Candidatus Prochlorococcus abhinibula (NL. fem. n. *abhinibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp902537275*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902537275.1. The GC content of the type genome is 30.95 % and the genome length is 0.97 Mbp.

Description of *Candidatus* Prochlorococcus abrumitudo sp. nov.

Candidatus Prochlorococcus abrumitudo (NL. fem. n. *abrumitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp902596585*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902596585.1. The GC content of the type genome is 31.41 % and the genome length is 1.17 Mbp.

Description of *Candidatus* Prochlorococcus absocicula sp. nov.

Candidatus Prochlorococcus absocicula (NL. fem. n. *absocicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp003216415*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003216415.1. The GC content of the type genome is 31.33 % and the genome length is 1.49 Mbp.

Description of *Candidatus* Prochlorococcus acceretta sp. nov.

Candidatus Prochlorococcus acceretta (NL. fem. n. *acceretta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp003212115*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003212115.1. The GC content of the type genome is 31.9 % and the genome length is 0.82 Mbp.

Description of *Candidatus* Prochlorococcus accucilega sp. nov.

Candidatus Prochlorococcus accucilega (NL. fem. n. *accucilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp902609995*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902609995.1. The GC content of the type genome is 31.09 % and the genome length is 1.0 Mbp.

Description of *Candidatus* Prochlorococcus aciscibra sp. nov.

Candidatus Prochlorococcus aciscibra (NL. fem. n. *aciscibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp003279005*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the

genus. The type genome for the species is the GenBank assembly GCA_003279005.1. The GC content of the type genome is 30.85 % and the genome length is 1.41 Mbp.

Description of *Candidatus* Prochlorococcus acrocitas sp. nov.

Candidatus Prochlorococcus acrocitas (NL. fem. n. *acrocitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp902573565*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902573565.1. The GC content of the type genome is 31.6 % and the genome length is 1.38 Mbp.

Description of *Candidatus* Prochlorococcus acrotentia sp. nov.

Candidatus Prochlorococcus acrotentia (NL. fem. n. *acrotentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp003278525*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003278525.1. The GC content of the type genome is 31.33 % and the genome length is 1.46 Mbp.

Description of *Candidatus* Prochlorococcus acrotigena sp. nov.

Candidatus Prochlorococcus acrotigena (NL. fem. n. *acrotigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp902618335*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902618335.1. The GC content of the type genome is 31.11 % and the genome length is 1.08 Mbp.

Description of *Candidatus* Prochlorococcus actaritas sp. nov.

Candidatus Prochlorococcus actaritas (NL. fem. n. *actaritas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp902615165*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902615165.1. The GC content of the type genome is 31.53 % and the genome length is 0.76 Mbp.

Description of *Candidatus* Prochlorococcus adhinastra sp. nov.

Candidatus Prochlorococcus adhinastra (NL. fem. n. *adhinastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp002026105*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_002026105.1. The GC content of the type genome is 31.15 % and the genome length is 1.02 Mbp.

Description of *Candidatus* Prochlorococcus adnecitudo sp. nov.

Candidatus Prochlorococcus adnecitudo (NL. fem. n. *adnecitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp003214815*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003214815.1. The GC content of the type genome is 31.43 % and the genome length is 1.83 Mbp.

Description of *Candidatus* Prochlorococcus adnicentia sp. nov.

Candidatus Prochlorococcus adnicentia (NL. fem. n. *adnicentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp902616595*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902616595.1. The GC content of the type genome is 31.31 % and the genome length is 1.29 Mbp.

Description of *Candidatus* Prochlorococcus adporitas sp. nov.

Candidatus Prochlorococcus adporitas (NL. fem. n. *adporitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp000757845*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_000757845.1. The GC content of the type genome is 31.17 % and the genome length is 1.78 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "water".

Description of *Candidatus* Prochlorococcus adsesax sp. nov.

Candidatus Prochlorococcus adsesax (NL. fem. n. *adsesax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp902538695*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902538695.1. The GC content of the type genome is 31.49 % and the genome length is 0.79 Mbp.

Description of *Candidatus* Prochlorococcus adsicetta sp. nov.

Candidatus Prochlorococcus adsicetta (NL. fem. n. *adsicetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp003212395*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003212395.1. The GC content of the type genome is 31.22 % and the genome length is 1.49 Mbp.

Description of *Candidatus* Prochlorococcus adsiciforma sp. nov.

Candidatus Prochlorococcus adsiciforma (NL. fem. n. *adsiciforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp003278045*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003278045.1. The GC content of the type genome is 31.73 % and the genome length is 1.3 Mbp.

Description of *Candidatus* Prochlorococcus adsifugo sp. nov.

Candidatus Prochlorococcus adsifugo (NL. fem. n. *adsifugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp003209375*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003209375.1. The GC content of the type genome is 31.45 % and the genome length is 1.33 Mbp.

Description of *Candidatus* Prochlorococcus adsucatica sp. nov.

Candidatus Prochlorococcus adsucatica (NL. fem. n. *adsucatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp002025945*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_002025945.1. The GC content of the type genome is 31.33 % and the genome length is 1.35 Mbp.

Description of *Candidatus* Prochlorococcus affabatio sp. nov.

Candidatus Prochlorococcus affabatio (NL. fem. n. *affabatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp003209565*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003209565.1. The GC content of the type genome is 31.47 % and the genome length is 1.32 Mbp.

Description of *Candidatus* Prochlorococcus affabigena sp. nov.

Candidatus Prochlorococcus affabigena (NL. fem. n. *affabigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp902536455*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902536455.1. The GC content of the type genome is 31.7 % and the genome length is 1.0 Mbp.

Description of *Candidatus* Prochlorococcus afranitio sp. nov.

Candidatus Prochlorococcus afranitio (NL. fem. n. *afranitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp003216535*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003216535.1. The GC content of the type genome is 31.25 % and the genome length is 1.61 Mbp.

Description of *Candidatus* Prochlorococcus aggesisca sp. nov.

Candidatus Prochlorococcus aggesisca (NL. fem. n. *aggesisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp902542595*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902542595.1. The GC content of the type genome is 31.33 % and the genome length is 0.88 Mbp.

Description of *Candidatus* Prochlorococcus aggubitura sp. nov.

Candidatus Prochlorococcus aggubitura (NL. fem. n. *aggubitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp003281605*. Although GTDB has assigned a

genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003281605.1. The GC content of the type genome is 31.31 % and the genome length is 1.52 Mbp.

Description of *Candidatus* Prochlorococcus agratitoga sp. nov.

Candidatus Prochlorococcus agratitoga (NL. fem. n. *agratitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp003281335*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003281335.1. The GC content of the type genome is 31.46 % and the genome length is 1.47 Mbp.

Description of *Candidatus* Prochlorococcus alcalastra sp. nov.

Candidatus Prochlorococcus alcalastra (NL. fem. n. *alcalastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp902573045*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902573045.1. The GC content of the type genome is 31.77 % and the genome length is 0.75 Mbp.

Description of *Candidatus* Prochlorococcus aminnifica sp. nov.

Candidatus Prochlorococcus aminnifica (NL. fem. n. *aminnifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp000635535*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_000635535.1. The GC content of the type genome is 31.33 % and the genome length is 0.98 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "raw seawater".

Description of *Candidatus* Prochlorococcus ammulatica sp. nov.

Candidatus Prochlorococcus ammulatica (NL. fem. n. *ammulatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp902621675*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902621675.1. The GC content of the type genome is 31.61 % and the genome length is 1.18 Mbp.

Description of *Candidatus* Prochlorococcus antepitica sp. nov.

Candidatus Prochlorococcus antepitica (NL. fem. n. *antepitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp003216835*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003216835.1. The GC content of the type genome is 30.9 % and the genome length is 1.53 Mbp.

Description of *Candidatus* Prochlorococcus arcatitia sp. nov.

Candidatus Prochlorococcus arcatitia (NL. fem. n. *arcatitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp902536065*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902536065.1. The GC content of the type genome is 31.13 % and the genome length is 1.19 Mbp.

Description of *Candidatus* Prochlorococcus artifastra sp. nov.

Candidatus Prochlorococcus artifastra (NL. fem. n. *artifastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp003211315*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the

genus. The type genome for the species is the GenBank assembly GCA_003211315.1. The GC content of the type genome is 30.89 % and the genome length is 1.39 Mbp.

Description of *Candidatus* Prochlorococcus artopibula sp. nov.

Candidatus Prochlorococcus artopibula (NL. fem. n. *artopibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp002026065*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_002026065.1. The GC content of the type genome is 31.34 % and the genome length is 1.26 Mbp.

Description of *Candidatus* Prochlorococcus aruspitura sp. nov.

Candidatus Prochlorococcus aruspitura (NL. fem. n. *aruspitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp902534685*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902534685.1. The GC content of the type genome is 31.27 % and the genome length is 0.92 Mbp.

Description of *Candidatus* Prochlorococcus assibitoga sp. nov.

Candidatus Prochlorococcus assibitoga (NL. fem. n. *assibitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp003214295*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003214295.1. The GC content of the type genome is 31.49 % and the genome length is 1.32 Mbp.

Description of *Candidatus* Prochlorococcus assucitrix sp. nov.

Candidatus Prochlorococcus assucitrix (NL. fem. n. *assucitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp902538225*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902538225.1. The GC content of the type genome is 31.05 % and the genome length is 1.06 Mbp.

Description of *Candidatus* Prochlorococcus aterrago sp. nov.

Candidatus Prochlorococcus aterrago (NL. fem. n. *aterrago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp003210155*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003210155.1. The GC content of the type genome is 31.33 % and the genome length is 1.45 Mbp.

Description of *Candidatus* Prochlorococcus aterredo sp. nov.

Candidatus Prochlorococcus aterredo (NL. fem. n. *aterredo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp003210235*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003210235.1. The GC content of the type genome is 30.75 % and the genome length is 1.09 Mbp.

Description of *Candidatus* Prochlorococcus atricago sp. nov.

Candidatus Prochlorococcus atricago (NL. fem. n. *atricago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp003209675*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003209675.1. The GC content of the type genome is 31.34 % and the genome length is 1.44 Mbp.

Description of *Candidatus* Prochlorococcus baditastra sp. nov.

Candidatus Prochlorococcus baditastra (NL. fem. n. *baditastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp902519235*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902519235.1. The GC content of the type genome is 31.6 % and the genome length is 1.17 Mbp.

Description of *Candidatus* Prochlorococcus benifatio sp. nov.

Candidatus Prochlorococcus benifatio (NL. fem. n. *benifatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp003216135*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003280335.1. The GC content of the type genome is 30.99 % and the genome length is 1.55 Mbp.

Description of *Candidatus* Prochlorococcus bimotax sp. nov.

Candidatus Prochlorococcus bimotax (NL. fem. n. *bimotax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp902572075*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902540935.1. The GC content of the type genome is 31.17 % and the genome length is 0.95 Mbp.

Description of *Candidatus* Prochlorococcus bipinedo sp. nov.

Candidatus Prochlorococcus bipinedo (NL. fem. n. *bipinedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp902573335*. Although GTDB has assigned a

genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902573335.1. The GC content of the type genome is 31.58 % and the genome length is 0.91 Mbp.

Description of *Candidatus* Prochlorococcus biveriforma sp. nov.

Candidatus Prochlorococcus biveriforma (NL. fem. n. *biveriforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp000634215*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_000634795.1. The GC content of the type genome is 31.24 % and the genome length is 1.6 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "raw seawater".

Description of *Candidatus* Prochlorococcus blacticula sp. nov.

Candidatus Prochlorococcus blacticula (NL. fem. n. *blacticula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp003280895*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003280895.1. The GC content of the type genome is 31.24 % and the genome length is 1.39 Mbp.

Description of *Candidatus* Prochlorococcus bovicicella sp. nov.

Candidatus Prochlorococcus bovicicella (NL. fem. n. *bovicicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp003214975*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003214975.1. The GC content of the type genome is 31.2 % and the genome length is 1.25 Mbp.

Description of *Candidatus* Prochlorococcus bovicousia sp. nov.

Candidatus Prochlorococcus bovicousia (NL. fem. n. *bovicousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp003278735*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003278735.1. The GC content of the type genome is 31.51 % and the genome length is 1.58 Mbp.

Description of *Candidatus* Prochlorococcus bucelatica sp. nov.

Candidatus Prochlorococcus bucelatica (NL. fem. n. *bucelatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp003210275*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003210275.1. The GC content of the type genome is 30.77 % and the genome length is 1.17 Mbp.

Description of *Candidatus* Prochlorococcus cadurilega sp. nov.

Candidatus Prochlorococcus cadurilega (NL. fem. n. *cadurilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp003212195*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003212195.1. The GC content of the type genome is 31.53 % and the genome length is 1.03 Mbp.

Description of *Candidatus* Prochlorococcus calipimonia sp. nov.

Candidatus Prochlorococcus calipimonia (NL. fem. n. *calipimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp902626435*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the

genus. The type genome for the species is the GenBank assembly GCA_902626435.1. The GC content of the type genome is 31.3 % and the genome length is 1.08 Mbp.

Description of *Candidatus* Prochlorococcus camilax sp. nov.

Candidatus Prochlorococcus camilax (NL. fem. n. *camilax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp003281625*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003281625.1. The GC content of the type genome is 31.4 % and the genome length is 1.47 Mbp.

Description of *Candidatus* Prochlorococcus capabibra sp. nov.

Candidatus Prochlorococcus capabibra (NL. fem. n. *capabibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp902538515*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902538515.1. The GC content of the type genome is 31.17 % and the genome length is 1.15 Mbp.

Description of *Candidatus* Prochlorococcus carecilega sp. nov.

Candidatus Prochlorococcus carecilega (NL. fem. n. *carecilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp003214115*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003214115.1. The GC content of the type genome is 31.57 % and the genome length is 1.1 Mbp.

Description of *Candidatus* Prochlorococcus casabitas sp. nov.

Candidatus Prochlorococcus casabitas (NL. fem. n. *casabitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp902570945*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902570945.1. The GC content of the type genome is 31.54 % and the genome length is 1.04 Mbp.

Description of *Candidatus* Prochlorococcus celamilega sp. nov.

Candidatus Prochlorococcus celamilega (NL. fem. n. *celamilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp003212055*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003212055.1. The GC content of the type genome is 31.36 % and the genome length is 0.98 Mbp.

Description of *Candidatus* Prochlorococcus celumugo sp. nov.

Candidatus Prochlorococcus celumugo (NL. fem. n. *celumugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp003210135*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003210135.1. The GC content of the type genome is 31.4 % and the genome length is 1.45 Mbp.

Description of *Candidatus* Prochlorococcus cerimitia sp. nov.

Candidatus Prochlorococcus cerimitia (NL. fem. n. *cerimitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp003278685*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902616515.1. The GC content of the type genome is 31.86 % and the genome length is 1.05 Mbp.

Description of *Candidatus* Prochlorococcus cimeletta sp. nov.

Candidatus Prochlorococcus cimeletta (NL. fem. n. *cimeletta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp902576415*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902576415.1. The GC content of the type genome is 31.4 % and the genome length is 1.29 Mbp.

Description of *Candidatus* Prochlorococcus ciminivita sp. nov.

Candidatus Prochlorococcus ciminivita (NL. fem. n. *ciminivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp000291825*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_000291825.1. The GC content of the type genome is 31.41 % and the genome length is 0.84 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "15m depth in Pacific Ocean".

Description of *Candidatus* Prochlorococcus cinefetta sp. nov.

Candidatus Prochlorococcus cinefetta (NL. fem. n. *cinefetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp902535025*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902535025.1. The GC content of the type genome is 31.45 % and the genome length is 0.98 Mbp.

Description of *Candidatus* Prochlorococcus cinipilenta sp. nov.

Candidatus Prochlorococcus cinipilenta (NL. fem. n. *cinipilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp902572825*. Although GTDB has assigned a

genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902572825.1. The GC content of the type genome is 31.25 % and the genome length is 1.33 Mbp.

Description of *Candidatus* Prochlorococcus citipitio sp. nov.

Candidatus Prochlorococcus citipitio (NL. fem. n. *citipitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp003216635*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902570735.1. The GC content of the type genome is 31.75 % and the genome length is 1.0 Mbp.

Description of *Candidatus* Prochlorococcus cnestatio sp. nov.

Candidatus Prochlorococcus cnestatio (NL. fem. n. *cnestatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp003281525*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003281525.1. The GC content of the type genome is 31.24 % and the genome length is 1.41 Mbp.

Description of *Candidatus* Prochlorococcus cobaligena sp. nov.

Candidatus Prochlorococcus cobaligena (NL. fem. n. *cobaligena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp902624085*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902624085.1. The GC content of the type genome is 30.31 % and the genome length is 1.06 Mbp.

Description of *Candidatus* Prochlorococcus cocibatica sp. nov.

Candidatus Prochlorococcus cocibatica (NL. fem. n. *cocibatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp003281165*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003281165.1. The GC content of the type genome is 31.4 % and the genome length is 1.37 Mbp.

Description of *Candidatus* Prochlorococcus cohurigena sp. nov.

Candidatus Prochlorococcus cohurigena (NL. fem. n. *cohurigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp902606255*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902606255.1. The GC content of the type genome is 31.61 % and the genome length is 0.89 Mbp.

Description of *Candidatus* Prochlorococcus colapivita sp. nov.

Candidatus Prochlorococcus colapivita (NL. fem. n. *colapivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp003281455*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003281455.1. The GC content of the type genome is 31.53 % and the genome length is 1.42 Mbp.

Description of *Candidatus* Prochlorococcus colutiforma sp. nov.

Candidatus Prochlorococcus colutiforma (NL. fem. n. *colutiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp902525585*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902525585.1. The GC content of the type genome is 31.35 % and the genome length is 1.3 Mbp.

Description of *Candidatus* Prochlorococcus conubitrix sp. nov.

Candidatus Prochlorococcus conubitrix (NL. fem. n. *conubitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp902624105*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902624105.1. The GC content of the type genome is 30.79 % and the genome length is 1.1 Mbp.

Description of *Candidatus* Prochlorococcus cruppatio sp. nov.

Candidatus Prochlorococcus cruppatio (NL. fem. n. *cruppatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp902571335*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902571335.1. The GC content of the type genome is 31.35 % and the genome length is 1.48 Mbp.

Description of *Candidatus* Prochlorococcus culilessa sp. nov.

Candidatus Prochlorococcus culilessa (NL. fem. n. *culilessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp003214175*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003214175.1. The GC content of the type genome is 31.33 % and the genome length is 1.5 Mbp.

Description of *Candidatus* Prochlorococcus cululilenta sp. nov.

Candidatus Prochlorococcus cululilenta (NL. fem. n. *cululilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp003279115*. Although GTDB has assigned a

genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003281445.1. The GC content of the type genome is 31.2 % and the genome length is 1.45 Mbp.

Description of *Candidatus* Prochlorococcus cululimonas sp. nov.

Candidatus Prochlorococcus cululimonas (NL. fem. n. *cululimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp003211655*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003211655.1. The GC content of the type genome is 31.24 % and the genome length is 1.11 Mbp.

Description of *Candidatus* Prochlorococcus curacimonas sp. nov.

Candidatus Prochlorococcus curacimonas (NL. fem. n. *curacimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp000635015*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902597705.1. The GC content of the type genome is 31.85 % and the genome length is 1.04 Mbp.

Description of *Candidatus* Prochlorococcus decapousia sp. nov.

Candidatus Prochlorococcus decapousia (NL. fem. n. *decapousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp003280575*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003280575.1. The GC content of the type genome is 31.32 % and the genome length is 1.52 Mbp.

Description of *Candidatus* Prochlorococcus decatugo sp. nov.

Candidatus Prochlorococcus decatugo (NL. fem. n. *decatugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp003209655*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003209655.1. The GC content of the type genome is 30.72 % and the genome length is 1.63 Mbp.

Description of *Candidatus* Prochlorococcus decupitoga sp. nov.

Candidatus Prochlorococcus decupitoga (NL. fem. n. *decupitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp003278855*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003278855.1. The GC content of the type genome is 31.66 % and the genome length is 1.51 Mbp.

Description of *Candidatus* Prochlorococcus dedigentia sp. nov.

Candidatus Prochlorococcus dedigentia (NL. fem. n. *dedigentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp003283415*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902523145.1. The GC content of the type genome is 30.84 % and the genome length is 0.92 Mbp.

Description of *Candidatus* Prochlorococcus dedigitio sp. nov.

Candidatus Prochlorococcus dedigitio (NL. fem. n. *dedigitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp902622625*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902622625.1. The GC content of the type genome is 31.63 % and the genome length is 1.26 Mbp.

Description of *Candidatus* Prochlorococcus defacitura sp. nov.

Candidatus Prochlorococcus defacitura (NL. fem. n. *defacitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp902536775*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902536775.1. The GC content of the type genome is 31.42 % and the genome length is 1.16 Mbp.

Description of *Candidatus* Prochlorococcus defesifica sp. nov.

Candidatus Prochlorococcus defesifica (NL. fem. n. *defesifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp003208695*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003208695.1. The GC content of the type genome is 31.19 % and the genome length is 0.83 Mbp.

Description of *Candidatus* Prochlorococcus deforatica sp. nov.

Candidatus Prochlorococcus deforatica (NL. fem. n. *deforatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp003214235*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003214235.1. The GC content of the type genome is 31.25 % and the genome length is 1.17 Mbp.

Description of *Candidatus* Prochlorococcus defunitia sp. nov.

Candidatus Prochlorococcus defunitia (NL. fem. n. *defunitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp003281225*. Although GTDB has assigned a

genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003281225.1. The GC content of the type genome is 31.13 % and the genome length is 1.65 Mbp.

Description of *Candidatus* Prochlorococcus defunitio sp. nov.

Candidatus Prochlorococcus defunitio (NL. fem. n. *defunitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp003281255*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003281255.1. The GC content of the type genome is 31.28 % and the genome length is 1.53 Mbp.

Description of *Candidatus* Prochlorococcus delebimonas sp. nov.

Candidatus Prochlorococcus delebimonas (NL. fem. n. *delebimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp003213255*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003213255.1. The GC content of the type genome is 31.23 % and the genome length is 1.24 Mbp.

Description of *Candidatus* Prochlorococcus demigatica sp. nov.

Candidatus Prochlorococcus demigatica (NL. fem. n. *demigatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp003279015*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003279015.1. The GC content of the type genome is 31.35 % and the genome length is 1.59 Mbp.

Description of *Candidatus* Prochlorococcus denicastra sp. nov.

Candidatus Prochlorococcus denicastra (NL. fem. n. *denicastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp003278955*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003278955.1. The GC content of the type genome is 31.39 % and the genome length is 1.34 Mbp.

Description of *Candidatus* Prochlorococcus denomastra sp. nov.

Candidatus Prochlorococcus denomastra (NL. fem. n. *denomastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp902595095*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003217005.1. The GC content of the type genome is 31.66 % and the genome length is 1.21 Mbp.

Description of *Candidatus* Prochlorococcus denomimonas sp. nov.

Candidatus Prochlorococcus denomimonas (NL. fem. n. *denomimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp003282425*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003209505.1. The GC content of the type genome is 30.73 % and the genome length is 1.51 Mbp.

Description of *Candidatus* Prochlorococcus depiciforma sp. nov.

Candidatus Prochlorococcus depiciforma (NL. fem. n. *depiciforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp902527105*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902527105.1. The GC content of the type genome is 31.22 % and the genome length is 1.45 Mbp.

Description of *Candidatus* Prochlorococcus desacatio sp. nov.

Candidatus Prochlorococcus desacatio (NL. fem. n. *desacatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp003281715*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003281715.1. The GC content of the type genome is 31.48 % and the genome length is 1.22 Mbp.

Description of *Candidatus* Prochlorococcus desepousia sp. nov.

Candidatus Prochlorococcus desepousia (NL. fem. n. *desepousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp003281385*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003281385.1. The GC content of the type genome is 31.22 % and the genome length is 1.5 Mbp.

Description of *Candidatus* Prochlorococcus desoricula sp. nov.

Candidatus Prochlorococcus desoricula (NL. fem. n. *desoricula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp003278545*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003278545.1. The GC content of the type genome is 31.24 % and the genome length is 1.65 Mbp.

Description of *Candidatus* Prochlorococcus desuledo sp. nov.

Candidatus Prochlorococcus desuledo (NL. fem. n. *desuledo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp003214315*. Although GTDB has assigned a

genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003214315.1. The GC content of the type genome is 31.21 % and the genome length is 1.62 Mbp.

Description of *Candidatus* Prochlorococcus detunugo sp. nov.

Candidatus Prochlorococcus detunugo (NL. fem. n. *detunugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp003212535*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003212535.1. The GC content of the type genome is 31.19 % and the genome length is 1.28 Mbp.

Description of *Candidatus* Prochlorococcus dicibibra sp. nov.

Candidatus Prochlorococcus dicibibra (NL. fem. n. *dicibibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp003213955*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003213955.1. The GC content of the type genome is 30.6 % and the genome length is 1.66 Mbp.

Description of *Candidatus* Prochlorococcus didacimonas sp. nov.

Candidatus Prochlorococcus didacimonas (NL. fem. n. *didacimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp003216615*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003216615.1. The GC content of the type genome is 31.0 % and the genome length is 1.61 Mbp.

Description of *Candidatus* Prochlorococcus dilaciforma sp. nov.

Candidatus Prochlorococcus dilaciforma (NL. fem. n. *dilaciforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a

noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp902521995*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902542055.1. The GC content of the type genome is 31.64 % and the genome length is 0.9 Mbp.

Description of *Candidatus* Prochlorococcus dilogibra sp. nov.

Candidatus Prochlorococcus dilogibra (NL. fem. n. *dilogibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp003210285*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003210215.1. The GC content of the type genome is 30.94 % and the genome length is 0.94 Mbp.

Description of *Candidatus* Prochlorococcus divorilenta sp. nov.

Candidatus Prochlorococcus divorilenta (NL. fem. n. *divorilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp902578845*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902578845.1. The GC content of the type genome is 31.29 % and the genome length is 0.85 Mbp.

Description of *Candidatus* Prochlorococcus domicitica sp. nov.

Candidatus Prochlorococcus domicitica (NL. fem. n. *domicitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp003209425*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003209425.1. The GC content of the type genome is 31.01 % and the genome length is 1.14 Mbp.

Description of *Candidatus* Prochlorococcus duricousia sp. nov.

Candidatus Prochlorococcus duricousia (NL. fem. n. *duricousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp003211335*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003211335.1. The GC content of the type genome is 31.38 % and the genome length is 0.82 Mbp.

Description of *Candidatus* Prochlorococcus duricugo sp. nov.

Candidatus Prochlorococcus duricugo (NL. fem. n. *duricugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp003281585*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003281585.1. The GC content of the type genome is 31.44 % and the genome length is 1.29 Mbp.

Description of *Candidatus* Prochlorococcus ecastisca sp. nov.

Candidatus Prochlorococcus ecastisca (NL. fem. n. *ecastisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp902620895*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902620895.1. The GC content of the type genome is 31.13 % and the genome length is 1.5 Mbp.

Description of *Candidatus* Prochlorococcus echiditia sp. nov.

Candidatus Prochlorococcus echiditia (NL. fem. n. *echiditia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp902578445*. Although GTDB has assigned a

genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902578445.1. The GC content of the type genome is 31.14 % and the genome length is 1.23 Mbp.

Description of *Candidatus* Prochlorococcus effacisca sp. nov.

Candidatus Prochlorococcus effacisca (NL. fem. n. *effacisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp902626425*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902626425.1. The GC content of the type genome is 31.38 % and the genome length is 0.79 Mbp.

Description of *Candidatus* Prochlorococcus egritugo sp. nov.

Candidatus Prochlorococcus egritugo (NL. fem. n. *egritugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp902600395*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902600395.1. The GC content of the type genome is 31.3 % and the genome length is 0.86 Mbp.

Description of *Candidatus* Prochlorococcus ellebitoga sp. nov.

Candidatus Prochlorococcus ellebitoga (NL. fem. n. *ellebitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp002026145*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_002026145.1. The GC content of the type genome is 31.33 % and the genome length is 1.18 Mbp.

Description of *Candidatus* Prochlorococcus embamimonia sp. nov.

Candidatus Prochlorococcus embamimonia (NL. fem. n. *embamimonia* a species epithet

created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp003278765*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003278765.1. The GC content of the type genome is 31.43 % and the genome length is 1.35 Mbp.

Description of *Candidatus* Prochlorococcus emortimonas sp. nov.

Candidatus Prochlorococcus emortimonas (NL. fem. n. *emortimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp003212035*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003212035.1. The GC content of the type genome is 31.55 % and the genome length is 1.14 Mbp.

Description of *Candidatus* Prochlorococcus encenitio sp. nov.

Candidatus Prochlorococcus encenitio (NL. fem. n. *encenitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp003279845*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003279845.1. The GC content of the type genome is 31.17 % and the genome length is 1.5 Mbp.

Description of *Candidatus* Prochlorococcus encolitia sp. nov.

Candidatus Prochlorococcus encolitia (NL. fem. n. *encolitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp902565305*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902565305.1.

The GC content of the type genome is 31.66 % and the genome length is 1.16 Mbp.

Description of *Candidatus* Prochlorococcus enigmilenta sp. nov.

Candidatus Prochlorococcus enigmilenta (NL. fem. n. *enigmilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp902606505*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902606505.1. The GC content of the type genome is 31.53 % and the genome length is 1.25 Mbp.

Description of *Candidatus* Prochlorococcus epiclibra sp. nov.

Candidatus Prochlorococcus epiclibra (NL. fem. n. *epiclibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp902572675*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902572675.1. The GC content of the type genome is 31.46 % and the genome length is 0.92 Mbp.

Description of *Candidatus* Prochlorococcus epogdentia sp. nov.

Candidatus Prochlorococcus epogdentia (NL. fem. n. *epogdentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp003216455*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003216455.1. The GC content of the type genome is 31.35 % and the genome length is 1.14 Mbp.

Description of *Candidatus* Prochlorococcus epogdifica sp. nov.

Candidatus Prochlorococcus epogdifica (NL. fem. n. *epogdifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Prochlorococcus_A sp002025975*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_002025975.1. The GC content of the type genome is 31.27 % and the genome length is 1.21 Mbp.

Description of *Candidatus* Prochlorococcus errabousia sp. nov.

Candidatus Prochlorococcus errabousia (NL. fem. n. *errabousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp003216915*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003216915.1. The GC content of the type genome is 31.31 % and the genome length is 1.42 Mbp.

Description of *Candidatus* Prochlorococcus excarax sp. nov.

Candidatus Prochlorococcus excarax (NL. fem. n. *excarax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp003214085*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003214085.1. The GC content of the type genome is 31.38 % and the genome length is 1.45 Mbp.

Description of *Candidatus* Prochlorococcus exheditas sp. nov.

Candidatus Prochlorococcus exheditas (NL. fem. n. *exheditas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp000634415*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_000634415.1. The GC content of the type genome is 31.08 % and the genome length is 1.15 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "raw seawater".

Description of *Candidatus* Prochlorococcus expisivita sp. nov.

Candidatus Prochlorococcus expisivita (NL. fem. n. *expisivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp003212175*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003212175.1. The GC content of the type genome is 31.37 % and the genome length is 1.06 Mbp.

Description of *Candidatus* Prochlorococcus extinitio sp. nov.

Candidatus Prochlorococcus extinitio (NL. fem. n. *extinitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp003278895*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003278895.1. The GC content of the type genome is 31.33 % and the genome length is 1.3 Mbp.

Description of *Candidatus* Prochlorococcus fetulitudo sp. nov.

Candidatus Prochlorococcus fetulitudo (NL. fem. n. *fetulitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp902526435*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902526435.1. The GC content of the type genome is 31.02 % and the genome length is 1.1 Mbp.

Description of *Candidatus* Prochlorococcus foricax sp. nov.

Candidatus Prochlorococcus foricax (NL. fem. n. *foricax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp902611225*. Although GTDB has assigned a

genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902611225.1. The GC content of the type genome is 31.39 % and the genome length is 1.13 Mbp.

Description of *Candidatus* Prochlorococcus fumacimonia sp. nov.

Candidatus Prochlorococcus fumacimonia (NL. fem. n. *fumacimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp902564235*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902564235.1. The GC content of the type genome is 31.46 % and the genome length is 1.2 Mbp.

Description of *Candidatus* Prochlorococcus gasifibra sp. nov.

Candidatus Prochlorococcus gasifibra (NL. fem. n. *gasifibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp003209415*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003209415.1. The GC content of the type genome is 31.38 % and the genome length is 1.09 Mbp.

Description of *Candidatus* Prochlorococcus grallitudo sp. nov.

Candidatus Prochlorococcus grallitudo (NL. fem. n. *grallitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp003210695*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003210695.1. The GC content of the type genome is 30.98 % and the genome length is 1.08 Mbp.

Description of *Candidatus* Prochlorococcus halucilega sp. nov.

Candidatus Prochlorococcus halucilega (NL. fem. n. *halucilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp003281315*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003281315.1. The GC content of the type genome is 31.6 % and the genome length is 1.51 Mbp.

Description of *Candidatus* Prochlorococcus hemidibula sp. nov.

Candidatus Prochlorococcus hemidibula (NL. fem. n. *hemidibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp902594875*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902594875.1. The GC content of the type genome is 31.57 % and the genome length is 1.43 Mbp.

Description of *Candidatus* Prochlorococcus hemititio sp. nov.

Candidatus Prochlorococcus hemititio (NL. fem. n. *hemititio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp003214055*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003214055.1. The GC content of the type genome is 31.37 % and the genome length is 1.27 Mbp.

Description of *Candidatus* Prochlorococcus hibisatica sp. nov.

Candidatus Prochlorococcus hibisatica (NL. fem. n. *hibisatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp003211955*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003211955.1. The GC content of the type genome is 31.36 % and the genome length is 1.23 Mbp.

Description of *Candidatus* Prochlorococcus holisetta sp. nov.

Candidatus Prochlorococcus holisetta (NL. fem. n. *holisetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp902572395*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902572395.1. The GC content of the type genome is 31.45 % and the genome length is 1.24 Mbp.

Description of *Candidatus* Prochlorococcus holisitia sp. nov.

Candidatus Prochlorococcus holisitia (NL. fem. n. *holisitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp003280165*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003280165.1. The GC content of the type genome is 32.39 % and the genome length is 1.04 Mbp.

Description of *Candidatus* Prochlorococcus homagax sp. nov.

Candidatus Prochlorococcus homagax (NL. fem. n. *homagax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp003280985*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003280985.1. The GC content of the type genome is 31.18 % and the genome length is 1.18 Mbp.

Description of *Candidatus* Prochlorococcus homagetta sp. nov.

Candidatus Prochlorococcus homagetta (NL. fem. n. *homagetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp003209585*. Although GTDB has assigned a

genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003209585.1. The GC content of the type genome is 31.37 % and the genome length is 1.41 Mbp.

Description of *Candidatus* Prochlorococcus humecicella sp. nov.

Candidatus Prochlorococcus humecicella (NL. fem. n. *humecicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp003281685*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003281685.1. The GC content of the type genome is 31.34 % and the genome length is 1.5 Mbp.

Description of *Candidatus* Prochlorococcus humeciforma sp. nov.

Candidatus Prochlorococcus humeciforma (NL. fem. n. *humeciforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp902535185*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902535185.1. The GC content of the type genome is 31.63 % and the genome length is 1.02 Mbp.

Description of *Candidatus* Prochlorococcus humecitura sp. nov.

Candidatus Prochlorococcus humecitura (NL. fem. n. *humecitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp003211115*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003211115.1. The GC content of the type genome is 30.73 % and the genome length is 1.08 Mbp.

Description of *Candidatus* Prochlorococcus illepatica sp. nov.

Candidatus Prochlorococcus illepatica (NL. fem. n. *illepatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp003216725*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003216725.1. The GC content of the type genome is 30.7 % and the genome length is 1.4 Mbp.

Description of *Candidatus* Prochlorococcus imbecugo sp. nov.

Candidatus Prochlorococcus imbecugo (NL. fem. n. *imbecugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp902591275*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902591275.1. The GC content of the type genome is 31.82 % and the genome length is 1.08 Mbp.

Description of *Candidatus* Prochlorococcus immedago sp. nov.

Candidatus Prochlorococcus immedago (NL. fem. n. *immedago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp003213375*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003213375.1. The GC content of the type genome is 31.41 % and the genome length is 1.1 Mbp.

Description of *Candidatus* Prochlorococcus immoditas sp. nov.

Candidatus Prochlorococcus immoditas (NL. fem. n. *immoditas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp003278925*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003278925.1. The GC content of the type genome is 31.27 % and the genome length is 1.52 Mbp.

Description of *Candidatus* Prochlorococcus immurousia sp. nov.

Candidatus Prochlorococcus immurousia (NL. fem. n. *immurousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp902595175*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902595175.1. The GC content of the type genome is 31.66 % and the genome length is 1.11 Mbp.

Description of *Candidatus* Prochlorococcus impavugo sp. nov.

Candidatus Prochlorococcus impavugo (NL. fem. n. *impavugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp003213235*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003213235.1. The GC content of the type genome is 31.17 % and the genome length is 1.48 Mbp.

Description of *Candidatus* Prochlorococcus inabsitrix sp. nov.

Candidatus Prochlorococcus inabsitrix (NL. fem. n. *inabsitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp902582995*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902582995.1. The GC content of the type genome is 31.61 % and the genome length is 0.89 Mbp.

Description of *Candidatus* Prochlorococcus inardugo sp. nov.

Candidatus Prochlorococcus inardugo (NL. fem. n. *inardugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp902536555*. Although GTDB has assigned a

genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902536555.1. The GC content of the type genome is 31.03 % and the genome length is 0.97 Mbp.

Description of *Candidatus* Prochlorococcus inargiforma sp. nov.

Candidatus Prochlorococcus inargiforma (NL. fem. n. *inargiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp902536725*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902536725.1. The GC content of the type genome is 31.43 % and the genome length is 1.41 Mbp.

Description of *Candidatus* Prochlorococcus indidousia sp. nov.

Candidatus Prochlorococcus indidousia (NL. fem. n. *indidousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp003212615*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003212615.1. The GC content of the type genome is 31.42 % and the genome length is 1.02 Mbp.

Description of *Candidatus* Prochlorococcus indipitudo sp. nov.

Candidatus Prochlorococcus indipitudo (NL. fem. n. *indipitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp902618795*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902618795.1. The GC content of the type genome is 31.7 % and the genome length is 1.07 Mbp.

Description of *Candidatus* Prochlorococcus indivago sp. nov.

Candidatus Prochlorococcus indivago (NL. fem. n. *indivago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp003279055*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003279055.1. The GC content of the type genome is 31.42 % and the genome length is 1.56 Mbp.

Description of *Candidatus* Prochlorococcus infelugo sp. nov.

Candidatus Prochlorococcus infelugo (NL. fem. n. *infelugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp003281635*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003281635.1. The GC content of the type genome is 31.41 % and the genome length is 1.33 Mbp.

Description of *Candidatus* Prochlorococcus infenastra sp. nov.

Candidatus Prochlorococcus infenastra (NL. fem. n. *infenastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp003281505*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003281505.1. The GC content of the type genome is 31.29 % and the genome length is 1.5 Mbp.

Description of *Candidatus* Prochlorococcus infiricella sp. nov.

Candidatus Prochlorococcus infiricella (NL. fem. n. *infiricella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp003214355*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003214355.1. The GC content of the type genome is 33.1 % and the genome length is 1.6 Mbp.

Description of *Candidatus* Prochlorococcus inlocilega sp. nov.

Candidatus Prochlorococcus inlocilega (NL. fem. n. *inlocilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp902535175*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902535175.1. The GC content of the type genome is 31.27 % and the genome length is 1.52 Mbp.

Description of *Candidatus* Prochlorococcus inmacimonas sp. nov.

Candidatus Prochlorococcus inmacimonas (NL. fem. n. *inmacimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp902572065*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902572065.1. The GC content of the type genome is 31.2 % and the genome length is 0.8 Mbp.

Description of *Candidatus* Prochlorococcus innabugo sp. nov.

Candidatus Prochlorococcus innabugo (NL. fem. n. *innabugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp003278705*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003278705.1. The GC content of the type genome is 31.38 % and the genome length is 1.45 Mbp.

Description of *Candidatus* Prochlorococcus inperessa sp. nov.

Candidatus Prochlorococcus inperessa (NL. fem. n. *inperessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp003209475*. Although GTDB has assigned a

genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003209475.1. The GC content of the type genome is 31.43 % and the genome length is 1.18 Mbp.

Description of *Candidatus* Prochlorococcus inresedo sp. nov.

Candidatus Prochlorococcus inresedo (NL. fem. n. *inresedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp902625845*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902625845.1. The GC content of the type genome is 30.21 % and the genome length is 1.18 Mbp.

Description of *Candidatus* Prochlorococcus insalisca sp. nov.

Candidatus Prochlorococcus insalisca (NL. fem. n. *insalisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp003210895*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003210895.1. The GC content of the type genome is 30.58 % and the genome length is 1.27 Mbp.

Description of *Candidatus* Prochlorococcus insenibula sp. nov.

Candidatus Prochlorococcus insenibula (NL. fem. n. *insenibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp003210825*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003210825.1. The GC content of the type genome is 31.01 % and the genome length is 1.15 Mbp.

Description of *Candidatus* Prochlorococcus insinibra sp. nov.

Candidatus Prochlorococcus insinibra (NL. fem. n. *insinibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp003281645*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003281645.1. The GC content of the type genome is 31.35 % and the genome length is 1.46 Mbp.

Description of *Candidatus* Prochlorococcus intemimonia sp. nov.

Candidatus Prochlorococcus intemimonia (NL. fem. n. *intemimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp003282225*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003282225.1. The GC content of the type genome is 30.99 % and the genome length is 0.94 Mbp.

Description of *Candidatus* Prochlorococcus intenitrix sp. nov.

Candidatus Prochlorococcus intenitrix (NL. fem. n. *intenitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp003216795*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003216795.1. The GC content of the type genome is 31.45 % and the genome length is 1.67 Mbp.

Description of *Candidatus* Prochlorococcus irreditoga sp. nov.

Candidatus Prochlorococcus irreditoga (NL. fem. n. *irreditoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp003214215*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003214215.1. The GC content of the type genome is 31.29 % and the genome length is 1.15 Mbp.

Description of *Candidatus* Prochlorococcus irremifica sp. nov.

Candidatus Prochlorococcus irremifica (NL. fem. n. *irremifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp003212755*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003212755.1. The GC content of the type genome is 31.18 % and the genome length is 1.44 Mbp.

Description of *Candidatus* Prochlorococcus laculibra sp. nov.

Candidatus Prochlorococcus laculibra (NL. fem. n. *laculibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp003216755*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003216755.1. The GC content of the type genome is 31.55 % and the genome length is 1.52 Mbp.

Description of *Candidatus* Prochlorococcus lametatica sp. nov.

Candidatus Prochlorococcus lametatica (NL. fem. n. *lametatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp003281485*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003281485.1. The GC content of the type genome is 31.49 % and the genome length is 1.4 Mbp.

Description of *Candidatus* Prochlorococcus lanififorma sp. nov.

Candidatus Prochlorococcus lanififorma (NL. fem. n. *lanififorma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp003209055*. Although GTDB has assigned a

genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003209055.1. The GC content of the type genome is 30.8 % and the genome length is 1.06 Mbp.

Description of *Candidatus* Prochlorococcus lanigastra sp. nov.

Candidatus Prochlorococcus lanigastra (NL. fem. n. *lanigastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp902627335*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902627335.1. The GC content of the type genome is 30.83 % and the genome length is 1.31 Mbp.

Description of *Candidatus* Prochlorococcus lanigitoga sp. nov.

Candidatus Prochlorococcus lanigitoga (NL. fem. n. *lanigitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp003280725*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003280725.1. The GC content of the type genome is 31.11 % and the genome length is 1.4 Mbp.

Description of *Candidatus* Prochlorococcus legifitura sp. nov.

Candidatus Prochlorococcus legifitura (NL. fem. n. *legifitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp003212655*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003212655.1. The GC content of the type genome is 31.47 % and the genome length is 1.16 Mbp.

Description of *Candidatus* Prochlorococcus lorarifica sp. nov.

Candidatus Prochlorococcus lorarifica (NL. fem. n. *lorarifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp003280885*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902572595.1. The GC content of the type genome is 31.39 % and the genome length is 1.01 Mbp.

Description of *Candidatus* Prochlorococcus loripastra sp. nov.

Candidatus Prochlorococcus loripastra (NL. fem. n. *loripastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp902534675*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902534675.1. The GC content of the type genome is 31.73 % and the genome length is 0.82 Mbp.

Description of *Candidatus* Prochlorococcus luculivita sp. nov.

Candidatus Prochlorococcus luculivita (NL. fem. n. *luculivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp902612005*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902575525.1. The GC content of the type genome is 31.29 % and the genome length is 1.2 Mbp.

Description of *Candidatus* Prochlorococcus malagatio sp. nov.

Candidatus Prochlorococcus malagatio (NL. fem. n. *malagatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp902628235*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902628235.1. The GC content of the type genome is 30.02 % and the genome length is 1.23 Mbp.

Description of *Candidatus* Prochlorococcus manibitrix sp. nov.

Candidatus Prochlorococcus manibitrix (NL. fem. n. *manibitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp003278535*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902601255.1. The GC content of the type genome is 31.75 % and the genome length is 1.27 Mbp.

Description of *Candidatus* Prochlorococcus manubitoga sp. nov.

Candidatus Prochlorococcus manubitoga (NL. fem. n. *manubitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp000634115*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_000634115.1. The GC content of the type genome is 31.0 % and the genome length is 1.53 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "raw seawater".

Description of *Candidatus* Prochlorococcus maxiletta sp. nov.

Candidatus Prochlorococcus maxiletta (NL. fem. n. *maxiletta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp003279105*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003279105.1. The GC content of the type genome is 31.45 % and the genome length is 1.46 Mbp.

Description of *Candidatus* Prochlorococcus maxilitudo sp. nov.

Candidatus Prochlorococcus maxilitudo (NL. fem. n. *maxilitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp003280935*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003280935.1. The GC content of the type genome is 31.46 % and the genome length is 1.3 Mbp.

Description of *Candidatus* Prochlorococcus melilitio sp. nov.

Candidatus Prochlorococcus melilitio (NL. fem. n. *melilitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp902574425*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902574425.1. The GC content of the type genome is 31.42 % and the genome length is 1.16 Mbp.

Description of *Candidatus* Prochlorococcus monocivita sp. nov.

Candidatus Prochlorococcus monocivita (NL. fem. n. *monocivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp003279945*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003279945.1. The GC content of the type genome is 31.13 % and the genome length is 1.55 Mbp.

Description of *Candidatus* Prochlorococcus navifibula sp. nov.

Candidatus Prochlorococcus navifibula (NL. fem. n. *navifibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp902520485*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902520485.1. The GC content of the type genome is 31.58 % and the genome length is 1.26 Mbp.

Description of *Candidatus* Prochlorococcus nidifitas sp. nov.

Candidatus Prochlorococcus nidifitas (NL. fem. n. *nidifitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp003212005*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003212005.1. The GC content of the type genome is 30.5 % and the genome length is 1.02 Mbp.

Description of *Candidatus* Prochlorococcus nitelicella sp. nov.

Candidatus Prochlorococcus nitelicella (NL. fem. n. *nitelicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp003281185*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003281185.1. The GC content of the type genome is 31.06 % and the genome length is 1.48 Mbp.

Description of *Candidatus* Prochlorococcus nitelitoga sp. nov.

Candidatus Prochlorococcus nitelitoga (NL. fem. n. *nitelitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp902627325*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902627325.1. The GC content of the type genome is 30.81 % and the genome length is 0.95 Mbp.

Description of *Candidatus* Prochlorococcus nubigivita sp. nov.

Candidatus Prochlorococcus nubigivita (NL. fem. n. *nubigivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp000634515*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the

genus. The type genome for the species is the GenBank assembly GCA_902543475.1. The GC content of the type genome is 31.56 % and the genome length is 1.04 Mbp.

Description of *Candidatus* Prochlorococcus obtemousia sp. nov.

Candidatus Prochlorococcus obtemousia (NL. fem. n. *obtemousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp902590355*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902590355.1. The GC content of the type genome is 31.27 % and the genome length is 0.95 Mbp.

Description of *Candidatus* Prochlorococcus offiritura sp. nov.

Candidatus Prochlorococcus offiritura (NL. fem. n. *offiritura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp902616385*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902616385.1. The GC content of the type genome is 31.33 % and the genome length is 1.5 Mbp.

Description of *Candidatus* Prochlorococcus ossucilenta sp. nov.

Candidatus Prochlorococcus ossucilenta (NL. fem. n. *ossucilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp902591865*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902591865.1. The GC content of the type genome is 31.25 % and the genome length is 1.28 Mbp.

Description of *Candidatus* Prochlorococcus palififica sp. nov.

Candidatus Prochlorococcus palififica (NL. fem. n. *palififica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp002026005*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_002026005.1. The GC content of the type genome is 31.18 % and the genome length is 1.49 Mbp.

Description of *Candidatus* Prochlorococcus panifitas sp. nov.

Candidatus Prochlorococcus panifitas (NL. fem. n. *panifitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp003208885*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003208885.1. The GC content of the type genome is 31.01 % and the genome length is 1.07 Mbp.

Description of *Candidatus* Prochlorococcus papavitica sp. nov.

Candidatus Prochlorococcus papavitica (NL. fem. n. *papavitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp003278875*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003278875.1. The GC content of the type genome is 31.32 % and the genome length is 1.41 Mbp.

Description of *Candidatus* Prochlorococcus papavousia sp. nov.

Candidatus Prochlorococcus papavousia (NL. fem. n. *papavousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp003280995*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902615195.1. The GC content of the type genome is 31.52 % and the genome length is 1.1 Mbp.

Description of *Candidatus* Prochlorococcus parocitas sp. nov.

Candidatus Prochlorococcus parocitas (NL. fem. n. *parocitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp003280025*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003215815.1. The GC content of the type genome is 31.98 % and the genome length is 0.78 Mbp.

Description of *Candidatus* Prochlorococcus patibimonia sp. nov.

Candidatus Prochlorococcus patibimonia (NL. fem. n. *patibimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp003280915*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003280915.1. The GC content of the type genome is 31.4 % and the genome length is 1.56 Mbp.

Description of *Candidatus* Prochlorococcus pavicitio sp. nov.

Candidatus Prochlorococcus pavicitio (NL. fem. n. *pavicitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp000634735*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003278585.1. The GC content of the type genome is 31.34 % and the genome length is 1.48 Mbp.

Description of *Candidatus* Prochlorococcus pecunatica sp. nov.

Candidatus Prochlorococcus pecunatica (NL. fem. n. *pecunatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp902583265*. Although GTDB has assigned a

genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902583265.1. The GC content of the type genome is 31.7 % and the genome length is 1.04 Mbp.

Description of *Candidatus* Prochlorococcus pedifisca sp. nov.

Candidatus Prochlorococcus pedifisca (NL. fem. n. *pedifisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp003211415*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003281705.1. The GC content of the type genome is 31.12 % and the genome length is 1.26 Mbp.

Description of *Candidatus* Prochlorococcus peracicella sp. nov.

Candidatus Prochlorococcus peracicella (NL. fem. n. *peracicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp003280515*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902525125.1. The GC content of the type genome is 31.55 % and the genome length is 1.31 Mbp.

Description of *Candidatus* Prochlorococcus pericatio sp. nov.

Candidatus Prochlorococcus pericatio (NL. fem. n. *pericatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp002026015*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_002026015.1. The GC content of the type genome is 31.38 % and the genome length is 1.27 Mbp.

Description of *Candidatus* Prochlorococcus problatio sp. nov.

Candidatus Prochlorococcus problatio (NL. fem. n. *problatio* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp003279935*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003279935.1. The GC content of the type genome is 30.84 % and the genome length is 1.49 Mbp.

Description of *Candidatus* Prochlorococcus prospentia sp. nov.

Candidatus Prochlorococcus prospentia (NL. fem. n. *prospentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp003212375*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003212375.1. The GC content of the type genome is 30.78 % and the genome length is 1.18 Mbp.

Description of *Candidatus* Prochlorococcus ratifousia sp. nov.

Candidatus Prochlorococcus ratifousia (NL. fem. n. *ratifousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp902572915*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902572915.1. The GC content of the type genome is 31.47 % and the genome length is 0.98 Mbp.

Description of *Candidatus* Prochlorococcus recocessa sp. nov.

Candidatus Prochlorococcus recocessa (NL. fem. n. *recocessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp003216465*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003216465.1.

The GC content of the type genome is 30.82 % and the genome length is 1.56 Mbp.

Description of *Candidatus* Prochlorococcus recocimonia sp. nov.

Candidatus Prochlorococcus recocimonia (NL. fem. n. *recocimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp003210915*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003210915.1. The GC content of the type genome is 30.85 % and the genome length is 1.37 Mbp.

Description of *Candidatus* Prochlorococcus recocitia sp. nov.

Candidatus Prochlorococcus recocitia (NL. fem. n. *recocitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp003210655*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003210655.1. The GC content of the type genome is 31.08 % and the genome length is 1.01 Mbp.

Description of *Candidatus* Prochlorococcus recocivita sp. nov.

Candidatus Prochlorococcus recocivita (NL. fem. n. *recocivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp902537445*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902537445.1. The GC content of the type genome is 31.47 % and the genome length is 1.12 Mbp.

Description of *Candidatus* Prochlorococcus recogitica sp. nov.

Candidatus Prochlorococcus recogitica (NL. fem. n. *recogitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Prochlorococcus_A sp003281285*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003281285.1. The GC content of the type genome is 31.59 % and the genome length is 0.87 Mbp.

Description of *Candidatus* Prochlorococcus remediforma sp. nov.

Candidatus Prochlorococcus remediforma (NL. fem. n. *remediforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp003213855*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003213855.1. The GC content of the type genome is 31.73 % and the genome length is 1.31 Mbp.

Description of *Candidatus* Prochlorococcus repagicella sp. nov.

Candidatus Prochlorococcus repagicella (NL. fem. n. *repagicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp902539115*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902539115.1. The GC content of the type genome is 31.55 % and the genome length is 1.1 Mbp.

Description of *Candidatus* Prochlorococcus repecibra sp. nov.

Candidatus Prochlorococcus repecibra (NL. fem. n. *repecibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp000634195*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_000634195.1. The GC content of the type genome is 31.38 % and the genome length is 1.23 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "raw seawater".

Description of *Candidatus* Prochlorococcus repurentia sp. nov.

Candidatus Prochlorococcus repurentia (NL. fem. n. *repurentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp003281365*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003281365.1. The GC content of the type genome is 31.18 % and the genome length is 1.57 Mbp.

Description of *Candidatus* Prochlorococcus resalitas sp. nov.

Candidatus Prochlorococcus resalitas (NL. fem. n. *resalitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp003216775*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003216775.1. The GC content of the type genome is 31.18 % and the genome length is 1.64 Mbp.

Description of *Candidatus* Prochlorococcus retecibra sp. nov.

Candidatus Prochlorococcus retecibra (NL. fem. n. *retecibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp902518475*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902518475.1. The GC content of the type genome is 31.56 % and the genome length is 1.29 Mbp.

Description of *Candidatus* Prochlorococcus retecivita sp. nov.

Candidatus Prochlorococcus retecivita (NL. fem. n. *retecivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp902600475*. Although GTDB has assigned a

genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902600475.1. The GC content of the type genome is 31.24 % and the genome length is 1.36 Mbp.

Description of *Candidatus* Prochlorococcus robigitura sp. nov.

Candidatus Prochlorococcus robigitura (NL. fem. n. *robigitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp003209065*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003209065.1. The GC content of the type genome is 30.81 % and the genome length is 1.45 Mbp.

Description of *Candidatus* Prochlorococcus rosacitio sp. nov.

Candidatus Prochlorococcus rosacitio (NL. fem. n. *rosacitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp902622705*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902622705.1. The GC content of the type genome is 31.57 % and the genome length is 1.18 Mbp.

Description of *Candidatus* Prochlorococcus rubicax sp. nov.

Candidatus Prochlorococcus rubicax (NL. fem. n. *rubicax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp003278845*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902596945.1. The GC content of the type genome is 31.26 % and the genome length is 0.95 Mbp.

Description of *Candidatus* Prochlorococcus rubigitrix sp. nov.

Candidatus Prochlorococcus rubigitrix (NL. fem. n. *rubigitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp902574955*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902574955.1. The GC content of the type genome is 31.56 % and the genome length is 1.01 Mbp.

Description of *Candidatus* Prochlorococcus rubigitudo sp. nov.

Candidatus Prochlorococcus rubigitudo (NL. fem. n. *rubigitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp003281415*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003281415.1. The GC content of the type genome is 31.43 % and the genome length is 1.17 Mbp.

Description of *Candidatus* Prochlorococcus rurigiforma sp. nov.

Candidatus Prochlorococcus rurigiforma (NL. fem. n. *rurigiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp902522795*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902522795.1. The GC content of the type genome is 31.46 % and the genome length is 1.42 Mbp.

Description of *Candidatus* Prochlorococcus scammicula sp. nov.

Candidatus Prochlorococcus scammicula (NL. fem. n. *scammicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp003211135*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003211135.1. The GC content of the type genome is 30.68 % and the genome length is 1.42 Mbp.

Description of *Candidatus* Prochlorococcus scintatio sp. nov.

Candidatus Prochlorococcus scintatio (NL. fem. n. *scintatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp902537395*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902537395.1. The GC content of the type genome is 31.33 % and the genome length is 1.07 Mbp.

Description of *Candidatus* Prochlorococcus scombilega sp. nov.

Candidatus Prochlorococcus scombilega (NL. fem. n. *scombilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp003209795*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003209795.1. The GC content of the type genome is 30.88 % and the genome length is 1.14 Mbp.

Description of *Candidatus* Prochlorococcus secuniforma sp. nov.

Candidatus Prochlorococcus secuniforma (NL. fem. n. *secuniforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp003214195*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003214195.1. The GC content of the type genome is 31.3 % and the genome length is 1.18 Mbp.

Description of *Candidatus* Prochlorococcus semidentia sp. nov.

Candidatus Prochlorococcus semidentia (NL. fem. n. *semidentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp902623195*. Although GTDB has assigned a

genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902623195.1. The GC content of the type genome is 30.61 % and the genome length is 1.21 Mbp.

Description of *Candidatus* Prochlorococcus semipivita sp. nov.

Candidatus Prochlorococcus semipivita (NL. fem. n. *semipivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp003279875*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003279875.1. The GC content of the type genome is 30.6 % and the genome length is 1.42 Mbp.

Description of *Candidatus* Prochlorococcus senipilenta sp. nov.

Candidatus Prochlorococcus senipilenta (NL. fem. n. *senipilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp003281405*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003281405.1. The GC content of the type genome is 31.34 % and the genome length is 1.57 Mbp.

Description of *Candidatus* Prochlorococcus siminentia sp. nov.

Candidatus Prochlorococcus siminentia (NL. fem. n. *siminentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp003281125*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003281125.1. The GC content of the type genome is 31.66 % and the genome length is 1.05 Mbp.

Description of *Candidatus* Prochlorococcus solificella sp. nov.

Candidatus Prochlorococcus solificella (NL. fem. n. *solificella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp000635495*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_000634355.1. The GC content of the type genome is 31.14 % and the genome length is 0.91 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "raw seawater".

Description of *Candidatus* Prochlorococcus subinentia sp. nov.

Candidatus Prochlorococcus subinentia (NL. fem. n. *subinentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp902525075*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902525075.1. The GC content of the type genome is 31.33 % and the genome length is 1.4 Mbp.

Description of *Candidatus* Prochlorococcus subucetta sp. nov.

Candidatus Prochlorococcus subucetta (NL. fem. n. *subucetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp003279535*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003279535.1. The GC content of the type genome is 31.78 % and the genome length is 1.17 Mbp.

Description of *Candidatus* Prochlorococcus taraxax sp. nov.

Candidatus Prochlorococcus taraxax (NL. fem. n. *taraxax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp003280655*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the

genus. The type genome for the species is the GenBank assembly GCA_902573135.1. The GC content of the type genome is 31.57 % and the genome length is 1.48 Mbp.

Description of *Candidatus* Prochlorococcus tibicibra sp. nov.

Candidatus Prochlorococcus tibicibra (NL. fem. n. *tibicibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp003213275*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003213275.1. The GC content of the type genome is 31.4 % and the genome length is 1.12 Mbp.

Description of *Candidatus* Prochlorococcus tirocentia sp. nov.

Candidatus Prochlorococcus tirocentia (NL. fem. n. *tirocentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp902624785*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902624785.1. The GC content of the type genome is 29.66 % and the genome length is 1.12 Mbp.

Description of *Candidatus* Prochlorococcus tolutatica sp. nov.

Candidatus Prochlorococcus tolutatica (NL. fem. n. *tolutatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp002025865*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902618265.1. The GC content of the type genome is 31.5 % and the genome length is 1.23 Mbp.

Description of *Candidatus* Prochlorococcus tolutifica sp. nov.

Candidatus Prochlorococcus tolutifica (NL. fem. n. *tolutifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp902626525*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902626525.1. The GC content of the type genome is 30.77 % and the genome length is 1.53 Mbp.

Description of *Candidatus* Prochlorococcus tubicigena sp. nov.

Candidatus Prochlorococcus tubicigena (NL. fem. n. *tubicigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp002026165*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_002026165.1. The GC content of the type genome is 31.23 % and the genome length is 1.41 Mbp.

Description of *Candidatus* Prochlorococcus undevatio sp. nov.

Candidatus Prochlorococcus undevatio (NL. fem. n. *undevatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp003279855*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003279855.1. The GC content of the type genome is 30.86 % and the genome length is 1.66 Mbp.

Description of *Candidatus* Prochlorococcus undeventia sp. nov.

Candidatus Prochlorococcus undeventia (NL. fem. n. *undeventia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp003216355*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003216355.1. The GC content of the type genome is 31.57 % and the genome length is 1.31 Mbp.

Description of *Candidatus* Prochlorococcus unetvitica sp. nov.

Candidatus Prochlorococcus unetvitica (NL. fem. n. *unetvitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp902617605*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902617605.1. The GC content of the type genome is 31.5 % and the genome length is 1.17 Mbp.

Description of *Candidatus* Prochlorococcus unetvitura sp. nov.

Candidatus Prochlorococcus unetvitura (NL. fem. n. *unetvitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp902558895*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902558895.1. The GC content of the type genome is 31.72 % and the genome length is 1.15 Mbp.

Description of *Candidatus* Prochlorococcus vacilugo sp. nov.

Candidatus Prochlorococcus vacilugo (NL. fem. n. *vacilugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp902550485*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902550485.1. The GC content of the type genome is 30.91 % and the genome length is 0.85 Mbp.

Description of *Candidatus* Prochlorococcus venucatica sp. nov.

Candidatus Prochlorococcus venucatica (NL. fem. n. *venucatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp902574405*. Although GTDB has assigned a

genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902574405.1. The GC content of the type genome is 31.31 % and the genome length is 0.98 Mbp.

Description of *Candidatus* Prochlorococcus viceciforma sp. nov.

Candidatus Prochlorococcus viceciforma (NL. fem. n. *viceciforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp001989455*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902525905.1. The GC content of the type genome is 31.65 % and the genome length is 1.15 Mbp.

Description of *Candidatus* Prochlorococcus vitigentia sp. nov.

Candidatus Prochlorococcus vitigentia (NL. fem. n. *vitigentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp902571795*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902571795.1. The GC content of the type genome is 31.2 % and the genome length is 1.22 Mbp.

Description of *Candidatus* Prochlorococcus xeropifica sp. nov.

Candidatus Prochlorococcus xeropifica (NL. fem. n. *xeropifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_A sp902536545*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902536545.1. The GC content of the type genome is 31.45 % and the genome length is 1.05 Mbp.

Description of *Candidatus* Prochlorococcus accoretta sp. nov.

Candidatus Prochlorococcus accoretta (NL. fem. n. *accoretta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_B sp003216175*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003216175.1. The GC content of the type genome is 35.2 % and the genome length is 1.58 Mbp.

Description of *Candidatus* Prochlorococcus acroledo sp. nov.

Candidatus Prochlorococcus acroledo (NL. fem. n. *acroledo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_B sp003283665*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003283665.1. The GC content of the type genome is 34.89 % and the genome length is 0.85 Mbp.

Description of *Candidatus* Prochlorococcus adrotiforma sp. nov.

Candidatus Prochlorococcus adrotiforma (NL. fem. n. *adrotiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_B sp000757865*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_000757865.1. The GC content of the type genome is 34.91 % and the genome length is 1.93 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "water".

Description of *Candidatus* Prochlorococcus angipiforma sp. nov.

Candidatus Prochlorococcus angipiforma (NL. fem. n. *angipiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_B sp003283745*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the

genus. The type genome for the species is the GenBank assembly GCA_003283745.1. The GC content of the type genome is 34.84 % and the genome length is 0.96 Mbp.

Description of *Candidatus* Prochlorococcus ascisitas sp. nov.

Candidatus Prochlorococcus ascisitas (NL. fem. n. *ascisitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_B sp003278445*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003278445.1. The GC content of the type genome is 34.38 % and the genome length is 1.09 Mbp.

Description of *Candidatus* Prochlorococcus binocago sp. nov.

Candidatus Prochlorococcus binocago (NL. fem. n. *binocago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_B sp003279585*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003279585.1. The GC content of the type genome is 34.58 % and the genome length is 1.59 Mbp.

Description of *Candidatus* Prochlorococcus capabatica sp. nov.

Candidatus Prochlorococcus capabatica (NL. fem. n. *capabatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_B sp003215315*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003215315.1. The GC content of the type genome is 35.63 % and the genome length is 1.16 Mbp.

Description of *Candidatus* Prochlorococcus cenobilenta sp. nov.

Candidatus Prochlorococcus cenobilenta (NL. fem. n. *cenobilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_B sp003216275*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003216275.1. The GC content of the type genome is 34.38 % and the genome length is 1.85 Mbp.

Description of *Candidatus* Prochlorococcus cilicitica sp. nov.

Candidatus Prochlorococcus cilicitica (NL. fem. n. *cilicitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_B sp003280445*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003280445.1. The GC content of the type genome is 35.09 % and the genome length is 1.37 Mbp.

Description of *Candidatus* Prochlorococcus cisalicula sp. nov.

Candidatus Prochlorococcus cisalicula (NL. fem. n. *cisalicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_B sp902564695*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902564695.1. The GC content of the type genome is 34.1 % and the genome length is 1.44 Mbp.

Description of *Candidatus* Prochlorococcus cituvastra sp. nov.

Candidatus Prochlorococcus cituvastra (NL. fem. n. *cituvastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_B sp003279565*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003279565.1. The GC content of the type genome is 34.75 % and the genome length is 1.63 Mbp.

Description of *Candidatus* Prochlorococcus dececousia sp. nov.

Candidatus Prochlorococcus dececousia (NL. fem. n. *dececousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_B sp003216295*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003216295.1. The GC content of the type genome is 34.44 % and the genome length is 1.59 Mbp.

Description of *Candidatus* Prochlorococcus denupousia sp. nov.

Candidatus Prochlorococcus denupousia (NL. fem. n. *denupousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_B sp003284445*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003284445.1. The GC content of the type genome is 35.01 % and the genome length is 1.47 Mbp.

Description of *Candidatus* Prochlorococcus desorimonia sp. nov.

Candidatus Prochlorococcus desorimonia (NL. fem. n. *desorimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_B sp003216895*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003216895.1. The GC content of the type genome is 34.68 % and the genome length is 1.38 Mbp.

Description of *Candidatus* Prochlorococcus dibucilenta sp. nov.

Candidatus Prochlorococcus dibucilenta (NL. fem. n. *dibucilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_B sp003283685*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the

genus. The type genome for the species is the GenBank assembly GCA_003283685.1. The GC content of the type genome is 35.12 % and the genome length is 0.96 Mbp.

Description of *Candidatus* Prochlorococcus dicanicella sp. nov.

Candidatus Prochlorococcus dicanicella (NL. fem. n. *dicanicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_B sp003284375*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003284375.1. The GC content of the type genome is 35.07 % and the genome length is 1.43 Mbp.

Description of *Candidatus* Prochlorococcus dimadicula sp. nov.

Candidatus Prochlorococcus dimadicula (NL. fem. n. *dimadicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_B sp003216975*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003216975.1. The GC content of the type genome is 34.59 % and the genome length is 1.7 Mbp.

Description of *Candidatus* Prochlorococcus dimidetta sp. nov.

Candidatus Prochlorococcus dimidetta (NL. fem. n. *dimidetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_B sp003279655*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003279655.1. The GC content of the type genome is 34.76 % and the genome length is 1.67 Mbp.

Description of *Candidatus* Prochlorococcus doxolastra sp. nov.

Candidatus Prochlorococcus doxolastra (NL. fem. n. *doxolastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_B sp003216955*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003216955.1. The GC content of the type genome is 34.68 % and the genome length is 1.73 Mbp.

Description of *Candidatus* Prochlorococcus ecciletta sp. nov.

Candidatus Prochlorococcus ecciletta (NL. fem. n. *ecciletta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_B sp003216575*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003216575.1. The GC content of the type genome is 34.32 % and the genome length is 1.68 Mbp.

Description of *Candidatus* Prochlorococcus feficedo sp. nov.

Candidatus Prochlorococcus feficedo (NL. fem. n. *feficedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_B sp003280265*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003280265.1. The GC content of the type genome is 34.6 % and the genome length is 1.21 Mbp.

Description of *Candidatus* Prochlorococcus immemitoga sp. nov.

Candidatus Prochlorococcus immemitoga (NL. fem. n. *immemitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_B sp003213355*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003213355.1. The GC content of the type genome is 35.28 % and the genome length is 1.27 Mbp.

Description of *Candidatus* Prochlorococcus ingigimonas sp. nov.

Candidatus Prochlorococcus ingigimonas (NL. fem. n. *ingigimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_B sp003216595*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003216595.1. The GC content of the type genome is 34.85 % and the genome length is 1.62 Mbp.

Description of *Candidatus* Prochlorococcus monogatio sp. nov.

Candidatus Prochlorococcus monogatio (NL. fem. n. *monogatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_B sp003216375*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003216675.1. The GC content of the type genome is 34.86 % and the genome length is 1.76 Mbp.

Description of *Candidatus* Prochlorococcus murelousia sp. nov.

Candidatus Prochlorococcus murelousia (NL. fem. n. *murelousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_B sp902634795*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902634795.1. The GC content of the type genome is 34.9 % and the genome length is 1.11 Mbp.

Description of *Candidatus* Prochlorococcus obtenigena sp. nov.

Candidatus Prochlorococcus obtenigena (NL. fem. n. *obtenigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_B sp003212625*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the

genus. The type genome for the species is the GenBank assembly GCA_003212625.1. The GC content of the type genome is 34.34 % and the genome length is 1.05 Mbp.

Description of *Candidatus* Prochlorococcus pinacicula sp. nov.

Candidatus Prochlorococcus pinacicula (NL. fem. n. *pinacicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_B sp902629395*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902629395.1. The GC content of the type genome is 34.98 % and the genome length is 1.17 Mbp.

Description of *Candidatus* Prochlorococcus recomitura sp. nov.

Candidatus Prochlorococcus recomitura (NL. fem. n. *recomitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_B sp003277985*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003277985.1. The GC content of the type genome is 34.85 % and the genome length is 1.49 Mbp.

Description of *Candidatus* Prochlorococcus semidiforma sp. nov.

Candidatus Prochlorococcus semidiforma (NL. fem. n. *semidiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_B sp003279635*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003279635.1. The GC content of the type genome is 35.08 % and the genome length is 1.76 Mbp.

Description of *Candidatus* Prochlorococcus semigitudo sp. nov.

Candidatus Prochlorococcus semigitudo (NL. fem. n. *semigitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_B sp003209755*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003209755.1. The GC content of the type genome is 34.63 % and the genome length is 1.72 Mbp.

Description of *Candidatus* Prochlorococcus siligibra sp. nov.

Candidatus Prochlorococcus siligibra (NL. fem. n. *siligibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_B sp003216815*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003216815.1. The GC content of the type genome is 34.55 % and the genome length is 1.65 Mbp.

Description of *Candidatus* Prochlorococcus sitelisca sp. nov.

Candidatus Prochlorococcus sitelisca (NL. fem. n. *sitelisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_B sp003216715*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003216715.1. The GC content of the type genome is 34.57 % and the genome length is 1.62 Mbp.

Description of *Candidatus* Prochlorococcus sonabilega sp. nov.

Candidatus Prochlorococcus sonabilega (NL. fem. n. *sonabilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_B sp003279455*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003279455.1. The GC content of the type genome is 34.45 % and the genome length is 1.28 Mbp.

Description of *Candidatus* Prochlorococcus velifugo sp. nov.

Candidatus Prochlorococcus velifugo (NL. fem. n. *velifugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_B sp003215895*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003215895.1. The GC content of the type genome is 35.29 % and the genome length is 0.96 Mbp.

Description of *Candidatus* Prochlorococcus viburax sp. nov.

Candidatus Prochlorococcus viburax (NL. fem. n. *viburax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_B sp003284185*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003284185.1. The GC content of the type genome is 34.74 % and the genome length is 0.96 Mbp.

Description of *Candidatus* Prochlorococcus vitupimonia sp. nov.

Candidatus Prochlorococcus vitupimonia (NL. fem. n. *vitupimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_B sp003215695*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003215695.1. The GC content of the type genome is 36.29 % and the genome length is 0.91 Mbp.

Description of *Candidatus* Prochlorococcus voragisca sp. nov.

Candidatus Prochlorococcus voragisca (NL. fem. n. *voragisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_B sp003279615*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the

genus. The type genome for the species is the GenBank assembly GCA_003279505.1. The GC content of the type genome is 34.57 % and the genome length is 1.33 Mbp.

Description of *Candidatus* Prochlorococcus defacilenta sp. nov.

Candidatus Prochlorococcus defacilenta (NL. fem. n. *defacilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_C sp000760295*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_000760335.1. The GC content of the type genome is 50.61 % and the genome length is 2.58 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Ocean".

Description of *Candidatus* Prochlorococcus inardivita sp. nov.

Candidatus Prochlorococcus inardivita (NL. fem. n. *inardivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_C sp003214855*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003214855.1. The GC content of the type genome is 49.29 % and the genome length is 2.13 Mbp.

Description of *Candidatus* Prochlorococcus invecicella sp. nov.

Candidatus Prochlorococcus invecicella (NL. fem. n. *invecicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_D sp003217035*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003217035.1. The GC content of the type genome is 37.42 % and the genome length is 1.46 Mbp.

Description of *Candidatus* Prochlorococcus munifica sp. nov.

Candidatus Prochlorococcus munifica (NL. fem. n. *munifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochlorococcus_D sp000760175*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_000760175.1. The GC content of the type genome is 37.02 % and the genome length is 1.71 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Ocean".

Description of *Candidatus* Prochloron bicaligena sp. nov.

Candidatus Prochloron bicaligena (NL. fem. n. *bicaligena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prochloron sp014323965*. The type genome for the species is the GenBank assembly GCA_014323965.1. The GC content of the type genome is 43.91 % and the genome length is 2.79 Mbp.

Description of *Candidatus* Proclana inexsimonas sp. nov.

Candidatus Proclana inexsimonas (NL. fem. n. *inexsimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *VMEW01 sp007375735*. The type genome for the species is the GenBank assembly GCA_007375735.1. The GC content of the type genome is 60.0 % and the genome length is 1.4 Mbp.

Description of *Candidatus* Proclana gen. nov.

Candidatus Proclana (NL. fem. n. *Proclana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *VMEW01*. The type species for the genus is *Candidatus* Proclana inexsimonas .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Proclella defositura sp. nov.

Candidatus Proclella defositura (NL. fem. n. *defositura* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RECH01 sp007694125*. The type genome for the species is the GenBank assembly GCA_007694125.1. The GC content of the type genome is 53.93 % and the genome length is 5.01 Mbp.

Description of *Candidatus* Proclella gen. nov.

Candidatus Proclella (NL. fem. n. *Proclella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RECH01*. The type species for the genus is *Candidatus* Proclella defositura .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Proclia voragessa sp. nov.

Candidatus Proclia voragessa (NL. fem. n. *voragessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-12-FULL-50-11-A sp001804315*. The type genome for the species is the GenBank assembly GCA_001804315.1. The GC content of the type genome is 49.88 % and the genome length is 2.24 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under low O2 conditions; 1.2 micron filter; full assembly".

Description of *Candidatus* Proclia gen. nov.

Candidatus Proclia (NL. fem. n. *Proclia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *2-12-FULL-50-11-A*. The type species for the genus is *Candidatus* Proclia voragessa .

According to the original version of GTDB R06-RS202, this genus belongs to the family *01-FULL-45-10b*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Semipidaceae.

Description of *Candidatus* Proclosa navicitia sp. nov.

Candidatus Proclosa navicitia (NL. fem. n. *navicitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AA32 sp003222275*. The type genome for the species is the GenBank assembly GCA_003222275.1. The GC content of the type genome is 69.62 % and the genome length is 6.76 Mbp.

Description of *Candidatus* Proclosa gen. nov.

Candidatus Proclosa (NL. fem. n. *Proclosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *AA32*. The type species for the genus is *Candidatus* Proclosa navicitia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *Fen-336*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Exsanellaceae.

Description of *Candidatus* Proclosa recomibula sp. nov.

Candidatus Proclosa recomibula (NL. fem. n. *recomibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AA32 sp003223555*. The type genome for the species is the GenBank assembly GCA_003223555.1. The GC content of the type genome is 71.04 % and the genome length is 5.39 Mbp.

Description of *Candidatus* Proclula ceraritura sp. nov.

Candidatus Proclula ceraritura (NL. fem. n. *ceraritura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYMU01 sp012521215*. The type genome for the species is the GenBank assembly GCA_012521215.1. The GC content of the type genome is 41.76 % and the genome length is 2.52 Mbp.

Description of *Candidatus* Proclula gen. nov.

Candidatus Proclula (NL. fem. n. *Proclula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAYMU01*. The type species for the genus is *Candidatus* Proclula ceraritura .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Proclula cotenago sp. nov.

Candidatus Proclula cotenago (NL. fem. n. *cotenago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYMU01 sp012523535*. The type genome for the species is the GenBank assembly GCA_012523535.1. The GC content of the type genome is 42.54 % and the genome length is 2.27 Mbp.

Description of *Candidatus* Proclula ficedibra sp. nov.

Candidatus Proclula ficedibra (NL. fem. n. *ficedibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYMU01 sp012520405*. The type genome for the species is the GenBank assembly GCA_012520405.1. The GC content of the type genome is 41.81 % and the genome length is 2.54 Mbp.

Description of *Candidatus* Procrana adsecitoga sp. nov.

Candidatus Procrana adsecitoga (NL. fem. n. *adsecitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABABU01 sp014238065*. The type genome for the species is the GenBank assembly GCA_014238065.1. The GC content of the type genome is 62.19 % and the genome length is 3.94 Mbp.

Description of *Candidatus* Procrana gen. nov.

Candidatus Procrana (NL. fem. n. *Procrana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABABU01*. The type species for the genus is *Candidatus* Procrana

adsecitoga .

According to the original version of GTDB R06-RS202, this genus belongs to the family *TK06*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Redaculaceae.

Description of *Candidatus* Procraria reduvago sp. nov.

Candidatus Procraria reduvago (NL. fem. n. *reduvago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *BMS3ABIN03 sp002898075*. The type genome for the species is the GenBank assembly GCA_002898075.1. The GC content of the type genome is 36.38 % and the genome length is 3.76 Mbp.

Description of *Candidatus* Procraria gen. nov.

Candidatus Procraria (NL. fem. n. *Procraria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *BMS3ABIN03*. The type species for the genus is *Candidatus* Procraria reduvago .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Procrida corocigena sp. nov.

Candidatus Procrida corocigena (NL. fem. n. *corocigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *VMCJ01 sp008081395*. The type genome for the species is the GenBank assembly GCA_008081395.1. The GC content of the type genome is 47.09 % and the genome length is 2.57 Mbp.

Description of *Candidatus* Procrida gen. nov.

Candidatus Procrida (NL. fem. n. *Procrida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *VMCJ01*. The type species for the genus is *Candidatus* Procrida corocigena .

According to the original version of GTDB R06-RS202, this genus belongs to the family *Bin95*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vepalariaceae.

Description of *Candidatus* Procrula adbelax sp. nov.

Candidatus Procrula adbelax (NL. fem. n. *adbelax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *XN24 sp011058255*. The type genome for the species is the GenBank assembly RS_GCF_011058255.1. The GC content of the type genome is 69.1 % and the genome length is 3.11 Mbp.

Description of *Candidatus* Procrula gen. nov.

Candidatus Procrula (NL. fem. n. *Procrula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *XN24*. The type species for the genus is *Candidatus* Procrula adbelax .

According to the original version of GTDB R06-RS202, this genus belongs to the family *PWYM01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cisalellaceae.

Description of *Candidatus* Procrula coturicella sp. nov.

Candidatus Procrula coturicella (NL. fem. n. *coturicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *XN24 sp011064545*. The type genome for the species is the GenBank assembly RS_GCF_011064545.1. The GC content of the type genome is 66.49 % and the genome length is 3.29 Mbp.

Description of *Candidatus* Procrula videlibra sp. nov.

Candidatus Procrula videlibra (NL. fem. n. *videlibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *XN24 sp011089885*. The type genome for the species is the GenBank

assembly RS_GCF_011089885.1. The GC content of the type genome is 67.77 % and the genome length is 3.13 Mbp.

Description of *Candidatus* Prodrana advigentia sp. nov.

Candidatus Prodrana advigentia (NL. fem. n. *advigentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PALSA-1332 sp003152105*. The type genome for the species is the GenBank assembly GCA_003152105.1. The GC content of the type genome is 33.86 % and the genome length is 1.22 Mbp.

Description of *Candidatus* Prodrana gen. nov.

Candidatus Prodrana (NL. fem. n. *Prodrana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PALSA-1332*. The type species for the genus is *Candidatus* Prodrana advigentia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA12049*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Catecariaceae.

Description of *Candidatus* Prodraria depopitoga sp. nov.

Candidatus Prodraria depopitoga (NL. fem. n. *depopitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CF-16 sp005880805*. The type genome for the species is the GenBank assembly GCA_005880805.1. The GC content of the type genome is 68.98 % and the genome length is 2.75 Mbp.

Description of *Candidatus* Prodraria gen. nov.

Candidatus Prodraria (NL. fem. n. *Prodraria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CF-16*. The type species for the genus is *Candidatus* Prodraria depopitoga .

According to the original version of GTDB R06-RS202, this genus belongs to the family

CSP1-4. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Hecatiaceae.

Description of *Candidatus* Prodraria fumifibra sp. nov.

Candidatus Prodraria fumifibra (NL. fem. n. *fumifibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CF-16 sp005883615*. The type genome for the species is the GenBank assembly GCA_005883615.1. The GC content of the type genome is 68.02 % and the genome length is 3.06 Mbp.

Description of *Candidatus* Prodrida immobigena sp. nov.

Candidatus Prodrida immobigena (NL. fem. n. *immobigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HGM13006 sp900756575*. The type genome for the species is the GenBank assembly GCA_900756575.1. The GC content of the type genome is 55.85 % and the genome length is 2.83 Mbp.

Description of *Candidatus* Prodrida gen. nov.

Candidatus Prodrida (NL. fem. n. *Prodrida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *HGM13006*. The type species for the genus is *Candidatus* Prodrida immobigena .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Prodrida ornitibula sp. nov.

Candidatus Prodrida ornitibula (NL. fem. n. *ornitibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HGM13006 sp900757695*. The type genome for the species is the GenBank assembly GCA_900757695.1. The GC content of the type genome is 54.21 % and the genome length is 3.5 Mbp.

Description of *Candidatus* Prodrosa plascicella sp. nov.

Candidatus Prodrosa plascicella (NL. fem. n. *plascicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYGD01 sp012727915*. The type genome for the species is the GenBank assembly GCA_012727915.1. The GC content of the type genome is 25.19 % and the genome length is 0.87 Mbp.

Description of *Candidatus* Prodrosa gen. nov.

Candidatus Prodrosa (NL. fem. n. *Prodrosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAYGD01*. The type species for the genus is *Candidatus* Prodrosa plascicella .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA660*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vitigellaceae.

Description of *Candidatus* Prodrula obrigifica sp. nov.

Candidatus Prodrula obrigifica (NL. fem. n. *obrigifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HGM12619 sp900753195*. The type genome for the species is the GenBank assembly RS_GCF_900753195.1. The GC content of the type genome is 48.73 % and the genome length is 1.58 Mbp.

Description of *Candidatus* Prodrula gen. nov.

Candidatus Prodrula (NL. fem. n. *Prodrula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *HGM12619*. The type species for the genus is *Candidatus* Prodrula obrigifica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA644*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Bifisanaceae.

Description of *Candidatus* Prognana colutatio sp. nov.

Candidatus Prognana colutatio (NL. fem. n. *colutatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2632 sp002359825*. The type genome for the species is the GenBank assembly GCA_002359825.1. The GC content of the type genome is 37.13 % and the genome length is 2.88 Mbp.

Description of *Candidatus* Prognana gen. nov.

Candidatus Prognana (NL. fem. n. *Prognana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA2632*. The type species for the genus is *Candidatus* Prognana colutatio .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Prognana indomitrix sp. nov.

Candidatus Prognana indomitrix (NL. fem. n. *indomitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2632 sp002364735*. The type genome for the species is the GenBank assembly GCA_002364735.1. The GC content of the type genome is 36.24 % and the genome length is 3.41 Mbp.

Description of *Candidatus* Prognana lacinitudo sp. nov.

Candidatus Prognana lacinitudo (NL. fem. n. *lacinitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2632 sp012840785*. The type genome for the species is the GenBank assembly GCA_012840785.1. The GC content of the type genome is 37.72 % and the genome length is 2.33 Mbp.

Description of *Candidatus* Prognella ardificella sp. nov.

Candidatus Prognella ardificella (NL. fem. n. *ardificella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SALINAS58 sp013336795*. The type genome for the species is the GenBank assembly RS_GCF_013336795.1. The GC content of the type genome is 61.38 % and the genome length is 2.86 Mbp.

Description of *Candidatus* Prognella gen. nov.

Candidatus Prognella (NL. fem. n. *Prognella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SALINAS58*. The type species for the genus is *Candidatus* Prognella ardificella .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Prognella lacinugo sp. nov.

Candidatus Prognella lacinugo (NL. fem. n. *lacinugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SALINAS58 sp012979275*. The type genome for the species is the GenBank assembly RS_GCF_012979275.1. The GC content of the type genome is 63.02 % and the genome length is 2.63 Mbp.

Description of *Candidatus* Prognia dimadiforma sp. nov.

Candidatus Prognia dimadiforma (NL. fem. n. *dimadiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WHSV01 sp009379915*. The type genome for the species is the GenBank assembly GCA_009379915.1. The GC content of the type genome is 64.35 % and the genome length is 3.39 Mbp.

Description of *Candidatus* Prognia gen. nov.

Candidatus Prognia (NL. fem. n. *Prognia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WHSV01*. The type species for the genus is *Candidatus* Prognia

dimadiforma .

According to the original version of GTDB R06-RS202, this genus belongs to the family *WHSQ01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Recumanaceae.

Description of *Candidatus* Prognida orgetatio sp. nov.

Candidatus Prognida orgetatio (NL. fem. n. *orgetatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SZUA-186 sp003230545*. The type genome for the species is the GenBank assembly GCA_003230545.1. The GC content of the type genome is 58.47 % and the genome length is 1.92 Mbp.

Description of *Candidatus* Prognida gen. nov.

Candidatus Prognida (NL. fem. n. *Prognida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SZUA-186*. The type species for the genus is *Candidatus* Prognida orgetatio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA9214*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Nehalariaceae.

Description of *Candidatus* Prognosa inmemilega sp. nov.

Candidatus Prognosa inmemilega (NL. fem. n. *inmemilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *R-H-3 sp002198655*. The type genome for the species is the GenBank assembly RS_GCF_002198655.1. The GC content of the type genome is 74.24 % and the genome length is 7.2 Mbp.

Description of *Candidatus* Prognosa gen. nov.

Candidatus Prognosa (NL. fem. n. *Prognosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this genus is *R-H-3*. The type species for the genus is *Candidatus* Prognosa inmemilega .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Prognosa manupicula sp. nov.

Candidatus Prognosa manupicula (NL. fem. n. *manupicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *R-H-3 sp002198675*. The type genome for the species is the GenBank assembly RS_GCF_002198675.1. The GC content of the type genome is 74.18 % and the genome length is 7.26 Mbp.

Description of *Candidatus* Prognula eclecitura sp. nov.

Candidatus Prognula eclecitura (NL. fem. n. *eclecitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABWCG01 sp013359225*. The type genome for the species is the GenBank assembly GCA_013359225.1. The GC content of the type genome is 42.72 % and the genome length is 1.01 Mbp.

Description of *Candidatus* Prognula gen. nov.

Candidatus Prognula (NL. fem. n. *Prognula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABWCG01*. The type species for the genus is *Candidatus* Prognula eclecitura .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA6539*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Rubecariaceae.

Description of *Candidatus* Prograria cerimedo sp. nov.

Candidatus Prograria cerimedo (NL. fem. n. *cerimedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *CADCTG01 sp902805625*. The type genome for the species is the GenBank assembly GCA_902805625.1. The GC content of the type genome is 72.32 % and the genome length is 3.77 Mbp.

Description of *Candidatus* Prograria gen. nov.

Candidatus Prograria (NL. fem. n. *Prograria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CADCTG01*. The type species for the genus is *Candidatus* Prograria cerimedo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Prograria detunilenta sp. nov.

Candidatus Prograria detunilenta (NL. fem. n. *detunilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CADCTG01 sp902805645*. The type genome for the species is the GenBank assembly GCA_902805645.1. The GC content of the type genome is 72.5 % and the genome length is 4.29 Mbp.

Description of *Candidatus* Progria absegugo sp. nov.

Candidatus Progria absegugo (NL. fem. n. *absegugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DUMS01 sp012839745*. The type genome for the species is the GenBank assembly GCA_012839745.1. The GC content of the type genome is 36.38 % and the genome length is 2.17 Mbp.

Description of *Candidatus* Progria gen. nov.

Candidatus Progria (NL. fem. n. *Progria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DUMS01*. The type species for the genus is *Candidatus* Progria absegugo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Progrida pinigax sp. nov.

Candidatus Progrida pinigax (NL. fem. n. *pinigax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CETP13 sp001885315*. The type genome for the species is the GenBank assembly GCA_001885315.1. The GC content of the type genome is 33.37 % and the genome length is 2.54 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "activated sludge".

Description of *Candidatus* Progrida gen. nov.

Candidatus Progrida (NL. fem. n. *Progrida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CETP13*. The type species for the genus is *Candidatus* Progrida pinigax .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Progrosa demulitoga sp. nov.

Candidatus Progrosa demulitoga (NL. fem. n. *demulitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CADBRU01 sp902797165*. The type genome for the species is the GenBank assembly GCA_902797165.1. The GC content of the type genome is 43.68 % and the genome length is 1.31 Mbp.

Description of *Candidatus* Progrosa gen. nov.

Candidatus Progrosa (NL. fem. n. *Progrosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CADBRU01*. The type species for the genus is *Candidatus* Progrosa demulitoga .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Progrosa innecitrix sp. nov.

Candidatus Progrosa innecitrix (NL. fem. n. *innecitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CADBRU01 sp900762815*. The type genome for the species is the GenBank assembly RS_GCF_900762815.1. The GC content of the type genome is 54.17 % and the genome length is 1.31 Mbp.

Description of *Candidatus* Progrula dupunax sp. nov.

Candidatus Progrula dupunax (NL. fem. n. *dupunax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYDK01 sp012729295*. The type genome for the species is the GenBank assembly GCA_012729295.1. The GC content of the type genome is 46.94 % and the genome length is 2.68 Mbp.

Description of *Candidatus* Progrula gen. nov.

Candidatus Progrula (NL. fem. n. *Progrula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAYDK01*. The type species for the genus is *Candidatus* Progrula dupunax .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Progrula inresatica sp. nov.

Candidatus Progrula inresatica (NL. fem. n. *inresatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYDK01 sp012523305*. The type genome for the species is the GenBank assembly GCA_012523305.1. The GC content of the type genome is 44.85 % and the genome length is 2.56 Mbp.

Description of *Candidatus* Prolixibacter didacago sp. nov.

Candidatus Prolixibacter didacago (NL. fem. n. *didacago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prolixibacter sp009617875*. The type genome for the species is the GenBank assembly RS_GCF_009617875.1. The GC content of the type genome is 45.1 % and the genome length is 5.14 Mbp.

Description of *Candidatus* Prolixibacter hecatitio sp. nov.

Candidatus Prolixibacter hecatitio (NL. fem. n. *hecatitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prolixibacter sp009617895*. The type genome for the species is the GenBank assembly RS_GCF_009617895.1. The GC content of the type genome is 44.66 % and the genome length is 3.96 Mbp.

Description of *Candidatus* Promicromonospora macilentia sp. nov.

Candidatus Promicromonospora macilentia (NL. fem. n. *macilentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Promicromonospora sp900608595*. The type genome for the species is the GenBank assembly RS_GCF_900608595.1. The GC content of the type genome is 71.2 % and the genome length is 6.58 Mbp.

Description of *Candidatus* Promicromonospora pavicibra sp. nov.

Candidatus Promicromonospora pavicibra (NL. fem. n. *pavicibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Promicromonospora sp003058225*. The type genome for the species is the GenBank assembly RS_GCF_004341335.1. The GC content of the type genome is 71.43 % and the genome length is 6.41 Mbp.

Description of *Candidatus* Promineofilum hirunicella sp. nov.

Candidatus Promineofilum hirunicella (NL. fem. n. *hirunicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Promineofilum sp014237545*. The type genome for the species is the GenBank assembly GCA_014237545.1. The GC content of the type genome is 61.8 %

and the genome length is 5.32 Mbp.

Description of *Candidatus* Propionibacterium taraxitrix sp. nov.

Candidatus Propionibacterium taraxitrix (NL. fem. n. *taraxitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Propionibacterium sp900289195*. The type genome for the species is the GenBank assembly RS_GCF_900289195.1. The GC content of the type genome is 68.86 % and the genome length is 2.78 Mbp.

Description of *Candidatus* Propioniciclava artocitoga sp. nov.

Candidatus Propioniciclava artocitoga (NL. fem. n. *artocitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Propioniciclava sp012517965*. The type genome for the species is the GenBank assembly GCA_012517965.1. The GC content of the type genome is 72.12 % and the genome length is 3.27 Mbp.

Description of *Candidatus* Propionicimonas aciscitia sp. nov.

Candidatus Propionicimonas aciscitia (NL. fem. n. *aciscitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Propionicimonas sp013791955*. The type genome for the species is the GenBank assembly GCA_013791955.1. The GC content of the type genome is 64.95 % and the genome length is 3.1 Mbp.

Description of *Candidatus* Propionicimonas conipibra sp. nov.

Candidatus Propionicimonas conipibra (NL. fem. n. *conipibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Propionicimonas sp001603275*. The type genome for the species is the GenBank assembly GCA_001603275.1. The GC content of the type genome is 67.64 % and the genome length is 3.05 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "3 replicate cellulose-degrading anaerobic digesters sampled at day 96 and day 362".

Description of *Candidatus* Propionicimonas desucitoga sp. nov.

Candidatus Propionicimonas desucitoga (NL. fem. n. *desucitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Propionicimonas sp003451975*. The type genome for the species is the GenBank assembly GCA_003451975.1. The GC content of the type genome is 64.3 % and the genome length is 2.72 Mbp.

Description of *Candidatus* Propionicimonas favoniforma sp. nov.

Candidatus Propionicimonas favoniforma (NL. fem. n. *favoniforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Propionicimonas sp002843035*. The type genome for the species is the GenBank assembly GCA_002843035.1. The GC content of the type genome is 69.9 % and the genome length is 3.84 Mbp.

Description of *Candidatus* Propionicimonas incocitudo sp. nov.

Candidatus Propionicimonas incocitudo (NL. fem. n. *incocitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Propionicimonas sp002413345*. The type genome for the species is the GenBank assembly GCA_002413345.1. The GC content of the type genome is 61.52 % and the genome length is 2.51 Mbp.

Description of *Candidatus* Propionicimonas indilibra sp. nov.

Candidatus Propionicimonas indilibra (NL. fem. n. *indilibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Propionicimonas sp002441465*. The type genome for the species is the GenBank assembly GCA_002441465.1. The GC content of the type genome is 68.17 % and the genome length is 3.01 Mbp.

Description of *Candidatus* Propionicimonas lametedo sp. nov.

Candidatus Propionicimonas lametedo (NL. fem. n. *lametedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Propionicimonas sp002841335*. The type genome for the species is the GenBank assembly GCA_002841335.1. The GC content of the type genome is 67.15 % and the genome length is 2.92 Mbp.

Description of *Candidatus* Propionicimonas malogatica sp. nov.

Candidatus Propionicimonas malogatica (NL. fem. n. *malogatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Propionicimonas sp009778535*. The type genome for the species is the GenBank assembly GCA_009778535.1. The GC content of the type genome is 53.16 % and the genome length is 1.72 Mbp.

Description of *Candidatus* Propionicimonas navififorma sp. nov.

Candidatus Propionicimonas navififorma (NL. fem. n. *navififorma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Propionicimonas sp002482525*. The type genome for the species is the GenBank assembly GCA_002482525.1. The GC content of the type genome is 64.84 % and the genome length is 2.95 Mbp.

Description of *Candidatus* Propionicimonas turififorma sp. nov.

Candidatus Propionicimonas turififorma (NL. fem. n. *turififorma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Propionicimonas sp002428365*. The type genome for the species is the GenBank assembly GCA_002428365.1. The GC content of the type genome is 64.99 % and the genome length is 2.84 Mbp.

Description of *Candidatus* Propionimicrobium carecifica sp. nov.

Candidatus Propionimicrobium carecifica (NL. fem. n. *carecifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Propionimicrobium sp900155645*. The type genome for the species is the GenBank assembly RS_GCF_900155645.1. The GC content of the type genome is 50.64 % and the genome length is 2.01 Mbp.

Description of *Candidatus* Propionivibrio altipastra sp. nov.

Candidatus Propionivibrio altipastra (NL. fem. n. *altipastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Propionivibrio sp003249625*. The type genome for the species is the GenBank assembly GCA_003249625.1. The GC content of the type genome is 59.05 % and the genome length is 3.59 Mbp.

Description of *Candidatus* Propionivibrio curabetta sp. nov.

Candidatus Propionivibrio curabetta (NL. fem. n. *curabetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Propionivibrio sp903917505*. The type genome for the species is the GenBank assembly GCA_903917505.1. The GC content of the type genome is 63.74 % and the genome length is 3.2 Mbp.

Description of *Candidatus* Propionivibrio inhumifica sp. nov.

Candidatus Propionivibrio inhumifica (NL. fem. n. *inhumifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Propionivibrio sp903916205*. The type genome for the species is the GenBank assembly GCA_903916205.1. The GC content of the type genome is 53.25 % and the genome length is 2.25 Mbp.

Description of *Candidatus* Propionivibrio insicastra sp. nov.

Candidatus Propionivibrio insicastra (NL. fem. n. *insicastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Propionivibrio sp903910495*. The type genome for the species is the GenBank assembly GCA_903910495.1. The GC content of the type genome is 57.51 % and the genome length is 4.41 Mbp.

Description of *Candidatus* Propionivibrio manufastra sp. nov.

Candidatus Propionivibrio manufastra (NL. fem. n. *manufastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Propionivibrio sp002304785*. The type genome for the species is the GenBank assembly GCA_002304785.1. The GC content of the type genome is 60.82 % and the genome length is 3.84 Mbp.

Description of *Candidatus* Propionivibrio siminetta sp. nov.

Candidatus Propionivibrio siminetta (NL. fem. n. *siminetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Propionivibrio sp903886975*. The type genome for the species is the GenBank assembly GCA_903886975.1. The GC content of the type genome is 61.45 % and the genome length is 4.03 Mbp.

Description of *Candidatus* Proprana allacax sp. nov.

Candidatus Proprana allacax (NL. fem. n. *allacax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WVZL01 sp011772495*. The type genome for the species is the GenBank assembly GCA_011772495.1. The GC content of the type genome is 44.3 % and the genome length is 3.28 Mbp.

Description of *Candidatus* Proprana gen. nov.

Candidatus Proprana (NL. fem. n. *Proprana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WVZL01*. The type species for the genus is *Candidatus* Proprana allacax .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Propraria abligitoga sp. nov.

Candidatus Propraria abligitoga (NL. fem. n. *abligitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DRQN01 sp011051755*. The type genome for the species is the GenBank assembly GCA_011051755.1. The GC content of the type genome is 57.04 % and the genome length is 3.3 Mbp.

Description of *Candidatus* Propraria gen. nov.

Candidatus Propraria (NL. fem. n. *Propraria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DRQN01*. The type species for the genus is *Candidatus* Propraria abligitoga .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SZUA-152*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Docibulaceae.

Description of *Candidatus* Propraria carucousia sp. nov.

Candidatus Propraria carucousia (NL. fem. n. *carucousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DRQN01 sp011371455*. The type genome for the species is the GenBank assembly GCA_011371455.1. The GC content of the type genome is 63.53 % and the genome length is 2.11 Mbp.

Description of *Candidatus* Proprella mahemitia sp. nov.

Candidatus Proprella mahemitia (NL. fem. n. *mahemitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *B11-G15 sp003646745*. The type genome for the species is the GenBank assembly GCA_003646745.1. The GC content of the type genome is 49.68 % and the genome length is 1.78 Mbp.

Description of *Candidatus* Proprella gen. nov.

Candidatus Proprella (NL. fem. n. *Proprella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *B11-G15*. The type species for the genus is *Candidatus* Proprella mahemitia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *RBG-16-54-18*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Funivariaceae.

Description of *Candidatus* Proprida horomitia sp. nov.

Candidatus Proprida horomitia (NL. fem. n. *horomitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *TFI-002 sp900230115*. The type genome for the species is the GenBank assembly RS_GCF_900230115.1. The GC content of the type genome is 37.38 % and the genome length is 5.46 Mbp.

Description of *Candidatus* Proprida gen. nov.

Candidatus Proprida (NL. fem. n. *Proprida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *TFI-002*. The type species for the genus is *Candidatus* Proprida horomitia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Proprula offunimonas sp. nov.

Candidatus Proprula offunimonas (NL. fem. n. *offunimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABXHR01 sp013373515*. The type genome for the species is the GenBank assembly GCA_013373515.1. The GC content of the type genome is 51.99 % and the genome length is 3.65 Mbp.

Description of *Candidatus* Proprula gen. nov.

Candidatus Proprula (NL. fem. n. *Proprula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this genus is *JABXHR01*. The type species for the genus is *Candidatus* Proprula offunimonas .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Proscaria almititoga sp. nov.

Candidatus Proscaria almititoga (NL. fem. n. *almititoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *1-14-0-20-39-49 sp002787635*. The type genome for the species is the GenBank assembly GCA_002787635.1. The GC content of the type genome is 39.15 % and the genome length is 2.3 Mbp.

Description of *Candidatus* Proscaria gen. nov.

Candidatus Proscaria (NL. fem. n. *Proscaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *1-14-0-20-39-49*. The type species for the genus is *Candidatus* Proscaria almititoga .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA6187*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Sarabidaceae.

Description of *Candidatus* Proscella dicanilega sp. nov.

Candidatus Proscella dicanilega (NL. fem. n. *dicanilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SW132 sp009909035*. The type genome for the species is the GenBank assembly GCA_009909035.1. The GC content of the type genome is 47.82 % and the genome length is 3.79 Mbp.

Description of *Candidatus* Proscella gen. nov.

Candidatus Proscella (NL. fem. n. *Proscella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SW132*. The type species for the genus is *Candidatus* Proscella

dicanilega .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Proscella inmoretta sp. nov.

Candidatus Proscella inmoretta (NL. fem. n. *inmoretta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SW132 sp003390325*. The type genome for the species is the GenBank assembly RS_GCF_003390325.1. The GC content of the type genome is 44.76 % and the genome length is 5.08 Mbp.

Description of *Candidatus* Proscella inrevitudo sp. nov.

Candidatus Proscella inrevitudo (NL. fem. n. *inrevitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SW132 sp003555185*. The type genome for the species is the GenBank assembly GCA_003555185.1. The GC content of the type genome is 41.72 % and the genome length is 2.66 Mbp.

Description of *Candidatus* Proscella irrecitio sp. nov.

Candidatus Proscella irrecitio (NL. fem. n. *irrecitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SW132 sp007129085*. The type genome for the species is the GenBank assembly GCA_007129085.1. The GC content of the type genome is 43.9 % and the genome length is 2.29 Mbp.

Description of *Candidatus* Proscia decaticula sp. nov.

Candidatus Proscia decaticula (NL. fem. n. *decaticula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SFGY01 sp004556455*. The type genome for the species is the GenBank assembly GCA_004556455.1. The GC content of the type genome is 51.0 % and the genome length is 2.47 Mbp.

Description of *Candidatus* Proscia gen. nov.

Candidatus Proscia (NL. fem. n. *Proscia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SFGY01*. The type species for the genus is *Candidatus* Proscia decaticula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DTU023*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Decunariaceae.

Description of *Candidatus* Proscida totidousia sp. nov.

Candidatus Proscida totidousia (NL. fem. n. *totidousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *LHW63021 sp003289645*. The type genome for the species is the GenBank assembly RS_GCF_003289645.1. The GC content of the type genome is 72.04 % and the genome length is 7.5 Mbp.

Description of *Candidatus* Proscida gen. nov.

Candidatus Proscida (NL. fem. n. *Proscida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *LHW63021*. The type species for the genus is *Candidatus* Proscida totidousia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Proscula defasicula sp. nov.

Candidatus Proscula defasicula (NL. fem. n. *defasicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SZUA-230 sp003228395*. The type genome for the species is the GenBank assembly GCA_003228395.1. The GC content of the type genome is 42.61 % and the genome length is 2.06 Mbp.

Description of *Candidatus* Proscula gen. nov.

Candidatus Proscula (NL. fem. n. *Proscula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SZUA-230*. The type species for the genus is *Candidatus* Proscula defasicula .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Proslana ampenitio sp. nov.

Candidatus Proslana ampenitio (NL. fem. n. *ampenitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAADHZ01 sp013151575*. The type genome for the species is the GenBank assembly GCA_013151575.1. The GC content of the type genome is 54.67 % and the genome length is 2.48 Mbp.

Description of *Candidatus* Proslana gen. nov.

Candidatus Proslana (NL. fem. n. *Proslana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAADHZ01*. The type species for the genus is *Candidatus* Proslana ampenitio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SZUA-152*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Docibulaceae.

Description of *Candidatus* Proslella excamigena sp. nov.

Candidatus Proslella excamigena (NL. fem. n. *excamigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SURF-36 sp003599345*. The type genome for the species is the GenBank assembly GCA_003599345.1. The GC content of the type genome is 66.58 % and the genome length is 2.32 Mbp.

Description of *Candidatus* Proslella gen. nov.

Candidatus Proslella (NL. fem. n. *Proslella* a name created arbitrarily, while preserving

the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SURF-36*. The type species for the genus is *Candidatus* Proslella excamigena .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA9673*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Dimacanaceae.

Description of *Candidatus* Proslosa lanificula sp. nov.

Candidatus Proslosa lanificula (NL. fem. n. *lanificula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *ZC4RG39 sp003242495*. The type genome for the species is the GenBank assembly GCA_003242495.1. The GC content of the type genome is 67.29 % and the genome length is 4.05 Mbp.

Description of *Candidatus* Proslosa gen. nov.

Candidatus Proslosa (NL. fem. n. *Proslosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *ZC4RG39*. The type species for the genus is *Candidatus* Proslosa lanificula .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Prospana inaccibula sp. nov.

Candidatus Prospana inaccibula (NL. fem. n. *inaccibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS1293 sp900550385*. The type genome for the species is the GenBank assembly GCA_900550385.1. The GC content of the type genome is 65.66 % and the genome length is 2.1 Mbp.

Description of *Candidatus* Prospana gen. nov.

Candidatus Prospana (NL. fem. n. *Prospana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UMGS1293*. The type species for the genus is *Candidatus* Prospana inaccibula .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Prospana revulago sp. nov.

Candidatus Prospana revulago (NL. fem. n. *revulago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS1293 sp900754495*. The type genome for the species is the GenBank assembly RS_GCF_900754495.1. The GC content of the type genome is 65.54 % and the genome length is 2.11 Mbp.

Description of *Candidatus* Prosparia dimacentia sp. nov.

Candidatus Prosparia dimacentia (NL. fem. n. *dimacentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *J125 sp003694325*. The type genome for the species is the GenBank assembly GCA_003694325.1. The GC content of the type genome is 72.07 % and the genome length is 4.72 Mbp.

Description of *Candidatus* Prosparia gen. nov.

Candidatus Prosparia (NL. fem. n. *Prosparia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *J125*. The type species for the genus is *Candidatus* Prosparia dimacentia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA796*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Melilanaceae.

Description of *Candidatus* Prospella catabentia sp. nov.

Candidatus Prospella catabentia (NL. fem. n. *catabentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CACEWU01 sp902563335*. The type genome for the species is the GenBank assembly GCA_902563335.1. The GC content of the type genome is 40.03 % and the genome length is 1.25 Mbp.

Description of *Candidatus* Prospella gen. nov.

Candidatus Prospella (NL. fem. n. *Prospella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CACEWU01*. The type species for the genus is *Candidatus* Prospella catabentia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Prospida antepimonas sp. nov.

Candidatus Prospida antepimonas (NL. fem. n. *antepimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-02-FULL-52-10 sp001805655*. The type genome for the species is the GenBank assembly GCA_001805655.1. The GC content of the type genome is 52.05 % and the genome length is 1.56 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 0.2 micron filter; full assembly".

Description of *Candidatus* Prospida gen. nov.

Candidatus Prospida (NL. fem. n. *Prospida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *2-02-FULL-52-10*. The type species for the genus is *Candidatus* Prospida antepimonas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *Kpj58rc*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Nefanellaceae.

Description of *Candidatus* Prospula dimadivita sp. nov.

Candidatus Prospula dimadivita (NL. fem. n. *dimadivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PNKL01 sp013822425*. The type genome for the species is the GenBank assembly GCA_013822425.1. The GC content of the type genome is 67.8 % and the genome length is 3.57 Mbp.

Description of *Candidatus* Prospula gen. nov.

Candidatus Prospula (NL. fem. n. *Prospula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PNKL01*. The type species for the genus is *Candidatus* Prospula dimadivita .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Prosthecobacter admigivita sp. nov.

Candidatus Prosthecobacter admigivita (NL. fem. n. *admigivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prosthecobacter sp002482965*. The type genome for the species is the GenBank assembly GCA_002482965.1. The GC content of the type genome is 59.34 % and the genome length is 7.01 Mbp.

Description of *Candidatus* Prosthecobacter afranibra sp. nov.

Candidatus Prosthecobacter afranibra (NL. fem. n. *afranibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prosthecobacter sp003506995*. The type genome for the species is the GenBank assembly GCA_003506995.1. The GC content of the type genome is 60.94 % and the genome length is 6.66 Mbp.

Description of *Candidatus* Prosthecobacter aggubifica sp. nov.

Candidatus Prosthecobacter aggubifica (NL. fem. n. *aggubifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Prosthecobacter sp002336895*. The type genome for the species is the GenBank assembly GCA_002336895.1. The GC content of the type genome is 60.98 % and the genome length is 6.87 Mbp.

Description of *Candidatus* Prosthecobacter casabicula sp. nov.

Candidatus Prosthecobacter casabicula (NL. fem. n. *casabicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prosthecobacter sp903960845*. The type genome for the species is the GenBank assembly GCA_903960845.1. The GC content of the type genome is 58.64 % and the genome length is 5.94 Mbp.

Description of *Candidatus* Prosthecobacter cerofibula sp. nov.

Candidatus Prosthecobacter cerofibula (NL. fem. n. *cerofibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prosthecobacter sp002343505*. The type genome for the species is the GenBank assembly GCA_003545395.1. The GC content of the type genome is 64.04 % and the genome length is 5.33 Mbp.

Description of *Candidatus* Prosthecobacter inobritica sp. nov.

Candidatus Prosthecobacter inobritica (NL. fem. n. *inobritica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prosthecobacter sp002279765*. The type genome for the species is the GenBank assembly GCA_002279765.1. The GC content of the type genome is 59.5 % and the genome length is 7.17 Mbp.

Description of *Candidatus* Prosthecobacter mimogessa sp. nov.

Candidatus Prosthecobacter mimogessa (NL. fem. n. *mimogessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prosthecobacter sp003453085*. The type genome for the species is the GenBank assembly GCA_003453085.1. The GC content of the type genome is 59.28 % and the genome length is 3.7 Mbp.

Description of *Candidatus* Prosthecobacter revecimonas sp. nov.

Candidatus Prosthecobacter revecimonas (NL. fem. n. *revecimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prosthecobacter sp903848465*. The type genome for the species is the GenBank assembly GCA_903917765.1. The GC content of the type genome is 59.3 % and the genome length is 5.99 Mbp.

Description of *Candidatus* Prosthecobacter sitelatica sp. nov.

Candidatus Prosthecobacter sitelatica (NL. fem. n. *sitelatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prosthecobacter sp903838675*. The type genome for the species is the GenBank assembly GCA_903925485.1. The GC content of the type genome is 58.92 % and the genome length is 7.36 Mbp.

Description of *Candidatus* Prosthecochloris benevilega sp. nov.

Candidatus Prosthecochloris benevilega (NL. fem. n. *benevilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prosthecochloris sp002113825*. The type genome for the species is the GenBank assembly RS_GCF_002113825.1. The GC content of the type genome is 52.04 % and the genome length is 2.41 Mbp.

Description of *Candidatus* Prosthecochloris xeropedo sp. nov.

Candidatus Prosthecochloris xeropedo (NL. fem. n. *xeropedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Prosthecochloris sp003344365*. The type genome for the species is the GenBank assembly RS_GCF_013357945.1. The GC content of the type genome is 55.1 % and the genome length is 2.44 Mbp.

Description of *Candidatus* Protaetiibacter ammuletta sp. nov.

Candidatus Protaetiibacter ammuletta (NL. fem. n. *ammuletta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Protaetiibacter sp008017545*. The type genome for the species is the GenBank assembly RS_GCF_008017545.1. The GC content of the type genome is 69.4 % and the genome length is 2.98 Mbp.

Description of *Candidatus* Protaetiibacter cucuritura sp. nov.

Candidatus Protaetiibacter cucuritura (NL. fem. n. *cucuritura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Protaetiibacter sp014483895*. The type genome for the species is the GenBank assembly RS_GCF_014483895.1. The GC content of the type genome is 71.54 % and the genome length is 2.96 Mbp.

Description of *Candidatus* Protaetiibacter defaritio sp. nov.

Candidatus Protaetiibacter defaritio (NL. fem. n. *defaritio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Protaetiibacter sp008365275*. The type genome for the species is the GenBank assembly RS_GCF_008365275.1. The GC content of the type genome is 71.14 % and the genome length is 2.56 Mbp.

Description of *Candidatus* Protaetiibacter ecnepentia sp. nov.

Candidatus Protaetiibacter ecnepentia (NL. fem. n. *ecnepentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Protaetiibacter sp004216815*. The type genome for the species is the GenBank assembly RS_GCF_004216815.1. The GC content of the type genome is 70.74 % and the genome length is 3.23 Mbp.

Description of *Candidatus* Protaetiibacter incenitura sp. nov.

Candidatus Protaetiibacter incenitura (NL. fem. n. *incenitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Protaetiibacter sp001898835*. The type genome for the species is the GenBank assembly GCA_001898835.1. The GC content of the type genome is 71.58 % and the genome length is 3.33 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Thiocyanate ramp bioreactor".

Description of *Candidatus* Protaetiibacter inhonax sp. nov.

Candidatus Protaetiibacter inhonax (NL. fem. n. *inhonax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Protaetiibacter sp003852775*. The type genome for the species is the GenBank assembly GCA_003852775.1. The GC content of the type genome is 71.3 % and the genome length is 2.79 Mbp.

Description of *Candidatus* Protaetiibacter lavabugo sp. nov.

Candidatus Protaetiibacter lavabugo (NL. fem. n. *lavabugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Protaetiibacter sp011751905*. The type genome for the species is the GenBank assembly RS_GCF_011751905.1. The GC content of the type genome is 69.18 % and the genome length is 2.71 Mbp.

Description of *Candidatus* Protaetiibacter uberrilenta sp. nov.

Candidatus Protaetiibacter uberrilenta (NL. fem. n. *uberrilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Protaetiibacter sp003243275*. The type genome for the species is the GenBank assembly GCA_003243275.1. The GC content of the type genome is 69.33 % and the genome length is 3.53 Mbp.

Description of *Candidatus* Proteiniclasticum conipivita sp. nov.

Candidatus Proteiniclasticum conipivita (NL. fem. n. *conipivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Proteiniclasticum sp003510765*. The type genome for the species is the GenBank assembly GCA_003510765.1. The GC content of the type genome is 44.13 % and the genome length is 1.34 Mbp.

Description of *Candidatus* Proteiniclasticum frigdentia sp. nov.

Candidatus Proteiniclasticum frigdentia (NL. fem. n. *frigdentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Proteiniclasticum sp009930125*. The type genome for the species is the GenBank assembly GCA_009930125.1. The GC content of the type genome is 46.25 % and the genome length is 2.61 Mbp.

Description of *Candidatus* Proteiniclasticum semigifica sp. nov.

Candidatus Proteiniclasticum semigifica (NL. fem. n. *semigifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Proteiniclasticum sp003514505*. The type genome for the species is the GenBank assembly GCA_003514505.1. The GC content of the type genome is 43.33 % and the genome length is 2.51 Mbp.

Description of *Candidatus* Proteiniphilum aciscicula sp. nov.

Candidatus Proteiniphilum aciscicula (NL. fem. n. *aciscicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Proteiniphilum sp012727735*. The type genome for the species is the GenBank assembly GCA_012727735.1. The GC content of the type genome is 48.57 % and the genome length is 3.02 Mbp.

Description of *Candidatus* Proteiniphilum ammixessa sp. nov.

Candidatus Proteiniphilum ammixessa (NL. fem. n. *ammixessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Proteiniphilum sp012799155*. The type genome for the species is the GenBank assembly GCA_012799155.1. The GC content of the type genome is 49.83 % and the genome length is 2.12 Mbp.

Description of *Candidatus* Proteiniphilum benemivita sp. nov.

Candidatus Proteiniphilum benemivita (NL. fem. n. *benemivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Proteiniphilum sp002383605*. The type genome for the species is the GenBank assembly GCA_002383605.1. The GC content of the type genome is 46.9 % and the genome length is 2.86 Mbp.

Description of *Candidatus* Proteiniphilum conaratica sp. nov.

Candidatus Proteiniphilum conaratica (NL. fem. n. *conaratica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Proteiniphilum sp003517675*. The type genome for the species is the GenBank assembly GCA_003517675.1. The GC content of the type genome is 48.66 % and the genome length is 1.85 Mbp.

Description of *Candidatus* Proteiniphilum cuticitoga sp. nov.

Candidatus Proteiniphilum cuticitoga (NL. fem. n. *cuticitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Proteiniphilum sp002411515*. The type genome for the species is the GenBank assembly GCA_002411515.1. The GC content of the type genome is 46.64 % and the genome length is 3.14 Mbp.

Description of *Candidatus* Proteiniphilum fetifago sp. nov.

Candidatus Proteiniphilum fetifago (NL. fem. n. *fetifago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Proteiniphilum sp002408485*. The type genome for the species is the GenBank assembly GCA_002408665.1. The GC content of the type genome is 47.16 % and the genome length is 2.76 Mbp.

Description of *Candidatus* Proteiniphilum fumacessa sp. nov.

Candidatus Proteiniphilum fumacessa (NL. fem. n. *fumacessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Proteiniphilum sp012728155*. The type genome for the species is the GenBank assembly GCA_012728155.1. The GC content of the type genome is 44.22 % and the genome length is 2.98 Mbp.

Description of *Candidatus* Proteiniphilum haricitica sp. nov.

Candidatus Proteiniphilum haricitica (NL. fem. n. *haricitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Proteiniphilum sp002398565*. The type genome for the species is the GenBank assembly GCA_002398565.1. The GC content of the type genome is 44.96 % and the genome length is 3.81 Mbp.

Description of *Candidatus* Proteiniphilum homicax sp. nov.

Candidatus Proteiniphilum homicax (NL. fem. n. *homicax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Proteiniphilum sp001768325*. The type genome for the species is the GenBank assembly GCA_003489185.1. The GC content of the type genome is 46.33 % and the genome length is 3.46 Mbp.

Description of *Candidatus* Proteiniphilum homogiforma sp. nov.

Candidatus Proteiniphilum homogiforma (NL. fem. n. *homogiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Proteiniphilum sp012837345*. The type genome for the species is the GenBank assembly GCA_012837345.1. The GC content of the type genome is 51.37 % and the genome length is 2.49 Mbp.

Description of *Candidatus* Proteiniphilum lupanitio sp. nov.

Candidatus Proteiniphilum lupanitio (NL. fem. n. *lupanitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Proteiniphilum sp003712195*. The type genome for the species is the GenBank assembly RS_GCF_003712195.1. The GC content of the type genome is 45.33 % and the genome length is 4.43 Mbp.

Description of *Candidatus* Proteiniphilum pudibibra sp. nov.

Candidatus Proteiniphilum pudibibra (NL. fem. n. *pudibibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Proteiniphilum sp002410825*. The type genome for the species is the GenBank assembly GCA_002410825.1. The GC content of the type genome is 43.43 % and the genome length is 3.87 Mbp.

Description of *Candidatus* Proteiniphilum rorififica sp. nov.

Candidatus Proteiniphilum rorififica (NL. fem. n. *rorififica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Proteiniphilum sp011620695*. The type genome for the species is the GenBank assembly GCA_011620695.1. The GC content of the type genome is 51.5 % and the genome length is 1.76 Mbp.

Description of *Candidatus* Proteiniphilum vitigilega sp. nov.

Candidatus Proteiniphilum vitigilega (NL. fem. n. *vitigilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Proteiniphilum sp002410345*. The type genome for the species is the GenBank assembly GCA_002399305.1. The GC content of the type genome is 42.33 % and the genome length is 1.97 Mbp.

Description of *Candidatus* Proteiniphilum vitigivita sp. nov.

Candidatus Proteiniphilum vitigivita (NL. fem. n. *vitigivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Proteiniphilum sp002305715*. The type genome for the species is the GenBank assembly GCA_002305715.1. The GC content of the type genome is 42.55 % and the genome length is 2.76 Mbp.

Description of *Candidatus* Proteocatella inurbitas sp. nov.

Candidatus Proteocatella inurbitas (NL. fem. n. *inurbitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Proteocatella sp009929415*. The type genome for the species is the GenBank assembly GCA_009929415.1. The GC content of the type genome is 43.29 % and the genome length is 2.96 Mbp.

Description of *Candidatus* Proteus bulapitoga sp. nov.

Candidatus Proteus bulapitoga (NL. fem. n. *bulapitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Proteus sp003144405*. The type genome for the species is the GenBank assembly RS_GCF_003144405.1. The GC content of the type genome is 38.14 % and the genome length is 4.01 Mbp.

Description of *Candidatus* Proteus cicatetta sp. nov.

Candidatus Proteus cicatetta (NL. fem. n. *cicatetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Proteus sp011046025*. The type genome for the species is the GenBank assembly RS_GCF_011046025.1. The GC content of the type genome is 38.4 % and the genome length is 4.41 Mbp.

Description of *Candidatus* Proteus cululigena sp. nov.

Candidatus Proteus cululigena (NL. fem. n. *cululigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Proteus sp001722135*. The type genome for the species is the GenBank assembly RS_GCF_001742985.1. The GC content of the type genome is 38.02 % and the genome length is 4.05 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "feces".

Description of *Candidatus* Proteus murelitrix sp. nov.

Candidatus Proteus murelitrix (NL. fem. n. *murelitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Proteus sp008808075*. The type genome for the species is the GenBank assembly RS_GCF_008808075.1. The GC content of the type genome is 37.98 % and the genome length is 4.06 Mbp.

Description of *Candidatus* Proteus navicitoga sp. nov.

Candidatus Proteus navicitoga (NL. fem. n. *navicitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Proteus sp003144505*. The type genome for the species is the GenBank assembly RS_GCF_003144505.1. The GC content of the type genome is 38.07 % and the genome length is 4.04 Mbp.

Description of *Candidatus* Proteus refacicella sp. nov.

Candidatus Proteus refacicella (NL. fem. n. *refacicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Proteus sp003144375*. The type genome for the species is the GenBank assembly RS_GCF_003144375.1. The GC content of the type genome is 37.42 % and the genome length is 4.25 Mbp.

Description of *Candidatus* Proteus vocamentia sp. nov.

Candidatus Proteus vocamentia (NL. fem. n. *vocamentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Proteus sp003144395*. The type genome for the species is the GenBank assembly RS_GCF_003144395.1. The GC content of the type genome is 37.81 % and the genome length is 3.89 Mbp.

Description of *Candidatus* Protochlamydia excanitio sp. nov.

Candidatus Protochlamydia excanitio (NL. fem. n. *excanitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Protochlamydia sp013695355*. The type genome for the species is the GenBank assembly GCA_013695355.1. The GC content of the type genome is 38.45 % and the genome length is 3.14 Mbp.

Description of *Candidatus* Protochlamydia modifibula sp. nov.

Candidatus Protochlamydia modifibula (NL. fem. n. *modifibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Protochlamydia sp001545115*. The type genome for the species is the GenBank assembly RS_GCF_001545115.1. The GC content of the type genome is 42.05 % and the genome length is 3.42 Mbp.

Description of *Candidatus* Protrana sonabatica sp. nov.

Candidatus Protrana sonabatica (NL. fem. n. *sonabatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MADRE3 sp004796425*. The type genome for the species is the GenBank assembly GCA_004796425.1. The GC content of the type genome is 46.91 % and the genome length is 4.4 Mbp.

Description of *Candidatus* Protrana gen. nov.

Candidatus Protrana (NL. fem. n. *Protrana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *MADRE3*. The type species for the genus is *Candidatus* Protrana sonabatica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Protraria inreditoga sp. nov.

Candidatus Protraria inreditoga (NL. fem. n. *inreditoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SKXG01 sp007128525*. The type genome for the species is the GenBank assembly GCA_007128525.1. The GC content of the type genome is 61.13 % and the genome length is 2.6 Mbp.

Description of *Candidatus* Protraria gen. nov.

Candidatus Protraria (NL. fem. n. *Protraria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SKXG01*. The type species for the genus is *Candidatus* Protraria inreditoga .

According to the original version of GTDB R06-RS202, this genus belongs to the family *HTCC2089*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Tegumosaceae.

Description of *Candidatus* Protrella corocibra sp. nov.

Candidatus Protrella corocibra (NL. fem. n. *corocibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-02-FULL-34-10 sp001821915*. The type genome for the species is the GenBank assembly GCA_001821915.1. The GC content of the type genome is 33.7 % and the genome length is 0.69 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 0.2 micron filter; full assembly".

Description of *Candidatus* Protrella gen. nov.

Candidatus Protrella (NL. fem. n. *Protrella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *2-02-FULL-34-10*. The type species for the genus is *Candidatus* Protrella corocibra .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Protria metapax sp. nov.

Candidatus Protria metapax (NL. fem. n. *metapax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RFXY01 sp009921385*. The type genome for the species is the GenBank assembly GCA_009921385.1. The GC content of the type genome is 35.07 % and the genome length is 1.27 Mbp.

Description of *Candidatus* Protria gen. nov.

Candidatus Protria (NL. fem. n. *Protria* a name created arbitrarily, while preserving the

phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RFXY01*. The type species for the genus is *Candidatus* Protria metapax .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1997*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Decapiaceae.

Description of *Candidatus* Protrosa sicaritio sp. nov.

Candidatus Protrosa sicaritio (NL. fem. n. *sicaritio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1755 sp002314805*. The type genome for the species is the GenBank assembly GCA_002314805.1. The GC content of the type genome is 48.2 % and the genome length is 1.95 Mbp.

Description of *Candidatus* Protrosa gen. nov.

Candidatus Protrosa (NL. fem. n. *Protrosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1755*. The type species for the genus is *Candidatus* Protrosa sicaritio .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Protrula dicabifica sp. nov.

Candidatus Protrula dicabifica (NL. fem. n. *dicabifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *ZCTH02-B3 sp002159065*. The type genome for the species is the GenBank assembly GCA_002159065.1. The GC content of the type genome is 62.51 % and the genome length is 3.12 Mbp.

Description of *Candidatus* Protrula gen. nov.

Candidatus Protrula (NL. fem. n. *Protrula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *ZCTH02-B3*. The type species for the genus is *Candidatus* Protrula dicabifica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Providencia bonifitoga sp. nov.

Candidatus Providencia bonifitoga (NL. fem. n. *bonifitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Providencia sp003533305*. The type genome for the species is the GenBank assembly GCA_003533305.1. The GC content of the type genome is 38.95 % and the genome length is 4.39 Mbp.

Description of *Candidatus* Providencia galacivita sp. nov.

Candidatus Providencia galacivita (NL. fem. n. *galacivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Providencia sp002843235*. The type genome for the species is the GenBank assembly RS_GCF_011077905.1. The GC content of the type genome is 40.97 % and the genome length is 4.73 Mbp.

Description of *Candidatus* Pseudacidovorax curotessa sp. nov.

Candidatus Pseudacidovorax curotessa (NL. fem. n. *curotessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudacidovorax sp900156165*. The type genome for the species is the GenBank assembly RS_GCF_900156165.1. The GC content of the type genome is 68.98 % and the genome length is 5.69 Mbp.

Description of *Candidatus* Pseudacidovorax semodifica sp. nov.

Candidatus Pseudacidovorax semodifica (NL. fem. n. *semodifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Pseudacidovorax sp903864295*. The type genome for the species is the GenBank assembly GCA_903864295.1. The GC content of the type genome is 69.58 % and the genome length is 6.54 Mbp.

Description of *Candidatus* Pseudaminobacter bimotivita sp. nov.

Candidatus Pseudaminobacter bimotivita (NL. fem. n. *bimotivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudaminobacter sp900116595*. The type genome for the species is the GenBank assembly RS_GCF_003596305.1. The GC content of the type genome is 61.28 % and the genome length is 6.75 Mbp.

Description of *Candidatus* Pseudanabaena casigago sp. nov.

Candidatus Pseudanabaena casigago (NL. fem. n. *casigago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudanabaena sp002325645*. The type genome for the species is the GenBank assembly GCA_002325645.1. The GC content of the type genome is 42.79 % and the genome length is 4.52 Mbp.

Description of *Candidatus* Pseudanabaena defarigena sp. nov.

Candidatus Pseudanabaena defarigena (NL. fem. n. *defarigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudanabaena sp006937785*. The type genome for the species is the GenBank assembly RS_GCF_006937785.1. The GC content of the type genome is 41.98 % and the genome length is 5.21 Mbp.

Description of *Candidatus* Pseudanabaena detecastra sp. nov.

Candidatus Pseudanabaena detecastra (NL. fem. n. *detecastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudanabaena sp002251945*. The type genome for the species is the GenBank assembly RS_GCF_002251945.1. The GC content of the type genome is 42.17 % and the genome length is 5.78 Mbp.

Description of *Candidatus* Pseudanabaena dilicitia sp. nov.

Candidatus Pseudanabaena dilicitia (NL. fem. n. *dilicitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudanabaena sp001873375*. The type genome for the species is the GenBank assembly GCA_001873375.1. The GC content of the type genome is 44.32 % and the genome length is 3.5 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "groundwater filtered through a 3.0 um filter".

Description of *Candidatus* Pseudanabaena fuligedo sp. nov.

Candidatus Pseudanabaena fuligedo (NL. fem. n. *fuligedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudanabaena sp003249035*. The type genome for the species is the GenBank assembly GCA_003249035.1. The GC content of the type genome is 42.23 % and the genome length is 4.56 Mbp.

Description of *Candidatus* Pseudanabaena levidifica sp. nov.

Candidatus Pseudanabaena levidifica (NL. fem. n. *levidifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudanabaena sp003967015*. The type genome for the species is the GenBank assembly RS_GCF_003967015.1. The GC content of the type genome is 42.19 % and the genome length is 5.66 Mbp.

Description of *Candidatus* Pseudanabaena nocenibra sp. nov.

Candidatus Pseudanabaena nocenibra (NL. fem. n. *nocenibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudanabaena sp903819605*. The type genome for the species is the GenBank assembly GCA_903844015.1. The GC content of the type genome is 41.5 % and the genome length is 5.44 Mbp.

Description of *Candidatus* Pseudanabaena peribousia sp. nov.

Candidatus Pseudanabaena peribousia (NL. fem. n. *peribousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudanabaena sp001402795*. The type genome for the species is the GenBank assembly RS_GCF_001402795.1. The GC content of the type genome is 43.33 % and the genome length is 5.48 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "freshwater".

Description of *Candidatus* Pseudanabaena progrimonia sp. nov.

Candidatus Pseudanabaena progrimonia (NL. fem. n. *progrimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudanabaena sp003249015*. The type genome for the species is the GenBank assembly GCA_003249015.1. The GC content of the type genome is 43.15 % and the genome length is 4.47 Mbp.

Description of *Candidatus* Pseudanabaena utpoticula sp. nov.

Candidatus Pseudanabaena utpoticula (NL. fem. n. *utpoticula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudanabaena sp002914585*. The type genome for the species is the GenBank assembly RS_GCF_002914585.1. The GC content of the type genome is 42.05 % and the genome length is 5.51 Mbp.

Description of *Candidatus* Pseudarthrobacter abinditio sp. nov.

Candidatus Pseudarthrobacter abinditio (NL. fem. n. *abinditio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudarthrobacter sp002892835*. The type genome for the species is the GenBank assembly RS_GCF_002892835.1. The GC content of the type genome is 64.88 % and the genome length is 4.05 Mbp.

Description of *Candidatus* Pseudarthrobacter aciscitoga sp. nov.

Candidatus Pseudarthrobacter aciscitoga (NL. fem. n. *aciscitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudarthrobacter sp014217545*. The type genome for the species is the GenBank assembly RS_GCF_014217545.1. The GC content of the type genome is 64.89 % and the genome length is 4.06 Mbp.

Description of *Candidatus* Pseudarthrobacter adfamisca sp. nov.

Candidatus Pseudarthrobacter adfamisca (NL. fem. n. *adfamisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudarthrobacter sp006715305*. The type genome for the species is the GenBank assembly RS_GCF_006715305.1. The GC content of the type genome is 64.72 % and the genome length is 4.94 Mbp.

Description of *Candidatus* Pseudarthrobacter adrenicella sp. nov.

Candidatus Pseudarthrobacter adrenicella (NL. fem. n. *adrenicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudarthrobacter sp902506095*. The type genome for the species is the GenBank assembly RS_GCF_902506095.1. The GC content of the type genome is 65.62 % and the genome length is 4.43 Mbp.

Description of *Candidatus* Pseudarthrobacter adsesilenta sp. nov.

Candidatus Pseudarthrobacter adsesilenta (NL. fem. n. *adsesilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudarthrobacter sp902506025*. The type genome for the species is the GenBank assembly RS_GCF_902506025.1. The GC content of the type genome is 66.32 % and the genome length is 4.33 Mbp.

Description of *Candidatus* Pseudarthrobacter bifarimonas sp. nov.

Candidatus Pseudarthrobacter bifarimonas (NL. fem. n. *bifarimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudarthrobacter sp002953935*. The type genome for the species is the GenBank assembly RS_GCF_002953935.1. The GC content of the type genome is

65.38 % and the genome length is 4.27 Mbp.

Description of *Candidatus* Pseudarthrobacter bipalibra sp. nov.

Candidatus Pseudarthrobacter bipalibra (NL. fem. n. *bipalibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudarthrobacter sp000374865*. The type genome for the species is the GenBank assembly RS_GCF_004364695.1. The GC content of the type genome is 66.15 % and the genome length is 4.56 Mbp.

Description of *Candidatus* Pseudarthrobacter bonitedo sp. nov.

Candidatus Pseudarthrobacter bonitedo (NL. fem. n. *bonitedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudarthrobacter sp013359725*. The type genome for the species is the GenBank assembly RS_GCF_013359725.1. The GC content of the type genome is 66.16 % and the genome length is 4.32 Mbp.

Description of *Candidatus* Pseudarthrobacter buceledo sp. nov.

Candidatus Pseudarthrobacter buceledo (NL. fem. n. *buceledo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudarthrobacter sp003061105*. The type genome for the species is the GenBank assembly RS_GCF_003061105.1. The GC content of the type genome is 64.75 % and the genome length is 4.61 Mbp.

Description of *Candidatus* Pseudarthrobacter corocitica sp. nov.

Candidatus Pseudarthrobacter corocitica (NL. fem. n. *corocitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudarthrobacter sp005796185*. The type genome for the species is the GenBank assembly RS_GCF_005796185.1. The GC content of the type genome is 64.95 % and the genome length is 3.82 Mbp.

Description of *Candidatus* Pseudarthrobacter coticibra sp. nov.

Candidatus Pseudarthrobacter coticibra (NL. fem. n. *coticibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudarthrobacter sp900110595*. The type genome for the species is the GenBank assembly RS_GCF_006680095.1. The GC content of the type genome is 64.78 % and the genome length is 5.03 Mbp.

Description of *Candidatus* Pseudarthrobacter coticigena sp. nov.

Candidatus Pseudarthrobacter coticigena (NL. fem. n. *coticigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudarthrobacter sp001428335*. The type genome for the species is the GenBank assembly RS_GCF_001428335.1. The GC content of the type genome is 65.01 % and the genome length is 4.53 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "soil".

Description of *Candidatus* Pseudarthrobacter defasitrix sp. nov.

Candidatus Pseudarthrobacter defasitrix (NL. fem. n. *defasitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudarthrobacter sp900168295*. The type genome for the species is the GenBank assembly RS_GCF_002934405.1. The GC content of the type genome is 65.19 % and the genome length is 4.9 Mbp.

Description of *Candidatus* Pseudarthrobacter delecicula sp. nov.

Candidatus Pseudarthrobacter delecicula (NL. fem. n. *delecicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudarthrobacter sp004320525*. The type genome for the species is the GenBank assembly RS_GCF_004320525.1. The GC content of the type genome is 65.4 % and the genome length is 5.12 Mbp.

Description of *Candidatus* Pseudarthrobacter democitoga sp. nov.

Candidatus Pseudarthrobacter democitoga (NL. fem. n. *democitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudarthrobacter sp001663775*. The type genome for the species is the GenBank assembly RS_GCF_001663775.1. The GC content of the type genome is 64.67 % and the genome length is 4.66 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "As-contaminated aquifer sediment".

Description of *Candidatus* Pseudarthrobacter detosetta sp. nov.

Candidatus Pseudarthrobacter detosetta (NL. fem. n. *detosetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudarthrobacter sp001641125*. The type genome for the species is the GenBank assembly RS_GCF_001641125.1. The GC content of the type genome is 65.4 % and the genome length is 4.52 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "rhizosphere of wild oats".

Description of *Candidatus* Pseudarthrobacter dilicentia sp. nov.

Candidatus Pseudarthrobacter dilicentia (NL. fem. n. *dilicentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudarthrobacter sp000374905*. The type genome for the species is the GenBank assembly RS_GCF_006715715.1. The GC content of the type genome is 66.04 % and the genome length is 4.5 Mbp.

Description of *Candidatus* Pseudarthrobacter ephematio sp. nov.

Candidatus Pseudarthrobacter ephematio (NL. fem. n. *ephematio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudarthrobacter sp003208335*. The type genome for the species is the GenBank assembly RS_GCF_003208335.1. The GC content of the type genome is 65.81 % and the genome length is 4.47 Mbp.

Description of *Candidatus* Pseudarthrobacter epistisca sp. nov.

Candidatus Pseudarthrobacter epistisca (NL. fem. n. *epistisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudarthrobacter sp005796205*. The type genome for the species is the GenBank assembly RS_GCF_005796205.1. The GC content of the type genome is 65.32 % and the genome length is 4.04 Mbp.

Description of *Candidatus* Pseudarthrobacter excamitio sp. nov.

Candidatus Pseudarthrobacter excamitio (NL. fem. n. *excamitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudarthrobacter sp002929215*. The type genome for the species is the GenBank assembly RS_GCF_002929215.1. The GC content of the type genome is 64.34 % and the genome length is 4.59 Mbp.

Description of *Candidatus* Pseudarthrobacter fetutugo sp. nov.

Candidatus Pseudarthrobacter fetutugo (NL. fem. n. *fetutugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudarthrobacter sp006517815*. The type genome for the species is the GenBank assembly RS_GCF_006517215.1. The GC content of the type genome is 66.09 % and the genome length is 4.47 Mbp.

Description of *Candidatus* Pseudarthrobacter ficedilega sp. nov.

Candidatus Pseudarthrobacter ficedilega (NL. fem. n. *ficedilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudarthrobacter sp006715295*. The type genome for the species is the GenBank assembly RS_GCF_006715295.1. The GC content of the type genome is 65.77 % and the genome length is 4.25 Mbp.

Description of *Candidatus* Pseudarthrobacter ficeditica sp. nov.

Candidatus Pseudarthrobacter ficeditica (NL. fem. n. *ficeditica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudarthrobacter sp005796225*. The type genome for the species is the GenBank assembly RS_GCF_005796225.1. The GC content of the type genome is 64.6 % and the genome length is 4.06 Mbp.

Description of *Candidatus* Pseudarthrobacter illuvax sp. nov.

Candidatus Pseudarthrobacter illuvax (NL. fem. n. *illuvax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudarthrobacter sp009911795*. The type genome for the species is the GenBank assembly RS_GCF_009911795.1. The GC content of the type genome is 64.74 % and the genome length is 5.17 Mbp.

Description of *Candidatus* Pseudarthrobacter infelibra sp. nov.

Candidatus Pseudarthrobacter infelibra (NL. fem. n. *infelibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudarthrobacter sp002370555*. The type genome for the species is the GenBank assembly GCA_002370555.1. The GC content of the type genome is 65.0 % and the genome length is 3.78 Mbp.

Description of *Candidatus* Pseudarthrobacter inforibra sp. nov.

Candidatus Pseudarthrobacter inforibra (NL. fem. n. *inforibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudarthrobacter sp001428075*. The type genome for the species is the GenBank assembly RS_GCF_001428075.1. The GC content of the type genome is 65.8 % and the genome length is 4.35 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "soil".

Description of *Candidatus* Pseudarthrobacter inhumiforma sp. nov.

Candidatus Pseudarthrobacter inhumiforma (NL. fem. n. *inhumiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudarthrobacter sp009741265*. The type genome for the species is the GenBank assembly RS_GCF_009741265.1. The GC content of the type genome is 65.42 % and the genome length is 4.78 Mbp.

Description of *Candidatus* Pseudarthrobacter inlepitio sp. nov.

Candidatus Pseudarthrobacter inlepitio (NL. fem. n. *inlepitio* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudarthrobacter sp013362385*. The type genome for the species is the GenBank assembly GCA_013362385.1. The GC content of the type genome is 67.49 % and the genome length is 2.46 Mbp.

Description of *Candidatus* Pseudarthrobacter inlumitudo sp. nov.

Candidatus Pseudarthrobacter inlumitudo (NL. fem. n. *inlumitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudarthrobacter sp900537115*. The type genome for the species is the GenBank assembly RS_GCF_900537115.1. The GC content of the type genome is 64.83 % and the genome length is 4.37 Mbp.

Description of *Candidatus* Pseudarthrobacter inoblilega sp. nov.

Candidatus Pseudarthrobacter inoblilega (NL. fem. n. *inoblilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudarthrobacter sp006715225*. The type genome for the species is the GenBank assembly RS_GCF_006715225.1. The GC content of the type genome is 65.77 % and the genome length is 4.4 Mbp.

Description of *Candidatus* Pseudarthrobacter lavabicula sp. nov.

Candidatus Pseudarthrobacter lavabicula (NL. fem. n. *lavabicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudarthrobacter sp001424565*. The type genome for the species is the GenBank assembly RS_GCF_001424565.1. The GC content of the type genome is 66.28 % and the genome length is 4.36 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "leaf".

Description of *Candidatus* Pseudarthrobacter lenimitrix sp. nov.

Candidatus Pseudarthrobacter lenimitrix (NL. fem. n. *lenimitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudarthrobacter sp002427975*. The type genome for the species is the GenBank assembly GCA_002413225.1. The GC content of the type genome is 65.39 % and the genome length is 3.66 Mbp.

Description of *Candidatus* Pseudarthrobacter nugigentia sp. nov.

Candidatus Pseudarthrobacter nugigentia (NL. fem. n. *nugigentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudarthrobacter sp002929755*. The type genome for the species is the GenBank assembly RS_GCF_006517235.1. The GC content of the type genome is 65.01 % and the genome length is 4.8 Mbp.

Description of *Candidatus* Pseudarthrobacter selecousia sp. nov.

Candidatus Pseudarthrobacter selecousia (NL. fem. n. *selecousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudarthrobacter sp006151685*. The type genome for the species is the GenBank assembly RS_GCF_901007635.1. The GC content of the type genome is 65.62 % and the genome length is 4.54 Mbp.

Description of *Candidatus* Pseudarthrobacter sitelivita sp. nov.

Candidatus Pseudarthrobacter sitelivita (NL. fem. n. *sitelivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudarthrobacter sp006715285*. The type genome for the species is the GenBank assembly RS_GCF_006715285.1. The GC content of the type genome is 65.86 % and the genome length is 4.42 Mbp.

Description of *Candidatus* Pseudarthrobacter solipitrix sp. nov.

Candidatus Pseudarthrobacter solipitrix (NL. fem. n. *solipitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudarthrobacter sp003287955*. The type genome for the species is the GenBank assembly RS_GCF_003287955.1. The GC content of the type genome is

64.88 % and the genome length is 4.14 Mbp.

Description of *Candidatus* Pseudarthrobacter tegimatio sp. nov.

Candidatus Pseudarthrobacter tegimatio (NL. fem. n. *tegimatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudarthrobacter sp001423525*. The type genome for the species is the GenBank assembly RS_GCF_001423525.1. The GC content of the type genome is 66.17 % and the genome length is 4.38 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "leaf".

Description of *Candidatus* Pseudarthrobacter telefitudo sp. nov.

Candidatus Pseudarthrobacter telefitudo (NL. fem. n. *telefitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudarthrobacter sp006715165*. The type genome for the species is the GenBank assembly RS_GCF_006715165.1. The GC content of the type genome is 65.55 % and the genome length is 4.47 Mbp.

Description of *Candidatus* Pseudescherichia conabitas sp. nov.

Candidatus Pseudescherichia conabitas (NL. fem. n. *conabitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudescherichia sp002298805*. The type genome for the species is the GenBank assembly RS_GCF_007680145.1. The GC content of the type genome is 56.31 % and the genome length is 4.4 Mbp.

Description of *Candidatus* Pseudescherichia inrelibra sp. nov.

Candidatus Pseudescherichia inrelibra (NL. fem. n. *inrelibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudescherichia sp002480085*. The type genome for the species is the GenBank assembly GCA_002480085.1. The GC content of the type genome is 57.32 % and the genome length is 4.18 Mbp.

Description of *Candidatus* Pseudescherichia repecago sp. nov.

Candidatus Pseudescherichia repecago (NL. fem. n. *repecago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudescherichia sp002918705*. The type genome for the species is the GenBank assembly GCA_002482285.1. The GC content of the type genome is 57.04 % and the genome length is 4.04 Mbp.

Description of *Candidatus* Pseudidiomarina ossaressa sp. nov.

Candidatus Pseudidiomarina ossaressa (NL. fem. n. *ossaressa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudidiomarina sp002423905*. The type genome for the species is the GenBank assembly GCA_002423905.1. The GC content of the type genome is 50.42 % and the genome length is 1.82 Mbp.

Description of *Candidatus* Pseudidiomarina socagitrix sp. nov.

Candidatus Pseudidiomarina socagitrix (NL. fem. n. *socagitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudidiomarina sp002279005*. The type genome for the species is the GenBank assembly GCA_002279005.1. The GC content of the type genome is 47.52 % and the genome length is 2.1 Mbp.

Description of *Candidatus* Pseudidiomarina tabifibula sp. nov.

Candidatus Pseudidiomarina tabifibula (NL. fem. n. *tabifibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudidiomarina sp902806985*. The type genome for the species is the GenBank assembly GCA_902703395.1. The GC content of the type genome is 49.53 % and the genome length is 2.51 Mbp.

Description of *Candidatus* Pseudoalteromonas acrobilega sp. nov.

Candidatus Pseudoalteromonas acrobilega (NL. fem. n. *acrobilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudoalteromonas sp001469895*. The type genome for the species is the GenBank assembly RS_GCF_001469895.1. The GC content of the type genome is 41.24 % and the genome length is 4.54 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "brine-seawater interface".

Description of *Candidatus* Pseudoalteromonas albogisca sp. nov.

Candidatus Pseudoalteromonas albogisca (NL. fem. n. *albogisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudoalteromonas sp002289345*. The type genome for the species is the GenBank assembly RS_GCF_002289345.1. The GC content of the type genome is 43.14 % and the genome length is 5.25 Mbp.

Description of *Candidatus* Pseudoalteromonas appugigena sp. nov.

Candidatus Pseudoalteromonas appugigena (NL. fem. n. *appugigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudoalteromonas sp000239855*. The type genome for the species is the GenBank assembly RS_GCF_000239855.1. The GC content of the type genome is 38.86 % and the genome length is 4.25 Mbp.

Description of *Candidatus* Pseudoalteromonas armigitura sp. nov.

Candidatus Pseudoalteromonas armigitura (NL. fem. n. *armigitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudoalteromonas sp013140855*. The type genome for the species is the GenBank assembly RS_GCF_013140855.1. The GC content of the type genome is 41.98 % and the genome length is 5.08 Mbp.

Description of *Candidatus* Pseudoalteromonas cinefisca sp. nov.

Candidatus Pseudoalteromonas cinefisca (NL. fem. n. *cinefisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudoalteromonas sp001974855*. The type genome for the species is

the GenBank assembly RS_GCF_001974855.1. The GC content of the type genome is 40.16 % and the genome length is 3.96 Mbp.

Description of *Candidatus* Pseudoalteromonas culibiforma sp. nov.

Candidatus Pseudoalteromonas culibiforma (NL. fem. n. *culibiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudoalteromonas sp004103285*. The type genome for the species is the GenBank assembly RS_GCF_004103285.1. The GC content of the type genome is 43.03 % and the genome length is 5.13 Mbp.

Description of *Candidatus* Pseudoalteromonas cunabitura sp. nov.

Candidatus Pseudoalteromonas cunabitura (NL. fem. n. *cunabitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudoalteromonas sp013349995*. The type genome for the species is the GenBank assembly RS_GCF_013349945.1. The GC content of the type genome is 41.12 % and the genome length is 4.21 Mbp.

Description of *Candidatus* Pseudoalteromonas daducigena sp. nov.

Candidatus Pseudoalteromonas daducigena (NL. fem. n. *daducigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudoalteromonas sp003590335*. The type genome for the species is the GenBank assembly RS_GCF_005887475.1. The GC content of the type genome is 41.36 % and the genome length is 5.33 Mbp.

Description of *Candidatus* Pseudoalteromonas demagitrix sp. nov.

Candidatus Pseudoalteromonas demagitrix (NL. fem. n. *demagitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudoalteromonas sp002964785*. The type genome for the species is the GenBank assembly RS_GCF_002964785.1. The GC content of the type genome is 49.89 % and the genome length is 3.59 Mbp.

Description of *Candidatus* Pseudoalteromonas funamastra sp. nov.

Candidatus Pseudoalteromonas funamastra (NL. fem. n. *funamastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudoalteromonas sp001269985*. The type genome for the species is the GenBank assembly RS_GCF_000724565.2. The GC content of the type genome is 34.98 % and the genome length is 5.26 Mbp.

Description of *Candidatus* Pseudoalteromonas hegumitrix sp. nov.

Candidatus Pseudoalteromonas hegumitrix (NL. fem. n. *hegumitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudoalteromonas sp002723455*. The type genome for the species is the GenBank assembly RS_GCF_004766475.1. The GC content of the type genome is 40.2 % and the genome length is 4.54 Mbp.

Description of *Candidatus* Pseudoalteromonas hemitax sp. nov.

Candidatus Pseudoalteromonas hemitax (NL. fem. n. *hemitax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudoalteromonas sp001974875*. The type genome for the species is the GenBank assembly RS_GCF_001974875.1. The GC content of the type genome is 39.04 % and the genome length is 4.53 Mbp.

Description of *Candidatus* Pseudoalteromonas innulitudo sp. nov.

Candidatus Pseudoalteromonas innulitudo (NL. fem. n. *innulitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudoalteromonas sp001399975*. The type genome for the species is the GenBank assembly RS_GCF_001399975.1. The GC content of the type genome is 40.69 % and the genome length is 4.81 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "polyp tissue".

Description of *Candidatus* Pseudoalteromonas irregentia sp. nov.

Candidatus Pseudoalteromonas irregentia (NL. fem. n. *irregentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudoalteromonas sp002591815*. The type genome for the species is the GenBank assembly RS_GCF_002591815.1. The GC content of the type genome is 43.29 % and the genome length is 5.38 Mbp.

Description of *Candidatus* Pseudoalteromonas latibousia sp. nov.

Candidatus Pseudoalteromonas latibousia (NL. fem. n. *latibousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudoalteromonas sp002685175*. The type genome for the species is the GenBank assembly RS_GCF_011806445.1. The GC content of the type genome is 40.73 % and the genome length is 4.39 Mbp.

Description of *Candidatus* Pseudoalteromonas lenocifica sp. nov.

Candidatus Pseudoalteromonas lenocifica (NL. fem. n. *lenocifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudoalteromonas sp002276045*. The type genome for the species is the GenBank assembly RS_GCF_002276045.1. The GC content of the type genome is 34.83 % and the genome length is 5.77 Mbp.

Description of *Candidatus* Pseudoalteromonas ludimitura sp. nov.

Candidatus Pseudoalteromonas ludimitura (NL. fem. n. *ludimitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudoalteromonas sp002165575*. The type genome for the species is the GenBank assembly RS_GCF_002165575.1. The GC content of the type genome is 39.98 % and the genome length is 4.89 Mbp.

Description of *Candidatus* Pseudoalteromonas maledimonia sp. nov.

Candidatus Pseudoalteromonas maledimonia (NL. fem. n. *maledimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudoalteromonas sp002964665*. The type genome for the species is the GenBank assembly RS_GCF_002964665.1. The GC content of the type genome is

43.25 % and the genome length is 4.58 Mbp.

Description of *Candidatus* Pseudoalteromonas myalgago sp. nov.

Candidatus Pseudoalteromonas myalgago (NL. fem. n. *myalgago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudoalteromonas sp009176705*. The type genome for the species is the GenBank assembly RS_GCF_009176705.1. The GC content of the type genome is 42.12 % and the genome length is 4.74 Mbp.

Description of *Candidatus* Pseudoalteromonas nicotatio sp. nov.

Candidatus Pseudoalteromonas nicotatio (NL. fem. n. *nicotatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudoalteromonas sp002850255*. The type genome for the species is the GenBank assembly RS_GCF_000259115.1. The GC content of the type genome is 43.23 % and the genome length is 5.5 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "rearing water of healthy turbot (Scophthalmus maximus)".

Description of *Candidatus* Pseudoalteromonas oblociforma sp. nov.

Candidatus Pseudoalteromonas oblociforma (NL. fem. n. *oblociforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudoalteromonas sp005886535*. The type genome for the species is the GenBank assembly RS_GCF_005886535.1. The GC content of the type genome is 43.25 % and the genome length is 5.19 Mbp.

Description of *Candidatus* Pseudoalteromonas oppugousia sp. nov.

Candidatus Pseudoalteromonas oppugousia (NL. fem. n. *oppugousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudoalteromonas sp008370255*. The type genome for the species is the GenBank assembly RS_GCF_008370255.1. The GC content of the type genome is 39.16 % and the genome length is 4.34 Mbp.

Description of *Candidatus* Pseudoalteromonas rudecitia sp. nov.

Candidatus Pseudoalteromonas rudecitia (NL. fem. n. *rudecitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudoalteromonas sp002964705*. The type genome for the species is the GenBank assembly RS_GCF_002964705.1. The GC content of the type genome is 50.13 % and the genome length is 3.65 Mbp.

Description of *Candidatus* Pseudoalteromonas tabititica sp. nov.

Candidatus Pseudoalteromonas tabititica (NL. fem. n. *tabititica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudoalteromonas sp002964765*. The type genome for the species is the GenBank assembly RS_GCF_002964645.1. The GC content of the type genome is 49.45 % and the genome length is 3.43 Mbp.

Description of *Candidatus* Pseudoalteromonas tigurastra sp. nov.

Candidatus Pseudoalteromonas tigurastra (NL. fem. n. *tigurastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudoalteromonas sp001401805*. The type genome for the species is the GenBank assembly RS_GCF_005887365.1. The GC content of the type genome is 40.73 % and the genome length is 4.23 Mbp.

Description of *Candidatus* Pseudoalteromonas totidilenta sp. nov.

Candidatus Pseudoalteromonas totidilenta (NL. fem. n. *totidilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudoalteromonas sp001282135*. The type genome for the species is the GenBank assembly RS_GCF_001282135.1. The GC content of the type genome is 47.63 % and the genome length is 5.84 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "intertidal zone sludge sample".

Description of *Candidatus* Pseudoalteromonas vatilibula sp. nov.

Candidatus Pseudoalteromonas vatilibula (NL. fem. n. *vatilibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudoalteromonas sp000498095*. The type genome for the species is the GenBank assembly RS_GCF_000498095.1. The GC content of the type genome is 37.92 % and the genome length is 4.84 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "sponge".

Description of *Candidatus* Pseudoalteromonas venunax sp. nov.

Candidatus Pseudoalteromonas venunax (NL. fem. n. *venunax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudoalteromonas sp001469215*. The type genome for the species is the GenBank assembly RS_GCF_001469215.1. The GC content of the type genome is 40.3 % and the genome length is 4.47 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "water".

Description of *Candidatus* Pseudoalteromonas veridimonia sp. nov.

Candidatus Pseudoalteromonas veridimonia (NL. fem. n. *veridimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudoalteromonas sp001468485*. The type genome for the species is the GenBank assembly RS_GCF_005886485.1. The GC content of the type genome is 39.73 % and the genome length is 4.06 Mbp.

Description of *Candidatus* Pseudoalteromonas vivifatio sp. nov.

Candidatus Pseudoalteromonas vivifatio (NL. fem. n. *vivifatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudoalteromonas sp011378855*. The type genome for the species is the GenBank assembly RS_GCF_011378855.1. The GC content of the type genome is 39.12 % and the genome length is 4.42 Mbp.

Description of *Candidatus* Pseudoalteromonas xeropousia sp. nov.

Candidatus Pseudoalteromonas xeropousia (NL. fem. n. *xeropousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a

noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudoalteromonas sp002684115*. The type genome for the species is the GenBank assembly GCA_002684115.1. The GC content of the type genome is 41.35 % and the genome length is 0.99 Mbp.

Description of *Candidatus* Pseudobacillus chancibra sp. nov.

Candidatus Pseudobacillus chancibra (NL. fem. n. *chancibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudobacillus sp003600835*. The type genome for the species is the GenBank assembly RS_GCF_003600835.1. The GC content of the type genome is 41.26 % and the genome length is 4.83 Mbp.

Description of *Candidatus* Pseudobacillus venabatica sp. nov.

Candidatus Pseudobacillus venabatica (NL. fem. n. *venabatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudobacillus sp009183655*. The type genome for the species is the GenBank assembly RS_GCF_009183655.1. The GC content of the type genome is 42.27 % and the genome length is 3.93 Mbp.

Description of *Candidatus* Pseudobacter denupugo sp. nov.

Candidatus Pseudobacter denupugo (NL. fem. n. *denupugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudobacter sp012927185*. The type genome for the species is the GenBank assembly RS_GCF_012927185.1. The GC content of the type genome is 46.51 % and the genome length is 6.12 Mbp.

Description of *Candidatus* Pseudobacteriovorax procritica sp. nov.

Candidatus Pseudobacteriovorax procritica (NL. fem. n. *procritica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Pseudobacteriovorax sp013215145*. The type genome for the species is the GenBank assembly GCA_013215145.1. The GC content of the type genome is 43.62 % and the genome length is 7.39 Mbp.

Description of *Candidatus* Pseudobdellovibrio catilitura sp. nov.

Candidatus Pseudobdellovibrio catilitura (NL. fem. n. *catilitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudobdellovibrio sp014378765*. The type genome for the species is the GenBank assembly GCA_014378765.1. The GC content of the type genome is 41.79 % and the genome length is 2.87 Mbp.

Description of *Candidatus* Pseudobdellovibrio direcivita sp. nov.

Candidatus Pseudobdellovibrio direcivita (NL. fem. n. *direcivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudobdellovibrio sp014376435*. The type genome for the species is the GenBank assembly GCA_014376435.1. The GC content of the type genome is 40.05 % and the genome length is 2.76 Mbp.

Description of *Candidatus* Pseudobdellovibrio furibitas sp. nov.

Candidatus Pseudobdellovibrio furibitas (NL. fem. n. *furibitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudobdellovibrio sp014378775*. The type genome for the species is the GenBank assembly GCA_014378775.1. The GC content of the type genome is 40.48 % and the genome length is 2.34 Mbp.

Description of *Candidatus* Pseudobdellovibrio inredifica sp. nov.

Candidatus Pseudobdellovibrio inredifica (NL. fem. n. *inredifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudobdellovibrio sp014376935*. The type genome for the species is the GenBank assembly GCA_014376935.1. The GC content of the type genome is 40.98 % and the genome length is 3.27 Mbp.

Description of *Candidatus* Pseudobdellovibrio rubefilega sp. nov.

Candidatus Pseudobdellovibrio rubefilega (NL. fem. n. *rubefilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudobdellovibrio sp001771815*. The type genome for the species is the GenBank assembly GCA_001771815.1. The GC content of the type genome is 40.22 % and the genome length is 2.93 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 0.1 micron filter; full assembly".

Description of *Candidatus* Pseudobutyrivibrio cenotatio sp. nov.

Candidatus Pseudobutyrivibrio cenotatio (NL. fem. n. *cenotatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudobutyrivibrio sp900100545*. The type genome for the species is the GenBank assembly RS_GCF_900100545.1. The GC content of the type genome is 38.92 % and the genome length is 3.4 Mbp.

Description of *Candidatus* Pseudobutyrivibrio indilicula sp. nov.

Candidatus Pseudobutyrivibrio indilicula (NL. fem. n. *indilicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudobutyrivibrio sp900104335*. The type genome for the species is the GenBank assembly RS_GCF_900104335.1. The GC content of the type genome is 39.0 % and the genome length is 3.24 Mbp.

Description of *Candidatus* Pseudobutyrivibrio inmobilega sp. nov.

Candidatus Pseudobutyrivibrio inmobilega (NL. fem. n. *inmobilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudobutyrivibrio sp900107545*. The type genome for the species is the GenBank assembly RS_GCF_900107545.1. The GC content of the type genome is 38.54 % and the genome length is 3.66 Mbp.

Description of *Candidatus* Pseudobutyrivibrio labecitio sp. nov.

Candidatus Pseudobutyrivibrio labecitio (NL. fem. n. *labecitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudobutyrivibrio sp900112855*. The type genome for the species is the GenBank assembly RS_GCF_010906925.1. The GC content of the type genome is 38.85 % and the genome length is 2.96 Mbp.

Description of *Candidatus* Pseudobutyrivibrio nicotedo sp. nov.

Candidatus Pseudobutyrivibrio nicotedo (NL. fem. n. *nicotedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudobutyrivibrio sp000621865*. The type genome for the species is the GenBank assembly RS_GCF_000621865.1. The GC content of the type genome is 38.34 % and the genome length is 3.09 Mbp.

Description of *Candidatus* Pseudobutyrivibrio perexilega sp. nov.

Candidatus Pseudobutyrivibrio perexilega (NL. fem. n. *perexilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudobutyrivibrio sp002309345*. The type genome for the species is the GenBank assembly GCA_002309345.1. The GC content of the type genome is 39.39 % and the genome length is 2.76 Mbp.

Description of *Candidatus* Pseudobutyrivibrio ridibivita sp. nov.

Candidatus Pseudobutyrivibrio ridibivita (NL. fem. n. *ridibivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudobutyrivibrio sp902775195*. The type genome for the species is the GenBank assembly GCA_902775195.1. The GC content of the type genome is 38.82 % and the genome length is 2.68 Mbp.

Description of *Candidatus* Pseudobutyrivibrio sitelicella sp. nov.

Candidatus Pseudobutyrivibrio sitelicella (NL. fem. n. *sitelicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudobutyrivibrio sp900113655*. The type genome for the species is the GenBank assembly RS_GCF_900113655.1. The GC content of the type genome is 38.72 % and the genome length is 3.56 Mbp.

Description of *Candidatus* Pseudochrobactrum daducitia sp. nov.

Candidatus Pseudochrobactrum daducitia (NL. fem. n. *daducitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudochrobactrum sp900470285*. The type genome for the species is the GenBank assembly RS_GCF_900470745.1. The GC content of the type genome is 51.36 % and the genome length is 4.05 Mbp.

Description of *Candidatus* Pseudocitrobacter ossaritio sp. nov.

Candidatus Pseudocitrobacter ossaritio (NL. fem. n. *ossaritio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudocitrobacter sp000330845*. The type genome for the species is the GenBank assembly RS_GCF_000330845.1. The GC content of the type genome is 54.02 % and the genome length is 4.76 Mbp.

Description of *Candidatus* Pseudocitrobacter turicibula sp. nov.

Candidatus Pseudocitrobacter turicibula (NL. fem. n. *turicibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudocitrobacter sp008369545*. The type genome for the species is the GenBank assembly RS_GCF_008369545.1. The GC content of the type genome is 53.12 % and the genome length is 5.38 Mbp.

Description of *Candidatus* Pseudoclavibacter catalousia sp. nov.

Candidatus Pseudoclavibacter catalousia (NL. fem. n. *catalousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudoclavibacter sp002931555*. The type genome for the species is the GenBank assembly RS_GCF_013409665.1. The GC content of the type genome is

68.49 % and the genome length is 3.77 Mbp.

Description of *Candidatus* Pseudoclavibacter inexcifica sp. nov.

Candidatus Pseudoclavibacter inexcifica (NL. fem. n. *inexcifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudoclavibacter sp002931075*. The type genome for the species is the GenBank assembly RS_GCF_002931075.1. The GC content of the type genome is 66.98 % and the genome length is 4.1 Mbp.

Description of *Candidatus* Pseudoclavibacter lapicatio sp. nov.

Candidatus Pseudoclavibacter lapicatio (NL. fem. n. *lapicatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudoclavibacter sp002931055*. The type genome for the species is the GenBank assembly RS_GCF_002931455.1. The GC content of the type genome is 68.36 % and the genome length is 4.1 Mbp.

Description of *Candidatus* Pseudoclavibacter bimotimonia sp. nov.

Candidatus Pseudoclavibacter bimotimonia (NL. fem. n. *bimotimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudoclavibacter_A sp008831235*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_008831185.1. The GC content of the type genome is 65.35 % and the genome length is 2.35 Mbp.

Description of *Candidatus* Pseudodesulfovibrio arcatessa sp. nov.

Candidatus Pseudodesulfovibrio arcatessa (NL. fem. n. *arcatessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudodesulfovibrio sp012516435*. The type genome for the species is the GenBank assembly RS_GCF_012516435.1. The GC content of the type genome is 53.26 % and the genome length is 4.08 Mbp.

Description of *Candidatus* Pseudodesulfovibrio depopiforma sp. nov.

Candidatus Pseudodesulfovibrio depopiforma (NL. fem. n. *depopiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudodesulfovibrio sp004025585*. The type genome for the species is the GenBank assembly RS_GCF_004025585.1. The GC content of the type genome is 56.59 % and the genome length is 3.68 Mbp.

Description of *Candidatus* Pseudodesulfovibrio foricitoga sp. nov.

Candidatus Pseudodesulfovibrio foricitoga (NL. fem. n. *foricitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudodesulfovibrio sp008001235*. The type genome for the species is the GenBank assembly RS_GCF_008001235.1. The GC content of the type genome is 60.45 % and the genome length is 3.89 Mbp.

Description of *Candidatus* Pseudodesulfovibrio lucelitoga sp. nov.

Candidatus Pseudodesulfovibrio lucelitoga (NL. fem. n. *lucelitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudodesulfovibrio sp009729555*. The type genome for the species is the GenBank assembly RS_GCF_009729555.1. The GC content of the type genome is 61.93 % and the genome length is 3.23 Mbp.

Description of *Candidatus* Pseudodesulfovibrio paropugo sp. nov.

Candidatus Pseudodesulfovibrio paropugo (NL. fem. n. *paropugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudodesulfovibrio sp010468615*. The type genome for the species is the GenBank assembly RS_GCF_010468615.1. The GC content of the type genome is 52.05 % and the genome length is 3.57 Mbp.

Description of *Candidatus* Pseudodesulfovibrio venabibula sp. nov.

Candidatus Pseudodesulfovibrio venabibula (NL. fem. n. *venabibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a

noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudodesulfovibrio sp009762795*. The type genome for the species is the GenBank assembly RS_GCF_009762795.1. The GC content of the type genome is 59.94 % and the genome length is 3.91 Mbp.

Description of *Candidatus* Pseudodonghicola bicoressa sp. nov.

Candidatus Pseudodonghicola bicoressa (NL. fem. n. *bicoressa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudodonghicola sp004358185*. The type genome for the species is the GenBank assembly RS_GCF_004358185.1. The GC content of the type genome is 65.76 % and the genome length is 4.66 Mbp.

Description of *Candidatus* Pseudodonghicola octupetta sp. nov.

Candidatus Pseudodonghicola octupetta (NL. fem. n. *octupetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudodonghicola sp004348975*. The type genome for the species is the GenBank assembly RS_GCF_004348975.1. The GC content of the type genome is 62.73 % and the genome length is 4.61 Mbp.

Description of *Candidatus* Pseudoduganella adnepitudo sp. nov.

Candidatus Pseudoduganella adnepitudo (NL. fem. n. *adnepitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudoduganella sp001191005*. The type genome for the species is the GenBank assembly RS_GCF_001191005.1. The GC content of the type genome is 63.83 % and the genome length is 6.36 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "forest soil".

Description of *Candidatus* Pseudoduganella allubitas sp. nov.

Candidatus Pseudoduganella allubitas (NL. fem. n. *allubitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudoduganella sp900113115*. The type genome for the species is the GenBank assembly RS_GCF_900113115.1. The GC content of the type genome is 62.61 % and the genome length is 6.34 Mbp.

Description of *Candidatus* Pseudoduganella benififorma sp. nov.

Candidatus Pseudoduganella benififorma (NL. fem. n. *benififorma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudoduganella sp001425265*. The type genome for the species is the GenBank assembly RS_GCF_001425265.1. The GC content of the type genome is 65.89 % and the genome length is 7.27 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "root".

Description of *Candidatus* Pseudoduganella codifentia sp. nov.

Candidatus Pseudoduganella codifentia (NL. fem. n. *codifentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudoduganella sp003053665*. The type genome for the species is the GenBank assembly RS_GCF_003053665.1. The GC content of the type genome is 65.99 % and the genome length is 6.72 Mbp.

Description of *Candidatus* Pseudoduganella homagitrix sp. nov.

Candidatus Pseudoduganella homagitrix (NL. fem. n. *homagitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudoduganella sp001425045*. The type genome for the species is the GenBank assembly RS_GCF_001425045.1. The GC content of the type genome is 65.82 % and the genome length is 7.21 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "root".

Description of *Candidatus* Pseudoduganella homiciforma sp. nov.

Candidatus Pseudoduganella homiciforma (NL. fem. n. *homiciforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudoduganella sp001425005*. The type genome for the species is the

GenBank assembly RS_GCF_001428585.1. The GC content of the type genome is 62.33 % and the genome length is 6.54 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "root".

Description of *Candidatus* Pseudoduganella inexsitudo sp. nov.

Candidatus Pseudoduganella inexsitudo (NL. fem. n. *inexsitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudoduganella sp013369485*. The type genome for the species is the GenBank assembly RS_GCF_013369485.1. The GC content of the type genome is 63.21 % and the genome length is 6.33 Mbp.

Description of *Candidatus* Pseudoduganella inpasitoga sp. nov.

Candidatus Pseudoduganella inpasitoga (NL. fem. n. *inpasitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudoduganella sp009674485*. The type genome for the species is the GenBank assembly RS_GCF_009674485.1. The GC content of the type genome is 62.75 % and the genome length is 8.17 Mbp.

Description of *Candidatus* Pseudoduganella nefarago sp. nov.

Candidatus Pseudoduganella nefarago (NL. fem. n. *nefarago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudoduganella sp004217275*. The type genome for the species is the GenBank assembly RS_GCF_004217275.1. The GC content of the type genome is 62.58 % and the genome length is 6.24 Mbp.

Description of *Candidatus* Pseudoduganella nitelugo sp. nov.

Candidatus Pseudoduganella nitelugo (NL. fem. n. *nitelugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudoduganella sp001427305*. The type genome for the species is the GenBank assembly RS_GCF_001427305.1. The GC content of the type genome is 62.04 % and the genome length is 6.6 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "root".

Description of *Candidatus* Pseudoduganella subucugo sp. nov.

Candidatus Pseudoduganella subucugo (NL. fem. n. *subucugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudoduganella sp002454505*. The type genome for the species is the GenBank assembly GCA_002454505.1. The GC content of the type genome is 65.83 % and the genome length is 6.06 Mbp.

Description of *Candidatus* Pseudoflavonifractor conubastra sp. nov.

Candidatus Pseudoflavonifractor conubastra (NL. fem. n. *conubastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudoflavonifractor sp014287675*. The type genome for the species is the GenBank assembly RS_GCF_009718665.1. The GC content of the type genome is 61.44 % and the genome length is 4.24 Mbp.

Description of *Candidatus* Pseudoflavonifractor sifunentia sp. nov.

Candidatus Pseudoflavonifractor sifunentia (NL. fem. n. *sifunentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudoflavonifractor sp900079765*. The type genome for the species is the GenBank assembly GCA_900079765.1. The GC content of the type genome is 57.7 % and the genome length is 3.67 Mbp.

Description of *Candidatus* Pseudofulvimonas necopitura sp. nov.

Candidatus Pseudofulvimonas necopitura (NL. fem. n. *necopitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudofulvimonas sp002344355*. The type genome for the species is the GenBank assembly GCA_002343145.1. The GC content of the type genome is 72.99 % and the genome length is 3.67 Mbp.

Description of *Candidatus* Pseudogemmobacter octacitio sp. nov.

Candidatus Pseudogemmobacter octacitio (NL. fem. n. *octacitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudogemmobacter sp900105075*. The type genome for the species is the GenBank assembly RS_GCF_900105075.1. The GC content of the type genome is 62.71 % and the genome length is 5.01 Mbp.

Description of *Candidatus* Pseudogemmobacter vaniditoga sp. nov.

Candidatus Pseudogemmobacter vaniditoga (NL. fem. n. *vaniditoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudogemmobacter sp013155295*. The type genome for the species is the GenBank assembly RS_GCF_013155295.1. The GC content of the type genome is 62.89 % and the genome length is 4.61 Mbp.

Description of *Candidatus* Pseudogracilibacillus terebiforma sp. nov.

Candidatus Pseudogracilibacillus terebiforma (NL. fem. n. *terebiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudogracilibacillus sp012518125*. The type genome for the species is the GenBank assembly GCA_012518125.1. The GC content of the type genome is 45.15 % and the genome length is 2.24 Mbp.

Description of *Candidatus* Pseudogracilibacillus turicago sp. nov.

Candidatus Pseudogracilibacillus turicago (NL. fem. n. *turicago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudogracilibacillus sp002453315*. The type genome for the species is the GenBank assembly GCA_002453315.1. The GC content of the type genome is 34.9 % and the genome length is 3.49 Mbp.

Description of *Candidatus* Pseudogulbenkiania odonticella sp. nov.

Candidatus Pseudogulbenkiania odonticella (NL. fem. n. *odonticella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Pseudogulbenkiania sp000527175*. The type genome for the species is the GenBank assembly RS_GCF_000527175.1. The GC content of the type genome is 64.19 % and the genome length is 4.34 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "not provided; submitted under MIGS 2.1".

Description of *Candidatus* Pseudohoeflea fetulitrix sp. nov.

Candidatus Pseudohoeflea fetulitrix (NL. fem. n. *fetulitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudohoeflea sp002707605*. The type genome for the species is the GenBank assembly GCA_002325365.1. The GC content of the type genome is 61.14 % and the genome length is 4.03 Mbp.

Description of *Candidatus* Pseudohoeflea invesitrix sp. nov.

Candidatus Pseudohoeflea invesitrix (NL. fem. n. *invesitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudohoeflea sp002709005*. The type genome for the species is the GenBank assembly GCA_002709005.1. The GC content of the type genome is 62.71 % and the genome length is 4.08 Mbp.

Description of *Candidatus* Pseudohongiella anarritio sp. nov.

Candidatus Pseudohongiella anarritio (NL. fem. n. *anarritio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudohongiella sp004535785*. The type genome for the species is the GenBank assembly RS_GCF_004535785.1. The GC content of the type genome is 52.54 % and the genome length is 3.53 Mbp.

Description of *Candidatus* Pseudohongiella bonititia sp. nov.

Candidatus Pseudohongiella bonititia (NL. fem. n. *bonititia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudohongiella sp002354805*. The type genome for the species is the GenBank assembly GCA_002693695.1. The GC content of the type genome is 55.24 %

and the genome length is 3.75 Mbp.

Description of *Candidatus* Pseudohongiella catecigena sp. nov.

Candidatus Pseudohongiella catecigena (NL. fem. n. *catecigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudohongiella sp002711845*. The type genome for the species is the GenBank assembly GCA_002388485.1. The GC content of the type genome is 57.81 % and the genome length is 3.39 Mbp.

Description of *Candidatus* Pseudohongiella defosentia sp. nov.

Candidatus Pseudohongiella defosentia (NL. fem. n. *defosentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudohongiella sp011050365*. The type genome for the species is the GenBank assembly GCA_011050365.1. The GC content of the type genome is 56.06 % and the genome length is 3.63 Mbp.

Description of *Candidatus* Pseudohongiella rubefifica sp. nov.

Candidatus Pseudohongiella rubefifica (NL. fem. n. *rubefifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudohongiella sp002422225*. The type genome for the species is the GenBank assembly GCA_002422225.1. The GC content of the type genome is 52.12 % and the genome length is 2.64 Mbp.

Description of *Candidatus* Pseudohongiella semibimonia sp. nov.

Candidatus Pseudohongiella semibimonia (NL. fem. n. *semibimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudohongiella sp002706685*. The type genome for the species is the GenBank assembly GCA_002388765.1. The GC content of the type genome is 55.31 % and the genome length is 3.55 Mbp.

Description of *Candidatus* Pseudolabrys adordifica sp. nov.

Candidatus Pseudolabrys adordifica (NL. fem. n. *adordifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudolabrys sp903891395*. The type genome for the species is the GenBank assembly GCA_903891395.1. The GC content of the type genome is 63.31 % and the genome length is 3.36 Mbp.

Description of *Candidatus* Pseudolabrys adpelax sp. nov.

Candidatus Pseudolabrys adpelax (NL. fem. n. *adpelax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudolabrys sp001426945*. The type genome for the species is the GenBank assembly RS_GCF_001426945.1. The GC content of the type genome is 64.01 % and the genome length is 4.74 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "root".

Description of *Candidatus* Pseudolabrys ancepastra sp. nov.

Candidatus Pseudolabrys ancepastra (NL. fem. n. *ancepastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudolabrys sp001464835*. The type genome for the species is the GenBank assembly GCA_001464835.1. The GC content of the type genome is 63.31 % and the genome length is 3.52 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "dual media filters at the Ann Arbor; Michigan drinking water treatment plant".

Description of *Candidatus* Pseudolabrys benifitia sp. nov.

Candidatus Pseudolabrys benifitia (NL. fem. n. *benifitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudolabrys sp903885555*. The type genome for the species is the GenBank assembly GCA_903897385.1. The GC content of the type genome is 62.64 % and the genome length is 3.69 Mbp.

Description of *Candidatus* Pseudolabrys bipativita sp. nov.

Candidatus Pseudolabrys bipativita (NL. fem. n. *bipativita* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudolabrys sp003133345*. The type genome for the species is the GenBank assembly GCA_003170235.1. The GC content of the type genome is 62.71 % and the genome length is 4.15 Mbp.

Description of *Candidatus* Pseudolabrys cerimousia sp. nov.

Candidatus Pseudolabrys cerimousia (NL. fem. n. *cerimousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudolabrys sp903892675*. The type genome for the species is the GenBank assembly GCA_903892675.1. The GC content of the type genome is 62.91 % and the genome length is 3.61 Mbp.

Description of *Candidatus* Pseudolabrys cnestitrix sp. nov.

Candidatus Pseudolabrys cnestitrix (NL. fem. n. *cnestitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudolabrys sp005153485*. The type genome for the species is the GenBank assembly RS_GCF_005153485.1. The GC content of the type genome is 63.61 % and the genome length is 4.52 Mbp.

Description of *Candidatus* Pseudolabrys herinugo sp. nov.

Candidatus Pseudolabrys herinugo (NL. fem. n. *herinugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudolabrys sp001899285*. The type genome for the species is the GenBank assembly GCA_001899285.1. The GC content of the type genome is 64.15 % and the genome length is 4.63 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Ammonium sulfate bioreactor".

Description of *Candidatus* Pseudolabrys inmenastra sp. nov.

Candidatus Pseudolabrys inmenastra (NL. fem. n. *inmenastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudolabrys sp003367195*. The type genome for the species is the GenBank assembly RS_GCF_003367195.1. The GC content of the type genome is 63.28 % and the genome length is 4.1 Mbp.

Description of *Candidatus* Pseudolabrys leviditura sp. nov.

Candidatus Pseudolabrys leviditura (NL. fem. n. *leviditura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudolabrys sp903929045*. The type genome for the species is the GenBank assembly GCA_903828905.1. The GC content of the type genome is 62.91 % and the genome length is 3.95 Mbp.

Description of *Candidatus* Pseudolabrys lubenitia sp. nov.

Candidatus Pseudolabrys lubenitia (NL. fem. n. *lubenitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudolabrys sp009694265*. The type genome for the species is the GenBank assembly GCA_009694265.1. The GC content of the type genome is 62.54 % and the genome length is 2.49 Mbp.

Description of *Candidatus* Pseudolabrys roraritura sp. nov.

Candidatus Pseudolabrys roraritura (NL. fem. n. *roraritura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudolabrys sp903878085*. The type genome for the species is the GenBank assembly GCA_903878085.1. The GC content of the type genome is 62.86 % and the genome length is 4.41 Mbp.

Description of *Candidatus* Pseudolabrys velivatica sp. nov.

Candidatus Pseudolabrys velivatica (NL. fem. n. *velivatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudolabrys sp903839845*. The type genome for the species is the GenBank assembly GCA_903838555.1. The GC content of the type genome is 63.16 %

and the genome length is 3.87 Mbp.

Description of *Candidatus* Pseudolabrys veliventia sp. nov.

Candidatus Pseudolabrys veliventia (NL. fem. n. *veliventia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudolabrys sp003152455*. The type genome for the species is the GenBank assembly GCA_003152455.1. The GC content of the type genome is 62.17 % and the genome length is 4.75 Mbp.

Description of *Candidatus* Pseudoleptotrichia tirunentia sp. nov.

Candidatus Pseudoleptotrichia tirunentia (NL. fem. n. *tirunentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudoleptotrichia sp003932895*. The type genome for the species is the GenBank assembly RS_GCF_003932895.1. The GC content of the type genome is 29.64 % and the genome length is 2.52 Mbp.

Description of *Candidatus* Pseudomaricurvus arcifousia sp. nov.

Candidatus Pseudomaricurvus arcifousia (NL. fem. n. *arcifousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomaricurvus sp009857815*. The type genome for the species is the GenBank assembly RS_GCF_009857815.1. The GC content of the type genome is 58.95 % and the genome length is 4.01 Mbp.

Description of *Candidatus* Pseudomaricurvus serotilenta sp. nov.

Candidatus Pseudomaricurvus serotilenta (NL. fem. n. *serotilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomaricurvus sp002707785*. The type genome for the species is the GenBank assembly GCA_002299085.1. The GC content of the type genome is 49.96 % and the genome length is 4.59 Mbp.

Description of *Candidatus* Pseudomonas adnuligena sp. nov.

Candidatus Pseudomonas adnuligena (NL. fem. n. *adnuligena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas sp000955805*. The type genome for the species is the GenBank assembly RS_GCF_000955805.1. The GC content of the type genome is 65.61 % and the genome length is 6.33 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Soil".

Description of *Candidatus* Pseudomonas arnogibra sp. nov.

Candidatus Pseudomonas arnogibra (NL. fem. n. *arnogibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas sp002796985*. The type genome for the species is the GenBank assembly GCA_002796985.1. The GC content of the type genome is 64.89 % and the genome length is 6.02 Mbp.

Description of *Candidatus* Pseudomonas decacilenta sp. nov.

Candidatus Pseudomonas decacilenta (NL. fem. n. *decacilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas sp000349845*. The type genome for the species is the GenBank assembly RS_GCF_000349845.1. The GC content of the type genome is 65.24 % and the genome length is 5.7 Mbp.

Description of *Candidatus* Pseudomonas detosugo sp. nov.

Candidatus Pseudomonas detosugo (NL. fem. n. *detosugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas sp002079985*. The type genome for the species is the GenBank assembly RS_GCF_002079985.1. The GC content of the type genome is 65.23 % and the genome length is 6.76 Mbp.

Description of *Candidatus* Pseudomonas extipibula sp. nov.

Candidatus Pseudomonas extipibula (NL. fem. n. *extipibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas sp009189165*. The type genome for the species is the GenBank assembly RS_GCF_009189165.1. The GC content of the type genome is 64.59 % and the genome length is 6.31 Mbp.

Description of *Candidatus* Pseudomonas ratificella sp. nov.

Candidatus Pseudomonas ratificella (NL. fem. n. *ratificella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas sp005877905*. The type genome for the species is the GenBank assembly RS_GCF_005877905.1. The GC content of the type genome is 64.78 % and the genome length is 6.68 Mbp.

Description of *Candidatus* Pseudomonas depopilega sp. nov.

Candidatus Pseudomonas depopilega (NL. fem. n. *depopilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_A sp003325755*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_003325755.1. The GC content of the type genome is 59.95 % and the genome length is 5.6 Mbp.

Description of *Candidatus* Pseudomonas favilitrix sp. nov.

Candidatus Pseudomonas favilitrix (NL. fem. n. *favilitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_A sp003205815*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_002341565.1. The GC content of the type genome is 64.0 % and the genome length is 3.9 Mbp.

Description of *Candidatus* Pseudomonas favonousia sp. nov.

Candidatus Pseudomonas favonousia (NL. fem. n. *favonousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_A sp003488145*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_002342105.1. The GC content of the type genome is 63.36 % and the genome length is 3.68 Mbp.

Description of *Candidatus* Pseudomonas mahelitia sp. nov.

Candidatus Pseudomonas mahelitia (NL. fem. n. *mahelitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_A sp002692525*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_000982865.1. The GC content of the type genome is 62.72 % and the genome length is 4.64 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "toluene-contaminated soil from the Barkan industrial zone".

Description of *Candidatus* Pseudomonas maxilifica sp. nov.

Candidatus Pseudomonas maxilifica (NL. fem. n. *maxilifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_A sp004331835*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_004331835.1. The GC content of the type genome is 60.77 % and the genome length is 4.62 Mbp.

Description of *Candidatus* Pseudomonas monodax sp. nov.

Candidatus Pseudomonas monodax (NL. fem. n. *monodax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_A sp004010935*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_002296325.1. The GC

content of the type genome is 60.42 % and the genome length is 4.47 Mbp.

Description of *Candidatus* Pseudomonas relecitrix sp. nov.

Candidatus Pseudomonas relecitrix (NL. fem. n. *relecitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_A sp007713455*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_007713455.1. The GC content of the type genome is 62.57 % and the genome length is 4.71 Mbp.

Description of *Candidatus* Pseudomonas saxopatica sp. nov.

Candidatus Pseudomonas saxopatica (NL. fem. n. *saxopatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_A sp013620795*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_013620795.1. The GC content of the type genome is 60.64 % and the genome length is 4.47 Mbp.

Description of *Candidatus* Pseudomonas senacastra sp. nov.

Candidatus Pseudomonas senacastra (NL. fem. n. *senacastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_A sp000765155*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_009740185.1. The GC content of the type genome is 64.69 % and the genome length is 3.93 Mbp.

Description of *Candidatus* Pseudomonas totidetta sp. nov.

Candidatus Pseudomonas totidetta (NL. fem. n. *totidetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Pseudomonas_A sp003527165*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003527165.1. The GC content of the type genome is 61.55 % and the genome length is 3.4 Mbp.

Description of *Candidatus* Pseudomonas infacitio sp. nov.

Candidatus Pseudomonas infacitio (NL. fem. n. *infacitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_B sp001512295*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_001512295.1. The GC content of the type genome is 65.46 % and the genome length is 5.44 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "stem and leaf".

Description of *Candidatus* Pseudomonas cenoditura sp. nov.

Candidatus Pseudomonas cenoditura (NL. fem. n. *cenoditura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_C sp001513025*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_012523245.1. The GC content of the type genome is 49.44 % and the genome length is 2.82 Mbp.

Description of *Candidatus* Pseudomonas detenitoga sp. nov.

Candidatus Pseudomonas detenitoga (NL. fem. n. *detenitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_C sp012719655*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_012719655.1. The GC content of the type genome is 48.8 % and the genome length is 2.7 Mbp.

Description of *Candidatus* Pseudomonas dimacitia sp. nov.

Candidatus Pseudomonas dimacitia (NL. fem. n. *dimacitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_C sp012518175*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_012518175.1. The GC content of the type genome is 49.57 % and the genome length is 2.22 Mbp.

Description of *Candidatus* Pseudomonas funebicella sp. nov.

Candidatus Pseudomonas funebicella (NL. fem. n. *funebicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_C sp012728315*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_012728315.1. The GC content of the type genome is 48.84 % and the genome length is 2.99 Mbp.

Description of *Candidatus* Pseudomonas humecilega sp. nov.

Candidatus Pseudomonas humecilega (NL. fem. n. *humecilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_C sp002342705*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_002342865.1. The GC content of the type genome is 48.54 % and the genome length is 2.81 Mbp.

Description of *Candidatus* Pseudomonas nugigitas sp. nov.

Candidatus Pseudomonas nugigitas (NL. fem. n. *nugigitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_C sp012800475*. Although GTDB has assigned a genus

name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_012800475.1. The GC content of the type genome is 49.11 % and the genome length is 2.23 Mbp.

Description of *Candidatus* Pseudomonas telefitia sp. nov.

Candidatus Pseudomonas telefitia (NL. fem. n. *telefitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_C sp012513235*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_012513235.1. The GC content of the type genome is 48.51 % and the genome length is 2.51 Mbp.

Description of *Candidatus* Pseudomonas admulago sp. nov.

Candidatus Pseudomonas admulago (NL. fem. n. *admulago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_D sp002296055*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_002296055.1. The GC content of the type genome is 61.36 % and the genome length is 3.56 Mbp.

Description of *Candidatus* Pseudomonas alcalicella sp. nov.

Candidatus Pseudomonas alcalicella (NL. fem. n. *alcalicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_D sp007117785*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_007117785.1. The GC content of the type genome is 57.53 % and the genome length is 2.71 Mbp.

Description of *Candidatus* Pseudomonas alectedo sp. nov.

Candidatus Pseudomonas alectedo (NL. fem. n. *alectedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_D sp008638345*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_008638345.1. The GC content of the type genome is 58.51 % and the genome length is 4.37 Mbp.

Description of *Candidatus* Pseudomonas armicimonas sp. nov.

Candidatus Pseudomonas armicimonas (NL. fem. n. *armicimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_D sp012735335*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_012735335.1. The GC content of the type genome is 62.03 % and the genome length is 2.95 Mbp.

Description of *Candidatus* Pseudomonas decitibula sp. nov.

Candidatus Pseudomonas decitibula (NL. fem. n. *decitibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_D sp002683975*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_003797945.1. The GC content of the type genome is 56.22 % and the genome length is 4.33 Mbp.

Description of *Candidatus* Pseudomonas istinatica sp. nov.

Candidatus Pseudomonas istinatica (NL. fem. n. *istinatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_D sp002840055*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_002840055.1. The GC content of the type genome is 57.94 % and the genome length is 3.24 Mbp.

Description of *Candidatus* Pseudomonas lenocicula sp. nov.

Candidatus Pseudomonas lenocicula (NL. fem. n. *lenocicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_D sp002979975*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_002979975.1. The GC content of the type genome is 61.5 % and the genome length is 4.1 Mbp.

Description of *Candidatus* Pseudomonas nefanicella sp. nov.

Candidatus Pseudomonas nefanicella (NL. fem. n. *nefanicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_D sp008365385*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_008365385.1. The GC content of the type genome is 57.84 % and the genome length is 4.11 Mbp.

Description of *Candidatus* Pseudomonas oscilivita sp. nov.

Candidatus Pseudomonas oscilivita (NL. fem. n. *oscilivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_D sp007692485*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_007692485.1. The GC content of the type genome is 57.6 % and the genome length is 2.8 Mbp.

Description of *Candidatus* Pseudomonas tribricula sp. nov.

Candidatus Pseudomonas tribricula (NL. fem. n. *tribricula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_D sp012844345*. Although GTDB has assigned a genus

name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_012844345.1. The GC content of the type genome is 58.27 % and the genome length is 3.98 Mbp.

Description of *Candidatus* Pseudomonas abnepilenta sp. nov.

Candidatus Pseudomonas abnepilenta (NL. fem. n. *abnepilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp005938045*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_005938045.2. The GC content of the type genome is 60.09 % and the genome length is 6.63 Mbp.

Description of *Candidatus* Pseudomonas absocatio sp. nov.

Candidatus Pseudomonas absocatio (NL. fem. n. *absocatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp002901475*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_002901475.1. The GC content of the type genome is 59.28 % and the genome length is 6.72 Mbp.

Description of *Candidatus* Pseudomonas absurilenta sp. nov.

Candidatus Pseudomonas absurilenta (NL. fem. n. *absurilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp000282195*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_000282195.1. The GC content of the type genome is 59.51 % and the genome length is 6.3 Mbp.

Description of *Candidatus* Pseudomonas acricimonia sp. nov.

Candidatus Pseudomonas acricimonia (NL. fem. n. *acricimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp007993865*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_007993865.1. The GC content of the type genome is 62.24 % and the genome length is 5.02 Mbp.

Description of *Candidatus* Pseudomonas adaggessa sp. nov.

Candidatus Pseudomonas adaggessa (NL. fem. n. *adaggessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp900187445*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_900187445.1. The GC content of the type genome is 58.69 % and the genome length is 6.22 Mbp.

Description of *Candidatus* Pseudomonas adcomessa sp. nov.

Candidatus Pseudomonas adcomessa (NL. fem. n. *adcomessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp003696305*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_003696305.1. The GC content of the type genome is 66.62 % and the genome length is 4.88 Mbp.

Description of *Candidatus* Pseudomonas adgenilenta sp. nov.

Candidatus Pseudomonas adgenilenta (NL. fem. n. *adgenilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp003061005*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_003061005.1. The GC content of the type genome is 60.28 % and the genome length is 5.95 Mbp.

Description of *Candidatus* Pseudomonas admulibula sp. nov.

Candidatus Pseudomonas admulibula (NL. fem. n. *admulibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp900108875*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_900108875.1. The GC content of the type genome is 60.19 % and the genome length is 6.06 Mbp.

Description of *Candidatus* Pseudomonas adnaretta sp. nov.

Candidatus Pseudomonas adnaretta (NL. fem. n. *adnaretta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp014268755*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_014268755.1. The GC content of the type genome is 63.02 % and the genome length is 6.99 Mbp.

Description of *Candidatus* Pseudomonas adnulimonia sp. nov.

Candidatus Pseudomonas adnulimonia (NL. fem. n. *adnulimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp000612585*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_000612585.1. The GC content of the type genome is 60.87 % and the genome length is 6.66 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "mushroom".

Description of *Candidatus* Pseudomonas adpacessa sp. nov.

Candidatus Pseudomonas adpacessa (NL. fem. n. *adpacessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp014268505*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_014268505.1. The GC content of the type genome is 59.7 % and the genome length is 5.65 Mbp.

Description of *Candidatus* Pseudomonas aggenilenta sp. nov.

Candidatus Pseudomonas aggenilenta (NL. fem. n. *aggenilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp900187645*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_900187645.1. The GC content of the type genome is 62.28 % and the genome length is 5.3 Mbp.

Description of *Candidatus* Pseudomonas aglasisca sp. nov.

Candidatus Pseudomonas aglasisca (NL. fem. n. *aglasisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp004519305*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_004519305.1. The GC content of the type genome is 64.41 % and the genome length is 5.4 Mbp.

Description of *Candidatus* Pseudomonas agravicula sp. nov.

Candidatus Pseudomonas agravicula (NL. fem. n. *agravicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp902706175*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_902706175.1. The GC content of the type genome is 59.94 % and the genome length is 6.4 Mbp.

Description of *Candidatus* Pseudomonas agrimago sp. nov.

Candidatus Pseudomonas agrimago (NL. fem. n. *agrimago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp009861525*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_009861525.1. The GC content of the type genome is 61.61 % and the genome length is 6.67 Mbp.

Description of *Candidatus* Pseudomonas algifedo sp. nov.

Candidatus Pseudomonas algifedo (NL. fem. n. *algifedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp004214895*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_004214895.1. The GC content of the type genome is 61.83 % and the genome length is 5.69 Mbp.

Description of *Candidatus* Pseudomonas ancipibula sp. nov.

Candidatus Pseudomonas ancipibula (NL. fem. n. *ancipibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp000633395*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_000633395.1. The GC content of the type genome is 62.93 % and the genome length is 7.43 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Carnivorous Plant Phytotelma".

Description of *Candidatus* Pseudomonas ancipimonia sp. nov.

Candidatus Pseudomonas ancipimonia (NL. fem. n. *ancipimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp009799925*. Although GTDB has assigned a genus

name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_009799925.1. The GC content of the type genome is 65.77 % and the genome length is 4.27 Mbp.

Description of *Candidatus* Pseudomonas apporiforma sp. nov.

Candidatus Pseudomonas apporiforma (NL. fem. n. *apporiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp009834515*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_009834515.1. The GC content of the type genome is 59.05 % and the genome length is 6.6 Mbp.

Description of *Candidatus* Pseudomonas ardifilega sp. nov.

Candidatus Pseudomonas ardifilega (NL. fem. n. *ardifilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp003105155*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_003105155.1. The GC content of the type genome is 62.95 % and the genome length is 4.84 Mbp.

Description of *Candidatus* Pseudomonas armicisca sp. nov.

Candidatus Pseudomonas armicisca (NL. fem. n. *armicisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp012935695*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_012935695.1. The GC content of the type genome is 59.21 % and the genome length is 6.47 Mbp.

Description of *Candidatus* Pseudomonas attegugo sp. nov.

Candidatus Pseudomonas attegugo (NL. fem. n. *attegugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp001269925*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_001269925.1. The GC content of the type genome is 60.67 % and the genome length is 6.82 Mbp.

Description of *Candidatus* Pseudomonas attesax sp. nov.

Candidatus Pseudomonas attesax (NL. fem. n. *attesax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp011369485*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_011369485.1. The GC content of the type genome is 59.62 % and the genome length is 6.13 Mbp.

Description of *Candidatus* Pseudomonas baditatica sp. nov.

Candidatus Pseudomonas baditatica (NL. fem. n. *baditatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp009761815*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_009761815.1. The GC content of the type genome is 59.84 % and the genome length is 6.41 Mbp.

Description of *Candidatus* Pseudomonas benivitas sp. nov.

Candidatus Pseudomonas benivitas (NL. fem. n. *benivitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp001655615*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_001655615.1. The GC content of the type genome is 59.41 % and the genome length is 6.5 Mbp. The isolation

source for the NCBI BioSample associated with the type genome is descibed as "plant root".

Description of *Candidatus* Pseudomonas bimotilega sp. nov.

Candidatus Pseudomonas bimotilega (NL. fem. n. *bimotilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp003033885*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_009831705.1. The GC content of the type genome is 60.44 % and the genome length is 5.87 Mbp.

Description of *Candidatus* Pseudomonas bipalitia sp. nov.

Candidatus Pseudomonas bipalitia (NL. fem. n. *bipalitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp004353925*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_004353925.1. The GC content of the type genome is 59.8 % and the genome length is 5.88 Mbp.

Description of *Candidatus* Pseudomonas bisulimonia sp. nov.

Candidatus Pseudomonas bisulimonia (NL. fem. n. *bisulimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp003097135*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_003097135.1. The GC content of the type genome is 62.76 % and the genome length is 4.85 Mbp.

Description of *Candidatus* Pseudomonas bovicastra sp. nov.

Candidatus Pseudomonas bovicastra (NL. fem. n. *bovicastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp003151075*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_003151075.1. The GC content of the type genome is 59.07 % and the genome length is 6.73 Mbp.

Description of *Candidatus* Pseudomonas buceliforma sp. nov.

Candidatus Pseudomonas buceliforma (NL. fem. n. *buceliforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp000935045*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_000935045.1. The GC content of the type genome is 62.45 % and the genome length is 6.35 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "PAH contaminated soil".

Description of *Candidatus* Pseudomonas buxanibra sp. nov.

Candidatus Pseudomonas buxanibra (NL. fem. n. *buxanibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp013823775*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_013823775.1. The GC content of the type genome is 58.85 % and the genome length is 4.18 Mbp.

Description of *Candidatus* Pseudomonas calipigena sp. nov.

Candidatus Pseudomonas calipigena (NL. fem. n. *calipigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp002029345*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_002029345.1. The GC content of the type genome is 60.02 % and the genome length is 7.35 Mbp.

Description of *Candidatus* Pseudomonas canacimonia sp. nov.

Candidatus Pseudomonas canacimonia (NL. fem. n. *canacimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp900187425*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_902498265.1. The GC content of the type genome is 58.82 % and the genome length is 6.49 Mbp.

Description of *Candidatus* Pseudomonas capucetta sp. nov.

Candidatus Pseudomonas capucetta (NL. fem. n. *capucetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp000801235*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_000801235.1. The GC content of the type genome is 60.98 % and the genome length is 6.31 Mbp.

Description of *Candidatus* Pseudomonas caselitica sp. nov.

Candidatus Pseudomonas caselitica (NL. fem. n. *caselitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp001655595*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_010448615.1. The GC content of the type genome is 60.56 % and the genome length is 6.42 Mbp.

Description of *Candidatus* Pseudomonas catabitia sp. nov.

Candidatus Pseudomonas catabitia (NL. fem. n. *catabitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp009763245*. Although GTDB has assigned a genus

name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_009763245.1. The GC content of the type genome is 62.97 % and the genome length is 3.96 Mbp.

Description of *Candidatus* Pseudomonas cemenilenta sp. nov.

Candidatus Pseudomonas cemenilenta (NL. fem. n. *cemenilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp003523465*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003523465.1. The GC content of the type genome is 62.85 % and the genome length is 3.56 Mbp.

Description of *Candidatus* Pseudomonas cenacitio sp. nov.

Candidatus Pseudomonas cenacitio (NL. fem. n. *cenacitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp001592875*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_001592875.1. The GC content of the type genome is 63.98 % and the genome length is 4.51 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "rhizosphere sediment of Phragmites karka from lake water".

Description of *Candidatus* Pseudomonas cenotax sp. nov.

Candidatus Pseudomonas cenotax (NL. fem. n. *cenotax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp002263605*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_002263605.1. The GC content of the type genome is 59.81 % and the genome length is 6.48 Mbp.

Description of *Candidatus* Pseudomonas cenotisca sp. nov.

Candidatus Pseudomonas cenotisca (NL. fem. n. *cenotisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp900582625*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_900582625.1. The GC content of the type genome is 60.79 % and the genome length is 5.42 Mbp.

Description of *Candidatus* Pseudomonas ceracastra sp. nov.

Candidatus Pseudomonas ceracastra (NL. fem. n. *ceracastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp009764265*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_009764265.1. The GC content of the type genome is 60.46 % and the genome length is 6.75 Mbp.

Description of *Candidatus* Pseudomonas cerevibula sp. nov.

Candidatus Pseudomonas cerevibula (NL. fem. n. *cerevibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp001422615*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_001422615.1. The GC content of the type genome is 61.36 % and the genome length is 6.28 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "leaf".

Description of *Candidatus* Pseudomonas cerevilenta sp. nov.

Candidatus Pseudomonas cerevilenta (NL. fem. n. *cerevilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp012985465*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-

formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_012985525.1. The GC content of the type genome is 61.0 % and the genome length is 6.2 Mbp.

Description of *Candidatus* Pseudomonas cetaribra sp. nov.

Candidatus Pseudomonas cetaribra (NL. fem. n. *cetaribra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp004310295*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_004310295.1. The GC content of the type genome is 58.87 % and the genome length is 6.27 Mbp.

Description of *Candidatus* Pseudomonas cetarousia sp. nov.

Candidatus Pseudomonas cetarousia (NL. fem. n. *cetarousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp003050835*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_003217055.1. The GC content of the type genome is 61.44 % and the genome length is 5.72 Mbp.

Description of *Candidatus* Pseudomonas chalbibula sp. nov.

Candidatus Pseudomonas chalbibula (NL. fem. n. *chalbibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp000418555*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_000418555.1. The GC content of the type genome is 63.42 % and the genome length is 5.09 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "glyphosate-polluted soil".

Description of *Candidatus* Pseudomonas cicaritoga sp. nov.

Candidatus Pseudomonas cicaritoga (NL. fem. n. *cicaritoga* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp014207255*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_014207255.1. The GC content of the type genome is 60.36 % and the genome length is 6.89 Mbp.

Description of *Candidatus* Pseudomonas cilibicula sp. nov.

Candidatus Pseudomonas cilibicula (NL. fem. n. *cilibicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp900187455*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_900187455.1. The GC content of the type genome is 62.7 % and the genome length is 7.24 Mbp.

Description of *Candidatus* Pseudomonas cilicigena sp. nov.

Candidatus Pseudomonas cilicigena (NL. fem. n. *cilicigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp009707515*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_009707515.1. The GC content of the type genome is 58.88 % and the genome length is 5.77 Mbp.

Description of *Candidatus* Pseudomonas cinefibra sp. nov.

Candidatus Pseudomonas cinefibra (NL. fem. n. *cinefibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp001269815*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_902706155.1. The GC

content of the type genome is 58.9 % and the genome length is 6.35 Mbp.

Description of *Candidatus* Pseudomonas cocolivita sp. nov.

Candidatus Pseudomonas cocolivita (NL. fem. n. *cocolivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp002383725*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_002345435.1. The GC content of the type genome is 61.29 % and the genome length is 5.07 Mbp.

Description of *Candidatus* Pseudomonas cohoritio sp. nov.

Candidatus Pseudomonas cohoritio (NL. fem. n. *cohoritio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp900005815*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_005233685.1. The GC content of the type genome is 60.77 % and the genome length is 5.91 Mbp.

Description of *Candidatus* Pseudomonas colapatio sp. nov.

Candidatus Pseudomonas colapatio (NL. fem. n. *colapatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp001465025*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_001465025.1. The GC content of the type genome is 58.64 % and the genome length is 4.02 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "dual media filters at the Ann Arbor; Michigan drinking water treatment plant".

Description of *Candidatus* Pseudomonas colapax sp. nov.

Candidatus Pseudomonas colapax (NL. fem. n. *colapax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp001945395*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_001945395.1. The GC content of the type genome is 63.17 % and the genome length is 5.49 Mbp.

Description of *Candidatus* Pseudomonas colepivita sp. nov.

Candidatus Pseudomonas colepivita (NL. fem. n. *colepivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp014472415*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_014472415.1. The GC content of the type genome is 58.88 % and the genome length is 6.13 Mbp.

Description of *Candidatus* Pseudomonas conabentia sp. nov.

Candidatus Pseudomonas conabentia (NL. fem. n. *conabentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp900187515*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_902497795.1. The GC content of the type genome is 59.13 % and the genome length is 6.85 Mbp.

Description of *Candidatus* Pseudomonas conifica sp. nov.

Candidatus Pseudomonas conifica (NL. fem. n. *conifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp001952855*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_001952855.1. The GC content of the type genome is 60.18 % and the genome length is 6.98 Mbp.

Description of *Candidatus* Pseudomonas coninatio sp. nov.

Candidatus Pseudomonas coninatio (NL. fem. n. *coninatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp014268975*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_014268955.1. The GC content of the type genome is 62.98 % and the genome length is 5.76 Mbp.

Description of *Candidatus* Pseudomonas conipiforma sp. nov.

Candidatus Pseudomonas conipiforma (NL. fem. n. *conipiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp002836515*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_002836515.1. The GC content of the type genome is 59.7 % and the genome length is 5.97 Mbp.

Description of *Candidatus* Pseudomonas corocedo sp. nov.

Candidatus Pseudomonas corocedo (NL. fem. n. *corocedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp002112885*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_002112965.1. The GC content of the type genome is 60.74 % and the genome length is 6.4 Mbp.

Description of *Candidatus* Pseudomonas cosigitoga sp. nov.

Candidatus Pseudomonas cosigitoga (NL. fem. n. *cosigitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp014268825*. Although GTDB has assigned a genus

name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_014268825.1. The GC content of the type genome is 62.5 % and the genome length is 5.27 Mbp.

Description of *Candidatus* Pseudomonas coticatio sp. nov.

Candidatus Pseudomonas coticatio (NL. fem. n. *coticatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp009908285*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_009908285.1. The GC content of the type genome is 61.51 % and the genome length is 7.33 Mbp.

Description of *Candidatus* Pseudomonas coturitia sp. nov.

Candidatus Pseudomonas coturitia (NL. fem. n. *coturitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp900187615*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_900187615.1. The GC content of the type genome is 58.96 % and the genome length is 6.06 Mbp.

Description of *Candidatus* Pseudomonas crastigena sp. nov.

Candidatus Pseudomonas crastigena (NL. fem. n. *crastigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp002386445*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_002386445.1. The GC content of the type genome is 63.17 % and the genome length is 5.2 Mbp.

Description of *Candidatus* Pseudomonas cruppicula sp. nov.

Candidatus Pseudomonas cruppicula (NL. fem. n. *cruppicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp000282455*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_000282455.1. The GC content of the type genome is 60.12 % and the genome length is 6.1 Mbp.

Description of *Candidatus* Pseudomonas daducisca sp. nov.

Candidatus Pseudomonas daducisca (NL. fem. n. *daducisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp002304225*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_002304225.1. The GC content of the type genome is 62.31 % and the genome length is 3.72 Mbp.

Description of *Candidatus* Pseudomonas decenimonas sp. nov.

Candidatus Pseudomonas decenimonas (NL. fem. n. *decenimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp013386825*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_013386785.1. The GC content of the type genome is 60.95 % and the genome length is 7.14 Mbp.

Description of *Candidatus* Pseudomonas deculastra sp. nov.

Candidatus Pseudomonas deculastra (NL. fem. n. *deculastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp002979555*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_900576665.1. The GC content of the type genome is 60.76 % and the genome length is 5.84 Mbp.

Description of *Candidatus* Pseudomonas decupimonas sp. nov.

Candidatus Pseudomonas decupimonas (NL. fem. n. *decupimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp900589395*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_900582365.1. The GC content of the type genome is 62.25 % and the genome length is 6.15 Mbp.

Description of *Candidatus* Pseudomonas defalilega sp. nov.

Candidatus Pseudomonas defalilega (NL. fem. n. *defalilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp900601905*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_900601905.1. The GC content of the type genome is 58.95 % and the genome length is 5.75 Mbp.

Description of *Candidatus* Pseudomonas defetibula sp. nov.

Candidatus Pseudomonas defetibula (NL. fem. n. *defetibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp001429045*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_001427765.1. The GC content of the type genome is 59.99 % and the genome length is 6.25 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "root".

Description of *Candidatus* Pseudomonas defetisca sp. nov.

Candidatus Pseudomonas defetisca (NL. fem. n. *defetisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Pseudomonas_E sp004364435*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_004364435.1. The GC content of the type genome is 58.77 % and the genome length is 5.44 Mbp.

Description of *Candidatus* Pseudomonas defuledo sp. nov.

Candidatus Pseudomonas defuledo (NL. fem. n. *defuledo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp009866765*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_009866765.1. The GC content of the type genome is 60.06 % and the genome length is 6.61 Mbp.

Description of *Candidatus* Pseudomonas dehisatio sp. nov.

Candidatus Pseudomonas dehisatio (NL. fem. n. *dehisatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp014164785*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_014164785.1. The GC content of the type genome is 63.25 % and the genome length is 4.29 Mbp.

Description of *Candidatus* Pseudomonas dehisetta sp. nov.

Candidatus Pseudomonas dehisetta (NL. fem. n. *dehisetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp005502935*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_005502935.1. The GC content of the type genome is 62.48 % and the genome length is 4.23 Mbp.

Description of *Candidatus* Pseudomonas dehonedo sp. nov.

Candidatus Pseudomonas dehonedo (NL. fem. n. *dehonedo* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp003851685*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_003851685.1. The GC content of the type genome is 60.63 % and the genome length is 6.0 Mbp.

Description of *Candidatus* Pseudomonas delebitoga sp. nov.

Candidatus Pseudomonas delebitoga (NL. fem. n. *delebitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp013359595*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_013359595.1. The GC content of the type genome is 60.86 % and the genome length is 6.65 Mbp.

Description of *Candidatus* Pseudomonas delubousia sp. nov.

Candidatus Pseudomonas delubousia (NL. fem. n. *delubousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp003935425*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_003935425.1. The GC content of the type genome is 60.97 % and the genome length is 5.46 Mbp.

Description of *Candidatus* Pseudomonas demagitas sp. nov.

Candidatus Pseudomonas demagitas (NL. fem. n. *demagitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp002438125*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_002438125.1. The GC

content of the type genome is 64.71 % and the genome length is 5.44 Mbp.

Description of *Candidatus* Pseudomonas demulago sp. nov.

Candidatus Pseudomonas demulago (NL. fem. n. *demulago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp013359695*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_013359695.1. The GC content of the type genome is 59.7 % and the genome length is 6.84 Mbp.

Description of *Candidatus* Pseudomonas denecago sp. nov.

Candidatus Pseudomonas denecago (NL. fem. n. *denecago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp007828215*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_007828175.1. The GC content of the type genome is 60.66 % and the genome length is 6.14 Mbp.

Description of *Candidatus* Pseudomonas denixitica sp. nov.

Candidatus Pseudomonas denixitica (NL. fem. n. *denixitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp900107395*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_900107395.1. The GC content of the type genome is 62.63 % and the genome length is 6.73 Mbp.

Description of *Candidatus* Pseudomonas denorifica sp. nov.

Candidatus Pseudomonas denorifica (NL. fem. n. *denorifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Pseudomonas_E sp002356535*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_002356535.1. The GC content of the type genome is 59.75 % and the genome length is 6.73 Mbp.

Description of *Candidatus* Pseudomonas depetousia sp. nov.

Candidatus Pseudomonas depetousia (NL. fem. n. *depetousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp004803755*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_004803755.1. The GC content of the type genome is 58.74 % and the genome length is 5.82 Mbp.

Description of *Candidatus* Pseudomonas depicousia sp. nov.

Candidatus Pseudomonas depicousia (NL. fem. n. *depicousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp001705835*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_001705995.2. The GC content of the type genome is 62.09 % and the genome length is 7.68 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "sewage enriched with benzalkonium chloride".

Description of *Candidatus* Pseudomonas depupitrix sp. nov.

Candidatus Pseudomonas depupitrix (NL. fem. n. *depupitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp002699985*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_002699985.1. The GC content of the type genome is 56.96 % and the genome length is 6.31 Mbp.

Description of *Candidatus* Pseudomonas derecatio sp. nov.

Candidatus Pseudomonas derecatio (NL. fem. n. *derecatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp002112505*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_002112505.1. The GC content of the type genome is 63.75 % and the genome length is 5.99 Mbp.

Description of *Candidatus* Pseudomonas derecousia sp. nov.

Candidatus Pseudomonas derecousia (NL. fem. n. *derecousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp003605735*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_003605735.1. The GC content of the type genome is 59.13 % and the genome length is 6.87 Mbp.

Description of *Candidatus* Pseudomonas derelentia sp. nov.

Candidatus Pseudomonas derelentia (NL. fem. n. *derelentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp012935755*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_012935675.1. The GC content of the type genome is 59.6 % and the genome length is 7.11 Mbp.

Description of *Candidatus* Pseudomonas desomedo sp. nov.

Candidatus Pseudomonas desomedo (NL. fem. n. *desomedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp000263855*. Although GTDB has assigned a genus

name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_000263855.1. The GC content of the type genome is 62.5 % and the genome length is 6.31 Mbp.

Description of *Candidatus* Pseudomonas desomisca sp. nov.

Candidatus Pseudomonas desomisca (NL. fem. n. *desomisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp002113595*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_002112565.1. The GC content of the type genome is 64.79 % and the genome length is 6.21 Mbp.

Description of *Candidatus* Pseudomonas desomitrix sp. nov.

Candidatus Pseudomonas desomitrix (NL. fem. n. *desomitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp900573885*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_900573885.1. The GC content of the type genome is 60.85 % and the genome length is 5.53 Mbp.

Description of *Candidatus* Pseudomonas desucifica sp. nov.

Candidatus Pseudomonas desucifica (NL. fem. n. *desucifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp003290225*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_002742485.1. The GC content of the type genome is 59.31 % and the genome length is 6.54 Mbp.

Description of *Candidatus* Pseudomonas desucitrix sp. nov.

Candidatus Pseudomonas desucitrix (NL. fem. n. *desucitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp002204795*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_002204795.1. The GC content of the type genome is 60.4 % and the genome length is 6.64 Mbp.

Description of *Candidatus* Pseudomonas desupatio sp. nov.

Candidatus Pseudomonas desupatio (NL. fem. n. *desupatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp000512695*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_000512695.2. The GC content of the type genome is 58.71 % and the genome length is 6.02 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "permafrost soil".

Description of *Candidatus* Pseudomonas desurugo sp. nov.

Candidatus Pseudomonas desurugo (NL. fem. n. *desurugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp002434265*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_002434265.1. The GC content of the type genome is 64.2 % and the genome length is 4.7 Mbp.

Description of *Candidatus* Pseudomonas detecessa sp. nov.

Candidatus Pseudomonas detecessa (NL. fem. n. *detecessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp000282375*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The

type genome for the species is the GenBank assembly RS_GCF_000282555.1. The GC content of the type genome is 58.96 % and the genome length is 6.66 Mbp.

Description of *Candidatus* Pseudomonas detesigena sp. nov.

Candidatus Pseudomonas detesigena (NL. fem. n. *detesigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp001297015*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_002979955.1. The GC content of the type genome is 59.34 % and the genome length is 6.36 Mbp.

Description of *Candidatus* Pseudomonas detesisca sp. nov.

Candidatus Pseudomonas detesisca (NL. fem. n. *detesisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp900109995*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_900109995.1. The GC content of the type genome is 61.41 % and the genome length is 5.29 Mbp.

Description of *Candidatus* Pseudomonas detoticula sp. nov.

Candidatus Pseudomonas detoticula (NL. fem. n. *detoticula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp904061905*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_904061905.1. The GC content of the type genome is 65.97 % and the genome length is 5.55 Mbp.

Description of *Candidatus* Pseudomonas detumibula sp. nov.

Candidatus Pseudomonas detumibula (NL. fem. n. *detumibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp009905435*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_009905435.1. The GC content of the type genome is 60.3 % and the genome length is 6.01 Mbp.

Description of *Candidatus* Pseudomonas dicimitia sp. nov.

Candidatus Pseudomonas dicimitia (NL. fem. n. *dicimitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp002803095*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_004369025.1. The GC content of the type genome is 62.21 % and the genome length is 6.37 Mbp.

Description of *Candidatus* Pseudomonas didacitio sp. nov.

Candidatus Pseudomonas didacitio (NL. fem. n. *didacitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp002843605*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_900589715.1. The GC content of the type genome is 60.78 % and the genome length is 6.58 Mbp.

Description of *Candidatus* Pseudomonas dilecilenta sp. nov.

Candidatus Pseudomonas dilecilenta (NL. fem. n. *dilecilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp003053805*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_000802985.1. The GC content of the type genome is 59.14 % and the genome length is 6.81 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "copper contaminated soil from Hygum site".

Description of *Candidatus* Pseudomonas dilogimonia sp. nov.

Candidatus Pseudomonas dilogimonia (NL. fem. n. *dilogimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp004011755*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_902497605.1. The GC content of the type genome is 59.13 % and the genome length is 6.66 Mbp.

Description of *Candidatus* Pseudomonas diminigena sp. nov.

Candidatus Pseudomonas diminigena (NL. fem. n. *diminigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp013385985*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_013385985.1. The GC content of the type genome is 61.34 % and the genome length is 6.68 Mbp.

Description of *Candidatus* Pseudomonas dinupibula sp. nov.

Candidatus Pseudomonas dinupibula (NL. fem. n. *dinupibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp003852405*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_003852405.1. The GC content of the type genome is 60.94 % and the genome length is 6.52 Mbp.

Description of *Candidatus* Pseudomonas direcax sp. nov.

Candidatus Pseudomonas direcax (NL. fem. n. *direcax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp900156465*. Although GTDB has assigned a genus

name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_900119645.1. The GC content of the type genome is 62.03 % and the genome length is 5.95 Mbp.

Description of *Candidatus* Pseudomonas direpentia sp. nov.

Candidatus Pseudomonas direpentia (NL. fem. n. *direpentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp002018875*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_002018875.1. The GC content of the type genome is 62.0 % and the genome length is 7.55 Mbp.

Description of *Candidatus* Pseudomonas disidugo sp. nov.

Candidatus Pseudomonas disidugo (NL. fem. n. *disidugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp002483005*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_002483005.1. The GC content of the type genome is 66.61 % and the genome length is 2.78 Mbp.

Description of *Candidatus* Pseudomonas domigicella sp. nov.

Candidatus Pseudomonas domigicella (NL. fem. n. *domigicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp014269185*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_014269185.1. The GC content of the type genome is 62.98 % and the genome length is 5.22 Mbp.

Description of *Candidatus* Pseudomonas domipitica sp. nov.

Candidatus Pseudomonas domipitica (NL. fem. n. *domipitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp900187565*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_005502415.1. The GC content of the type genome is 59.03 % and the genome length is 6.57 Mbp.

Description of *Candidatus* Pseudomonas ecastitas sp. nov.

Candidatus Pseudomonas ecastitas (NL. fem. n. *ecastitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp003595175*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_003595175.1. The GC content of the type genome is 64.52 % and the genome length is 4.95 Mbp.

Description of *Candidatus* Pseudomonas echogigena sp. nov.

Candidatus Pseudomonas echogigena (NL. fem. n. *echogigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp000282275*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_000282275.2. The GC content of the type genome is 60.28 % and the genome length is 6.15 Mbp.

Description of *Candidatus* Pseudomonas elastitoga sp. nov.

Candidatus Pseudomonas elastitoga (NL. fem. n. *elastitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp900590755*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_900590755.1. The GC content of the type genome is 58.48 % and the genome length is 5.87 Mbp.

Description of *Candidatus* Pseudomonas encenigena sp. nov.

Candidatus Pseudomonas encenigena (NL. fem. n. *encenigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp003052585*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_003052585.1. The GC content of the type genome is 64.34 % and the genome length is 4.05 Mbp.

Description of *Candidatus* Pseudomonas exhonigena sp. nov.

Candidatus Pseudomonas exhonigena (NL. fem. n. *exhonigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp011355085*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_011355085.1. The GC content of the type genome is 60.2 % and the genome length is 6.37 Mbp.

Description of *Candidatus* Pseudomonas exsomilenta sp. nov.

Candidatus Pseudomonas exsomilenta (NL. fem. n. *exsomilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp900475325*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_900475325.1. The GC content of the type genome is 58.91 % and the genome length is 5.92 Mbp.

Description of *Candidatus* Pseudomonas exsomitia sp. nov.

Candidatus Pseudomonas exsomitia (NL. fem. n. *exsomitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp001320245*. Although GTDB has assigned a genus

name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_001320245.1. The GC content of the type genome is 62.39 % and the genome length is 6.09 Mbp.

Description of *Candidatus* Pseudomonas fameledo sp. nov.

Candidatus Pseudomonas fameledo (NL. fem. n. *fameledo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp003052515*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_003057685.2. The GC content of the type genome is 60.11 % and the genome length is 5.92 Mbp.

Description of *Candidatus* Pseudomonas fatilisca sp. nov.

Candidatus Pseudomonas fatilisca (NL. fem. n. *fatilisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp014268745*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_014268705.1. The GC content of the type genome is 61.16 % and the genome length is 6.62 Mbp.

Description of *Candidatus* Pseudomonas favonilenta sp. nov.

Candidatus Pseudomonas favonilenta (NL. fem. n. *favonilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp006227205*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_006227205.1. The GC content of the type genome is 60.74 % and the genome length is 6.69 Mbp.

Description of *Candidatus* Pseudomonas fecunax sp. nov.

Candidatus Pseudomonas fecunax (NL. fem. n. *fecunax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp002163625*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_002163625.1. The GC content of the type genome is 54.27 % and the genome length is 4.93 Mbp.

Description of *Candidatus* Pseudomonas feditibra sp. nov.

Candidatus Pseudomonas feditibra (NL. fem. n. *feditibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp013179515*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_013179515.1. The GC content of the type genome is 62.72 % and the genome length is 5.93 Mbp.

Description of *Candidatus* Pseudomonas feficax sp. nov.

Candidatus Pseudomonas feficax (NL. fem. n. *feficax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp900187605*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_900187605.1. The GC content of the type genome is 59.04 % and the genome length is 6.49 Mbp.

Description of *Candidatus* Pseudomonas femelisca sp. nov.

Candidatus Pseudomonas femelisca (NL. fem. n. *femelisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp002754355*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_014268485.1. The GC content of the type genome is 59.03 % and the genome length is 6.58 Mbp.

Description of *Candidatus* Pseudomonas femelitio sp. nov.

Candidatus Pseudomonas femelitio (NL. fem. n. *femelitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp009834565*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_013385735.1. The GC content of the type genome is 60.32 % and the genome length is 6.63 Mbp.

Description of *Candidatus* Pseudomonas fetutax sp. nov.

Candidatus Pseudomonas fetutax (NL. fem. n. *fetutax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp003208235*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_003208235.1. The GC content of the type genome is 59.42 % and the genome length is 5.75 Mbp.

Description of *Candidatus* Pseudomonas fidenitudo sp. nov.

Candidatus Pseudomonas fidenitudo (NL. fem. n. *fidenitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp002303925*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_902498255.1. The GC content of the type genome is 59.83 % and the genome length is 6.29 Mbp.

Description of *Candidatus* Pseudomonas fiducigena sp. nov.

Candidatus Pseudomonas fiducigena (NL. fem. n. *fiducigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp000416235*. Although GTDB has assigned a genus

name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_000737235.1. The GC content of the type genome is 58.39 % and the genome length is 6.68 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "biofilm on rocks in a stream".

Description of *Candidatus* Pseudomonas fuligimonia sp. nov.

Candidatus Pseudomonas fuligimonia (NL. fem. n. *fuligimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp002753995*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_002753995.1. The GC content of the type genome is 59.88 % and the genome length is 5.28 Mbp.

Description of *Candidatus* Pseudomonas fumifatio sp. nov.

Candidatus Pseudomonas fumifatio (NL. fem. n. *fumifatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp009391885*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_009391885.1. The GC content of the type genome is 62.91 % and the genome length is 6.08 Mbp.

Description of *Candidatus* Pseudomonas fusifugo sp. nov.

Candidatus Pseudomonas fusifugo (NL. fem. n. *fusifugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp002000165*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_000967945.1. The GC content of the type genome is 58.94 % and the genome length is 6.3 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "surface soil".

Description of *Candidatus* Pseudomonas hemidisca sp. nov.

Candidatus Pseudomonas hemidisca (NL. fem. n. *hemidisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp014270125*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_014268595.1. The GC content of the type genome is 60.03 % and the genome length is 6.01 Mbp.

Description of *Candidatus* Pseudomonas hexapousia sp. nov.

Candidatus Pseudomonas hexapousia (NL. fem. n. *hexapousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp008369295*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_008369295.1. The GC content of the type genome is 58.58 % and the genome length is 6.13 Mbp.

Description of *Candidatus* Pseudomonas hirunitica sp. nov.

Candidatus Pseudomonas hirunitica (NL. fem. n. *hirunitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp002255865*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_014230445.1. The GC content of the type genome is 59.7 % and the genome length is 6.96 Mbp.

Description of *Candidatus* Pseudomonas homilentia sp. nov.

Candidatus Pseudomonas homilentia (NL. fem. n. *homilentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp000282315*. Although GTDB has assigned a genus

name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_004346485.1. The GC content of the type genome is 58.79 % and the genome length is 6.6 Mbp.

Description of *Candidatus* Pseudomonas homogivita sp. nov.

Candidatus Pseudomonas homogivita (NL. fem. n. *homogivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp000282215*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_000282215.1. The GC content of the type genome is 58.46 % and the genome length is 6.61 Mbp.

Description of *Candidatus* Pseudomonas homolessa sp. nov.

Candidatus Pseudomonas homolessa (NL. fem. n. *homolessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp000242655*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_012935715.1. The GC content of the type genome is 60.95 % and the genome length is 7.3 Mbp.

Description of *Candidatus* Pseudomonas immacibra sp. nov.

Candidatus Pseudomonas immacibra (NL. fem. n. *immacibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp002277815*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_002277815.1. The GC content of the type genome is 58.4 % and the genome length is 6.73 Mbp.

Description of *Candidatus* Pseudomonas impavifica sp. nov.

Candidatus Pseudomonas impavifica (NL. fem. n. *impavifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp000631985*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_000631985.1. The GC content of the type genome is 60.04 % and the genome length is 6.27 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Willow (Salix sp.)".

Description of *Candidatus* Pseudomonas impiniforma sp. nov.

Candidatus Pseudomonas impiniforma (NL. fem. n. *impiniforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp002080045*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_002080045.1. The GC content of the type genome is 59.55 % and the genome length is 7.04 Mbp.

Description of *Candidatus* Pseudomonas inabsicula sp. nov.

Candidatus Pseudomonas inabsicula (NL. fem. n. *inabsicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp003208475*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_003208475.1. The GC content of the type genome is 58.86 % and the genome length is 6.51 Mbp.

Description of *Candidatus* Pseudomonas indevastra sp. nov.

Candidatus Pseudomonas indevastra (NL. fem. n. *indevastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp000761545*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The

type genome for the species is the GenBank assembly RS_GCF_000761545.1. The GC content of the type genome is 64.82 % and the genome length is 4.8 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "bottom water from the Huguangyan Maar Lake in southern China".

Description of *Candidatus* Pseudomonas indilibula sp. nov.

Candidatus Pseudomonas indilibula (NL. fem. n. *indilibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp001269805*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_001269805.1. The GC content of the type genome is 58.84 % and the genome length is 6.36 Mbp.

Description of *Candidatus* Pseudomonas infabentia sp. nov.

Candidatus Pseudomonas infabentia (NL. fem. n. *infabentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp003205205*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_003205205.1. The GC content of the type genome is 62.12 % and the genome length is 5.67 Mbp.

Description of *Candidatus* Pseudomonas infucentia sp. nov.

Candidatus Pseudomonas infucentia (NL. fem. n. *infucentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp001421885*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_001421885.1. The GC content of the type genome is 59.44 % and the genome length is 5.69 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "leaf".

Description of *Candidatus* Pseudomonas inlacivita sp. nov.

Candidatus Pseudomonas inlacivita (NL. fem. n. *inlacivita* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp004786035*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_004786035.1. The GC content of the type genome is 60.34 % and the genome length is 6.7 Mbp.

Description of *Candidatus* Pseudomonas innasimonia sp. nov.

Candidatus Pseudomonas innasimonia (NL. fem. n. *innasimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp013200955*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_013200955.2. The GC content of the type genome is 63.45 % and the genome length is 4.44 Mbp.

Description of *Candidatus* Pseudomonas inpelugo sp. nov.

Candidatus Pseudomonas inpelugo (NL. fem. n. *inpelugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp012844475*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_012844475.1. The GC content of the type genome is 60.75 % and the genome length is 6.04 Mbp.

Description of *Candidatus* Pseudomonas inrecimonia sp. nov.

Candidatus Pseudomonas inrecimonia (NL. fem. n. *inrecimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp010095445*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_010095445.1. The GC

content of the type genome is 58.54 % and the genome length is 6.49 Mbp.

Description of *Candidatus* Pseudomonas inturimonas sp. nov.

Candidatus Pseudomonas inturimonas (NL. fem. n. *inturimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp001297125*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_001297125.1. The GC content of the type genome is 59.1 % and the genome length is 7.45 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "internal stem tissue".

Description of *Candidatus* Pseudomonas invicedo sp. nov.

Candidatus Pseudomonas invicedo (NL. fem. n. *invicedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp000829415*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_000829415.1. The GC content of the type genome is 60.74 % and the genome length is 6.33 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "leaf".

Description of *Candidatus* Pseudomonas invigimonia sp. nov.

Candidatus Pseudomonas invigimonia (NL. fem. n. *invigimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp003024385*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_003024385.1. The GC content of the type genome is 60.31 % and the genome length is 5.03 Mbp.

Description of *Candidatus* Pseudomonas irraditoga sp. nov.

Candidatus Pseudomonas irraditoga (NL. fem. n. *irraditoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp002878485*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_002878485.1. The GC content of the type genome is 60.07 % and the genome length is 6.38 Mbp.

Description of *Candidatus* Pseudomonas lacinitica sp. nov.

Candidatus Pseudomonas lacinitica (NL. fem. n. *lacinitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp000955815*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_000955815.1. The GC content of the type genome is 59.59 % and the genome length is 5.61 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "soil".

Description of *Candidatus* Pseudomonas lavabessa sp. nov.

Candidatus Pseudomonas lavabessa (NL. fem. n. *lavabessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp002286815*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_014192635.1. The GC content of the type genome is 58.79 % and the genome length is 6.05 Mbp.

Description of *Candidatus* Pseudomonas levificella sp. nov.

Candidatus Pseudomonas levificella (NL. fem. n. *levificella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp903970465*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_903970465.1. The GC

content of the type genome is 61.38 % and the genome length is 5.52 Mbp.

Description of *Candidatus* Pseudomonas licenitia sp. nov.

Candidatus Pseudomonas licenitia (NL. fem. n. *licenitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp001830395*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_001830395.1. The GC content of the type genome is 59.54 % and the genome length is 3.23 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under low O2 conditions; 1.2 micron filter; 10% subassembly".

Description of *Candidatus* Pseudomonas locupilenta sp. nov.

Candidatus Pseudomonas locupilenta (NL. fem. n. *locupilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp000282475*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_000282475.1. The GC content of the type genome is 60.21 % and the genome length is 7.29 Mbp.

Description of *Candidatus* Pseudomonas lorarax sp. nov.

Candidatus Pseudomonas lorarax (NL. fem. n. *lorarax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp012975065*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_012975065.1. The GC content of the type genome is 63.28 % and the genome length is 5.68 Mbp.

Description of *Candidatus* Pseudomonas ludimisca sp. nov.

Candidatus Pseudomonas ludimisca (NL. fem. n. *ludimisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp900596015*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_900589655.1. The GC content of the type genome is 62.1 % and the genome length is 4.66 Mbp.

Description of *Candidatus* Pseudomonas luticivita sp. nov.

Candidatus Pseudomonas luticivita (NL. fem. n. *luticivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp900585905*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_900585905.1. The GC content of the type genome is 59.84 % and the genome length is 5.05 Mbp.

Description of *Candidatus* Pseudomonas macilastra sp. nov.

Candidatus Pseudomonas macilastra (NL. fem. n. *macilastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp001259595*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_001259595.1. The GC content of the type genome is 64.7 % and the genome length is 5.91 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "minimium media from garden soil".

Description of *Candidatus* Pseudomonas mahemisca sp. nov.

Candidatus Pseudomonas mahemisca (NL. fem. n. *mahemisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp002112385*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_002112365.1. The GC

content of the type genome is 60.28 % and the genome length is 6.27 Mbp.

Description of *Candidatus* Pseudomonas mahemitudo sp. nov.

Candidatus Pseudomonas mahemitudo (NL. fem. n. *mahemitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp003050925*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_003050925.1. The GC content of the type genome is 59.59 % and the genome length is 6.38 Mbp.

Description of *Candidatus* Pseudomonas malogitura sp. nov.

Candidatus Pseudomonas malogitura (NL. fem. n. *malogitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp002843585*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_902497645.1. The GC content of the type genome is 62.01 % and the genome length is 5.25 Mbp.

Description of *Candidatus* Pseudomonas manubicula sp. nov.

Candidatus Pseudomonas manubicula (NL. fem. n. *manubicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp002354655*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_002354655.1. The GC content of the type genome is 62.25 % and the genome length is 4.83 Mbp.

Description of *Candidatus* Pseudomonas manupilenta sp. nov.

Candidatus Pseudomonas manupilenta (NL. fem. n. *manupilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Pseudomonas_E sp002439135*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_002439245.1. The GC content of the type genome is 62.98 % and the genome length is 4.71 Mbp.

Description of *Candidatus* Pseudomonas maxiligena sp. nov.

Candidatus Pseudomonas maxiligena (NL. fem. n. *maxiligena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp002980155*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_000620245.1. The GC content of the type genome is 60.64 % and the genome length is 6.21 Mbp.

Description of *Candidatus* Pseudomonas melilastra sp. nov.

Candidatus Pseudomonas melilastra (NL. fem. n. *melilastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp002113045*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_002113045.1. The GC content of the type genome is 60.44 % and the genome length is 6.23 Mbp.

Description of *Candidatus* Pseudomonas mimogitudo sp. nov.

Candidatus Pseudomonas mimogitudo (NL. fem. n. *mimogitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp004136015*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_004136015.1. The GC content of the type genome is 58.74 % and the genome length is 6.6 Mbp.

Description of *Candidatus* Pseudomonas minagedo sp. nov.

Candidatus Pseudomonas minagedo (NL. fem. n. *minagedo* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp005233515*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_003936805.1. The GC content of the type genome is 60.03 % and the genome length is 5.98 Mbp.

Description of *Candidatus* Pseudomonas momorilega sp. nov.

Candidatus Pseudomonas momorilega (NL. fem. n. *momorilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp003097075*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_003097075.1. The GC content of the type genome is 61.34 % and the genome length is 6.2 Mbp.

Description of *Candidatus* Pseudomonas monocago sp. nov.

Candidatus Pseudomonas monocago (NL. fem. n. *monocago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp003053605*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_003391585.1. The GC content of the type genome is 58.5 % and the genome length is 7.69 Mbp.

Description of *Candidatus* Pseudomonas monogitura sp. nov.

Candidatus Pseudomonas monogitura (NL. fem. n. *monogitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp002025205*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_002025205.1. The GC

content of the type genome is 61.73 % and the genome length is 5.04 Mbp.

Description of *Candidatus* Pseudomonas murililenta sp. nov.

Candidatus Pseudomonas murililenta (NL. fem. n. *murililenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp013374995*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_009765425.1. The GC content of the type genome is 63.4 % and the genome length is 6.06 Mbp.

Description of *Candidatus* Pseudomonas navicimonas sp. nov.

Candidatus Pseudomonas navicimonas (NL. fem. n. *navicimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp000282415*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_000282415.1. The GC content of the type genome is 59.59 % and the genome length is 6.42 Mbp.

Description of *Candidatus* Pseudomonas necopivita sp. nov.

Candidatus Pseudomonas necopivita (NL. fem. n. *necopivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp900110765*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_000974525.1. The GC content of the type genome is 59.36 % and the genome length is 6.89 Mbp.

Description of *Candidatus* Pseudomonas necubivita sp. nov.

Candidatus Pseudomonas necubivita (NL. fem. n. *necubivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Pseudomonas_E sp900583165*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_900583155.1. The GC content of the type genome is 59.68 % and the genome length is 6.3 Mbp.

Description of *Candidatus* Pseudomonas nicotastra sp. nov.

Candidatus Pseudomonas nicotastra (NL. fem. n. *nicotastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp013184545*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_013184545.1. The GC content of the type genome is 63.47 % and the genome length is 5.51 Mbp.

Description of *Candidatus* Pseudomonas nidifilega sp. nov.

Candidatus Pseudomonas nidifilega (NL. fem. n. *nidifilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp011752525*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_011752525.1. The GC content of the type genome is 64.51 % and the genome length is 5.26 Mbp.

Description of *Candidatus* Pseudomonas nimirentia sp. nov.

Candidatus Pseudomonas nimirentia (NL. fem. n. *nimirentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp007713465*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_007713465.1. The GC content of the type genome is 58.84 % and the genome length is 5.86 Mbp.

Description of *Candidatus* Pseudomonas noninifica sp. nov.

Candidatus Pseudomonas noninifica (NL. fem. n. *noninifica* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp008369325*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_008369325.1. The GC content of the type genome is 58.57 % and the genome length is 6.28 Mbp.

Description of *Candidatus* Pseudomonas noninigena sp. nov.

Candidatus Pseudomonas noninigena (NL. fem. n. *noninigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp003253735*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_003253735.1. The GC content of the type genome is 63.15 % and the genome length is 5.28 Mbp.

Description of *Candidatus* Pseudomonas notacitoga sp. nov.

Candidatus Pseudomonas notacitoga (NL. fem. n. *notacitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp003013355*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_003013355.1. The GC content of the type genome is 61.65 % and the genome length is 7.01 Mbp.

Description of *Candidatus* Pseudomonas nubecugo sp. nov.

Candidatus Pseudomonas nubecugo (NL. fem. n. *nubecugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp900187635*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_900187635.1. The GC

content of the type genome is 61.16 % and the genome length is 6.0 Mbp.

Description of *Candidatus* Pseudomonas pacifatio sp. nov.

Candidatus Pseudomonas pacifatio (NL. fem. n. *pacifatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp001446935*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_001446935.1. The GC content of the type genome is 56.69 % and the genome length is 4.52 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "feces".

Description of *Candidatus* Pseudomonas panopivita sp. nov.

Candidatus Pseudomonas panopivita (NL. fem. n. *panopivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp900602065*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_900602065.1. The GC content of the type genome is 57.31 % and the genome length is 6.18 Mbp.

Description of *Candidatus* Pseudomonas papilugo sp. nov.

Candidatus Pseudomonas papilugo (NL. fem. n. *papilugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp003852235*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_003852335.1. The GC content of the type genome is 60.39 % and the genome length is 5.84 Mbp.

Description of *Candidatus* Pseudomonas paracigena sp. nov.

Candidatus Pseudomonas paracigena (NL. fem. n. *paracigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp003596405*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_003596405.1. The GC content of the type genome is 60.64 % and the genome length is 5.63 Mbp.

Description of *Candidatus* Pseudomonas paracilega sp. nov.

Candidatus Pseudomonas paracilega (NL. fem. n. *paracilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp000282535*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_000282535.1. The GC content of the type genome is 63.15 % and the genome length is 5.82 Mbp.

Description of *Candidatus* Pseudomonas paropilega sp. nov.

Candidatus Pseudomonas paropilega (NL. fem. n. *paropilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp900581005*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_900581005.1. The GC content of the type genome is 60.94 % and the genome length is 6.7 Mbp.

Description of *Candidatus* Pseudomonas pecunedo sp. nov.

Candidatus Pseudomonas pecunedo (NL. fem. n. *pecunedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp902506495*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_902506495.1. The GC content of the type genome is 62.48 % and the genome length is 5.22 Mbp.

Description of *Candidatus* Pseudomonas pedepimonia sp. nov.

Candidatus Pseudomonas pedepimonia (NL. fem. n. *pedepimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp001547895*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_003057655.1. The GC content of the type genome is 63.34 % and the genome length is 7.12 Mbp.

Description of *Candidatus* Pseudomonas penecatio sp. nov.

Candidatus Pseudomonas penecatio (NL. fem. n. *penecatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp902506505*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_009799935.1. The GC content of the type genome is 65.82 % and the genome length is 4.51 Mbp.

Description of *Candidatus* Pseudomonas peribimonas sp. nov.

Candidatus Pseudomonas peribimonas (NL. fem. n. *peribimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp002113125*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_002113125.1. The GC content of the type genome is 60.5 % and the genome length is 6.14 Mbp.

Description of *Candidatus* Pseudomonas pericigena sp. nov.

Candidatus Pseudomonas pericigena (NL. fem. n. *pericigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp005508865*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The

type genome for the species is the GenBank assembly RS_GCF_005508865.1. The GC content of the type genome is 65.61 % and the genome length is 4.74 Mbp.

Description of *Candidatus* Pseudomonas peropigena sp. nov.

Candidatus Pseudomonas peropigena (NL. fem. n. *peropigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp900585815*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_900585815.1. The GC content of the type genome is 60.59 % and the genome length is 5.64 Mbp.

Description of *Candidatus* Pseudomonas peropitica sp. nov.

Candidatus Pseudomonas peropitica (NL. fem. n. *peropitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp003014915*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_003590475.1. The GC content of the type genome is 60.5 % and the genome length is 6.71 Mbp.

Description of *Candidatus* Pseudomonas plascisca sp. nov.

Candidatus Pseudomonas plascisca (NL. fem. n. *plascisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp001269775*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_001269775.1. The GC content of the type genome is 60.79 % and the genome length is 5.98 Mbp.

Description of *Candidatus* Pseudomonas podagentia sp. nov.

Candidatus Pseudomonas podagentia (NL. fem. n. *podagentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp002419965*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_002419965.1. The GC content of the type genome is 59.45 % and the genome length is 6.33 Mbp.

Description of *Candidatus* Pseudomonas proscimonas sp. nov.

Candidatus Pseudomonas proscimonas (NL. fem. n. *proscimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp000497835*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_000497835.1. The GC content of the type genome is 62.87 % and the genome length is 6.85 Mbp.

Description of *Candidatus* Pseudomonas prospibra sp. nov.

Candidatus Pseudomonas prospibra (NL. fem. n. *prospibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp004124275*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_004124275.1. The GC content of the type genome is 59.46 % and the genome length is 6.27 Mbp.

Description of *Candidatus* Pseudomonas pudibigena sp. nov.

Candidatus Pseudomonas pudibigena (NL. fem. n. *pudibigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp000633255*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_000633255.1. The GC content of the type genome is 60.31 % and the genome length is 6.37 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Carnivorous Plant Phytotelma".

Description of *Candidatus* Pseudomonas recomitio sp. nov.

Candidatus Pseudomonas recomitio (NL. fem. n. *recomitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp900580675*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_900580675.1. The GC content of the type genome is 60.92 % and the genome length is 6.06 Mbp.

Description of *Candidatus* Pseudomonas reduvilega sp. nov.

Candidatus Pseudomonas reduvilega (NL. fem. n. *reduvilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp002282595*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_002282595.1. The GC content of the type genome is 61.97 % and the genome length is 3.15 Mbp.

Description of *Candidatus* Pseudomonas reforibula sp. nov.

Candidatus Pseudomonas reforibula (NL. fem. n. *reforibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp900187505*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_900187415.1. The GC content of the type genome is 60.4 % and the genome length is 5.38 Mbp.

Description of *Candidatus* Pseudomonas regigifica sp. nov.

Candidatus Pseudomonas regigifica (NL. fem. n. *regigifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp001320525*. Although GTDB has assigned a genus

name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_002296625.1. The GC content of the type genome is 62.24 % and the genome length is 5.63 Mbp.

Description of *Candidatus* Pseudomonas relenitas sp. nov.

Candidatus Pseudomonas relenitas (NL. fem. n. *relenitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp900187575*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_900187575.1. The GC content of the type genome is 57.11 % and the genome length is 6.43 Mbp.

Description of *Candidatus* Pseudomonas repagitas sp. nov.

Candidatus Pseudomonas repagitas (NL. fem. n. *repagitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp008370045*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_008370045.1. The GC content of the type genome is 59.8 % and the genome length is 7.18 Mbp.

Description of *Candidatus* Pseudomonas repudatica sp. nov.

Candidatus Pseudomonas repudatica (NL. fem. n. *repudatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp002113375*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_002113375.1. The GC content of the type genome is 60.11 % and the genome length is 6.04 Mbp.

Description of *Candidatus* Pseudomonas resalatica sp. nov.

Candidatus Pseudomonas resalatica (NL. fem. n. *resalatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp000931465*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_000963835.1. The GC content of the type genome is 64.01 % and the genome length is 6.66 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "avocado roots".

Description of *Candidatus* Pseudomonas revulilega sp. nov.

Candidatus Pseudomonas revulilega (NL. fem. n. *revulilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp000282515*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_009764635.1. The GC content of the type genome is 59.21 % and the genome length is 6.72 Mbp.

Description of *Candidatus* Pseudomonas risibatica sp. nov.

Candidatus Pseudomonas risibatica (NL. fem. n. *risibatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp012985665*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_012985665.1. The GC content of the type genome is 60.06 % and the genome length is 6.15 Mbp.

Description of *Candidatus* Pseudomonas risibentia sp. nov.

Candidatus Pseudomonas risibentia (NL. fem. n. *risibentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp000952175*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The

type genome for the species is the GenBank assembly RS_GCF_900586845.1. The GC content of the type genome is 60.14 % and the genome length is 5.9 Mbp.

Description of *Candidatus* Pseudomonas rorifousia sp. nov.

Candidatus Pseudomonas rorifousia (NL. fem. n. *rorifousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp002874965*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_002179905.1. The GC content of the type genome is 61.06 % and the genome length is 7.04 Mbp.

Description of *Candidatus* Pseudomonas rosacatica sp. nov.

Candidatus Pseudomonas rosacatica (NL. fem. n. *rosacatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp014268815*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_014268815.1. The GC content of the type genome is 61.87 % and the genome length is 5.73 Mbp.

Description of *Candidatus* Pseudomonas rosarentia sp. nov.

Candidatus Pseudomonas rosarentia (NL. fem. n. *rosarentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp002338065*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_002338065.1. The GC content of the type genome is 59.99 % and the genome length is 5.96 Mbp.

Description of *Candidatus* Pseudomonas rosarugo sp. nov.

Candidatus Pseudomonas rosarugo (NL. fem. n. *rosarugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp001984065*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_001984065.1. The GC content of the type genome is 60.78 % and the genome length is 6.38 Mbp.

Description of *Candidatus* Pseudomonas rubecugo sp. nov.

Candidatus Pseudomonas rubecugo (NL. fem. n. *rubecugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp002113165*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_002113165.1. The GC content of the type genome is 63.03 % and the genome length is 5.57 Mbp.

Description of *Candidatus* Pseudomonas rudicitas sp. nov.

Candidatus Pseudomonas rudicitas (NL. fem. n. *rudicitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp011752565*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_011752565.1. The GC content of the type genome is 63.5 % and the genome length is 6.67 Mbp.

Description of *Candidatus* Pseudomonas ruricax sp. nov.

Candidatus Pseudomonas ruricax (NL. fem. n. *ruricax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp000346225*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_009910445.1. The GC content of the type genome is 58.73 % and the genome length is 4.98 Mbp.

Description of *Candidatus* Pseudomonas ruricifica sp. nov.

Candidatus Pseudomonas ruricifica (NL. fem. n. *ruricifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp001511755*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_000514395.1. The GC content of the type genome is 59.06 % and the genome length is 6.57 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "not provided; submitted under MIGS 2.1".

Description of *Candidatus* Pseudomonas sanabiforma sp. nov.

Candidatus Pseudomonas sanabiforma (NL. fem. n. *sanabiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp001308855*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_001280445.1. The GC content of the type genome is 59.49 % and the genome length is 7.17 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "agricultural soil".

Description of *Candidatus* Pseudomonas saxifentia sp. nov.

Candidatus Pseudomonas saxifentia (NL. fem. n. *saxifentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp001427125*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_004307665.1. The GC content of the type genome is 59.05 % and the genome length is 6.26 Mbp.

Description of *Candidatus* Pseudomonas saxifilega sp. nov.

Candidatus Pseudomonas saxifilega (NL. fem. n. *saxifilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp014268655*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_014268645.1. The GC content of the type genome is 60.48 % and the genome length is 5.9 Mbp.

Description of *Candidatus* Pseudomonas semidax sp. nov.

Candidatus Pseudomonas semidax (NL. fem. n. *semidax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp000282495*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_001625455.1. The GC content of the type genome is 58.84 % and the genome length is 6.62 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Ground water".

Description of *Candidatus* Pseudomonas semiviforma sp. nov.

Candidatus Pseudomonas semiviforma (NL. fem. n. *semiviforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp001642705*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_001642705.1. The GC content of the type genome is 63.17 % and the genome length is 5.55 Mbp.

Description of *Candidatus* Pseudomonas semivugo sp. nov.

Candidatus Pseudomonas semivugo (NL. fem. n. *semivugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp012033695*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_012033695.1. The GC content of the type genome is 59.45 % and the genome length is 4.98 Mbp.

Description of *Candidatus* Pseudomonas sicubimonas sp. nov.

Candidatus Pseudomonas sicubimonas (NL. fem. n. *sicubimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp002113025*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_003258965.1. The GC content of the type genome is 59.45 % and the genome length is 6.71 Mbp.

Description of *Candidatus* Pseudomonas sicunitrix sp. nov.

Candidatus Pseudomonas sicunitrix (NL. fem. n. *sicunitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp002113295*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_003062165.1. The GC content of the type genome is 63.02 % and the genome length is 5.81 Mbp.

Description of *Candidatus* Pseudomonas subabitica sp. nov.

Candidatus Pseudomonas subabitica (NL. fem. n. *subabitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp003060885*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_003060885.1. The GC content of the type genome is 60.0 % and the genome length is 4.39 Mbp.

Description of *Candidatus* Pseudomonas subadiforma sp. nov.

Candidatus Pseudomonas subadiforma (NL. fem. n. *subadiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp014268885*. Although GTDB has assigned a genus

name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_014268885.1. The GC content of the type genome is 64.29 % and the genome length is 5.52 Mbp.

Description of *Candidatus* Pseudomonas subinitoga sp. nov.

Candidatus Pseudomonas subinitoga (NL. fem. n. *subinitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp002840155*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_002840155.1. The GC content of the type genome is 60.75 % and the genome length is 4.55 Mbp.

Description of *Candidatus* Pseudomonas tabititura sp. nov.

Candidatus Pseudomonas tabititura (NL. fem. n. *tabititura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp001945445*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_001945375.1. The GC content of the type genome is 63.15 % and the genome length is 5.29 Mbp.

Description of *Candidatus* Pseudomonas taraxitio sp. nov.

Candidatus Pseudomonas taraxitio (NL. fem. n. *taraxitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp002165135*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_002165135.1. The GC content of the type genome is 62.65 % and the genome length is 5.41 Mbp.

Description of *Candidatus* Pseudomonas telegiforma sp. nov.

Candidatus Pseudomonas telegiforma (NL. fem. n. *telegiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp014174475*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_014174475.1. The GC content of the type genome is 63.65 % and the genome length is 4.63 Mbp.

Description of *Candidatus* Pseudomonas terebastra sp. nov.

Candidatus Pseudomonas terebastra (NL. fem. n. *terebastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp002814235*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_013385535.1. The GC content of the type genome is 61.4 % and the genome length is 7.5 Mbp.

Description of *Candidatus* Pseudomonas terebigena sp. nov.

Candidatus Pseudomonas terebigena (NL. fem. n. *terebigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp900580865*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_900580865.1. The GC content of the type genome is 59.07 % and the genome length is 6.77 Mbp.

Description of *Candidatus* Pseudomonas tirocitas sp. nov.

Candidatus Pseudomonas tirocitas (NL. fem. n. *tirocitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp002379585*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_002379585.1. The GC content of the type genome is 62.09 % and the genome length is 4.99 Mbp.

Description of *Candidatus* Pseudomonas tumefousia sp. nov.

Candidatus Pseudomonas tumefousia (NL. fem. n. *tumefousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp900591205*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_900591205.1. The GC content of the type genome is 60.66 % and the genome length is 6.47 Mbp.

Description of *Candidatus* Pseudomonas valeficella sp. nov.

Candidatus Pseudomonas valeficella (NL. fem. n. *valeficella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp003428805*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_001320485.1. The GC content of the type genome is 62.85 % and the genome length is 5.72 Mbp.

Description of *Candidatus* Pseudomonas valefivita sp. nov.

Candidatus Pseudomonas valefivita (NL. fem. n. *valefivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp009764645*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_009764645.1. The GC content of the type genome is 59.41 % and the genome length is 6.05 Mbp.

Description of *Candidatus* Pseudomonas vehemilenta sp. nov.

Candidatus Pseudomonas vehemilenta (NL. fem. n. *vehemilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp902506535*. Although GTDB has assigned a genus

name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_902506535.1. The GC content of the type genome is 60.86 % and the genome length is 4.79 Mbp.

Description of *Candidatus* Pseudomonas venefigena sp. nov.

Candidatus Pseudomonas venefigena (NL. fem. n. *venefigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp003231275*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_003231275.1. The GC content of the type genome is 62.26 % and the genome length is 7.26 Mbp.

Description of *Candidatus* Pseudomonas venefitrix sp. nov.

Candidatus Pseudomonas venefitrix (NL. fem. n. *venefitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp014235765*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_014235765.1. The GC content of the type genome is 62.48 % and the genome length is 4.58 Mbp.

Description of *Candidatus* Pseudomonas venucatio sp. nov.

Candidatus Pseudomonas venucatio (NL. fem. n. *venucatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp000690905*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_000690905.1. The GC content of the type genome is 58.6 % and the genome length is 6.14 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "fuel-contaminated soil".

Description of *Candidatus* Pseudomonas veridastra sp. nov.

Candidatus Pseudomonas veridastra (NL. fem. n. *veridastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp000346755*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_000346755.1. The GC content of the type genome is 61.25 % and the genome length is 6.5 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "water sample".

Description of *Candidatus* Pseudomonas vicecicella sp. nov.

Candidatus Pseudomonas vicecicella (NL. fem. n. *vicecicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp003445295*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003445295.1. The GC content of the type genome is 61.61 % and the genome length is 2.52 Mbp.

Description of *Candidatus* Pseudomonas vicecivita sp. nov.

Candidatus Pseudomonas vicecivita (NL. fem. n. *vicecivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp009932725*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_009932725.1. The GC content of the type genome is 62.83 % and the genome length is 5.12 Mbp.

Description of *Candidatus* Pseudomonas vinoletta sp. nov.

Candidatus Pseudomonas vinoletta (NL. fem. n. *vinoletta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp009905615*. Although GTDB has assigned a genus

name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_009905615.1. The GC content of the type genome is 60.18 % and the genome length is 6.49 Mbp.

Description of *Candidatus* Pseudomonas viripitudo sp. nov.

Candidatus Pseudomonas viripitudo (NL. fem. n. *viripitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp003097235*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_003097235.1. The GC content of the type genome is 62.72 % and the genome length is 6.22 Mbp.

Description of *Candidatus* Pseudomonas visibibra sp. nov.

Candidatus Pseudomonas visibibra (NL. fem. n. *visibibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp900113505*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_900113505.1. The GC content of the type genome is 60.25 % and the genome length is 6.16 Mbp.

Description of *Candidatus* Pseudomonas vitabessa sp. nov.

Candidatus Pseudomonas vitabessa (NL. fem. n. *vitabessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp900101695*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_003731745.1. The GC content of the type genome is 62.8 % and the genome length is 5.73 Mbp.

Description of *Candidatus* Pseudomonas vocifetta sp. nov.

Candidatus Pseudomonas vocifetta (NL. fem. n. *vocifetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp004519405*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_003731985.1. The GC content of the type genome is 60.05 % and the genome length is 6.2 Mbp.

Description of *Candidatus* Pseudomonas volunatio sp. nov.

Candidatus Pseudomonas volunatio (NL. fem. n. *volunatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp900582195*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_900582195.1. The GC content of the type genome is 59.25 % and the genome length is 6.44 Mbp.

Description of *Candidatus* Pseudomonas volunifica sp. nov.

Candidatus Pseudomonas volunifica (NL. fem. n. *volunifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp013386585*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_013386585.1. The GC content of the type genome is 61.09 % and the genome length is 7.05 Mbp.

Description of *Candidatus* Pseudomonas xeramiforma sp. nov.

Candidatus Pseudomonas xeramiforma (NL. fem. n. *xeramiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_E sp003331055*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_003331055.1. The GC content of the type genome is 63.82 % and the genome length is 5.22 Mbp.

Description of *Candidatus* Pseudomonas grallibra sp. nov.

Candidatus Pseudomonas grallibra (NL. fem. n. *grallibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_F sp000949385*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_000949385.2. The GC content of the type genome is 64.29 % and the genome length is 5.97 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Sugarcane soil".

Description of *Candidatus* Pseudomonas lanugimonas sp. nov.

Candidatus Pseudomonas lanugimonas (NL. fem. n. *lanugimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_F sp003626975*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_009662095.1. The GC content of the type genome is 62.86 % and the genome length is 5.99 Mbp.

Description of *Candidatus* Pseudomonas ludibibra sp. nov.

Candidatus Pseudomonas ludibibra (NL. fem. n. *ludibibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_F sp001708505*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_001708505.1. The GC content of the type genome is 63.22 % and the genome length is 6.26 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "soil sample".

Description of *Candidatus* Pseudomonas purulitrix sp. nov.

Candidatus Pseudomonas purulitrix (NL. fem. n. *purulitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_F sp008807375*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_008807375.1. The GC content of the type genome is 64.24 % and the genome length is 6.06 Mbp.

Description of *Candidatus* Pseudomonas resalentia sp. nov.

Candidatus Pseudomonas resalentia (NL. fem. n. *resalentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_F sp003234055*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_003234055.1. The GC content of the type genome is 66.44 % and the genome length is 7.08 Mbp.

Description of *Candidatus* Pseudomonas menapentia sp. nov.

Candidatus Pseudomonas menapentia (NL. fem. n. *menapentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_K sp004801855*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_004801855.1. The GC content of the type genome is 68.21 % and the genome length is 4.41 Mbp.

Description of *Candidatus* Pseudomonas adsusifica sp. nov.

Candidatus Pseudomonas adsusifica (NL. fem. n. *adsusifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_M sp002286785*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_002286785.1. The GC content of the type genome is 63.62 % and the genome length is 6.05 Mbp.

Description of *Candidatus* Pseudomonas defanivita sp. nov.

Candidatus Pseudomonas defanivita (NL. fem. n. *defanivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_N sp003640395*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_003640395.1. The GC content of the type genome is 65.32 % and the genome length is 4.07 Mbp.

Description of *Candidatus* Pseudomonas infiritudo sp. nov.

Candidatus Pseudomonas infiritudo (NL. fem. n. *infiritudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_O sp002418465*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_002418465.1. The GC content of the type genome is 65.78 % and the genome length is 4.14 Mbp.

Description of *Candidatus* Pseudomonas coturibula sp. nov.

Candidatus Pseudomonas coturibula (NL. fem. n. *coturibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_Q sp013395055*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_013395055.1. The GC content of the type genome is 62.34 % and the genome length is 4.04 Mbp.

Description of *Candidatus* Pseudomonas artolentia sp. nov.

Candidatus Pseudomonas artolentia (NL. fem. n. *artolentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudomonas_R sp900766265*. Although GTDB has assigned a genus

name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_900766265.1. The GC content of the type genome is 64.13 % and the genome length is 4.47 Mbp.

Description of *Candidatus* Pseudonocardia adporastra sp. nov.

Candidatus Pseudonocardia adporastra (NL. fem. n. *adporastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudonocardia sp002262885*. The type genome for the species is the GenBank assembly RS_GCF_002262885.1. The GC content of the type genome is 72.64 % and the genome length is 10.18 Mbp.

Description of *Candidatus* Pseudonocardia alcibax sp. nov.

Candidatus Pseudonocardia alcibax (NL. fem. n. *alcibax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudonocardia sp013155125*. The type genome for the species is the GenBank assembly RS_GCF_013155125.1. The GC content of the type genome is 74.45 % and the genome length is 7.29 Mbp.

Description of *Candidatus* Pseudonocardia arrabitudo sp. nov.

Candidatus Pseudonocardia arrabitudo (NL. fem. n. *arrabitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudonocardia sp013695005*. The type genome for the species is the GenBank assembly GCA_013695005.1. The GC content of the type genome is 70.35 % and the genome length is 3.0 Mbp.

Description of *Candidatus* Pseudonocardia caravessa sp. nov.

Candidatus Pseudonocardia caravessa (NL. fem. n. *caravessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudonocardia sp001942415*. The type genome for the species is the GenBank assembly RS_GCF_001942415.1. The GC content of the type genome is 74.23 % and the genome length is 7.13 Mbp.

Description of *Candidatus* Pseudonocardia catapatica sp. nov.

Candidatus Pseudonocardia catapatica (NL. fem. n. *catapatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudonocardia sp001294645*. The type genome for the species is the GenBank assembly RS_GCF_001932405.1. The GC content of the type genome is 73.73 % and the genome length is 6.43 Mbp.

Description of *Candidatus* Pseudonocardia cisalimonia sp. nov.

Candidatus Pseudonocardia cisalimonia (NL. fem. n. *cisalimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudonocardia sp012911935*. The type genome for the species is the GenBank assembly RS_GCF_012911935.1. The GC content of the type genome is 72.39 % and the genome length is 7.16 Mbp.

Description of *Candidatus* Pseudonocardia inlepetta sp. nov.

Candidatus Pseudonocardia inlepetta (NL. fem. n. *inlepetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudonocardia sp014267175*. The type genome for the species is the GenBank assembly RS_GCF_014267175.1. The GC content of the type genome is 73.6 % and the genome length is 6.24 Mbp.

Description of *Candidatus* Pseudonocardia lapicibra sp. nov.

Candidatus Pseudonocardia lapicibra (NL. fem. n. *lapicibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudonocardia sp001942185*. The type genome for the species is the GenBank assembly RS_GCF_001942185.1. The GC content of the type genome is 72.57 % and the genome length is 9.2 Mbp.

Description of *Candidatus* Pseudonocardia lorarugo sp. nov.

Candidatus Pseudonocardia lorarugo (NL. fem. n. *lorarugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudonocardia sp001420995*. The type genome for the species is the GenBank assembly RS_GCF_001932355.1. The GC content of the type genome is 73.58 % and the genome length is 6.51 Mbp.

Description of *Candidatus* Pseudonocardia maligitio sp. nov.

Candidatus Pseudonocardia maligitio (NL. fem. n. *maligitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudonocardia sp002583555*. The type genome for the species is the GenBank assembly RS_GCF_002583555.1. The GC content of the type genome is 72.51 % and the genome length is 6.54 Mbp.

Description of *Candidatus* Pseudonocardia murilibula sp. nov.

Candidatus Pseudonocardia murilibula (NL. fem. n. *murilibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudonocardia sp001698125*. The type genome for the species is the GenBank assembly RS_GCF_001698125.1. The GC content of the type genome is 73.73 % and the genome length is 6.68 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "exoskeleton of ant".

Description of *Candidatus* Pseudonocardia pacifago sp. nov.

Candidatus Pseudonocardia pacifago (NL. fem. n. *pacifago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudonocardia sp001899645*. The type genome for the species is the GenBank assembly GCA_001899645.1. The GC content of the type genome is 72.6 % and the genome length is 7.09 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Ammonium sulfate bioreactor".

Description of *Candidatus* Pseudonocardia vinolicula sp. nov.

Candidatus Pseudonocardia vinolicula (NL. fem. n. *vinolicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudonocardia sp001725415*. The type genome for the species is the GenBank assembly GCA_001725415.1. The GC content of the type genome is 72.63 % and the genome length is 6.95 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Thiocyanate bioreactor".

Description of *Candidatus* Pseudonocardia vitupitrix sp. nov.

Candidatus Pseudonocardia vitupitrix (NL. fem. n. *vitupitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudonocardia sp014235185*. The type genome for the species is the GenBank assembly RS_GCF_014235185.1. The GC content of the type genome is 74.04 % and the genome length is 6.49 Mbp.

Description of *Candidatus* Pseudooceanicola arcubessa sp. nov.

Candidatus Pseudooceanicola arcubessa (NL. fem. n. *arcubessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudooceanicola sp009827095*. The type genome for the species is the GenBank assembly RS_GCF_009827095.1. The GC content of the type genome is 67.35 % and the genome length is 5.51 Mbp.

Description of *Candidatus* Pseudooceanicola assibibra sp. nov.

Candidatus Pseudooceanicola assibibra (NL. fem. n. *assibibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudooceanicola sp002709085*. The type genome for the species is the GenBank assembly GCA_002709085.1. The GC content of the type genome is 61.03 % and the genome length is 3.02 Mbp.

Description of *Candidatus* Pseudooceanicola effosessa sp. nov.

Candidatus Pseudooceanicola effosessa (NL. fem. n. *effosessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudooceanicola sp011806405*. The type genome for the species is

the GenBank assembly RS_GCF_011806405.1. The GC content of the type genome is 64.9 % and the genome length is 4.27 Mbp.

Description of *Candidatus* Pseudooceanicola emortatica sp. nov.

Candidatus Pseudooceanicola emortatica (NL. fem. n. *emortatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudooceanicola sp009789075*. The type genome for the species is the GenBank assembly RS_GCF_009789075.1. The GC content of the type genome is 66.3 % and the genome length is 3.89 Mbp.

Description of *Candidatus* Pseudooceanicola fibicessa sp. nov.

Candidatus Pseudooceanicola fibicessa (NL. fem. n. *fibicessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudooceanicola sp010614805*. The type genome for the species is the GenBank assembly RS_GCF_010614805.1. The GC content of the type genome is 65.74 % and the genome length is 4.2 Mbp.

Description of *Candidatus* Pseudooceanicola odollastra sp. nov.

Candidatus Pseudooceanicola odollastra (NL. fem. n. *odollastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudooceanicola sp002210105*. The type genome for the species is the GenBank assembly RS_GCF_002210105.1. The GC content of the type genome is 66.34 % and the genome length is 5.11 Mbp.

Description of *Candidatus* Pseudooceanicola rubefimonas sp. nov.

Candidatus Pseudooceanicola rubefimonas (NL. fem. n. *rubefimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudooceanicola sp003590145*. The type genome for the species is the GenBank assembly RS_GCF_003590145.1. The GC content of the type genome is 64.05 % and the genome length is 4.07 Mbp.

Description of *Candidatus* Pseudooceanicola sonabugo sp. nov.

Candidatus Pseudooceanicola sonabugo (NL. fem. n. *sonabugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudooceanicola sp000220565*. The type genome for the species is the GenBank assembly RS_GCF_000220565.1. The GC content of the type genome is 67.31 % and the genome length is 4.65 Mbp.

Description of *Candidatus* Pseudopelobacter altificula sp. nov.

Candidatus Pseudopelobacter altificula (NL. fem. n. *altificula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudopelobacter sp002298925*. The type genome for the species is the GenBank assembly GCA_002298925.1. The GC content of the type genome is 55.97 % and the genome length is 4.33 Mbp.

Description of *Candidatus* Pseudopelobacter anarribula sp. nov.

Candidatus Pseudopelobacter anarribula (NL. fem. n. *anarribula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudopelobacter sp012556225*. The type genome for the species is the GenBank assembly RS_GCF_012556225.1. The GC content of the type genome is 58.0 % and the genome length is 4.66 Mbp.

Description of *Candidatus* Pseudopelobacter bipenitio sp. nov.

Candidatus Pseudopelobacter bipenitio (NL. fem. n. *bipenitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudopelobacter sp013349405*. The type genome for the species is the GenBank assembly GCA_013349405.1. The GC content of the type genome is 51.5 % and the genome length is 3.43 Mbp.

Description of *Candidatus* Pseudopelobacter cisoritio sp. nov.

Candidatus Pseudopelobacter cisoritio (NL. fem. n. *cisoritio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudopelobacter sp903852495*. The type genome for the species is the GenBank assembly GCA_903859945.1. The GC content of the type genome is 54.27 % and the genome length is 2.33 Mbp.

Description of *Candidatus* Pseudopelobacter culigitica sp. nov.

Candidatus Pseudopelobacter culigitica (NL. fem. n. *culigitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudopelobacter sp903845365*. The type genome for the species is the GenBank assembly GCA_903845365.1. The GC content of the type genome is 48.72 % and the genome length is 5.51 Mbp.

Description of *Candidatus* Pseudopelobacter demagilega sp. nov.

Candidatus Pseudopelobacter demagilega (NL. fem. n. *demagilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudopelobacter sp001802125*. The type genome for the species is the GenBank assembly GCA_001802165.1. The GC content of the type genome is 53.73 % and the genome length is 3.91 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at time point 6 / F; 5m depth; 0.2 filter".

Description of *Candidatus* Pseudopelobacter denixitas sp. nov.

Candidatus Pseudopelobacter denixitas (NL. fem. n. *denixitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudopelobacter sp903958085*. The type genome for the species is the GenBank assembly GCA_903958085.1. The GC content of the type genome is 45.11 % and the genome length is 4.53 Mbp.

Description of *Candidatus* Pseudopelobacter divoretta sp. nov.

Candidatus Pseudopelobacter divoretta (NL. fem. n. *divoretta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Pseudopelobacter sp903868145*. The type genome for the species is the GenBank assembly GCA_903868145.1. The GC content of the type genome is 52.87 % and the genome length is 3.8 Mbp.

Description of *Candidatus* Pseudopelobacter doxolivita sp. nov.

Candidatus Pseudopelobacter doxolivita (NL. fem. n. *doxolivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudopelobacter sp003574895*. The type genome for the species is the GenBank assembly GCA_003574895.1. The GC content of the type genome is 54.15 % and the genome length is 4.48 Mbp.

Description of *Candidatus* Pseudopelobacter duponifica sp. nov.

Candidatus Pseudopelobacter duponifica (NL. fem. n. *duponifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudopelobacter sp903939115*. The type genome for the species is the GenBank assembly GCA_903862795.1. The GC content of the type genome is 50.44 % and the genome length is 4.77 Mbp.

Description of *Candidatus* Pseudopelobacter duponitica sp. nov.

Candidatus Pseudopelobacter duponitica (NL. fem. n. *duponitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudopelobacter sp903875605*. The type genome for the species is the GenBank assembly GCA_903879745.1. The GC content of the type genome is 46.07 % and the genome length is 1.97 Mbp.

Description of *Candidatus* Pseudopelobacter feculimonas sp. nov.

Candidatus Pseudopelobacter feculimonas (NL. fem. n. *feculimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudopelobacter sp013336525*. The type genome for the species is the GenBank assembly GCA_013334345.1. The GC content of the type genome is 49.37 % and the genome length is 3.48 Mbp.

Description of *Candidatus* Pseudopelobacter figilicula sp. nov.

Candidatus Pseudopelobacter figilicula (NL. fem. n. *figilicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudopelobacter sp903901875*. The type genome for the species is the GenBank assembly GCA_903901875.1. The GC content of the type genome is 51.04 % and the genome length is 4.3 Mbp.

Description of *Candidatus* Pseudopelobacter forinisca sp. nov.

Candidatus Pseudopelobacter forinisca (NL. fem. n. *forinisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudopelobacter sp903925005*. The type genome for the species is the GenBank assembly GCA_903883665.1. The GC content of the type genome is 50.32 % and the genome length is 5.08 Mbp.

Description of *Candidatus* Pseudopelobacter homulicella sp. nov.

Candidatus Pseudopelobacter homulicella (NL. fem. n. *homulicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudopelobacter sp009886055*. The type genome for the species is the GenBank assembly GCA_009886055.1. The GC content of the type genome is 53.55 % and the genome length is 3.5 Mbp.

Description of *Candidatus* Pseudopelobacter ignobifica sp. nov.

Candidatus Pseudopelobacter ignobifica (NL. fem. n. *ignobifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudopelobacter sp001824455*. The type genome for the species is the GenBank assembly GCA_001824455.1. The GC content of the type genome is 53.47 % and the genome length is 1.83 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at time point 2 / B; 5m depth; 0.2 filter".

Description of *Candidatus* Pseudopelobacter inpinitura sp. nov.

Candidatus Pseudopelobacter inpinitura (NL. fem. n. *inpinitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudopelobacter sp903930585*. The type genome for the species is the GenBank assembly GCA_903930585.1. The GC content of the type genome is 50.66 % and the genome length is 5.89 Mbp.

Description of *Candidatus* Pseudopelobacter insubousia sp. nov.

Candidatus Pseudopelobacter insubousia (NL. fem. n. *insubousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudopelobacter sp009885845*. The type genome for the species is the GenBank assembly GCA_009885845.1. The GC content of the type genome is 50.48 % and the genome length is 3.27 Mbp.

Description of *Candidatus* Pseudopelobacter insusivita sp. nov.

Candidatus Pseudopelobacter insusivita (NL. fem. n. *insusivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudopelobacter sp009684515*. The type genome for the species is the GenBank assembly GCA_009684515.1. The GC content of the type genome is 51.55 % and the genome length is 3.67 Mbp.

Description of *Candidatus* Pseudopelobacter malagatica sp. nov.

Candidatus Pseudopelobacter malagatica (NL. fem. n. *malagatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudopelobacter sp008369015*. The type genome for the species is the GenBank assembly RS_GCF_008802355.1. The GC content of the type genome is 59.68 % and the genome length is 3.61 Mbp.

Description of *Candidatus* Pseudopelobacter noninago sp. nov.

Candidatus Pseudopelobacter noninago (NL. fem. n. *noninago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudopelobacter sp903879825*. The type genome for the species is the GenBank assembly GCA_903879825.1. The GC content of the type genome is 49.23 % and the genome length is 3.98 Mbp.

Description of *Candidatus* Pseudopelobacter nutamitica sp. nov.

Candidatus Pseudopelobacter nutamitica (NL. fem. n. *nutamitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudopelobacter sp903862245*. The type genome for the species is the GenBank assembly GCA_903845725.1. The GC content of the type genome is 53.83 % and the genome length is 3.16 Mbp.

Description of *Candidatus* Pseudopelobacter ossicessa sp. nov.

Candidatus Pseudopelobacter ossicessa (NL. fem. n. *ossicessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudopelobacter sp903876875*. The type genome for the species is the GenBank assembly GCA_903876875.1. The GC content of the type genome is 51.78 % and the genome length is 3.93 Mbp.

Description of *Candidatus* Pseudopelobacter papiligena sp. nov.

Candidatus Pseudopelobacter papiligena (NL. fem. n. *papiligena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudopelobacter sp002322035*. The type genome for the species is the GenBank assembly GCA_002321915.1. The GC content of the type genome is 56.49 % and the genome length is 2.19 Mbp.

Description of *Candidatus* Pseudopelobacter penicibula sp. nov.

Candidatus Pseudopelobacter penicibula (NL. fem. n. *penicibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudopelobacter sp013349325*. The type genome for the species is the GenBank assembly GCA_013349325.1. The GC content of the type genome is 52.01

% and the genome length is 3.58 Mbp.

Description of *Candidatus* Pseudopelobacter purulimonia sp. nov.

Candidatus Pseudopelobacter purulimonia (NL. fem. n. *purulimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudopelobacter sp014380135*. The type genome for the species is the GenBank assembly GCA_014380135.1. The GC content of the type genome is 55.17 % and the genome length is 2.99 Mbp.

Description of *Candidatus* Pseudopelobacter rumifigena sp. nov.

Candidatus Pseudopelobacter rumifigena (NL. fem. n. *rumifigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudopelobacter sp002382705*. The type genome for the species is the GenBank assembly GCA_002382705.1. The GC content of the type genome is 50.85 % and the genome length is 2.34 Mbp.

Description of *Candidatus* Pseudopelobacter sacopitas sp. nov.

Candidatus Pseudopelobacter sacopitas (NL. fem. n. *sacopitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudopelobacter sp008330225*. The type genome for the species is the GenBank assembly RS_GCF_008330225.1. The GC content of the type genome is 61.13 % and the genome length is 4.1 Mbp.

Description of *Candidatus* Pseudopelobacter scaccago sp. nov.

Candidatus Pseudopelobacter scaccago (NL. fem. n. *scaccago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudopelobacter sp013377095*. The type genome for the species is the GenBank assembly GCA_013377095.1. The GC content of the type genome is 53.35 % and the genome length is 5.26 Mbp.

Description of *Candidatus* Pseudopelobacter tabitugo sp. nov.

Candidatus Pseudopelobacter tabitugo (NL. fem. n. *tabitugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudopelobacter sp001802645*. The type genome for the species is the GenBank assembly GCA_001802645.1. The GC content of the type genome is 53.0 % and the genome length is 4.28 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at time point 3 / C; 5m depth; 0.2 filter".

Description of *Candidatus* Pseudopelobacter visibivita sp. nov.

Candidatus Pseudopelobacter visibivita (NL. fem. n. *visibivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudopelobacter sp003151775*. The type genome for the species is the GenBank assembly GCA_003151775.1. The GC content of the type genome is 56.96 % and the genome length is 2.95 Mbp.

Description of *Candidatus* Pseudophaeobacter adnecitica sp. nov.

Candidatus Pseudophaeobacter adnecitica (NL. fem. n. *adnecitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudophaeobacter sp001457775*. The type genome for the species is the GenBank assembly RS_GCF_001457775.1. The GC content of the type genome is 58.03 % and the genome length is 4.11 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "oyster;cultured off Spanish mediterranean coast; Vinaroz".

Description of *Candidatus* Pseudophaeobacter catocibra sp. nov.

Candidatus Pseudophaeobacter catocibra (NL. fem. n. *catocibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudophaeobacter sp000152965*. The type genome for the species is the GenBank assembly GCA_001874205.1. The GC content of the type genome is 57.21 % and the genome length is 4.31 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Mediterranean seawater enriched with a specific particulate matter".

Description of *Candidatus* Pseudophaeobacter cimititica sp. nov.

Candidatus Pseudophaeobacter cimititica (NL. fem. n. *cimititica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudophaeobacter sp900313025*. The type genome for the species is the GenBank assembly RS_GCF_900313025.1. The GC content of the type genome is 57.75 % and the genome length is 4.55 Mbp.

Description of *Candidatus* Pseudophaeobacter inregicella sp. nov.

Candidatus Pseudophaeobacter inregicella (NL. fem. n. *inregicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudophaeobacter sp000169455*. The type genome for the species is the GenBank assembly RS_GCF_000169455.1. The GC content of the type genome is 57.02 % and the genome length is 4.56 Mbp.

Description of *Candidatus* Pseudophaeobacter metapitas sp. nov.

Candidatus Pseudophaeobacter metapitas (NL. fem. n. *metapitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudophaeobacter sp001294455*. The type genome for the species is the GenBank assembly RS_GCF_001294455.1. The GC content of the type genome is 58.18 % and the genome length is 4.71 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Surface seawater".

Description of *Candidatus* Pseudoramibacter exhorago sp. nov.

Candidatus Pseudoramibacter exhorago (NL. fem. n. *exhorago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudoramibacter sp009696145*. The type genome for the species is the GenBank assembly RS_GCF_009696145.1. The GC content of the type genome is 49.87 % and the genome length is 2.1 Mbp.

Description of *Candidatus* Pseudorhodobacter attorugo sp. nov.

Candidatus Pseudorhodobacter attorugo (NL. fem. n. *attorugo* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudorhodobacter sp005234135*. The type genome for the species is the GenBank assembly RS_GCF_005234135.1. The GC content of the type genome is 57.79 % and the genome length is 4.25 Mbp.

Description of *Candidatus* Pseudorhodobacter depecitura sp. nov.

Candidatus Pseudorhodobacter depecitura (NL. fem. n. *depecitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudorhodobacter sp003991405*. The type genome for the species is the GenBank assembly RS_GCF_003991405.1. The GC content of the type genome is 61.1 % and the genome length is 3.88 Mbp.

Description of *Candidatus* Pseudorhodobacter orgetax sp. nov.

Candidatus Pseudorhodobacter orgetax (NL. fem. n. *orgetax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudorhodobacter_B sp000176015*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_000176015.1. The GC content of the type genome is 65.15 % and the genome length is 3.51 Mbp.

Description of *Candidatus* Pseudorhodoferax effigitrix sp. nov.

Candidatus Pseudorhodoferax effigitrix (NL. fem. n. *effigitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudorhodoferax sp001422445*. The type genome for the species is the GenBank assembly RS_GCF_001422445.1. The GC content of the type genome is 69.7 % and the genome length is 6.74 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "leaf".

Description of *Candidatus* Pseudorhodoferax gemebetta sp. nov.

Candidatus Pseudorhodoferax gemebetta (NL. fem. n. *gemebetta* a species epithet

created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudorhodoferax sp001422365*. The type genome for the species is the GenBank assembly RS_GCF_001422365.1. The GC content of the type genome is 69.11 % and the genome length is 7.48 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "leaf".

Description of *Candidatus* Pseudorhodoferax secunimonia sp. nov.

Candidatus Pseudorhodoferax secunimonia (NL. fem. n. *secunimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudorhodoferax sp001422405*. The type genome for the species is the GenBank assembly RS_GCF_001422405.1. The GC content of the type genome is 68.75 % and the genome length is 6.53 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "leaf".

Description of *Candidatus* Pseudorhodoplanes baropifica sp. nov.

Candidatus Pseudorhodoplanes baropifica (NL. fem. n. *baropifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudorhodoplanes sp008933495*. The type genome for the species is the GenBank assembly GCA_008933495.1. The GC content of the type genome is 64.99 % and the genome length is 3.35 Mbp.

Description of *Candidatus* Pseudorhodoplanes ducilago sp. nov.

Candidatus Pseudorhodoplanes ducilago (NL. fem. n. *ducilago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudorhodoplanes sp013388965*. The type genome for the species is the GenBank assembly GCA_013388965.1. The GC content of the type genome is 65.36 % and the genome length is 4.08 Mbp.

Description of *Candidatus* Pseudoruminococcus epicritas sp. nov.

Candidatus Pseudoruminococcus epicritas (NL. fem. n. *epicritas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudoruminococcus sp902765855*. The type genome for the species is the GenBank assembly GCA_902765855.1. The GC content of the type genome is 36.5 % and the genome length is 2.39 Mbp.

Description of *Candidatus* Pseudoscardovia affirax sp. nov.

Candidatus Pseudoscardovia affirax (NL. fem. n. *affirax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudoscardovia sp002353815*. The type genome for the species is the GenBank assembly GCA_002353815.1. The GC content of the type genome is 63.39 % and the genome length is 2.07 Mbp.

Description of *Candidatus* Pseudosphingobacterium adsecitura sp. nov.

Candidatus Pseudosphingobacterium adsecitura (NL. fem. n. *adsecitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudosphingobacterium sp004368405*. The type genome for the species is the GenBank assembly RS_GCF_004368405.1. The GC content of the type genome is 43.29 % and the genome length is 5.36 Mbp.

Description of *Candidatus* Pseudosphingobacterium forabitrix sp. nov.

Candidatus Pseudosphingobacterium forabitrix (NL. fem. n. *forabitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudosphingobacterium sp014334135*. The type genome for the species is the GenBank assembly RS_GCF_014334135.1. The GC content of the type genome is 40.78 % and the genome length is 6.12 Mbp.

Description of *Candidatus* Pseudothermotoga dinupessa sp. nov.

Candidatus Pseudothermotoga dinupessa (NL. fem. n. *dinupessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudothermotoga_A sp003510135*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into

a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003510135.1. The GC content of the type genome is 49.72 % and the genome length is 2.02 Mbp.

Description of *Candidatus* Pseudothermotoga divorago sp. nov.

Candidatus Pseudothermotoga divorago (NL. fem. n. *divorago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudothermotoga_A sp011057685*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_011057685.1. The GC content of the type genome is 50.0 % and the genome length is 2.08 Mbp.

Description of *Candidatus* Pseudovibrio advicago sp. nov.

Candidatus Pseudovibrio advicago (NL. fem. n. *advicago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudovibrio sp001941685*. The type genome for the species is the GenBank assembly RS_GCF_001941685.1. The GC content of the type genome is 52.12 % and the genome length is 5.98 Mbp.

Description of *Candidatus* Pseudovibrio baropentia sp. nov.

Candidatus Pseudovibrio baropentia (NL. fem. n. *baropentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudovibrio sp009711345*. The type genome for the species is the GenBank assembly RS_GCF_009711345.1. The GC content of the type genome is 52.6 % and the genome length is 4.29 Mbp.

Description of *Candidatus* Pseudovibrio brasmitrix sp. nov.

Candidatus Pseudovibrio brasmitrix (NL. fem. n. *brasmitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudovibrio sp900104145*. The type genome for the species is the

GenBank assembly RS_GCF_900104145.1. The GC content of the type genome is 50.31 % and the genome length is 6.55 Mbp.

Description of *Candidatus* Pseudovibrio caravitica sp. nov.

Candidatus Pseudovibrio caravitica (NL. fem. n. *caravitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudovibrio sp900143565*. The type genome for the species is the GenBank assembly RS_GCF_001623225.1. The GC content of the type genome is 51.32 % and the genome length is 6.0 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "marine sponge".

Description of *Candidatus* Pseudovibrio dimadugo sp. nov.

Candidatus Pseudovibrio dimadugo (NL. fem. n. *dimadugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudovibrio sp001623075*. The type genome for the species is the GenBank assembly RS_GCF_001623075.1. The GC content of the type genome is 51.13 % and the genome length is 5.88 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "marine sponge".

Description of *Candidatus* Pseudovibrio sonipimonia sp. nov.

Candidatus Pseudovibrio sonipimonia (NL. fem. n. *sonipimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudovibrio sp001310715*. The type genome for the species is the GenBank assembly GCA_001310715.1. The GC content of the type genome is 52.29 % and the genome length is 4.61 Mbp.

Description of *Candidatus* Pseudoxanthobacter everbicella sp. nov.

Candidatus Pseudoxanthobacter everbicella (NL. fem. n. *everbicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudoxanthobacter sp009600605*. The type genome for the species is the GenBank assembly RS_GCF_009600605.1. The GC content of the type genome is 68.28 % and the genome length is 5.4 Mbp.

Description of *Candidatus* Pseudoxanthomonas bicapitudo sp. nov.

Candidatus Pseudoxanthomonas bicapitudo (NL. fem. n. *bicapitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudoxanthomonas sp000513995*. The type genome for the species is the GenBank assembly RS_GCF_000513995.1. The GC content of the type genome is 70.75 % and the genome length is 3.25 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "not provided; submitted under MIGS 2.1".

Description of *Candidatus* Pseudoxanthomonas devecax sp. nov.

Candidatus Pseudoxanthomonas devecax (NL. fem. n. *devecax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudoxanthomonas sp000510725*. The type genome for the species is the GenBank assembly RS_GCF_000283075.1. The GC content of the type genome is 71.38 % and the genome length is 3.35 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "water".

Description of *Candidatus* Pseudoxanthomonas anarritudo sp. nov.

Candidatus Pseudoxanthomonas anarritudo (NL. fem. n. *anarritudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudoxanthomonas_A sp001427635*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_001427635.1. The GC content of the type genome is 67.56 % and the genome length is 3.89 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "root".

Description of *Candidatus* Pseudoxanthomonas expecicula sp. nov.

Candidatus Pseudoxanthomonas expecicula (NL. fem. n. *expecicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Pseudoxanthomonas_A sp900104255*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_900104255.1. The GC content of the type genome is 67.89 % and the genome length is 3.88 Mbp.

Description of *Candidatus* Pseudoxanthomonas gemebitudo sp. nov.

Candidatus Pseudoxanthomonas gemebitudo (NL. fem. n. *gemebitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudoxanthomonas_A sp900104085*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_900104085.1. The GC content of the type genome is 63.71 % and the genome length is 4.22 Mbp.

Description of *Candidatus* Pseudoxanthomonas homolicella sp. nov.

Candidatus Pseudoxanthomonas homolicella (NL. fem. n. *homolicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudoxanthomonas_A sp900116385*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_900116385.1. The GC content of the type genome is 66.72 % and the genome length is 3.79 Mbp.

Description of *Candidatus* Pseudoxanthomonas lorarimonas sp. nov.

Candidatus Pseudoxanthomonas lorarimonas (NL. fem. n. *lorarimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudoxanthomonas_A sp004284195*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_004294545.1. The GC content of the type genome is 69.14 % and the genome

length is 4.59 Mbp.

Description of *Candidatus* Pseudoxanthomonas obmurilega sp. nov.

Candidatus Pseudoxanthomonas obmurilega (NL. fem. n. *obmurilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudoxanthomonas_A sp001427585*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_001427585.1. The GC content of the type genome is 66.95 % and the genome length is 4.44 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "root".

Description of *Candidatus* Pseudoxanthomonas obmuritura sp. nov.

Candidatus Pseudoxanthomonas obmuritura (NL. fem. n. *obmuritura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudoxanthomonas_A sp002863005*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_002863005.1. The GC content of the type genome is 67.25 % and the genome length is 3.96 Mbp.

Description of *Candidatus* Pseudoxanthomonas optumax sp. nov.

Candidatus Pseudoxanthomonas optumax (NL. fem. n. *optumax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudoxanthomonas_A sp004173415*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_004173415.1. The GC content of the type genome is 67.93 % and the genome length is 3.18 Mbp.

Description of *Candidatus* Pseudoxanthomonas peropitio sp. nov.

Candidatus Pseudoxanthomonas peropitio (NL. fem. n. *peropitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudoxanthomonas_A sp006716465*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_006716465.1. The GC content of the type genome is 66.24 % and the genome length is 4.04 Mbp.

Description of *Candidatus* Pseudoxanthomonas umbilitura sp. nov.

Candidatus Pseudoxanthomonas umbilitura (NL. fem. n. *umbilitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudoxanthomonas_A sp900109775*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_900109775.1. The GC content of the type genome is 66.57 % and the genome length is 4.7 Mbp.

Description of *Candidatus* Pseudoxanthomonas veriditoga sp. nov.

Candidatus Pseudoxanthomonas veriditoga (NL. fem. n. *veriditoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudoxanthomonas_A sp006542425*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_006542425.1. The GC content of the type genome is 67.08 % and the genome length is 4.3 Mbp.

Description of *Candidatus* Pseudozobellia angipimonas sp. nov.

Candidatus Pseudozobellia angipimonas (NL. fem. n. *angipimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pseudozobellia sp002813285*. The type genome for the species is the GenBank assembly RS_GCF_002813285.1. The GC content of the type genome is 39.17 % and the genome length is 4.76 Mbp.

Description of *Candidatus* Psittacicella adnecimonas sp. nov.

Candidatus Psittacicella adnecimonas (NL. fem. n. *adnecimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Psittacicella sp003585885*. The type genome for the species is the GenBank assembly RS_GCF_003585885.1. The GC content of the type genome is 35.04 % and the genome length is 2.3 Mbp.

Description of *Candidatus* Psychrilyobacter adsudifica sp. nov.

Candidatus Psychrilyobacter adsudifica (NL. fem. n. *adsudifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Psychrilyobacter sp002084825*. The type genome for the species is the GenBank assembly GCA_002084825.1. The GC content of the type genome is 30.66 % and the genome length is 1.37 Mbp.

Description of *Candidatus* Psychrilyobacter diritilenta sp. nov.

Candidatus Psychrilyobacter diritilenta (NL. fem. n. *diritilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Psychrilyobacter sp002342785*. The type genome for the species is the GenBank assembly GCA_002342785.1. The GC content of the type genome is 27.93 % and the genome length is 2.77 Mbp.

Description of *Candidatus* Psychrilyobacter haricitio sp. nov.

Candidatus Psychrilyobacter haricitio (NL. fem. n. *haricitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Psychrilyobacter sp003973585*. The type genome for the species is the GenBank assembly GCA_003973585.1. The GC content of the type genome is 28.69 % and the genome length is 1.03 Mbp.

Description of *Candidatus* Psychrilyobacter hemiticella sp. nov.

Candidatus Psychrilyobacter hemiticella (NL. fem. n. *hemiticella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a

noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Psychrilyobacter sp003391055*. The type genome for the species is the GenBank assembly RS_GCF_010078245.1. The GC content of the type genome is 33.83 % and the genome length is 3.34 Mbp.

Description of *Candidatus* Psychrobacillus colepilega sp. nov.

Candidatus Psychrobacillus colepilega (NL. fem. n. *colepilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Psychrobacillus sp007676755*. The type genome for the species is the GenBank assembly RS_GCF_007676755.1. The GC content of the type genome is 36.72 % and the genome length is 3.97 Mbp.

Description of *Candidatus* Psychrobacillus epitressa sp. nov.

Candidatus Psychrobacillus epitressa (NL. fem. n. *epitressa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Psychrobacillus sp900103605*. The type genome for the species is the GenBank assembly RS_GCF_900103605.1. The GC content of the type genome is 36.59 % and the genome length is 3.76 Mbp.

Description of *Candidatus* Psychrobacillus inrecifica sp. nov.

Candidatus Psychrobacillus inrecifica (NL. fem. n. *inrecifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Psychrobacillus sp900111345*. The type genome for the species is the GenBank assembly RS_GCF_900111345.1. The GC content of the type genome is 37.02 % and the genome length is 4.39 Mbp.

Description of *Candidatus* Psychrobacillus megalastra sp. nov.

Candidatus Psychrobacillus megalastra (NL. fem. n. *megalastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Psychrobacillus sp012843435*. The type genome for the species is the GenBank assembly RS_GCF_012843435.1. The GC content of the type genome is 37.3 % and the genome length is 3.8 Mbp.

Description of *Candidatus* Psychrobacillus peridastra sp. nov.

Candidatus Psychrobacillus peridastra (NL. fem. n. *peridastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Psychrobacillus sp008807035*. The type genome for the species is the GenBank assembly RS_GCF_008807035.1. The GC content of the type genome is 36.67 % and the genome length is 4.1 Mbp.

Description of *Candidatus* Psychrobacillus velifilenta sp. nov.

Candidatus Psychrobacillus velifilenta (NL. fem. n. *velifilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Psychrobacillus sp001278755*. The type genome for the species is the GenBank assembly RS_GCF_001278755.1. The GC content of the type genome is 35.67 % and the genome length is 4.22 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "soil".

Description of *Candidatus* Psychrobacter adlapibra sp. nov.

Candidatus Psychrobacter adlapibra (NL. fem. n. *adlapibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Psychrobacter sp002377905*. The type genome for the species is the GenBank assembly GCA_002377905.1. The GC content of the type genome is 43.46 % and the genome length is 3.07 Mbp.

Description of *Candidatus* Psychrobacter apsuritura sp. nov.

Candidatus Psychrobacter apsuritura (NL. fem. n. *apsuritura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Psychrobacter sp002836735*. The type genome for the species is the GenBank assembly RS_GCF_002836735.1. The GC content of the type genome is 42.83 % and the genome length is 3.36 Mbp.

Description of *Candidatus* Psychrobacter bigaritudo sp. nov.

Candidatus Psychrobacter bigaritudo (NL. fem. n. *bigaritudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Psychrobacter sp002810365*. The type genome for the species is the GenBank assembly RS_GCF_002810365.1. The GC content of the type genome is 47.21 % and the genome length is 2.98 Mbp.

Description of *Candidatus* Psychrobacter cepulibra sp. nov.

Candidatus Psychrobacter cepulibra (NL. fem. n. *cepulibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Psychrobacter sp900168255*. The type genome for the species is the GenBank assembly RS_GCF_002224105.1. The GC content of the type genome is 41.94 % and the genome length is 3.21 Mbp.

Description of *Candidatus* Psychrobacter cepurilega sp. nov.

Candidatus Psychrobacter cepurilega (NL. fem. n. *cepurilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Psychrobacter sp012270355*. The type genome for the species is the GenBank assembly GCA_012270355.1. The GC content of the type genome is 46.33 % and the genome length is 1.95 Mbp.

Description of *Candidatus* Psychrobacter ciminago sp. nov.

Candidatus Psychrobacter ciminago (NL. fem. n. *ciminago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Psychrobacter sp900163785*. The type genome for the species is the GenBank assembly RS_GCF_900163785.1. The GC content of the type genome is 43.27 % and the genome length is 3.3 Mbp.

Description of *Candidatus* Psychrobacter cocodibra sp. nov.

Candidatus Psychrobacter cocodibra (NL. fem. n. *cocodibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Psychrobacter sp002836715*. The type genome for the species is the GenBank assembly RS_GCF_002836715.1. The GC content of the type genome is 42.78 % and the genome length is 3.31 Mbp.

Description of *Candidatus* Psychrobacter cohonitrix sp. nov.

Candidatus Psychrobacter cohonitrix (NL. fem. n. *cohonitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Psychrobacter sp002385225*. The type genome for the species is the GenBank assembly GCA_002385225.1. The GC content of the type genome is 42.37 % and the genome length is 2.81 Mbp.

Description of *Candidatus* Psychrobacter conubitoga sp. nov.

Candidatus Psychrobacter conubitoga (NL. fem. n. *conubitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Psychrobacter sp013414195*. The type genome for the species is the GenBank assembly RS_GCF_013414195.1. The GC content of the type genome is 42.69 % and the genome length is 3.26 Mbp.

Description of *Candidatus* Psychrobacter delebousia sp. nov.

Candidatus Psychrobacter delebousia (NL. fem. n. *delebousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Psychrobacter sp002352555*. The type genome for the species is the GenBank assembly GCA_002352555.1. The GC content of the type genome is 43.14 % and the genome length is 3.15 Mbp.

Description of *Candidatus* Psychrobacter denavibra sp. nov.

Candidatus Psychrobacter denavibra (NL. fem. n. *denavibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Psychrobacter sp001435295*. The type genome for the species is the GenBank assembly RS_GCF_001435295.1. The GC content of the type genome is 42.76 % and the genome length is 3.51 Mbp.

Description of *Candidatus* Psychrobacter detumitas sp. nov.

Candidatus Psychrobacter detumitas (NL. fem. n. *detumitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Psychrobacter sp001652315*. The type genome for the species is the GenBank assembly RS_GCF_001652315.1. The GC content of the type genome is 43.57 % and the genome length is 3.12 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "alkaline soil".

Description of *Candidatus* Psychrobacter direcitura sp. nov.

Candidatus Psychrobacter direcitura (NL. fem. n. *direcitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Psychrobacter sp002377945*. The type genome for the species is the GenBank assembly GCA_002377945.1. The GC content of the type genome is 42.54 % and the genome length is 3.49 Mbp.

Description of *Candidatus* Psychrobacter famelimonas sp. nov.

Candidatus Psychrobacter famelimonas (NL. fem. n. *famelimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Psychrobacter sp000213615*. The type genome for the species is the GenBank assembly GCA_002415515.1. The GC content of the type genome is 41.43 % and the genome length is 2.03 Mbp.

Description of *Candidatus* Psychrobacter feculetta sp. nov.

Candidatus Psychrobacter feculetta (NL. fem. n. *feculetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Psychrobacter sp002366815*. The type genome for the species is the GenBank assembly GCA_002366815.1. The GC content of the type genome is 44.97 % and the genome length is 2.88 Mbp.

Description of *Candidatus* Psychrobacter ficedousia sp. nov.

Candidatus Psychrobacter ficedousia (NL. fem. n. *ficedousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Psychrobacter sp002453355*. The type genome for the species is the GenBank assembly GCA_002453355.1. The GC content of the type genome is 42.95 % and the genome length is 3.02 Mbp.

Description of *Candidatus* Psychrobacter homogitoga sp. nov.

Candidatus Psychrobacter homogitoga (NL. fem. n. *homogitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Psychrobacter sp003542795*. The type genome for the species is the GenBank assembly GCA_003542795.1. The GC content of the type genome is 42.97 % and the genome length is 3.23 Mbp.

Description of *Candidatus* Psychrobacter indubitoga sp. nov.

Candidatus Psychrobacter indubitoga (NL. fem. n. *indubitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Psychrobacter sp002414005*. The type genome for the species is the GenBank assembly GCA_002414005.1. The GC content of the type genome is 44.44 % and the genome length is 2.76 Mbp.

Description of *Candidatus* Psychrobacter inreventia sp. nov.

Candidatus Psychrobacter inreventia (NL. fem. n. *inreventia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Psychrobacter sp008369115*. The type genome for the species is the GenBank assembly RS_GCF_008369115.1. The GC content of the type genome is 42.8 % and the genome length is 3.12 Mbp.

Description of *Candidatus* Psychrobacter insicicula sp. nov.

Candidatus Psychrobacter insicicula (NL. fem. n. *insicicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Psychrobacter sp000586435*. The type genome for the species is the GenBank assembly GCA_000586435.1. The GC content of the type genome is 42.71 % and the genome length is 3.15 Mbp.

Description of *Candidatus* Psychrobacter ludificella sp. nov.

Candidatus Psychrobacter ludificella (NL. fem. n. *ludificella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Psychrobacter sp002836505*. The type genome for the species is the GenBank assembly RS_GCF_002836505.1. The GC content of the type genome is 42.59 % and the genome length is 3.39 Mbp.

Description of *Candidatus* Psychrobacter necopicula sp. nov.

Candidatus Psychrobacter necopicula (NL. fem. n. *necopicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Psychrobacter sp000586455*. The type genome for the species is the GenBank assembly GCA_000586455.1. The GC content of the type genome is 42.87 % and the genome length is 3.27 Mbp.

Description of *Candidatus* Psychrobacter obnupentia sp. nov.

Candidatus Psychrobacter obnupentia (NL. fem. n. *obnupentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Psychrobacter sp003530515*. The type genome for the species is the GenBank assembly GCA_003530515.1. The GC content of the type genome is 42.76 % and the genome length is 3.32 Mbp.

Description of *Candidatus* Psychrobacter pabilax sp. nov.

Candidatus Psychrobacter pabilax (NL. fem. n. *pabilax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Psychrobacter sp001921745*. The type genome for the species is the GenBank assembly RS_GCF_001921745.1. The GC content of the type genome is 42.58 % and the genome length is 3.19 Mbp.

Description of *Candidatus* Psychrobacter refocatica sp. nov.

Candidatus Psychrobacter refocatica (NL. fem. n. *refocatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Psychrobacter sp000586415*. The type genome for the species is the GenBank assembly GCA_000586415.1. The GC content of the type genome is 42.74 % and the genome length is 3.27 Mbp.

Description of *Candidatus* Psychrobacter rubecax sp. nov.

Candidatus Psychrobacter rubecax (NL. fem. n. *rubecax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Psychrobacter sp001593285*. The type genome for the species is the GenBank assembly RS_GCF_001593285.1. The GC content of the type genome is 41.82 % and the genome length is 3.37 Mbp.

Description of *Candidatus* Psychrobacter semunibra sp. nov.

Candidatus Psychrobacter semunibra (NL. fem. n. *semunibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Psychrobacter sp000586475*. The type genome for the species is the GenBank assembly GCA_000586475.1. The GC content of the type genome is 42.67 % and the genome length is 3.43 Mbp.

Description of *Candidatus* Psychrobacter sicinatica sp. nov.

Candidatus Psychrobacter sicinatica (NL. fem. n. *sicinatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Psychrobacter sp001435845*. The type genome for the species is the GenBank assembly RS_GCF_001435845.1. The GC content of the type genome is 42.82 % and the genome length is 3.28 Mbp.

Description of *Candidatus* Psychrobacter tenilitio sp. nov.

Candidatus Psychrobacter tenilitio (NL. fem. n. *tenilitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Psychrobacter sp000511655*. The type genome for the species is the GenBank assembly RS_GCF_000511655.1. The GC content of the type genome is 44.77 % and the genome length is 3.07 Mbp.

Description of *Candidatus* Psychrobacter turibimonia sp. nov.

Candidatus Psychrobacter turibimonia (NL. fem. n. *turibimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Psychrobacter sp014119005*. The type genome for the species is the GenBank assembly RS_GCF_014119005.1. The GC content of the type genome is 41.68 % and the genome length is 2.87 Mbp.

Description of *Candidatus* Psychrobacter vinulibula sp. nov.

Candidatus Psychrobacter vinulibula (NL. fem. n. *vinulibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Psychrobacter sp002313155*. The type genome for the species is the GenBank assembly RS_GCF_002313155.2. The GC content of the type genome is 42.64 % and the genome length is 3.16 Mbp.

Description of *Candidatus* Psychrobium ammurousia sp. nov.

Candidatus Psychrobium ammurousia (NL. fem. n. *ammurousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Psychrobium sp013214905*. The type genome for the species is the GenBank assembly GCA_013214905.1. The GC content of the type genome is 41.8 % and the genome length is 3.89 Mbp.

Description of *Candidatus* Psychrobium arcubitio sp. nov.

Candidatus Psychrobium arcubitio (NL. fem. n. *arcubitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Psychrobium sp013214945*. The type genome for the species is the GenBank assembly GCA_013214945.1. The GC content of the type genome is 42.67 % and the genome length is 4.7 Mbp.

Description of *Candidatus* Psychrobium biciniforma sp. nov.

Candidatus Psychrobium biciniforma (NL. fem. n. *biciniforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Psychrobium sp013214885*. The type genome for the species is the GenBank assembly GCA_013214885.1. The GC content of the type genome is 41.67 % and the genome length is 3.68 Mbp.

Description of *Candidatus* Psychrobium cotenatica sp. nov.

Candidatus Psychrobium cotenatica (NL. fem. n. *cotenatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Psychrobium sp013214965*. The type genome for the species is the GenBank assembly GCA_013214965.1. The GC content of the type genome is 40.65 % and the genome length is 4.25 Mbp.

Description of *Candidatus* Psychrobium episticella sp. nov.

Candidatus Psychrobium episticella (NL. fem. n. *episticella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Psychrobium sp001874365*. The type genome for the species is the GenBank assembly GCA_001874365.1. The GC content of the type genome is 40.86 % and the genome length is 3.25 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Mediterranean seawater enriched with a specific particulate matter".

Description of *Candidatus* Psychrobium monopibra sp. nov.

Candidatus Psychrobium monopibra (NL. fem. n. *monopibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Psychrobium sp002835545*. The type genome for the species is the GenBank assembly RS_GCF_002835545.1. The GC content of the type genome is 41.03 % and the genome length is 3.99 Mbp.

Description of *Candidatus* Psychroflexus arcitigena sp. nov.

Candidatus Psychroflexus arcitigena (NL. fem. n. *arcitigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Psychroflexus sp007116535*. The type genome for the species is the GenBank assembly GCA_007116535.1. The GC content of the type genome is 35.1 % and the genome length is 1.25 Mbp.

Description of *Candidatus* Psychroflexus argimitudo sp. nov.

Candidatus Psychroflexus argimitudo (NL. fem. n. *argimitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Psychroflexus sp003931895*. The type genome for the species is the GenBank assembly RS_GCF_003931895.1. The GC content of the type genome is 34.08 % and the genome length is 2.84 Mbp.

Description of *Candidatus* Psychroflexus casigilega sp. nov.

Candidatus Psychroflexus casigilega (NL. fem. n. *casigilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Psychroflexus sp010820555*. The type genome for the species is the GenBank assembly RS_GCF_010820555.1. The GC content of the type genome is 39.83 % and the genome length is 2.9 Mbp.

Description of *Candidatus* Psychroflexus depelicula sp. nov.

Candidatus Psychroflexus depelicula (NL. fem. n. *depelicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Psychroflexus sp003565575*. The type genome for the species is the GenBank assembly GCA_003565575.1. The GC content of the type genome is 35.48 %

and the genome length is 2.6 Mbp.

Description of *Candidatus* Psychroflexus depopatica sp. nov.

Candidatus Psychroflexus depopatica (NL. fem. n. *depopatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Psychroflexus sp003564185*. The type genome for the species is the GenBank assembly GCA_003564185.1. The GC content of the type genome is 33.9 % and the genome length is 2.63 Mbp.

Description of *Candidatus* Psychroflexus incoritia sp. nov.

Candidatus Psychroflexus incoritia (NL. fem. n. *incoritia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Psychroflexus sp002836055*. The type genome for the species is the GenBank assembly RS_GCF_002836055.1. The GC content of the type genome is 34.54 % and the genome length is 3.82 Mbp.

Description of *Candidatus* Psychroflexus vivifitio sp. nov.

Candidatus Psychroflexus vivifitio (NL. fem. n. *vivifitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Psychroflexus sp006120725*. The type genome for the species is the GenBank assembly GCA_009909115.1. The GC content of the type genome is 34.83 % and the genome length is 2.58 Mbp.

Description of *Candidatus* Psychromonas betacitoga sp. nov.

Candidatus Psychromonas betacitoga (NL. fem. n. *betacitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Psychromonas sp003318165*. The type genome for the species is the GenBank assembly RS_GCF_003318165.1. The GC content of the type genome is 38.44 % and the genome length is 3.86 Mbp.

Description of *Candidatus* Psychromonas brasmilega sp. nov.

Candidatus Psychromonas brasmilega (NL. fem. n. *brasmilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Psychromonas sp013619145*. The type genome for the species is the GenBank assembly GCA_013619145.1. The GC content of the type genome is 39.97 % and the genome length is 3.95 Mbp.

Description of *Candidatus* Psychromonas cerarigena sp. nov.

Candidatus Psychromonas cerarigena (NL. fem. n. *cerarigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Psychromonas sp004378355*. The type genome for the species is the GenBank assembly RS_GCF_004378355.1. The GC content of the type genome is 36.71 % and the genome length is 3.51 Mbp.

Description of *Candidatus* Psychromonas dicabisca sp. nov.

Candidatus Psychromonas dicabisca (NL. fem. n. *dicabisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Psychromonas sp000470315*. The type genome for the species is the GenBank assembly RS_GCF_000470315.2. The GC content of the type genome is 36.43 % and the genome length is 4.8 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "sandy beach".

Description of *Candidatus* Psychromonas genufitia sp. nov.

Candidatus Psychromonas genufitia (NL. fem. n. *genufitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Psychromonas sp002239585*. The type genome for the species is the GenBank assembly RS_GCF_002239585.1. The GC content of the type genome is 36.86 % and the genome length is 1.69 Mbp.

Description of *Candidatus* Psychromonas indubitia sp. nov.

Candidatus Psychromonas indubitia (NL. fem. n. *indubitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Psychromonas sp002836415*. The type genome for the species is the GenBank assembly RS_GCF_002836415.1. The GC content of the type genome is 40.79 % and the genome length is 4.37 Mbp.

Description of *Candidatus* Psychromonas inlapisca sp. nov.

Candidatus Psychromonas inlapisca (NL. fem. n. *inlapisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Psychromonas sp011378715*. The type genome for the species is the GenBank assembly RS_GCF_011378715.1. The GC content of the type genome is 37.45 % and the genome length is 4.57 Mbp.

Description of *Candidatus* Psychromonas inlecibula sp. nov.

Candidatus Psychromonas inlecibula (NL. fem. n. *inlecibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Psychromonas sp000153405*. The type genome for the species is the GenBank assembly RS_GCF_000153405.2. The GC content of the type genome is 38.62 % and the genome length is 3.05 Mbp.

Description of *Candidatus* Psychromonas inresatio sp. nov.

Candidatus Psychromonas inresatio (NL. fem. n. *inresatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Psychromonas sp009828855*. The type genome for the species is the GenBank assembly RS_GCF_009828855.1. The GC content of the type genome is 36.35 % and the genome length is 4.34 Mbp.

Description of *Candidatus* Psychromonas insorax sp. nov.

Candidatus Psychromonas insorax (NL. fem. n. *insorax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Psychromonas sp004376845*. The type genome for the species is the GenBank assembly RS_GCF_004376845.1. The GC content of the type genome is 35.89

% and the genome length is 3.07 Mbp.

Description of *Candidatus* Psychromonas noviligena sp. nov.

Candidatus Psychromonas noviligena (NL. fem. n. *noviligena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Psychromonas sp002835995*. The type genome for the species is the GenBank assembly RS_GCF_002835995.1. The GC content of the type genome is 38.99 % and the genome length is 4.75 Mbp.

Description of *Candidatus* Psychromonas subucimonia sp. nov.

Candidatus Psychromonas subucimonia (NL. fem. n. *subucimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Psychromonas sp002835465*. The type genome for the species is the GenBank assembly RS_GCF_002835465.1. The GC content of the type genome is 39.35 % and the genome length is 3.72 Mbp.

Description of *Candidatus* Psychroserpens affabibula sp. nov.

Candidatus Psychroserpens affabibula (NL. fem. n. *affabibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Psychroserpens sp014526325*. The type genome for the species is the GenBank assembly GCA_014526325.1. The GC content of the type genome is 34.14 % and the genome length is 3.8 Mbp.

Description of *Candidatus* Psychroserpens apercilenta sp. nov.

Candidatus Psychroserpens apercilenta (NL. fem. n. *apercilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Psychroserpens sp000799465*. The type genome for the species is the GenBank assembly RS_GCF_000799465.1. The GC content of the type genome is 34.06 % and the genome length is 3.84 Mbp.

Description of *Candidatus* Psychroserpens cilibitio sp. nov.

Candidatus Psychroserpens cilibitio (NL. fem. n. *cilibitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Psychroserpens sp900104785*. The type genome for the species is the GenBank assembly RS_GCF_900104785.1. The GC content of the type genome is 34.91 % and the genome length is 3.1 Mbp.

Description of *Candidatus* Psychroserpens viginitoga sp. nov.

Candidatus Psychroserpens viginitoga (NL. fem. n. *viginitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Psychroserpens sp002162685*. The type genome for the species is the GenBank assembly GCA_002162685.1. The GC content of the type genome is 32.07 % and the genome length is 3.75 Mbp.

Description of *Candidatus* Psychrosphaera adremilega sp. nov.

Candidatus Psychrosphaera adremilega (NL. fem. n. *adremilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Psychrosphaera sp013373245*. The type genome for the species is the GenBank assembly GCA_013373245.1. The GC content of the type genome is 40.72 % and the genome length is 3.42 Mbp.

Description of *Candidatus* Pudibaria fidenitio sp. nov.

Candidatus Pudibaria fidenitio (NL. fem. n. *fidenitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAJATL01 sp903944895*. The type genome for the species is the GenBank assembly GCA_903944895.1. The GC content of the type genome is 41.15 % and the genome length is 7.17 Mbp.

Description of *Candidatus* Pudibaria gen. nov.

Candidatus Pudibaria (NL. fem. n. *Pudibaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAJATL01*. The type species for the genus is *Candidatus* Pudibaria fidenitio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *4484-276*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Bicubosaceae.

Description of *Candidatus* Pudibella delecitica sp. nov.

Candidatus Pudibella delecitica (NL. fem. n. *delecitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-826 sp000437235*. The type genome for the species is the GenBank assembly GCA_900542995.1. The GC content of the type genome is 34.0 % and the genome length is 1.59 Mbp.

Description of *Candidatus* Pudibella gen. nov.

Candidatus Pudibella (NL. fem. n. *Pudibella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAG-826*. The type species for the genus is *Candidatus* Pudibella delecitica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-826*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Pudibellaceae.

Description of *Candidatus* Pudibellaceae fam. nov.

Candidatus Pudibellaceae (NL. fem. n. *Pudibellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CAG-826.* The type genus for the taxon is *Candidatus* Pudibella .

According to the original version of GTDB R06-RS202, this family belongs to the order *RFN20*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Cerofellales.

Description of *Candidatus* Pudibella selibibra sp. nov.

Candidatus Pudibella selibibra (NL. fem. n. *selibibra* a species epithet created arbitrarily,

while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-826 sp002477825*. The type genome for the species is the GenBank assembly GCA_002477825.1. The GC content of the type genome is 33.7 % and the genome length is 1.6 Mbp.

Description of *Candidatus* Pudibia democitica sp. nov.

Candidatus Pudibia democitica (NL. fem. n. *democitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7332 sp002471225*. The type genome for the species is the GenBank assembly GCA_002471225.1. The GC content of the type genome is 36.96 % and the genome length is 3.4 Mbp.

Description of *Candidatus* Pudibia gen. nov.

Candidatus Pudibia (NL. fem. n. *Pudibia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA7332*. The type species for the genus is *Candidatus* Pudibia democitica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA7332*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Pudibiaceae.

Description of *Candidatus* Pudibiaceae fam. nov.

Candidatus Pudibiaceae (NL. fem. n. *Pudibiaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA7332.* The type genus for the taxon is *Candidatus* Pudibia .

According to GTDB R06-RS202, this family belongs to the order *Bacteroidales*.

Description of *Candidatus* Pudibida bipenisca sp. nov.

Candidatus Pudibida bipenisca (NL. fem. n. *bipenisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-354 sp900553015*. The type genome for the species is the GenBank assembly RS_GCF_900752165.1. The GC content of the type genome is 27.79 % and the genome length is 1.74 Mbp.

Description of *Candidatus* Pudibida gen. nov.

Candidatus Pudibida (NL. fem. n. *Pudibida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAG-354*. The type species for the genus is *Candidatus* Pudibida bipenisca .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-508*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Fidenidaceae.

Description of *Candidatus* Pudibida carunitia sp. nov.

Candidatus Pudibida carunitia (NL. fem. n. *carunitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-354 sp900555085*. The type genome for the species is the GenBank assembly RS_GCF_900765495.1. The GC content of the type genome is 27.19 % and the genome length is 1.24 Mbp.

Description of *Candidatus* Pudibida colopibula sp. nov.

Candidatus Pudibida colopibula (NL. fem. n. *colopibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-354 sp001915925*. The type genome for the species is the GenBank assembly GCA_000437455.1. The GC content of the type genome is 27.57 % and the genome length is 1.67 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "derived from human gut metagenome".

Description of *Candidatus* Pudibida colopimonia sp. nov.

Candidatus Pudibida colopimonia (NL. fem. n. *colopimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-354 sp900754085*. The type genome for the species is the GenBank assembly RS_GCF_900754085.1. The GC content of the type genome is 26.8 % and the genome length is 1.43 Mbp.

Description of *Candidatus* Pudibida culilax sp. nov.

Candidatus Pudibida culilax (NL. fem. n. *culilax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-354 sp900552655*. The type genome for the species is the GenBank assembly GCA_900552655.1. The GC content of the type genome is 27.06 % and the genome length is 1.6 Mbp.

Description of *Candidatus* Pudibida deparitio sp. nov.

Candidatus Pudibida deparitio (NL. fem. n. *deparitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-354 sp900759015*. The type genome for the species is the GenBank assembly RS_GCF_900759015.1. The GC content of the type genome is 27.28 % and the genome length is 1.61 Mbp.

Description of *Candidatus* Pudibosa arcebitica sp. nov.

Candidatus Pudibosa arcebitica (NL. fem. n. *arcebitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *QAMI01 sp003150395*. The type genome for the species is the GenBank assembly GCA_003150395.1. The GC content of the type genome is 36.31 % and the genome length is 2.17 Mbp.

Description of *Candidatus* Pudibosa gen. nov.

Candidatus Pudibosa (NL. fem. n. *Pudibosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *QAMI01*. The type species for the genus is *Candidatus* Pudibosa arcebitica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Pudibosa maligitoga sp. nov.

Candidatus Pudibosa maligitoga (NL. fem. n. *maligitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *QAMI01 sp900551915*. The type genome for the species is the GenBank assembly GCA_900551915.1. The GC content of the type genome is 36.75 % and the genome length is 2.09 Mbp.

Description of *Candidatus* Pudibosa tetenifica sp. nov.

Candidatus Pudibosa tetenifica (NL. fem. n. *tetenifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *QAMI01 sp900554095*. The type genome for the species is the GenBank assembly GCA_900554095.1. The GC content of the type genome is 36.67 % and the genome length is 1.95 Mbp.

Description of *Candidatus* Pudibula ablepitas sp. nov.

Candidatus Pudibula ablepitas (NL. fem. n. *ablepitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIWGR01 sp903873545*. The type genome for the species is the GenBank assembly GCA_903873545.1. The GC content of the type genome is 67.22 % and the genome length is 3.84 Mbp.

Description of *Candidatus* Pudibula gen. nov.

Candidatus Pudibula (NL. fem. n. *Pudibula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIWGR01*. The type species for the genus is *Candidatus* Pudibula ablepitas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *REDH01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Debucariaceae.

Description of *Candidatus* Pudibula camilimonas sp. nov.

Candidatus Pudibula camilimonas (NL. fem. n. *camilimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIWGR01 sp013205435*. The type genome for the species is the GenBank assembly GCA_013205435.1. The GC content of the type genome is 66.77 % and the genome length is 3.67 Mbp.

Description of *Candidatus* Pudibula divoliforma sp. nov.

Candidatus Pudibula divoliforma (NL. fem. n. *divoliforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIWGR01 sp903912275*. The type genome for the species is the GenBank assembly GCA_903912275.1. The GC content of the type genome is 67.11 % and the genome length is 3.76 Mbp.

Description of *Candidatus* Pueribacillus defacicella sp. nov.

Candidatus Pueribacillus defacicella (NL. fem. n. *defacicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pueribacillus sp002453275*. The type genome for the species is the GenBank assembly GCA_002453275.1. The GC content of the type genome is 39.5 % and the genome length is 2.1 Mbp.

Description of *Candidatus* Puia adtorilenta sp. nov.

Candidatus Puia adtorilenta (NL. fem. n. *adtorilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Puia sp013288945*. The type genome for the species is the GenBank assembly GCA_013288945.1. The GC content of the type genome is 35.42 % and the genome length is 3.03 Mbp.

Description of *Candidatus* Puia anastilega sp. nov.

Candidatus Puia anastilega (NL. fem. n. *anastilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Puia sp003151295*. The type genome for the species is the GenBank assembly GCA_003151295.1. The GC content of the type genome is 48.3 % and the genome length is 4.35 Mbp.

Description of *Candidatus* Puia antiritoga sp. nov.

Candidatus Puia antiritoga (NL. fem. n. *antiritoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Puia sp003167015*. The type genome for the species is the GenBank assembly GCA_003167015.1. The GC content of the type genome is 52.36 % and the genome length is 5.75 Mbp.

Description of *Candidatus* Puia catalatio sp. nov.

Candidatus Puia catalatio (NL. fem. n. *catalatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Puia sp003135585*. The type genome for the species is the GenBank assembly GCA_003135585.1. The GC content of the type genome is 41.82 % and the genome length is 3.91 Mbp.

Description of *Candidatus* Puia cohonitio sp. nov.

Candidatus Puia cohonitio (NL. fem. n. *cohonitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Puia sp003136915*. The type genome for the species is the GenBank assembly GCA_003136915.1. The GC content of the type genome is 44.46 % and the genome length is 3.06 Mbp.

Description of *Candidatus* Puia conubetta sp. nov.

Candidatus Puia conubetta (NL. fem. n. *conubetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Puia sp013287475*. The type genome for the species is the GenBank assembly GCA_013287475.1. The GC content of the type genome is 40.26 % and the genome length is 3.16 Mbp.

Description of *Candidatus* Puia ecastentia sp. nov.

Candidatus Puia ecastentia (NL. fem. n. *ecastentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Puia sp001898505*. The type genome for the species is the GenBank assembly GCA_001898505.1. The GC content of the type genome is 50.31 % and the genome length is 7.9 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Ammonium sulfate bioreactor".

Description of *Candidatus* Puia locelimonia sp. nov.

Candidatus Puia locelimonia (NL. fem. n. *locelimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Puia sp003168265*. The type genome for the species is the GenBank assembly GCA_003168265.1. The GC content of the type genome is 44.08 % and the genome length is 4.3 Mbp.

Description of *Candidatus* Puia papilitas sp. nov.

Candidatus Puia papilitas (NL. fem. n. *papilitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Puia sp003175695*. The type genome for the species is the GenBank assembly GCA_003175695.1. The GC content of the type genome is 42.69 % and the genome length is 4.58 Mbp.

Description of *Candidatus* Puia pavimilenta sp. nov.

Candidatus Puia pavimilenta (NL. fem. n. *pavimilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Puia sp903927975*. The type genome for the species is the GenBank assembly GCA_903900005.1. The GC content of the type genome is 37.78 % and the genome length is 5.01 Mbp.

Description of *Candidatus* Puia renavilenta sp. nov.

Candidatus Puia renavilenta (NL. fem. n. *renavilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Puia sp903906365*. The type genome for the species is the GenBank assembly GCA_903892725.1. The GC content of the type genome is 50.61 % and the genome length is 3.87 Mbp.

Description of *Candidatus* Puia serotitura sp. nov.

Candidatus Puia serotitura (NL. fem. n. *serotitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Puia sp013286315*. The type genome for the species is the GenBank assembly GCA_013286315.1. The GC content of the type genome is 42.44 % and the genome length is 3.31 Mbp.

Description of *Candidatus* Puia sonabentia sp. nov.

Candidatus Puia sonabentia (NL. fem. n. *sonabentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Puia sp002413325*. The type genome for the species is the GenBank assembly GCA_002413325.1. The GC content of the type genome is 46.03 % and the genome length is 3.32 Mbp.

Description of *Candidatus* Puia videlimonas sp. nov.

Candidatus Puia videlimonas (NL. fem. n. *videlimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Puia sp013289175*. The type genome for the species is the GenBank assembly GCA_013289175.1. The GC content of the type genome is 44.63 % and the genome length is 3.23 Mbp.

Description of *Candidatus* Pulegana mahemibra sp. nov.

Candidatus Pulegana mahemibra (NL. fem. n. *mahemibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *VMTK01 sp013791585*. The type genome for the species is the GenBank assembly GCA_013791585.1. The GC content of the type genome is 37.64 % and the genome length is 1.34 Mbp.

Description of *Candidatus* Pulegana gen. nov.

Candidatus Pulegana (NL. fem. n. *Pulegana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *VMTK01*. The type species for the genus is *Candidatus* Pulegana mahemibra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *VMTK01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Puleganaceae.

Description of *Candidatus* Puleganaceae fam. nov.

Candidatus Puleganaceae (NL. fem. n. *Puleganaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *VMTK01.* The type genus for the taxon is *Candidatus* Pulegana .

According to the original version of GTDB R06-RS202, this family belongs to the order *BM507*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Bucolosales.

Description of *Candidatus* Pulegaria lucelastra sp. nov.

Candidatus Pulegaria lucelastra (NL. fem. n. *lucelastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACAEZ01 sp013388565*. The type genome for the species is the GenBank assembly GCA_013388565.1. The GC content of the type genome is 28.83 % and the genome length is 1.41 Mbp.

Description of *Candidatus* Pulegaria gen. nov.

Candidatus Pulegaria (NL. fem. n. *Pulegaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACAEZ01*. The type species for the genus is *Candidatus* Pulegaria lucelastra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JACAEZ01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Pulegariaceae.

Description of *Candidatus* Pulegariaceae fam. nov.

Candidatus Pulegariaceae (NL. fem. n. *Pulegariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JACAEZ01.* The type genus for the taxon is *Candidatus* Pulegaria .

According to GTDB R06-RS202, this family belongs to the order *Campylobacterales*.

Description of *Candidatus* Pulegella cosidicula sp. nov.

Candidatus Pulegella cosidicula (NL. fem. n. *cosidicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *BRH-c8a sp000961575*. The type genome for the species is the GenBank assembly GCA_003512665.1. The GC content of the type genome is 48.41 % and the genome length is 2.86 Mbp.

Description of *Candidatus* Pulegella gen. nov.

Candidatus Pulegella (NL. fem. n. *Pulegella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *BRH-c8a*. The type species for the genus is *Candidatus* Pulegella cosidicula .

According to GTDB R06-RS202, this genus belongs to the family _A.

Description of *Candidatus* Pulegella forinatio sp. nov.

Candidatus Pulegella forinatio (NL. fem. n. *forinatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *BRH-c8a sp009781965*. The type genome for the species is the GenBank assembly GCA_009781965.1. The GC content of the type genome is 50.91 % and the genome length is 2.56 Mbp.

Description of *Candidatus* Pulegia cimeligena sp. nov.

Candidatus Pulegia cimeligena (NL. fem. n. *cimeligena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-02-FULL-66-22 sp001771285*. The type genome for the species is the GenBank assembly GCA_001771285.1. The GC content of the type genome is 66.06 % and the genome length is 4.35 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under low O2 conditions; 1.2 micron filter; full assembly".

Description of *Candidatus* Pulegia gen. nov.

Candidatus Pulegia (NL. fem. n. *Pulegia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *2-02-FULL-66-22*. The type species for the genus is *Candidatus* Pulegia cimeligena .

According to the original version of GTDB R06-RS202, this genus belongs to the family *2-02-FULL-66-22*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Pulegiaceae.

Description of *Candidatus* Pulegiaceae fam. nov.

Candidatus Pulegiaceae (NL. fem. n. *Pulegiaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *2-02-FULL-66-22.* The type genus for the taxon is *Candidatus* Pulegia .

According to GTDB R06-RS202, this family belongs to the order *Methylomirabilales*.

Description of *Candidatus* Pulegia letifitia sp. nov.

Candidatus Pulegia letifitia (NL. fem. n. *letifitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-02-FULL-66-22 sp011054645*. The type genome for the species is the GenBank assembly GCA_011054645.1. The GC content of the type genome is 65.6 % and the genome length is 4.14 Mbp.

Description of *Candidatus* Pulegida obtenatio sp. nov.

Candidatus Pulegida obtenatio (NL. fem. n. *obtenatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3086 sp002367305*. The type genome for the species is the GenBank assembly GCA_002367305.1. The GC content of the type genome is 60.8 % and the genome length is 1.67 Mbp.

Description of *Candidatus* Pulegida gen. nov.

Candidatus Pulegida (NL. fem. n. *Pulegida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA3086*. The type species for the genus is *Candidatus* Pulegida obtenatio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA3086*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Pulegidaceae.

Description of *Candidatus* Pulegidaceae fam. nov.

Candidatus Pulegidaceae (NL. fem. n. *Pulegidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA3086.* The type genus for the taxon is *Candidatus* Pulegida .

According to the original version of GTDB R06-RS202, this family belongs to the order *OPB41*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Cenodanales.

Description of *Candidatus* Pulegosa ignobitudo sp. nov.

Candidatus Pulegosa ignobitudo (NL. fem. n. *ignobitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UM-FILTER-46-8 sp002791595*. The type genome for the species is the GenBank assembly GCA_002791595.1. The GC content of the type genome is 46.23 % and the genome length is 2.73 Mbp.

Description of *Candidatus* Pulegosa gen. nov.

Candidatus Pulegosa (NL. fem. n. *Pulegosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UM-FILTER-46-8*. The type species for the genus is *Candidatus* Pulegosa ignobitudo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UM-FILTER-46-8*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Pulegosaceae.

Description of *Candidatus* Pulegosaceae fam. nov.

Candidatus Pulegosaceae (NL. fem. n. *Pulegosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UM-FILTER-46-8.* The type genus for the taxon is *Candidatus* Pulegosa .

According to the original version of GTDB R06-RS202, this family belongs to the order *UM-FILTER-46-8*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Pulegosales.

Description of *Candidatus* Pulegosales ord. nov.

Candidatus Pulegosales (NL. fem. n. *Pulegosales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UM-FILTER-46-8.* The type genus for the taxon is *Candidatus* Pulegosa .

According to the original version of GTDB R06-RS202, this family belongs to the class *MSB-5A5*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Loripellae.

Description of *Candidatus* Pulegula abinvivita sp. nov.

Candidatus Pulegula abinvivita (NL. fem. n. *abinvivita* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS1491 sp900552265*. The type genome for the species is the GenBank assembly GCA_900552265.1. The GC content of the type genome is 32.94 % and the genome length is 1.12 Mbp.

Description of *Candidatus* Pulegula gen. nov.

Candidatus Pulegula (NL. fem. n. *Pulegula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UMGS1491*. The type species for the genus is *Candidatus* Pulegula abinvivita .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Pulegula defositoga sp. nov.

Candidatus Pulegula defositoga (NL. fem. n. *defositoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS1491 sp900554775*. The type genome for the species is the GenBank assembly GCA_900554775.1. The GC content of the type genome is 38.2 % and the genome length is 0.86 Mbp.

Description of *Candidatus* Pulegula dicabugo sp. nov.

Candidatus Pulegula dicabugo (NL. fem. n. *dicabugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS1491 sp900554335*. The type genome for the species is the GenBank assembly RS_GCF_900772125.1. The GC content of the type genome is 37.6 % and the genome length is 0.93 Mbp.

Description of *Candidatus* Pulegula forinilenta sp. nov.

Candidatus Pulegula forinilenta (NL. fem. n. *forinilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS1491 sp900757335*. The type genome for the species is the GenBank assembly RS_GCF_900757335.1. The GC content of the type genome is 33.74 % and the genome length is 1.12 Mbp.

Description of *Candidatus* Pulveribacter penecax sp. nov.

Candidatus Pulveribacter penecax (NL. fem. n. *penecax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pulveribacter sp002434305*. The type genome for the species is the GenBank assembly GCA_002434305.1. The GC content of the type genome is 68.83 % and the genome length is 3.48 Mbp.

Description of *Candidatus* Puniceibacterium assibessa sp. nov.

Candidatus Puniceibacterium assibessa (NL. fem. n. *assibessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Puniceibacterium sp001038505*. The type genome for the species is the GenBank assembly RS_GCF_001038505.1. The GC content of the type genome is 60.46 % and the genome length is 5.56 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Coastal seawater".

Description of *Candidatus* Puniceicoccus atlanago sp. nov.

Candidatus Puniceicoccus atlanago (NL. fem. n. *atlanago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Puniceicoccus sp002388665*. The type genome for the species is the GenBank assembly GCA_002388665.1. The GC content of the type genome is 54.31 % and the genome length is 4.03 Mbp.

Description of *Candidatus* Purulana masocicella sp. nov.

Candidatus Purulana masocicella (NL. fem. n. *masocicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *J132 sp003694635*. The type genome for the species is the GenBank assembly GCA_003694635.1. The GC content of the type genome is 47.21 % and the

genome length is 2.52 Mbp.

Description of *Candidatus* Purulana gen. nov.

Candidatus Purulana (NL. fem. n. *Purulana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *J132*. The type species for the genus is *Candidatus* Purulana masocicella .

According to the original version of GTDB R06-RS202, this genus belongs to the family *J132*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Purulanaceae.

Description of *Candidatus* Purulanaceae fam. nov.

Candidatus Purulanaceae (NL. fem. n. *Purulanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *J132.* The type genus for the taxon is *Candidatus* Purulana .

According to the original version of GTDB R06-RS202, this family belongs to the order *J132*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Purulanales.

Description of *Candidatus* Purulanales ord. nov.

Candidatus Purulanales (NL. fem. n. *Purulanales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *J132.* The type genus for the taxon is *Candidatus* Purulana .

According to the original version of GTDB R06-RS202, this family belongs to the class *J132*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Purulanae.

Description of *Candidatus* Purulanae class. nov.

Candidatus Purulanae (NL. fem. n. *c__Purulanae* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *J132.* The type genus for the taxon is *Candidatus* Purulana .

According to GTDB R06-RS202, this class belongs to the phylum *Planctomycetota*.

Description of *Candidatus* Purularia venucousia sp. nov.

Candidatus Purularia venucousia (NL. fem. n. *venucousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *B15-G9 sp003645975*. The type genome for the species is the GenBank assembly GCA_003645975.1. The GC content of the type genome is 48.9 % and the genome length is 1.78 Mbp.

Description of *Candidatus* Purularia gen. nov.

Candidatus Purularia (NL. fem. n. *Purularia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *B15-G9*. The type species for the genus is *Candidatus* Purularia venucousia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *B15-G9*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Purulariaceae.

Description of *Candidatus* Purulariaceae fam. nov.

Candidatus Purulariaceae (NL. fem. n. *Purulariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *B15-G9.* The type genus for the taxon is *Candidatus* Purularia .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA1063*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Homicosales.

Description of *Candidatus* Purulella effigicula sp. nov.

Candidatus Purulella effigicula (NL. fem. n. *effigicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *F0540 sp000466585*. The type genome for the species is the GenBank

assembly RS_GCF_000466585.1. The GC content of the type genome is 32.94 % and the genome length is 4.77 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "oral cavity- mouth".

Description of *Candidatus* Purulella gen. nov.

Candidatus Purulella (NL. fem. n. *Purulella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *F0540*. The type species for the genus is *Candidatus* Purulella effigicula .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Purulella saburago sp. nov.

Candidatus Purulella saburago (NL. fem. n. *saburago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *F0540 sp900167505*. The type genome for the species is the GenBank assembly RS_GCF_004011155.1. The GC content of the type genome is 27.71 % and the genome length is 2.62 Mbp.

Description of *Candidatus* Purulida desulitica sp. nov.

Candidatus Purulida desulitica (NL. fem. n. *desulitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-12-FULL-57-22 sp001798455*. The type genome for the species is the GenBank assembly GCA_001798455.1. The GC content of the type genome is 57.45 % and the genome length is 1.84 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under low O2 conditions; 0.2 micron filter; full assembly".

Description of *Candidatus* Purulida gen. nov.

Candidatus Purulida (NL. fem. n. *Purulida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *2-12-FULL-57-22*. The type species for the genus is *Candidatus* Purulida desulitica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA9968*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Casigosaceae.

Description of *Candidatus* Purulosa decitentia sp. nov.

Candidatus Purulosa decitentia (NL. fem. n. *decitentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WRGC01 sp009787385*. The type genome for the species is the GenBank assembly GCA_009787335.1. The GC content of the type genome is 32.83 % and the genome length is 1.27 Mbp.

Description of *Candidatus* Purulosa gen. nov.

Candidatus Purulosa (NL. fem. n. *Purulosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WRGC01*. The type species for the genus is *Candidatus* Purulosa decitentia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-552*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Sanabiaceae.

Description of *Candidatus* Purulula benivigena sp. nov.

Candidatus Purulula benivigena (NL. fem. n. *benivigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002712045 sp002712045*. The type genome for the species is the GenBank assembly GCA_004213335.1. The GC content of the type genome is 37.77 % and the genome length is 1.87 Mbp.

Description of *Candidatus* Purulula gen. nov.

Candidatus Purulula (NL. fem. n. *Purulula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-002712045*. The type species for the genus is *Candidatus* Purulula

benivigena .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Purulula rutabago sp. nov.

Candidatus Purulula rutabago (NL. fem. n. *rutabago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002712045 sp002683355*. The type genome for the species is the GenBank assembly GCA_002683355.1. The GC content of the type genome is 37.5 % and the genome length is 1.88 Mbp.

Description of *Candidatus* Pusillimonas ammodicella sp. nov.

Candidatus Pusillimonas ammodicella (NL. fem. n. *ammodicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pusillimonas_A sp014237865*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_014237865.1. The GC content of the type genome is 57.36 % and the genome length is 3.2 Mbp.

Description of *Candidatus* Pusillimonas epitrax sp. nov.

Candidatus Pusillimonas epitrax (NL. fem. n. *epitrax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pusillimonas_A sp011388195*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_011388195.1. The GC content of the type genome is 53.25 % and the genome length is 3.19 Mbp.

Description of *Candidatus* Pusillimonas latibitio sp. nov.

Candidatus Pusillimonas latibitio (NL. fem. n. *latibitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pusillimonas_A sp002384935*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_002384935.1. The GC content of the type genome is 54.3 % and the genome length is 3.27 Mbp.

Description of *Candidatus* Pusillimonas nugacitudo sp. nov.

Candidatus Pusillimonas nugacitudo (NL. fem. n. *nugacitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pusillimonas_A sp002694155*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_002694155.1. The GC content of the type genome is 47.99 % and the genome length is 2.62 Mbp.

Description of *Candidatus* Pusillimonas solifitas sp. nov.

Candidatus Pusillimonas solifitas (NL. fem. n. *solifitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pusillimonas_A sp012744285*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_012744285.1. The GC content of the type genome is 57.43 % and the genome length is 2.79 Mbp.

Description of *Candidatus* Pusillimonas verecax sp. nov.

Candidatus Pusillimonas verecax (NL. fem. n. *verecax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pusillimonas_A sp002236805*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_003788685.1. The GC content of the type genome is 56.25 % and the genome length is 3.29 Mbp.

Description of *Candidatus* Pusillimonas subofitudo sp. nov.

Candidatus Pusillimonas subofitudo (NL. fem. n. *subofitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pusillimonas_B sp013416395*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_008369125.1. The GC content of the type genome is 54.85 % and the genome length is 4.91 Mbp.

Description of *Candidatus* Pusillimonas vanitimonas sp. nov.

Candidatus Pusillimonas vanitimonas (NL. fem. n. *vanitimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pusillimonas_B sp009857885*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_009857885.1. The GC content of the type genome is 61.08 % and the genome length is 4.1 Mbp.

Description of *Candidatus* Pusillimonas dicibilenta sp. nov.

Candidatus Pusillimonas dicibilenta (NL. fem. n. *dicibilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pusillimonas_C sp004022565*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_004022565.1. The GC content of the type genome is 59.34 % and the genome length is 3.55 Mbp.

Description of *Candidatus* Pusillimonas inardilega sp. nov.

Candidatus Pusillimonas inardilega (NL. fem. n. *inardilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pusillimonas_C sp000209655*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The

type genome for the species is the GenBank assembly RS_GCF_000209655.1. The GC content of the type genome is 56.91 % and the genome length is 3.92 Mbp.

Description of *Candidatus* Pusillimonas rorulousia sp. nov.

Candidatus Pusillimonas rorulousia (NL. fem. n. *rorulousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pusillimonas_C sp013416405*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_013416405.1. The GC content of the type genome is 56.93 % and the genome length is 3.66 Mbp.

Description of *Candidatus* Pygmaiobacter ecligimonas sp. nov.

Candidatus Pygmaiobacter ecligimonas (NL. fem. n. *ecligimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pygmaiobacter sp014287275*. The type genome for the species is the GenBank assembly RS_GCF_014287275.1. The GC content of the type genome is 61.65 % and the genome length is 3.14 Mbp.

Description of *Candidatus* Pyramidobacter nugacago sp. nov.

Candidatus Pyramidobacter nugacago (NL. fem. n. *nugacago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pyramidobacter sp009695745*. The type genome for the species is the GenBank assembly RS_GCF_009695745.1. The GC content of the type genome is 59.65 % and the genome length is 2.53 Mbp.

Description of *Candidatus* Pyramidobacter solipetta sp. nov.

Candidatus Pyramidobacter solipetta (NL. fem. n. *solipetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Pyramidobacter sp002007215*. The type genome for the species is the GenBank assembly RS_GCF_002007215.1. The GC content of the type genome is 60.28 % and the genome length is 2.67 Mbp.

Description of *Candidatus* Quadrisphaera alsisimonia sp. nov.

Candidatus Quadrisphaera alsisimonia (NL. fem. n. *alsisimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Quadrisphaera sp900101335*. The type genome for the species is the GenBank assembly RS_GCF_900101335.1. The GC content of the type genome is 76.64 % and the genome length is 3.2 Mbp.

Description of *Candidatus* Quadrisphaera epitritura sp. nov.

Candidatus Quadrisphaera epitritura (NL. fem. n. *epitritura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Quadrisphaera sp014270065*. The type genome for the species is the GenBank assembly RS_GCF_014270065.1. The GC content of the type genome is 75.18 % and the genome length is 4.62 Mbp.

Description of *Candidatus* Quadrisphaera lucelilenta sp. nov.

Candidatus Quadrisphaera lucelilenta (NL. fem. n. *lucelilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Quadrisphaera sp902806005*. The type genome for the species is the GenBank assembly GCA_902806005.1. The GC content of the type genome is 76.14 % and the genome length is 2.86 Mbp.

Description of *Candidatus* Quadrisphaera sanabitica sp. nov.

Candidatus Quadrisphaera sanabitica (NL. fem. n. *sanabitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Quadrisphaera sp006335115*. The type genome for the species is the GenBank assembly RS_GCF_006335115.1. The GC content of the type genome is 74.93 % and the genome length is 4.77 Mbp.

Description of *Candidatus* Quadrisphaera semivivita sp. nov.

Candidatus Quadrisphaera semivivita (NL. fem. n. *semivivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Quadrisphaera sp008041935*. The type genome for the species is the GenBank assembly RS_GCF_008041935.1. The GC content of the type genome is 74.79 % and the genome length is 4.91 Mbp.

Description of *Candidatus* Rahnella adpacatica sp. nov.

Candidatus Rahnella adpacatica (NL. fem. n. *adpacatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rahnella sp013457415*. The type genome for the species is the GenBank assembly GCA_013457415.1. The GC content of the type genome is 52.48 % and the genome length is 5.32 Mbp.

Description of *Candidatus* Rahnella egritetta sp. nov.

Candidatus Rahnella egritetta (NL. fem. n. *egritetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rahnella sp002951615*. The type genome for the species is the GenBank assembly RS_GCF_002951615.1. The GC content of the type genome is 52.7 % and the genome length is 5.53 Mbp.

Description of *Candidatus* Rahnella funebibula sp. nov.

Candidatus Rahnella funebibula (NL. fem. n. *funebibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rahnella sp002834385*. The type genome for the species is the GenBank assembly RS_GCF_002834385.1. The GC content of the type genome is 52.34 % and the genome length is 5.85 Mbp.

Description of *Candidatus* Rahnella refocago sp. nov.

Candidatus Rahnella refocago (NL. fem. n. *refocago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Rahnella sp004195115*. The type genome for the species is the GenBank assembly RS_GCF_004195095.1. The GC content of the type genome is 51.6 % and the genome length is 5.42 Mbp.

Description of *Candidatus* Rahnella refocivita sp. nov.

Candidatus Rahnella refocivita (NL. fem. n. *refocivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rahnella sp001422575*. The type genome for the species is the GenBank assembly RS_GCF_004799335.1. The GC content of the type genome is 53.0 % and the genome length is 5.42 Mbp.

Description of *Candidatus* Raineya capudicella sp. nov.

Candidatus Raineya capudicella (NL. fem. n. *capudicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Raineya sp001281695*. The type genome for the species is the GenBank assembly RS_GCF_001281695.1. The GC content of the type genome is 32.62 % and the genome length is 4.71 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "lake".

Description of *Candidatus* Raineyella inlacessa sp. nov.

Candidatus Raineyella inlacessa (NL. fem. n. *inlacessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Raineyella sp009646095*. The type genome for the species is the GenBank assembly RS_GCF_009646095.1. The GC content of the type genome is 69.61 % and the genome length is 3.65 Mbp.

Description of *Candidatus* Ralstonia arcelugo sp. nov.

Candidatus Ralstonia arcelugo (NL. fem. n. *arcelugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ralstonia sp002298975*. The type genome for the species is the GenBank assembly GCA_002298975.1. The GC content of the type genome is 64.15 % and the genome length is 5.22 Mbp.

Description of *Candidatus* Ralstonia bicalilega sp. nov.

Candidatus Ralstonia bicalilega (NL. fem. n. *bicalilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ralstonia sp007997035*. The type genome for the species is the GenBank assembly RS_GCF_007997035.1. The GC content of the type genome is 64.47 % and the genome length is 5.44 Mbp.

Description of *Candidatus* Ralstonia infinilega sp. nov.

Candidatus Ralstonia infinilega (NL. fem. n. *infinilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ralstonia sp000801955*. The type genome for the species is the GenBank assembly RS_GCF_000801955.1. The GC content of the type genome is 63.47 % and the genome length is 6.1 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Soil".

Description of *Candidatus* Ralstonia lucerilega sp. nov.

Candidatus Ralstonia lucerilega (NL. fem. n. *lucerilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ralstonia sp001078575*. The type genome for the species is the GenBank assembly RS_GCF_005503115.1. The GC content of the type genome is 63.47 % and the genome length is 6.1 Mbp.

Description of *Candidatus* Ralstonia occalitio sp. nov.

Candidatus Ralstonia occalitio (NL. fem. n. *occalitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ralstonia sp000955795*. The type genome for the species is the GenBank assembly RS_GCF_000955795.1. The GC content of the type genome is 63.44 % and the genome length is 5.68 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "soil".

Description of *Candidatus* Ralstonia paralilenta sp. nov.

Candidatus Ralstonia paralilenta (NL. fem. n. *paralilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ralstonia sp000620465*. The type genome for the species is the GenBank assembly RS_GCF_002849525.1. The GC content of the type genome is 64.43 % and the genome length is 5.53 Mbp.

Description of *Candidatus* Ralstonia parocetta sp. nov.

Candidatus Ralstonia parocetta (NL. fem. n. *parocetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ralstonia sp900115545*. The type genome for the species is the GenBank assembly RS_GCF_900115545.1. The GC content of the type genome is 63.77 % and the genome length is 5.37 Mbp.

Description of *Candidatus* Ralstonia scammatica sp. nov.

Candidatus Ralstonia scammatica (NL. fem. n. *scammatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ralstonia sp003851545*. The type genome for the species is the GenBank assembly RS_GCF_003851545.1. The GC content of the type genome is 63.27 % and the genome length is 4.8 Mbp.

Description of *Candidatus* Ramlibacter adpinitio sp. nov.

Candidatus Ramlibacter adpinitio (NL. fem. n. *adpinitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ramlibacter sp014297445*. The type genome for the species is the GenBank assembly RS_GCF_014297445.1. The GC content of the type genome is 67.87 % and the genome length is 6.15 Mbp.

Description of *Candidatus* Ramlibacter avoncilega sp. nov.

Candidatus Ramlibacter avoncilega (NL. fem. n. *avoncilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ramlibacter sp000426125*. The type genome for the species is the GenBank assembly RS_GCF_000426125.1. The GC content of the type genome is 68.03 % and the genome length is 4.9 Mbp.

Description of *Candidatus* Ramlibacter cenobibula sp. nov.

Candidatus Ramlibacter cenobibula (NL. fem. n. *cenobibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ramlibacter sp007833165*. The type genome for the species is the GenBank assembly RS_GCF_007833165.1. The GC content of the type genome is 67.56 % and the genome length is 5.91 Mbp.

Description of *Candidatus* Ramlibacter ceromimonas sp. nov.

Candidatus Ramlibacter ceromimonas (NL. fem. n. *ceromimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ramlibacter sp013778345*. The type genome for the species is the GenBank assembly RS_GCF_013778345.1. The GC content of the type genome is 70.28 % and the genome length is 5.51 Mbp.

Description of *Candidatus* Ramlibacter cunabibra sp. nov.

Candidatus Ramlibacter cunabibra (NL. fem. n. *cunabibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ramlibacter sp013155545*. The type genome for the species is the GenBank assembly RS_GCF_013155545.1. The GC content of the type genome is 65.1 % and the genome length is 5.64 Mbp.

Description of *Candidatus* Ramlibacter desacastra sp. nov.

Candidatus Ramlibacter desacastra (NL. fem. n. *desacastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ramlibacter sp001044395*. The type genome for the species is the GenBank assembly RS_GCF_001044395.1. The GC content of the type genome is 63.39

% and the genome length is 4.72 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "surface water of freshwater Swan Lake".

Description of *Candidatus* Ramlibacter dilecastra sp. nov.

Candidatus Ramlibacter dilecastra (NL. fem. n. *dilecastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ramlibacter sp012927085*. The type genome for the species is the GenBank assembly RS_GCF_012927085.1. The GC content of the type genome is 68.87 % and the genome length is 7.2 Mbp.

Description of *Candidatus* Ramlibacter dimadigena sp. nov.

Candidatus Ramlibacter dimadigena (NL. fem. n. *dimadigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ramlibacter sp012274225*. The type genome for the species is the GenBank assembly GCA_012274225.1. The GC content of the type genome is 66.45 % and the genome length is 4.17 Mbp.

Description of *Candidatus* Ramlibacter eccilentia sp. nov.

Candidatus Ramlibacter eccilentia (NL. fem. n. *eccilentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ramlibacter sp013087525*. The type genome for the species is the GenBank assembly RS_GCF_013087525.1. The GC content of the type genome is 69.34 % and the genome length is 4.75 Mbp.

Description of *Candidatus* Ramlibacter excinentia sp. nov.

Candidatus Ramlibacter excinentia (NL. fem. n. *excinentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ramlibacter sp004681975*. The type genome for the species is the GenBank assembly RS_GCF_004681975.1. The GC content of the type genome is 68.9 % and the genome length is 4.47 Mbp.

Description of *Candidatus* Ramlibacter fetifentia sp. nov.

Candidatus Ramlibacter fetifentia (NL. fem. n. *fetifentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ramlibacter sp004028785*. The type genome for the species is the GenBank assembly GCA_004028785.1. The GC content of the type genome is 70.57 % and the genome length is 3.95 Mbp.

Description of *Candidatus* Ramlibacter gerunastra sp. nov.

Candidatus Ramlibacter gerunastra (NL. fem. n. *gerunastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ramlibacter sp014376915*. The type genome for the species is the GenBank assembly GCA_014376915.1. The GC content of the type genome is 66.93 % and the genome length is 3.68 Mbp.

Description of *Candidatus* Ramlibacter inergimonas sp. nov.

Candidatus Ramlibacter inergimonas (NL. fem. n. *inergimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ramlibacter sp013815685*. The type genome for the species is the GenBank assembly GCA_013815685.1. The GC content of the type genome is 65.16 % and the genome length is 4.15 Mbp.

Description of *Candidatus* Ramlibacter invetimonia sp. nov.

Candidatus Ramlibacter invetimonia (NL. fem. n. *invetimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ramlibacter sp004144865*. The type genome for the species is the GenBank assembly GCA_004144865.1. The GC content of the type genome is 69.49 % and the genome length is 4.35 Mbp.

Description of *Candidatus* Ramlibacter nugigilenta sp. nov.

Candidatus Ramlibacter nugigilenta (NL. fem. n. *nugigilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ramlibacter sp001424545*. The type genome for the species is the GenBank assembly RS_GCF_001424545.1. The GC content of the type genome is 69.93 % and the genome length is 4.59 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "leaf".

Description of *Candidatus* Ramlibacter obtemimonia sp. nov.

Candidatus Ramlibacter obtemimonia (NL. fem. n. *obtemimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ramlibacter sp013697775*. The type genome for the species is the GenBank assembly GCA_013697775.1. The GC content of the type genome is 68.64 % and the genome length is 4.88 Mbp.

Description of *Candidatus* Ramlibacter resalivita sp. nov.

Candidatus Ramlibacter resalivita (NL. fem. n. *resalivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ramlibacter sp003797765*. The type genome for the species is the GenBank assembly RS_GCF_003797765.1. The GC content of the type genome is 65.37 % and the genome length is 6.98 Mbp.

Description of *Candidatus* Ramlibacter tabifugo sp. nov.

Candidatus Ramlibacter tabifugo (NL. fem. n. *tabifugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ramlibacter sp014297465*. The type genome for the species is the GenBank assembly RS_GCF_014297465.1. The GC content of the type genome is 69.74 % and the genome length is 5.53 Mbp.

Description of *Candidatus* Ramlibacter velifatio sp. nov.

Candidatus Ramlibacter velifatio (NL. fem. n. *velifatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ramlibacter sp013127575*. The type genome for the species is the

GenBank assembly GCA_013127575.1. The GC content of the type genome is 69.39 % and the genome length is 5.28 Mbp.

Description of *Candidatus* Ranunana vehemilega sp. nov.

Candidatus Ranunana vehemilega (NL. fem. n. *vehemilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *1-14-0-20-49-13 sp002796305*. The type genome for the species is the GenBank assembly GCA_002796305.1. The GC content of the type genome is 48.77 % and the genome length is 1.96 Mbp.

Description of *Candidatus* Ranunana gen. nov.

Candidatus Ranunana (NL. fem. n. *Ranunana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *1-14-0-20-49-13*. The type species for the genus is *Candidatus* Ranunana vehemilega .

According to the original version of GTDB R06-RS202, this genus belongs to the family *1-14-0-20-49-13*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Ranunanaceae.

Description of *Candidatus* Ranunanaceae fam. nov.

Candidatus Ranunanaceae (NL. fem. n. *Ranunanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *1-14-0-20-49-13.* The type genus for the taxon is *Candidatus* Ranunana .

According to the original version of GTDB R06-RS202, this family belongs to the order *GCA-002796325*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Taraxanales.

Description of *Candidatus* Ranunaria secunago sp. nov.

Candidatus Ranunaria secunago (NL. fem. n. *secunago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS1052 sp900548115*. The type genome for the species is the

GenBank assembly GCA_900548115.1. The GC content of the type genome is 52.11 % and the genome length is 2.14 Mbp.

Description of *Candidatus* Ranunaria gen. nov.

Candidatus Ranunaria (NL. fem. n. *Ranunaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UMGS1052*. The type species for the genus is *Candidatus* Ranunaria secunago .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-382*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Doxolulaceae.

Description of *Candidatus* Ranunella domipentia sp. nov.

Candidatus Ranunella domipentia (NL. fem. n. *domipentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA11398 sp009699465*. The type genome for the species is the GenBank assembly GCA_009702825.1. The GC content of the type genome is 53.28 % and the genome length is 1.38 Mbp.

Description of *Candidatus* Ranunella gen. nov.

Candidatus Ranunella (NL. fem. n. *Ranunella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA11398*. The type species for the genus is *Candidatus* Ranunella domipentia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *S36-B12*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Categidaceae.

Description of *Candidatus* Ranunella infatitoga sp. nov.

Candidatus Ranunella infatitoga (NL. fem. n. *infatitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *UBA11398 sp003506065*. The type genome for the species is the GenBank assembly GCA_003506065.1. The GC content of the type genome is 60.8 % and the genome length is 1.63 Mbp.

Description of *Candidatus* Ranunella munimiforma sp. nov.

Candidatus Ranunella munimiforma (NL. fem. n. *munimiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA11398 sp009699705*. The type genome for the species is the GenBank assembly GCA_009706035.1. The GC content of the type genome is 53.59 % and the genome length is 1.78 Mbp.

Description of *Candidatus* Ranunia inpelitica sp. nov.

Candidatus Ranunia inpelitica (NL. fem. n. *inpelitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SZUA-500 sp003252195*. The type genome for the species is the GenBank assembly GCA_003252195.1. The GC content of the type genome is 36.13 % and the genome length is 2.27 Mbp.

Description of *Candidatus* Ranunia gen. nov.

Candidatus Ranunia (NL. fem. n. *Ranunia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SZUA-500*. The type species for the genus is *Candidatus* Ranunia inpelitica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SZUA-500*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Ranuniaceae.

Description of *Candidatus* Ranuniaceae fam. nov.

Candidatus Ranuniaceae (NL. fem. n. *Ranuniaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SZUA-500.* The type genus for the taxon is *Candidatus* Ranunia .

According to the original version of GTDB R06-RS202, this family belongs to the order

RF32. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Resaculales.

Description of *Candidatus* Ranunida habacitoga sp. nov.

Candidatus Ranunida habacitoga (NL. fem. n. *habacitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA12108 sp001002415*. The type genome for the species is the GenBank assembly GCA_001000465.1. The GC content of the type genome is 46.46 % and the genome length is 0.66 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "aquifer sediment".

Description of *Candidatus* Ranunida gen. nov.

Candidatus Ranunida (NL. fem. n. *Ranunida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA12108*. The type species for the genus is *Candidatus* Ranunida habacitoga .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA12108*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Ranunidaceae.

Description of *Candidatus* Ranunidaceae fam. nov.

Candidatus Ranunidaceae (NL. fem. n. *Ranunidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA12108.* The type genus for the taxon is *Candidatus* Ranunida .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA1400*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Bucolulales.

Description of *Candidatus* Ranunosa cituvago sp. nov.

Candidatus Ranunosa cituvago (NL. fem. n. *cituvago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RFNS01 sp009927055*. The type genome for the species is the GenBank assembly GCA_009927055.1. The GC content of the type genome is 51.85 % and the genome length is 2.09 Mbp.

Description of *Candidatus* Ranunosa gen. nov.

Candidatus Ranunosa (NL. fem. n. *Ranunosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RFNS01*. The type species for the genus is *Candidatus* Ranunosa cituvago .

According to the original version of GTDB R06-RS202, this genus belongs to the family *RFNS01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Ranunosaceae.

Description of *Candidatus* Ranunosaceae fam. nov.

Candidatus Ranunosaceae (NL. fem. n. *Ranunosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *RFNS01*. The type genus for the taxon is *Candidatus* Ranunosa .

According to GTDB R06-RS202, this family belongs to the order *Micavibrionales_A*.

Description of *Candidatus* Ranunula lameticula sp. nov.

Candidatus Ranunula lameticula (NL. fem. n. *lameticula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SZUA-287 sp003251275*. The type genome for the species is the GenBank assembly GCA_003251275.1. The GC content of the type genome is 50.54 % and the genome length is 3.38 Mbp.

Description of *Candidatus* Ranunula gen. nov.

Candidatus Ranunula (NL. fem. n. *Ranunula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SZUA-287*. The type species for the genus is *Candidatus* Ranunula lameticula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA6906*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Culibellaceae.

Description of *Candidatus* Raoultella bigarago sp. nov.

Candidatus Raoultella bigarago (NL. fem. n. *bigarago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Raoultella sp003752615*. The type genome for the species is the GenBank assembly RS_GCF_003752615.1. The GC content of the type genome is 56.02 % and the genome length is 5.28 Mbp.

Description of *Candidatus* Raoultella desulisca sp. nov.

Candidatus Raoultella desulisca (NL. fem. n. *desulisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Raoultella sp004342285*. The type genome for the species is the GenBank assembly RS_GCF_004342285.1. The GC content of the type genome is 56.57 % and the genome length is 5.6 Mbp.

Description of *Candidatus* Raoultella fetulitia sp. nov.

Candidatus Raoultella fetulitia (NL. fem. n. *fetulitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Raoultella sp002270295*. The type genome for the species is the GenBank assembly RS_GCF_009758445.1. The GC content of the type genome is 56.72 % and the genome length is 6.1 Mbp.

Description of *Candidatus* Raoultella inlibibra sp. nov.

Candidatus Raoultella inlibibra (NL. fem. n. *inlibibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Raoultella sp900759445*. The type genome for the species is the GenBank assembly GCA_900759445.1. The GC content of the type genome is 53.9 % and the genome length is 3.54 Mbp.

Description of *Candidatus* Raoultibacter algebitia sp. nov.

Candidatus Raoultibacter algebitia (NL. fem. n. *algebitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Raoultibacter sp009782605*. The type genome for the species is the GenBank assembly GCA_009782605.1. The GC content of the type genome is 61.76 % and the genome length is 1.95 Mbp.

Description of *Candidatus* Raoultibacter argumitas sp. nov.

Candidatus Raoultibacter argumitas (NL. fem. n. *argumitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Raoultibacter sp901411515*. The type genome for the species is the GenBank assembly RS_GCF_901411515.1. The GC content of the type genome is 59.37 % and the genome length is 3.86 Mbp.

Description of *Candidatus* Raoultibacter chalbiforma sp. nov.

Candidatus Raoultibacter chalbiforma (NL. fem. n. *chalbiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Raoultibacter sp009782615*. The type genome for the species is the GenBank assembly GCA_009782615.1. The GC content of the type genome is 49.71 % and the genome length is 1.67 Mbp.

Description of *Candidatus* Rarefana absurimonia sp. nov.

Candidatus Rarefana absurimonia (NL. fem. n. *absurimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA985 sp009937455*. The type genome for the species is the GenBank assembly GCA_009937455.1. The GC content of the type genome is 50.61 % and the genome length is 2.04 Mbp.

Description of *Candidatus* Rarefana gen. nov.

Candidatus Rarefana (NL. fem. n. *Rarefana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA985*. The type species for the genus is *Candidatus* Rarefana absurimonia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Rarefana negotetta sp. nov.

Candidatus Rarefana negotetta (NL. fem. n. *negotetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA985 sp013041925*. The type genome for the species is the GenBank assembly GCA_013041925.1. The GC content of the type genome is 53.47 % and the genome length is 3.28 Mbp.

Description of *Candidatus* Rarefana nehalatica sp. nov.

Candidatus Rarefana nehalatica (NL. fem. n. *nehalatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA985 sp003527555*. The type genome for the species is the GenBank assembly GCA_003526985.1. The GC content of the type genome is 48.35 % and the genome length is 2.16 Mbp.

Description of *Candidatus* Rarefana rorulentia sp. nov.

Candidatus Rarefana rorulentia (NL. fem. n. *rorulentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA985 sp002292185*. The type genome for the species is the GenBank assembly GCA_002292185.1. The GC content of the type genome is 50.37 % and the genome length is 1.95 Mbp.

Description of *Candidatus* Rarefana subacitia sp. nov.

Candidatus Rarefana subacitia (NL. fem. n. *subacitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *UBA985 sp013391475*. The type genome for the species is the GenBank assembly RS_GCF_013391475.1. The GC content of the type genome is 51.96 % and the genome length is 5.07 Mbp.

Description of *Candidatus* Rarefella abambugo sp. nov.

Candidatus Rarefella abambugo (NL. fem. n. *abambugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-337-I02 sp902585605*. The type genome for the species is the GenBank assembly GCA_902585605.1. The GC content of the type genome is 29.02 % and the genome length is 1.46 Mbp.

Description of *Candidatus* Rarefella gen. nov.

Candidatus Rarefella (NL. fem. n. *Rarefella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *AG-337-I02*. The type species for the genus is *Candidatus* Rarefella abambugo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GCA-002718135*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Defululaceae.

Description of *Candidatus* Rarefella abrumugo sp. nov.

Candidatus Rarefella abrumugo (NL. fem. n. *abrumugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-337-I02 sp902625365*. The type genome for the species is the GenBank assembly GCA_902625365.1. The GC content of the type genome is 29.2 % and the genome length is 1.03 Mbp.

Description of *Candidatus* Rarefella aclasibra sp. nov.

Candidatus Rarefella aclasibra (NL. fem. n. *aclasibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-337-I02 sp002718135*. The type genome for the species is the

GenBank assembly GCA_002718135.1. The GC content of the type genome is 33.32 % and the genome length is 1.16 Mbp.

Description of *Candidatus* Rarefella adcelicula sp. nov.

Candidatus Rarefella adcelicula (NL. fem. n. *adcelicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-337-I02 sp902517315*. The type genome for the species is the GenBank assembly GCA_902517315.1. The GC content of the type genome is 29.33 % and the genome length is 1.04 Mbp.

Description of *Candidatus* Rarefella addivitudo sp. nov.

Candidatus Rarefella addivitudo (NL. fem. n. *addivitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-337-I02 sp902597795*. The type genome for the species is the GenBank assembly GCA_902597795.1. The GC content of the type genome is 28.13 % and the genome length is 1.19 Mbp.

Description of *Candidatus* Rarefella adlicitoga sp. nov.

Candidatus Rarefella adlicitoga (NL. fem. n. *adlicitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-337-I02 sp902553945*. The type genome for the species is the GenBank assembly GCA_902553945.1. The GC content of the type genome is 27.59 % and the genome length is 1.15 Mbp.

Description of *Candidatus* Rarefella adnunigena sp. nov.

Candidatus Rarefella adnunigena (NL. fem. n. *adnunigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-337-I02 sp902630465*. The type genome for the species is the GenBank assembly GCA_902630465.1. The GC content of the type genome is 29.01 % and the genome length is 1.02 Mbp.

Description of *Candidatus* Rarefella adperibula sp. nov.

Candidatus Rarefella adperibula (NL. fem. n. *adperibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-337-I02 sp902597015*. The type genome for the species is the GenBank assembly GCA_902597015.1. The GC content of the type genome is 28.99 % and the genome length is 1.2 Mbp.

Description of *Candidatus* Rarefella adsocimonas sp. nov.

Candidatus Rarefella adsocimonas (NL. fem. n. *adsocimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-337-I02 sp902512325*. The type genome for the species is the GenBank assembly GCA_902512325.1. The GC content of the type genome is 29.43 % and the genome length is 1.33 Mbp.

Description of *Candidatus* Rarefella ampenitas sp. nov.

Candidatus Rarefella ampenitas (NL. fem. n. *ampenitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-337-I02 sp902560725*. The type genome for the species is the GenBank assembly GCA_902560725.1. The GC content of the type genome is 28.14 % and the genome length is 1.43 Mbp.

Description of *Candidatus* Rarefella apsegitura sp. nov.

Candidatus Rarefella apsegitura (NL. fem. n. *apsegitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-337-I02 sp902577945*. The type genome for the species is the GenBank assembly GCA_902577945.1. The GC content of the type genome is 28.62 % and the genome length is 1.21 Mbp.

Description of *Candidatus* Rarefella arnacatica sp. nov.

Candidatus Rarefella arnacatica (NL. fem. n. *arnacatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-337-I02 sp902522865*. The type genome for the species is the GenBank assembly GCA_902522865.1. The GC content of the type genome is 29.11 % and the genome length is 1.41 Mbp.

Description of *Candidatus* Rarefella arnaciforma sp. nov.

Candidatus Rarefella arnaciforma (NL. fem. n. *arnaciforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-337-I02 sp902616545*. The type genome for the species is the GenBank assembly GCA_902616545.1. The GC content of the type genome is 29.32 % and the genome length is 1.05 Mbp.

Description of *Candidatus* Rarefella artificula sp. nov.

Candidatus Rarefella artificula (NL. fem. n. *artificula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-337-I02 sp902602845*. The type genome for the species is the GenBank assembly GCA_902602845.1. The GC content of the type genome is 29.12 % and the genome length is 1.03 Mbp.

Description of *Candidatus* Rarefella attemetta sp. nov.

Candidatus Rarefella attemetta (NL. fem. n. *attemetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-337-I02 sp902589095*. The type genome for the species is the GenBank assembly GCA_902589095.1. The GC content of the type genome is 30.57 % and the genome length is 1.13 Mbp.

Description of *Candidatus* Rarefella avuncitrix sp. nov.

Candidatus Rarefella avuncitrix (NL. fem. n. *avuncitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-337-I02 sp902614395*. The type genome for the species is the GenBank assembly GCA_902614395.1. The GC content of the type genome is 28.8 %

and the genome length is 1.35 Mbp.

Description of *Candidatus* Rarefella benevitura sp. nov.

Candidatus Rarefella benevitura (NL. fem. n. *benevitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-337-I02 sp902621165*. The type genome for the species is the GenBank assembly GCA_902621165.1. The GC content of the type genome is 29.0 % and the genome length is 1.42 Mbp.

Description of *Candidatus* Rarefella benivilenta sp. nov.

Candidatus Rarefella benivilenta (NL. fem. n. *benivilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-337-I02 sp902554185*. The type genome for the species is the GenBank assembly GCA_902560675.1. The GC content of the type genome is 28.49 % and the genome length is 1.36 Mbp.

Description of *Candidatus* Rarefella bicinigena sp. nov.

Candidatus Rarefella bicinigena (NL. fem. n. *bicinigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-337-I02 sp902577905*. The type genome for the species is the GenBank assembly GCA_902577905.1. The GC content of the type genome is 28.81 % and the genome length is 1.45 Mbp.

Description of *Candidatus* Rarefella bicubedo sp. nov.

Candidatus Rarefella bicubedo (NL. fem. n. *bicubedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-337-I02 sp902570155*. The type genome for the species is the GenBank assembly GCA_902576955.1. The GC content of the type genome is 28.64 % and the genome length is 1.03 Mbp.

Description of *Candidatus* Rarefella bimetifica sp. nov.

Candidatus Rarefella bimetifica (NL. fem. n. *bimetifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-337-I02 sp902602885*. The type genome for the species is the GenBank assembly GCA_902602885.1. The GC content of the type genome is 28.96 % and the genome length is 1.11 Mbp.

Description of *Candidatus* Rarefella bipalousia sp. nov.

Candidatus Rarefella bipalousia (NL. fem. n. *bipalousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-337-I02 sp902614375*. The type genome for the species is the GenBank assembly GCA_902614375.1. The GC content of the type genome is 29.19 % and the genome length is 1.39 Mbp.

Description of *Candidatus* Rarefella bipenugo sp. nov.

Candidatus Rarefella bipenugo (NL. fem. n. *bipenugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-337-I02 sp902591485*. The type genome for the species is the GenBank assembly GCA_902556365.1. The GC content of the type genome is 30.66 % and the genome length is 1.13 Mbp.

Description of *Candidatus* Rarefella biveredo sp. nov.

Candidatus Rarefella biveredo (NL. fem. n. *biveredo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-337-I02 sp014653715*. The type genome for the species is the GenBank assembly GCA_014653715.1. The GC content of the type genome is 29.68 % and the genome length is 0.94 Mbp.

Description of *Candidatus* Rarefella buxifousia sp. nov.

Candidatus Rarefella buxifousia (NL. fem. n. *buxifousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-337-I02 sp902571865*. The type genome for the species is the GenBank assembly GCA_902571865.1. The GC content of the type genome is 28.96 % and the genome length is 1.63 Mbp.

Description of *Candidatus* Rarefella cadavibula sp. nov.

Candidatus Rarefella cadavibula (NL. fem. n. *cadavibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-337-I02 sp902616075*. The type genome for the species is the GenBank assembly GCA_902616075.1. The GC content of the type genome is 28.64 % and the genome length is 1.05 Mbp.

Description of *Candidatus* Rarefella capucax sp. nov.

Candidatus Rarefella capucax (NL. fem. n. *capucax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-337-I02 sp902519435*. The type genome for the species is the GenBank assembly GCA_902519435.1. The GC content of the type genome is 29.04 % and the genome length is 0.84 Mbp.

Description of *Candidatus* Rarefella caravisca sp. nov.

Candidatus Rarefella caravisca (NL. fem. n. *caravisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-337-I02 sp902521325*. The type genome for the species is the GenBank assembly GCA_902521325.1. The GC content of the type genome is 29.31 % and the genome length is 1.1 Mbp.

Description of *Candidatus* Rarefella caselessa sp. nov.

Candidatus Rarefella caselessa (NL. fem. n. *caselessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-337-I02 sp902623585*. The type genome for the species is the GenBank assembly GCA_902623585.1. The GC content of the type genome is 29.05 %

and the genome length is 1.11 Mbp.

Description of *Candidatus* Rarefella catocicula sp. nov.

Candidatus Rarefella catocicula (NL. fem. n. *catocicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-337-I02 sp902522015*. The type genome for the species is the GenBank assembly GCA_902522015.1. The GC content of the type genome is 29.35 % and the genome length is 1.03 Mbp.

Description of *Candidatus* Rarefella cenobitoga sp. nov.

Candidatus Rarefella cenobitoga (NL. fem. n. *cenobitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-337-I02 sp902595855*. The type genome for the species is the GenBank assembly GCA_902595855.1. The GC content of the type genome is 30.05 % and the genome length is 1.47 Mbp.

Description of *Candidatus* Rarefella cerofitia sp. nov.

Candidatus Rarefella cerofitia (NL. fem. n. *cerofitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-337-I02 sp902622475*. The type genome for the species is the GenBank assembly GCA_902622475.1. The GC content of the type genome is 29.33 % and the genome length is 0.95 Mbp.

Description of *Candidatus* Rarefella cibarago sp. nov.

Candidatus Rarefella cibarago (NL. fem. n. *cibarago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-337-I02 sp902521315*. The type genome for the species is the GenBank assembly GCA_902521315.1. The GC content of the type genome is 28.88 % and the genome length is 1.54 Mbp.

Description of *Candidatus* Rarefella cimelatica sp. nov.

Candidatus Rarefella cimelatica (NL. fem. n. *cimelatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-337-I02 sp902620425*. The type genome for the species is the GenBank assembly GCA_902618385.1. The GC content of the type genome is 29.37 % and the genome length is 1.04 Mbp.

Description of *Candidatus* Rarefella cimiticella sp. nov.

Candidatus Rarefella cimiticella (NL. fem. n. *cimiticella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-337-I02 sp902524385*. The type genome for the species is the GenBank assembly GCA_902524385.1. The GC content of the type genome is 28.72 % and the genome length is 1.43 Mbp.

Description of *Candidatus* Rarefella citivisca sp. nov.

Candidatus Rarefella citivisca (NL. fem. n. *citivisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-337-I02 sp902538155*. The type genome for the species is the GenBank assembly GCA_902538155.1. The GC content of the type genome is 29.03 % and the genome length is 1.07 Mbp.

Description of *Candidatus* Rarefella colapetta sp. nov.

Candidatus Rarefella colapetta (NL. fem. n. *colapetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-337-I02 sp902620285*. The type genome for the species is the GenBank assembly GCA_902620285.1. The GC content of the type genome is 28.92 % and the genome length is 1.38 Mbp.

Description of *Candidatus* Rarefella cotenicella sp. nov.

Candidatus Rarefella cotenicella (NL. fem. n. *cotenicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-337-I02 sp902575815*. The type genome for the species is the GenBank assembly GCA_902575815.1. The GC content of the type genome is 29.79 % and the genome length is 1.07 Mbp.

Description of *Candidatus* Rarefella cotenitas sp. nov.

Candidatus Rarefella cotenitas (NL. fem. n. *cotenitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-337-I02 sp902619055*. The type genome for the species is the GenBank assembly GCA_902619055.1. The GC content of the type genome is 29.12 % and the genome length is 0.88 Mbp.

Description of *Candidatus* Rarefella coturifica sp. nov.

Candidatus Rarefella coturifica (NL. fem. n. *coturifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-337-I02 sp902602135*. The type genome for the species is the GenBank assembly GCA_902602135.1. The GC content of the type genome is 29.42 % and the genome length is 0.96 Mbp.

Description of *Candidatus* Rarefella debucitrix sp. nov.

Candidatus Rarefella debucitrix (NL. fem. n. *debucitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-337-I02 sp902572735*. The type genome for the species is the GenBank assembly GCA_902572735.1. The GC content of the type genome is 28.63 % and the genome length is 1.32 Mbp.

Description of *Candidatus* Rarefella defaritas sp. nov.

Candidatus Rarefella defaritas (NL. fem. n. *defaritas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-337-I02 sp902580765*. The type genome for the species is the GenBank assembly GCA_902580765.1. The GC content of the type genome is 29.36 %

and the genome length is 1.12 Mbp.

Description of *Candidatus* Rarefella defenibra sp. nov.

Candidatus Rarefella defenibra (NL. fem. n. *defenibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-337-I02 sp902621725*. The type genome for the species is the GenBank assembly GCA_902621725.1. The GC content of the type genome is 28.9 % and the genome length is 1.38 Mbp.

Description of *Candidatus* Rarefella demigitia sp. nov.

Candidatus Rarefella demigitia (NL. fem. n. *demigitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-337-I02 sp902577865*. The type genome for the species is the GenBank assembly GCA_902577865.1. The GC content of the type genome is 29.17 % and the genome length is 0.95 Mbp.

Description of *Candidatus* Rarefella demogedo sp. nov.

Candidatus Rarefella demogedo (NL. fem. n. *demogedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-337-I02 sp902562275*. The type genome for the species is the GenBank assembly GCA_902562275.1. The GC content of the type genome is 29.31 % and the genome length is 0.97 Mbp.

Description of *Candidatus* Rarefella denoricula sp. nov.

Candidatus Rarefella denoricula (NL. fem. n. *denoricula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-337-I02 sp902623255*. The type genome for the species is the GenBank assembly GCA_902623255.1. The GC content of the type genome is 28.77 % and the genome length is 1.47 Mbp.

Description of *Candidatus* Rarefella detepentia sp. nov.

Candidatus Rarefella detepentia (NL. fem. n. *detepentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-337-I02 sp902615745*. The type genome for the species is the GenBank assembly GCA_902532995.1. The GC content of the type genome is 28.65 % and the genome length is 1.07 Mbp.

Description of *Candidatus* Rarefella duponilega sp. nov.

Candidatus Rarefella duponilega (NL. fem. n. *duponilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-337-I02 sp902593125*. The type genome for the species is the GenBank assembly GCA_902559055.1. The GC content of the type genome is 28.64 % and the genome length is 1.2 Mbp.

Description of *Candidatus* Rarefella ectenatica sp. nov.

Candidatus Rarefella ectenatica (NL. fem. n. *ectenatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-337-I02 sp902539825*. The type genome for the species is the GenBank assembly GCA_902539825.1. The GC content of the type genome is 29.17 % and the genome length is 0.96 Mbp.

Description of *Candidatus* Rarefella enuntitia sp. nov.

Candidatus Rarefella enuntitia (NL. fem. n. *enuntitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-337-I02 sp902604905*. The type genome for the species is the GenBank assembly GCA_902604905.1. The GC content of the type genome is 29.33 % and the genome length is 1.0 Mbp.

Description of *Candidatus* Rarefella episciforma sp. nov.

Candidatus Rarefella episciforma (NL. fem. n. *episciforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-337-I02 sp902590695*. The type genome for the species is the GenBank assembly GCA_902590695.1. The GC content of the type genome is 29.56 % and the genome length is 1.39 Mbp.

Description of *Candidatus* Rarefella estovicella sp. nov.

Candidatus Rarefella estovicella (NL. fem. n. *estovicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-337-I02 sp902512415*. The type genome for the species is the GenBank assembly GCA_902512415.1. The GC content of the type genome is 29.78 % and the genome length is 0.93 Mbp.

Description of *Candidatus* Rarefella exentimonas sp. nov.

Candidatus Rarefella exentimonas (NL. fem. n. *exentimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-337-I02 sp902600225*. The type genome for the species is the GenBank assembly GCA_902600225.1. The GC content of the type genome is 28.79 % and the genome length is 1.25 Mbp.

Description of *Candidatus* Rarefella exsolivita sp. nov.

Candidatus Rarefella exsolivita (NL. fem. n. *exsolivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-337-I02 sp902628645*. The type genome for the species is the GenBank assembly GCA_902628645.1. The GC content of the type genome is 29.31 % and the genome length is 0.98 Mbp.

Description of *Candidatus* Rarefella exsupitrix sp. nov.

Candidatus Rarefella exsupitrix (NL. fem. n. *exsupitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-337-I02 sp902541215*. The type genome for the species is the GenBank assembly GCA_902541215.1. The GC content of the type genome is 28.88 %

and the genome length is 1.32 Mbp.

Description of *Candidatus* Rarefella fatiliforma sp. nov.

Candidatus Rarefella fatiliforma (NL. fem. n. *fatiliforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-337-I02 sp902595425*. The type genome for the species is the GenBank assembly GCA_902595425.1. The GC content of the type genome is 30.0 % and the genome length is 1.49 Mbp.

Description of *Candidatus* Rarefella fetulimonas sp. nov.

Candidatus Rarefella fetulimonas (NL. fem. n. *fetulimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-337-I02 sp902525035*. The type genome for the species is the GenBank assembly GCA_902525035.1. The GC content of the type genome is 28.82 % and the genome length is 1.38 Mbp.

Description of *Candidatus* Rarefella filifilega sp. nov.

Candidatus Rarefella filifilega (NL. fem. n. *filifilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-337-I02 sp902613275*. The type genome for the species is the GenBank assembly GCA_902613275.1. The GC content of the type genome is 29.13 % and the genome length is 0.89 Mbp.

Description of *Candidatus* Rarefella futatentia sp. nov.

Candidatus Rarefella futatentia (NL. fem. n. *futatentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-337-I02 sp902569865*. The type genome for the species is the GenBank assembly GCA_902570355.1. The GC content of the type genome is 29.31 % and the genome length is 1.13 Mbp.

Description of *Candidatus* Rarefella hexagousia sp. nov.

Candidatus Rarefella hexagousia (NL. fem. n. *hexagousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-337-I02 sp902518705*. The type genome for the species is the GenBank assembly GCA_902590495.1. The GC content of the type genome is 29.3 % and the genome length is 1.08 Mbp.

Description of *Candidatus* Rarefella holovitia sp. nov.

Candidatus Rarefella holovitia (NL. fem. n. *holovitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-337-I02 sp902602515*. The type genome for the species is the GenBank assembly GCA_902592095.1. The GC content of the type genome is 29.07 % and the genome length is 1.21 Mbp.

Description of *Candidatus* Rarefella inculicula sp. nov.

Candidatus Rarefella inculicula (NL. fem. n. *inculicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-337-I02 sp902610845*. The type genome for the species is the GenBank assembly GCA_902610845.1. The GC content of the type genome is 28.71 % and the genome length is 1.08 Mbp.

Description of *Candidatus* Rarefella indiritoga sp. nov.

Candidatus Rarefella indiritoga (NL. fem. n. *indiritoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-337-I02 sp902605135*. The type genome for the species is the GenBank assembly GCA_902605135.1. The GC content of the type genome is 29.18 % and the genome length is 1.16 Mbp.

Description of *Candidatus* Rarefella indubitudo sp. nov.

Candidatus Rarefella indubitudo (NL. fem. n. *indubitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-337-I02 sp902530685*. The type genome for the species is the GenBank assembly GCA_902530685.1. The GC content of the type genome is 29.21 % and the genome length is 1.05 Mbp.

Description of *Candidatus* Rarefella infinatio sp. nov.

Candidatus Rarefella infinatio (NL. fem. n. *infinatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-337-I02 sp902596365*. The type genome for the species is the GenBank assembly GCA_902596365.1. The GC content of the type genome is 29.1 % and the genome length is 1.18 Mbp.

Description of *Candidatus* Rarefella inhoniforma sp. nov.

Candidatus Rarefella inhoniforma (NL. fem. n. *inhoniforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-337-I02 sp902518985*. The type genome for the species is the GenBank assembly GCA_902518985.1. The GC content of the type genome is 29.14 % and the genome length is 1.18 Mbp.

Description of *Candidatus* Rarefella inlocago sp. nov.

Candidatus Rarefella inlocago (NL. fem. n. *inlocago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-337-I02 sp902594815*. The type genome for the species is the GenBank assembly GCA_902594815.1. The GC content of the type genome is 30.75 % and the genome length is 1.17 Mbp.

Description of *Candidatus* Rarefella inmutivita sp. nov.

Candidatus Rarefella inmutivita (NL. fem. n. *inmutivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-337-I02 sp902615845*. The type genome for the species is the GenBank assembly GCA_902615845.1. The GC content of the type genome is 28.86 %

and the genome length is 1.35 Mbp.

Description of *Candidatus* Rarefella inobsago sp. nov.

Candidatus Rarefella inobsago (NL. fem. n. *inobsago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-337-I02 sp902587565*. The type genome for the species is the GenBank assembly GCA_902587565.1. The GC content of the type genome is 29.49 % and the genome length is 1.2 Mbp.

Description of *Candidatus* Rarefella inreditura sp. nov.

Candidatus Rarefella inreditura (NL. fem. n. *inreditura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-337-I02 sp902543005*. The type genome for the species is the GenBank assembly GCA_902543005.1. The GC content of the type genome is 28.92 % and the genome length is 1.07 Mbp.

Description of *Candidatus* Rarefella insufigena sp. nov.

Candidatus Rarefella insufigena (NL. fem. n. *insufigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-337-I02 sp902628835*. The type genome for the species is the GenBank assembly GCA_902628835.1. The GC content of the type genome is 28.97 % and the genome length is 1.48 Mbp.

Description of *Candidatus* Rarefella intolifica sp. nov.

Candidatus Rarefella intolifica (NL. fem. n. *intolifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-337-I02 sp902573325*. The type genome for the species is the GenBank assembly GCA_902573325.1. The GC content of the type genome is 28.87 % and the genome length is 1.47 Mbp.

Description of *Candidatus* Rarefella inurbitica sp. nov.

Candidatus Rarefella inurbitica (NL. fem. n. *inurbitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-337-I02 sp902588745*. The type genome for the species is the GenBank assembly GCA_902588745.1. The GC content of the type genome is 28.92 % and the genome length is 1.5 Mbp.

Description of *Candidatus* Rarefella invesisca sp. nov.

Candidatus Rarefella invesisca (NL. fem. n. *invesisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-337-I02 sp902586695*. The type genome for the species is the GenBank assembly GCA_902586695.1. The GC content of the type genome is 28.32 % and the genome length is 1.12 Mbp.

Description of *Candidatus* Rarefella loraratica sp. nov.

Candidatus Rarefella loraratica (NL. fem. n. *loraratica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-337-I02 sp902535885*. The type genome for the species is the GenBank assembly GCA_902535885.1. The GC content of the type genome is 29.24 % and the genome length is 1.0 Mbp.

Description of *Candidatus* Rarefella mahelitura sp. nov.

Candidatus Rarefella mahelitura (NL. fem. n. *mahelitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-337-I02 sp902627245*. The type genome for the species is the GenBank assembly GCA_902627245.1. The GC content of the type genome is 29.19 % and the genome length is 1.19 Mbp.

Description of *Candidatus* Rarefella maligibra sp. nov.

Candidatus Rarefella maligibra (NL. fem. n. *maligibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-337-I02 sp902576125*. The type genome for the species is the GenBank assembly GCA_902576125.1. The GC content of the type genome is 29.4 % and the genome length is 1.26 Mbp.

Description of *Candidatus* Rarefella malivigena sp. nov.

Candidatus Rarefella malivigena (NL. fem. n. *malivigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-337-I02 sp902601455*. The type genome for the species is the GenBank assembly GCA_902601455.1. The GC content of the type genome is 29.68 % and the genome length is 1.42 Mbp.

Description of *Candidatus* Rarefella maxilentia sp. nov.

Candidatus Rarefella maxilentia (NL. fem. n. *maxilentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-337-I02 sp902623545*. The type genome for the species is the GenBank assembly GCA_902532825.1. The GC content of the type genome is 29.06 % and the genome length is 1.26 Mbp.

Description of *Candidatus* Rarefella maxilousia sp. nov.

Candidatus Rarefella maxilousia (NL. fem. n. *maxilousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-337-I02 sp902614085*. The type genome for the species is the GenBank assembly GCA_902614085.1. The GC content of the type genome is 28.89 % and the genome length is 1.65 Mbp.

Description of *Candidatus* Rarefella megalago sp. nov.

Candidatus Rarefella megalago (NL. fem. n. *megalago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-337-I02 sp902595805*. The type genome for the species is the GenBank assembly GCA_902595805.1. The GC content of the type genome is 28.98 %

and the genome length is 1.31 Mbp.

Description of *Candidatus* Rarefella milipitrix sp. nov.

Candidatus Rarefella milipitrix (NL. fem. n. *milipitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-337-I02 sp902621855*. The type genome for the species is the GenBank assembly GCA_902621855.1. The GC content of the type genome is 28.76 % and the genome length is 1.48 Mbp.

Description of *Candidatus* Rarefella modifitudo sp. nov.

Candidatus Rarefella modifitudo (NL. fem. n. *modifitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-337-I02 sp902612805*. The type genome for the species is the GenBank assembly GCA_902612805.1. The GC content of the type genome is 29.08 % and the genome length is 1.41 Mbp.

Description of *Candidatus* Rarefella monogicula sp. nov.

Candidatus Rarefella monogicula (NL. fem. n. *monogicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-337-I02 sp902582755*. The type genome for the species is the GenBank assembly GCA_902582755.1. The GC content of the type genome is 29.0 % and the genome length is 1.43 Mbp.

Description of *Candidatus* Rarefella novilitia sp. nov.

Candidatus Rarefella novilitia (NL. fem. n. *novilitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-337-I02 sp902575375*. The type genome for the species is the GenBank assembly GCA_902575375.1. The GC content of the type genome is 29.1 % and the genome length is 1.09 Mbp.

Description of *Candidatus* Rarefella nubifibula sp. nov.

Candidatus Rarefella nubifibula (NL. fem. n. *nubifibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-337-I02 sp902540265*. The type genome for the species is the GenBank assembly GCA_902540265.1. The GC content of the type genome is 29.22 % and the genome length is 1.41 Mbp.

Description of *Candidatus* Rarefella nucifigena sp. nov.

Candidatus Rarefella nucifigena (NL. fem. n. *nucifigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-337-I02 sp902537325*. The type genome for the species is the GenBank assembly GCA_902537325.1. The GC content of the type genome is 29.05 % and the genome length is 1.4 Mbp.

Description of *Candidatus* Rarefella panopugo sp. nov.

Candidatus Rarefella panopugo (NL. fem. n. *panopugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-337-I02 sp902603095*. The type genome for the species is the GenBank assembly GCA_902603095.1. The GC content of the type genome is 28.55 % and the genome length is 1.09 Mbp.

Description of *Candidatus* Rarefella papavimonas sp. nov.

Candidatus Rarefella papavimonas (NL. fem. n. *papavimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-337-I02 sp902619045*. The type genome for the species is the GenBank assembly GCA_902619045.1. The GC content of the type genome is 29.23 % and the genome length is 0.97 Mbp.

Description of *Candidatus* Rarefella periditrix sp. nov.

Candidatus Rarefella periditrix (NL. fem. n. *periditrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-337-I02 sp902592345*. The type genome for the species is the GenBank assembly GCA_902592345.1. The GC content of the type genome is 29.42 % and the genome length is 1.33 Mbp.

Description of *Candidatus* Rarefella pinifatica sp. nov.

Candidatus Rarefella pinifatica (NL. fem. n. *pinifatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-337-I02 sp002938205*. The type genome for the species is the GenBank assembly GCA_002938205.1. The GC content of the type genome is 28.33 % and the genome length is 1.58 Mbp.

Description of *Candidatus* Rarefella refocibula sp. nov.

Candidatus Rarefella refocibula (NL. fem. n. *refocibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-337-I02 sp003215235*. The type genome for the species is the GenBank assembly GCA_902564835.1. The GC content of the type genome is 28.87 % and the genome length is 1.07 Mbp.

Description of *Candidatus* Rarefella remededo sp. nov.

Candidatus Rarefella remededo (NL. fem. n. *remededo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-337-I02 sp003282155*. The type genome for the species is the GenBank assembly GCA_003282155.1. The GC content of the type genome is 29.02 % and the genome length is 1.45 Mbp.

Description of *Candidatus* Rarefella renavicella sp. nov.

Candidatus Rarefella renavicella (NL. fem. n. *renavicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-337-I02 sp902615625*. The type genome for the species is the GenBank assembly GCA_902615625.1. The GC content of the type genome is 28.51 %

and the genome length is 1.31 Mbp.

Description of *Candidatus* Rarefella rosacibula sp. nov.

Candidatus Rarefella rosacibula (NL. fem. n. *rosacibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-337-I02 sp902561355*. The type genome for the species is the GenBank assembly GCA_902561355.1. The GC content of the type genome is 27.95 % and the genome length is 1.29 Mbp.

Description of *Candidatus* Rarefella rubefibra sp. nov.

Candidatus Rarefella rubefibra (NL. fem. n. *rubefibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-337-I02 sp902541435*. The type genome for the species is the GenBank assembly GCA_902541435.1. The GC content of the type genome is 28.79 % and the genome length is 1.21 Mbp.

Description of *Candidatus* Rarefella rubigicella sp. nov.

Candidatus Rarefella rubigicella (NL. fem. n. *rubigicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-337-I02 sp902553005*. The type genome for the species is the GenBank assembly GCA_902553005.1. The GC content of the type genome is 29.52 % and the genome length is 1.03 Mbp.

Description of *Candidatus* Rarefella salubibula sp. nov.

Candidatus Rarefella salubibula (NL. fem. n. *salubibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-337-I02 sp902602695*. The type genome for the species is the GenBank assembly GCA_902602695.1. The GC content of the type genome is 29.3 % and the genome length is 1.28 Mbp.

Description of *Candidatus* Rarefella selibiforma sp. nov.

Candidatus Rarefella selibiforma (NL. fem. n. *selibiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-337-I02 sp902612825*. The type genome for the species is the GenBank assembly GCA_902612825.1. The GC content of the type genome is 28.82 % and the genome length is 1.36 Mbp.

Description of *Candidatus* Rarefella solacitio sp. nov.

Candidatus Rarefella solacitio (NL. fem. n. *solacitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-337-I02 sp902515745*. The type genome for the species is the GenBank assembly GCA_902515745.1. The GC content of the type genome is 28.81 % and the genome length is 1.62 Mbp.

Description of *Candidatus* Rarefella solacousia sp. nov.

Candidatus Rarefella solacousia (NL. fem. n. *solacousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-337-I02 sp902618015*. The type genome for the species is the GenBank assembly GCA_902618015.1. The GC content of the type genome is 29.05 % and the genome length is 1.47 Mbp.

Description of *Candidatus* Rarefella solifentia sp. nov.

Candidatus Rarefella solifentia (NL. fem. n. *solifentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-337-I02 sp902574475*. The type genome for the species is the GenBank assembly GCA_902574475.1. The GC content of the type genome is 28.98 % and the genome length is 1.3 Mbp.

Description of *Candidatus* Rarefella solivax sp. nov.

Candidatus Rarefella solivax (NL. fem. n. *solivax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-337-I02 sp902511405*. The type genome for the species is the GenBank assembly GCA_902511405.1. The GC content of the type genome is 29.6 % and the genome length is 1.12 Mbp.

Description of *Candidatus* Rarefella subabedo sp. nov.

Candidatus Rarefella subabedo (NL. fem. n. *subabedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-337-I02 sp902584805*. The type genome for the species is the GenBank assembly GCA_902568185.1. The GC content of the type genome is 28.89 % and the genome length is 1.1 Mbp.

Description of *Candidatus* Rarefella tirocetta sp. nov.

Candidatus Rarefella tirocetta (NL. fem. n. *tirocetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-337-I02 sp902621305*. The type genome for the species is the GenBank assembly GCA_902621305.1. The GC content of the type genome is 29.03 % and the genome length is 1.45 Mbp.

Description of *Candidatus* Rarefella urbicicula sp. nov.

Candidatus Rarefella urbicicula (NL. fem. n. *urbicicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-337-I02 sp902514875*. The type genome for the species is the GenBank assembly GCA_902514875.1. The GC content of the type genome is 29.39 % and the genome length is 1.27 Mbp.

Description of *Candidatus* Rarefella venunitio sp. nov.

Candidatus Rarefella venunitio (NL. fem. n. *venunitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-337-I02 sp902567135*. The type genome for the species is the GenBank assembly GCA_902567135.1. The GC content of the type genome is 29.37 %

and the genome length is 1.19 Mbp.

Description of *Candidatus* Rarefella vinulentia sp. nov.

Candidatus Rarefella vinulentia (NL. fem. n. *vinulentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-337-I02 sp902518895*. The type genome for the species is the GenBank assembly GCA_902518895.1. The GC content of the type genome is 29.1 % and the genome length is 1.27 Mbp.

Description of *Candidatus* Rarefida categousia sp. nov.

Candidatus Rarefida categousia (NL. fem. n. *categousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3012 sp009701305*. The type genome for the species is the GenBank assembly GCA_009701305.1. The GC content of the type genome is 43.43 % and the genome length is 1.48 Mbp.

Description of *Candidatus* Rarefida gen. nov.

Candidatus Rarefida (NL. fem. n. *Rarefida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA3012*. The type species for the genus is *Candidatus* Rarefida categousia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Rarefida exadvitio sp. nov.

Candidatus Rarefida exadvitio (NL. fem. n. *exadvitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3012 sp014190175*. The type genome for the species is the GenBank assembly GCA_014190175.1. The GC content of the type genome is 43.63 % and the genome length is 1.96 Mbp.

Description of *Candidatus* Rarefida exaspitia sp. nov.

Candidatus Rarefida exaspitia (NL. fem. n. *exaspitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3012 sp009694285*. The type genome for the species is the GenBank assembly GCA_009694285.1. The GC content of the type genome is 43.6 % and the genome length is 1.28 Mbp.

Description of *Candidatus* Rarefida galacisca sp. nov.

Candidatus Rarefida galacisca (NL. fem. n. *galacisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3012 sp010031635*. The type genome for the species is the GenBank assembly GCA_010031635.1. The GC content of the type genome is 43.5 % and the genome length is 1.64 Mbp.

Description of *Candidatus* Rarefida mutabisca sp. nov.

Candidatus Rarefida mutabisca (NL. fem. n. *mutabisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3012 sp903902965*. The type genome for the species is the GenBank assembly GCA_903859915.1. The GC content of the type genome is 43.59 % and the genome length is 1.48 Mbp.

Description of *Candidatus* Rarefida rurigigena sp. nov.

Candidatus Rarefida rurigigena (NL. fem. n. *rurigigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3012 sp002346305*. The type genome for the species is the GenBank assembly GCA_005786885.1. The GC content of the type genome is 43.63 % and the genome length is 1.08 Mbp.

Description of *Candidatus* Rarefosa maleditia sp. nov.

Candidatus Rarefosa maleditia (NL. fem. n. *maleditia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DSQI01 sp011331825*. The type genome for the species is the GenBank assembly GCA_011331825.1. The GC content of the type genome is 47.92 % and the genome length is 2.16 Mbp.

Description of *Candidatus* Rarefosa gen. nov.

Candidatus Rarefosa (NL. fem. n. *Rarefosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DSQI01*. The type species for the genus is *Candidatus* Rarefosa maleditia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DSQI01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Rarefosaceae.

Description of *Candidatus* Rarefosaceae fam. nov.

Candidatus Rarefosaceae (NL. fem. n. *Rarefosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *DSQI01.* The type genus for the taxon is *Candidatus* Rarefosa .

According to the original version of GTDB R06-RS202, this family belongs to the order *MSB-5A5*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Loripellales.

Description of *Candidatus* Rarefula cohonessa sp. nov.

Candidatus Rarefula cohonessa (NL. fem. n. *cohonessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SM23-32 sp001303885*. The type genome for the species is the GenBank assembly GCA_001303885.1. The GC content of the type genome is 69.25 % and the genome length is 2.3 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Sulfate-methane transisition zone estuary sediments 16-26 cm".

Description of *Candidatus* Rarefula gen. nov.

Candidatus Rarefula (NL. fem. n. *Rarefula* a name created arbitrarily, while preserving

the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SM23-32*. The type species for the genus is *Candidatus* Rarefula cohonessa .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SM23-32*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Rarefulaceae.

Description of *Candidatus* Rarefulaceae fam. nov.

Candidatus Rarefulaceae (NL. fem. n. *Rarefulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SM23-32.* The type genus for the taxon is *Candidatus* Rarefula .

According to the original version of GTDB R06-RS202, this family belongs to the order *SM23-32*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Rarefulales.

Description of *Candidatus* Rarefulales ord. nov.

Candidatus Rarefulales (NL. fem. n. *Rarefulales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SM23-32.* The type genus for the taxon is *Candidatus* Rarefula .

According to the GTDB R06-RS202, this order belongs to the class *Brocadiae*.

Description of *Candidatus* Rariglobus carecedo sp. nov.

Candidatus Rariglobus carecedo (NL. fem. n. *carecedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rariglobus sp903876795*. The type genome for the species is the GenBank assembly GCA_903876795.1. The GC content of the type genome is 63.85 % and the genome length is 3.57 Mbp.

Description of *Candidatus* Rariglobus desurisca sp. nov.

Candidatus Rariglobus desurisca (NL. fem. n. *desurisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rariglobus sp002382525*. The type genome for the species is the GenBank assembly GCA_002382525.1. The GC content of the type genome is 63.52 % and the genome length is 3.95 Mbp.

Description of *Candidatus* Rariglobus pomifessa sp. nov.

Candidatus Rariglobus pomifessa (NL. fem. n. *pomifessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rariglobus sp903904685*. The type genome for the species is the GenBank assembly GCA_903904685.1. The GC content of the type genome is 60.49 % and the genome length is 3.23 Mbp.

Description of *Candidatus* Rarobacter pinacilenta sp. nov.

Candidatus Rarobacter pinacilenta (NL. fem. n. *pinacilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rarobacter sp900188465*. The type genome for the species is the GenBank assembly RS_GCF_900188465.1. The GC content of the type genome is 60.57 % and the genome length is 2.8 Mbp.

Description of *Candidatus* Rathayibacter ablacitrix sp. nov.

Candidatus Rathayibacter ablacitrix (NL. fem. n. *ablacitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rathayibacter sp009834185*. The type genome for the species is the GenBank assembly RS_GCF_009834185.1. The GC content of the type genome is 72.07 % and the genome length is 4.61 Mbp.

Description of *Candidatus* Rathayibacter advinibula sp. nov.

Candidatus Rathayibacter advinibula (NL. fem. n. *advinibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Rathayibacter sp013205085*. The type genome for the species is the GenBank assembly RS_GCF_013205085.1. The GC content of the type genome is 69.61 % and the genome length is 4.75 Mbp.

Description of *Candidatus* Rathayibacter caselibra sp. nov.

Candidatus Rathayibacter caselibra (NL. fem. n. *caselibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rathayibacter sp001423885*. The type genome for the species is the GenBank assembly RS_GCF_001423885.1. The GC content of the type genome is 71.19 % and the genome length is 4.11 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "leaf".

Description of *Candidatus* Rathayibacter desepitia sp. nov.

Candidatus Rathayibacter desepitia (NL. fem. n. *desepitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rathayibacter sp009807095*. The type genome for the species is the GenBank assembly RS_GCF_009807175.1. The GC content of the type genome is 71.3 % and the genome length is 4.29 Mbp.

Description of *Candidatus* Rathayibacter dibucedo sp. nov.

Candidatus Rathayibacter dibucedo (NL. fem. n. *dibucedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rathayibacter sp013205025*. The type genome for the species is the GenBank assembly RS_GCF_013205025.1. The GC content of the type genome is 72.11 % and the genome length is 4.61 Mbp.

Description of *Candidatus* Rathayibacter inperitoga sp. nov.

Candidatus Rathayibacter inperitoga (NL. fem. n. *inperitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rathayibacter sp009834225*. The type genome for the species is the GenBank assembly RS_GCF_009834225.1. The GC content of the type genome is 71.58 % and the genome length is 4.16 Mbp.

Description of *Candidatus* Rathayibacter lupanugo sp. nov.

Candidatus Rathayibacter lupanugo (NL. fem. n. *lupanugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rathayibacter sp013205055*. The type genome for the species is the GenBank assembly RS_GCF_013205055.1. The GC content of the type genome is 72.47 % and the genome length is 4.27 Mbp.

Description of *Candidatus* Rathayibacter semifitudo sp. nov.

Candidatus Rathayibacter semifitudo (NL. fem. n. *semifitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rathayibacter sp002930885*. The type genome for the species is the GenBank assembly RS_GCF_002931595.1. The GC content of the type genome is 72.52 % and the genome length is 3.45 Mbp.

Description of *Candidatus* Rathayibacter subacessa sp. nov.

Candidatus Rathayibacter subacessa (NL. fem. n. *subacessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rathayibacter sp013204985*. The type genome for the species is the GenBank assembly RS_GCF_013204985.1. The GC content of the type genome is 68.32 % and the genome length is 4.71 Mbp.

Description of *Candidatus* Rathayibacter tametigena sp. nov.

Candidatus Rathayibacter tametigena (NL. fem. n. *tametigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rathayibacter sp009866655*. The type genome for the species is the GenBank assembly RS_GCF_013266705.1. The GC content of the type genome is 72.23 % and the genome length is 4.26 Mbp.

Description of *Candidatus* Rathayibacter utraricula sp. nov.

Candidatus Rathayibacter utraricula (NL. fem. n. *utraricula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rathayibacter sp001995175*. The type genome for the species is the GenBank assembly RS_GCF_001995175.1. The GC content of the type genome is 72.02 % and the genome length is 3.88 Mbp.

Description of *Candidatus* Ratifana direpugo sp. nov.

Candidatus Ratifana direpugo (NL. fem. n. *direpugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABAAK01 sp014238395*. The type genome for the species is the GenBank assembly GCA_014238395.1. The GC content of the type genome is 32.56 % and the genome length is 0.61 Mbp.

Description of *Candidatus* Ratifana gen. nov.

Candidatus Ratifana (NL. fem. n. *Ratifana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABAAK01*. The type species for the genus is *Candidatus* Ratifana direpugo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JABAAK01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Ratifanaceae.

Description of *Candidatus* Ratifanaceae fam. nov.

Candidatus Ratifanaceae (NL. fem. n. *Ratifanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JABAAK01*. The type genus for the taxon is *Candidatus* Ratifana .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA9983_A*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Ficedanales.

Description of *Candidatus* Ratifana imbelatio sp. nov.

Candidatus Ratifana imbelatio (NL. fem. n. *imbelatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABAAK01 sp014238475*. The type genome for the species is the GenBank assembly GCA_014238475.1. The GC content of the type genome is 31.72 % and the genome length is 0.31 Mbp.

Description of *Candidatus* Ratifana lanugicella sp. nov.

Candidatus Ratifana lanugicella (NL. fem. n. *lanugicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABAAK01 sp014238775*. The type genome for the species is the GenBank assembly GCA_014238775.1. The GC content of the type genome is 31.79 % and the genome length is 0.48 Mbp.

Description of *Candidatus* Ratifaria adpinedo sp. nov.

Candidatus Ratifaria adpinedo (NL. fem. n. *adpinedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DSOJ01 sp011046985*. The type genome for the species is the GenBank assembly GCA_011046985.1. The GC content of the type genome is 52.87 % and the genome length is 6.77 Mbp.

Description of *Candidatus* Ratifaria gen. nov.

Candidatus Ratifaria (NL. fem. n. *Ratifaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DSOJ01*. The type species for the genus is *Candidatus* Ratifaria adpinedo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DSOJ01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Ratifariaceae.

Description of *Candidatus* Ratifariaceae fam. nov.

Candidatus Ratifariaceae (NL. fem. n. *Ratifariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *DSOJ01*. The type genus for the taxon is *Candidatus* Ratifaria .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA7656*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Funamiales.

Description of *Candidatus* Ratifella fiducessa sp. nov.

Candidatus Ratifella fiducessa (NL. fem. n. *fiducessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA10015 sp003522725*. The type genome for the species is the GenBank assembly GCA_003529035.1. The GC content of the type genome is 52.93 % and the genome length is 1.79 Mbp.

Description of *Candidatus* Ratifella gen. nov.

Candidatus Ratifella (NL. fem. n. *Ratifella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA10015*. The type species for the genus is *Candidatus* Ratifella fiducessa .

According to the original version of GTDB R06-RS202, this genus belongs to the family *Kpj58rc*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Nefanellaceae.

Description of *Candidatus* Ratifellales ord. nov.

Candidatus Ratifellales (NL. fem. n. *Ratifellales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA10015*. The type genus for the taxon is *Candidatus* Ratifella .

According to the original version of GTDB R06-RS202, this family belongs to the class *Koll11*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Resalellae.

Description of *Candidatus* Ratifella obtecilenta sp. nov.

Candidatus Ratifella obtecilenta (NL. fem. n. *obtecilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA10015 sp005239675*. The type genome for the species is the GenBank assembly GCA_005239675.1. The GC content of the type genome is 47.75 % and the genome length is 1.32 Mbp.

Description of *Candidatus* Ratifella plascago sp. nov.

Candidatus Ratifella plascago (NL. fem. n. *plascago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA10015 sp001805565*. The type genome for the species is the GenBank assembly GCA_001805565.1. The GC content of the type genome is 51.68 % and the genome length is 0.9 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 0.1 micron filter; full assembly".

Description of *Candidatus* Ratifida solipatica sp. nov.

Candidatus Ratifida solipatica (NL. fem. n. *solipatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002727615 sp002715265*. The type genome for the species is the GenBank assembly GCA_002727615.1. The GC content of the type genome is 29.73 % and the genome length is 1.56 Mbp.

Description of *Candidatus* Ratifida gen. nov.

Candidatus Ratifida (NL. fem. n. *Ratifida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-002727615*. The type species for the genus is *Candidatus* Ratifida solipatica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *TMED109*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Nubifariaceae.

Description of *Candidatus* Ratifosa gabinimonia sp. nov.

Candidatus Ratifosa gabinimonia (NL. fem. n. *gabinimonia* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RSA7 sp002919195*. The type genome for the species is the GenBank assembly GCA_002919395.1. The GC content of the type genome is 62.68 % and the genome length is 3.13 Mbp.

Description of *Candidatus* Ratifosa gen. nov.

Candidatus Ratifosa (NL. fem. n. *Ratifosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RSA7*. The type species for the genus is *Candidatus* Ratifosa gabinimonia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *RSA5*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Bipinosaceae.

Description of *Candidatus* Ratifula cacalicella sp. nov.

Candidatus Ratifula cacalicella (NL. fem. n. *cacalicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS1820 sp900555375*. The type genome for the species is the GenBank assembly GCA_900555375.1. The GC content of the type genome is 44.68 % and the genome length is 1.15 Mbp.

Description of *Candidatus* Ratifula gen. nov.

Candidatus Ratifula (NL. fem. n. *Ratifula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UMGS1820*. The type species for the genus is *Candidatus* Ratifula cacalicella .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Ratifula cacopentia sp. nov.

Candidatus Ratifula cacopentia (NL. fem. n. *cacopentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS1820 sp902760955*. The type genome for the species is the GenBank assembly GCA_902781475.1. The GC content of the type genome is 39.16 % and the genome length is 1.61 Mbp.

Description of *Candidatus* Ratifula denicugo sp. nov.

Candidatus Ratifula denicugo (NL. fem. n. *denicugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS1820 sp902766745*. The type genome for the species is the GenBank assembly GCA_902766745.1. The GC content of the type genome is 44.68 % and the genome length is 2.85 Mbp.

Description of *Candidatus* Ratifula enharicula sp. nov.

Candidatus Ratifula enharicula (NL. fem. n. *enharicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS1820 sp902791425*. The type genome for the species is the GenBank assembly GCA_902791425.1. The GC content of the type genome is 39.76 % and the genome length is 1.8 Mbp.

Description of *Candidatus* Ratifula fatiletta sp. nov.

Candidatus Ratifula fatiletta (NL. fem. n. *fatiletta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS1820 sp902777435*. The type genome for the species is the GenBank assembly GCA_902777435.1. The GC content of the type genome is 39.7 % and the genome length is 1.81 Mbp.

Description of *Candidatus* Ratifula incoritio sp. nov.

Candidatus Ratifula incoritio (NL. fem. n. *incoritio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *UMGS1820 sp900769795*. The type genome for the species is the GenBank assembly RS_GCF_900769795.1. The GC content of the type genome is 41.54 % and the genome length is 1.36 Mbp.

Description of *Candidatus* Ratifula sarabetta sp. nov.

Candidatus Ratifula sarabetta (NL. fem. n. *sarabetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS1820 sp902797885*. The type genome for the species is the GenBank assembly GCA_902797885.1. The GC content of the type genome is 42.4 % and the genome length is 2.58 Mbp.

Description of *Candidatus* Ratifula vigenitrix sp. nov.

Candidatus Ratifula vigenitrix (NL. fem. n. *vigenitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS1820 sp900545865*. The type genome for the species is the GenBank assembly RS_GCF_900766545.1. The GC content of the type genome is 43.32 % and the genome length is 2.89 Mbp.

Description of *Candidatus* Recocana furibatio sp. nov.

Candidatus Recocana furibatio (NL. fem. n. *furibatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS124 sp900555105*. The type genome for the species is the GenBank assembly GCA_004559905.1. The GC content of the type genome is 61.98 % and the genome length is 2.82 Mbp.

Description of *Candidatus* Recocana gen. nov.

Candidatus Recocana (NL. fem. n. *Recocana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UMGS124*. The type species for the genus is *Candidatus* Recocana furibatio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UMGS124*. According to the renamed version of GTDB R06-RS202, this taxon belongs

to the family *Candidatus* Recocanaceae.

Description of *Candidatus* Recocanaceae fam. nov.

Candidatus Recocanaceae (NL. fem. n. *Recocanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UMGS124.* The type genus for the taxon is *Candidatus* Recocana .

According to GTDB R06-RS202, this family belongs to the order *Coriobacteriales*.

Description of *Candidatus* Recocana inregessa sp. nov.

Candidatus Recocana inregessa (NL. fem. n. *inregessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS124 sp900539345*. The type genome for the species is the GenBank assembly GCA_900539345.1. The GC content of the type genome is 62.22 % and the genome length is 2.95 Mbp.

Description of *Candidatus* Recocaria ambifitas sp. nov.

Candidatus Recocaria ambifitas (NL. fem. n. *ambifitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6024 sp014380255*. The type genome for the species is the GenBank assembly GCA_014380255.1. The GC content of the type genome is 42.1 % and the genome length is 2.86 Mbp.

Description of *Candidatus* Recocaria gen. nov.

Candidatus Recocaria (NL. fem. n. *Recocaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA6024*. The type species for the genus is *Candidatus* Recocaria ambifitas .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Recocaria demulibula sp. nov.

Candidatus Recocaria demulibula (NL. fem. n. *demulibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6024 sp002429385*. The type genome for the species is the GenBank assembly GCA_002427965.1. The GC content of the type genome is 40.83 % and the genome length is 5.03 Mbp.

Description of *Candidatus* Recocaria depelitio sp. nov.

Candidatus Recocaria depelitio (NL. fem. n. *depelitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6024 sp903865775*. The type genome for the species is the GenBank assembly GCA_903865775.1. The GC content of the type genome is 41.38 % and the genome length is 4.89 Mbp.

Description of *Candidatus* Recocaria egritago sp. nov.

Candidatus Recocaria egritago (NL. fem. n. *egritago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6024 sp003457135*. The type genome for the species is the GenBank assembly GCA_003457135.1. The GC content of the type genome is 40.96 % and the genome length is 4.99 Mbp.

Description of *Candidatus* Recocaria humecatica sp. nov.

Candidatus Recocaria humecatica (NL. fem. n. *humecatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6024 sp013824715*. The type genome for the species is the GenBank assembly GCA_013824715.1. The GC content of the type genome is 41.09 % and the genome length is 4.6 Mbp.

Description of *Candidatus* Recocaria obtemisca sp. nov.

Candidatus Recocaria obtemisca (NL. fem. n. *obtemisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6024 sp903834475*. The type genome for the species is the GenBank assembly GCA_903834475.1. The GC content of the type genome is 41.76 % and the genome length is 3.6 Mbp.

Description of *Candidatus* Recocaria vinolilega sp. nov.

Candidatus Recocaria vinolilega (NL. fem. n. *vinolilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6024 sp003537645*. The type genome for the species is the GenBank assembly GCA_001768245.1. The GC content of the type genome is 41.36 % and the genome length is 4.87 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at time point 2 / B; 5m depth; 0.2 filter".

Description of *Candidatus* Recocia abrelitica sp. nov.

Candidatus Recocia abrelitica (NL. fem. n. *abrelitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *28-YEA-48 sp903847605*. The type genome for the species is the GenBank assembly GCA_903847605.1. The GC content of the type genome is 61.31 % and the genome length is 5.34 Mbp.

Description of *Candidatus* Recocia gen. nov.

Candidatus Recocia (NL. fem. n. *Recocia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *28-YEA-48*. The type species for the genus is *Candidatus* Recocia abrelitica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Recocia absuritudo sp. nov.

Candidatus Recocia absuritudo (NL. fem. n. *absuritudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *28-YEA-48 sp903918155*. The type genome for the species is the GenBank assembly GCA_903918155.1. The GC content of the type genome is 66.95 % and the genome length is 3.09 Mbp.

Description of *Candidatus* Recocia adnepentia sp. nov.

Candidatus Recocia adnepentia (NL. fem. n. *adnepentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *28-YEA-48 sp900104955*. The type genome for the species is the GenBank assembly RS_GCF_900104955.1. The GC content of the type genome is 61.09 % and the genome length is 6.43 Mbp.

Description of *Candidatus* Recocia alluvifica sp. nov.

Candidatus Recocia alluvifica (NL. fem. n. *alluvifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *28-YEA-48 sp903884435*. The type genome for the species is the GenBank assembly GCA_903884435.1. The GC content of the type genome is 66.1 % and the genome length is 5.32 Mbp.

Description of *Candidatus* Recocia biparilenta sp. nov.

Candidatus Recocia biparilenta (NL. fem. n. *biparilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *28-YEA-48 sp903916165*. The type genome for the species is the GenBank assembly GCA_903916165.1. The GC content of the type genome is 62.56 % and the genome length is 3.42 Mbp.

Description of *Candidatus* Recocia brasmimonas sp. nov.

Candidatus Recocia brasmimonas (NL. fem. n. *brasmimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *28-YEA-48 sp900299065*. The type genome for the species is the GenBank assembly GCA_900299065.1. The GC content of the type genome is 52.7 % and the genome length is 2.41 Mbp.

Description of *Candidatus* Recocia catobetta sp. nov.

Candidatus Recocia catobetta (NL. fem. n. *catobetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *28-YEA-48 sp903902915*. The type genome for the species is the GenBank assembly GCA_903891535.1. The GC content of the type genome is 63.26 % and the genome length is 3.64 Mbp.

Description of *Candidatus* Recocia cemeniforma sp. nov.

Candidatus Recocia cemeniforma (NL. fem. n. *cemeniforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *28-YEA-48 sp903931945*. The type genome for the species is the GenBank assembly GCA_903881595.1. The GC content of the type genome is 59.75 % and the genome length is 5.14 Mbp.

Description of *Candidatus* Recocia ceracivita sp. nov.

Candidatus Recocia ceracivita (NL. fem. n. *ceracivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *28-YEA-48 sp903825465*. The type genome for the species is the GenBank assembly GCA_903888965.1. The GC content of the type genome is 65.13 % and the genome length is 4.03 Mbp.

Description of *Candidatus* Recocia citociforma sp. nov.

Candidatus Recocia citociforma (NL. fem. n. *citociforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *28-YEA-48 sp903889985*. The type genome for the species is the GenBank assembly GCA_903826315.1. The GC content of the type genome is 61.69 % and the genome length is 3.88 Mbp.

Description of *Candidatus* Recocia defesessa sp. nov.

Candidatus Recocia defesessa (NL. fem. n. *defesessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *28-YEA-48 sp903897875*. The type genome for the species is the GenBank assembly GCA_903897875.1. The GC content of the type genome is 53.92 % and the genome length is 2.71 Mbp.

Description of *Candidatus* Recocia desulousia sp. nov.

Candidatus Recocia desulousia (NL. fem. n. *desulousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *28-YEA-48 sp903851305*. The type genome for the species is the GenBank assembly GCA_903891775.1. The GC content of the type genome is 56.71 % and the genome length is 2.69 Mbp.

Description of *Candidatus* Recocia epistago sp. nov.

Candidatus Recocia epistago (NL. fem. n. *epistago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *28-YEA-48 sp903885755*. The type genome for the species is the GenBank assembly GCA_903885755.1. The GC content of the type genome is 63.31 % and the genome length is 4.39 Mbp.

Description of *Candidatus* Recocia fatilicula sp. nov.

Candidatus Recocia fatilicula (NL. fem. n. *fatilicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *28-YEA-48 sp903861645*. The type genome for the species is the GenBank assembly GCA_903927565.1. The GC content of the type genome is 65.34 % and the genome length is 4.13 Mbp.

Description of *Candidatus* Recocia inpenatio sp. nov.

Candidatus Recocia inpenatio (NL. fem. n. *inpenatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *28-YEA-48 sp001898965*. The type genome for the species is the GenBank assembly GCA_001898965.1. The GC content of the type genome is 61.62 % and the genome length is 5.66 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Ammonium sulfate bioreactor".

Description of *Candidatus* Recocia prodredo sp. nov.

Candidatus Recocia prodredo (NL. fem. n. *prodredo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *28-YEA-48 sp903932565*. The type genome for the species is the GenBank assembly GCA_903932565.1. The GC content of the type genome is 58.92 % and the genome length is 3.9 Mbp.

Description of *Candidatus* Recocia vecoratica sp. nov.

Candidatus Recocia vecoratica (NL. fem. n. *vecoratica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *28-YEA-48 sp903903935*. The type genome for the species is the GenBank assembly GCA_903903935.1. The GC content of the type genome is 53.79 % and the genome length is 2.61 Mbp.

Description of *Candidatus* Recocosa viburitas sp. nov.

Candidatus Recocosa viburitas (NL. fem. n. *viburitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *O2-12-FULL-44-13 sp001817765*. The type genome for the species is the GenBank assembly GCA_001817765.1. The GC content of the type genome is 44.23 % and the genome length is 0.59 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under low O2 conditions; 0.2 micron filter; full assembly".

Description of *Candidatus* Recocosa gen. nov.

Candidatus Recocosa (NL. fem. n. *Recocosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *O2-12-FULL-44-13*. The type species for the genus is *Candidatus* Recocosa viburitas .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Recocula duponago sp. nov.

Candidatus Recocula duponago (NL. fem. n. *duponago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-01-FULL-37-20 sp001784115*. The type genome for the species is the GenBank assembly GCA_001782205.1. The GC content of the type genome is 36.28 % and the genome length is 0.65 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 0.2 micron filter; full assembly".

Description of *Candidatus* Recocula gen. nov.

Candidatus Recocula (NL. fem. n. *Recocula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *2-01-FULL-37-20*. The type species for the genus is *Candidatus* Recocula duponago .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA12049*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Catecariaceae.

Description of *Candidatus* Recogana detorilega sp. nov.

Candidatus Recogana detorilega (NL. fem. n. *detorilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *O2-12-FULL-42-9 sp001777665*. The type genome for the species is the GenBank assembly GCA_001780055.1. The GC content of the type genome is 41.98 % and the genome length is 0.85 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under low O2 conditions; 0.1 micron filter; full assembly".

Description of *Candidatus* Recogana gen. nov.

Candidatus Recogana (NL. fem. n. *Recogana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *O2-12-FULL-42-9*. The type species for the genus is *Candidatus* Recogana detorilega .

According to the original version of GTDB R06-RS202, this genus belongs to the family *O2-02-FULL-48-8*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Susicariaceae.

Description of *Candidatus* Recogaria adnepatio sp. nov.

Candidatus Recogaria adnepatio (NL. fem. n. *adnepatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002718515 sp014381305*. The type genome for the species is the GenBank assembly GCA_014381305.1. The GC content of the type genome is 45.44 % and the genome length is 1.88 Mbp.

Description of *Candidatus* Recogaria gen. nov.

Candidatus Recogaria (NL. fem. n. *Recogaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-002718515*. The type species for the genus is *Candidatus* Recogaria adnepatio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SM1A02*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cenaciaceae.

Description of *Candidatus* Recogaria cocibilenta sp. nov.

Candidatus Recogaria cocibilenta (NL. fem. n. *cocibilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002718515 sp014381555*. The type genome for the species is the GenBank assembly GCA_014381555.1. The GC content of the type genome is 43.77 % and the genome length is 1.99 Mbp.

Description of *Candidatus* Recogaria illepugo sp. nov.

Candidatus Recogaria illepugo (NL. fem. n. *illepugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002718515 sp014381385*. The type genome for the species is the GenBank assembly GCA_014381385.1. The GC content of the type genome is 45.66 % and the genome length is 1.89 Mbp.

Description of *Candidatus* Recogaria impilifica sp. nov.

Candidatus Recogaria impilifica (NL. fem. n. *impilifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002718515 sp002718515*. The type genome for the species is the GenBank assembly GCA_002718515.1. The GC content of the type genome is 45.33 % and the genome length is 1.95 Mbp.

Description of *Candidatus* Recogaria inmolicella sp. nov.

Candidatus Recogaria inmolicella (NL. fem. n. *inmolicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002718515 sp014238125*. The type genome for the species is the GenBank assembly GCA_014238125.1. The GC content of the type genome is 44.04 % and the genome length is 2.07 Mbp.

Description of *Candidatus* Recogaria invinifica sp. nov.

Candidatus Recogaria invinifica (NL. fem. n. *invinifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002718515 sp014238785*. The type genome for the species is the GenBank assembly GCA_014238785.1. The GC content of the type genome is 45.11 % and the genome length is 1.81 Mbp.

Description of *Candidatus* Recogaria resuredo sp. nov.

Candidatus Recogaria resuredo (NL. fem. n. *resuredo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *GCA-002718515 sp012965315*. The type genome for the species is the GenBank assembly GCA_012964395.1. The GC content of the type genome is 43.27 % and the genome length is 2.01 Mbp.

Description of *Candidatus* Recogaria vilipentia sp. nov.

Candidatus Recogaria vilipentia (NL. fem. n. *vilipentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002718515 sp002689385*. The type genome for the species is the GenBank assembly GCA_002689385.1. The GC content of the type genome is 45.1 % and the genome length is 1.94 Mbp.

Description of *Candidatus* Recogella anxifentia sp. nov.

Candidatus Recogella anxifentia (NL. fem. n. *anxifentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *46-32 sp003243445*. The type genome for the species is the GenBank assembly GCA_003243445.1. The GC content of the type genome is 45.59 % and the genome length is 7.34 Mbp.

Description of *Candidatus* Recogella gen. nov.

Candidatus Recogella (NL. fem. n. *Recogella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *46-32*. The type species for the genus is *Candidatus* Recogella anxifentia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Recogella cunabitio sp. nov.

Candidatus Recogella cunabitio (NL. fem. n. *cunabitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *46-32 sp004173355*. The type genome for the species is the GenBank assembly GCA_004173355.1. The GC content of the type genome is 50.64 % and the genome length is 5.36 Mbp.

Description of *Candidatus* Recogella dehonousia sp. nov.

Candidatus Recogella dehonousia (NL. fem. n. *dehonousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *46-32 sp001898485*. The type genome for the species is the GenBank assembly GCA_001898485.1. The GC content of the type genome is 46.06 % and the genome length is 5.49 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Thiocyanate stock bioreactor".

Description of *Candidatus* Recogella facunilega sp. nov.

Candidatus Recogella facunilega (NL. fem. n. *facunilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *46-32 sp001898405*. The type genome for the species is the GenBank assembly GCA_001898405.1. The GC content of the type genome is 44.15 % and the genome length is 5.58 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Thiocyanate ramp bioreactor".

Description of *Candidatus* Recogella rubecitudo sp. nov.

Candidatus Recogella rubecitudo (NL. fem. n. *rubecitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *46-32 sp004173255*. The type genome for the species is the GenBank assembly GCA_004173255.1. The GC content of the type genome is 49.83 % and the genome length is 5.11 Mbp.

Description of *Candidatus* Recogia depacicella sp. nov.

Candidatus Recogia depacicella (NL. fem. n. *depacicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1876 sp003446665*. The type genome for the species is the GenBank assembly GCA_003446665.1. The GC content of the type genome is 52.4 % and the genome length is 1.52 Mbp.

Description of *Candidatus* Recogia gen. nov.

Candidatus Recogia (NL. fem. n. *Recogia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1876*. The type species for the genus is *Candidatus* Recogia depacicella .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Recogosa decomatica sp. nov.

Candidatus Recogosa decomatica (NL. fem. n. *decomatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DSLN01 sp011048175*. The type genome for the species is the GenBank assembly GCA_011048175.1. The GC content of the type genome is 64.07 % and the genome length is 3.66 Mbp.

Description of *Candidatus* Recogosa gen. nov.

Candidatus Recogosa (NL. fem. n. *Recogosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DSLN01*. The type species for the genus is *Candidatus* Recogosa decomatica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DSLN01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Recogosaceae.

Description of *Candidatus* Recogosaceae fam. nov.

Candidatus Recogosaceae (NL. fem. n. *Recogosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *DSLN01*. The type genus for the taxon is *Candidatus* Recogosa .

According to the original version of GTDB R06-RS202, this family belongs to the order *DSLN01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Recogosales.

Description of *Candidatus* Recogosales ord. nov.

Candidatus Recogosales (NL. fem. n. *Recogosales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *DSLN01*. The type genus for the taxon is *Candidatus* Recogosa .

According to the GTDB R06-RS202, this order belongs to the class *Anaerolineae*.

Description of *Candidatus* Recogosa doxolatica sp. nov.

Candidatus Recogosa doxolatica (NL. fem. n. *doxolatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DSLN01 sp902812335*. The type genome for the species is the GenBank assembly RS_GCF_902812335.1. The GC content of the type genome is 62.83 % and the genome length is 3.52 Mbp.

Description of *Candidatus* Recogula catocibula sp. nov.

Candidatus Recogula catocibula (NL. fem. n. *catocibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Ch27 sp013178165*. The type genome for the species is the GenBank assembly GCA_013178165.1. The GC content of the type genome is 62.82 % and the genome length is 4.19 Mbp.

Description of *Candidatus* Recogula gen. nov.

Candidatus Recogula (NL. fem. n. *Recogula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Ch27*. The type species for the genus is *Candidatus* Recogula catocibula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *Ch27*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Recogulaceae.

Description of *Candidatus* Recogulaceae fam. nov.

Candidatus Recogulaceae (NL. fem. n. *Recogulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *Ch27*. The type genus for the taxon is *Candidatus* Recogula .

According to the original version of GTDB R06-RS202, this family belongs to the order *SBR1031*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Nocumellales.

Description of *Candidatus* Recomaria algebicula sp. nov.

Candidatus Recomaria algebicula (NL. fem. n. *algebicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CG1-02-40-82 sp001819495*. The type genome for the species is the GenBank assembly GCA_001819495.1. The GC content of the type genome is 41.37 % and the genome length is 0.76 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle background sediment; well D04 at 13ft depth".

Description of *Candidatus* Recomaria gen. nov.

Candidatus Recomaria (NL. fem. n. *Recomaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CG1-02-40-82*. The type species for the genus is *Candidatus* Recomaria algebicula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GWB1-42-6*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Biveridaceae.

Description of *Candidatus* Recomaria novilisca sp. nov.

Candidatus Recomaria novilisca (NL. fem. n. *novilisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CG1-02-40-82 sp002774415*. The type genome for the species is the GenBank assembly GCA_002796005.1. The GC content of the type genome is 40.25 % and the genome length is 0.83 Mbp.

Description of *Candidatus* Recomella semunifica sp. nov.

Candidatus Recomella semunifica (NL. fem. n. *semunifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *QNZT01 sp003978455*. The type genome for the species is the GenBank assembly GCA_003978455.1. The GC content of the type genome is 46.25 % and the genome length is 1.83 Mbp.

Description of *Candidatus* Recomella gen. nov.

Candidatus Recomella (NL. fem. n. *Recomella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *QNZT01*. The type species for the genus is *Candidatus* Recomella semunifica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *QNZT01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Recomellaceae.

Description of *Candidatus* Recomellaceae fam. nov.

Candidatus Recomellaceae (NL. fem. n. *Recomellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *QNZT01.* The type genus for the taxon is *Candidatus* Recomella .

According to GTDB R06-RS202, this family belongs to the order *Campylobacterales*.

Description of *Candidatus* Recomia delucitudo sp. nov.

Candidatus Recomia delucitudo (NL. fem. n. *delucitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SKZA01 sp007128275*. The type genome for the species is the GenBank assembly GCA_007128275.1. The GC content of the type genome is 59.29 % and the genome length is 2.8 Mbp.

Description of *Candidatus* Recomia gen. nov.

Candidatus Recomia (NL. fem. n. *Recomia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SKZA01*. The type species for the genus is *Candidatus* Recomia delucitudo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SLAD01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Reveculaceae.

Description of *Candidatus* Recomia manufitoga sp. nov.

Candidatus Recomia manufitoga (NL. fem. n. *manufitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SKZA01 sp007136425*. The type genome for the species is the GenBank assembly GCA_003560565.1. The GC content of the type genome is 57.92 % and the genome length is 3.08 Mbp.

Description of *Candidatus* Recomia sicinago sp. nov.

Candidatus Recomia sicinago (NL. fem. n. *sicinago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SKZA01 sp007127595*. The type genome for the species is the GenBank assembly GCA_007127595.1. The GC content of the type genome is 58.79 % and the genome length is 2.33 Mbp.

Description of *Candidatus* Recomosa didacentia sp. nov.

Candidatus Recomosa didacentia (NL. fem. n. *didacentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AAA164-E04 sp002690655*. The type genome for the species is the GenBank assembly GCA_003455095.1. The GC content of the type genome is 47.93 % and the genome length is 3.82 Mbp.

Description of *Candidatus* Recomosa gen. nov.

Candidatus Recomosa (NL. fem. n. *Recomosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *AAA164-E04*. The type species for the genus is *Candidatus* Recomosa didacentia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *AAA164-E04*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Recomosaceae.

Description of *Candidatus* Recomosaceae fam. nov.

Candidatus Recomosaceae (NL. fem. n. *Recomosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *AAA164-E04.* The type genus for the taxon is *Candidatus* Recomosa .

According to GTDB R06-RS202, this family belongs to the order *Pedosphaerales*.

Description of *Candidatus* Recomosa dilogedo sp. nov.

Candidatus Recomosa dilogedo (NL. fem. n. *dilogedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AAA164-E04 sp000383715*. The type genome for the species is the GenBank assembly GCA_000383715.1. The GC content of the type genome is 47.7 % and the genome length is 3.95 Mbp.

Description of *Candidatus* Recomula baditimonas sp. nov.

Candidatus Recomula baditimonas (NL. fem. n. *baditimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYUG01 sp012517825*. The type genome for the species is the GenBank assembly GCA_011388975.1. The GC content of the type genome is 45.71 % and the genome length is 2.76 Mbp.

Description of *Candidatus* Recomula gen. nov.

Candidatus Recomula (NL. fem. n. *Recomula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAYUG01*. The type species for the genus is *Candidatus* Recomula

baditimonas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JAAYUG01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Recomulaceae.

Description of *Candidatus* Recomulaceae fam. nov.

Candidatus Recomulaceae (NL. fem. n. *Recomulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JAAYUG01.* The type genus for the taxon is *Candidatus* Recomula .

According to GTDB R06-RS202, this family belongs to the order *Bacteroidales*.

Description of *Candidatus* Recorana cilicicella sp. nov.

Candidatus Recorana cilicicella (NL. fem. n. *cilicicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2166 sp012965905*. The type genome for the species is the GenBank assembly GCA_012965905.1. The GC content of the type genome is 52.33 % and the genome length is 1.89 Mbp.

Description of *Candidatus* Recorana gen. nov.

Candidatus Recorana (NL. fem. n. *Recorana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA2166*. The type species for the genus is *Candidatus* Recorana cilicicella .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2166*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Recoranaceae.

Description of *Candidatus* Recoranaceae fam. nov.

Candidatus Recoranaceae (NL. fem. n. *Recoranaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA2166.* The type genus for the taxon is *Candidatus* Recorana .

According to GTDB R06-RS202, this family belongs to the order *Nitrospirales*.

Description of *Candidatus* Recorana inaspetta sp. nov.

Candidatus Recorana inaspetta (NL. fem. n. *inaspetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2166 sp002726235*. The type genome for the species is the GenBank assembly GCA_002726235.1. The GC content of the type genome is 49.1 % and the genome length is 1.87 Mbp.

Description of *Candidatus* Recorana rubefilenta sp. nov.

Candidatus Recorana rubefilenta (NL. fem. n. *rubefilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2166 sp002328825*. The type genome for the species is the GenBank assembly GCA_002328825.1. The GC content of the type genome is 45.99 % and the genome length is 2.07 Mbp.

Description of *Candidatus* Recoraria intenastra sp. nov.

Candidatus Recoraria intenastra (NL. fem. n. *intenastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9628 sp903881545*. The type genome for the species is the GenBank assembly GCA_903881545.1. The GC content of the type genome is 63.81 % and the genome length is 2.94 Mbp.

Description of *Candidatus* Recoraria gen. nov.

Candidatus Recoraria (NL. fem. n. *Recoraria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA9628*. The type species for the genus is *Candidatus* Recoraria intenastra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA9628*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Recorariaceae.

Description of *Candidatus* Recorariaceae fam. nov.

Candidatus Recorariaceae (NL. fem. n. *Recorariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA9628.* The type genus for the taxon is *Candidatus* Recoraria .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA1565*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Papiliales.

Description of *Candidatus* Recoraria monodicula sp. nov.

Candidatus Recoraria monodicula (NL. fem. n. *monodicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9628 sp903830945*. The type genome for the species is the GenBank assembly GCA_903911935.1. The GC content of the type genome is 62.03 % and the genome length is 3.12 Mbp.

Description of *Candidatus* Recoraria negidetta sp. nov.

Candidatus Recoraria negidetta (NL. fem. n. *negidetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9628 sp003452935*. The type genome for the species is the GenBank assembly GCA_003509925.1. The GC content of the type genome is 62.63 % and the genome length is 3.33 Mbp.

Description of *Candidatus* Recorella bacifibra sp. nov.

Candidatus Recorella bacifibra (NL. fem. n. *bacifibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SZUA-442 sp003235475*. The type genome for the species is the GenBank assembly GCA_003245435.1. The GC content of the type genome is 64.69 % and the genome length is 2.13 Mbp.

Description of *Candidatus* Recorella gen. nov.

Candidatus Recorella (NL. fem. n. *Recorella* a name created arbitrarily, while preserving

the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SZUA-442*. The type species for the genus is *Candidatus* Recorella bacifibra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA5794*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Rudicellaceae.

Description of *Candidatus* Recoria ceromilega sp. nov.

Candidatus Recoria ceromilega (NL. fem. n. *ceromilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIXFN01 sp903918755*. The type genome for the species is the GenBank assembly GCA_903881465.1. The GC content of the type genome is 60.54 % and the genome length is 7.22 Mbp.

Description of *Candidatus* Recoria gen. nov.

Candidatus Recoria (NL. fem. n. *Recoria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIXFN01*. The type species for the genus is *Candidatus* Recoria ceromilega .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Recoria nehalitudo sp. nov.

Candidatus Recoria nehalitudo (NL. fem. n. *nehalitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIXFN01 sp903930565*. The type genome for the species is the GenBank assembly GCA_903930565.1. The GC content of the type genome is 64.0 % and the genome length is 6.62 Mbp.

Description of *Candidatus* Recorida abinditica sp. nov.

Candidatus Recorida abinditica (NL. fem. n. *abinditica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2753465 sp903861305*. The type genome for the species is the GenBank assembly GCA_903861305.1. The GC content of the type genome is 53.03 % and the genome length is 1.74 Mbp.

Description of *Candidatus* Recorida gen. nov.

Candidatus Recorida (NL. fem. n. *Recorida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2753465*. The type species for the genus is *Candidatus* Recorida abinditica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GCA-002753745*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Rosaculaceae.

Description of *Candidatus* Recorida catocugo sp. nov.

Candidatus Recorida catocugo (NL. fem. n. *catocugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2753465 sp903959815*. The type genome for the species is the GenBank assembly GCA_903959815.1. The GC content of the type genome is 47.8 % and the genome length is 1.81 Mbp.

Description of *Candidatus* Recorida codifisca sp. nov.

Candidatus Recorida codifisca (NL. fem. n. *codifisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2753465 sp903901225*. The type genome for the species is the GenBank assembly GCA_903843755.1. The GC content of the type genome is 54.87 % and the genome length is 2.35 Mbp.

Description of *Candidatus* Recorida homulilega sp. nov.

Candidatus Recorida homulilega (NL. fem. n. *homulilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2753465 sp903836515*. The type genome for the species is the GenBank assembly GCA_903884765.1. The GC content of the type genome is 54.03 % and the genome length is 1.98 Mbp.

Description of *Candidatus* Recorida laculetta sp. nov.

Candidatus Recorida laculetta (NL. fem. n. *laculetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2753465 sp002753465*. The type genome for the species is the GenBank assembly GCA_002753465.1. The GC content of the type genome is 49.49 % and the genome length is 2.18 Mbp.

Description of *Candidatus* Recorida nocumitura sp. nov.

Candidatus Recorida nocumitura (NL. fem. n. *nocumitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2753465 sp903860135*. The type genome for the species is the GenBank assembly GCA_903860135.1. The GC content of the type genome is 50.78 % and the genome length is 2.03 Mbp.

Description of *Candidatus* Recorosa adluvitia sp. nov.

Candidatus Recorosa adluvitia (NL. fem. n. *adluvitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA963 sp903915075*. The type genome for the species is the GenBank assembly GCA_903915075.1. The GC content of the type genome is 61.38 % and the genome length is 1.84 Mbp.

Description of *Candidatus* Recorosa gen. nov.

Candidatus Recorosa (NL. fem. n. *Recorosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA963*. The type species for the genus is *Candidatus* Recorosa adluvitia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Recorosa diludigena sp. nov.

Candidatus Recorosa diludigena (NL. fem. n. *diludigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA963 sp903857985*. The type genome for the species is the GenBank assembly GCA_903857985.1. The GC content of the type genome is 61.35 % and the genome length is 1.61 Mbp.

Description of *Candidatus* Recorosa enigmibra sp. nov.

Candidatus Recorosa enigmibra (NL. fem. n. *enigmibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA963 sp009699665*. The type genome for the species is the GenBank assembly GCA_009699665.1. The GC content of the type genome is 60.15 % and the genome length is 1.45 Mbp.

Description of *Candidatus* Recorosa notabiforma sp. nov.

Candidatus Recorosa notabiforma (NL. fem. n. *notabiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA963 sp903907615*. The type genome for the species is the GenBank assembly GCA_903907615.1. The GC content of the type genome is 62.04 % and the genome length is 1.58 Mbp.

Description of *Candidatus* Recorosa sarabessa sp. nov.

Candidatus Recorosa sarabessa (NL. fem. n. *sarabessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA963 sp002292955*. The type genome for the species is the GenBank assembly GCA_000754435.1. The GC content of the type genome is 61.65 % and the genome length is 0.86 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "water column of the freshwater reservoir Embalse de Amadorio in Spain".

Description of *Candidatus* Recorula sotulicella sp. nov.

Candidatus Recorula sotulicella (NL. fem. n. *sotulicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *BOG-938 sp003164925*. The type genome for the species is the GenBank assembly GCA_003164925.1. The GC content of the type genome is 65.44 % and the genome length is 3.44 Mbp.

Description of *Candidatus* Recorula gen. nov.

Candidatus Recorula (NL. fem. n. *Recorula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *BOG-938*. The type species for the genus is *Candidatus* Recorula sotulicella .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Recorula vehemimonia sp. nov.

Candidatus Recorula vehemimonia (NL. fem. n. *vehemimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *BOG-938 sp903929535*. The type genome for the species is the GenBank assembly GCA_903873335.1. The GC content of the type genome is 67.25 % and the genome length is 3.2 Mbp.

Description of *Candidatus* Rectinema adremimonia sp. nov.

Candidatus Rectinema adremimonia (NL. fem. n. *adremimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rectinema sp011368145*. The type genome for the species is the GenBank assembly GCA_011368145.1. The GC content of the type genome is 55.26 % and the genome length is 2.31 Mbp.

Description of *Candidatus* Rectinema cibicimonas sp. nov.

Candidatus Rectinema cibicimonas (NL. fem. n. *cibicimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rectinema sp002425765*. The type genome for the species is the GenBank assembly GCA_002425765.1. The GC content of the type genome is 55.06 % and the genome length is 2.4 Mbp.

Description of *Candidatus* Rectinema enigmicula sp. nov.

Candidatus Rectinema enigmicula (NL. fem. n. *enigmicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rectinema sp002070755*. The type genome for the species is the GenBank assembly GCA_002070755.1. The GC content of the type genome is 44.99 % and the genome length is 2.88 Mbp.

Description of *Candidatus* Rectinema gemebedo sp. nov.

Candidatus Rectinema gemebedo (NL. fem. n. *gemebedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rectinema sp003452735*. The type genome for the species is the GenBank assembly GCA_003452735.1. The GC content of the type genome is 44.46 % and the genome length is 1.31 Mbp.

Description of *Candidatus* Rectinema peracitica sp. nov.

Candidatus Rectinema peracitica (NL. fem. n. *peracitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rectinema sp002441395*. The type genome for the species is the GenBank assembly GCA_900163975.1. The GC content of the type genome is 53.08 % and the genome length is 2.97 Mbp.

Description of *Candidatus* Rectinema roraribra sp. nov.

Candidatus Rectinema roraribra (NL. fem. n. *roraribra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Rectinema sp002435985*. The type genome for the species is the GenBank assembly GCA_002435985.1. The GC content of the type genome is 54.89 % and the genome length is 1.72 Mbp.

Description of *Candidatus* Rectinema ruricicula sp. nov.

Candidatus Rectinema ruricicula (NL. fem. n. *ruricicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rectinema sp012516755*. The type genome for the species is the GenBank assembly GCA_002071555.1. The GC content of the type genome is 45.94 % and the genome length is 1.99 Mbp.

Description of *Candidatus* Recucana homolitrix sp. nov.

Candidatus Recucana homolitrix (NL. fem. n. *homolitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAKFR01 sp011064985*. The type genome for the species is the GenBank assembly GCA_011064985.1. The GC content of the type genome is 47.21 % and the genome length is 2.07 Mbp.

Description of *Candidatus* Recucana gen. nov.

Candidatus Recucana (NL. fem. n. *Recucana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAKFR01*. The type species for the genus is *Candidatus* Recucana homolitrix .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JAAKFR01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Recucanaceae.

Description of *Candidatus* Recucanaceae fam. nov.

Candidatus Recucanaceae (NL. fem. n. *Recucanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JAAKFR01.* The type genus for the taxon is *Candidatus* Recucana .

According to GTDB R06-RS202, this family belongs to the order *Chlamydiales*.

Description of *Candidatus* Recucaria cohoritoga sp. nov.

Candidatus Recucaria cohoritoga (NL. fem. n. *cohoritoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIKXV01 sp903873475*. The type genome for the species is the GenBank assembly GCA_903873475.1. The GC content of the type genome is 68.13 % and the genome length is 4.53 Mbp.

Description of *Candidatus* Recucaria gen. nov.

Candidatus Recucaria (NL. fem. n. *Recucaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIKXV01*. The type species for the genus is *Candidatus* Recucaria cohoritoga .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAIKXV01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Recucariaceae.

Description of *Candidatus* Recucariaceae fam. nov.

Candidatus Recucariaceae (NL. fem. n. *Recucariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CAIKXV01.* The type genus for the taxon is *Candidatus* Recucaria .

According to GTDB R06-RS202, this family belongs to the order *Burkholderiales*.

Description of *Candidatus* Recucaria dicanago sp. nov.

Candidatus Recucaria dicanago (NL. fem. n. *dicanago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIKXV01 sp903831455*. The type genome for the species is the GenBank assembly GCA_903924515.1. The GC content of the type genome is 71.13 % and the genome length is 4.13 Mbp.

Description of *Candidatus* Recucaria pabilitura sp. nov.

Candidatus Recucaria pabilitura (NL. fem. n. *pabilitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIKXV01 sp014379045*. The type genome for the species is the GenBank assembly GCA_014379045.1. The GC content of the type genome is 66.27 % and the genome length is 3.84 Mbp.

Description of *Candidatus* Recucella defulitudo sp. nov.

Candidatus Recucella defulitudo (NL. fem. n. *defulitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GRL18 sp013139395*. The type genome for the species is the GenBank assembly GCA_013139395.1. The GC content of the type genome is 38.74 % and the genome length is 3.2 Mbp.

Description of *Candidatus* Recucella gen. nov.

Candidatus Recucella (NL. fem. n. *Recucella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GRL18*. The type species for the genus is *Candidatus* Recucella defulitudo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GRL18*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Recucellaceae.

Description of *Candidatus* Recucellaceae fam. nov.

Candidatus Recucellaceae (NL. fem. n. *Recucellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *GRL18.* The type genus for the taxon is *Candidatus* Recucella .

According to the original version of GTDB R06-RS202, this family belongs to the order *GCF-002020875*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Valefariales.

Description of *Candidatus* Recucia remedax sp. nov.

Candidatus Recucia remedax (NL. fem. n. *remedax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2361 sp002343185*. The type genome for the species is the GenBank assembly GCA_002343185.1. The GC content of the type genome is 39.55 % and the genome length is 2.47 Mbp.

Description of *Candidatus* Recucia gen. nov.

Candidatus Recucia (NL. fem. n. *Recucia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA2361*. The type species for the genus is *Candidatus* Recucia remedax .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2361*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Recuciaceae.

Description of *Candidatus* Recuciaceae fam. nov.

Candidatus Recuciaceae (NL. fem. n. *Recuciaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA2361.* The type genus for the taxon is *Candidatus* Recucia .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA2361*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Recuciales.

Description of *Candidatus* Recuciales ord. nov.

Candidatus Recuciales (NL. fem. n. *Recuciales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA2361.* The type genus for the taxon is *Candidatus* Recucia .

According to the original version of GTDB R06-RS202, this family belongs to the class *UBA2361*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Recuciae.

Description of *Candidatus* Recuciae class. nov.

Candidatus Recuciae (NL. fem. n. *c__Recuciae* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA2361*. The type genus for the taxon is *Candidatus* Recucia .

According to GTDB R06-RS202, this class belongs to the phylum *Bdellovibrionota_C*.

Description of *Candidatus* Recucida adhosimonas sp. nov.

Candidatus Recucida adhosimonas (NL. fem. n. *adhosimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-484 sp900554385*. The type genome for the species is the GenBank assembly GCA_900554385.1. The GC content of the type genome is 35.65 % and the genome length is 1.7 Mbp.

Description of *Candidatus* Recucida gen. nov.

Candidatus Recucida (NL. fem. n. *Recucida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAG-484*. The type species for the genus is *Candidatus* Recucida adhosimonas .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Recucida delubisca sp. nov.

Candidatus Recucida delubisca (NL. fem. n. *delubisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-484 sp900321895*. The type genome for the species is the GenBank assembly GCA_902776125.1. The GC content of the type genome is 37.21 % and the genome length is 1.79 Mbp.

Description of *Candidatus* Recucida detesitoga sp. nov.

Candidatus Recucida detesitoga (NL. fem. n. *detesitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-484 sp000431315*. The type genome for the species is the GenBank assembly GCA_900556565.1. The GC content of the type genome is 35.33 % and the genome length is 1.44 Mbp.

Description of *Candidatus* Recucosa catocitoga sp. nov.

Candidatus Recucosa catocitoga (NL. fem. n. *catocitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5508 sp002409745*. The type genome for the species is the GenBank assembly GCA_002399885.1. The GC content of the type genome is 44.43 % and the genome length is 3.58 Mbp.

Description of *Candidatus* Recucosa gen. nov.

Candidatus Recucosa (NL. fem. n. *Recucosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA5508*. The type species for the genus is *Candidatus* Recucosa catocitoga .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Recucula demadetta sp. nov.

Candidatus Recucula demadetta (NL. fem. n. *demadetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1149 sp014382245*. The type genome for the species is the GenBank assembly GCA_014382245.1. The GC content of the type genome is 63.77 % and the genome length is 2.94 Mbp.

Description of *Candidatus* Recucula gen. nov.

Candidatus Recucula (NL. fem. n. *Recucula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1149*. The type species for the genus is *Candidatus* Recucula

demadetta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1149*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Recuculaceae.

Description of *Candidatus* Recuculaceae fam. nov.

Candidatus Recuculaceae (NL. fem. n. *Recuculaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA1149.* The type genus for the taxon is *Candidatus* Recucula .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA1149*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Recuculales.

Description of *Candidatus* Recuculales ord. nov.

Candidatus Recuculales (NL. fem. n. *Recuculales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA1149.* The type genus for the taxon is *Candidatus* Recucula .

According to the GTDB R06-RS202, this order belongs to the class *Binatia*.

Description of *Candidatus* Recucula subofitas sp. nov.

Candidatus Recucula subofitas (NL. fem. n. *subofitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1149 sp012960245*. The type genome for the species is the GenBank assembly GCA_012960245.1. The GC content of the type genome is 63.36 % and the genome length is 2.82 Mbp.

Description of *Candidatus* Recucula vecoritio sp. nov.

Candidatus Recucula vecoritio (NL. fem. n. *vecoritio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1149 sp002311335*. The type genome for the species is the

GenBank assembly GCA_013216095.1. The GC content of the type genome is 64.02 % and the genome length is 2.66 Mbp.

Description of *Candidatus* Recumana innasivita sp. nov.

Candidatus Recumana innasivita (NL. fem. n. *innasivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WHSQ01 sp009380005*. The type genome for the species is the GenBank assembly GCA_009380005.1. The GC content of the type genome is 65.61 % and the genome length is 3.81 Mbp.

Description of *Candidatus* Recumana gen. nov.

Candidatus Recumana (NL. fem. n. *Recumana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WHSQ01*. The type species for the genus is *Candidatus* Recumana innasivita .

According to the original version of GTDB R06-RS202, this genus belongs to the family *WHSQ01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Recumanaceae.

Description of *Candidatus* Recumanaceae fam. nov.

Candidatus Recumanaceae (NL. fem. n. *Recumanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *WHSQ01.* The type genus for the taxon is *Candidatus* Recumana .

According to the original version of GTDB R06-RS202, this family belongs to the order *CADDZG01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Curacanales.

Description of *Candidatus* Recumella carucitia sp. nov.

Candidatus Recumella carucitia (NL. fem. n. *carucitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA12393 sp001002765*. The type genome for the species is the

GenBank assembly GCA_001002565.1. The GC content of the type genome is 45.77 % and the genome length is 1.06 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "aquifer sediment".

Description of *Candidatus* Recumella gen. nov.

Candidatus Recumella (NL. fem. n. *Recumella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA12393*. The type species for the genus is *Candidatus* Recumella carucitia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GWF2-40-263*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Fetifidaceae.

Description of *Candidatus* Recumia bipatatio sp. nov.

Candidatus Recumia bipatatio (NL. fem. n. *bipatatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTU033 sp012839705*. The type genome for the species is the GenBank assembly GCA_012839705.1. The GC content of the type genome is 46.97 % and the genome length is 1.91 Mbp.

Description of *Candidatus* Recumia gen. nov.

Candidatus Recumia (NL. fem. n. *Recumia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DTU033*. The type species for the genus is *Candidatus* Recumia bipatatio .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Recumia cenobatica sp. nov.

Candidatus Recumia cenobatica (NL. fem. n. *cenobatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTU033 sp001513365*. The type genome for the species is the

GenBank assembly GCA_012521925.1. The GC content of the type genome is 52.1 % and the genome length is 1.6 Mbp.

Description of *Candidatus* Recumia mutabastra sp. nov.

Candidatus Recumia mutabastra (NL. fem. n. *mutabastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTU033 sp003519645*. The type genome for the species is the GenBank assembly GCA_003519645.1. The GC content of the type genome is 44.57 % and the genome length is 3.09 Mbp.

Description of *Candidatus* Recumia obtesitudo sp. nov.

Candidatus Recumia obtesitudo (NL. fem. n. *obtesitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTU033 sp012522615*. The type genome for the species is the GenBank assembly GCA_012522615.1. The GC content of the type genome is 48.86 % and the genome length is 1.92 Mbp.

Description of *Candidatus* Recumia repecimonia sp. nov.

Candidatus Recumia repecimonia (NL. fem. n. *repecimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTU033 sp002409375*. The type genome for the species is the GenBank assembly GCA_002409375.1. The GC content of the type genome is 42.83 % and the genome length is 1.8 Mbp.

Description of *Candidatus* Recumia tibicessa sp. nov.

Candidatus Recumia tibicessa (NL. fem. n. *tibicessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTU033 sp002410715*. The type genome for the species is the GenBank assembly GCA_002410715.1. The GC content of the type genome is 44.97 % and the genome length is 3.16 Mbp.

Description of *Candidatus* Recumida nugivilega sp. nov.

Candidatus Recumida nugivilega (NL. fem. n. *nugivilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *VXRJ01 sp009838525*. The type genome for the species is the GenBank assembly GCA_009837385.1. The GC content of the type genome is 67.52 % and the genome length is 4.21 Mbp.

Description of *Candidatus* Recumida gen. nov.

Candidatus Recumida (NL. fem. n. *Recumida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *VXRJ01*. The type species for the genus is *Candidatus* Recumida nugivilega .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA8438*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Citiposaceae.

Description of *Candidatus* Recumosa rarefibula sp. nov.

Candidatus Recumosa rarefibula (NL. fem. n. *rarefibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SKUG01 sp007122215*. The type genome for the species is the GenBank assembly GCA_007122215.1. The GC content of the type genome is 71.26 % and the genome length is 1.45 Mbp.

Description of *Candidatus* Recumosa gen. nov.

Candidatus Recumosa (NL. fem. n. *Recumosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SKUG01*. The type species for the genus is *Candidatus* Recumosa rarefibula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SKUG01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Recumosaceae.

Description of *Candidatus* Recumosaceae fam. nov.

Candidatus Recumosaceae (NL. fem. n. *Recumosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SKUG01*. The type genus for the taxon is *Candidatus* Recumosa .

According to GTDB R06-RS202, this family belongs to the order *Gaiellales*.

Description of *Candidatus* Recumula detenitas sp. nov.

Candidatus Recumula detenitas (NL. fem. n. *detenitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GWC1-47-15 sp001001375*. The type genome for the species is the GenBank assembly GCA_001001375.1. The GC content of the type genome is 47.21 % and the genome length is 0.91 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "aquifer sediment".

Description of *Candidatus* Recumula gen. nov.

Candidatus Recumula (NL. fem. n. *Recumula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GWC1-47-15*. The type species for the genus is *Candidatus* Recumula detenitas .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Redacana acustax sp. nov.

Candidatus Redacana acustax (NL. fem. n. *acustax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3085 sp002366545*. The type genome for the species is the GenBank assembly GCA_002366545.1. The GC content of the type genome is 40.13 % and the genome length is 1.51 Mbp.

Description of *Candidatus* Redacana gen. nov.

Candidatus Redacana (NL. fem. n. *Redacana* a name created arbitrarily, while preserving

the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA3085*. The type species for the genus is *Candidatus* Redacana acustax .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA3085*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Redacanaceae.

Description of *Candidatus* Redacanaceae fam. nov.

Candidatus Redacanaceae (NL. fem. n. *Redacanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA3085.* The type genus for the taxon is *Candidatus* Redacana .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA9087*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Monocellales.

Description of *Candidatus* Redacella delacigena sp. nov.

Candidatus Redacella delacigena (NL. fem. n. *delacigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA10138 sp000995845*. The type genome for the species is the GenBank assembly GCA_003520685.1. The GC content of the type genome is 42.4 % and the genome length is 0.75 Mbp.

Description of *Candidatus* Redacella gen. nov.

Candidatus Redacella (NL. fem. n. *Redacella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA10138*. The type species for the genus is *Candidatus* Redacella delacigena .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA10138*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Redacellaceae.

Description of *Candidatus* Redacellaceae fam. nov.

Candidatus Redacellaceae (NL. fem. n. *Redacellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA10138.* The type genus for the taxon is *Candidatus* Redacella .

According to GTDB R06-RS202, this family belongs to the order *Veblenbacterales*.

Description of *Candidatus* Redacia dehisessa sp. nov.

Candidatus Redacia dehisessa (NL. fem. n. *dehisessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SCGC-AAA003-L08 sp002701525*. The type genome for the species is the GenBank assembly GCA_002696525.1. The GC content of the type genome is 30.99 % and the genome length is 0.88 Mbp.

Description of *Candidatus* Redacia gen. nov.

Candidatus Redacia (NL. fem. n. *Redacia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SCGC-AAA003-L08*. The type species for the genus is *Candidatus* Redacia dehisessa .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SCGC-AAA003-L08*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Redaciaceae.

Description of *Candidatus* Redaciaceae fam. nov.

Candidatus Redaciaceae (NL. fem. n. *Redaciaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SCGC-AAA003-L08.* The type genus for the taxon is *Candidatus* Redacia .

According to the original version of GTDB R06-RS202, this family belongs to the order *SCGC-AAA003-L08*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Redaciales.

Description of *Candidatus* Redaciales ord. nov.

Candidatus Redaciales (NL. fem. n. *Redaciales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SCGC-AAA003-L08.* The type genus for the taxon is *Candidatus* Redacia .

According to the GTDB R06-RS202, this order belongs to the class *Marinisomatia*.

Description of *Candidatus* Redacia inobritia sp. nov.

Candidatus Redacia inobritia (NL. fem. n. *inobritia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SCGC-AAA003-L08 sp000405805*. The type genome for the species is the GenBank assembly GCA_000405805.1. The GC content of the type genome is 30.29 % and the genome length is 1.27 Mbp.

Description of *Candidatus* Redacida adtenitoga sp. nov.

Candidatus Redacida adtenitoga (NL. fem. n. *adtenitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CG2-30-64-16 sp001871755*. The type genome for the species is the GenBank assembly GCA_001871755.1. The GC content of the type genome is 63.75 % and the genome length is 3.99 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "groundwater filtered through a 3.0 um filter".

Description of *Candidatus* Redacida gen. nov.

Candidatus Redacida (NL. fem. n. *Redacida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CG2-30-64-16*. The type species for the genus is *Candidatus* Redacida adtenitoga .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CG2-30-64-16*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Redacidaceae.

Description of *Candidatus* Redacidaceae fam. nov.

Candidatus Redacidaceae (NL. fem. n. *Redacidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CG2-30-64-16.* The type genus for the taxon is *Candidatus* Redacida .

According to the original version of GTDB R06-RS202, this family belongs to the order *CG2-30-64-16*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Redacidales.

Description of *Candidatus* Redacidales ord. nov.

Candidatus Redacidales (NL. fem. n. *Redacidales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CG2-30-64-16.* The type genus for the taxon is *Candidatus* Redacida .

According to the GTDB R06-RS202, this order belongs to the class *Anaerolineae*.

Description of *Candidatus* Redacida argitimonia sp. nov.

Candidatus Redacida argitimonia (NL. fem. n. *argitimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CG2-30-64-16 sp002842085*. The type genome for the species is the GenBank assembly GCA_002842085.1. The GC content of the type genome is 62.9 % and the genome length is 4.45 Mbp.

Description of *Candidatus* Redacosa hecatitrix sp. nov.

Candidatus Redacosa hecatitrix (NL. fem. n. *hecatitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-01-FULL-40-39 sp001820095*. The type genome for the species is the GenBank assembly GCA_001820275.1. The GC content of the type genome is 39.45 % and the genome length is 0.82 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under low O2 conditions; 0.1 micron filter; full assembly".

Description of *Candidatus* Redacosa gen. nov.

Candidatus Redacosa (NL. fem. n. *Redacosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *2-01-FULL-40-39*. The type species for the genus is *Candidatus* Redacosa hecatitrix .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Redunana abpatago sp. nov.

Candidatus Redunana abpatago (NL. fem. n. *abpatago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *B111-G9 sp011042035*. The type genome for the species is the GenBank assembly GCA_011042035.1. The GC content of the type genome is 48.29 % and the genome length is 2.06 Mbp.

Description of *Candidatus* Redunana gen. nov.

Candidatus Redunana (NL. fem. n. *Redunana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *B111-G9*. The type species for the genus is *Candidatus* Redunana abpatago .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Redunana adpelugo sp. nov.

Candidatus Redunana adpelugo (NL. fem. n. *adpelugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *B111-G9 sp003646995*. The type genome for the species is the GenBank assembly GCA_003646995.1. The GC content of the type genome is 47.56 % and the genome length is 3.85 Mbp.

Description of *Candidatus* Redunana ludibentia sp. nov.

Candidatus Redunana ludibentia (NL. fem. n. *ludibentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *B111-G9 sp003646865*. The type genome for the species is the GenBank assembly GCA_003646865.1. The GC content of the type genome is 48.37 % and the genome length is 2.47 Mbp.

Description of *Candidatus* Redunaria casigatio sp. nov.

Candidatus Redunaria casigatio (NL. fem. n. *casigatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SHYF01 sp009692985*. The type genome for the species is the GenBank assembly GCA_009692985.1. The GC content of the type genome is 59.12 % and the genome length is 1.31 Mbp.

Description of *Candidatus* Redunaria gen. nov.

Candidatus Redunaria (NL. fem. n. *Redunaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SHYF01*. The type species for the genus is *Candidatus* Redunaria casigatio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SHYF01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Redunariaceae.

Description of *Candidatus* Redunariaceae fam. nov.

Candidatus Redunariaceae (NL. fem. n. *Redunariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SHYF01*. The type genus for the taxon is *Candidatus* Redunaria .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA6952*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Baditariales.

Description of *Candidatus* Redunella denicicula sp. nov.

Candidatus Redunella denicicula (NL. fem. n. *denicicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG023 sp900315435*. The type genome for the species is the GenBank assembly GCA_002371395.1. The GC content of the type genome is 56.87 % and the genome length is 2.64 Mbp.

Description of *Candidatus* Redunella gen. nov.

Candidatus Redunella (NL. fem. n. *Redunella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RUG023*. The type species for the genus is *Candidatus* Redunella denicicula .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Redunia denoritudo sp. nov.

Candidatus Redunia denoritudo (NL. fem. n. *denoritudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6345 sp002437945*. The type genome for the species is the GenBank assembly GCA_002296745.1. The GC content of the type genome is 30.29 % and the genome length is 1.0 Mbp.

Description of *Candidatus* Redunia gen. nov.

Candidatus Redunia (NL. fem. n. *Redunia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA6345*. The type species for the genus is *Candidatus* Redunia denoritudo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1242*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Macilulaceae.

Description of *Candidatus* Redunida inhabitura sp. nov.

Candidatus Redunida inhabitura (NL. fem. n. *inhabitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CACZQA01 sp900758075*. The type genome for the species is the GenBank assembly RS_GCF_900758075.1. The GC content of the type genome is 61.98 % and the genome length is 1.46 Mbp.

Description of *Candidatus* Redunida gen. nov.

Candidatus Redunida (NL. fem. n. *Redunida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CACZQA01*. The type species for the genus is *Candidatus* Redunida inhabitura .

According to the original version of GTDB R06-RS202, this genus belongs to the family *QAMH01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Decuniaceae.

Description of *Candidatus* Redunida paracitia sp. nov.

Candidatus Redunida paracitia (NL. fem. n. *paracitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CACZQA01 sp902783175*. The type genome for the species is the GenBank assembly GCA_902783175.1. The GC content of the type genome is 63.25 % and the genome length is 1.62 Mbp.

Description of *Candidatus* Redunosa metucessa sp. nov.

Candidatus Redunosa metucessa (NL. fem. n. *metucessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *BMS3Bbin11 sp013150915*. The type genome for the species is the GenBank assembly GCA_013150915.1. The GC content of the type genome is 47.8 % and the genome length is 2.65 Mbp.

Description of *Candidatus* Redunosa gen. nov.

Candidatus Redunosa (NL. fem. n. *Redunosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *BMS3Bbin11*. The type species for the genus is *Candidatus* Redunosa

metucessa .

According to the original version of GTDB R06-RS202, this genus belongs to the family *BMS3Bbin11*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Redunosaceae.

Description of *Candidatus* Redunosaceae fam. nov.

Candidatus Redunosaceae (NL. fem. n. *Redunosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *BMS3Bbin11.* The type genus for the taxon is *Candidatus* Redunosa .

According to GTDB R06-RS202, this family belongs to the order *Arenicellales*.

Description of *Candidatus* Redunosa refulilenta sp. nov.

Candidatus Redunosa refulilenta (NL. fem. n. *refulilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *BMS3Bbin11 sp002897635*. The type genome for the species is the GenBank assembly GCA_011051025.1. The GC content of the type genome is 47.04 % and the genome length is 1.86 Mbp.

Description of *Candidatus* Redunula nefarivita sp. nov.

Candidatus Redunula nefarivita (NL. fem. n. *nefarivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DUOF01 sp012839015*. The type genome for the species is the GenBank assembly GCA_012839015.1. The GC content of the type genome is 32.85 % and the genome length is 0.94 Mbp.

Description of *Candidatus* Redunula gen. nov.

Candidatus Redunula (NL. fem. n. *Redunula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DUOF01*. The type species for the genus is *Candidatus* Redunula nefarivita .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DUOF01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Redunulaceae.

Description of *Candidatus* Redunulaceae fam. nov.

Candidatus Redunulaceae (NL. fem. n. *Redunulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *DUOF01*. The type genus for the taxon is *Candidatus* Redunula .

According to the original version of GTDB R06-RS202, this family belongs to the order *RFN20*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Cerofellales.

Description of *Candidatus* Reduvana curacetta sp. nov.

Candidatus Reduvana curacetta (NL. fem. n. *curacetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GWF2-57-35 sp001804865*. The type genome for the species is the GenBank assembly GCA_003489865.1. The GC content of the type genome is 57.26 % and the genome length is 5.22 Mbp.

Description of *Candidatus* Reduvana gen. nov.

Candidatus Reduvana (NL. fem. n. *Reduvana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GWF2-57-35*. The type species for the genus is *Candidatus* Reduvana curacetta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GWF2-57-35*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Reduvanaceae.

Description of *Candidatus* Reduvanaceae fam. nov.

Candidatus Reduvanaceae (NL. fem. n. *Reduvanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this taxon is *GWF2-57-35*. The type genus for the taxon is *Candidatus* Reduvana .

According to the original version of GTDB R06-RS202, this family belongs to the order *LD1-PB3*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Delacariales.

Description of *Candidatus* Reduvaria adnilousia sp. nov.

Candidatus Reduvaria adnilousia (NL. fem. n. *adnilousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4923 sp012511185*. The type genome for the species is the GenBank assembly GCA_012511185.1. The GC content of the type genome is 54.82 % and the genome length is 1.33 Mbp.

Description of *Candidatus* Reduvaria gen. nov.

Candidatus Reduvaria (NL. fem. n. *Reduvaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA4923*. The type species for the genus is *Candidatus* Reduvaria adnilousia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DTU023*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Decunariaceae.

Description of *Candidatus* Reduvaria algifitia sp. nov.

Candidatus Reduvaria algifitia (NL. fem. n. *algifitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4923 sp012800135*. The type genome for the species is the GenBank assembly GCA_012800135.1. The GC content of the type genome is 47.52 % and the genome length is 1.65 Mbp.

Description of *Candidatus* Reduvaria angipago sp. nov.

Candidatus Reduvaria angipago (NL. fem. n. *angipago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4923 sp012511175*. The type genome for the species is the GenBank assembly GCA_012511175.1. The GC content of the type genome is 54.94 % and the genome length is 1.71 Mbp.

Description of *Candidatus* Reduvaria epistedo sp. nov.

Candidatus Reduvaria epistedo (NL. fem. n. *epistedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4923 sp012799825*. The type genome for the species is the GenBank assembly GCA_012799825.1. The GC content of the type genome is 47.12 % and the genome length is 2.31 Mbp.

Description of *Candidatus* Reduvaria ineffitrix sp. nov.

Candidatus Reduvaria ineffitrix (NL. fem. n. *ineffitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4923 sp012841255*. The type genome for the species is the GenBank assembly GCA_012841255.1. The GC content of the type genome is 57.86 % and the genome length is 1.31 Mbp.

Description of *Candidatus* Reduvaria letifilega sp. nov.

Candidatus Reduvaria letifilega (NL. fem. n. *letifilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4923 sp002427535*. The type genome for the species is the GenBank assembly GCA_012515675.1. The GC content of the type genome is 52.44 % and the genome length is 1.43 Mbp.

Description of *Candidatus* Reduvaria locelago sp. nov.

Candidatus Reduvaria locelago (NL. fem. n. *locelago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4923 sp001512945*. The type genome for the species is the GenBank assembly GCA_012510955.1. The GC content of the type genome is 49.09 % and the genome length is 1.51 Mbp.

Description of *Candidatus* Reduvaria luticicula sp. nov.

Candidatus Reduvaria luticicula (NL. fem. n. *luticicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4923 sp012841015*. The type genome for the species is the GenBank assembly GCA_012841015.1. The GC content of the type genome is 47.92 % and the genome length is 1.79 Mbp.

Description of *Candidatus* Reduvaria mahelentia sp. nov.

Candidatus Reduvaria mahelentia (NL. fem. n. *mahelentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4923 sp012800435*. The type genome for the species is the GenBank assembly GCA_012800435.1. The GC content of the type genome is 47.49 % and the genome length is 1.62 Mbp.

Description of *Candidatus* Reduvaria ossucicella sp. nov.

Candidatus Reduvaria ossucicella (NL. fem. n. *ossucicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4923 sp012841145*. The type genome for the species is the GenBank assembly GCA_012841145.1. The GC content of the type genome is 51.0 % and the genome length is 1.57 Mbp.

Description of *Candidatus* Reduvaria semifago sp. nov.

Candidatus Reduvaria semifago (NL. fem. n. *semifago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4923 sp012511735*. The type genome for the species is the GenBank assembly GCA_012511735.1. The GC content of the type genome is 55.35 % and the genome length is 1.35 Mbp.

Description of *Candidatus* Reduvaria sicinastra sp. nov.

Candidatus Reduvaria sicinastra (NL. fem. n. *sicinastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4923 sp012799695*. The type genome for the species is the GenBank assembly GCA_012799695.1. The GC content of the type genome is 50.52 % and the genome length is 1.71 Mbp.

Description of *Candidatus* Reduvaria subofifica sp. nov.

Candidatus Reduvaria subofifica (NL. fem. n. *subofifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4923 sp012798865*. The type genome for the species is the GenBank assembly GCA_012798865.1. The GC content of the type genome is 50.02 % and the genome length is 1.56 Mbp.

Description of *Candidatus* Reduvella lavacousia sp. nov.

Candidatus Reduvella lavacousia (NL. fem. n. *lavacousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-611 sp000434175*. The type genome for the species is the GenBank assembly GCA_000434175.1. The GC content of the type genome is 24.15 % and the genome length is 0.93 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "derived from human gut metagenome".

Description of *Candidatus* Reduvella gen. nov.

Candidatus Reduvella (NL. fem. n. *Reduvella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAG-611*. The type species for the genus is *Candidatus* Reduvella lavacousia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA660*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vitigellaceae.

Description of *Candidatus* Reduvella recucivita sp. nov.

Candidatus Reduvella recucivita (NL. fem. n. *recucivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-611 sp900552235*. The type genome for the species is the GenBank assembly GCA_900552235.1. The GC content of the type genome is 24.33 % and the genome length is 0.79 Mbp.

Description of *Candidatus* Reduvida adsicilenta sp. nov.

Candidatus Reduvida adsicilenta (NL. fem. n. *adsicilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9959 sp903889965*. The type genome for the species is the GenBank assembly GCA_903889965.1. The GC content of the type genome is 58.77 % and the genome length is 2.24 Mbp.

Description of *Candidatus* Reduvida gen. nov.

Candidatus Reduvida (NL. fem. n. *Reduvida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA9959*. The type species for the genus is *Candidatus* Reduvida adsicilenta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA9959*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Reduvidaceae.

Description of *Candidatus* Reduvidaceae fam. nov.

Candidatus Reduvidaceae (NL. fem. n. *Reduvidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA9959.* The type genus for the taxon is *Candidatus* Reduvida .

According to GTDB R06-RS202, this family belongs to the order *Elusimicrobiales*.

Description of *Candidatus* Reduvida apharedo sp. nov.

Candidatus Reduvida apharedo (NL. fem. n. *apharedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9959 sp001799795*. The type genome for the species is the GenBank assembly GCA_001799795.1. The GC content of the type genome is 60.69 % and the genome length is 1.36 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at time point 3 / C; 5m depth; 0.2 filter".

Description of *Candidatus* Reduvida butubitura sp. nov.

Candidatus Reduvida butubitura (NL. fem. n. *butubitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9959 sp001799995*. The type genome for the species is the GenBank assembly GCA_001799995.1. The GC content of the type genome is 61.67 % and the genome length is 2.91 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at time point 6 / F; 5m depth; 0.2 filter".

Description of *Candidatus* Reduvida catagitio sp. nov.

Candidatus Reduvida catagitio (NL. fem. n. *catagitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9959 sp003482905*. The type genome for the species is the GenBank assembly GCA_003482905.1. The GC content of the type genome is 59.44 % and the genome length is 2.51 Mbp.

Description of *Candidatus* Reduvida cibicatica sp. nov.

Candidatus Reduvida cibicatica (NL. fem. n. *cibicatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9959 sp001799895*. The type genome for the species is the GenBank assembly GCA_001799895.1. The GC content of the type genome is 62.9 % and the genome length is 3.29 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at time point 4 / D; 5m depth; 0.2 filter".

Description of *Candidatus* Reduvida cilicisca sp. nov.

Candidatus Reduvida cilicisca (NL. fem. n. *cilicisca* a species epithet created arbitrarily,

while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9959 sp001871115*. The type genome for the species is the GenBank assembly GCA_001871115.1. The GC content of the type genome is 56.3 % and the genome length is 2.99 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "groundwater filtered through a a 3.0 um filter and then through a 0.2 um filter".

Description of *Candidatus* Reduvida defunitoga sp. nov.

Candidatus Reduvida defunitoga (NL. fem. n. *defunitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9959 sp001799715*. The type genome for the species is the GenBank assembly GCA_003452415.1. The GC content of the type genome is 64.36 % and the genome length is 2.59 Mbp.

Description of *Candidatus* Reduvida desoredo sp. nov.

Candidatus Reduvida desoredo (NL. fem. n. *desoredo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9959 sp002840355*. The type genome for the species is the GenBank assembly GCA_002840355.1. The GC content of the type genome is 63.76 % and the genome length is 2.88 Mbp.

Description of *Candidatus* Reduvida detepitrix sp. nov.

Candidatus Reduvida detepitrix (NL. fem. n. *detepitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9959 sp001799735*. The type genome for the species is the GenBank assembly GCA_001799735.1. The GC content of the type genome is 62.48 % and the genome length is 3.06 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at time point 2 / B; 5m depth; 0.2 filter".

Description of *Candidatus* Reduvida duponatica sp. nov.

Candidatus Reduvida duponatica (NL. fem. n. *duponatica* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9959 sp002779045*. The type genome for the species is the GenBank assembly GCA_002779045.1. The GC content of the type genome is 59.48 % and the genome length is 2.62 Mbp.

Description of *Candidatus* Reduvida lanifilenta sp. nov.

Candidatus Reduvida lanifilenta (NL. fem. n. *lanifilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9959 sp903879915*. The type genome for the species is the GenBank assembly GCA_903827195.1. The GC content of the type genome is 61.27 % and the genome length is 3.44 Mbp.

Description of *Candidatus* Reduvida metapitica sp. nov.

Candidatus Reduvida metapitica (NL. fem. n. *metapitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9959 sp001799845*. The type genome for the species is the GenBank assembly GCA_001799845.1. The GC content of the type genome is 64.45 % and the genome length is 3.09 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at time point 3 / C; 5m depth; 0.2 filter".

Description of *Candidatus* Reduvida offiribra sp. nov.

Candidatus Reduvida offiribra (NL. fem. n. *offiribra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9959 sp903873295*. The type genome for the species is the GenBank assembly GCA_903873295.1. The GC content of the type genome is 59.11 % and the genome length is 3.49 Mbp.

Description of *Candidatus* Reduvida pociletta sp. nov.

Candidatus Reduvida pociletta (NL. fem. n. *pociletta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9959 sp001800275*. The type genome for the species is the GenBank assembly GCA_001800395.1. The GC content of the type genome is 57.35 % and the genome length is 2.45 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at 16ft depth; 0.2 micron filter at time point A".

Description of *Candidatus* Reduvida semapitrix sp. nov.

Candidatus Reduvida semapitrix (NL. fem. n. *semapitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9959 sp001799635*. The type genome for the species is the GenBank assembly GCA_001799635.1. The GC content of the type genome is 62.37 % and the genome length is 2.98 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at time point 1 / A; 5m depth; 0.2 filter".

Description of *Candidatus* Reduvida valefilenta sp. nov.

Candidatus Reduvida valefilenta (NL. fem. n. *valefilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9959 sp903917735*. The type genome for the species is the GenBank assembly GCA_903917735.1. The GC content of the type genome is 57.85 % and the genome length is 3.59 Mbp.

Description of *Candidatus* Reduvida xeropiforma sp. nov.

Candidatus Reduvida xeropiforma (NL. fem. n. *xeropiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9959 sp001799615*. The type genome for the species is the GenBank assembly GCA_001799815.1. The GC content of the type genome is 61.56 % and the genome length is 2.84 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at time point 3 / C; 5m depth; 0.2 filter".

Description of *Candidatus* Reduvosa necubax sp. nov.

Candidatus Reduvosa necubax (NL. fem. n. *necubax* a species epithet created arbitrarily,

while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GWF2-35-48 sp001769125*. The type genome for the species is the GenBank assembly GCA_001769745.1. The GC content of the type genome is 34.9 % and the genome length is 3.77 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at 16ft depth; 0.2 micron filter at time point B".

Description of *Candidatus* Reduvosa gen. nov.

Candidatus Reduvosa (NL. fem. n. *Reduvosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GWF2-35-48*. The type species for the genus is *Candidatus* Reduvosa necubax .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GWF2-35-48*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Reduvosaceae.

Description of *Candidatus* Reduvosaceae fam. nov.

Candidatus Reduvosaceae (NL. fem. n. *Reduvosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *GWF2-35-48.* The type genus for the taxon is *Candidatus* Reduvosa .

According to GTDB R06-RS202, this family belongs to the order *Bacteroidales*.

Description of *Candidatus* Reduvula vinacago sp. nov.

Candidatus Reduvula vinacago (NL. fem. n. *vinacago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2721365 sp002721365*. The type genome for the species is the GenBank assembly GCA_002721365.1. The GC content of the type genome is 65.32 % and the genome length is 4.04 Mbp.

Description of *Candidatus* Reduvula gen. nov.

Candidatus Reduvula (NL. fem. n. *Reduvula* a name created arbitrarily, while preserving

the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2721365*. The type species for the genus is *Candidatus* Reduvula vinacago .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GCA-2721365*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Reduvulaceae.

Description of *Candidatus* Reduvulaceae fam. nov.

Candidatus Reduvulaceae (NL. fem. n. *Reduvulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *GCA-2721365.* The type genus for the taxon is *Candidatus* Reduvula .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA7887*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Demulariales.

Description of *Candidatus* Refacana lupanitia sp. nov.

Candidatus Refacana lupanitia (NL. fem. n. *lupanitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SLCH01 sp003566995*. The type genome for the species is the GenBank assembly GCA_003566995.1. The GC content of the type genome is 55.34 % and the genome length is 3.04 Mbp.

Description of *Candidatus* Refacana gen. nov.

Candidatus Refacana (NL. fem. n. *Refacana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SLCH01*. The type species for the genus is *Candidatus* Refacana lupanitia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Refacana metapitrix sp. nov.

Candidatus Refacana metapitrix (NL. fem. n. *metapitrix* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SLCH01 sp007125915*. The type genome for the species is the GenBank assembly GCA_003561075.1. The GC content of the type genome is 54.58 % and the genome length is 2.75 Mbp.

Description of *Candidatus* Refacaria diluvilenta sp. nov.

Candidatus Refacaria diluvilenta (NL. fem. n. *diluvilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CF-54 sp005881025*. The type genome for the species is the GenBank assembly GCA_005880745.1. The GC content of the type genome is 66.06 % and the genome length is 2.6 Mbp.

Description of *Candidatus* Refacaria gen. nov.

Candidatus Refacaria (NL. fem. n. *Refacaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CF-54*. The type species for the genus is *Candidatus* Refacaria diluvilenta .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Refacella admuledo sp. nov.

Candidatus Refacella admuledo (NL. fem. n. *admuledo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2013 sp003978185*. The type genome for the species is the GenBank assembly GCA_003978185.1. The GC content of the type genome is 39.49 % and the genome length is 0.76 Mbp.

Description of *Candidatus* Refacella gen. nov.

Candidatus Refacella (NL. fem. n. *Refacella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this genus is *UBA2013*. The type species for the genus is *Candidatus* Refacella admuledo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Refacella cocoliforma sp. nov.

Candidatus Refacella cocoliforma (NL. fem. n. *cocoliforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2013 sp002335045*. The type genome for the species is the GenBank assembly GCA_002335045.1. The GC content of the type genome is 39.36 % and the genome length is 1.2 Mbp.

Description of *Candidatus* Refacella denavousia sp. nov.

Candidatus Refacella denavousia (NL. fem. n. *denavousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2013 sp003978285*. The type genome for the species is the GenBank assembly GCA_003978285.1. The GC content of the type genome is 39.36 % and the genome length is 0.89 Mbp.

Description of *Candidatus* Refacella tegimugo sp. nov.

Candidatus Refacella tegimugo (NL. fem. n. *tegimugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2013 sp003489145*. The type genome for the species is the GenBank assembly GCA_003489945.1. The GC content of the type genome is 39.88 % and the genome length is 0.99 Mbp.

Description of *Candidatus* Refacia cohuretta sp. nov.

Candidatus Refacia cohuretta (NL. fem. n. *cohuretta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA11654 sp002691305*. The type genome for the species is the GenBank assembly GCA_014239385.1. The GC content of the type genome is 39.4 %

and the genome length is 1.37 Mbp.

Description of *Candidatus* Refacia gen. nov.

Candidatus Refacia (NL. fem. n. *Refacia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA11654*. The type species for the genus is *Candidatus* Refacia cohuretta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA11654*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Refaciaceae.

Description of *Candidatus* Refaciaceae fam. nov.

Candidatus Refaciaceae (NL. fem. n. *Refaciaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA11654.* The type genus for the taxon is *Candidatus* Refacia .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA11654*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Refaciales.

Description of *Candidatus* Refaciales ord. nov.

Candidatus Refaciales (NL. fem. n. *Refaciales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA11654.* The type genus for the taxon is *Candidatus* Refacia .

According to the GTDB R06-RS202, this order belongs to the class *Gammaproteobacteria*.

Description of *Candidatus* Refacia excomitrix sp. nov.

Candidatus Refacia excomitrix (NL. fem. n. *excomitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA11654 sp002717445*. The type genome for the species is the GenBank assembly GCA_002717445.1. The GC content of the type genome is 39.84 %

and the genome length is 1.51 Mbp.

Description of *Candidatus* Refacia feculatio sp. nov.

Candidatus Refacia feculatio (NL. fem. n. *feculatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA11654 sp902553145*. The type genome for the species is the GenBank assembly GCA_902586565.1. The GC content of the type genome is 39.14 % and the genome length is 0.95 Mbp.

Description of *Candidatus* Refacia inhumitudo sp. nov.

Candidatus Refacia inhumitudo (NL. fem. n. *inhumitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA11654 sp003449795*. The type genome for the species is the GenBank assembly GCA_003449795.1. The GC content of the type genome is 38.34 % and the genome length is 1.18 Mbp.

Description of *Candidatus* Refacia tegumilega sp. nov.

Candidatus Refacia tegumilega (NL. fem. n. *tegumilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA11654 sp002718375*. The type genome for the species is the GenBank assembly GCA_002718375.1. The GC content of the type genome is 38.34 % and the genome length is 0.88 Mbp.

Description of *Candidatus* Refacia vehicitia sp. nov.

Candidatus Refacia vehicitia (NL. fem. n. *vehicitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA11654 sp001629325*. The type genome for the species is the GenBank assembly GCA_902577505.1. The GC content of the type genome is 38.45 % and the genome length is 1.41 Mbp.

Description of *Candidatus* Refacia viripibula sp. nov.

Candidatus Refacia viripibula (NL. fem. n. *viripibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA11654 sp002691465*. The type genome for the species is the GenBank assembly GCA_002691465.1. The GC content of the type genome is 38.62 % and the genome length is 1.4 Mbp.

Description of *Candidatus* Refacosa anastisca sp. nov.

Candidatus Refacosa anastisca (NL. fem. n. *anastisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6249 sp002441245*. The type genome for the species is the GenBank assembly GCA_002441245.1. The GC content of the type genome is 41.29 % and the genome length is 1.61 Mbp.

Description of *Candidatus* Refacosa gen. nov.

Candidatus Refacosa (NL. fem. n. *Refacosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA6249*. The type species for the genus is *Candidatus* Refacosa anastisca .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA6249*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Refacosaceae.

Description of *Candidatus* Refacosaceae fam. nov.

Candidatus Refacosaceae (NL. fem. n. *Refacosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA6249.* The type genus for the taxon is *Candidatus* Refacosa .

According to the original version of GTDB R06-RS202, this family belongs to the order *GIF10*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Decamellales.

Description of *Candidatus* Refacosa esculilega sp. nov.

Candidatus Refacosa esculilega (NL. fem. n. *esculilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6249 sp002796135*. The type genome for the species is the GenBank assembly GCA_002796135.1. The GC content of the type genome is 41.0 % and the genome length is 1.22 Mbp.

Description of *Candidatus* Refacosa homilifica sp. nov.

Candidatus Refacosa homilifica (NL. fem. n. *homilifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6249 sp903907475*. The type genome for the species is the GenBank assembly GCA_903907475.1. The GC content of the type genome is 39.97 % and the genome length is 1.19 Mbp.

Description of *Candidatus* Refacosa negiditia sp. nov.

Candidatus Refacosa negiditia (NL. fem. n. *negiditia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6249 sp004298075*. The type genome for the species is the GenBank assembly GCA_004298075.1. The GC content of the type genome is 46.17 % and the genome length is 1.32 Mbp.

Description of *Candidatus* Refacosa solacitoga sp. nov.

Candidatus Refacosa solacitoga (NL. fem. n. *solacitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6249 sp903852325*. The type genome for the species is the GenBank assembly GCA_903874485.1. The GC content of the type genome is 48.1 % and the genome length is 1.71 Mbp.

Description of *Candidatus* Refacosa venabedo sp. nov.

Candidatus Refacosa venabedo (NL. fem. n. *venabedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6249 sp002441305*. The type genome for the species is the GenBank assembly GCA_002441305.1. The GC content of the type genome is 48.06 % and the genome length is 1.31 Mbp.

Description of *Candidatus* Refacula decenax sp. nov.

Candidatus Refacula decenax (NL. fem. n. *decenax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS1338 sp900550805*. The type genome for the species is the GenBank assembly GCA_900550805.1. The GC content of the type genome is 52.16 % and the genome length is 1.6 Mbp.

Description of *Candidatus* Refacula gen. nov.

Candidatus Refacula (NL. fem. n. *Refacula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UMGS1338*. The type species for the genus is *Candidatus* Refacula decenax .

According to the original version of GTDB R06-RS202, this genus belongs to the family *QALW01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Lanugariaceae.

Description of *Candidatus* Refinana exaggibra sp. nov.

Candidatus Refinana exaggibra (NL. fem. n. *exaggibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2737125 sp002737125*. The type genome for the species is the GenBank assembly GCA_002737125.1. The GC content of the type genome is 56.93 % and the genome length is 1.26 Mbp.

Description of *Candidatus* Refinana gen. nov.

Candidatus Refinana (NL. fem. n. *Refinana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this genus is *GCA-2737125*. The type species for the genus is *Candidatus* Refinana exaggibra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *S36-B12*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Categidaceae.

Description of *Candidatus* Refinana excalatio sp. nov.

Candidatus Refinana excalatio (NL. fem. n. *excalatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2737125 sp009694585*. The type genome for the species is the GenBank assembly GCA_009694585.1. The GC content of the type genome is 57.33 % and the genome length is 1.69 Mbp.

Description of *Candidatus* Refinana hecatessa sp. nov.

Candidatus Refinana hecatessa (NL. fem. n. *hecatessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2737125 sp009702725*. The type genome for the species is the GenBank assembly GCA_009698095.1. The GC content of the type genome is 56.33 % and the genome length is 1.57 Mbp.

Description of *Candidatus* Refinana infatentia sp. nov.

Candidatus Refinana infatentia (NL. fem. n. *infatentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2737125 sp009700485*. The type genome for the species is the GenBank assembly GCA_009700485.1. The GC content of the type genome is 56.89 % and the genome length is 1.93 Mbp.

Description of *Candidatus* Refinana legifimonas sp. nov.

Candidatus Refinana legifimonas (NL. fem. n. *legifimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *GCA-2737125 sp903960135*. The type genome for the species is the GenBank assembly GCA_903935455.1. The GC content of the type genome is 59.48 % and the genome length is 2.14 Mbp.

Description of *Candidatus* Refinana necopilega sp. nov.

Candidatus Refinana necopilega (NL. fem. n. *necopilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2737125 sp005798555*. The type genome for the species is the GenBank assembly GCA_005789765.1. The GC content of the type genome is 60.18 % and the genome length is 1.89 Mbp.

Description of *Candidatus* Refinana opporifica sp. nov.

Candidatus Refinana opporifica (NL. fem. n. *opporifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2737125 sp014190275*. The type genome for the species is the GenBank assembly GCA_014190275.1. The GC content of the type genome is 58.91 % and the genome length is 2.25 Mbp.

Description of *Candidatus* Refinella cacomibra sp. nov.

Candidatus Refinella cacomibra (NL. fem. n. *cacomibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Zgenome-0027 sp003854995*. The type genome for the species is the GenBank assembly GCA_003854995.1. The GC content of the type genome is 52.65 % and the genome length is 3.54 Mbp.

Description of *Candidatus* Refinella gen. nov.

Candidatus Refinella (NL. fem. n. *Refinella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Zgenome-0027*. The type species for the genus is *Candidatus* Refinella cacomibra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *Zgenome-0027*. According to the renamed version of GTDB R06-RS202, this taxon

belongs to the family *Candidatus* Refinellaceae.

Description of *Candidatus* Refinellaceae fam. nov.

Candidatus Refinellaceae (NL. fem. n. *Refinellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *Zgenome-0027.* The type genus for the taxon is *Candidatus* Refinella .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA2214*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Renavosales.

Description of *Candidatus* Refinella inbelitica sp. nov.

Candidatus Refinella inbelitica (NL. fem. n. *inbelitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Zgenome-0027 sp003854975*. The type genome for the species is the GenBank assembly GCA_003854975.1. The GC content of the type genome is 46.83 % and the genome length is 5.42 Mbp.

Description of *Candidatus* Refinia catapitoga sp. nov.

Candidatus Refinia catapitoga (NL. fem. n. *catapitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RBG-16-66-30 sp001773855*. The type genome for the species is the GenBank assembly GCA_001773855.1. The GC content of the type genome is 63.73 % and the genome length is 1.79 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle background sediment; well D04 at 13ft depth".

Description of *Candidatus* Refinia gen. nov.

Candidatus Refinia (NL. fem. n. *Refinia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RBG-16-66-30*. The type species for the genus is *Candidatus* Refinia catapitoga .

According to the original version of GTDB R06-RS202, this genus belongs to the family *RBG-16-66-30*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Refiniaceae.

Description of *Candidatus* Refiniaceae fam. nov.

Candidatus Refiniaceae (NL. fem. n. *Refiniaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *RBG-16-66-30.* The type genus for the taxon is *Candidatus* Refinia .

According to GTDB R06-RS202, this family belongs to the order *Aminicenantales*.

Description of *Candidatus* Refinia detesivita sp. nov.

Candidatus Refinia detesivita (NL. fem. n. *detesivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RBG-16-66-30 sp011048485*. The type genome for the species is the GenBank assembly GCA_011048485.1. The GC content of the type genome is 66.47 % and the genome length is 2.05 Mbp.

Description of *Candidatus* Refinia effemicula sp. nov.

Candidatus Refinia effemicula (NL. fem. n. *effemicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RBG-16-66-30 sp012516875*. The type genome for the species is the GenBank assembly GCA_012516875.1. The GC content of the type genome is 63.82 % and the genome length is 4.03 Mbp.

Description of *Candidatus* Refinia fedititio sp. nov.

Candidatus Refinia fedititio (NL. fem. n. *fedititio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RBG-16-66-30 sp001775755*. The type genome for the species is the GenBank assembly GCA_001775755.1. The GC content of the type genome is 64.05 % and the genome length is 2.45 Mbp. The isolation source for the NCBI BioSample

associated with the type genome is descibed as "Rifle background sediment; well D04 at 19ft depth".

Description of *Candidatus* Refinia protrivita sp. nov.

Candidatus Refinia protrivita (NL. fem. n. *protrivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RBG-16-66-30 sp001775715*. The type genome for the species is the GenBank assembly GCA_001775715.1. The GC content of the type genome is 65.98 % and the genome length is 2.08 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle background sediment; well D04 at 16ft depth".

Description of *Candidatus* Refinida cilibitoga sp. nov.

Candidatus Refinida cilibitoga (NL. fem. n. *cilibitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABWCL01 sp013360295*. The type genome for the species is the GenBank assembly GCA_013360295.1. The GC content of the type genome is 43.03 % and the genome length is 4.46 Mbp.

Description of *Candidatus* Refinida gen. nov.

Candidatus Refinida (NL. fem. n. *Refinida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABWCL01*. The type species for the genus is *Candidatus* Refinida cilibitoga .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Refinida holisousia sp. nov.

Candidatus Refinida holisousia (NL. fem. n. *holisousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABWCL01 sp903843135*. The type genome for the species is the GenBank assembly GCA_903871165.1. The GC content of the type genome is 43.67 %

and the genome length is 3.93 Mbp.

Description of *Candidatus* Refinosa abluvimonas sp. nov.

Candidatus Refinosa abluvimonas (NL. fem. n. *abluvimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WTGL01 sp011525365*. The type genome for the species is the GenBank assembly GCA_011525365.1. The GC content of the type genome is 68.47 % and the genome length is 4.22 Mbp.

Description of *Candidatus* Refinosa gen. nov.

Candidatus Refinosa (NL. fem. n. *Refinosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WTGL01*. The type species for the genus is *Candidatus* Refinosa abluvimonas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *QQVD01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cululidaceae.

Description of *Candidatus* Refinosa cerucitio sp. nov.

Candidatus Refinosa cerucitio (NL. fem. n. *cerucitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WTGL01 sp009837885*. The type genome for the species is the GenBank assembly GCA_009842435.1. The GC content of the type genome is 68.46 % and the genome length is 4.35 Mbp.

Description of *Candidatus* Refinosa desonilenta sp. nov.

Candidatus Refinosa desonilenta (NL. fem. n. *desonilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WTGL01 sp009843505*. The type genome for the species is the GenBank assembly GCA_009843505.1. The GC content of the type genome is 68.31 % and the genome length is 4.52 Mbp.

Description of *Candidatus* Refinosa detotatio sp. nov.

Candidatus Refinosa detotatio (NL. fem. n. *detotatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WTGL01 sp009837085*. The type genome for the species is the GenBank assembly GCA_009837085.1. The GC content of the type genome is 68.32 % and the genome length is 4.32 Mbp.

Description of *Candidatus* Refinosa lucericella sp. nov.

Candidatus Refinosa lucericella (NL. fem. n. *lucericella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WTGL01 sp012270995*. The type genome for the species is the GenBank assembly GCA_012270995.1. The GC content of the type genome is 68.27 % and the genome length is 5.27 Mbp.

Description of *Candidatus* Refinosa malogicella sp. nov.

Candidatus Refinosa malogicella (NL. fem. n. *malogicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WTGL01 sp009845425*. The type genome for the species is the GenBank assembly GCA_009838785.1. The GC content of the type genome is 68.32 % and the genome length is 4.33 Mbp.

Description of *Candidatus* Refinosa refunifica sp. nov.

Candidatus Refinosa refunifica (NL. fem. n. *refunifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WTGL01 sp011523565*. The type genome for the species is the GenBank assembly GCA_011523565.1. The GC content of the type genome is 68.09 % and the genome length is 3.72 Mbp.

Description of *Candidatus* Refinosa rurigousia sp. nov.

Candidatus Refinosa rurigousia (NL. fem. n. *rurigousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WTGL01 sp009836625*. The type genome for the species is the GenBank assembly GCA_009844385.1. The GC content of the type genome is 68.43 % and the genome length is 4.3 Mbp.

Description of *Candidatus* Refinula bucoliforma sp. nov.

Candidatus Refinula bucoliforma (NL. fem. n. *bucoliforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GWB1-37-8 sp903872785*. The type genome for the species is the GenBank assembly GCA_903827285.1. The GC content of the type genome is 35.79 % and the genome length is 0.9 Mbp.

Description of *Candidatus* Refinula gen. nov.

Candidatus Refinula (NL. fem. n. *Refinula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GWB1-37-8*. The type species for the genus is *Candidatus* Refinula bucoliforma .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA12049*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Catecariaceae.

Description of *Candidatus* Refinula dececiforma sp. nov.

Candidatus Refinula dececiforma (NL. fem. n. *dececiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GWB1-37-8 sp001782645*. The type genome for the species is the GenBank assembly GCA_000992095.1. The GC content of the type genome is 36.75 % and the genome length is 0.71 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "aquifer sediment".

Description of *Candidatus* Refinula melopimonia sp. nov.

Candidatus Refinula melopimonia (NL. fem. n. *melopimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GWB1-37-8 sp001783805*. The type genome for the species is the GenBank assembly GCA_001782335.1. The GC content of the type genome is 38.56 % and the genome length is 0.74 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 1.2 micron filter; full assembly".

Description of *Candidatus* Refocana adgesisca sp. nov.

Candidatus Refocana adgesisca (NL. fem. n. *adgesisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *40CM-3-55-5 sp001914815*. The type genome for the species is the GenBank assembly GCA_001914815.1. The GC content of the type genome is 55.37 % and the genome length is 2.77 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Soil sample from Angelo meadow plot 2; 20cm depth; 6 days after first rain event (27mm)".

Description of *Candidatus* Refocana gen. nov.

Candidatus Refocana (NL. fem. n. *Refocana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *40CM-3-55-5*. The type species for the genus is *Candidatus* Refocana adgesisca .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Refocana exhonax sp. nov.

Candidatus Refocana exhonax (NL. fem. n. *exhonax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *40CM-3-55-5 sp003224935*. The type genome for the species is the GenBank assembly GCA_003224935.1. The GC content of the type genome is 55.16 % and the genome length is 4.12 Mbp.

Description of *Candidatus* Refocana minagugo sp. nov.

Candidatus Refocana minagugo (NL. fem. n. *minagugo* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *40CM-3-55-5 sp001918935*. The type genome for the species is the GenBank assembly GCA_001917495.1. The GC content of the type genome is 55.22 % and the genome length is 1.76 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Soil sample from Angelo meadow plot 2; 20cm depth; 2 days after second rain event (91mm)".

Description of *Candidatus* Refocaria maligitia sp. nov.

Candidatus Refocaria maligitia (NL. fem. n. *maligitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *VXNJ01 sp009840625*. The type genome for the species is the GenBank assembly GCA_009840625.1. The GC content of the type genome is 64.84 % and the genome length is 2.27 Mbp.

Description of *Candidatus* Refocaria gen. nov.

Candidatus Refocaria (NL. fem. n. *Refocaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *VXNJ01*. The type species for the genus is *Candidatus* Refocaria maligitia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *VXNJ01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Refocariaceae.

Description of *Candidatus* Refocariaceae fam. nov.

Candidatus Refocariaceae (NL. fem. n. *Refocariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *VXNJ01.* The type genus for the taxon is *Candidatus* Refocaria .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA11872*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Rosacidales.

Description of *Candidatus* Refocella acculax sp. nov.

Candidatus Refocella acculax (NL. fem. n. *acculax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *E44-bin18 sp004376575*. The type genome for the species is the GenBank assembly GCA_004376575.1. The GC content of the type genome is 50.21 % and the genome length is 3.0 Mbp.

Description of *Candidatus* Refocella gen. nov.

Candidatus Refocella (NL. fem. n. *Refocella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *E44-bin18*. The type species for the genus is *Candidatus* Refocella acculax .

According to the original version of GTDB R06-RS202, this genus belongs to the family *E44-bin18*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Refocellaceae.

Description of *Candidatus* Refocellaceae fam. nov.

Candidatus Refocellaceae (NL. fem. n. *Refocellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *E44-bin18.* The type genus for the taxon is *Candidatus* Refocella .

According to the original version of GTDB R06-RS202, this family belongs to the order *E44-bin18*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Refocellales.

Description of *Candidatus* Refocellales ord. nov.

Candidatus Refocellales (NL. fem. n. *Refocellales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *E44-bin18.* The type genus for the taxon is *Candidatus* Refocella .

According to the original version of GTDB R06-RS202, this family belongs to the class *DG-26*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Cacopellae.

Description of *Candidatus* Refocia infucastra sp. nov.

Candidatus Refocia infucastra (NL. fem. n. *infucastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CACXFL01 sp902766925*. The type genome for the species is the GenBank assembly GCA_902766925.1. The GC content of the type genome is 31.42 % and the genome length is 2.36 Mbp.

Description of *Candidatus* Refocia gen. nov.

Candidatus Refocia (NL. fem. n. *Refocia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CACXFL01*. The type species for the genus is *Candidatus* Refocia infucastra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CACXFL01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Refociaceae.

Description of *Candidatus* Refociaceae fam. nov.

Candidatus Refociaceae (NL. fem. n. *Refociaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CACXFL01.* The type genus for the taxon is *Candidatus* Refocia .

According to GTDB R06-RS202, this family belongs to the order *Oligoflexales*.

Description of *Candidatus* Refocida cibicitoga sp. nov.

Candidatus Refocida cibicitoga (NL. fem. n. *cibicitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIJKW01 sp903821355*. The type genome for the species is the GenBank assembly GCA_903821355.1. The GC content of the type genome is 37.18 % and the genome length is 0.98 Mbp.

Description of *Candidatus* Refocida gen. nov.

Candidatus Refocida (NL. fem. n. *Refocida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIJKW01*. The type species for the genus is *Candidatus* Refocida cibicitoga .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAIZLB01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Bicapariaceae.

Description of *Candidatus* Refocida inmoritica sp. nov.

Candidatus Refocida inmoritica (NL. fem. n. *inmoritica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIJKW01 sp903864515*. The type genome for the species is the GenBank assembly GCA_903864515.1. The GC content of the type genome is 35.81 % and the genome length is 0.93 Mbp.

Description of *Candidatus* Refocida nocenivita sp. nov.

Candidatus Refocida nocenivita (NL. fem. n. *nocenivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIJKW01 sp903848795*. The type genome for the species is the GenBank assembly GCA_903900915.1. The GC content of the type genome is 36.95 % and the genome length is 0.99 Mbp.

Description of *Candidatus* Refocida solacigena sp. nov.

Candidatus Refocida solacigena (NL. fem. n. *solacigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIJKW01 sp903952785*. The type genome for the species is the GenBank assembly GCA_903952785.1. The GC content of the type genome is 37.33 % and the genome length is 0.88 Mbp.

Description of *Candidatus* Refocida supelibra sp. nov.

Candidatus Refocida supelibra (NL. fem. n. *supelibra* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIJKW01 sp903936565*. The type genome for the species is the GenBank assembly GCA_903936565.1. The GC content of the type genome is 37.49 % and the genome length is 1.04 Mbp.

Description of *Candidatus* Refocosa rutabibra sp. nov.

Candidatus Refocosa rutabibra (NL. fem. n. *rutabibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-01-FULL-39-24 sp001789445*. The type genome for the species is the GenBank assembly GCA_001789955.1. The GC content of the type genome is 38.78 % and the genome length is 0.71 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under low O2 conditions; 0.2 micron filter; full assembly".

Description of *Candidatus* Refocosa gen. nov.

Candidatus Refocosa (NL. fem. n. *Refocosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *2-01-FULL-39-24*. The type species for the genus is *Candidatus* Refocosa rutabibra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *HO2-37-13b*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Semifidaceae.

Description of *Candidatus* Refocula baropibula sp. nov.

Candidatus Refocula baropibula (NL. fem. n. *baropibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG727 sp902797005*. The type genome for the species is the GenBank assembly GCA_902797005.1. The GC content of the type genome is 28.85 % and the genome length is 1.02 Mbp.

Description of *Candidatus* Refocula gen. nov.

Candidatus Refocula (NL. fem. n. *Refocula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RUG727*. The type species for the genus is *Candidatus* Refocula baropibula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA660*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vitigellaceae.

Description of *Candidatus* Refocula genocitio sp. nov.

Candidatus Refocula genocitio (NL. fem. n. *genocitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG727 sp900321795*. The type genome for the species is the GenBank assembly GCA_900321795.1. The GC content of the type genome is 28.37 % and the genome length is 0.9 Mbp.

Description of *Candidatus* Reforana addivitoga sp. nov.

Candidatus Reforana addivitoga (NL. fem. n. *addivitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG440 sp902772085*. The type genome for the species is the GenBank assembly GCA_902772085.1. The GC content of the type genome is 59.12 % and the genome length is 2.98 Mbp.

Description of *Candidatus* Reforana gen. nov.

Candidatus Reforana (NL. fem. n. *Reforana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RUG440*. The type species for the genus is *Candidatus* Reforana addivitoga .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Reforana adgesibula sp. nov.

Candidatus Reforana adgesibula (NL. fem. n. *adgesibula* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG440 sp902793465*. The type genome for the species is the GenBank assembly GCA_902793465.1. The GC content of the type genome is 57.43 % and the genome length is 3.11 Mbp.

Description of *Candidatus* Reforana amnenitoga sp. nov.

Candidatus Reforana amnenitoga (NL. fem. n. *amnenitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG440 sp902786015*. The type genome for the species is the GenBank assembly GCA_902786015.1. The GC content of the type genome is 57.72 % and the genome length is 3.49 Mbp.

Description of *Candidatus* Reforana antomitio sp. nov.

Candidatus Reforana antomitio (NL. fem. n. *antomitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG440 sp902793195*. The type genome for the species is the GenBank assembly GCA_902793195.1. The GC content of the type genome is 61.56 % and the genome length is 3.04 Mbp.

Description of *Candidatus* Reforana assicatio sp. nov.

Candidatus Reforana assicatio (NL. fem. n. *assicatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG440 sp902798915*. The type genome for the species is the GenBank assembly GCA_902798915.1. The GC content of the type genome is 60.61 % and the genome length is 3.99 Mbp.

Description of *Candidatus* Reforana decitilega sp. nov.

Candidatus Reforana decitilega (NL. fem. n. *decitilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG440 sp902766445*. The type genome for the species is the GenBank assembly GCA_902766445.1. The GC content of the type genome is 58.9 % and the genome length is 4.07 Mbp.

Description of *Candidatus* Reforana estovisca sp. nov.

Candidatus Reforana estovisca (NL. fem. n. *estovisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG440 sp902803315*. The type genome for the species is the GenBank assembly GCA_902803315.1. The GC content of the type genome is 58.41 % and the genome length is 2.95 Mbp.

Description of *Candidatus* Reforana semigicella sp. nov.

Candidatus Reforana semigicella (NL. fem. n. *semigicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG440 sp902780305*. The type genome for the species is the GenBank assembly GCA_902780305.1. The GC content of the type genome is 61.67 % and the genome length is 3.19 Mbp.

Description of *Candidatus* Reforana semimisca sp. nov.

Candidatus Reforana semimisca (NL. fem. n. *semimisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG440 sp900318935*. The type genome for the species is the GenBank assembly GCA_902759715.1. The GC content of the type genome is 59.31 % and the genome length is 2.62 Mbp.

Description of *Candidatus* Reforaria adnulugo sp. nov.

Candidatus Reforaria adnulugo (NL. fem. n. *adnulugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PUMD01 sp003551215*. The type genome for the species is the GenBank assembly GCA_003551215.1. The GC content of the type genome is 56.17 % and the genome length is 2.83 Mbp.

Description of *Candidatus* Reforaria gen. nov.

Candidatus Reforaria (NL. fem. n. *Reforaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PUMD01*. The type species for the genus is *Candidatus* Reforaria adnulugo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *PUMD01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Reforariaceae.

Description of *Candidatus* Reforariaceae fam. nov.

Candidatus Reforariaceae (NL. fem. n. *Reforariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *PUMD01*. The type genus for the taxon is *Candidatus* Reforaria .

According to the original version of GTDB R06-RS202, this family belongs to the order *SLMV01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Revecidales.

Description of *Candidatus* Reforella obfenastra sp. nov.

Candidatus Reforella obfenastra (NL. fem. n. *obfenastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *KS3-K002 sp011774835*. The type genome for the species is the GenBank assembly GCA_011774835.1. The GC content of the type genome is 66.75 % and the genome length is 3.76 Mbp.

Description of *Candidatus* Reforella gen. nov.

Candidatus Reforella (NL. fem. n. *Reforella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *KS3-K002*. The type species for the genus is *Candidatus* Reforella obfenastra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *KS3-K002*. According to the renamed version of GTDB R06-RS202, this taxon belongs

to the family *Candidatus* Reforellaceae.

Description of *Candidatus* Reforellaceae fam. nov.

Candidatus Reforellaceae (NL. fem. n. *Reforellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *KS3-K002.* The type genus for the taxon is *Candidatus* Reforella .

According to the original version of GTDB R06-RS202, this family belongs to the order *KS3-K002*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Reforellales.

Description of *Candidatus* Reforellales ord. nov.

Candidatus Reforellales (NL. fem. n. *Reforellales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *KS3-K002.* The type genus for the taxon is *Candidatus* Reforella .

According to the GTDB R06-RS202, this order belongs to the class *Gemmatimonadetes*.

Description of *Candidatus* Reforia curacastra sp. nov.

Candidatus Reforia curacastra (NL. fem. n. *curacastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SHUY01 sp009694435*. The type genome for the species is the GenBank assembly GCA_009697865.1. The GC content of the type genome is 53.26 % and the genome length is 1.81 Mbp.

Description of *Candidatus* Reforia gen. nov.

Candidatus Reforia (NL. fem. n. *Reforia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SHUY01*. The type species for the genus is *Candidatus* Reforia curacastra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *PALSA-555*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Pocilulaceae.

Description of *Candidatus* Reforida bimotastra sp. nov.

Candidatus Reforida bimotastra (NL. fem. n. *bimotastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RBG-13-53-26 sp001795035*. The type genome for the species is the GenBank assembly GCA_001795035.1. The GC content of the type genome is 53.7 % and the genome length is 1.6 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle background sediment; well D04 at 13ft depth".

Description of *Candidatus* Reforida gen. nov.

Candidatus Reforida (NL. fem. n. *Reforida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RBG-13-53-26*. The type species for the genus is *Candidatus* Reforida bimotastra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *RBG-13-53-26*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Reforidaceae.

Description of *Candidatus* Reforidaceae fam. nov.

Candidatus Reforidaceae (NL. fem. n. *Reforidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *RBG-13-53-26.* The type genus for the taxon is *Candidatus* Reforida .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA2777*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Horomanales.

Description of *Candidatus* Reforosa bipeniforma sp. nov.

Candidatus Reforosa bipeniforma (NL. fem. n. *bipeniforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *KS41 sp903905335*. The type genome for the species is the GenBank assembly GCA_903932495.1. The GC content of the type genome is 40.34 % and the

genome length is 2.87 Mbp.

Description of *Candidatus* Reforosa gen. nov.

Candidatus Reforosa (NL. fem. n. *Reforosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *KS41*. The type species for the genus is *Candidatus* Reforosa bipeniforma .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Reforosa canacetta sp. nov.

Candidatus Reforosa canacetta (NL. fem. n. *canacetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *KS41 sp003584865*. The type genome for the species is the GenBank assembly GCA_003584865.1. The GC content of the type genome is 41.67 % and the genome length is 2.52 Mbp.

Description of *Candidatus* Reforosa cenotibula sp. nov.

Candidatus Reforosa cenotibula (NL. fem. n. *cenotibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *KS41 sp903903765*. The type genome for the species is the GenBank assembly GCA_903903765.1. The GC content of the type genome is 38.28 % and the genome length is 1.92 Mbp.

Description of *Candidatus* Reforosa cenotimonia sp. nov.

Candidatus Reforosa cenotimonia (NL. fem. n. *cenotimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *KS41 sp903873165*. The type genome for the species is the GenBank assembly GCA_903873165.1. The GC content of the type genome is 39.43 % and the genome length is 3.46 Mbp.

Description of *Candidatus* Reforosa cepulicella sp. nov.

Candidatus Reforosa cepulicella (NL. fem. n. *cepulicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *KS41 sp903939355*. The type genome for the species is the GenBank assembly GCA_903933495.1. The GC content of the type genome is 39.24 % and the genome length is 2.82 Mbp.

Description of *Candidatus* Reforosa coninivita sp. nov.

Candidatus Reforosa coninivita (NL. fem. n. *coninivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *KS41 sp903908165*. The type genome for the species is the GenBank assembly GCA_903830715.1. The GC content of the type genome is 38.41 % and the genome length is 2.71 Mbp.

Description of *Candidatus* Reforosa decupitio sp. nov.

Candidatus Reforosa decupitio (NL. fem. n. *decupitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *KS41 sp903934035*. The type genome for the species is the GenBank assembly GCA_903934035.1. The GC content of the type genome is 39.73 % and the genome length is 3.19 Mbp.

Description of *Candidatus* Reforosa defanifica sp. nov.

Candidatus Reforosa defanifica (NL. fem. n. *defanifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *KS41 sp903859415*. The type genome for the species is the GenBank assembly GCA_903857775.1. The GC content of the type genome is 41.73 % and the genome length is 2.46 Mbp.

Description of *Candidatus* Reforosa deparax sp. nov.

Candidatus Reforosa deparax (NL. fem. n. *deparax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *KS41 sp903873045*. The type genome for the species is the GenBank assembly GCA_903873045.1. The GC content of the type genome is 43.61 % and the genome length is 4.24 Mbp.

Description of *Candidatus* Reforosa derecessa sp. nov.

Candidatus Reforosa derecessa (NL. fem. n. *derecessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *KS41 sp903938485*. The type genome for the species is the GenBank assembly GCA_903844515.1. The GC content of the type genome is 38.12 % and the genome length is 2.48 Mbp.

Description of *Candidatus* Reforosa detesibula sp. nov.

Candidatus Reforosa detesibula (NL. fem. n. *detesibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *KS41 sp903910205*. The type genome for the species is the GenBank assembly GCA_903885955.1. The GC content of the type genome is 41.29 % and the genome length is 2.9 Mbp.

Description of *Candidatus* Reforosa dicabilega sp. nov.

Candidatus Reforosa dicabilega (NL. fem. n. *dicabilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *KS41 sp002862125*. The type genome for the species is the GenBank assembly GCA_002862125.1. The GC content of the type genome is 46.8 % and the genome length is 4.74 Mbp.

Description of *Candidatus* Reforosa hegumitoga sp. nov.

Candidatus Reforosa hegumitoga (NL. fem. n. *hegumitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *KS41 sp903839855*. The type genome for the species is the GenBank assembly GCA_903913685.1. The GC content of the type genome is 41.1 % and the

genome length is 3.42 Mbp.

Description of *Candidatus* Reforosa hirunugo sp. nov.

Candidatus Reforosa hirunugo (NL. fem. n. *hirunugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *KS41 sp002256705*. The type genome for the species is the GenBank assembly GCA_002256705.1. The GC content of the type genome is 44.82 % and the genome length is 1.9 Mbp.

Description of *Candidatus* Reforosa homunibula sp. nov.

Candidatus Reforosa homunibula (NL. fem. n. *homunibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *KS41 sp903917345*. The type genome for the species is the GenBank assembly GCA_903864705.1. The GC content of the type genome is 39.99 % and the genome length is 2.25 Mbp.

Description of *Candidatus* Reforosa impacitudo sp. nov.

Candidatus Reforosa impacitudo (NL. fem. n. *impacitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *KS41 sp003158415*. The type genome for the species is the GenBank assembly GCA_003158415.1. The GC content of the type genome is 48.2 % and the genome length is 3.1 Mbp.

Description of *Candidatus* Reforosa indubitas sp. nov.

Candidatus Reforosa indubitas (NL. fem. n. *indubitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *KS41 sp903839795*. The type genome for the species is the GenBank assembly GCA_903839795.1. The GC content of the type genome is 43.83 % and the genome length is 3.56 Mbp.

Description of *Candidatus* Reforosa inornigena sp. nov.

Candidatus Reforosa inornigena (NL. fem. n. *inornigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *KS41 sp903903365*. The type genome for the species is the GenBank assembly GCA_903903365.1. The GC content of the type genome is 44.47 % and the genome length is 3.96 Mbp.

Description of *Candidatus* Reforosa luxuritio sp. nov.

Candidatus Reforosa luxuritio (NL. fem. n. *luxuritio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *KS41 sp903866825*. The type genome for the species is the GenBank assembly GCA_903866825.1. The GC content of the type genome is 41.52 % and the genome length is 4.28 Mbp.

Description of *Candidatus* Reforosa oblucimonia sp. nov.

Candidatus Reforosa oblucimonia (NL. fem. n. *oblucimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *KS41 sp013140465*. The type genome for the species is the GenBank assembly GCA_013140465.1. The GC content of the type genome is 49.16 % and the genome length is 3.6 Mbp.

Description of *Candidatus* Reforosa omnivitura sp. nov.

Candidatus Reforosa omnivitura (NL. fem. n. *omnivitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *KS41 sp002256465*. The type genome for the species is the GenBank assembly GCA_002256465.1. The GC content of the type genome is 44.25 % and the genome length is 1.67 Mbp.

Description of *Candidatus* Reforosa rinocicella sp. nov.

Candidatus Reforosa rinocicella (NL. fem. n. *rinocicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *KS41 sp903918335*. The type genome for the species is the GenBank assembly GCA_903821065.1. The GC content of the type genome is 38.55 % and the genome length is 2.08 Mbp.

Description of *Candidatus* Reforosa sanabugo sp. nov.

Candidatus Reforosa sanabugo (NL. fem. n. *sanabugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *KS41 sp003584875*. The type genome for the species is the GenBank assembly GCA_903851585.1. The GC content of the type genome is 39.98 % and the genome length is 3.31 Mbp.

Description of *Candidatus* Reforosa tegumiforma sp. nov.

Candidatus Reforosa tegumiforma (NL. fem. n. *tegumiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *KS41 sp903863905*. The type genome for the species is the GenBank assembly GCA_903880255.1. The GC content of the type genome is 40.67 % and the genome length is 2.93 Mbp.

Description of *Candidatus* Reforosa tubicentia sp. nov.

Candidatus Reforosa tubicentia (NL. fem. n. *tubicentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *KS41 sp003584895*. The type genome for the species is the GenBank assembly GCA_903914745.1. The GC content of the type genome is 40.67 % and the genome length is 2.54 Mbp.

Description of *Candidatus* Reforula expisessa sp. nov.

Candidatus Reforula expisessa (NL. fem. n. *expisessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYPW01 sp012519615*. The type genome for the species is the GenBank assembly GCA_012519615.1. The GC content of the type genome is 26.05 %

and the genome length is 1.8 Mbp.

Description of *Candidatus* Reforula gen. nov.

Candidatus Reforula (NL. fem. n. *Reforula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAYPW01*. The type species for the genus is *Candidatus* Reforula expisessa .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JAAYPW01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Reforulaceae.

Description of *Candidatus* Reforulaceae fam. nov.

Candidatus Reforulaceae (NL. fem. n. *Reforulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JAAYPW01.* The type genus for the taxon is *Candidatus* Reforula .

According to GTDB R06-RS202, this family belongs to the order *Fusobacteriales*.

Description of *Candidatus* Refulana velivousia sp. nov.

Candidatus Refulana velivousia (NL. fem. n. *velivousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SFDB01 sp004558825*. The type genome for the species is the GenBank assembly GCA_900540695.1. The GC content of the type genome is 51.0 % and the genome length is 1.68 Mbp.

Description of *Candidatus* Refulana gen. nov.

Candidatus Refulana (NL. fem. n. *Refulana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SFDB01*. The type species for the genus is *Candidatus* Refulana velivousia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-138*. According to the renamed version of GTDB R06-RS202, this taxon belongs to

the family *Candidatus* Selecellaceae.

Description of *Candidatus* Refulella detenimonia sp. nov.

Candidatus Refulella detenimonia (NL. fem. n. *detenimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG11623 sp902770965*. The type genome for the species is the GenBank assembly GCA_902768865.1. The GC content of the type genome is 50.56 % and the genome length is 2.39 Mbp.

Description of *Candidatus* Refulella gen. nov.

Candidatus Refulella (NL. fem. n. *Refulella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RUG11623*. The type species for the genus is *Candidatus* Refulella detenimonia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Refulia antacisca sp. nov.

Candidatus Refulia antacisca (NL. fem. n. *antacisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GWF2-35-9 sp001783275*. The type genome for the species is the GenBank assembly GCA_001783275.1. The GC content of the type genome is 34.53 % and the genome length is 2.35 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at time point 6 / F; 5m depth; 0.2 filter".

Description of *Candidatus* Refulia gen. nov.

Candidatus Refulia (NL. fem. n. *Refulia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GWF2-35-9*. The type species for the genus is *Candidatus* Refulia antacisca .

According to the original version of GTDB R06-RS202, this genus belongs to the family

GWF2-35-9. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Refuliaceae.

Description of *Candidatus* Refuliaceae fam. nov.

Candidatus Refuliaceae (NL. fem. n. *Refuliaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *GWF2-35-9.* The type genus for the taxon is *Candidatus* Refulia .

According to the original version of GTDB R06-RS202, this family belongs to the order *GWF2-35-9*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Refuliales.

Description of *Candidatus* Refuliales ord. nov.

Candidatus Refuliales (NL. fem. n. *Refuliales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *GWF2-35-9.* The type genus for the taxon is *Candidatus* Refulia .

According to the GTDB R06-RS202, this order belongs to the class *Riflemargulisbacteria*.

Description of *Candidatus* Refulida adalgibula sp. nov.

Candidatus Refulida adalgibula (NL. fem. n. *adalgibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG14156 sp902796305*. The type genome for the species is the GenBank assembly GCA_902796305.1. The GC content of the type genome is 32.46 % and the genome length is 1.89 Mbp.

Description of *Candidatus* Refulida gen. nov.

Candidatus Refulida (NL. fem. n. *Refulida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RUG14156*. The type species for the genus is *Candidatus* Refulida adalgibula .

According to the original version of GTDB R06-RS202, this genus belongs to the family

RUG14156. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Refulidaceae.

Description of *Candidatus* Refulidaceae fam. nov.

Candidatus Refulidaceae (NL. fem. n. *Refulidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *RUG14156.* The type genus for the taxon is *Candidatus* Refulida .

According to GTDB R06-RS202, this family belongs to the order *Gastranaerophilales*.

Description of *Candidatus* Refulida inresitudo sp. nov.

Candidatus Refulida inresitudo (NL. fem. n. *inresitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG14156 sp902796515*. The type genome for the species is the GenBank assembly GCA_902796515.1. The GC content of the type genome is 33.16 % and the genome length is 1.85 Mbp.

Description of *Candidatus* Refulosa alluvitrix sp. nov.

Candidatus Refulosa alluvitrix (NL. fem. n. *alluvitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *NMUJ01 sp002256535*. The type genome for the species is the GenBank assembly GCA_002256535.1. The GC content of the type genome is 44.84 % and the genome length is 0.89 Mbp.

Description of *Candidatus* Refulosa gen. nov.

Candidatus Refulosa (NL. fem. n. *Refulosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *NMUJ01*. The type species for the genus is *Candidatus* Refulosa alluvitrix .

According to the original version of GTDB R06-RS202, this genus belongs to the family *NMUJ01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Refulosaceae.

Description of *Candidatus* Refulosaceae fam. nov.

Candidatus Refulosaceae (NL. fem. n. *Refulosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *NMUJ01*. The type genus for the taxon is *Candidatus* Refulosa .

According to the original version of GTDB R06-RS202, this family belongs to the order *NMUJ01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Refulosales.

Description of *Candidatus* Refulosales ord. nov.

Candidatus Refulosales (NL. fem. n. *Refulosales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *NMUJ01*. The type genus for the taxon is *Candidatus* Refulosa .

According to the original version of GTDB R06-RS202, this family belongs to the class *UBA3073*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Morigosae.

Description of *Candidatus* Refulula ensifitas sp. nov.

Candidatus Refulula ensifitas (NL. fem. n. *ensifitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *13-1-40CM-64-14 sp001917855*. The type genome for the species is the GenBank assembly GCA_001917855.1. The GC content of the type genome is 64.09 % and the genome length is 2.08 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Soil sample from Angelo meadow plot 1; 40cm depth; pre rain".

Description of *Candidatus* Refulula gen. nov.

Candidatus Refulula (NL. fem. n. *Refulula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *13-1-40CM-64-14*. The type species for the genus is *Candidatus* Refulula ensifitas .

According to the original version of GTDB R06-RS202, this genus belongs to the family

13-1-40CM-64-14. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Refululaceae.

Description of *Candidatus* Refululaceae fam. nov.

Candidatus Refululaceae (NL. fem. n. *Refululaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *13-1-40CM-64-14.* The type genus for the taxon is *Candidatus* Refulula .

According to the original version of GTDB R06-RS202, this family belongs to the order *CSP1-3*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Minagiales.

Description of *Candidatus* Refunana defasitio sp. nov.

Candidatus Refunana defasitio (NL. fem. n. *defasitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CSBR16-87 sp007116105*. The type genome for the species is the GenBank assembly GCA_007116105.1. The GC content of the type genome is 45.68 % and the genome length is 1.08 Mbp.

Description of *Candidatus* Refunana gen. nov.

Candidatus Refunana (NL. fem. n. *Refunana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CSBR16-87*. The type species for the genus is *Candidatus* Refunana defasitio .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Refunana enimvicula sp. nov.

Candidatus Refunana enimvicula (NL. fem. n. *enimvicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CSBR16-87 sp007123535*. The type genome for the species is the

GenBank assembly GCA_007123535.1. The GC content of the type genome is 43.98 % and the genome length is 0.9 Mbp.

Description of *Candidatus* Refunana rutabitudo sp. nov.

Candidatus Refunana rutabitudo (NL. fem. n. *rutabitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CSBR16-87 sp007117565*. The type genome for the species is the GenBank assembly GCA_007117565.1. The GC content of the type genome is 43.77 % and the genome length is 0.53 Mbp.

Description of *Candidatus* Refunaria corocessa sp. nov.

Candidatus Refunaria corocessa (NL. fem. n. *corocessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAJANQ01 sp903930035*. The type genome for the species is the GenBank assembly GCA_903930035.1. The GC content of the type genome is 73.33 % and the genome length is 2.5 Mbp.

Description of *Candidatus* Refunaria gen. nov.

Candidatus Refunaria (NL. fem. n. *Refunaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAJANQ01*. The type species for the genus is *Candidatus* Refunaria corocessa .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Refunaria lanifisca sp. nov.

Candidatus Refunaria lanifisca (NL. fem. n. *lanifisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAJANQ01 sp903941145*. The type genome for the species is the GenBank assembly GCA_903941145.1. The GC content of the type genome is 71.26 % and the genome length is 2.75 Mbp.

Description of *Candidatus* Refunella citocetta sp. nov.

Candidatus Refunella citocetta (NL. fem. n. *citocetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4064 sp002382065*. The type genome for the species is the GenBank assembly GCA_002424785.1. The GC content of the type genome is 50.42 % and the genome length is 4.68 Mbp.

Description of *Candidatus* Refunella gen. nov.

Candidatus Refunella (NL. fem. n. *Refunella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA4064*. The type species for the genus is *Candidatus* Refunella citocetta .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Refunia adsigatica sp. nov.

Candidatus Refunia adsigatica (NL. fem. n. *adsigatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SIBE01 sp009695265*. The type genome for the species is the GenBank assembly GCA_009695265.1. The GC content of the type genome is 55.04 % and the genome length is 3.1 Mbp.

Description of *Candidatus* Refunia gen. nov.

Candidatus Refunia (NL. fem. n. *Refunia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SIBE01*. The type species for the genus is *Candidatus* Refunia adsigatica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SIBE01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Refuniaceae.

Description of *Candidatus* Refuniaceae fam. nov.

Candidatus Refuniaceae (NL. fem. n. *Refuniaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SIBE01.* The type genus for the taxon is *Candidatus* Refunia .

According to GTDB R06-RS202, this family belongs to the order *Pedosphaerales*.

Description of *Candidatus* Refunida delapago sp. nov.

Candidatus Refunida delapago (NL. fem. n. *delapago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA12223 sp002937495*. The type genome for the species is the GenBank assembly GCA_002937495.1. The GC content of the type genome is 31.2 % and the genome length is 1.01 Mbp.

Description of *Candidatus* Refunida gen. nov.

Candidatus Refunida (NL. fem. n. *Refunida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA12223*. The type species for the genus is *Candidatus* Refunida delapago .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA12223*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Refunidaceae.

Description of *Candidatus* Refunidaceae fam. nov.

Candidatus Refunidaceae (NL. fem. n. *Refunidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA12223.* The type genus for the taxon is *Candidatus* Refunida .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA1280*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Redacariales.

Description of *Candidatus* Refunida vicecigena sp. nov.

Candidatus Refunida vicecigena (NL. fem. n. *vicecigena* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA12223 sp003450915*. The type genome for the species is the GenBank assembly GCA_003450915.1. The GC content of the type genome is 32.04 % and the genome length is 1.34 Mbp.

Description of *Candidatus* Refunosa cenobessa sp. nov.

Candidatus Refunosa cenobessa (NL. fem. n. *cenobessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG626 sp900317385*. The type genome for the species is the GenBank assembly GCA_900317385.1. The GC content of the type genome is 54.93 % and the genome length is 1.68 Mbp.

Description of *Candidatus* Refunosa gen. nov.

Candidatus Refunosa (NL. fem. n. *Refunosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RUG626*. The type species for the genus is *Candidatus* Refunosa cenobessa .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Refunosa femelitoga sp. nov.

Candidatus Refunosa femelitoga (NL. fem. n. *femelitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG626 sp900320765*. The type genome for the species is the GenBank assembly GCA_900320765.1. The GC content of the type genome is 55.04 % and the genome length is 1.61 Mbp.

Description of *Candidatus* Refunula subofitura sp. nov.

Candidatus Refunula subofitura (NL. fem. n. *subofitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-01-FULL-33-17 sp001786995*. The type genome for the species is the GenBank assembly GCA_001785485.1. The GC content of the type genome is 32.68 % and the genome length is 0.59 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 0.2 micron filter; full assembly".

Description of *Candidatus* Refunula gen. nov.

Candidatus Refunula (NL. fem. n. *Refunula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *2-01-FULL-33-17*. The type species for the genus is *Candidatus* Refunula subofitura .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA9973*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Relaposaceae.

Description of *Candidatus* Regifana fumacivita sp. nov.

Candidatus Regifana fumacivita (NL. fem. n. *fumacivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GAS474 sp900105685*. The type genome for the species is the GenBank assembly RS_GCF_900105685.1. The GC content of the type genome is 65.76 % and the genome length is 3.76 Mbp.

Description of *Candidatus* Regifana gen. nov.

Candidatus Regifana (NL. fem. n. *Regifana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GAS474*. The type species for the genus is *Candidatus* Regifana fumacivita .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GAS474*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Regifanaceae.

Description of *Candidatus* Regifanaceae fam. nov.

Candidatus Regifanaceae (NL. fem. n. *Regifanaceae* a name created from the name of

the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *GAS474.* The type genus for the taxon is *Candidatus* Regifana .

According to GTDB R06-RS202, this family belongs to the order *Methylacidiphilales*.

Description of *Candidatus* Regifana tegumigena sp. nov.

Candidatus Regifana tegumigena (NL. fem. n. *tegumigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GAS474 sp903889845*. The type genome for the species is the GenBank assembly GCA_903889845.1. The GC content of the type genome is 65.58 % and the genome length is 2.89 Mbp.

Description of *Candidatus* Regifaria cinipessa sp. nov.

Candidatus Regifaria cinipessa (NL. fem. n. *cinipessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *ATZT02 sp005789325*. The type genome for the species is the GenBank assembly GCA_005789325.1. The GC content of the type genome is 38.85 % and the genome length is 0.79 Mbp.

Description of *Candidatus* Regifaria gen. nov.

Candidatus Regifaria (NL. fem. n. *Regifaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *ATZT02*. The type species for the genus is *Candidatus* Regifaria cinipessa .

According to the original version of GTDB R06-RS202, this genus belongs to the family *AcAMD-5*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Mimogosaceae.

Description of *Candidatus* Regifaria hirunitudo sp. nov.

Candidatus Regifaria hirunitudo (NL. fem. n. *hirunitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *ATZT02 sp000428345*. The type genome for the species is the GenBank assembly GCA_000428345.2. The GC content of the type genome is 38.7 % and the genome length is 0.95 Mbp.

Description of *Candidatus* Regifaria prospax sp. nov.

Candidatus Regifaria prospax (NL. fem. n. *prospax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *ATZT02 sp014190035*. The type genome for the species is the GenBank assembly GCA_014190035.1. The GC content of the type genome is 38.55 % and the genome length is 1.26 Mbp.

Description of *Candidatus* Regifella semifetta sp. nov.

Candidatus Regifella semifetta (NL. fem. n. *semifetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CSSED10-335 sp003557585*. The type genome for the species is the GenBank assembly GCA_003557585.1. The GC content of the type genome is 40.62 % and the genome length is 0.97 Mbp.

Description of *Candidatus* Regifella gen. nov.

Candidatus Regifella (NL. fem. n. *Regifella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CSSED10-335*. The type species for the genus is *Candidatus* Regifella semifetta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CSSED10-335*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Regifellaceae.

Description of *Candidatus* Regifellaceae fam. nov.

Candidatus Regifellaceae (NL. fem. n. *Regifellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this taxon is *CSSED10-335*. The type genus for the taxon is *Candidatus* Regifella .

According to GTDB R06-RS202, this family belongs to the order *Paceibacterales*.

Description of *Candidatus* Regifia dimadilenta sp. nov.

Candidatus Regifia dimadilenta (NL. fem. n. *dimadilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7330 sp002471275*. The type genome for the species is the GenBank assembly GCA_002336125.1. The GC content of the type genome is 42.69 % and the genome length is 6.01 Mbp.

Description of *Candidatus* Regifia gen. nov.

Candidatus Regifia (NL. fem. n. *Regifia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA7330*. The type species for the genus is *Candidatus* Regifia dimadilenta .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Regifida bisacitica sp. nov.

Candidatus Regifida bisacitica (NL. fem. n. *bisacitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS1668 sp900768105*. The type genome for the species is the GenBank assembly RS_GCF_900768105.1. The GC content of the type genome is 47.6 % and the genome length is 1.76 Mbp.

Description of *Candidatus* Regifida gen. nov.

Candidatus Regifida (NL. fem. n. *Regifida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UMGS1668*. The type species for the genus is *Candidatus* Regifida bisacitica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Regifida denigimonia sp. nov.

Candidatus Regifida denigimonia (NL. fem. n. *denigimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS1668 sp004556975*. The type genome for the species is the GenBank assembly GCA_004561885.1. The GC content of the type genome is 49.78 % and the genome length is 1.13 Mbp.

Description of *Candidatus* Regifida sarabicella sp. nov.

Candidatus Regifida sarabicella (NL. fem. n. *sarabicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS1668 sp900553955*. The type genome for the species is the GenBank assembly RS_GCF_900768555.1. The GC content of the type genome is 50.7 % and the genome length is 1.89 Mbp.

Description of *Candidatus* Regifosa adsusitica sp. nov.

Candidatus Regifosa adsusitica (NL. fem. n. *adsusitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *B28-G17 sp003645735*. The type genome for the species is the GenBank assembly GCA_003645735.1. The GC content of the type genome is 59.93 % and the genome length is 2.64 Mbp.

Description of *Candidatus* Regifosa gen. nov.

Candidatus Regifosa (NL. fem. n. *Regifosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *B28-G17*. The type species for the genus is *Candidatus* Regifosa adsusitica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *B28-G17*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Regifosaceae.

Description of *Candidatus* Regifosaceae fam. nov.

Candidatus Regifosaceae (NL. fem. n. *Regifosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *B28-G17.* The type genus for the taxon is *Candidatus* Regifosa .

According to the original version of GTDB R06-RS202, this family belongs to the order *B28-G17*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Regifosales.

Description of *Candidatus* Regifosales ord. nov.

Candidatus Regifosales (NL. fem. n. *Regifosales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *B28-G17.* The type genus for the taxon is *Candidatus* Regifosa .

According to the original version of GTDB R06-RS202, this family belongs to the class *WGA-4E*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Demociae.

Description of *Candidatus* Regifula debucigena sp. nov.

Candidatus Regifula debucigena (NL. fem. n. *debucigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS1889 sp900556055*. The type genome for the species is the GenBank assembly RS_GCF_900766405.1. The GC content of the type genome is 46.3 % and the genome length is 2.49 Mbp.

Description of *Candidatus* Regifula gen. nov.

Candidatus Regifula (NL. fem. n. *Regifula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UMGS1889*. The type species for the genus is *Candidatus* Regifula debucigena .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Regigaria citocousia sp. nov.

Candidatus Regigaria citocousia (NL. fem. n. *citocousia* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3402 sp003478355*. The type genome for the species is the GenBank assembly GCA_900545695.1. The GC content of the type genome is 46.34 % and the genome length is 3.0 Mbp.

Description of *Candidatus* Regigaria gen. nov.

Candidatus Regigaria (NL. fem. n. *Regigaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA3402*. The type species for the genus is *Candidatus* Regigaria citocousia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Regigaria scellimonia sp. nov.

Candidatus Regigaria scellimonia (NL. fem. n. *scellimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3402 sp002358555*. The type genome for the species is the GenBank assembly GCA_002358555.1. The GC content of the type genome is 38.84 % and the genome length is 2.97 Mbp.

Description of *Candidatus* Regigella salubatio sp. nov.

Candidatus Regigella salubatio (NL. fem. n. *salubatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GWA2-46-10 sp001817635*. The type genome for the species is the GenBank assembly GCA_001002165.1. The GC content of the type genome is 46.14 % and the genome length is 0.51 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "aquifer sediment".

Description of *Candidatus* Regigella gen. nov.

Candidatus Regigella (NL. fem. n. *Regigella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GWA2-46-10*. The type species for the genus is *Candidatus* Regigella salubatio .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Regigia denigitura sp. nov.

Candidatus Regigia denigitura (NL. fem. n. *denigitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA10656 sp002085445*. The type genome for the species is the GenBank assembly GCA_002085445.1. The GC content of the type genome is 42.85 % and the genome length is 8.45 Mbp.

Description of *Candidatus* Regigia gen. nov.

Candidatus Regigia (NL. fem. n. *Regigia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA10656*. The type species for the genus is *Candidatus* Regigia denigitura .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Regigia resacax sp. nov.

Candidatus Regigia resacax (NL. fem. n. *resacax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA10656 sp003645185*. The type genome for the species is the GenBank assembly GCA_003645245.1. The GC content of the type genome is 40.91 % and the genome length is 8.21 Mbp.

Description of *Candidatus* Regigida rurigessa sp. nov.

Candidatus Regigida rurigessa (NL. fem. n. *rurigessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIVPM01 sp903907815*. The type genome for the species is the

GenBank assembly GCA_903907815.1. The GC content of the type genome is 35.21 % and the genome length is 3.93 Mbp.

Description of *Candidatus* Regigida gen. nov.

Candidatus Regigida (NL. fem. n. *Regigida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIVPM01*. The type species for the genus is *Candidatus* Regigida rurigessa .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Regigosa adlubitas sp. nov.

Candidatus Regigosa adlubitas (NL. fem. n. *adlubitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2146 sp002311975*. The type genome for the species is the GenBank assembly GCA_002311975.1. The GC content of the type genome is 50.95 % and the genome length is 1.86 Mbp.

Description of *Candidatus* Regigosa gen. nov.

Candidatus Regigosa (NL. fem. n. *Regigosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA2146*. The type species for the genus is *Candidatus* Regigosa adlubitas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *S15-B10*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Minagulaceae.

Description of *Candidatus* Regigosa volunilenta sp. nov.

Candidatus Regigosa volunilenta (NL. fem. n. *volunilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2146 sp002471705*. The type genome for the species is the GenBank assembly GCA_002471705.1. The GC content of the type genome is 50.17 %

and the genome length is 1.84 Mbp.

Description of *Candidatus* Regigula demogitoga sp. nov.

Candidatus Regigula demogitoga (NL. fem. n. *demogitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Bog-105 sp003167495*. The type genome for the species is the GenBank assembly GCA_003167495.1. The GC content of the type genome is 55.98 % and the genome length is 9.39 Mbp.

Description of *Candidatus* Regigula gen. nov.

Candidatus Regigula (NL. fem. n. *Regigula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Bog-105*. The type species for the genus is *Candidatus* Regigula demogitoga .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Regigula divorentia sp. nov.

Candidatus Regigula divorentia (NL. fem. n. *divorentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Bog-105 sp003163855*. The type genome for the species is the GenBank assembly GCA_003163855.1. The GC content of the type genome is 56.23 % and the genome length is 6.33 Mbp.

Description of *Candidatus* Regigula rurigastra sp. nov.

Candidatus Regigula rurigastra (NL. fem. n. *rurigastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Bog-105 sp003169195*. The type genome for the species is the GenBank assembly GCA_003169195.1. The GC content of the type genome is 55.37 % and the genome length is 7.82 Mbp.

Description of *Candidatus* Reichenbachiella curotifica sp. nov.

Candidatus Reichenbachiella curotifica (NL. fem. n. *curotifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Reichenbachiella sp002742335*. The type genome for the species is the GenBank assembly RS_GCF_002742335.1. The GC content of the type genome is 45.14 % and the genome length is 4.64 Mbp.

Description of *Candidatus* Reinekea spastitrix sp. nov.

Candidatus Reinekea spastitrix (NL. fem. n. *spastitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Reinekea sp008041945*. The type genome for the species is the GenBank assembly RS_GCF_008041945.1. The GC content of the type genome is 45.51 % and the genome length is 2.94 Mbp.

Description of *Candidatus* Relapana caravivita sp. nov.

Candidatus Relapana caravivita (NL. fem. n. *caravivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIVKH01 sp903906425*. The type genome for the species is the GenBank assembly GCA_903906425.1. The GC content of the type genome is 59.18 % and the genome length is 6.66 Mbp.

Description of *Candidatus* Relapana gen. nov.

Candidatus Relapana (NL. fem. n. *Relapana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIVKH01*. The type species for the genus is *Candidatus* Relapana caravivita .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAIVKH01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Relapanaceae.

Description of *Candidatus* Relapanaceae fam. nov.

Candidatus Relapanaceae (NL. fem. n. *Relapanaceae* a name created from the name of

the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CAIVKH01*. The type genus for the taxon is *Candidatus* Relapana .

According to the original version of GTDB R06-RS202, this family belongs to the order *LD1-PB3*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Delacariales.

Description of *Candidatus* Relaparia momoribula sp. nov.

Candidatus Relaparia momoribula (NL. fem. n. *momoribula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HO2-45-28 sp001819395*. The type genome for the species is the GenBank assembly GCA_001819455.1. The GC content of the type genome is 45.54 % and the genome length is 0.69 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 0.1 micron filter; full assembly".

Description of *Candidatus* Relaparia gen. nov.

Candidatus Relaparia (NL. fem. n. *Relaparia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *HO2-45-28*. The type species for the genus is *Candidatus* Relaparia momoribula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *H02-45-28*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Supelanaceae.

Description of *Candidatus* Relapella cosigentia sp. nov.

Candidatus Relapella cosigentia (NL. fem. n. *cosigentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *BMS3ABIN14 sp002897695*. The type genome for the species is the GenBank assembly GCA_002897695.1. The GC content of the type genome is 55.37 % and the genome length is 2.28 Mbp.

Description of *Candidatus* Relapella gen. nov.

Candidatus Relapella (NL. fem. n. *Relapella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *BMS3ABIN14*. The type species for the genus is *Candidatus* Relapella cosigentia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *BMS3Abin14*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Relapellaceae.

Description of *Candidatus* Relapellaceae fam. nov.

Candidatus Relapellaceae (NL. fem. n. *Relapellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *BMS3Abin14.* The type genus for the taxon is *Candidatus* Relapella .

According to the original version of GTDB R06-RS202, this family belongs to the order *BMS3Abin14*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Relapellales.

Description of *Candidatus* Relapellales ord. nov.

Candidatus Relapellales (NL. fem. n. *Relapellales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *BMS3Abin14.* The type genus for the taxon is *Candidatus* Relapella .

According to the original version of GTDB R06-RS202, this family belongs to the class *BMS3Abin14*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Relapellae.

Description of *Candidatus* Relapellae class. nov.

Candidatus Relapellae (NL. fem. n. *c__Relapellae* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *BMS3Abin14.* The type genus for the taxon is *Candidatus* Relapella .

According to the original version of GTDB R06-RS202, this family belongs to the phylum *BMS3Abin14*. According to the renamed version of GTDB R06-RS202, this

taxon belongs to the phylum *Candidatus* Relapellota.

Description of *Candidatus* Relapellota phyl. nov.

Candidatus Relapellota (NL. fem. n. *Relapellota* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *BMS3Abin14.* The type genus for the taxon is *Candidatus* Relapella .

According to GTDB R06-RS202, this phylum belongs to the domain *Bacteria* .

Description of *Candidatus* Relapella metucitio sp. nov.

Candidatus Relapella metucitio (NL. fem. n. *metucitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *BMS3ABIN14 sp013151915*. The type genome for the species is the GenBank assembly GCA_013151915.1. The GC content of the type genome is 54.97 % and the genome length is 2.28 Mbp.

Description of *Candidatus* Relapia ammigugo sp. nov.

Candidatus Relapia ammigugo (NL. fem. n. *ammigugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4427 sp002719955*. The type genome for the species is the GenBank assembly GCA_002719955.1. The GC content of the type genome is 63.33 % and the genome length is 5.85 Mbp.

Description of *Candidatus* Relapia gen. nov.

Candidatus Relapia (NL. fem. n. *Relapia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA4427*. The type species for the genus is *Candidatus* Relapia ammigugo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA4427*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Relapiaceae.

Description of *Candidatus* Relapiaceae fam. nov.

Candidatus Relapiaceae (NL. fem. n. *Relapiaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA4427*. The type genus for the taxon is *Candidatus* Relapia .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA9160*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Buxifiales.

Description of *Candidatus* Relapia emancitudo sp. nov.

Candidatus Relapia emancitudo (NL. fem. n. *emancitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4427 sp011051925*. The type genome for the species is the GenBank assembly GCA_011051925.1. The GC content of the type genome is 65.99 % and the genome length is 4.4 Mbp.

Description of *Candidatus* Relapia hibisibula sp. nov.

Candidatus Relapia hibisibula (NL. fem. n. *hibisibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4427 sp002390675*. The type genome for the species is the GenBank assembly GCA_002390675.1. The GC content of the type genome is 59.19 % and the genome length is 4.86 Mbp.

Description of *Candidatus* Relapia lavabitura sp. nov.

Candidatus Relapia lavabitura (NL. fem. n. *lavabitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4427 sp012959805*. The type genome for the species is the GenBank assembly GCA_012959805.1. The GC content of the type genome is 59.05 % and the genome length is 4.46 Mbp.

Description of *Candidatus* Relapia nicotimonia sp. nov.

Candidatus Relapia nicotimonia (NL. fem. n. *nicotimonia* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4427 sp002709835*. The type genome for the species is the GenBank assembly GCA_002709835.1. The GC content of the type genome is 66.75 % and the genome length is 3.99 Mbp.

Description of *Candidatus* Relapida defacimonia sp. nov.

Candidatus Relapida defacimonia (NL. fem. n. *defacimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIOVX01 sp903894145*. The type genome for the species is the GenBank assembly GCA_903894145.1. The GC content of the type genome is 49.16 % and the genome length is 1.88 Mbp.

Description of *Candidatus* Relapida gen. nov.

Candidatus Relapida (NL. fem. n. *Relapida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIOVX01*. The type species for the genus is *Candidatus* Relapida defacimonia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAIOVX01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Relapidaceae.

Description of *Candidatus* Relapidaceae fam. nov.

Candidatus Relapidaceae (NL. fem. n. *Relapidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CAIOVX01.* The type genus for the taxon is *Candidatus* Relapida .

According to the original version of GTDB R06-RS202, this family belongs to the order *D2-FULL-39-29*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Lapilanales.

Description of *Candidatus* Relapida nutamitas sp. nov.

Candidatus Relapida nutamitas (NL. fem. n. *nutamitas* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIOVX01 sp903915125*. The type genome for the species is the GenBank assembly GCA_903915125.1. The GC content of the type genome is 48.82 % and the genome length is 2.01 Mbp.

Description of *Candidatus* Relapida subabitudo sp. nov.

Candidatus Relapida subabitudo (NL. fem. n. *subabitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIOVX01 sp903916325*. The type genome for the species is the GenBank assembly GCA_903853605.1. The GC content of the type genome is 48.78 % and the genome length is 2.2 Mbp.

Description of *Candidatus* Relapida valefugo sp. nov.

Candidatus Relapida valefugo (NL. fem. n. *valefugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIOVX01 sp903861835*. The type genome for the species is the GenBank assembly GCA_903871455.1. The GC content of the type genome is 48.57 % and the genome length is 1.81 Mbp.

Description of *Candidatus* Relaposa ambecibula sp. nov.

Candidatus Relaposa ambecibula (NL. fem. n. *ambecibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9973 sp903825255*. The type genome for the species is the GenBank assembly GCA_903825255.1. The GC content of the type genome is 32.35 % and the genome length is 0.98 Mbp.

Description of *Candidatus* Relaposa gen. nov.

Candidatus Relaposa (NL. fem. n. *Relaposa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this genus is *UBA9973*. The type species for the genus is *Candidatus* Relaposa ambecibula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA9973*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Relaposaceae.

Description of *Candidatus* Relaposaceae fam. nov.

Candidatus Relaposaceae (NL. fem. n. *Relaposaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA9973.* The type genus for the taxon is *Candidatus* Relaposa .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA9983_A*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Ficedanales.

Description of *Candidatus* Relaposa benivicella sp. nov.

Candidatus Relaposa benivicella (NL. fem. n. *benivicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9973 sp000999465*. The type genome for the species is the GenBank assembly GCA_003539105.1. The GC content of the type genome is 42.93 % and the genome length is 0.62 Mbp.

Description of *Candidatus* Relaposa bimotessa sp. nov.

Candidatus Relaposa bimotessa (NL. fem. n. *bimotessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9973 sp000991415*. The type genome for the species is the GenBank assembly GCA_000990415.1. The GC content of the type genome is 34.72 % and the genome length is 0.53 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "aquifer sediment".

Description of *Candidatus* Relaposa bugilitas sp. nov.

Candidatus Relaposa bugilitas (NL. fem. n. *bugilitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9973 sp903869825*. The type genome for the species is the GenBank assembly GCA_903869825.1. The GC content of the type genome is 36.42 % and the genome length is 0.77 Mbp.

Description of *Candidatus* Relaposa buxifugo sp. nov.

Candidatus Relaposa buxifugo (NL. fem. n. *buxifugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9973 sp001786765*. The type genome for the species is the GenBank assembly GCA_001786875.1. The GC content of the type genome is 36.17 % and the genome length is 0.75 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 0.2 micron filter; full assembly".

Description of *Candidatus* Relaposa cenacilega sp. nov.

Candidatus Relaposa cenacilega (NL. fem. n. *cenacilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9973 sp001787035*. The type genome for the species is the GenBank assembly GCA_001785285.1. The GC content of the type genome is 40.25 % and the genome length is 0.48 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 0.1 micron filter; full assembly".

Description of *Candidatus* Relaposa cituvilega sp. nov.

Candidatus Relaposa cituvilega (NL. fem. n. *cituvilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9973 sp000990145*. The type genome for the species is the GenBank assembly GCA_000992225.1. The GC content of the type genome is 36.94 % and the genome length is 0.55 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "aquifer sediment".

Description of *Candidatus* Relaposa conabicula sp. nov.

Candidatus Relaposa conabicula (NL. fem. n. *conabicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9973 sp001785445*. The type genome for the species is the GenBank assembly GCA_000993455.1. The GC content of the type genome is 39.24 % and the genome length is 0.75 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "aquifer sediment".

Description of *Candidatus* Relaposa conubilenta sp. nov.

Candidatus Relaposa conubilenta (NL. fem. n. *conubilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9973 sp903904195*. The type genome for the species is the GenBank assembly GCA_903904195.1. The GC content of the type genome is 36.97 % and the genome length is 0.68 Mbp.

Description of *Candidatus* Relaposa denavessa sp. nov.

Candidatus Relaposa denavessa (NL. fem. n. *denavessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9973 sp903895055*. The type genome for the species is the GenBank assembly GCA_903895055.1. The GC content of the type genome is 38.1 % and the genome length is 0.6 Mbp.

Description of *Candidatus* Relaposa dilemilega sp. nov.

Candidatus Relaposa dilemilega (NL. fem. n. *dilemilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9973 sp001785615*. The type genome for the species is the GenBank assembly GCA_001785615.1. The GC content of the type genome is 41.84 % and the genome length is 0.61 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 0.2 micron filter; full assembly".

Description of *Candidatus* Relaposa echogimonas sp. nov.

Candidatus Relaposa echogimonas (NL. fem. n. *echogimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9973 sp009695015*. The type genome for the species is the GenBank assembly GCA_009695015.1. The GC content of the type genome is 36.44 % and the genome length is 0.44 Mbp.

Description of *Candidatus* Relaposa exhonessa sp. nov.

Candidatus Relaposa exhonessa (NL. fem. n. *exhonessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9973 sp003157195*. The type genome for the species is the GenBank assembly GCA_003157195.1. The GC content of the type genome is 39.7 % and the genome length is 0.74 Mbp.

Description of *Candidatus* Relaposa exsufousia sp. nov.

Candidatus Relaposa exsufousia (NL. fem. n. *exsufousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9973 sp001786015*. The type genome for the species is the GenBank assembly GCA_001786015.1. The GC content of the type genome is 46.24 % and the genome length is 0.45 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under low O2 conditions; 0.1 micron filter; full assembly".

Description of *Candidatus* Relaposa exsurifica sp. nov.

Candidatus Relaposa exsurifica (NL. fem. n. *exsurifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9973 sp001787005*. The type genome for the species is the GenBank assembly GCA_001787005.1. The GC content of the type genome is 39.58 % and the genome length is 0.81 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under low O2 conditions; 0.1 micron filter; full assembly".

Description of *Candidatus* Relaposa frigdicula sp. nov.

Candidatus Relaposa frigdicula (NL. fem. n. *frigdicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9973 sp000994705*. The type genome for the species is the GenBank assembly GCA_000994705.1. The GC content of the type genome is 39.82 % and the genome length is 0.55 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "aquifer sediment".

Description of *Candidatus* Relaposa genocatio sp. nov.

Candidatus Relaposa genocatio (NL. fem. n. *genocatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9973 sp001786195*. The type genome for the species is the GenBank assembly GCA_001786045.1. The GC content of the type genome is 40.56 % and the genome length is 0.76 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under low O2 conditions; 0.2 micron filter; full assembly".

Description of *Candidatus* Relaposa impacilenta sp. nov.

Candidatus Relaposa impacilenta (NL. fem. n. *impacilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9973 sp903838985*. The type genome for the species is the GenBank assembly GCA_903838985.1. The GC content of the type genome is 32.07 % and the genome length is 0.75 Mbp.

Description of *Candidatus* Relaposa impudifica sp. nov.

Candidatus Relaposa impudifica (NL. fem. n. *impudifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9973 sp001785985*. The type genome for the species is the GenBank assembly GCA_001785985.1. The GC content of the type genome is 40.68 % and the genome length is 0.67 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under low O2 conditions; 0.1 micron filter; full assembly".

Description of *Candidatus* Relaposa innabisca sp. nov.

Candidatus Relaposa innabisca (NL. fem. n. *innabisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9973 sp001785805*. The type genome for the species is the GenBank assembly GCA_001785805.1. The GC content of the type genome is 39.0 % and the genome length is 0.49 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under low O2 conditions; 0.1 micron filter; full assembly".

Description of *Candidatus* Relaposa luculatio sp. nov.

Candidatus Relaposa luculatio (NL. fem. n. *luculatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9973 sp000989515*. The type genome for the species is the GenBank assembly GCA_000989515.1. The GC content of the type genome is 30.79 % and the genome length is 0.67 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "aquifer sediment".

Description of *Candidatus* Relaposa mahelitica sp. nov.

Candidatus Relaposa mahelitica (NL. fem. n. *mahelitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9973 sp001785355*. The type genome for the species is the GenBank assembly GCA_001785595.1. The GC content of the type genome is 41.33 % and the genome length is 0.63 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 0.2 micron filter; full assembly".

Description of *Candidatus* Relaposa metabilenta sp. nov.

Candidatus Relaposa metabilenta (NL. fem. n. *metabilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9973 sp001787125*. The type genome for the species is the GenBank assembly GCA_001787125.1. The GC content of the type genome is 44.14 % and the genome length is 0.64 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under low O2 conditions; 1.2 micron filter; full assembly".

Description of *Candidatus* Relaposa omnifilega sp. nov.

Candidatus Relaposa omnifilega (NL. fem. n. *omnifilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9973 sp001785515*. The type genome for the species is the GenBank assembly GCA_001785515.1. The GC content of the type genome is 34.91 % and the genome length is 0.55 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 0.2 micron filter; full assembly".

Description of *Candidatus* Relaposa pabilatio sp. nov.

Candidatus Relaposa pabilatio (NL. fem. n. *pabilatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9973 sp001786805*. The type genome for the species is the GenBank assembly GCA_001786805.1. The GC content of the type genome is 39.54 % and the genome length is 0.87 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 0.1 micron filter; full assembly".

Description of *Candidatus* Relaposa pericatica sp. nov.

Candidatus Relaposa pericatica (NL. fem. n. *pericatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9973 sp903894955*. The type genome for the species is the GenBank assembly GCA_903894955.1. The GC content of the type genome is 34.94 % and the genome length is 0.63 Mbp.

Description of *Candidatus* Relaposa recumivita sp. nov.

Candidatus Relaposa recumivita (NL. fem. n. *recumivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9973 sp001786365*. The type genome for the species is the GenBank assembly GCA_001786295.1. The GC content of the type genome is 35.49 % and the genome length is 0.68 Mbp. The isolation source for the NCBI BioSample

associated with the type genome is descibed as "Rifle well CD01 at 16ft depth; 0.2 micron filter at time point C".

Description of *Candidatus* Relaposa relapitas sp. nov.

Candidatus Relaposa relapitas (NL. fem. n. *relapitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9973 sp002792755*. The type genome for the species is the GenBank assembly GCA_002792755.1. The GC content of the type genome is 30.32 % and the genome length is 0.61 Mbp.

Description of *Candidatus* Relaposa rosacastra sp. nov.

Candidatus Relaposa rosacastra (NL. fem. n. *rosacastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9973 sp001786745*. The type genome for the species is the GenBank assembly GCA_001786745.1. The GC content of the type genome is 36.38 % and the genome length is 0.56 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 0.1 micron filter; full assembly".

Description of *Candidatus* Relaposa sarabilega sp. nov.

Candidatus Relaposa sarabilega (NL. fem. n. *sarabilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9973 sp000993955*. The type genome for the species is the GenBank assembly GCA_000993955.1. The GC content of the type genome is 36.12 % and the genome length is 0.6 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "aquifer sediment".

Description of *Candidatus* Relaposa sotuletta sp. nov.

Candidatus Relaposa sotuletta (NL. fem. n. *sotuletta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9973 sp903888625*. The type genome for the species is the GenBank assembly GCA_903888625.1. The GC content of the type genome is 33.13 %

and the genome length is 0.9 Mbp.

Description of *Candidatus* Relaposa tibicitudo sp. nov.

Candidatus Relaposa tibicitudo (NL. fem. n. *tibicitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9973 sp001785675*. The type genome for the species is the GenBank assembly GCA_001786175.1. The GC content of the type genome is 37.07 % and the genome length is 0.5 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under low O2 conditions; 1.2 micron filter; full assembly".

Description of *Candidatus* Relaposa tumefessa sp. nov.

Candidatus Relaposa tumefessa (NL. fem. n. *tumefessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9973 sp002788475*. The type genome for the species is the GenBank assembly GCA_002786695.1. The GC content of the type genome is 31.76 % and the genome length is 0.64 Mbp.

Description of *Candidatus* Relaposa utraressa sp. nov.

Candidatus Relaposa utraressa (NL. fem. n. *utraressa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9973 sp903907175*. The type genome for the species is the GenBank assembly GCA_903907175.1. The GC content of the type genome is 33.37 % and the genome length is 0.84 Mbp.

Description of *Candidatus* Relaposa utrinicula sp. nov.

Candidatus Relaposa utrinicula (NL. fem. n. *utrinicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9973 sp001000035*. The type genome for the species is the GenBank assembly GCA_001000035.1. The GC content of the type genome is 42.87 % and the genome length is 0.66 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "aquifer sediment".

Description of *Candidatus* Relaposa vehemousia sp. nov.

Candidatus Relaposa vehemousia (NL. fem. n. *vehemousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9973 sp001785865*. The type genome for the species is the GenBank assembly GCA_001785865.1. The GC content of the type genome is 40.75 % and the genome length is 0.75 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under low O2 conditions; 0.1 micron filter; full assembly".

Description of *Candidatus* Relaposa velifatica sp. nov.

Candidatus Relaposa velifatica (NL. fem. n. *velifatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9973 sp001786835*. The type genome for the species is the GenBank assembly GCA_001786835.1. The GC content of the type genome is 40.2 % and the genome length is 0.55 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 0.1 micron filter; full assembly".

Description of *Candidatus* Relaposa vinacivita sp. nov.

Candidatus Relaposa vinacivita (NL. fem. n. *vinacivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9973 sp001787205*. The type genome for the species is the GenBank assembly GCA_001787245.1. The GC content of the type genome is 39.07 % and the genome length is 0.73 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at 16ft depth; 0.1 micron filter at time point D".

Description of *Candidatus* Relaposa virecitrix sp. nov.

Candidatus Relaposa virecitrix (NL. fem. n. *virecitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9973 sp001786225*. The type genome for the species is the

GenBank assembly GCA_001786225.1. The GC content of the type genome is 46.16 % and the genome length is 0.53 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under low O2 conditions; 1.2 micron filter; full assembly".

Description of *Candidatus* Relaposa virecugo sp. nov.

Candidatus Relaposa virecugo (NL. fem. n. *virecugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9973 sp001786955*. The type genome for the species is the GenBank assembly GCA_000997645.1. The GC content of the type genome is 41.25 % and the genome length is 0.56 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "aquifer sediment".

Description of *Candidatus* Relapula cisaligena sp. nov.

Candidatus Relapula cisaligena (NL. fem. n. *cisaligena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CG1-02-64-396 sp001872725*. The type genome for the species is the GenBank assembly GCA_002793495.1. The GC content of the type genome is 62.77 % and the genome length is 3.07 Mbp.

Description of *Candidatus* Relapula gen. nov.

Candidatus Relapula (NL. fem. n. *Relapula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CG1-02-64-396*. The type species for the genus is *Candidatus* Relapula cisaligena .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CG1-02-64-396*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Relapulaceae.

Description of *Candidatus* Relapulaceae fam. nov.

Candidatus Relapulaceae (NL. fem. n. *Relapulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this taxon is *CG1-02-64-396.* The type genus for the taxon is *Candidatus* Relapula .

According to the original version of GTDB R06-RS202, this family belongs to the order *CG1-02-64-396*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Relapulales.

Description of *Candidatus* Relapulales ord. nov.

Candidatus Relapulales (NL. fem. n. *Relapulales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CG1-02-64-396.* The type genus for the taxon is *Candidatus* Relapula .

According to the GTDB R06-RS202, this order belongs to the class *Zetaproteobacteria*.

Description of *Candidatus* Relecana allacitas sp. nov.

Candidatus Relecana allacitas (NL. fem. n. *allacitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Palsa-661 sp003131945*. The type genome for the species is the GenBank assembly GCA_003131945.1. The GC content of the type genome is 66.83 % and the genome length is 3.94 Mbp.

Description of *Candidatus* Relecana gen. nov.

Candidatus Relecana (NL. fem. n. *Relecana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Palsa-661*. The type species for the genus is *Candidatus* Relecana allacitas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA8190*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Telegosaceae.

Description of *Candidatus* Relecana nubigitia sp. nov.

Candidatus Relecana nubigitia (NL. fem. n. *nubigitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *Palsa-661 sp003151475*. The type genome for the species is the GenBank assembly GCA_003167615.1. The GC content of the type genome is 66.57 % and the genome length is 4.19 Mbp.

Description of *Candidatus* Relecaria cohurifica sp. nov.

Candidatus Relecaria cohurifica (NL. fem. n. *cohurifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA995 sp003517845*. The type genome for the species is the GenBank assembly GCA_003517845.1. The GC content of the type genome is 66.63 % and the genome length is 1.77 Mbp.

Description of *Candidatus* Relecaria gen. nov.

Candidatus Relecaria (NL. fem. n. *Relecaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA995*. The type species for the genus is *Candidatus* Relecaria cohurifica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA995*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Relecariaceae.

Description of *Candidatus* Relecariaceae fam. nov.

Candidatus Relecariaceae (NL. fem. n. *Relecariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA995.* The type genus for the taxon is *Candidatus* Relecaria .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA995*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Relecariales.

Description of *Candidatus* Relecariales ord. nov.

Candidatus Relecariales (NL. fem. n. *Relecariales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA995.* The type genus for the taxon is *Candidatus* Relecaria .

According to the original version of GTDB R06-RS202, this family belongs to the class *DTU015*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Cetariae.

Description of *Candidatus* Relecaria recoressa sp. nov.

Candidatus Relecaria recoressa (NL. fem. n. *recoressa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA995 sp002291985*. The type genome for the species is the GenBank assembly GCA_002291985.1. The GC content of the type genome is 65.58 % and the genome length is 1.65 Mbp.

Description of *Candidatus* Relecella renavibra sp. nov.

Candidatus Relecella renavibra (NL. fem. n. *renavibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *ZCTH02-B6 sp002159155*. The type genome for the species is the GenBank assembly GCA_002159155.1. The GC content of the type genome is 65.53 % and the genome length is 2.77 Mbp.

Description of *Candidatus* Relecella gen. nov.

Candidatus Relecella (NL. fem. n. *Relecella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *ZCTH02-B6*. The type species for the genus is *Candidatus* Relecella renavibra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *ZCTH02-B6*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Relecellaceae.

Description of *Candidatus* Relecellaceae fam. nov.

Candidatus Relecellaceae (NL. fem. n. *Relecellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *ZCTH02-B6.* The type genus for the taxon is *Candidatus* Relecella .

According to GTDB R06-RS202, this family belongs to the order *Limnochordales_A*.

Description of *Candidatus* Relecia cepulentia sp. nov.

Candidatus Relecia cepulentia (NL. fem. n. *cepulentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA11963 sp902795675*. The type genome for the species is the GenBank assembly GCA_902795675.1. The GC content of the type genome is 28.1 % and the genome length is 0.99 Mbp.

Description of *Candidatus* Relecia gen. nov.

Candidatus Relecia (NL. fem. n. *Relecia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA11963*. The type species for the genus is *Candidatus* Relecia cepulentia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA660*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vitigellaceae.

Description of *Candidatus* Relecia colopivita sp. nov.

Candidatus Relecia colopivita (NL. fem. n. *colopivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA11963 sp002362595*. The type genome for the species is the GenBank assembly GCA_002362595.1. The GC content of the type genome is 26.75 % and the genome length is 1.55 Mbp.

Description of *Candidatus* Relecia maxumivita sp. nov.

Candidatus Relecia maxumivita (NL. fem. n. *maxumivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA11963 sp902800945*. The type genome for the species is the GenBank assembly GCA_902800945.1. The GC content of the type genome is 30.05 %

and the genome length is 1.42 Mbp.

Description of *Candidatus* Relecia pulegentia sp. nov.

Candidatus Relecia pulegentia (NL. fem. n. *pulegentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA11963 sp900552975*. The type genome for the species is the GenBank assembly GCA_900552975.1. The GC content of the type genome is 27.19 % and the genome length is 1.4 Mbp.

Description of *Candidatus* Relecida chancimonas sp. nov.

Candidatus Relecida chancimonas (NL. fem. n. *chancimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5232 sp012797935*. The type genome for the species is the GenBank assembly GCA_012797935.1. The GC content of the type genome is 33.02 % and the genome length is 0.6 Mbp.

Description of *Candidatus* Relecida gen. nov.

Candidatus Relecida (NL. fem. n. *Relecida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA5232*. The type species for the genus is *Candidatus* Relecida chancimonas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SC72*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Bipenellaceae.

Description of *Candidatus* Relecida epiclousia sp. nov.

Candidatus Relecida epiclousia (NL. fem. n. *epiclousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5232 sp012513575*. The type genome for the species is the GenBank assembly GCA_012513575.1. The GC content of the type genome is 35.17 % and the genome length is 0.72 Mbp.

Description of *Candidatus* Relecida luculimonas sp. nov.

Candidatus Relecida luculimonas (NL. fem. n. *luculimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5232 sp002409215*. The type genome for the species is the GenBank assembly GCA_002409215.1. The GC content of the type genome is 35.16 % and the genome length is 0.68 Mbp.

Description of *Candidatus* Relecida obnoximonas sp. nov.

Candidatus Relecida obnoximonas (NL. fem. n. *obnoximonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5232 sp012842045*. The type genome for the species is the GenBank assembly GCA_012842045.1. The GC content of the type genome is 34.17 % and the genome length is 0.74 Mbp.

Description of *Candidatus* Relecida tirunitio sp. nov.

Candidatus Relecida tirunitio (NL. fem. n. *tirunitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5232 sp903840015*. The type genome for the species is the GenBank assembly GCA_903875565.1. The GC content of the type genome is 36.43 % and the genome length is 0.65 Mbp.

Description of *Candidatus* Relecosa decenivita sp. nov.

Candidatus Relecosa decenivita (NL. fem. n. *decenivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAXXJ01 sp013334545*. The type genome for the species is the GenBank assembly GCA_013334545.1. The GC content of the type genome is 58.78 % and the genome length is 3.46 Mbp.

Description of *Candidatus* Relecosa gen. nov.

Candidatus Relecosa (NL. fem. n. *Relecosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAXXJ01*. The type species for the genus is *Candidatus* Relecosa decenivita .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA9217*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Volucosaceae.

Description of *Candidatus* Relecula refulivita sp. nov.

Candidatus Relecula refulivita (NL. fem. n. *refulivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Palsa-892 sp003135415*. The type genome for the species is the GenBank assembly GCA_003140335.1. The GC content of the type genome is 61.54 % and the genome length is 2.99 Mbp.

Description of *Candidatus* Relecula gen. nov.

Candidatus Relecula (NL. fem. n. *Relecula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Palsa-892*. The type species for the genus is *Candidatus* Relecula refulivita .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Relenana ensigousia sp. nov.

Candidatus Relenana ensigousia (NL. fem. n. *ensigousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA11705 sp002773615*. The type genome for the species is the GenBank assembly GCA_002773615.1. The GC content of the type genome is 39.27 % and the genome length is 1.1 Mbp.

Description of *Candidatus* Relenana gen. nov.

Candidatus Relenana (NL. fem. n. *Relenana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA11705*. The type species for the genus is *Candidatus* Relenana ensigousia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA11705*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Relenanaceae.

Description of *Candidatus* Relenanaceae fam. nov.

Candidatus Relenanaceae (NL. fem. n. *Relenanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA11705.* The type genus for the taxon is *Candidatus* Relenana .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA11705*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Relenanales.

Description of *Candidatus* Relenanales ord. nov.

Candidatus Relenanales (NL. fem. n. *Relenanales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA11705.* The type genus for the taxon is *Candidatus* Relenana .

According to the original version of GTDB R06-RS202, this family belongs to the class *ABY1*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Defunanae.

Description of *Candidatus* Relenana obsigago sp. nov.

Candidatus Relenana obsigago (NL. fem. n. *obsigago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA11705 sp003518055*. The type genome for the species is the GenBank assembly GCA_003518055.1. The GC content of the type genome is 43.63 % and the genome length is 1.31 Mbp.

Description of *Candidatus* Relenella arremibra sp. nov.

Candidatus Relenella arremibra (NL. fem. n. *arremibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-1782 sp002315475*. The type genome for the species is the GenBank assembly GCA_002315475.1. The GC content of the type genome is 45.74 % and the genome length is 2.27 Mbp.

Description of *Candidatus* Relenella gen. nov.

Candidatus Relenella (NL. fem. n. *Relenella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAG-1782*. The type species for the genus is *Candidatus* Relenella arremibra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DTU072*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vicecariaceae.

Description of *Candidatus* Relenella cacopitoga sp. nov.

Candidatus Relenella cacopitoga (NL. fem. n. *cacopitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-1782 sp902766325*. The type genome for the species is the GenBank assembly GCA_902766325.1. The GC content of the type genome is 48.8 % and the genome length is 1.73 Mbp.

Description of *Candidatus* Relenella camilitas sp. nov.

Candidatus Relenella camilitas (NL. fem. n. *camilitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-1782 sp002439705*. The type genome for the species is the GenBank assembly GCA_002439705.1. The GC content of the type genome is 45.26 % and the genome length is 1.74 Mbp.

Description of *Candidatus* Relenella niteligena sp. nov.

Candidatus Relenella niteligena (NL. fem. n. *niteligena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-1782 sp002349735*. The type genome for the species is the GenBank assembly GCA_002349735.1. The GC content of the type genome is 45.31 % and the genome length is 1.71 Mbp.

Description of *Candidatus* Relenella umbilitica sp. nov.

Candidatus Relenella umbilitica (NL. fem. n. *umbilitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-1782 sp012520515*. The type genome for the species is the GenBank assembly GCA_012520515.1. The GC content of the type genome is 36.94 % and the genome length is 1.56 Mbp.

Description of *Candidatus* Relenia rudicimonas sp. nov.

Candidatus Relenia rudicimonas (NL. fem. n. *rudicimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7937 sp002366595*. The type genome for the species is the GenBank assembly GCA_002366595.1. The GC content of the type genome is 56.29 % and the genome length is 2.24 Mbp.

Description of *Candidatus* Relenia gen. nov.

Candidatus Relenia (NL. fem. n. *Relenia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA7937*. The type species for the genus is *Candidatus* Relenia rudicimonas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA7937*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Releniaceae.

Description of *Candidatus* Releniaceae fam. nov.

Candidatus Releniaceae (NL. fem. n. *Releniaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this taxon is *UBA7937*. The type genus for the taxon is *Candidatus* Relenia .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA7937*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Releniales.

Description of *Candidatus* Releniales ord. nov.

Candidatus Releniales (NL. fem. n. *Releniales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA7937*. The type genus for the taxon is *Candidatus* Relenia .

According to the GTDB R06-RS202, this order belongs to the class *Anaerolineae*.

Description of *Candidatus* Relenia tegumicella sp. nov.

Candidatus Relenia tegumicella (NL. fem. n. *tegumicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7937 sp003453555*. The type genome for the species is the GenBank assembly GCA_003453555.1. The GC content of the type genome is 57.18 % and the genome length is 2.0 Mbp.

Description of *Candidatus* Relenida celamicula sp. nov.

Candidatus Relenida celamicula (NL. fem. n. *celamicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4855 sp002438785*. The type genome for the species is the GenBank assembly GCA_002298615.1. The GC content of the type genome is 26.15 % and the genome length is 1.26 Mbp.

Description of *Candidatus* Relenida gen. nov.

Candidatus Relenida (NL. fem. n. *Relenida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA4855*. The type species for the genus is *Candidatus* Relenida celamicula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-826*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Pudibellaceae.

Description of *Candidatus* Relenida echidisca sp. nov.

Candidatus Relenida echidisca (NL. fem. n. *echidisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4855 sp900545015*. The type genome for the species is the GenBank assembly GCA_900545015.1. The GC content of the type genome is 28.83 % and the genome length is 1.56 Mbp.

Description of *Candidatus* Relenida feculibula sp. nov.

Candidatus Relenida feculibula (NL. fem. n. *feculibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4855 sp900540395*. The type genome for the species is the GenBank assembly RS_GCF_900754135.1. The GC content of the type genome is 29.98 % and the genome length is 1.34 Mbp.

Description of *Candidatus* Relenida hegumicula sp. nov.

Candidatus Relenida hegumicula (NL. fem. n. *hegumicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4855 sp002451465*. The type genome for the species is the GenBank assembly GCA_002477835.1. The GC content of the type genome is 28.32 % and the genome length is 1.31 Mbp.

Description of *Candidatus* Relenida semifimonas sp. nov.

Candidatus Relenida semifimonas (NL. fem. n. *semifimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4855 sp002399785*. The type genome for the species is the GenBank assembly GCA_002399785.1. The GC content of the type genome is 30.21 % and the genome length is 1.3 Mbp.

Description of *Candidatus* Relenida venefitudo sp. nov.

Candidatus Relenida venefitudo (NL. fem. n. *venefitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4855 sp900540365*. The type genome for the species is the GenBank assembly GCA_900540365.1. The GC content of the type genome is 26.99 % and the genome length is 1.29 Mbp.

Description of *Candidatus* Relenosa benevax sp. nov.

Candidatus Relenosa benevax (NL. fem. n. *benevax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SM1-40 sp001303705*. The type genome for the species is the GenBank assembly GCA_001302835.1. The GC content of the type genome is 60.62 % and the genome length is 2.32 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Methane-rich estuary sediments 52-54 cm".

Description of *Candidatus* Relenosa gen. nov.

Candidatus Relenosa (NL. fem. n. *Relenosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SM1-40*. The type species for the genus is *Candidatus* Relenosa benevax .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SM1-40*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Relenosaceae.

Description of *Candidatus* Relenosaceae fam. nov.

Candidatus Relenosaceae (NL. fem. n. *Relenosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SM1-40.* The type genus for the taxon is *Candidatus* Relenosa .

According to the original version of GTDB R06-RS202, this family belongs to the order *SM1-40*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Relenosales.

Description of *Candidatus* Relenosales ord. nov.

Candidatus Relenosales (NL. fem. n. *Relenosales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SM1-40.* The type genus for the taxon is *Candidatus* Relenosa .

According to the original version of GTDB R06-RS202, this family belongs to the class *DG-26*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Cacopellae.

Description of *Candidatus* Remedana homogitas sp. nov.

Candidatus Remedana homogitas (NL. fem. n. *homogitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *E44-bin80 sp004375785*. The type genome for the species is the GenBank assembly GCA_004375785.1. The GC content of the type genome is 38.06 % and the genome length is 2.55 Mbp.

Description of *Candidatus* Remedana gen. nov.

Candidatus Remedana (NL. fem. n. *Remedana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *E44-bin80*. The type species for the genus is *Candidatus* Remedana homogitas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *E44-bin80*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Remedanaceae.

Description of *Candidatus* Remedanaceae fam. nov.

Candidatus Remedanaceae (NL. fem. n. *Remedanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *E44-bin80.* The type genus for the taxon is *Candidatus* Remedana .

According to the original version of GTDB R06-RS202, this family belongs to the order *E44-bin80*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Remedanales.

Description of *Candidatus* Remedanales ord. nov.

Candidatus Remedanales (NL. fem. n. *Remedanales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *E44-bin80.* The type genus for the taxon is *Candidatus* Remedana .

According to the original version of GTDB R06-RS202, this family belongs to the class *E44-bin80*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Remedanae.

Description of *Candidatus* Remedanae class. nov.

Candidatus Remedanae (NL. fem. n. *c__Remedanae* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *E44-bin80.* The type genus for the taxon is *Candidatus* Remedana .

According to the original version of GTDB R06-RS202, this family belongs to the phylum *WOR-3*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the phylum *Candidatus* Tigurariota.

Description of *Candidatus* Remedida aggesatica sp. nov.

Candidatus Remedida aggesatica (NL. fem. n. *aggesatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002401385 sp002401385*. The type genome for the species is the GenBank assembly GCA_002401385.1. The GC content of the type genome is 34.09 % and the genome length is 3.15 Mbp.

Description of *Candidatus* Remedida gen. nov.

Candidatus Remedida (NL. fem. n. *Remedida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-002401385*. The type species for the genus is *Candidatus* Remedida aggesatica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Remedida carecatica sp. nov.

Candidatus Remedida carecatica (NL. fem. n. *carecatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002401385 sp002401105*. The type genome for the species is the GenBank assembly GCA_002401105.1. The GC content of the type genome is 34.52 % and the genome length is 2.72 Mbp.

Description of *Candidatus* Remedida satacessa sp. nov.

Candidatus Remedida satacessa (NL. fem. n. *satacessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002401385 sp002400885*. The type genome for the species is the GenBank assembly GCA_002400885.1. The GC content of the type genome is 35.09 % and the genome length is 2.96 Mbp.

Description of *Candidatus* Remedosa alsuletta sp. nov.

Candidatus Remedosa alsuletta (NL. fem. n. *alsuletta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DRJF01 sp011052375*. The type genome for the species is the GenBank assembly GCA_011052375.1. The GC content of the type genome is 60.43 % and the genome length is 1.88 Mbp.

Description of *Candidatus* Remedosa gen. nov.

Candidatus Remedosa (NL. fem. n. *Remedosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DRJF01*. The type species for the genus is *Candidatus* Remedosa alsuletta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DRJF01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Remedosaceae.

Description of *Candidatus* Remedosaceae fam. nov.

Candidatus Remedosaceae (NL. fem. n. *Remedosaceae* a name created from the name of

the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *DRJF01*. The type genus for the taxon is *Candidatus* Remedosa .

According to the original version of GTDB R06-RS202, this family belongs to the order *RBG-16-55-9*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Vicecosales.

Description of *Candidatus* Remedula navifetta sp. nov.

Candidatus Remedula navifetta (NL. fem. n. *navifetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *TMED198 sp002170735*. The type genome for the species is the GenBank assembly GCA_002170735.1. The GC content of the type genome is 34.25 % and the genome length is 1.14 Mbp.

Description of *Candidatus* Remedula gen. nov.

Candidatus Remedula (NL. fem. n. *Remedula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *TMED198*. The type species for the genus is *Candidatus* Remedula navifetta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *TMED198*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Remedulaceae.

Description of *Candidatus* Remedulaceae fam. nov.

Candidatus Remedulaceae (NL. fem. n. *Remedulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *TMED198*. The type genus for the taxon is *Candidatus* Remedula .

According to the original version of GTDB R06-RS202, this family belongs to the order *SCGC-AAA003-L08*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Redaciales.

Description of *Candidatus* Remulana domabitoga sp. nov.

Candidatus Remulana domabitoga (NL. fem. n. *domabitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7862 sp009929275*. The type genome for the species is the GenBank assembly GCA_009929275.1. The GC content of the type genome is 34.3 % and the genome length is 1.18 Mbp.

Description of *Candidatus* Remulana gen. nov.

Candidatus Remulana (NL. fem. n. *Remulana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA7862*. The type species for the genus is *Candidatus* Remulana domabitoga .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1242*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Macilulaceae.

Description of *Candidatus* Remulana subucitas sp. nov.

Candidatus Remulana subucitas (NL. fem. n. *subucitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7862 sp002500135*. The type genome for the species is the GenBank assembly GCA_002437645.1. The GC content of the type genome is 37.72 % and the genome length is 1.0 Mbp.

Description of *Candidatus* Remularia nocenilenta sp. nov.

Candidatus Remularia nocenilenta (NL. fem. n. *nocenilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAADDD01 sp013154095*. The type genome for the species is the GenBank assembly GCA_013154095.1. The GC content of the type genome is 45.66 % and the genome length is 0.54 Mbp.

Description of *Candidatus* Remularia gen. nov.

Candidatus Remularia (NL. fem. n. *Remularia* a name created arbitrarily, while

preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAADDD01*. The type species for the genus is *Candidatus* Remularia nocenilenta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JAADDD01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Remulariaceae.

Description of *Candidatus* Remulariaceae fam. nov.

Candidatus Remulariaceae (NL. fem. n. *Remulariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JAADDD01*. The type genus for the taxon is *Candidatus* Remularia .

According to GTDB R06-RS202, this family belongs to the order *Rickettsiales_B*.

Description of *Candidatus* Remulella siminessa sp. nov.

Candidatus Remulella siminessa (NL. fem. n. *siminessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6215 sp002421665*. The type genome for the species is the GenBank assembly GCA_002421665.1. The GC content of the type genome is 49.98 % and the genome length is 1.61 Mbp.

Description of *Candidatus* Remulella gen. nov.

Candidatus Remulella (NL. fem. n. *Remulella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA6215*. The type species for the genus is *Candidatus* Remulella siminessa .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA6215*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Remulellaceae.

Description of *Candidatus* Remulellaceae fam. nov.

Candidatus Remulellaceae (NL. fem. n. *Remulellaceae* a name created from the name of

the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA6215*. The type genus for the taxon is *Candidatus* Remulella .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA6215*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Remulellales.

Description of *Candidatus* Remulellales ord. nov.

Candidatus Remulellales (NL. fem. n. *Remulellales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA6215*. The type genus for the taxon is *Candidatus* Remulella .

According to the original version of GTDB R06-RS202, this family belongs to the class *Koll11*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Resalellae.

Description of *Candidatus* Remulia cicarago sp. nov.

Candidatus Remulia cicarago (NL. fem. n. *cicarago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *51-20 sp902795665*. The type genome for the species is the GenBank assembly GCA_902795665.1. The GC content of the type genome is 40.05 % and the genome length is 1.1 Mbp.

Description of *Candidatus* Remulia gen. nov.

Candidatus Remulia (NL. fem. n. *Remulia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *51-20*. The type species for the genus is *Candidatus* Remulia cicarago .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-239*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Catobosaceae.

Description of *Candidatus* Remulia cituviforma sp. nov.

Candidatus Remulia cituviforma (NL. fem. n. *cituviforma* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *51-20 sp900762565*. The type genome for the species is the GenBank assembly RS_GCF_900762565.1. The GC content of the type genome is 46.09 % and the genome length is 1.48 Mbp.

Description of *Candidatus* Remulia colepastra sp. nov.

Candidatus Remulia colepastra (NL. fem. n. *colepastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *51-20 sp900542055*. The type genome for the species is the GenBank assembly GCA_900542055.1. The GC content of the type genome is 38.61 % and the genome length is 1.39 Mbp.

Description of *Candidatus* Remulia obfusax sp. nov.

Candidatus Remulia obfusax (NL. fem. n. *obfusax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *51-20 sp902761715*. The type genome for the species is the GenBank assembly GCA_902761715.1. The GC content of the type genome is 41.14 % and the genome length is 1.43 Mbp.

Description of *Candidatus* Remulia susicilenta sp. nov.

Candidatus Remulia susicilenta (NL. fem. n. *susicilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *51-20 sp001917175*. The type genome for the species is the GenBank assembly GCA_001917175.1. The GC content of the type genome is 50.74 % and the genome length is 1.98 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "healthy adult 3C".

Description of *Candidatus* Remulia venabax sp. nov.

Candidatus Remulia venabax (NL. fem. n. *venabax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *51-20 sp900539605*. The type genome for the species is the GenBank assembly GCA_900539605.1. The GC content of the type genome is 46.83 % and the genome length is 1.64 Mbp.

Description of *Candidatus* Remulida capabivita sp. nov.

Candidatus Remulida capabivita (NL. fem. n. *capabivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HCH-1 sp002753305*. The type genome for the species is the GenBank assembly GCA_002753305.1. The GC content of the type genome is 47.78 % and the genome length is 3.6 Mbp.

Description of *Candidatus* Remulida gen. nov.

Candidatus Remulida (NL. fem. n. *Remulida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *HCH-1*. The type species for the genus is *Candidatus* Remulida capabivita .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Remulida forinivita sp. nov.

Candidatus Remulida forinivita (NL. fem. n. *forinivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HCH-1 sp001541255*. The type genome for the species is the GenBank assembly RS_GCF_001541255.1. The GC content of the type genome is 45.37 % and the genome length is 3.59 Mbp.

Description of *Candidatus* Remulosa conifessa sp. nov.

Candidatus Remulosa conifessa (NL. fem. n. *conifessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SKPS01 sp007119395*. The type genome for the species is the

GenBank assembly GCA_007119395.1. The GC content of the type genome is 49.11 % and the genome length is 2.74 Mbp.

Description of *Candidatus* Remulosa gen. nov.

Candidatus Remulosa (NL. fem. n. *Remulosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SKPS01*. The type species for the genus is *Candidatus* Remulosa conifessa .

According to the original version of GTDB R06-RS202, this genus belongs to the family *PWNQ01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Sotuliaceae.

Description of *Candidatus* Remulula nubifimonas sp. nov.

Candidatus Remulula nubifimonas (NL. fem. n. *nubifimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PNNF01 sp013824085*. The type genome for the species is the GenBank assembly GCA_013824085.1. The GC content of the type genome is 32.91 % and the genome length is 2.65 Mbp.

Description of *Candidatus* Remulula gen. nov.

Candidatus Remulula (NL. fem. n. *Remulula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PNNF01*. The type species for the genus is *Candidatus* Remulula nubifimonas .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Renavana depubitrix sp. nov.

Candidatus Renavana depubitrix (NL. fem. n. *depubitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2125 sp002311275*. The type genome for the species is the GenBank assembly GCA_012963675.1. The GC content of the type genome is 46.73 %

and the genome length is 2.2 Mbp.

Description of *Candidatus* Renavana gen. nov.

Candidatus Renavana (NL. fem. n. *Renavana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA2125*. The type species for the genus is *Candidatus* Renavana depubitrix .

According to the original version of GTDB R06-RS202, this genus belongs to the family *S15-B10*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Minagulaceae.

Description of *Candidatus* Renavana excorifica sp. nov.

Candidatus Renavana excorifica (NL. fem. n. *excorifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2125 sp004124465*. The type genome for the species is the GenBank assembly RS_GCF_004124465.1. The GC content of the type genome is 46.15 % and the genome length is 1.48 Mbp.

Description of *Candidatus* Renavana genufessa sp. nov.

Candidatus Renavana genufessa (NL. fem. n. *genufessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2125 sp002329125*. The type genome for the species is the GenBank assembly GCA_002329125.1. The GC content of the type genome is 45.95 % and the genome length is 1.97 Mbp.

Description of *Candidatus* Renavaria docibilega sp. nov.

Candidatus Renavaria docibilega (NL. fem. n. *docibilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS905 sp900540085*. The type genome for the species is the GenBank assembly RS_GCF_900755385.1. The GC content of the type genome is 35.8 % and the genome length is 1.7 Mbp.

Description of *Candidatus* Renavaria gen. nov.

Candidatus Renavaria (NL. fem. n. *Renavaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UMGS905*. The type species for the genus is *Candidatus* Renavaria docibilega .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Renavaria levifitica sp. nov.

Candidatus Renavaria levifitica (NL. fem. n. *levifitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS905 sp900546735*. The type genome for the species is the GenBank assembly GCA_014465935.1. The GC content of the type genome is 53.03 % and the genome length is 2.17 Mbp.

Description of *Candidatus* Renavella depecastra sp. nov.

Candidatus Renavella depecastra (NL. fem. n. *depecastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *VXYL01 sp009839405*. The type genome for the species is the GenBank assembly GCA_009839405.1. The GC content of the type genome is 65.99 % and the genome length is 3.65 Mbp.

Description of *Candidatus* Renavella gen. nov.

Candidatus Renavella (NL. fem. n. *Renavella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *VXYL01*. The type species for the genus is *Candidatus* Renavella depecastra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *HTCC2089*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Tegumosaceae.

Description of *Candidatus* Renavella inhumitas sp. nov.

Candidatus Renavella inhumitas (NL. fem. n. *inhumitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *VXYL01 sp009839505*. The type genome for the species is the GenBank assembly GCA_009839505.1. The GC content of the type genome is 65.17 % and the genome length is 4.7 Mbp.

Description of *Candidatus* Renavella molecitio sp. nov.

Candidatus Renavella molecitio (NL. fem. n. *molecitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *VXYL01 sp009837725*. The type genome for the species is the GenBank assembly GCA_009837725.1. The GC content of the type genome is 65.51 % and the genome length is 4.66 Mbp.

Description of *Candidatus* Renavella tumefentia sp. nov.

Candidatus Renavella tumefentia (NL. fem. n. *tumefentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *VXYL01 sp009846005*. The type genome for the species is the GenBank assembly GCA_009843225.1. The GC content of the type genome is 64.75 % and the genome length is 5.46 Mbp.

Description of *Candidatus* Renavia cemenicula sp. nov.

Candidatus Renavia cemenicula (NL. fem. n. *cemenicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *B18-G4 sp003648575*. The type genome for the species is the GenBank assembly GCA_003648575.1. The GC content of the type genome is 44.53 % and the genome length is 3.94 Mbp.

Description of *Candidatus* Renavia gen. nov.

Candidatus Renavia (NL. fem. n. *Renavia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *B18-G4*. The type species for the genus is *Candidatus* Renavia cemenicula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *B18-G4*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Renaviaceae.

Description of *Candidatus* Renaviaceae fam. nov.

Candidatus Renaviaceae (NL. fem. n. *Renaviaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *B18-G4.* The type genus for the taxon is *Candidatus* Renavia .

According to GTDB R06-RS202, this family belongs to the order *Bacteroidales*.

Description of *Candidatus* Renavia immacetta sp. nov.

Candidatus Renavia immacetta (NL. fem. n. *immacetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *B18-G4 sp013202965*. The type genome for the species is the GenBank assembly GCA_013202965.1. The GC content of the type genome is 42.22 % and the genome length is 3.32 Mbp.

Description of *Candidatus* Renavida denicedo sp. nov.

Candidatus Renavida denicedo (NL. fem. n. *denicedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1441 sp002329255*. The type genome for the species is the GenBank assembly GCA_002329255.1. The GC content of the type genome is 41.36 % and the genome length is 0.41 Mbp.

Description of *Candidatus* Renavida gen. nov.

Candidatus Renavida (NL. fem. n. *Renavida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1441*. The type species for the genus is *Candidatus* Renavida

denicedo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1441*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Renavidaceae.

Description of *Candidatus* Renavidaceae fam. nov.

Candidatus Renavidaceae (NL. fem. n. *Renavidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA1441*. The type genus for the taxon is *Candidatus* Renavida .

According to GTDB R06-RS202, this family belongs to the order *Paceibacterales*.

Description of *Candidatus* Renavosa ammurisca sp. nov.

Candidatus Renavosa ammurisca (NL. fem. n. *ammurisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2214 sp002327255*. The type genome for the species is the GenBank assembly GCA_002327255.1. The GC content of the type genome is 56.34 % and the genome length is 4.2 Mbp.

Description of *Candidatus* Renavosa gen. nov.

Candidatus Renavosa (NL. fem. n. *Renavosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA2214*. The type species for the genus is *Candidatus* Renavosa ammurisca .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2214*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Renavosaceae.

Description of *Candidatus* Renavosaceae fam. nov.

Candidatus Renavosaceae (NL. fem. n. *Renavosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA2214*. The type genus for the taxon is *Candidatus* Renavosa .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA2214*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Renavosales.

Description of *Candidatus* Renavosales ord. nov.

Candidatus Renavosales (NL. fem. n. *Renavosales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA2214.* The type genus for the taxon is *Candidatus* Renavosa .

According to the original version of GTDB R06-RS202, this family belongs to the class *UBA2214*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Renavosae.

Description of *Candidatus* Renavosae class. nov.

Candidatus Renavosae (NL. fem. n. *c__Renavosae* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA2214.* The type genus for the taxon is *Candidatus* Renavosa .

According to the original version of GTDB R06-RS202, this family belongs to the phylum *KSB1*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the phylum *Candidatus* Locupulota.

Description of *Candidatus* Renavula decamatica sp. nov.

Candidatus Renavula decamatica (NL. fem. n. *decamatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIMEY01 sp903840165*. The type genome for the species is the GenBank assembly GCA_903864385.1. The GC content of the type genome is 61.07 % and the genome length is 5.65 Mbp.

Description of *Candidatus* Renavula gen. nov.

Candidatus Renavula (NL. fem. n. *Renavula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIMEY01*. The type species for the genus is *Candidatus* Renavula

decamatica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA9042*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Rubigariaceae.

Description of *Candidatus* Renibacterium rutabitura sp. nov.

Candidatus Renibacterium rutabitura (NL. fem. n. *rutabitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Renibacterium sp005809195*. The type genome for the species is the GenBank assembly GCA_903875395.1. The GC content of the type genome is 64.57 % and the genome length is 3.4 Mbp.

Description of *Candidatus* Repagana adcumimonia sp. nov.

Candidatus Repagana adcumimonia (NL. fem. n. *adcumimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HRBIN16 sp011359015*. The type genome for the species is the GenBank assembly GCA_011359015.1. The GC content of the type genome is 59.61 % and the genome length is 3.5 Mbp.

Description of *Candidatus* Repagana gen. nov.

Candidatus Repagana (NL. fem. n. *Repagana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *HRBIN16*. The type species for the genus is *Candidatus* Repagana adcumimonia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *HRBIN16*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Repaganaceae.

Description of *Candidatus* Repaganaceae fam. nov.

Candidatus Repaganaceae (NL. fem. n. *Repaganaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this taxon is *HRBIN16.* The type genus for the taxon is *Candidatus* Repagana .

According to the original version of GTDB R06-RS202, this family belongs to the order *HRBIN16*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Repaganales.

Description of *Candidatus* Repaganales ord. nov.

Candidatus Repaganales (NL. fem. n. *Repaganales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *HRBIN16.* The type genus for the taxon is *Candidatus* Repagana .

According to the original version of GTDB R06-RS202, this family belongs to the class *HRBIN16*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Repaganae.

Description of *Candidatus* Repaganae class. nov.

Candidatus Repaganae (NL. fem. n. *c__Repaganae* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *HRBIN16.* The type genus for the taxon is *Candidatus* Repagana .

According to GTDB R06-RS202, this class belongs to the phylum *Armatimonadota*.

Description of *Candidatus* Repagana coturicula sp. nov.

Candidatus Repagana coturicula (NL. fem. n. *coturicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HRBIN16 sp002898895*. The type genome for the species is the GenBank assembly GCA_011051345.1. The GC content of the type genome is 58.94 % and the genome length is 4.17 Mbp.

Description of *Candidatus* Repagana figililega sp. nov.

Candidatus Repagana figililega (NL. fem. n. *figililega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HRBIN16 sp013314755*. The type genome for the species is the

GenBank assembly GCA_013314755.1. The GC content of the type genome is 59.8 % and the genome length is 3.95 Mbp.

Description of *Candidatus* Repagana homilessa sp. nov.

Candidatus Repagana homilessa (NL. fem. n. *homilessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HRBIN16 sp011053695*. The type genome for the species is the GenBank assembly GCA_011048065.1. The GC content of the type genome is 59.54 % and the genome length is 3.88 Mbp.

Description of *Candidatus* Repagaria dilacilega sp. nov.

Candidatus Repagaria dilacilega (NL. fem. n. *dilacilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-02-FULL-40-12 sp001824375*. The type genome for the species is the GenBank assembly GCA_001824375.1. The GC content of the type genome is 39.5 % and the genome length is 0.48 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 0.2 micron filter; full assembly".

Description of *Candidatus* Repagaria gen. nov.

Candidatus Repagaria (NL. fem. n. *Repagaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *2-02-FULL-40-12*. The type species for the genus is *Candidatus* Repagaria dilacilega .

According to the original version of GTDB R06-RS202, this genus belongs to the family *2-02-FULL-40-12*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Repagariaceae.

Description of *Candidatus* Repagariaceae fam. nov.

Candidatus Repagariaceae (NL. fem. n. *Repagariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *2-02-FULL-40-12.* The type genus for the taxon is *Candidatus*

Repagaria .

According to the original version of GTDB R06-RS202, this family belongs to the order *2-02-FULL-40-12*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Repagariales.

Description of *Candidatus* Repagariales ord. nov.

Candidatus Repagariales (NL. fem. n. *Repagariales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *2-02-FULL-40-12.* The type genus for the taxon is *Candidatus* Repagaria .

According to the GTDB R06-RS202, this order belongs to the class *Paceibacteria*.

Description of *Candidatus* Repagaria impilibula sp. nov.

Candidatus Repagaria impilibula (NL. fem. n. *impilibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-02-FULL-40-12 sp007376425*. The type genome for the species is the GenBank assembly GCA_007376425.1. The GC content of the type genome is 40.12 % and the genome length is 0.55 Mbp.

Description of *Candidatus* Repagella denomiforma sp. nov.

Candidatus Repagella denomiforma (NL. fem. n. *denomiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTER01 sp014360995*. The type genome for the species is the GenBank assembly GCA_014360995.1. The GC content of the type genome is 60.05 % and the genome length is 1.29 Mbp.

Description of *Candidatus* Repagella gen. nov.

Candidatus Repagella (NL. fem. n. *Repagella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DTER01*. The type species for the genus is *Candidatus* Repagella denomiforma .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Repagella fidenessa sp. nov.

Candidatus Repagella fidenessa (NL. fem. n. *fidenessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTER01 sp011371555*. The type genome for the species is the GenBank assembly GCA_011371555.1. The GC content of the type genome is 58.22 % and the genome length is 1.68 Mbp.

Description of *Candidatus* Repagella paracimonas sp. nov.

Candidatus Repagella paracimonas (NL. fem. n. *paracimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTER01 sp014360945*. The type genome for the species is the GenBank assembly GCA_014360945.1. The GC content of the type genome is 56.77 % and the genome length is 1.28 Mbp.

Description of *Candidatus* Repagia cicarentia sp. nov.

Candidatus Repagia cicarentia (NL. fem. n. *cicarentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *IGN2 sp013388525*. The type genome for the species is the GenBank assembly GCA_013388525.1. The GC content of the type genome is 35.47 % and the genome length is 3.25 Mbp.

Description of *Candidatus* Repagia gen. nov.

Candidatus Repagia (NL. fem. n. *Repagia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *IGN2*. The type species for the genus is *Candidatus* Repagia cicarentia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Repagia recucigena sp. nov.

Candidatus Repagia recucigena (NL. fem. n. *recucigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *IGN2 sp013042995*. The type genome for the species is the GenBank assembly GCA_013042995.1. The GC content of the type genome is 34.7 % and the genome length is 3.44 Mbp.

Description of *Candidatus* Repagia venucigena sp. nov.

Candidatus Repagia venucigena (NL. fem. n. *venucigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *IGN2 sp013285405*. The type genome for the species is the GenBank assembly GCA_013359325.1. The GC content of the type genome is 34.72 % and the genome length is 3.23 Mbp.

Description of *Candidatus* Repagida ascalago sp. nov.

Candidatus Repagida ascalago (NL. fem. n. *ascalago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIOGM01 sp903857795*. The type genome for the species is the GenBank assembly GCA_903857795.1. The GC content of the type genome is 59.52 % and the genome length is 4.05 Mbp.

Description of *Candidatus* Repagida gen. nov.

Candidatus Repagida (NL. fem. n. *Repagida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIOGM01*. The type species for the genus is *Candidatus* Repagida ascalago .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAIOGM01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Repagidaceae.

Description of *Candidatus* Repagidaceae fam. nov.

Candidatus Repagidaceae (NL. fem. n. *Repagidaceae* a name created from the name of

the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CAIOGM01.* The type genus for the taxon is *Candidatus* Repagida .

According to GTDB R06-RS202, this family belongs to the order *Geobacterales*.

Description of *Candidatus* Repagida bifisibra sp. nov.

Candidatus Repagida bifisibra (NL. fem. n. *bifisibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIOGM01 sp903902345*. The type genome for the species is the GenBank assembly GCA_903902345.1. The GC content of the type genome is 56.58 % and the genome length is 4.91 Mbp.

Description of *Candidatus* Repagida pepenilenta sp. nov.

Candidatus Repagida pepenilenta (NL. fem. n. *pepenilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIOGM01 sp903902855*. The type genome for the species is the GenBank assembly GCA_903932025.1. The GC content of the type genome is 56.44 % and the genome length is 5.13 Mbp.

Description of *Candidatus* Repagida siminitia sp. nov.

Candidatus Repagida siminitia (NL. fem. n. *siminitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIOGM01 sp903929485*. The type genome for the species is the GenBank assembly GCA_903844075.1. The GC content of the type genome is 55.74 % and the genome length is 5.53 Mbp.

Description of *Candidatus* Repagosa fumacibula sp. nov.

Candidatus Repagosa fumacibula (NL. fem. n. *fumacibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *2-01-FULL-41-22 sp001789805*. The type genome for the species is the GenBank assembly GCA_001789995.1. The GC content of the type genome is 40.41 % and the genome length is 0.75 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under low O2 conditions; 0.2 micron filter; full assembly".

Description of *Candidatus* Repagosa gen. nov.

Candidatus Repagosa (NL. fem. n. *Repagosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *2-01-FULL-41-22*. The type species for the genus is *Candidatus* Repagosa fumacibula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GWC2-37-13*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vigenidaceae.

Description of *Candidatus* Repecana laxitastra sp. nov.

Candidatus Repecana laxitastra (NL. fem. n. *laxitastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SFDP01 sp004558185*. The type genome for the species is the GenBank assembly RS_GCF_900770755.1. The GC content of the type genome is 44.14 % and the genome length is 2.87 Mbp.

Description of *Candidatus* Repecana gen. nov.

Candidatus Repecana (NL. fem. n. *Repecana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SFDP01*. The type species for the genus is *Candidatus* Repecana laxitastra .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Repecana recomitia sp. nov.

Candidatus Repecana recomitia (NL. fem. n. *recomitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SFDP01 sp900770785*. The type genome for the species is the GenBank assembly RS_GCF_900770785.1. The GC content of the type genome is 43.74 % and the genome length is 2.72 Mbp.

Description of *Candidatus* Repecaria depetetta sp. nov.

Candidatus Repecaria depetetta (NL. fem. n. *depetetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PFDW01 sp002793835*. The type genome for the species is the GenBank assembly GCA_002793835.1. The GC content of the type genome is 35.94 % and the genome length is 0.71 Mbp.

Description of *Candidatus* Repecaria gen. nov.

Candidatus Repecaria (NL. fem. n. *Repecaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PFDW01*. The type species for the genus is *Candidatus* Repecaria depetetta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *PFDW01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Repecariaceae.

Description of *Candidatus* Repecariaceae fam. nov.

Candidatus Repecariaceae (NL. fem. n. *Repecariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *PFDW01.* The type genus for the taxon is *Candidatus* Repecaria .

According to GTDB R06-RS202, this family belongs to the order *Portnoybacterales*.

Description of *Candidatus* Repecella fidenibra sp. nov.

Candidatus Repecella fidenibra (NL. fem. n. *fidenibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *T3Sed10-66 sp003556585*. The type genome for the species is the

GenBank assembly GCA_003561415.1. The GC content of the type genome is 66.85 % and the genome length is 4.37 Mbp.

Description of *Candidatus* Repecella gen. nov.

Candidatus Repecella (NL. fem. n. *Repecella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *T3Sed10-66*. The type species for the genus is *Candidatus* Repecella fidenibra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA6960*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Caravidaceae.

Description of *Candidatus* Repecella peradessa sp. nov.

Candidatus Repecella peradessa (NL. fem. n. *peradessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *T3Sed10-66 sp003564555*. The type genome for the species is the GenBank assembly GCA_007695225.1. The GC content of the type genome is 67.86 % and the genome length is 4.18 Mbp.

Description of *Candidatus* Repecia hibisentia sp. nov.

Candidatus Repecia hibisentia (NL. fem. n. *hibisentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *LS-SOB sp001543005*. The type genome for the species is the GenBank assembly GCA_001543005.1. The GC content of the type genome is 47.47 % and the genome length is 2.69 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "glass sponge collected from seamount of South China Sea".

Description of *Candidatus* Repecia gen. nov.

Candidatus Repecia (NL. fem. n. *Repecia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *LS-SOB*. The type species for the genus is *Candidatus* Repecia

hibisentia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *LS-SOB*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Repeciaceae.

Description of *Candidatus* Repeciaceae fam. nov.

Candidatus Repeciaceae (NL. fem. n. *Repeciaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *LS-SOB*. The type genus for the taxon is *Candidatus* Repecia .

According to GTDB R06-RS202, this family belongs to the order *Arenicellales*.

Description of *Candidatus* Repecida genufilega sp. nov.

Candidatus Repecida genufilega (NL. fem. n. *genufilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIZRG01 sp903935335*. The type genome for the species is the GenBank assembly GCA_903893035.1. The GC content of the type genome is 40.3 % and the genome length is 2.45 Mbp.

Description of *Candidatus* Repecida gen. nov.

Candidatus Repecida (NL. fem. n. *Repecida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIZRG01*. The type species for the genus is *Candidatus* Repecida genufilega .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1018*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Desorariaceae.

Description of *Candidatus* Repecosa cepulousia sp. nov.

Candidatus Repecosa cepulousia (NL. fem. n. *cepulousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *HRBIN30 sp011054845*. The type genome for the species is the GenBank assembly GCA_011054845.1. The GC content of the type genome is 61.63 % and the genome length is 3.69 Mbp.

Description of *Candidatus* Repecosa gen. nov.

Candidatus Repecosa (NL. fem. n. *Repecosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *HRBIN30*. The type species for the genus is *Candidatus* Repecosa cepulousia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *HRBIN30*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Repecosaceae.

Description of *Candidatus* Repecosaceae fam. nov.

Candidatus Repecosaceae (NL. fem. n. *Repecosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *HRBIN30.* The type genus for the taxon is *Candidatus* Repecosa .

According to the original version of GTDB R06-RS202, this family belongs to the order *HRBIN30*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Repecosales.

Description of *Candidatus* Repecosales ord. nov.

Candidatus Repecosales (NL. fem. n. *Repecosales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *HRBIN30.* The type genus for the taxon is *Candidatus* Repecosa .

According to the GTDB R06-RS202, this order belongs to the class *Binatia*.

Description of *Candidatus* Repecosa ingigitas sp. nov.

Candidatus Repecosa ingigitas (NL. fem. n. *ingigitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HRBIN30 sp002898795*. The type genome for the species is the

GenBank assembly GCA_002898795.1. The GC content of the type genome is 60.32 % and the genome length is 3.73 Mbp.

Description of *Candidatus* Repecula colimatio sp. nov.

Candidatus Repecula colimatio (NL. fem. n. *colimatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WVXJ01 sp011773575*. The type genome for the species is the GenBank assembly GCA_011773575.1. The GC content of the type genome is 56.82 % and the genome length is 2.68 Mbp.

Description of *Candidatus* Repecula gen. nov.

Candidatus Repecula (NL. fem. n. *Repecula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WVXJ01*. The type species for the genus is *Candidatus* Repecula colimatio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *WVXJ01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Repeculaceae.

Description of *Candidatus* Repeculaceae fam. nov.

Candidatus Repeculaceae (NL. fem. n. *Repeculaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *WVXJ01*. The type genus for the taxon is *Candidatus* Repecula .

According to the original version of GTDB R06-RS202, this family belongs to the order *WVXJ01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Repeculales.

Description of *Candidatus* Repeculales ord. nov.

Candidatus Repeculales (NL. fem. n. *Repeculales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *WVXJ01*. The type genus for the taxon is *Candidatus* Repecula .

According to the original version of GTDB R06-RS202, this family belongs to the class *CAIYQO01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Nocumidae.

Description of *Candidatus* Repepana siticitia sp. nov.

Candidatus Repepana siticitia (NL. fem. n. *siticitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4572 sp002387725*. The type genome for the species is the GenBank assembly GCA_002454995.1. The GC content of the type genome is 58.4 % and the genome length is 1.71 Mbp.

Description of *Candidatus* Repepana gen. nov.

Candidatus Repepana (NL. fem. n. *Repepana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA4572*. The type species for the genus is *Candidatus* Repepana siticitia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Repeparia canacicella sp. nov.

Candidatus Repeparia canacicella (NL. fem. n. *canacicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *B3-TA06 sp005223075*. The type genome for the species is the GenBank assembly GCA_005223075.1. The GC content of the type genome is 52.55 % and the genome length is 2.41 Mbp.

Description of *Candidatus* Repeparia gen. nov.

Candidatus Repeparia (NL. fem. n. *Repeparia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *B3-TA06*. The type species for the genus is *Candidatus* Repeparia canacicella .

According to the original version of GTDB R06-RS202, this genus belongs to the family

B3-TA06. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Repepariaceae.

Description of *Candidatus* Repepariaceae fam. nov.

Candidatus Repepariaceae (NL. fem. n. *Repepariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *B3-TA06.* The type genus for the taxon is *Candidatus* Repeparia .

According to the original version of GTDB R06-RS202, this family belongs to the order *B3-TA06*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Repepariales.

Description of *Candidatus* Repepariales ord. nov.

Candidatus Repepariales (NL. fem. n. *Repepariales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *B3-TA06.* The type genus for the taxon is *Candidatus* Repeparia .

According to the original version of GTDB R06-RS202, this family belongs to the class *WOR-3*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Tigurariae.

Description of *Candidatus* Repeparia fatilentia sp. nov.

Candidatus Repeparia fatilentia (NL. fem. n. *fatilentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *B3-TA06 sp004375895*. The type genome for the species is the GenBank assembly GCA_004375895.1. The GC content of the type genome is 52.87 % and the genome length is 2.2 Mbp.

Description of *Candidatus* Repeparia videlitudo sp. nov.

Candidatus Repeparia videlitudo (NL. fem. n. *videlitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *B3-TA06 sp012517375*. The type genome for the species is the

GenBank assembly GCA_012517375.1. The GC content of the type genome is 48.75 % and the genome length is 2.54 Mbp.

Description of *Candidatus* Repepella buxifedo sp. nov.

Candidatus Repepella buxifedo (NL. fem. n. *buxifedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SLPH01 sp007132095*. The type genome for the species is the GenBank assembly GCA_007123165.1. The GC content of the type genome is 50.82 % and the genome length is 2.07 Mbp.

Description of *Candidatus* Repepella gen. nov.

Candidatus Repepella (NL. fem. n. *Repepella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SLPH01*. The type species for the genus is *Candidatus* Repepella buxifedo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DTU022*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Depelidaceae.

Description of *Candidatus* Repepia antacitura sp. nov.

Candidatus Repepia antacitura (NL. fem. n. *antacitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2716585 sp002716585*. The type genome for the species is the GenBank assembly GCA_002716585.1. The GC content of the type genome is 68.58 % and the genome length is 4.25 Mbp.

Description of *Candidatus* Repepia gen. nov.

Candidatus Repepia (NL. fem. n. *Repepia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2716585*. The type species for the genus is *Candidatus* Repepia antacitura .

According to the original version of GTDB R06-RS202, this genus belongs to the family

GCA-2716585. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Repepiaceae.

Description of *Candidatus* Repepiaceae fam. nov.

Candidatus Repepiaceae (NL. fem. n. *Repepiaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *GCA-2716585.* The type genus for the taxon is *Candidatus* Repepia .

According to GTDB R06-RS202, this family belongs to the order *Bradymonadales*.

Description of *Candidatus* Repepida depopicella sp. nov.

Candidatus Repepida depopicella (NL. fem. n. *depopicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GWE2-40-63 sp002840905*. The type genome for the species is the GenBank assembly GCA_002840905.1. The GC content of the type genome is 39.81 % and the genome length is 4.32 Mbp.

Description of *Candidatus* Repepida gen. nov.

Candidatus Repepida (NL. fem. n. *Repepida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GWE2-40-63*. The type species for the genus is *Candidatus* Repepida depopicella .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SZUA-534*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Tomogariaceae.

Description of *Candidatus* Repepida mahemugo sp. nov.

Candidatus Repepida mahemugo (NL. fem. n. *mahemugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GWE2-40-63 sp003512955*. The type genome for the species is the GenBank assembly GCA_001769865.1. The GC content of the type genome is 40.03 %

and the genome length is 5.09 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at 16ft depth; 0.2 micron filter at time point C".

Description of *Candidatus* Repeposa demogisca sp. nov.

Candidatus Repeposa demogisca (NL. fem. n. *demogisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *TMED26 sp003280605*. The type genome for the species is the GenBank assembly GCA_002690685.1. The GC content of the type genome is 55.1 % and the genome length is 2.98 Mbp.

Description of *Candidatus* Repeposa gen. nov.

Candidatus Repeposa (NL. fem. n. *Repeposa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *TMED26*. The type species for the genus is *Candidatus* Repeposa demogisca .

According to the original version of GTDB R06-RS202, this genus belongs to the family *TMED26*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Repeposaceae.

Description of *Candidatus* Repeposaceae fam. nov.

Candidatus Repeposaceae (NL. fem. n. *Repeposaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *TMED26.* The type genus for the taxon is *Candidatus* Repeposa .

According to GTDB R06-RS202, this family belongs to the order *Thalassobaculales*.

Description of *Candidatus* Repeposa fumacitio sp. nov.

Candidatus Repeposa fumacitio (NL. fem. n. *fumacitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *TMED26 sp002694075*. The type genome for the species is the GenBank assembly GCA_002694075.1. The GC content of the type genome is 64.03 %

and the genome length is 2.1 Mbp.

Description of *Candidatus* Repepula defetetta sp. nov.

Candidatus Repepula defetetta (NL. fem. n. *defetetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAINFC01 sp903847975*. The type genome for the species is the GenBank assembly GCA_903919995.1. The GC content of the type genome is 60.01 % and the genome length is 8.04 Mbp.

Description of *Candidatus* Repepula gen. nov.

Candidatus Repepula (NL. fem. n. *Repepula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAINFC01*. The type species for the genus is *Candidatus* Repepula defetetta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAINFC01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Repepulaceae.

Description of *Candidatus* Repepulaceae fam. nov.

Candidatus Repepulaceae (NL. fem. n. *Repepulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CAINFC01.* The type genus for the taxon is *Candidatus* Repepula .

According to the original version of GTDB R06-RS202, this family belongs to the order *CAINFC01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Repepulales.

Description of *Candidatus* Repepulales ord. nov.

Candidatus Repepulales (NL. fem. n. *Repepulales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CAINFC01.* The type genus for the taxon is *Candidatus* Repepula .

According to the original version of GTDB R06-RS202, this family belongs to the class

UBA6911. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Decomulae.

Description of *Candidatus* Repudana cenacetta sp. nov.

Candidatus Repudana cenacetta (NL. fem. n. *cenacetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MEVN01 sp001772985*. The type genome for the species is the GenBank assembly GCA_001772985.1. The GC content of the type genome is 35.48 % and the genome length is 0.73 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under low O2 conditions; 1.2 micron filter; full assembly".

Description of *Candidatus* Repudana gen. nov.

Candidatus Repudana (NL. fem. n. *Repudana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *MEVN01*. The type species for the genus is *Candidatus* Repudana cenacetta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA10185*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Musulellaceae.

Description of *Candidatus* Repudaria lametibra sp. nov.

Candidatus Repudaria lametibra (NL. fem. n. *lametibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DSSU01 sp011330975*. The type genome for the species is the GenBank assembly GCA_011330975.1. The GC content of the type genome is 52.24 % and the genome length is 6.34 Mbp.

Description of *Candidatus* Repudaria gen. nov.

Candidatus Repudaria (NL. fem. n. *Repudaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this genus is *DSSU01*. The type species for the genus is *Candidatus* Repudaria lametibra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DSSU01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Repudariaceae.

Description of *Candidatus* Repudariaceae fam. nov.

Candidatus Repudariaceae (NL. fem. n. *Repudariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *DSSU01*. The type genus for the taxon is *Candidatus* Repudaria .

According to GTDB R06-RS202, this family belongs to the order *Moduliflexales*.

Description of *Candidatus* Repudella pimenitudo sp. nov.

Candidatus Repudella pimenitudo (NL. fem. n. *pimenitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *VMGU01 sp007376745*. The type genome for the species is the GenBank assembly GCA_007376615.1. The GC content of the type genome is 38.98 % and the genome length is 0.67 Mbp.

Description of *Candidatus* Repudella gen. nov.

Candidatus Repudella (NL. fem. n. *Repudella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *VMGU01*. The type species for the genus is *Candidatus* Repudella pimenitudo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *02-FULL-45-10c*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Delubariaceae.

Description of *Candidatus* Repudida faticitudo sp. nov.

Candidatus Repudida faticitudo (NL. fem. n. *faticitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6901 sp002451085*. The type genome for the species is the GenBank assembly GCA_002451085.1. The GC content of the type genome is 60.07 % and the genome length is 2.39 Mbp.

Description of *Candidatus* Repudida gen. nov.

Candidatus Repudida (NL. fem. n. *Repudida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA6901*. The type species for the genus is *Candidatus* Repudida faticitudo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Repudosa acustilenta sp. nov.

Candidatus Repudosa acustilenta (NL. fem. n. *acustilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *LS-NOB sp001542995*. The type genome for the species is the GenBank assembly GCA_001542995.1. The GC content of the type genome is 46.85 % and the genome length is 2.65 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "glass sponge collected from seamount of South China Sea".

Description of *Candidatus* Repudosa gen. nov.

Candidatus Repudosa (NL. fem. n. *Repudosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *LS-NOB*. The type species for the genus is *Candidatus* Repudosa acustilenta .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Repudosa adhorastra sp. nov.

Candidatus Repudosa adhorastra (NL. fem. n. *adhorastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *LS-NOB sp002786505*. The type genome for the species is the GenBank assembly GCA_002786505.1. The GC content of the type genome is 46.9 % and the genome length is 2.39 Mbp.

Description of *Candidatus* Repudosa ancipivita sp. nov.

Candidatus Repudosa ancipivita (NL. fem. n. *ancipivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *LS-NOB sp002705185*. The type genome for the species is the GenBank assembly GCA_002705185.1. The GC content of the type genome is 39.82 % and the genome length is 1.83 Mbp.

Description of *Candidatus* Repudosa apsurigena sp. nov.

Candidatus Repudosa apsurigena (NL. fem. n. *apsurigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *LS-NOB sp014382285*. The type genome for the species is the GenBank assembly GCA_014382285.1. The GC content of the type genome is 46.08 % and the genome length is 2.97 Mbp.

Description of *Candidatus* Repudosa halucetta sp. nov.

Candidatus Repudosa halucetta (NL. fem. n. *halucetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *LS-NOB sp002454045*. The type genome for the species is the GenBank assembly GCA_002453875.1. The GC content of the type genome is 50.74 % and the genome length is 1.73 Mbp.

Description of *Candidatus* Repudosa refacimonas sp. nov.

Candidatus Repudosa refacimonas (NL. fem. n. *refacimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *LS-NOB sp012961055*. The type genome for the species is the GenBank assembly GCA_012961055.1. The GC content of the type genome is 43.28 % and the genome length is 1.61 Mbp.

Description of *Candidatus* Repudosa semigitura sp. nov.

Candidatus Repudosa semigitura (NL. fem. n. *semigitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *LS-NOB sp009873635*. The type genome for the species is the GenBank assembly GCA_009874485.1. The GC content of the type genome is 42.88 % and the genome length is 2.55 Mbp.

Description of *Candidatus* Repudosa timefivita sp. nov.

Candidatus Repudosa timefivita (NL. fem. n. *timefivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *LS-NOB sp003545625*. The type genome for the species is the GenBank assembly GCA_003545625.1. The GC content of the type genome is 46.78 % and the genome length is 2.04 Mbp.

Description of *Candidatus* Repudula seposilenta sp. nov.

Candidatus Repudula seposilenta (NL. fem. n. *seposilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *B32-G15 sp003644445*. The type genome for the species is the GenBank assembly GCA_003644445.1. The GC content of the type genome is 35.43 % and the genome length is 1.2 Mbp.

Description of *Candidatus* Repudula gen. nov.

Candidatus Repudula (NL. fem. n. *Repudula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *B32-G15*. The type species for the genus is *Candidatus* Repudula seposilenta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *B32-G15*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Repudulaceae.

Description of *Candidatus* Repudulaceae fam. nov.

Candidatus Repudulaceae (NL. fem. n. *Repudulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *B32-G15.* The type genus for the taxon is *Candidatus* Repudula .

According to the original version of GTDB R06-RS202, this family belongs to the order *4484-171*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Homoliales.

Description of *Candidatus* Repurana recucitio sp. nov.

Candidatus Repurana recucitio (NL. fem. n. *recucitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-12-FULL-62-27 sp001784175*. The type genome for the species is the GenBank assembly GCA_001782795.1. The GC content of the type genome is 61.56 % and the genome length is 3.94 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under low O2 conditions; 0.2 micron filter; full assembly".

Description of *Candidatus* Repurana gen. nov.

Candidatus Repurana (NL. fem. n. *Repurana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *2-12-FULL-62-27*. The type species for the genus is *Candidatus* Repurana recucitio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *2-12-FULL-62-27*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Repuranaceae.

Description of *Candidatus* Repuranaceae fam. nov.

Candidatus Repuranaceae (NL. fem. n. *Repuranaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *2-12-FULL-62-27.* The type genus for the taxon is *Candidatus* Repurana .

According to the original version of GTDB R06-RS202, this family belongs to the order *2-12-FULL-62-27*. According to the renamed version of GTDB R06-RS202, this taxon

belongs to the order *Candidatus* Repuranales.

Description of *Candidatus* Repuranales ord. nov.

Candidatus Repuranales (NL. fem. n. *Repuranales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *2-12-FULL-62-27.* The type genus for the taxon is *Candidatus* Repurana .

According to the original version of GTDB R06-RS202, this family belongs to the class *2-12-FULL-62-27*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Repuranae.

Description of *Candidatus* Repuranae class. nov.

Candidatus Repuranae (NL. fem. n. *c__Repuranae* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *2-12-FULL-62-27.* The type genus for the taxon is *Candidatus* Repurana .

According to GTDB R06-RS202, this class belongs to the phylum *Lindowbacteria*.

Description of *Candidatus* Repuraria canacibra sp. nov.

Candidatus Repuraria canacibra (NL. fem. n. *canacibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CG2-30-37-29 sp001873215*. The type genome for the species is the GenBank assembly GCA_002793055.1. The GC content of the type genome is 36.17 % and the genome length is 1.07 Mbp.

Description of *Candidatus* Repuraria gen. nov.

Candidatus Repuraria (NL. fem. n. *Repuraria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CG2-30-37-29*. The type species for the genus is *Candidatus* Repuraria canacibra .

According to the original version of GTDB R06-RS202, this genus belongs to the family

GWA1-39-11. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Tumefellaceae.

Description of *Candidatus* Repurella depocetta sp. nov.

Candidatus Repurella depocetta (NL. fem. n. *depocetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WRBN01 sp009784515*. The type genome for the species is the GenBank assembly GCA_009784515.1. The GC content of the type genome is 40.95 % and the genome length is 1.83 Mbp.

Description of *Candidatus* Repurella gen. nov.

Candidatus Repurella (NL. fem. n. *Repurella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WRBN01*. The type species for the genus is *Candidatus* Repurella depocetta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *WRBN01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Repurellaceae.

Description of *Candidatus* Repurellaceae fam. nov.

Candidatus Repurellaceae (NL. fem. n. *Repurellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *WRBN01.* The type genus for the taxon is *Candidatus* Repurella .

According to the original version of GTDB R06-RS202, this family belongs to the order *WRBN01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Repurellales.

Description of *Candidatus* Repurellales ord. nov.

Candidatus Repurellales (NL. fem. n. *Repurellales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *WRBN01.* The type genus for the taxon is *Candidatus* Repurella .

According to the GTDB R06-RS202, this order belongs to the class *Spirochaetia*.

Description of *Candidatus* Repuria attolifica sp. nov.

Candidatus Repuria attolifica (NL. fem. n. *attolifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *B22-G15 sp003648245*. The type genome for the species is the GenBank assembly GCA_003648245.1. The GC content of the type genome is 35.91 % and the genome length is 1.36 Mbp.

Description of *Candidatus* Repuria gen. nov.

Candidatus Repuria (NL. fem. n. *Repuria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *B22-G15*. The type species for the genus is *Candidatus* Repuria attolifica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *B22-G15*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Repuriaceae.

Description of *Candidatus* Repuriaceae fam. nov.

Candidatus Repuriaceae (NL. fem. n. *Repuriaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *B22-G15.* The type genus for the taxon is *Candidatus* Repuria .

According to the original version of GTDB R06-RS202, this family belongs to the order *B22-G15*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Repuriales.

Description of *Candidatus* Repuriales ord. nov.

Candidatus Repuriales (NL. fem. n. *Repuriales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *B22-G15.* The type genus for the taxon is *Candidatus* Repuria .

According to the GTDB R06-RS202, this order belongs to the class *Caldisericia*.

Description of *Candidatus* Repurida ammodago sp. nov.

Candidatus Repurida ammodago (NL. fem. n. *ammodago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Fen-1268 sp007280275*. The type genome for the species is the GenBank assembly GCA_007280275.1. The GC content of the type genome is 52.87 % and the genome length is 3.7 Mbp.

Description of *Candidatus* Repurida gen. nov.

Candidatus Repurida (NL. fem. n. *Repurida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Fen-1268*. The type species for the genus is *Candidatus* Repurida ammodago .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA10030*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vagabanaceae.

Description of *Candidatus* Repurida cohoratica sp. nov.

Candidatus Repurida cohoratica (NL. fem. n. *cohoratica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Fen-1268 sp003170475*. The type genome for the species is the GenBank assembly GCA_003155535.1. The GC content of the type genome is 52.24 % and the genome length is 4.22 Mbp.

Description of *Candidatus* Repurosa insopisca sp. nov.

Candidatus Repurosa insopisca (NL. fem. n. *insopisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *B21-G15 sp003650255*. The type genome for the species is the GenBank assembly GCA_003650255.1. The GC content of the type genome is 33.39 % and the genome length is 1.41 Mbp.

Description of *Candidatus* Repurosa gen. nov.

Candidatus Repurosa (NL. fem. n. *Repurosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *B21-G15*. The type species for the genus is *Candidatus* Repurosa insopisca .

According to the original version of GTDB R06-RS202, this genus belongs to the family *B21-G15*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Repurosaceae.

Description of *Candidatus* Repurosaceae fam. nov.

Candidatus Repurosaceae (NL. fem. n. *Repurosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *B21-G15.* The type genus for the taxon is *Candidatus* Repurosa .

According to the original version of GTDB R06-RS202, this family belongs to the order *B21-G15*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Repurosales.

Description of *Candidatus* Repurosales ord. nov.

Candidatus Repurosales (NL. fem. n. *Repurosales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *B21-G15.* The type genus for the taxon is *Candidatus* Repurosa .

According to the original version of GTDB R06-RS202, this family belongs to the class *CG03*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Laxitanae.

Description of *Candidatus* Repurula protritoga sp. nov.

Candidatus Repurula protritoga (NL. fem. n. *protritoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WRBM01 sp009784525*. The type genome for the species is the GenBank assembly GCA_009784525.1. The GC content of the type genome is 32.68 % and the genome length is 1.96 Mbp.

Description of *Candidatus* Repurula gen. nov.

Candidatus Repurula (NL. fem. n. *Repurula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WRBM01*. The type species for the genus is *Candidatus* Repurula protritoga .

According to the original version of GTDB R06-RS202, this genus belongs to the family *WRBM01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Repurulaceae.

Description of *Candidatus* Repurulaceae fam. nov.

Candidatus Repurulaceae (NL. fem. n. *Repurulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *WRBM01*. The type genus for the taxon is *Candidatus* Repurula .

According to GTDB R06-RS202, this family belongs to the order *Acholeplasmatales*.

Description of *Candidatus* Resacana bicalousia sp. nov.

Candidatus Resacana bicalousia (NL. fem. n. *bicalousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIWKO01 sp903858655*. The type genome for the species is the GenBank assembly GCA_903858655.1. The GC content of the type genome is 39.9 % and the genome length is 4.2 Mbp.

Description of *Candidatus* Resacana gen. nov.

Candidatus Resacana (NL. fem. n. *Resacana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIWKO01*. The type species for the genus is *Candidatus* Resacana bicalousia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAIWKO01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Resacanaceae.

Description of *Candidatus* Resacanaceae fam. nov.

Candidatus Resacanaceae (NL. fem. n. *Resacanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CAIWKO01.* The type genus for the taxon is *Candidatus* Resacana .

According to GTDB R06-RS202, this family belongs to the order *Bacteroidales*.

Description of *Candidatus* Resacana mavorifica sp. nov.

Candidatus Resacana mavorifica (NL. fem. n. *mavorifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIWKO01 sp903916135*. The type genome for the species is the GenBank assembly GCA_903916135.1. The GC content of the type genome is 38.17 % and the genome length is 4.59 Mbp.

Description of *Candidatus* Resacana sitelago sp. nov.

Candidatus Resacana sitelago (NL. fem. n. *sitelago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIWKO01 sp903913285*. The type genome for the species is the GenBank assembly GCA_903829715.1. The GC content of the type genome is 38.86 % and the genome length is 4.12 Mbp.

Description of *Candidatus* Resacana siticax sp. nov.

Candidatus Resacana siticax (NL. fem. n. *siticax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIWKO01 sp903862465*. The type genome for the species is the GenBank assembly GCA_903862465.1. The GC content of the type genome is 39.56 % and the genome length is 4.23 Mbp.

Description of *Candidatus* Resacaria salubessa sp. nov.

Candidatus Resacaria salubessa (NL. fem. n. *salubessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-449 sp000432895*. The type genome for the species is the GenBank assembly GCA_900546855.1. The GC content of the type genome is 26.3 % and the genome length is 2.11 Mbp.

Description of *Candidatus* Resacaria gen. nov.

Candidatus Resacaria (NL. fem. n. *Resacaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAG-449*. The type species for the genus is *Candidatus* Resacaria salubessa .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-449*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Resacariaceae.

Description of *Candidatus* Resacariaceae fam. nov.

Candidatus Resacariaceae (NL. fem. n. *Resacariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CAG-449.* The type genus for the taxon is *Candidatus* Resacaria .

According to the original version of GTDB R06-RS202, this family belongs to the order *RFN20*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Cerofellales.

Description of *Candidatus* Resacaria suboditrix sp. nov.

Candidatus Resacaria suboditrix (NL. fem. n. *suboditrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-449 sp900551385*. The type genome for the species is the GenBank assembly GCA_900551385.1. The GC content of the type genome is 25.57 % and the genome length is 1.86 Mbp.

Description of *Candidatus* Resacella biparisca sp. nov.

Candidatus Resacella biparisca (NL. fem. n. *biparisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MWEM01 sp002071085*. The type genome for the species is the GenBank assembly GCA_002071085.1. The GC content of the type genome is 51.76 % and the genome length is 2.89 Mbp.

Description of *Candidatus* Resacella gen. nov.

Candidatus Resacella (NL. fem. n. *Resacella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *MWEM01*. The type species for the genus is *Candidatus* Resacella biparisca .

According to the original version of GTDB R06-RS202, this genus belongs to the family *MWEM01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Resacellaceae.

Description of *Candidatus* Resacellaceae fam. nov.

Candidatus Resacellaceae (NL. fem. n. *Resacellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *MWEM01.* The type genus for the taxon is *Candidatus* Resacella .

According to the original version of GTDB R06-RS202, this family belongs to the order *MWEM01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Resacellales.

Description of *Candidatus* Resacellales ord. nov.

Candidatus Resacellales (NL. fem. n. *Resacellales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *MWEM01.* The type genus for the taxon is *Candidatus* Resacella .

According to the GTDB R06-RS202, this order belongs to the class *Thermotogae*.

Description of *Candidatus* Resacella rurigicella sp. nov.

Candidatus Resacella rurigicella (NL. fem. n. *rurigicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MWEM01 sp012744415*. The type genome for the species is the GenBank assembly GCA_012744415.1. The GC content of the type genome is 49.33 % and the genome length is 2.63 Mbp.

Description of *Candidatus* Resacia obteciforma sp. nov.

Candidatus Resacia obteciforma (NL. fem. n. *obteciforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WRDZ01 sp009779595*. The type genome for the species is the GenBank assembly GCA_009779595.1. The GC content of the type genome is 56.32 % and the genome length is 0.86 Mbp.

Description of *Candidatus* Resacia gen. nov.

Candidatus Resacia (NL. fem. n. *Resacia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WRDZ01*. The type species for the genus is *Candidatus* Resacia obteciforma .

According to the original version of GTDB R06-RS202, this genus belongs to the family *WRDZ01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Resaciaceae.

Description of *Candidatus* Resaciaceae fam. nov.

Candidatus Resaciaceae (NL. fem. n. *Resaciaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *WRDZ01.* The type genus for the taxon is *Candidatus* Resacia .

According to the original version of GTDB R06-RS202, this family belongs to the order *RF32*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Resaculales.

Description of *Candidatus* Resacida reforiforma sp. nov.

Candidatus Resacida reforiforma (NL. fem. n. *reforiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1222 sp002309415*. The type genome for the species is the GenBank assembly GCA_002309415.1. The GC content of the type genome is 46.13 % and the genome length is 0.85 Mbp.

Description of *Candidatus* Resacida gen. nov.

Candidatus Resacida (NL. fem. n. *Resacida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1222*. The type species for the genus is *Candidatus* Resacida reforiforma .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1222*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Resacidaceae.

Description of *Candidatus* Resacidaceae fam. nov.

Candidatus Resacidaceae (NL. fem. n. *Resacidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA1222.* The type genus for the taxon is *Candidatus* Resacida .

According to GTDB R06-RS202, this family belongs to the order *Dehalococcoidales*.

Description of *Candidatus* Resacosa solipatio sp. nov.

Candidatus Resacosa solipatio (NL. fem. n. *solipatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-01-FULL-50-28 sp001816585*. The type genome for the species is the GenBank assembly GCA_001816955.1. The GC content of the type genome is 49.82 % and the genome length is 1.21 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under low O2 conditions; 0.1 micron filter; full assembly".

Description of *Candidatus* Resacosa gen. nov.

Candidatus Resacosa (NL. fem. n. *Resacosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this genus is *2-01-FULL-50-28*. The type species for the genus is *Candidatus* Resacosa solipatio .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Resalana pocilibula sp. nov.

Candidatus Resalana pocilibula (NL. fem. n. *pocilibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *FEB-25 sp003105035*. The type genome for the species is the GenBank assembly GCA_003105035.1. The GC content of the type genome is 51.23 % and the genome length is 4.45 Mbp.

Description of *Candidatus* Resalana gen. nov.

Candidatus Resalana (NL. fem. n. *Resalana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *FEB-25*. The type species for the genus is *Candidatus* Resalana pocilibula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA4823*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Habacidaceae.

Description of *Candidatus* Resalaria cerimatio sp. nov.

Candidatus Resalaria cerimatio (NL. fem. n. *cerimatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Fen-1298 sp003142475*. The type genome for the species is the GenBank assembly GCA_003142715.1. The GC content of the type genome is 41.5 % and the genome length is 3.36 Mbp.

Description of *Candidatus* Resalaria gen. nov.

Candidatus Resalaria (NL. fem. n. *Resalaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Fen-1298*. The type species for the genus is *Candidatus* Resalaria

cerimatio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA10030*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vagabanaceae.

Description of *Candidatus* Resalaria sotulitura sp. nov.

Candidatus Resalaria sotulitura (NL. fem. n. *sotulitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Fen-1298 sp003155495*. The type genome for the species is the GenBank assembly GCA_003155495.1. The GC content of the type genome is 42.9 % and the genome length is 3.59 Mbp.

Description of *Candidatus* Resalaria subodibra sp. nov.

Candidatus Resalaria subodibra (NL. fem. n. *subodibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Fen-1298 sp003819715*. The type genome for the species is the GenBank assembly GCA_003819715.1. The GC content of the type genome is 47.72 % and the genome length is 4.03 Mbp.

Description of *Candidatus* Resalaria terebivita sp. nov.

Candidatus Resalaria terebivita (NL. fem. n. *terebivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Fen-1298 sp003142575*. The type genome for the species is the GenBank assembly GCA_003171115.1. The GC content of the type genome is 44.04 % and the genome length is 2.74 Mbp.

Description of *Candidatus* Resalia ceraratica sp. nov.

Candidatus Resalia ceraratica (NL. fem. n. *ceraratica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SKOM01 sp003562535*. The type genome for the species is the

GenBank assembly GCA_007135185.1. The GC content of the type genome is 54.05 % and the genome length is 1.82 Mbp.

Description of *Candidatus* Resalia gen. nov.

Candidatus Resalia (NL. fem. n. *Resalia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SKOM01*. The type species for the genus is *Candidatus* Resalia ceraratica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SKOM01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Resaliaceae.

Description of *Candidatus* Resaliaceae fam. nov.

Candidatus Resaliaceae (NL. fem. n. *Resaliaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SKOM01.* The type genus for the taxon is *Candidatus* Resalia .

According to GTDB R06-RS202, this family belongs to the order *Competibacterales*.

Description of *Candidatus* Resalia dibucitio sp. nov.

Candidatus Resalia dibucitio (NL. fem. n. *dibucitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SKOM01 sp007120095*. The type genome for the species is the GenBank assembly GCA_003564175.1. The GC content of the type genome is 54.84 % and the genome length is 2.16 Mbp.

Description of *Candidatus* Resalida bicorigena sp. nov.

Candidatus Resalida bicorigena (NL. fem. n. *bicorigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RDXZ01 sp004294005*. The type genome for the species is the GenBank assembly GCA_004294005.1. The GC content of the type genome is 30.05 % and the genome length is 2.78 Mbp.

Description of *Candidatus* Resalida gen. nov.

Candidatus Resalida (NL. fem. n. *Resalida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RDXZ01*. The type species for the genus is *Candidatus* Resalida bicorigena .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Resalida binocastra sp. nov.

Candidatus Resalida binocastra (NL. fem. n. *binocastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RDXZ01 sp004293265*. The type genome for the species is the GenBank assembly GCA_004293265.1. The GC content of the type genome is 30.22 % and the genome length is 4.03 Mbp.

Description of *Candidatus* Resalida rorifitoga sp. nov.

Candidatus Resalida rorifitoga (NL. fem. n. *rorifitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RDXZ01 sp013298075*. The type genome for the species is the GenBank assembly GCA_013298075.1. The GC content of the type genome is 29.67 % and the genome length is 4.71 Mbp.

Description of *Candidatus* Resalosa adnecessa sp. nov.

Candidatus Resalosa adnecessa (NL. fem. n. *adnecessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CSBr16-58 sp007116495*. The type genome for the species is the GenBank assembly GCA_007116495.1. The GC content of the type genome is 43.92 % and the genome length is 2.33 Mbp.

Description of *Candidatus* Resalosa gen. nov.

Candidatus Resalosa (NL. fem. n. *Resalosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CSBr16-58*. The type species for the genus is *Candidatus* Resalosa adnecessa .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Resalosa catilastra sp. nov.

Candidatus Resalosa catilastra (NL. fem. n. *catilastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CSBr16-58 sp003566715*. The type genome for the species is the GenBank assembly GCA_003566715.1. The GC content of the type genome is 44.97 % and the genome length is 2.46 Mbp.

Description of *Candidatus* Resalula adbeletta sp. nov.

Candidatus Resalula adbeletta (NL. fem. n. *adbeletta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA10988 sp002409445*. The type genome for the species is the GenBank assembly GCA_002409445.1. The GC content of the type genome is 70.14 % and the genome length is 3.38 Mbp.

Description of *Candidatus* Resalula gen. nov.

Candidatus Resalula (NL. fem. n. *Resalula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA10988*. The type species for the genus is *Candidatus* Resalula adbeletta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA10988*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Resalulaceae.

Description of *Candidatus* Resalulaceae fam. nov.

Candidatus Resalulaceae (NL. fem. n. *Resalulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA10988.* The type genus for the taxon is *Candidatus* Resalula .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA10988*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Resalulales.

Description of *Candidatus* Resalulales ord. nov.

Candidatus Resalulales (NL. fem. n. *Resalulales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA10988.* The type genus for the taxon is *Candidatus* Resalula .

According to the original version of GTDB R06-RS202, this family belongs to the class *UBA10988*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Resalulae.

Description of *Candidatus* Resalulae class. nov.

Candidatus Resalulae (NL. fem. n. *c__Resalulae* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA10988.* The type genus for the taxon is *Candidatus* Resalula .

According to GTDB R06-RS202, this class belongs to the phylum *Armatimonadota*.

Description of *Candidatus* Resulana selibigena sp. nov.

Candidatus Resulana selibigena (NL. fem. n. *selibigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG240 sp900316875*. The type genome for the species is the GenBank assembly GCA_900316875.1. The GC content of the type genome is 30.96 % and the genome length is 1.89 Mbp.

Description of *Candidatus* Resulana gen. nov.

Candidatus Resulana (NL. fem. n. *Resulana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RUG240*. The type species for the genus is *Candidatus* Resulana

selibigena .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Resularia aggubax sp. nov.

Candidatus Resularia aggubax (NL. fem. n. *aggubax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG41 sp003220905*. The type genome for the species is the GenBank assembly GCA_003220905.1. The GC content of the type genome is 69.25 % and the genome length is 2.65 Mbp.

Description of *Candidatus* Resularia gen. nov.

Candidatus Resularia (NL. fem. n. *Resularia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *AG41*. The type species for the genus is *Candidatus* Resularia aggubax .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GWC2-71-9*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Relenulaceae.

Description of *Candidatus* Resularia baropetta sp. nov.

Candidatus Resularia baropetta (NL. fem. n. *baropetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG41 sp003222035*. The type genome for the species is the GenBank assembly GCA_003222035.1. The GC content of the type genome is 68.19 % and the genome length is 3.58 Mbp.

Description of *Candidatus* Resularia colipiforma sp. nov.

Candidatus Resularia colipiforma (NL. fem. n. *colipiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG41 sp003221045*. The type genome for the species is the GenBank assembly GCA_003221045.1. The GC content of the type genome is 68.21 % and the

genome length is 2.81 Mbp.

Description of *Candidatus* Resularia docibitrix sp. nov.

Candidatus Resularia docibitrix (NL. fem. n. *docibitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG41 sp003220975*. The type genome for the species is the GenBank assembly GCA_003220975.1. The GC content of the type genome is 70.06 % and the genome length is 2.88 Mbp.

Description of *Candidatus* Resularia exherifica sp. nov.

Candidatus Resularia exherifica (NL. fem. n. *exherifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG41 sp003220855*. The type genome for the species is the GenBank assembly GCA_003220855.1. The GC content of the type genome is 69.39 % and the genome length is 2.96 Mbp.

Description of *Candidatus* Resularia illepigena sp. nov.

Candidatus Resularia illepigena (NL. fem. n. *illepigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG41 sp003222155*. The type genome for the species is the GenBank assembly GCA_003222155.1. The GC content of the type genome is 69.59 % and the genome length is 3.45 Mbp.

Description of *Candidatus* Resularia inpinitio sp. nov.

Candidatus Resularia inpinitio (NL. fem. n. *inpinitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG41 sp003222055*. The type genome for the species is the GenBank assembly GCA_003222055.1. The GC content of the type genome is 69.31 % and the genome length is 3.69 Mbp.

Description of *Candidatus* Resularia mahematica sp. nov.

Candidatus Resularia mahematica (NL. fem. n. *mahematica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG41 sp003221085*. The type genome for the species is the GenBank assembly GCA_003221085.1. The GC content of the type genome is 68.45 % and the genome length is 2.96 Mbp.

Description of *Candidatus* Resularia vavasitio sp. nov.

Candidatus Resularia vavasitio (NL. fem. n. *vavasitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG41 sp003222085*. The type genome for the species is the GenBank assembly GCA_003221875.1. The GC content of the type genome is 68.86 % and the genome length is 2.69 Mbp.

Description of *Candidatus* Resulia imbeciforma sp. nov.

Candidatus Resulia imbeciforma (NL. fem. n. *imbeciforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RBG-13-66-14 sp001774505*. The type genome for the species is the GenBank assembly GCA_001774505.1. The GC content of the type genome is 65.8 % and the genome length is 2.07 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle background sediment; well D04 at 13ft depth".

Description of *Candidatus* Resulia gen. nov.

Candidatus Resulia (NL. fem. n. *Resulia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RBG-13-66-14*. The type species for the genus is *Candidatus* Resulia imbeciforma .

According to the original version of GTDB R06-RS202, this genus belongs to the family *RBG-13-66-14*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Resuliaceae.

Description of *Candidatus* Resuliaceae fam. nov.

Candidatus Resuliaceae (NL. fem. n. *Resuliaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *RBG-13-66-14.* The type genus for the taxon is *Candidatus* Resulia .

According to the original version of GTDB R06-RS202, this family belongs to the order *RBG-13-66-14*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Resuliales.

Description of *Candidatus* Resuliales ord. nov.

Candidatus Resuliales (NL. fem. n. *Resuliales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *RBG-13-66-14.* The type genus for the taxon is *Candidatus* Resulia .

According to the original version of GTDB R06-RS202, this family belongs to the class *RBG-13-66-14*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Resuliae.

Description of *Candidatus* Resuliae class. nov.

Candidatus Resuliae (NL. fem. n. *c__Resuliae* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *RBG-13-66-14.* The type genus for the taxon is *Candidatus* Resulia .

According to the original version of GTDB R06-RS202, this family belongs to the phylum *RBG-13-66-14*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the phylum *Candidatus* Resuliota.

Description of *Candidatus* Resuliota phyl. nov.

Candidatus Resuliota (NL. fem. n. *Resuliota* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *RBG-13-66-14.* The type genus for the taxon is *Candidatus* Resulia .

According to GTDB R06-RS202, this phylum belongs to the domain *Bacteria* .

Description of *Candidatus* Resulida giganitica sp. nov.

Candidatus Resulida giganitica (NL. fem. n. *giganitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAFIG01 sp013298595*. The type genome for the species is the GenBank assembly GCA_013298595.1. The GC content of the type genome is 45.24 % and the genome length is 4.58 Mbp.

Description of *Candidatus* Resulida gen. nov.

Candidatus Resulida (NL. fem. n. *Resulida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAFIG01*. The type species for the genus is *Candidatus* Resulida giganitica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JAAFIG01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Resulidaceae.

Description of *Candidatus* Resulidaceae fam. nov.

Candidatus Resulidaceae (NL. fem. n. *Resulidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JAAFIG01*. The type genus for the taxon is *Candidatus* Resulida .

According to GTDB R06-RS202, this family belongs to the order *Deinococcales*.

Description of *Candidatus* Resulida peracitudo sp. nov.

Candidatus Resulida peracitudo (NL. fem. n. *peracitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAFIG01 sp013298185*. The type genome for the species is the GenBank assembly GCA_013298185.1. The GC content of the type genome is 49.7 % and the genome length is 4.41 Mbp.

Description of *Candidatus* Resulosa intemastra sp. nov.

Candidatus Resulosa intemastra (NL. fem. n. *intemastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Firm-18 sp001604215*. The type genome for the species is the GenBank assembly GCA_001604215.1. The GC content of the type genome is 41.43 % and the genome length is 2.11 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "3 replicate cellulose-degrading anaerobic digesters sampled at day 96 and day 362".

Description of *Candidatus* Resulosa gen. nov.

Candidatus Resulosa (NL. fem. n. *Resulosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Firm-18*. The type species for the genus is *Candidatus* Resulosa intemastra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *Firm-18*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Resulosaceae.

Description of *Candidatus* Resulosaceae fam. nov.

Candidatus Resulosaceae (NL. fem. n. *Resulosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *Firm-18.* The type genus for the taxon is *Candidatus* Resulosa .

According to GTDB R06-RS202, this family belongs to the order *Monoglobales*.

Description of *Candidatus* Resulula perabitoga sp. nov.

Candidatus Resulula perabitoga (NL. fem. n. *perabitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABDMI01 sp013001575*. The type genome for the species is the GenBank assembly GCA_013043715.1. The GC content of the type genome is 47.06 % and the genome length is 2.41 Mbp.

Description of *Candidatus* Resulula gen. nov.

Candidatus Resulula (NL. fem. n. *Resulula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABDMI01*. The type species for the genus is *Candidatus* Resulula perabitoga .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JABDMI01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Resululaceae.

Description of *Candidatus* Resululaceae fam. nov.

Candidatus Resululaceae (NL. fem. n. *Resululaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JABDMI01.* The type genus for the taxon is *Candidatus* Resulula .

According to the original version of GTDB R06-RS202, this family belongs to the order *JABDMI01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Resululales.

Description of *Candidatus* Resululales ord. nov.

Candidatus Resululales (NL. fem. n. *Resululales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JABDMI01.* The type genus for the taxon is *Candidatus* Resulula .

According to the GTDB R06-RS202, this order belongs to the class *Gammaproteobacteria*.

Description of *Candidatus* Resupana detotugo sp. nov.

Candidatus Resupana detotugo (NL. fem. n. *detotugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RDZH01 sp004293935*. The type genome for the species is the GenBank assembly GCA_004293245.1. The GC content of the type genome is 46.15 % and the genome length is 1.48 Mbp.

Description of *Candidatus* Resupana gen. nov.

Candidatus Resupana (NL. fem. n. *Resupana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RDZH01*. The type species for the genus is *Candidatus* Resupana detotugo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA998*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Levifariaceae.

Description of *Candidatus* Resupana plostitas sp. nov.

Candidatus Resupana plostitas (NL. fem. n. *plostitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RDZH01 sp004292675*. The type genome for the species is the GenBank assembly GCA_004292675.1. The GC content of the type genome is 45.69 % and the genome length is 1.6 Mbp.

Description of *Candidatus* Resuparia delucugo sp. nov.

Candidatus Resuparia delucugo (NL. fem. n. *delucugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4132 sp002380945*. The type genome for the species is the GenBank assembly GCA_002415885.1. The GC content of the type genome is 42.15 % and the genome length is 3.15 Mbp.

Description of *Candidatus* Resuparia gen. nov.

Candidatus Resuparia (NL. fem. n. *Resuparia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA4132*. The type species for the genus is *Candidatus* Resuparia delucugo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Resuparia gerunitas sp. nov.

Candidatus Resuparia gerunitas (NL. fem. n. *gerunitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4132 sp002256685*. The type genome for the species is the GenBank assembly GCA_002256685.1. The GC content of the type genome is 42.81 % and the genome length is 2.72 Mbp.

Description of *Candidatus* Resuparia negidentia sp. nov.

Candidatus Resuparia negidentia (NL. fem. n. *negidentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4132 sp009692395*. The type genome for the species is the GenBank assembly GCA_009692395.1. The GC content of the type genome is 42.98 % and the genome length is 1.95 Mbp.

Description of *Candidatus* Resuparia solacimonas sp. nov.

Candidatus Resuparia solacimonas (NL. fem. n. *solacimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4132 sp903902705*. The type genome for the species is the GenBank assembly GCA_903848195.1. The GC content of the type genome is 41.62 % and the genome length is 3.98 Mbp.

Description of *Candidatus* Resuparia sonipetta sp. nov.

Candidatus Resuparia sonipetta (NL. fem. n. *sonipetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4132 sp002134785*. The type genome for the species is the GenBank assembly GCA_002134785.1. The GC content of the type genome is 42.18 % and the genome length is 3.63 Mbp.

Description of *Candidatus* Resupia telegibra sp. nov.

Candidatus Resupia telegibra (NL. fem. n. *telegibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAJBMM01 sp903954185*. The type genome for the species is the GenBank assembly GCA_903897595.1. The GC content of the type genome is 38.99 %

and the genome length is 0.98 Mbp.

Description of *Candidatus* Resupia gen. nov.

Candidatus Resupia (NL. fem. n. *Resupia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAJBMM01*. The type species for the genus is *Candidatus* Resupia telegibra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAJBMM01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Resupiaceae.

Description of *Candidatus* Resupiaceae fam. nov.

Candidatus Resupiaceae (NL. fem. n. *Resupiaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CAJBMM01.* The type genus for the taxon is *Candidatus* Resupia .

According to the original version of GTDB R06-RS202, this family belongs to the order *CAJBMM01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Resupiales.

Description of *Candidatus* Resupiales ord. nov.

Candidatus Resupiales (NL. fem. n. *Resupiales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CAJBMM01.* The type genus for the taxon is *Candidatus* Resupia .

According to the original version of GTDB R06-RS202, this family belongs to the class *UBA1384*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Panifidae.

Description of *Candidatus* Resupida abhinibra sp. nov.

Candidatus Resupida abhinibra (NL. fem. n. *abhinibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2813 sp902788345*. The type genome for the species is the

GenBank assembly GCA_902788345.1. The GC content of the type genome is 33.37 % and the genome length is 1.85 Mbp.

Description of *Candidatus* Resupida gen. nov.

Candidatus Resupida (NL. fem. n. *Resupida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA2813*. The type species for the genus is *Candidatus* Resupida abhinibra .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Resupida anatritura sp. nov.

Candidatus Resupida anatritura (NL. fem. n. *anatritura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2813 sp902794035*. The type genome for the species is the GenBank assembly GCA_902794035.1. The GC content of the type genome is 32.73 % and the genome length is 1.79 Mbp.

Description of *Candidatus* Resupida defalibra sp. nov.

Candidatus Resupida defalibra (NL. fem. n. *defalibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2813 sp900314375*. The type genome for the species is the GenBank assembly GCA_902773945.1. The GC content of the type genome is 33.32 % and the genome length is 1.93 Mbp.

Description of *Candidatus* Resupida defasitica sp. nov.

Candidatus Resupida defasitica (NL. fem. n. *defasitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2813 sp902792085*. The type genome for the species is the GenBank assembly GCA_902792085.1. The GC content of the type genome is 33.69 % and the genome length is 1.92 Mbp.

Description of *Candidatus* Resupida denunitica sp. nov.

Candidatus Resupida denunitica (NL. fem. n. *denunitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2813 sp902774905*. The type genome for the species is the GenBank assembly GCA_902774905.1. The GC content of the type genome is 33.8 % and the genome length is 1.99 Mbp.

Description of *Candidatus* Resupida detumugo sp. nov.

Candidatus Resupida detumugo (NL. fem. n. *detumugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2813 sp902766975*. The type genome for the species is the GenBank assembly GCA_902768215.1. The GC content of the type genome is 33.74 % and the genome length is 2.01 Mbp.

Description of *Candidatus* Resupida effulivita sp. nov.

Candidatus Resupida effulivita (NL. fem. n. *effulivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2813 sp902765655*. The type genome for the species is the GenBank assembly GCA_902765655.1. The GC content of the type genome is 34.02 % and the genome length is 1.65 Mbp.

Description of *Candidatus* Resupida extoritas sp. nov.

Candidatus Resupida extoritas (NL. fem. n. *extoritas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2813 sp902801985*. The type genome for the species is the GenBank assembly GCA_902801985.1. The GC content of the type genome is 33.07 % and the genome length is 2.14 Mbp.

Description of *Candidatus* Resupida lutulicula sp. nov.

Candidatus Resupida lutulicula (NL. fem. n. *lutulicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2813 sp902777855*. The type genome for the species is the GenBank assembly GCA_902777855.1. The GC content of the type genome is 34.51 % and the genome length is 1.94 Mbp.

Description of *Candidatus* Resupida necopastra sp. nov.

Candidatus Resupida necopastra (NL. fem. n. *necopastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2813 sp902796825*. The type genome for the species is the GenBank assembly GCA_902796825.1. The GC content of the type genome is 34.19 % and the genome length is 1.46 Mbp.

Description of *Candidatus* Resupida nicotax sp. nov.

Candidatus Resupida nicotax (NL. fem. n. *nicotax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2813 sp900319365*. The type genome for the species is the GenBank assembly GCA_002350285.1. The GC content of the type genome is 35.26 % and the genome length is 1.84 Mbp.

Description of *Candidatus* Resupida peradilenta sp. nov.

Candidatus Resupida peradilenta (NL. fem. n. *peradilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2813 sp902802825*. The type genome for the species is the GenBank assembly GCA_902802825.1. The GC content of the type genome is 34.02 % and the genome length is 1.62 Mbp.

Description of *Candidatus* Resupida refocimonas sp. nov.

Candidatus Resupida refocimonas (NL. fem. n. *refocimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *UBA2813 sp902766395*. The type genome for the species is the GenBank assembly GCA_902766395.1. The GC content of the type genome is 32.37 % and the genome length is 1.7 Mbp.

Description of *Candidatus* Resupida relecibula sp. nov.

Candidatus Resupida relecibula (NL. fem. n. *relecibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2813 sp002361485*. The type genome for the species is the GenBank assembly GCA_902801915.1. The GC content of the type genome is 33.79 % and the genome length is 1.86 Mbp.

Description of *Candidatus* Resupida rubeficula sp. nov.

Candidatus Resupida rubeficula (NL. fem. n. *rubeficula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2813 sp902791985*. The type genome for the species is the GenBank assembly GCA_902791985.1. The GC content of the type genome is 33.63 % and the genome length is 1.91 Mbp.

Description of *Candidatus* Resuposa vilipimonas sp. nov.

Candidatus Resuposa vilipimonas (NL. fem. n. *vilipimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RBG-16-57-12 sp001801365*. The type genome for the species is the GenBank assembly GCA_001801365.1. The GC content of the type genome is 58.0 % and the genome length is 1.98 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle background sediment; well D04 at 16ft depth".

Description of *Candidatus* Resuposa gen. nov.

Candidatus Resuposa (NL. fem. n. *Resuposa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RBG-16-57-12*. The type species for the genus is *Candidatus* Resuposa vilipimonas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *RBG-16-57-12*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Resuposaceae.

Description of *Candidatus* Resuposaceae fam. nov.

Candidatus Resuposaceae (NL. fem. n. *Resuposaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *RBG-16-57-12.* The type genus for the taxon is *Candidatus* Resuposa .

According to GTDB R06-RS202, this family belongs to the order *Thiohalomonadales_A*.

Description of *Candidatus* Resupula verecentia sp. nov.

Candidatus Resupula verecentia (NL. fem. n. *verecentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SIAJ01 sp009691845*. The type genome for the species is the GenBank assembly GCA_009885865.1. The GC content of the type genome is 58.35 % and the genome length is 5.74 Mbp.

Description of *Candidatus* Resupula gen. nov.

Candidatus Resupula (NL. fem. n. *Resupula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SIAJ01*. The type species for the genus is *Candidatus* Resupula verecentia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Resurana adselatio sp. nov.

Candidatus Resurana adselatio (NL. fem. n. *adselatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RFNO01 sp009927165*. The type genome for the species is the GenBank assembly GCA_009927165.1. The GC content of the type genome is 44.28 % and the genome length is 2.47 Mbp.

Description of *Candidatus* Resurana gen. nov.

Candidatus Resurana (NL. fem. n. *Resurana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RFNO01*. The type species for the genus is *Candidatus* Resurana adselatio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2466*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Feditosaceae.

Description of *Candidatus* Resurana funivisca sp. nov.

Candidatus Resurana funivisca (NL. fem. n. *funivisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RFNO01 sp009927045*. The type genome for the species is the GenBank assembly GCA_009927045.1. The GC content of the type genome is 46.04 % and the genome length is 2.39 Mbp.

Description of *Candidatus* Resurana vilipigena sp. nov.

Candidatus Resurana vilipigena (NL. fem. n. *vilipigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RFNO01 sp009927005*. The type genome for the species is the GenBank assembly GCA_009927005.1. The GC content of the type genome is 44.35 % and the genome length is 2.77 Mbp.

Description of *Candidatus* Resuraria defenitia sp. nov.

Candidatus Resuraria defenitia (NL. fem. n. *defenitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *VXMT01 sp009840965*. The type genome for the species is the GenBank assembly GCA_009836955.1. The GC content of the type genome is 71.51 % and the genome length is 2.63 Mbp.

Description of *Candidatus* Resuraria gen. nov.

Candidatus Resuraria (NL. fem. n. *Resuraria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *VXMT01*. The type species for the genus is *Candidatus* Resuraria defenitia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2979*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Sacopulaceae.

Description of *Candidatus* Resuraria energitrix sp. nov.

Candidatus Resuraria energitrix (NL. fem. n. *energitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *VXMT01 sp009839925*. The type genome for the species is the GenBank assembly GCA_009839925.1. The GC content of the type genome is 71.11 % and the genome length is 2.86 Mbp.

Description of *Candidatus* Resuraria hemitetta sp. nov.

Candidatus Resuraria hemitetta (NL. fem. n. *hemitetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *VXMT01 sp009840945*. The type genome for the species is the GenBank assembly GCA_009840945.1. The GC content of the type genome is 71.01 % and the genome length is 2.53 Mbp.

Description of *Candidatus* Resuraria refulitica sp. nov.

Candidatus Resuraria refulitica (NL. fem. n. *refulitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *VXMT01 sp009837285*. The type genome for the species is the GenBank assembly GCA_009839875.1. The GC content of the type genome is 70.14 % and the genome length is 2.31 Mbp.

Description of *Candidatus* Resurella detosigena sp. nov.

Candidatus Resurella detosigena (NL. fem. n. *detosigena* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS1585 sp900553205*. The type genome for the species is the GenBank assembly GCA_900553205.1. The GC content of the type genome is 32.47 % and the genome length is 1.94 Mbp.

Description of *Candidatus* Resurella gen. nov.

Candidatus Resurella (NL. fem. n. *Resurella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UMGS1585*. The type species for the genus is *Candidatus* Resurella detosigena .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Resurella solivatio sp. nov.

Candidatus Resurella solivatio (NL. fem. n. *solivatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS1585 sp900766355*. The type genome for the species is the GenBank assembly RS_GCF_900766355.1. The GC content of the type genome is 31.39 % and the genome length is 2.17 Mbp.

Description of *Candidatus* Resuria indirilenta sp. nov.

Candidatus Resuria indirilenta (NL. fem. n. *indirilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RBG-13-36-15 sp001819145*. The type genome for the species is the GenBank assembly GCA_001819145.1. The GC content of the type genome is 35.65 % and the genome length is 0.38 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle background sediment; well D04 at 13ft depth".

Description of *Candidatus* Resuria gen. nov.

Candidatus Resuria (NL. fem. n. *Resuria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RBG-13-36-15*. The type species for the genus is *Candidatus* Resuria indirilenta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *RBG-13-36-15*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Resuriaceae.

Description of *Candidatus* Resuriaceae fam. nov.

Candidatus Resuriaceae (NL. fem. n. *Resuriaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *RBG-13-36-15.* The type genus for the taxon is *Candidatus* Resuria .

According to GTDB R06-RS202, this family belongs to the order *Paceibacterales*.

Description of *Candidatus* Resuria nidifousia sp. nov.

Candidatus Resuria nidifousia (NL. fem. n. *nidifousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RBG-13-36-15 sp011050465*. The type genome for the species is the GenBank assembly GCA_011049515.1. The GC content of the type genome is 37.16 % and the genome length is 0.74 Mbp.

Description of *Candidatus* Resurida bimetibula sp. nov.

Candidatus Resurida bimetibula (NL. fem. n. *bimetibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAJCBL01 sp903960515*. The type genome for the species is the GenBank assembly GCA_903834575.1. The GC content of the type genome is 64.52 % and the genome length is 5.36 Mbp.

Description of *Candidatus* Resurida gen. nov.

Candidatus Resurida (NL. fem. n. *Resurida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this genus is *CAJCBL01*. The type species for the genus is *Candidatus* Resurida bimetibula .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Resurosa fibicitrix sp. nov.

Candidatus Resurosa fibicitrix (NL. fem. n. *fibicitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *OM182 sp001438145*. The type genome for the species is the GenBank assembly GCA_002469635.1. The GC content of the type genome is 52.97 % and the genome length is 2.13 Mbp.

Description of *Candidatus* Resurosa gen. nov.

Candidatus Resurosa (NL. fem. n. *Resurosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *OM182*. The type species for the genus is *Candidatus* Resurosa fibicitrix .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Resurosa hexamilega sp. nov.

Candidatus Resurosa hexamilega (NL. fem. n. *hexamilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *OM182 sp003482475*. The type genome for the species is the GenBank assembly GCA_003482475.1. The GC content of the type genome is 51.92 % and the genome length is 1.95 Mbp.

Description of *Candidatus* Resurosa octipisca sp. nov.

Candidatus Resurosa octipisca (NL. fem. n. *octipisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *OM182 sp002700775*. The type genome for the species is the GenBank assembly GCA_002700775.1. The GC content of the type genome is 43.76 % and the

genome length is 2.17 Mbp.

Description of *Candidatus* Resurula argumatio sp. nov.

Candidatus Resurula argumatio (NL. fem. n. *argumatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2716485 sp002716485*. The type genome for the species is the GenBank assembly GCA_002716485.1. The GC content of the type genome is 42.19 % and the genome length is 1.4 Mbp.

Description of *Candidatus* Resurula gen. nov.

Candidatus Resurula (NL. fem. n. *Resurula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2716485*. The type species for the genus is *Candidatus* Resurula argumatio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GCA-2716485*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Resurulaceae.

Description of *Candidatus* Resurulaceae fam. nov.

Candidatus Resurulaceae (NL. fem. n. *Resurulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *GCA-2716485.* The type genus for the taxon is *Candidatus* Resurula .

According to the original version of GTDB R06-RS202, this family belongs to the order *GCA-2716485*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Resurulales.

Description of *Candidatus* Resurulales ord. nov.

Candidatus Resurulales (NL. fem. n. *Resurulales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *GCA-2716485.* The type genus for the taxon is *Candidatus* Resurula .

According to the GTDB R06-RS202, this order belongs to the class

Marinamargulisbacteria.

Description of *Candidatus* Retecana delecatica sp. nov.

Candidatus Retecana delecatica (NL. fem. n. *delecatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG147 sp900315495*. The type genome for the species is the GenBank assembly GCA_900315495.1. The GC content of the type genome is 56.45 % and the genome length is 2.93 Mbp.

Description of *Candidatus* Retecana gen. nov.

Candidatus Retecana (NL. fem. n. *Retecana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RUG147*. The type species for the genus is *Candidatus* Retecana delecatica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Retecaria abindisca sp. nov.

Candidatus Retecaria abindisca (NL. fem. n. *abindisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6821 sp009928265*. The type genome for the species is the GenBank assembly GCA_009928265.1. The GC content of the type genome is 58.02 % and the genome length is 2.22 Mbp.

Description of *Candidatus* Retecaria gen. nov.

Candidatus Retecaria (NL. fem. n. *Retecaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA6821*. The type species for the genus is *Candidatus* Retecaria abindisca .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA6821*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Retecariaceae.

Description of *Candidatus* Retecariaceae fam. nov.

Candidatus Retecariaceae (NL. fem. n. *Retecariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA6821.* The type genus for the taxon is *Candidatus* Retecaria .

According to GTDB R06-RS202, this family belongs to the order *Chthoniobacterales*.

Description of *Candidatus* Retecaria aneclimonia sp. nov.

Candidatus Retecaria aneclimonia (NL. fem. n. *aneclimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6821 sp003136515*. The type genome for the species is the GenBank assembly GCA_003136515.1. The GC content of the type genome is 53.17 % and the genome length is 2.36 Mbp.

Description of *Candidatus* Retecaria cepulitura sp. nov.

Candidatus Retecaria cepulitura (NL. fem. n. *cepulitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6821 sp903823215*. The type genome for the species is the GenBank assembly GCA_903823215.1. The GC content of the type genome is 53.28 % and the genome length is 2.31 Mbp.

Description of *Candidatus* Retecaria cepuretta sp. nov.

Candidatus Retecaria cepuretta (NL. fem. n. *cepuretta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6821 sp008933015*. The type genome for the species is the GenBank assembly GCA_008933015.1. The GC content of the type genome is 54.51 % and the genome length is 1.42 Mbp.

Description of *Candidatus* Retecaria conificella sp. nov.

Candidatus Retecaria conificella (NL. fem. n. *conificella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6821 sp002452515*. The type genome for the species is the GenBank assembly GCA_002452515.1. The GC content of the type genome is 54.02 % and the genome length is 2.35 Mbp.

Description of *Candidatus* Retecaria coturiforma sp. nov.

Candidatus Retecaria coturiforma (NL. fem. n. *coturiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6821 sp903933015*. The type genome for the species is the GenBank assembly GCA_903933015.1. The GC content of the type genome is 56.69 % and the genome length is 2.33 Mbp.

Description of *Candidatus* Retecaria curabatica sp. nov.

Candidatus Retecaria curabatica (NL. fem. n. *curabatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6821 sp903858595*. The type genome for the species is the GenBank assembly GCA_903858595.1. The GC content of the type genome is 55.92 % and the genome length is 2.35 Mbp.

Description of *Candidatus* Retecaria docibastra sp. nov.

Candidatus Retecaria docibastra (NL. fem. n. *docibastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6821 sp903847935*. The type genome for the species is the GenBank assembly GCA_903825975.1. The GC content of the type genome is 54.59 % and the genome length is 1.91 Mbp.

Description of *Candidatus* Retecaria duponibra sp. nov.

Candidatus Retecaria duponibra (NL. fem. n. *duponibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6821 sp903826635*. The type genome for the species is the GenBank assembly GCA_903911745.1. The GC content of the type genome is 54.39 %

and the genome length is 2.04 Mbp.

Description of *Candidatus* Retecaria indivetta sp. nov.

Candidatus Retecaria indivetta (NL. fem. n. *indivetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6821 sp903919105*. The type genome for the species is the GenBank assembly GCA_903919105.1. The GC content of the type genome is 56.25 % and the genome length is 1.43 Mbp.

Description of *Candidatus* Retecaria inrefimonia sp. nov.

Candidatus Retecaria inrefimonia (NL. fem. n. *inrefimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6821 sp903831635*. The type genome for the species is the GenBank assembly GCA_903831635.1. The GC content of the type genome is 54.66 % and the genome length is 2.37 Mbp.

Description of *Candidatus* Retecaria vanitilenta sp. nov.

Candidatus Retecaria vanitilenta (NL. fem. n. *vanitilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6821 sp903868795*. The type genome for the species is the GenBank assembly GCA_903907545.1. The GC content of the type genome is 55.5 % and the genome length is 2.35 Mbp.

Description of *Candidatus* Retecella bulapugo sp. nov.

Candidatus Retecella bulapugo (NL. fem. n. *bulapugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CSSed11-197 sp003563865*. The type genome for the species is the GenBank assembly GCA_003563865.1. The GC content of the type genome is 45.72 % and the genome length is 0.93 Mbp.

Description of *Candidatus* Retecella gen. nov.

Candidatus Retecella (NL. fem. n. *Retecella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CSSed11-197*. The type species for the genus is *Candidatus* Retecella bulapugo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CSSed11-197*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Retecellaceae.

Description of *Candidatus* Retecellaceae fam. nov.

Candidatus Retecellaceae (NL. fem. n. *Retecellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CSSed11-197.* The type genus for the taxon is *Candidatus* Retecella .

According to GTDB R06-RS202, this family belongs to the order *Dehalococcoidales*.

Description of *Candidatus* Retecella pulegifica sp. nov.

Candidatus Retecella pulegifica (NL. fem. n. *pulegifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CSSed11-197 sp003552785*. The type genome for the species is the GenBank assembly GCA_003552785.1. The GC content of the type genome is 46.47 % and the genome length is 1.42 Mbp.

Description of *Candidatus* Retecia docibivita sp. nov.

Candidatus Retecia docibivita (NL. fem. n. *docibivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Bog-473 sp003160635*. The type genome for the species is the GenBank assembly GCA_003160635.1. The GC content of the type genome is 64.49 % and the genome length is 6.93 Mbp.

Description of *Candidatus* Retecia gen. nov.

Candidatus Retecia (NL. fem. n. *Retecia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Bog-473*. The type species for the genus is *Candidatus* Retecia docibivita .

According to the original version of GTDB R06-RS202, this genus belongs to the family *RAAP-2*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Buxifanaceae.

Description of *Candidatus* Retecia inmenitoga sp. nov.

Candidatus Retecia inmenitoga (NL. fem. n. *inmenitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Bog-473 sp003133545*. The type genome for the species is the GenBank assembly GCA_003133545.1. The GC content of the type genome is 67.1 % and the genome length is 4.75 Mbp.

Description of *Candidatus* Retecia peracigena sp. nov.

Candidatus Retecia peracigena (NL. fem. n. *peracigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Bog-473 sp003169675*. The type genome for the species is the GenBank assembly GCA_003169675.1. The GC content of the type genome is 65.69 % and the genome length is 3.56 Mbp.

Description of *Candidatus* Retecia rumifago sp. nov.

Candidatus Retecia rumifago (NL. fem. n. *rumifago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Bog-473 sp003169235*. The type genome for the species is the GenBank assembly GCA_003165735.1. The GC content of the type genome is 69.82 % and the genome length is 3.39 Mbp.

Description of *Candidatus* Retecosa canacitudo sp. nov.

Candidatus Retecosa canacitudo (NL. fem. n. *canacitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *NML-160184 sp002250475*. The type genome for the species is the GenBank assembly RS_GCF_002250475.1. The GC content of the type genome is 68.06 % and the genome length is 3.02 Mbp.

Description of *Candidatus* Retecosa gen. nov.

Candidatus Retecosa (NL. fem. n. *Retecosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *NML-160184*. The type species for the genus is *Candidatus* Retecosa canacitudo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Retecula addubitoga sp. nov.

Candidatus Retecula addubitoga (NL. fem. n. *addubitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8525 sp002839355*. The type genome for the species is the GenBank assembly GCA_002839355.1. The GC content of the type genome is 51.61 % and the genome length is 3.62 Mbp.

Description of *Candidatus* Retecula gen. nov.

Candidatus Retecula (NL. fem. n. *Retecula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA8525*. The type species for the genus is *Candidatus* Retecula addubitoga .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Retecula notabentia sp. nov.

Candidatus Retecula notabentia (NL. fem. n. *notabentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8525 sp002839335*. The type genome for the species is the

GenBank assembly GCA_003522045.1. The GC content of the type genome is 52.04 % and the genome length is 3.01 Mbp.

Description of *Candidatus* Retunana colutitrix sp. nov.

Candidatus Retunana colutitrix (NL. fem. n. *colutitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-776 sp000438195*. The type genome for the species is the GenBank assembly GCA_900551255.1. The GC content of the type genome is 27.53 % and the genome length is 1.3 Mbp.

Description of *Candidatus* Retunana gen. nov.

Candidatus Retunana (NL. fem. n. *Retunana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAG-776*. The type species for the genus is *Candidatus* Retunana colutitrix .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA660*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vitigellaceae.

Description of *Candidatus* Retunana obnuniforma sp. nov.

Candidatus Retunana obnuniforma (NL. fem. n. *obnuniforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-776 sp900758895*. The type genome for the species is the GenBank assembly RS_GCF_900758895.1. The GC content of the type genome is 29.6 % and the genome length is 1.4 Mbp.

Description of *Candidatus* Retunana subacitas sp. nov.

Candidatus Retunana subacitas (NL. fem. n. *subacitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-776 sp900549285*. The type genome for the species is the GenBank assembly RS_GCF_900752875.1. The GC content of the type genome is 27.16

% and the genome length is 1.3 Mbp.

Description of *Candidatus* Retunaria galacousia sp. nov.

Candidatus Retunaria galacousia (NL. fem. n. *galacousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-02-FULL-48-16 sp007376285*. The type genome for the species is the GenBank assembly GCA_007376285.1. The GC content of the type genome is 48.46 % and the genome length is 0.61 Mbp.

Description of *Candidatus* Retunaria gen. nov.

Candidatus Retunaria (NL. fem. n. *Retunaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *2-02-FULL-48-16*. The type species for the genus is *Candidatus* Retunaria galacousia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA11359_A*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Noviliaceae.

Description of *Candidatus* Retunaria satacicella sp. nov.

Candidatus Retunaria satacicella (NL. fem. n. *satacicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-02-FULL-48-16 sp001821135*. The type genome for the species is the GenBank assembly GCA_001821305.1. The GC content of the type genome is 47.53 % and the genome length is 0.71 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under low O2 conditions; 0.2 micron filter; full assembly".

Description of *Candidatus* Retunella lucubitio sp. nov.

Candidatus Retunella lucubitio (NL. fem. n. *lucubitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SKXZ01 sp003561145*. The type genome for the species is the

GenBank assembly GCA_003561145.1. The GC content of the type genome is 49.61 % and the genome length is 1.86 Mbp.

Description of *Candidatus* Retunella gen. nov.

Candidatus Retunella (NL. fem. n. *Retunella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SKXZ01*. The type species for the genus is *Candidatus* Retunella lucubitio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA8910*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Monogiaceae.

Description of *Candidatus* Retunella vehemitoga sp. nov.

Candidatus Retunella vehemitoga (NL. fem. n. *vehemitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SKXZ01 sp007128145*. The type genome for the species is the GenBank assembly GCA_007119915.1. The GC content of the type genome is 47.76 % and the genome length is 1.83 Mbp.

Description of *Candidatus* Retunia innumetta sp. nov.

Candidatus Retunia innumetta (NL. fem. n. *innumetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *B70-G9 sp003641465*. The type genome for the species is the GenBank assembly GCA_003641465.1. The GC content of the type genome is 59.84 % and the genome length is 1.15 Mbp.

Description of *Candidatus* Retunia gen. nov.

Candidatus Retunia (NL. fem. n. *Retunia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *B70-G9*. The type species for the genus is *Candidatus* Retunia innumetta .

According to the original version of GTDB R06-RS202, this genus belongs to the family

B70-G9. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Retuniaceae.

Description of *Candidatus* Retuniaceae fam. nov.

Candidatus Retuniaceae (NL. fem. n. *Retuniaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *B70-G9.* The type genus for the taxon is *Candidatus* Retunia .

According to the original version of GTDB R06-RS202, this family belongs to the order *B70-G9*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Retuniales.

Description of *Candidatus* Retuniales ord. nov.

Candidatus Retuniales (NL. fem. n. *Retuniales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *B70-G9.* The type genus for the taxon is *Candidatus* Retunia .

According to the GTDB R06-RS202, this order belongs to the class *Kiritimatiellae*.

Description of *Candidatus* Retunia proscitas sp. nov.

Candidatus Retunia proscitas (NL. fem. n. *proscitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *B70-G9 sp012961745*. The type genome for the species is the GenBank assembly GCA_012961745.1. The GC content of the type genome is 62.05 % and the genome length is 1.99 Mbp.

Description of *Candidatus* Retunida forabifica sp. nov.

Candidatus Retunida forabifica (NL. fem. n. *forabifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4716 sp002438865*. The type genome for the species is the GenBank assembly GCA_002404425.1. The GC content of the type genome is 43.7 % and the genome length is 2.25 Mbp.

Description of *Candidatus* Retunida gen. nov.

Candidatus Retunida (NL. fem. n. *Retunida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA4716*. The type species for the genus is *Candidatus* Retunida forabifica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1381*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Melilosaceae.

Description of *Candidatus* Retunida nubecifica sp. nov.

Candidatus Retunida nubecifica (NL. fem. n. *nubecifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4716 sp900556575*. The type genome for the species is the GenBank assembly GCA_900556575.1. The GC content of the type genome is 38.53 % and the genome length is 2.12 Mbp.

Description of *Candidatus* Retunosa antimitica sp. nov.

Candidatus Retunosa antimitica (NL. fem. n. *antimitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SZUA-605 sp003250835*. The type genome for the species is the GenBank assembly GCA_003250835.1. The GC content of the type genome is 35.42 % and the genome length is 0.67 Mbp.

Description of *Candidatus* Retunosa gen. nov.

Candidatus Retunosa (NL. fem. n. *Retunosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SZUA-605*. The type species for the genus is *Candidatus* Retunosa antimitica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SZUA-605*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Retunosaceae.

Description of *Candidatus* Retunosaceae fam. nov.

Candidatus Retunosaceae (NL. fem. n. *Retunosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SZUA-605.* The type genus for the taxon is *Candidatus* Retunosa .

According to the original version of GTDB R06-RS202, this family belongs to the order *Rs-D84*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Delapiales.

Description of *Candidatus* Retunula albogibula sp. nov.

Candidatus Retunula albogibula (NL. fem. n. *albogibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1479 sp002696205*. The type genome for the species is the GenBank assembly GCA_002696205.1. The GC content of the type genome is 63.55 % and the genome length is 3.78 Mbp.

Description of *Candidatus* Retunula gen. nov.

Candidatus Retunula (NL. fem. n. *Retunula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1479*. The type species for the genus is *Candidatus* Retunula albogibula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *Casp-alpha2*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Noninidaceae.

Description of *Candidatus* Retunula baditilenta sp. nov.

Candidatus Retunula baditilenta (NL. fem. n. *baditilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1479 sp002781745*. The type genome for the species is the GenBank assembly GCA_002781745.1. The GC content of the type genome is 66.23 % and the genome length is 3.85 Mbp.

Description of *Candidatus* Retunula incomigena sp. nov.

Candidatus Retunula incomigena (NL. fem. n. *incomigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1479 sp002433335*. The type genome for the species is the GenBank assembly GCA_002433335.1. The GC content of the type genome is 62.52 % and the genome length is 3.67 Mbp.

Description of *Candidatus* Retunula navifigena sp. nov.

Candidatus Retunula navifigena (NL. fem. n. *navifigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1479 sp002325375*. The type genome for the species is the GenBank assembly GCA_002709445.1. The GC content of the type genome is 63.44 % and the genome length is 3.88 Mbp.

Description of *Candidatus* Retunula vanitigena sp. nov.

Candidatus Retunula vanitigena (NL. fem. n. *vanitigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1479 sp002706405*. The type genome for the species is the GenBank assembly GCA_002695715.1. The GC content of the type genome is 63.09 % and the genome length is 2.95 Mbp.

Description of *Candidatus* Revecana denoritia sp. nov.

Candidatus Revecana denoritia (NL. fem. n. *denoritia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Bin80 sp009838195*. The type genome for the species is the GenBank assembly GCA_009838195.1. The GC content of the type genome is 50.59 % and the genome length is 3.0 Mbp.

Description of *Candidatus* Revecana gen. nov.

Candidatus Revecana (NL. fem. n. *Revecana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Bin80*. The type species for the genus is *Candidatus* Revecana denoritia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *Bin80*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Revecanaceae.

Description of *Candidatus* Revecanaceae fam. nov.

Candidatus Revecanaceae (NL. fem. n. *Revecanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *Bin80.* The type genus for the taxon is *Candidatus* Revecana .

According to GTDB R06-RS202, this family belongs to the order *Rhodothermales*.

Description of *Candidatus* Revecana pericibra sp. nov.

Candidatus Revecana pericibra (NL. fem. n. *pericibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Bin80 sp009841335*. The type genome for the species is the GenBank assembly GCA_009844335.1. The GC content of the type genome is 51.5 % and the genome length is 3.28 Mbp.

Description of *Candidatus* Revecana repurilenta sp. nov.

Candidatus Revecana repurilenta (NL. fem. n. *repurilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Bin80 sp002238805*. The type genome for the species is the GenBank assembly GCA_002238805.1. The GC content of the type genome is 50.96 % and the genome length is 4.08 Mbp.

Description of *Candidatus* Revecaria artifitia sp. nov.

Candidatus Revecaria artifitia (NL. fem. n. *artifitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4055 sp002382735*. The type genome for the species is the GenBank assembly GCA_002382735.1. The GC content of the type genome is 41.82 % and the genome length is 2.51 Mbp.

Description of *Candidatus* Revecaria gen. nov.

Candidatus Revecaria (NL. fem. n. *Revecaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA4055*. The type species for the genus is *Candidatus* Revecaria artifitia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA4055*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Revecariaceae.

Description of *Candidatus* Revecariaceae fam. nov.

Candidatus Revecariaceae (NL. fem. n. *Revecariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA4055.* The type genus for the taxon is *Candidatus* Revecaria .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA4055*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Revecariales.

Description of *Candidatus* Revecariales ord. nov.

Candidatus Revecariales (NL. fem. n. *Revecariales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA4055.* The type genus for the taxon is *Candidatus* Revecaria .

According to the original version of GTDB R06-RS202, this family belongs to the class *UBA4055*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Revecariae.

Description of *Candidatus* Revecariae class. nov.

Candidatus Revecariae (NL. fem. n. *c__Revecariae* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA4055*. The type genus for the taxon is *Candidatus* Revecaria .

According to GTDB R06-RS202, this class belongs to the phylum *Delongbacteria*.

Description of *Candidatus* Revecaria holovax sp. nov.

Candidatus Revecaria holovax (NL. fem. n. *holovax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4055 sp003252515*. The type genome for the species is the GenBank assembly GCA_003252515.1. The GC content of the type genome is 42.58 % and the genome length is 2.52 Mbp.

Description of *Candidatus* Revecella apogribra sp. nov.

Candidatus Revecella apogribra (NL. fem. n. *apogribra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *F23-D06 sp902802755*. The type genome for the species is the GenBank assembly GCA_902802755.1. The GC content of the type genome is 44.21 % and the genome length is 2.56 Mbp.

Description of *Candidatus* Revecella gen. nov.

Candidatus Revecella (NL. fem. n. *Revecella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *F23-D06*. The type species for the genus is *Candidatus* Revecella apogribra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *WCHB1-69*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Turibosaceae.

Description of *Candidatus* Revecella binocibula sp. nov.

Candidatus Revecella binocibula (NL. fem. n. *binocibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *F23-D06 sp002311645*. The type genome for the species is the GenBank assembly GCA_002367095.1. The GC content of the type genome is 51.55 % and the genome length is 2.56 Mbp.

Description of *Candidatus* Revecella cocodimonia sp. nov.

Candidatus Revecella cocodimonia (NL. fem. n. *cocodimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *F23-D06 sp902786595*. The type genome for the species is the GenBank assembly GCA_902786595.1. The GC content of the type genome is 49.23 % and the genome length is 2.84 Mbp.

Description of *Candidatus* Revecella dimiditrix sp. nov.

Candidatus Revecella dimiditrix (NL. fem. n. *dimiditrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *F23-D06 sp900316305*. The type genome for the species is the GenBank assembly GCA_900316305.1. The GC content of the type genome is 49.89 % and the genome length is 3.28 Mbp.

Description of *Candidatus* Revecella fidenitrix sp. nov.

Candidatus Revecella fidenitrix (NL. fem. n. *fidenitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *F23-D06 sp900319925*. The type genome for the species is the GenBank assembly GCA_900319925.1. The GC content of the type genome is 53.19 % and the genome length is 3.12 Mbp.

Description of *Candidatus* Revecella invicibra sp. nov.

Candidatus Revecella invicibra (NL. fem. n. *invicibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *F23-D06 sp902797625*. The type genome for the species is the GenBank assembly GCA_902797625.1. The GC content of the type genome is 35.11 % and the genome length is 1.81 Mbp.

Description of *Candidatus* Revecella menapicella sp. nov.

Candidatus Revecella menapicella (NL. fem. n. *menapicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *F23-D06 sp900317715*. The type genome for the species is the GenBank assembly GCA_902758435.1. The GC content of the type genome is 48.76 % and the genome length is 3.14 Mbp.

Description of *Candidatus* Revecella meriditura sp. nov.

Candidatus Revecella meriditura (NL. fem. n. *meriditura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *F23-D06 sp902771655*. The type genome for the species is the GenBank assembly GCA_902772535.1. The GC content of the type genome is 44.67 % and the genome length is 2.81 Mbp.

Description of *Candidatus* Revecella nubigibra sp. nov.

Candidatus Revecella nubigibra (NL. fem. n. *nubigibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *F23-D06 sp002392325*. The type genome for the species is the GenBank assembly GCA_002392325.1. The GC content of the type genome is 48.34 % and the genome length is 1.95 Mbp.

Description of *Candidatus* Revecella nubigousia sp. nov.

Candidatus Revecella nubigousia (NL. fem. n. *nubigousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *F23-D06 sp902770735*. The type genome for the species is the GenBank assembly GCA_902768555.1. The GC content of the type genome is 52.6 % and the genome length is 2.31 Mbp.

Description of *Candidatus* Revecella opercitio sp. nov.

Candidatus Revecella opercitio (NL. fem. n. *opercitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *F23-D06 sp902796805*. The type genome for the species is the GenBank assembly GCA_902796805.1. The GC content of the type genome is 50.81 % and the genome length is 2.1 Mbp.

Description of *Candidatus* Revecella sotulilega sp. nov.

Candidatus Revecella sotulilega (NL. fem. n. *sotulilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *F23-D06 sp900315705*. The type genome for the species is the GenBank assembly GCA_900315705.1. The GC content of the type genome is 52.14 % and the genome length is 3.0 Mbp.

Description of *Candidatus* Revecella vitupibula sp. nov.

Candidatus Revecella vitupibula (NL. fem. n. *vitupibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *F23-D06 sp900315245*. The type genome for the species is the GenBank assembly GCA_900315245.1. The GC content of the type genome is 48.82 % and the genome length is 3.05 Mbp.

Description of *Candidatus* Revecia selecitia sp. nov.

Candidatus Revecia selecitia (NL. fem. n. *selecitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002782225 sp002787295*. The type genome for the species is the GenBank assembly GCA_002782225.1. The GC content of the type genome is 37.13 % and the genome length is 0.6 Mbp.

Description of *Candidatus* Revecia gen. nov.

Candidatus Revecia (NL. fem. n. *Revecia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-002782225*. The type species for the genus is *Candidatus* Revecia

selecitia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GCA-002782225*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Reveciaceae.

Description of *Candidatus* Reveciaceae fam. nov.

Candidatus Reveciaceae (NL. fem. n. *Reveciaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *GCA-002782225.* The type genus for the taxon is *Candidatus* Revecia .

According to GTDB R06-RS202, this family belongs to the order *Paceibacterales*.

Description of *Candidatus* Revecida desacitia sp. nov.

Candidatus Revecida desacitia (NL. fem. n. *desacitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SLMV01 sp007133365*. The type genome for the species is the GenBank assembly GCA_007133365.1. The GC content of the type genome is 53.75 % and the genome length is 1.91 Mbp.

Description of *Candidatus* Revecida gen. nov.

Candidatus Revecida (NL. fem. n. *Revecida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SLMV01*. The type species for the genus is *Candidatus* Revecida desacitia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SLMV01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Revecidaceae.

Description of *Candidatus* Revecidaceae fam. nov.

Candidatus Revecidaceae (NL. fem. n. *Revecidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SLMV01.* The type genus for the taxon is *Candidatus* Revecida .

According to the original version of GTDB R06-RS202, this family belongs to the order *SLMV01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Revecidales.

Description of *Candidatus* Revecidales ord. nov.

Candidatus Revecidales (NL. fem. n. *Revecidales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SLMV01.* The type genus for the taxon is *Candidatus* Revecida .

According to the original version of GTDB R06-RS202, this family belongs to the class *SLMV01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Revecidae.

Description of *Candidatus* Revecidae class. nov.

Candidatus Revecidae (NL. fem. n. *c__Revecidae* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SLMV01.* The type genus for the taxon is *Candidatus* Revecida .

According to GTDB R06-RS202, this class belongs to the phylum *Firmicutes_E*.

Description of *Candidatus* Revecosa recumicula sp. nov.

Candidatus Revecosa recumicula (NL. fem. n. *recumicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIMGI01 sp903840505*. The type genome for the species is the GenBank assembly GCA_903862275.1. The GC content of the type genome is 35.67 % and the genome length is 2.72 Mbp.

Description of *Candidatus* Revecosa gen. nov.

Candidatus Revecosa (NL. fem. n. *Revecosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIMGI01*. The type species for the genus is *Candidatus* Revecosa recumicula .

According to the original version of GTDB R06-RS202, this genus belongs to the family

UBA4408. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vavasanaceae.

Description of *Candidatus* Revecula aprarastra sp. nov.

Candidatus Revecula aprarastra (NL. fem. n. *aprarastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SLAD01 sp007126995*. The type genome for the species is the GenBank assembly GCA_007126995.1. The GC content of the type genome is 57.97 % and the genome length is 2.47 Mbp.

Description of *Candidatus* Revecula gen. nov.

Candidatus Revecula (NL. fem. n. *Revecula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SLAD01*. The type species for the genus is *Candidatus* Revecula aprarastra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SLAD01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Reveculaceae.

Description of *Candidatus* Reveculaceae fam. nov.

Candidatus Reveculaceae (NL. fem. n. *Reveculaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SLAD01.* The type genus for the taxon is *Candidatus* Revecula .

According to the original version of GTDB R06-RS202, this family belongs to the order *SLAD01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Reveculales.

Description of *Candidatus* Reveculales ord. nov.

Candidatus Reveculales (NL. fem. n. *Reveculales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SLAD01.* The type genus for the taxon is *Candidatus* Revecula .

According to the GTDB R06-RS202, this order belongs to the class *Kiritimatiellae*.

Description of *Candidatus* Revecula celumisca sp. nov.

Candidatus Revecula celumisca (NL. fem. n. *celumisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SLAD01 sp007125875*. The type genome for the species is the GenBank assembly GCA_007136625.1. The GC content of the type genome is 55.54 % and the genome length is 1.67 Mbp.

Description of *Candidatus* Revecula docibatica sp. nov.

Candidatus Revecula docibatica (NL. fem. n. *docibatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SLAD01 sp007123265*. The type genome for the species is the GenBank assembly GCA_003562305.1. The GC content of the type genome is 58.31 % and the genome length is 2.54 Mbp.

Description of *Candidatus* Revecula inoffax sp. nov.

Candidatus Revecula inoffax (NL. fem. n. *inoffax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SLAD01 sp007126515*. The type genome for the species is the GenBank assembly GCA_007126515.1. The GC content of the type genome is 53.97 % and the genome length is 2.47 Mbp.

Description of *Candidatus* Revulana adrenax sp. nov.

Candidatus Revulana adrenax (NL. fem. n. *adrenax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8752 sp902535565*. The type genome for the species is the GenBank assembly GCA_902535565.1. The GC content of the type genome is 54.95 % and the genome length is 1.39 Mbp.

Description of *Candidatus* Revulana gen. nov.

Candidatus Revulana (NL. fem. n. *Revulana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA8752*. The type species for the genus is *Candidatus* Revulana adrenax .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UA16*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vatilosaceae.

Description of *Candidatus* Revulana avuncimonia sp. nov.

Candidatus Revulana avuncimonia (NL. fem. n. *avuncimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8752 sp002720375*. The type genome for the species is the GenBank assembly GCA_002720375.1. The GC content of the type genome is 54.34 % and the genome length is 1.56 Mbp.

Description of *Candidatus* Revulana detesentia sp. nov.

Candidatus Revulana detesentia (NL. fem. n. *detesentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8752 sp011522855*. The type genome for the species is the GenBank assembly GCA_011522855.1. The GC content of the type genome is 63.77 % and the genome length is 2.15 Mbp.

Description of *Candidatus* Revulana dibapisca sp. nov.

Candidatus Revulana dibapisca (NL. fem. n. *dibapisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8752 sp002389295*. The type genome for the species is the GenBank assembly GCA_002390645.1. The GC content of the type genome is 58.77 % and the genome length is 2.55 Mbp.

Description of *Candidatus* Revulana dilacetta sp. nov.

Candidatus Revulana dilacetta (NL. fem. n. *dilacetta* a species epithet created arbitrarily,

while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8752 sp002336475*. The type genome for the species is the GenBank assembly GCA_002336475.1. The GC content of the type genome is 55.65 % and the genome length is 2.49 Mbp.

Description of *Candidatus* Revulana exhilibula sp. nov.

Candidatus Revulana exhilibula (NL. fem. n. *exhilibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8752 sp002862785*. The type genome for the species is the GenBank assembly GCA_002862785.1. The GC content of the type genome is 62.28 % and the genome length is 2.44 Mbp.

Description of *Candidatus* Revulana inexpivita sp. nov.

Candidatus Revulana inexpivita (NL. fem. n. *inexpivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8752 sp002683735*. The type genome for the species is the GenBank assembly GCA_002683735.1. The GC content of the type genome is 60.08 % and the genome length is 1.71 Mbp.

Description of *Candidatus* Revulana melopitudo sp. nov.

Candidatus Revulana melopitudo (NL. fem. n. *melopitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8752 sp002172485*. The type genome for the species is the GenBank assembly GCA_002172485.2. The GC content of the type genome is 61.02 % and the genome length is 1.73 Mbp.

Description of *Candidatus* Revularia maleditrix sp. nov.

Candidatus Revularia maleditrix (NL. fem. n. *maleditrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SKQS01 sp007118895*. The type genome for the species is the GenBank assembly GCA_007118895.1. The GC content of the type genome is 62.76 % and the genome length is 3.38 Mbp.

Description of *Candidatus* Revularia gen. nov.

Candidatus Revularia (NL. fem. n. *Revularia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SKQS01*. The type species for the genus is *Candidatus* Revularia maleditrix .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Revulella catabessa sp. nov.

Candidatus Revulella catabessa (NL. fem. n. *catabessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2737725 sp009693785*. The type genome for the species is the GenBank assembly GCA_009693785.1. The GC content of the type genome is 57.6 % and the genome length is 2.95 Mbp.

Description of *Candidatus* Revulella gen. nov.

Candidatus Revulella (NL. fem. n. *Revulella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2737725*. The type species for the genus is *Candidatus* Revulella catabessa .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Revulella senipivita sp. nov.

Candidatus Revulella senipivita (NL. fem. n. *senipivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2737725 sp002737725*. The type genome for the species is the GenBank assembly GCA_009693805.1. The GC content of the type genome is 55.72 %

and the genome length is 2.53 Mbp.

Description of *Candidatus* Revulia ancipetta sp. nov.

Candidatus Revulia ancipetta (NL. fem. n. *ancipetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAZBM01 sp012513815*. The type genome for the species is the GenBank assembly GCA_012513815.1. The GC content of the type genome is 50.74 % and the genome length is 1.88 Mbp.

Description of *Candidatus* Revulia gen. nov.

Candidatus Revulia (NL. fem. n. *Revulia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAZBM01*. The type species for the genus is *Candidatus* Revulia ancipetta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JAAZBM01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Revuliaceae.

Description of *Candidatus* Revuliaceae fam. nov.

Candidatus Revuliaceae (NL. fem. n. *Revuliaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JAAZBM01.* The type genus for the taxon is *Candidatus* Revulia .

According to GTDB R06-RS202, this family belongs to the order *Sumerlaeales*.

Description of *Candidatus* Revulida turifugo sp. nov.

Candidatus Revulida turifugo (NL. fem. n. *turifugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *1-14-0-10-44-23 sp002773475*. The type genome for the species is the GenBank assembly GCA_002773475.1. The GC content of the type genome is 44.17 % and the genome length is 0.53 Mbp.

Description of *Candidatus* Revulida gen. nov.

Candidatus Revulida (NL. fem. n. *Revulida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *1-14-0-10-44-23*. The type species for the genus is *Candidatus* Revulida turifugo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *1-14-0-10-44-23*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Revulidaceae.

Description of *Candidatus* Revulidaceae fam. nov.

Candidatus Revulidaceae (NL. fem. n. *Revulidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *1-14-0-10-44-23.* The type genus for the taxon is *Candidatus* Revulida .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA6257*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Denomulales.

Description of *Candidatus* Revulosa affamibra sp. nov.

Candidatus Revulosa affamibra (NL. fem. n. *affamibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2704625 sp902591045*. The type genome for the species is the GenBank assembly GCA_902591045.1. The GC content of the type genome is 30.01 % and the genome length is 0.96 Mbp.

Description of *Candidatus* Revulosa gen. nov.

Candidatus Revulosa (NL. fem. n. *Revulosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2704625*. The type species for the genus is *Candidatus* Revulosa affamibra .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Revulosa agratifica sp. nov.

Candidatus Revulosa agratifica (NL. fem. n. *agratifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2704625 sp002171925*. The type genome for the species is the GenBank assembly GCA_002171925.1. The GC content of the type genome is 29.15 % and the genome length is 0.56 Mbp.

Description of *Candidatus* Revulosa ambidimonia sp. nov.

Candidatus Revulosa ambidimonia (NL. fem. n. *ambidimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2704625 sp902567495*. The type genome for the species is the GenBank assembly GCA_902567495.1. The GC content of the type genome is 29.64 % and the genome length is 0.97 Mbp.

Description of *Candidatus* Revulosa aplesibra sp. nov.

Candidatus Revulosa aplesibra (NL. fem. n. *aplesibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2704625 sp902581795*. The type genome for the species is the GenBank assembly GCA_902581795.1. The GC content of the type genome is 30.05 % and the genome length is 1.01 Mbp.

Description of *Candidatus* Revulosa appugitia sp. nov.

Candidatus Revulosa appugitia (NL. fem. n. *appugitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2704625 sp902587085*. The type genome for the species is the GenBank assembly GCA_902587085.1. The GC content of the type genome is 30.28 % and the genome length is 0.7 Mbp.

Description of *Candidatus* Revulosa assifax sp. nov.

Candidatus Revulosa assifax (NL. fem. n. *assifax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2704625 sp902552845*. The type genome for the species is the GenBank assembly GCA_902552845.1. The GC content of the type genome is 29.67 % and the genome length is 0.77 Mbp.

Description of *Candidatus* Revulosa benivugo sp. nov.

Candidatus Revulosa benivugo (NL. fem. n. *benivugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2704625 sp902554135*. The type genome for the species is the GenBank assembly GCA_902554135.1. The GC content of the type genome is 30.99 % and the genome length is 0.58 Mbp.

Description of *Candidatus* Revulosa bucelilenta sp. nov.

Candidatus Revulosa bucelilenta (NL. fem. n. *bucelilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2704625 sp902571095*. The type genome for the species is the GenBank assembly GCA_902571095.1. The GC content of the type genome is 29.67 % and the genome length is 0.9 Mbp.

Description of *Candidatus* Revulosa cadurimonas sp. nov.

Candidatus Revulosa cadurimonas (NL. fem. n. *cadurimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2704625 sp902583785*. The type genome for the species is the GenBank assembly GCA_902583785.1. The GC content of the type genome is 30.49 % and the genome length is 0.74 Mbp.

Description of *Candidatus* Revulosa carunimonas sp. nov.

Candidatus Revulosa carunimonas (NL. fem. n. *carunimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *GCA-2704625 sp902579585*. The type genome for the species is the GenBank assembly GCA_902579585.1. The GC content of the type genome is 29.65 % and the genome length is 0.65 Mbp.

Description of *Candidatus* Revulosa catocigena sp. nov.

Candidatus Revulosa catocigena (NL. fem. n. *catocigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2704625 sp902570785*. The type genome for the species is the GenBank assembly GCA_902570785.1. The GC content of the type genome is 29.76 % and the genome length is 0.97 Mbp.

Description of *Candidatus* Revulosa celumitas sp. nov.

Candidatus Revulosa celumitas (NL. fem. n. *celumitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2704625 sp902579285*. The type genome for the species is the GenBank assembly GCA_902613655.1. The GC content of the type genome is 29.65 % and the genome length is 0.93 Mbp.

Description of *Candidatus* Revulosa cnesticula sp. nov.

Candidatus Revulosa cnesticula (NL. fem. n. *cnesticula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2704625 sp902609645*. The type genome for the species is the GenBank assembly GCA_902609645.1. The GC content of the type genome is 29.59 % and the genome length is 0.9 Mbp.

Description of *Candidatus* Revulosa curotentia sp. nov.

Candidatus Revulosa curotentia (NL. fem. n. *curotentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2704625 sp902582475*. The type genome for the species is the GenBank assembly GCA_902582475.1. The GC content of the type genome is 30.21 % and the genome length is 0.78 Mbp.

Description of *Candidatus* Revulosa detecilega sp. nov.

Candidatus Revulosa detecilega (NL. fem. n. *detecilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2704625 sp902583685*. The type genome for the species is the GenBank assembly GCA_902583685.1. The GC content of the type genome is 29.64 % and the genome length is 0.75 Mbp.

Description of *Candidatus* Revulosa detunigena sp. nov.

Candidatus Revulosa detunigena (NL. fem. n. *detunigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2704625 sp902634325*. The type genome for the species is the GenBank assembly GCA_902634325.1. The GC content of the type genome is 30.61 % and the genome length is 0.73 Mbp.

Description of *Candidatus* Revulosa dicibousia sp. nov.

Candidatus Revulosa dicibousia (NL. fem. n. *dicibousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2704625 sp002704625*. The type genome for the species is the GenBank assembly GCA_002704625.1. The GC content of the type genome is 28.68 % and the genome length is 1.26 Mbp.

Description of *Candidatus* Revulosa dinupastra sp. nov.

Candidatus Revulosa dinupastra (NL. fem. n. *dinupastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2704625 sp902578115*. The type genome for the species is the GenBank assembly GCA_902566975.1. The GC content of the type genome is 29.82 % and the genome length is 0.89 Mbp.

Description of *Candidatus* Revulosa ducilibra sp. nov.

Candidatus Revulosa ducilibra (NL. fem. n. *ducilibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2704625 sp902614835*. The type genome for the species is the GenBank assembly GCA_902569925.1. The GC content of the type genome is 30.55 % and the genome length is 0.8 Mbp.

Description of *Candidatus* Revulosa exhonicula sp. nov.

Candidatus Revulosa exhonicula (NL. fem. n. *exhonicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2704625 sp902623915*. The type genome for the species is the GenBank assembly GCA_902623915.1. The GC content of the type genome is 29.6 % and the genome length is 0.64 Mbp.

Description of *Candidatus* Revulosa gabinessa sp. nov.

Candidatus Revulosa gabinessa (NL. fem. n. *gabinessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2704625 sp902519465*. The type genome for the species is the GenBank assembly GCA_902519465.1. The GC content of the type genome is 30.15 % and the genome length is 0.77 Mbp.

Description of *Candidatus* Revulosa indepimonia sp. nov.

Candidatus Revulosa indepimonia (NL. fem. n. *indepimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2704625 sp902599805*. The type genome for the species is the GenBank assembly GCA_902599805.1. The GC content of the type genome is 30.14 % and the genome length is 0.91 Mbp.

Description of *Candidatus* Revulosa mahemedo sp. nov.

Candidatus Revulosa mahemedo (NL. fem. n. *mahemedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *GCA-2704625 sp003209895*. The type genome for the species is the GenBank assembly GCA_003209895.1. The GC content of the type genome is 30.04 % and the genome length is 0.92 Mbp.

Description of *Candidatus* Revulosa metucivita sp. nov.

Candidatus Revulosa metucivita (NL. fem. n. *metucivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2704625 sp902587295*. The type genome for the species is the GenBank assembly GCA_902586325.1. The GC content of the type genome is 29.57 % and the genome length is 0.83 Mbp.

Description of *Candidatus* Revulosa miracetta sp. nov.

Candidatus Revulosa miracetta (NL. fem. n. *miracetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2704625 sp902566925*. The type genome for the species is the GenBank assembly GCA_902566925.1. The GC content of the type genome is 32.42 % and the genome length is 1.2 Mbp.

Description of *Candidatus* Revulosa ossifisca sp. nov.

Candidatus Revulosa ossifisca (NL. fem. n. *ossifisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2704625 sp902573425*. The type genome for the species is the GenBank assembly GCA_902573425.1. The GC content of the type genome is 29.9 % and the genome length is 0.99 Mbp.

Description of *Candidatus* Revulosa paralugo sp. nov.

Candidatus Revulosa paralugo (NL. fem. n. *paralugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2704625 sp902569185*. The type genome for the species is the GenBank assembly GCA_902569185.1. The GC content of the type genome is 30.0 % and the genome length is 0.79 Mbp.

Description of *Candidatus* Revulosa pluscessa sp. nov.

Candidatus Revulosa pluscessa (NL. fem. n. *pluscessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2704625 sp902530635*. The type genome for the species is the GenBank assembly GCA_902530635.1. The GC content of the type genome is 29.58 % and the genome length is 0.99 Mbp.

Description of *Candidatus* Revulosa rurigimonia sp. nov.

Candidatus Revulosa rurigimonia (NL. fem. n. *rurigimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2704625 sp902578935*. The type genome for the species is the GenBank assembly GCA_902570375.1. The GC content of the type genome is 30.93 % and the genome length is 0.93 Mbp.

Description of *Candidatus* Revulosa saburimonas sp. nov.

Candidatus Revulosa saburimonas (NL. fem. n. *saburimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2704625 sp902588585*. The type genome for the species is the GenBank assembly GCA_902588585.1. The GC content of the type genome is 30.28 % and the genome length is 0.99 Mbp.

Description of *Candidatus* Revulosa semipastra sp. nov.

Candidatus Revulosa semipastra (NL. fem. n. *semipastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2704625 sp902568425*. The type genome for the species is the GenBank assembly GCA_902568425.1. The GC content of the type genome is 30.22 % and the genome length is 0.76 Mbp.

Description of *Candidatus* Revulosa triscentia sp. nov.

Candidatus Revulosa triscentia (NL. fem. n. *triscentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2704625 sp002171275*. The type genome for the species is the GenBank assembly GCA_002171275.2. The GC content of the type genome is 28.39 % and the genome length is 0.67 Mbp.

Description of *Candidatus* Revulosa ulcisessa sp. nov.

Candidatus Revulosa ulcisessa (NL. fem. n. *ulcisessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2704625 sp902573065*. The type genome for the species is the GenBank assembly GCA_902573065.1. The GC content of the type genome is 29.84 % and the genome length is 0.77 Mbp.

Description of *Candidatus* Revulosa veneficula sp. nov.

Candidatus Revulosa veneficula (NL. fem. n. *veneficula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2704625 sp902580445*. The type genome for the species is the GenBank assembly GCA_902580445.1. The GC content of the type genome is 29.76 % and the genome length is 0.85 Mbp.

Description of *Candidatus* Revulosa vicecibra sp. nov.

Candidatus Revulosa vicecibra (NL. fem. n. *vicecibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2704625 sp902539745*. The type genome for the species is the GenBank assembly GCA_902539745.1. The GC content of the type genome is 29.7 % and the genome length is 0.92 Mbp.

Description of *Candidatus* Revulosa vocifitia sp. nov.

Candidatus Revulosa vocifitia (NL. fem. n. *vocifitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *GCA-2704625 sp003213135*. The type genome for the species is the GenBank assembly GCA_902577615.1. The GC content of the type genome is 30.06 % and the genome length is 0.98 Mbp.

Description of *Candidatus* Revulula alembitudo sp. nov.

Candidatus Revulula alembitudo (NL. fem. n. *alembitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *FW305-bin1 sp004297305*. The type genome for the species is the GenBank assembly GCA_004297305.1. The GC content of the type genome is 70.88 % and the genome length is 2.68 Mbp.

Description of *Candidatus* Revulula gen. nov.

Candidatus Revulula (NL. fem. n. *Revulula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *FW305-bin1*. The type species for the genus is *Candidatus* Revulula alembitudo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *FW305-bin1*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Revululaceae.

Description of *Candidatus* Revululaceae fam. nov.

Candidatus Revululaceae (NL. fem. n. *Revululaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *FW305-bin1.* The type genus for the taxon is *Candidatus* Revulula .

According to GTDB R06-RS202, this family belongs to the order *Nanopelagicales*.

Description of *Candidatus* Reyranella acculitudo sp. nov.

Candidatus Reyranella acculitudo (NL. fem. n. *acculitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Reyranella sp013290035*. The type genome for the species is the GenBank assembly GCA_013290035.1. The GC content of the type genome is 66.97 %

and the genome length is 4.45 Mbp.

Description of *Candidatus* Reyranella adsusitudo sp. nov.

Candidatus Reyranella adsusitudo (NL. fem. n. *adsusitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Reyranella sp004297405*. The type genome for the species is the GenBank assembly GCA_004297405.1. The GC content of the type genome is 64.24 % and the genome length is 6.46 Mbp.

Description of *Candidatus* Reyranella anarrilenta sp. nov.

Candidatus Reyranella anarrilenta (NL. fem. n. *anarrilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Reyranella sp001767945*. The type genome for the species is the GenBank assembly GCA_001767945.1. The GC content of the type genome is 66.42 % and the genome length is 4.46 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 1.2 micron filter; full assembly".

Description of *Candidatus* Reyranella appagisca sp. nov.

Candidatus Reyranella appagisca (NL. fem. n. *appagisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Reyranella sp009377525*. The type genome for the species is the GenBank assembly GCA_009377525.1. The GC content of the type genome is 66.18 % and the genome length is 7.35 Mbp.

Description of *Candidatus* Reyranella ardifitia sp. nov.

Candidatus Reyranella ardifitia (NL. fem. n. *ardifitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Reyranella sp001897995*. The type genome for the species is the GenBank assembly GCA_001897995.1. The GC content of the type genome is 65.77 % and the genome length is 7.15 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Ammonium sulfate bioreactor".

Description of *Candidatus* Reyranella bicoritica sp. nov.

Candidatus Reyranella bicoritica (NL. fem. n. *bicoritica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Reyranella sp001557035*. The type genome for the species is the GenBank assembly RS_GCF_001557035.1. The GC content of the type genome is 66.23 % and the genome length is 5.92 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "hospital shower hose biofilm".

Description of *Candidatus* Reyranella catocicella sp. nov.

Candidatus Reyranella catocicella (NL. fem. n. *catocicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Reyranella sp900110395*. The type genome for the species is the GenBank assembly RS_GCF_900110395.1. The GC content of the type genome is 66.25 % and the genome length is 8.18 Mbp.

Description of *Candidatus* Reyranella excorimonia sp. nov.

Candidatus Reyranella excorimonia (NL. fem. n. *excorimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Reyranella sp004296935*. The type genome for the species is the GenBank assembly GCA_004296935.1. The GC content of the type genome is 66.28 % and the genome length is 5.15 Mbp.

Description of *Candidatus* Reyranella expanicula sp. nov.

Candidatus Reyranella expanicula (NL. fem. n. *expanicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Reyranella sp010032545*. The type genome for the species is the GenBank assembly GCA_010032545.1. The GC content of the type genome is 65.87 % and the genome length is 4.59 Mbp.

Description of *Candidatus* Reyranella gasomisca sp. nov.

Candidatus Reyranella gasomisca (NL. fem. n. *gasomisca* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Reyranella sp009772935*. The type genome for the species is the GenBank assembly GCA_009772935.1. The GC content of the type genome is 66.27 % and the genome length is 6.01 Mbp.

Description of *Candidatus* Reyranella laculimonas sp. nov.

Candidatus Reyranella laculimonas (NL. fem. n. *laculimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Reyranella sp002281855*. The type genome for the species is the GenBank assembly GCA_002281325.1. The GC content of the type genome is 66.22 % and the genome length is 6.17 Mbp.

Description of *Candidatus* Reyranella mahemastra sp. nov.

Candidatus Reyranella mahemastra (NL. fem. n. *mahemastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Reyranella sp004297265*. The type genome for the species is the GenBank assembly GCA_004297265.1. The GC content of the type genome is 66.34 % and the genome length is 6.02 Mbp.

Description of *Candidatus* Reyranella ornitessa sp. nov.

Candidatus Reyranella ornitessa (NL. fem. n. *ornitessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Reyranella sp013205335*. The type genome for the species is the GenBank assembly GCA_013205335.1. The GC content of the type genome is 65.79 % and the genome length is 5.41 Mbp.

Description of *Candidatus* Reyranella pluscicella sp. nov.

Candidatus Reyranella pluscicella (NL. fem. n. *pluscicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Reyranella sp005884705*. The type genome for the species is the GenBank assembly GCA_005884705.1. The GC content of the type genome is 67.65 % and the genome length is 4.03 Mbp.

Description of *Candidatus* Reyranella redacugo sp. nov.

Candidatus Reyranella redacugo (NL. fem. n. *redacugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Reyranella sp003153415*. The type genome for the species is the GenBank assembly GCA_003153415.1. The GC content of the type genome is 65.09 % and the genome length is 5.62 Mbp.

Description of *Candidatus* Reyranella tetenimonia sp. nov.

Candidatus Reyranella tetenimonia (NL. fem. n. *tetenimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Reyranella sp004296815*. The type genome for the species is the GenBank assembly GCA_004296815.1. The GC content of the type genome is 67.78 % and the genome length is 4.64 Mbp.

Description of *Candidatus* Reyranella veridicella sp. nov.

Candidatus Reyranella veridicella (NL. fem. n. *veridicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Reyranella sp902825855*. The type genome for the species is the GenBank assembly GCA_902825855.1. The GC content of the type genome is 64.93 % and the genome length is 7.79 Mbp.

Description of *Candidatus* Rhabdaerophilum ascenitudo sp. nov.

Candidatus Rhabdaerophilum ascenitudo (NL. fem. n. *ascenitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhabdaerophilum sp009846685*. The type genome for the species is the GenBank assembly RS_GCF_009846685.1. The GC content of the type genome is 63.03 % and the genome length is 3.46 Mbp.

Description of *Candidatus* Rhabdaerophilum chalbicella sp. nov.

Candidatus Rhabdaerophilum chalbicella (NL. fem. n. *chalbicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhabdaerophilum sp002928875*. The type genome for the species is the GenBank assembly GCA_002928875.1. The GC content of the type genome is 65.82 % and the genome length is 3.24 Mbp.

Description of *Candidatus* Rhabdaerophilum haricilega sp. nov.

Candidatus Rhabdaerophilum haricilega (NL. fem. n. *haricilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhabdaerophilum sp009773635*. The type genome for the species is the GenBank assembly GCA_009773635.1. The GC content of the type genome is 63.01 % and the genome length is 3.24 Mbp.

Description of *Candidatus* Rhabdaerophilum terebentia sp. nov.

Candidatus Rhabdaerophilum terebentia (NL. fem. n. *terebentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhabdaerophilum sp002256205*. The type genome for the species is the GenBank assembly GCA_002256205.1. The GC content of the type genome is 61.36 % and the genome length is 4.2 Mbp.

Description of *Candidatus* Rhabdochlamydia aggubago sp. nov.

Candidatus Rhabdochlamydia aggubago (NL. fem. n. *aggubago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhabdochlamydia sp003176115*. The type genome for the species is the GenBank assembly GCA_003176115.1. The GC content of the type genome is 36.58 % and the genome length is 1.38 Mbp.

Description of *Candidatus* Rhabdochlamydia dilibiforma sp. nov.

Candidatus Rhabdochlamydia dilibiforma (NL. fem. n. *dilibiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a

noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhabdochlamydia sp901000775*. The type genome for the species is the GenBank assembly RS_GCF_901000775.1. The GC content of the type genome is 36.16 % and the genome length is 1.83 Mbp.

Description of *Candidatus* Rheinheimera agrapicula sp. nov.

Candidatus Rheinheimera agrapicula (NL. fem. n. *agrapicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rheinheimera sp002840125*. The type genome for the species is the GenBank assembly GCA_002840125.1. The GC content of the type genome is 49.41 % and the genome length is 4.68 Mbp.

Description of *Candidatus* Rheinheimera hirunedo sp. nov.

Candidatus Rheinheimera hirunedo (NL. fem. n. *hirunedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rheinheimera sp013283795*. The type genome for the species is the GenBank assembly RS_GCF_013283795.1. The GC content of the type genome is 50.02 % and the genome length is 4.08 Mbp.

Description of *Candidatus* Rheinheimera purulatica sp. nov.

Candidatus Rheinheimera purulatica (NL. fem. n. *purulatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rheinheimera sp004345025*. The type genome for the species is the GenBank assembly RS_GCF_004345025.1. The GC content of the type genome is 44.4 % and the genome length is 3.31 Mbp.

Description of *Candidatus* Rheinheimera verecibula sp. nov.

Candidatus Rheinheimera verecibula (NL. fem. n. *verecibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Rheinheimera sp001513785*. The type genome for the species is the GenBank assembly RS_GCF_001513785.1. The GC content of the type genome is 49.3 % and the genome length is 4.4 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "rhizospheric soil".

Description of *Candidatus* Rhizobacter adnumicella sp. nov.

Candidatus Rhizobacter adnumicella (NL. fem. n. *adnumicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhizobacter sp014379885*. The type genome for the species is the GenBank assembly GCA_014379885.1. The GC content of the type genome is 64.71 % and the genome length is 3.68 Mbp.

Description of *Candidatus* Rhizobacter adtilatica sp. nov.

Candidatus Rhizobacter adtilatica (NL. fem. n. *adtilatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhizobacter sp903643055*. The type genome for the species is the GenBank assembly RS_GCF_903643055.1. The GC content of the type genome is 63.31 % and the genome length is 4.42 Mbp.

Description of *Candidatus* Rhizobacter arunditoga sp. nov.

Candidatus Rhizobacter arunditoga (NL. fem. n. *arunditoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhizobacter sp001464195*. The type genome for the species is the GenBank assembly GCA_001464195.1. The GC content of the type genome is 65.25 % and the genome length is 2.84 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "dual media filters at the Ann Arbor; Michigan drinking water treatment plant".

Description of *Candidatus* Rhizobacter betacivita sp. nov.

Candidatus Rhizobacter betacivita (NL. fem. n. *betacivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhizobacter sp903830565*. The type genome for the species is the

GenBank assembly GCA_903830565.1. The GC content of the type genome is 67.5 % and the genome length is 4.13 Mbp.

Description of *Candidatus* Rhizobacter delapiforma sp. nov.

Candidatus Rhizobacter delapiforma (NL. fem. n. *delapiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhizobacter sp005882155*. The type genome for the species is the GenBank assembly GCA_005881815.1. The GC content of the type genome is 66.52 % and the genome length is 3.88 Mbp.

Description of *Candidatus* Rhizobacter dilibedo sp. nov.

Candidatus Rhizobacter dilibedo (NL. fem. n. *dilibedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhizobacter sp000799305*. The type genome for the species is the GenBank assembly RS_GCF_000799305.1. The GC content of the type genome is 65.68 % and the genome length is 6.84 Mbp.

Description of *Candidatus* Rhizobacter divulicula sp. nov.

Candidatus Rhizobacter divulicula (NL. fem. n. *divulicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhizobacter sp001425785*. The type genome for the species is the GenBank assembly RS_GCF_001425785.1. The GC content of the type genome is 67.8 % and the genome length is 6.87 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "root".

Description of *Candidatus* Rhizobacter facunifica sp. nov.

Candidatus Rhizobacter facunifica (NL. fem. n. *facunifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhizobacter sp002281415*. The type genome for the species is the GenBank assembly GCA_002281415.1. The GC content of the type genome is 66.62 % and the genome length is 2.63 Mbp.

Description of *Candidatus* Rhizobacter immoditoga sp. nov.

Candidatus Rhizobacter immoditoga (NL. fem. n. *immoditoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhizobacter sp013366375*. The type genome for the species is the GenBank assembly RS_GCF_013366375.1. The GC content of the type genome is 69.85 % and the genome length is 5.58 Mbp.

Description of *Candidatus* Rhizobacter inmoritudo sp. nov.

Candidatus Rhizobacter inmoritudo (NL. fem. n. *inmoritudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhizobacter sp000799605*. The type genome for the species is the GenBank assembly RS_GCF_000799605.1. The GC content of the type genome is 69.04 % and the genome length is 6.85 Mbp.

Description of *Candidatus* Rhizobacter ludifitrix sp. nov.

Candidatus Rhizobacter ludifitrix (NL. fem. n. *ludifitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhizobacter sp014380155*. The type genome for the species is the GenBank assembly GCA_014380155.1. The GC content of the type genome is 65.84 % and the genome length is 4.58 Mbp.

Description of *Candidatus* Rhizobacter noninugo sp. nov.

Candidatus Rhizobacter noninugo (NL. fem. n. *noninugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhizobacter sp012932665*. The type genome for the species is the GenBank assembly RS_GCF_012932665.1. The GC content of the type genome is 69.87 % and the genome length is 6.73 Mbp.

Description of *Candidatus* Rhizobacter oblanisca sp. nov.

Candidatus Rhizobacter oblanisca (NL. fem. n. *oblanisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhizobacter sp000800095*. The type genome for the species is the GenBank assembly RS_GCF_000800095.1. The GC content of the type genome is 69.19 % and the genome length is 6.74 Mbp.

Description of *Candidatus* Rhizobacter oscilitudo sp. nov.

Candidatus Rhizobacter oscilitudo (NL. fem. n. *oscilitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhizobacter sp001263235*. The type genome for the species is the GenBank assembly GCA_001263235.1. The GC content of the type genome is 67.93 % and the genome length is 4.78 Mbp.

Description of *Candidatus* Rhizobacter pericousia sp. nov.

Candidatus Rhizobacter pericousia (NL. fem. n. *pericousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhizobacter sp012275445*. The type genome for the species is the GenBank assembly RS_GCF_012275445.1. The GC content of the type genome is 69.28 % and the genome length is 6.51 Mbp.

Description of *Candidatus* Rhizobacter refinisca sp. nov.

Candidatus Rhizobacter refinisca (NL. fem. n. *refinisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhizobacter sp903905475*. The type genome for the species is the GenBank assembly GCA_903958725.1. The GC content of the type genome is 67.21 % and the genome length is 2.35 Mbp.

Description of *Candidatus* Rhizobacter ridibitas sp. nov.

Candidatus Rhizobacter ridibitas (NL. fem. n. *ridibitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Rhizobacter sp002255905*. The type genome for the species is the GenBank assembly GCA_002255905.1. The GC content of the type genome is 65.63 % and the genome length is 3.25 Mbp.

Description of *Candidatus* Rhizobacter risibimonia sp. nov.

Candidatus Rhizobacter risibimonia (NL. fem. n. *risibimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhizobacter sp001425825*. The type genome for the species is the GenBank assembly RS_GCF_001425825.1. The GC content of the type genome is 69.06 % and the genome length is 6.52 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "root".

Description of *Candidatus* Rhizobacter tametedo sp. nov.

Candidatus Rhizobacter tametedo (NL. fem. n. *tametedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhizobacter sp900142965*. The type genome for the species is the GenBank assembly RS_GCF_900142965.1. The GC content of the type genome is 68.65 % and the genome length is 6.9 Mbp.

Description of *Candidatus* Rhizobacter turifatica sp. nov.

Candidatus Rhizobacter turifatica (NL. fem. n. *turifatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhizobacter sp003152055*. The type genome for the species is the GenBank assembly GCA_003152055.1. The GC content of the type genome is 66.66 % and the genome length is 5.36 Mbp.

Description of *Candidatus* Rhizobacter xenopigena sp. nov.

Candidatus Rhizobacter xenopigena (NL. fem. n. *xenopigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhizobacter sp001425865*. The type genome for the species is the GenBank assembly RS_GCF_001425865.1. The GC content of the type genome is 68.64 % and the genome length is 5.27 Mbp. The isolation source for the NCBI BioSample

associated with the type genome is descibed as "root".

Description of *Candidatus* Rhizobium acrocousia sp. nov.

Candidatus Rhizobium acrocousia (NL. fem. n. *acrocousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhizobium sp001426265*. The type genome for the species is the GenBank assembly RS_GCF_001426265.1. The GC content of the type genome is 59.64 % and the genome length is 5.75 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "root".

Description of *Candidatus* Rhizobium adleniforma sp. nov.

Candidatus Rhizobium adleniforma (NL. fem. n. *adleniforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhizobium sp000292525*. The type genome for the species is the GenBank assembly RS_GCF_000292525.1. The GC content of the type genome is 60.82 % and the genome length is 6.92 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "nodules".

Description of *Candidatus* Rhizobium advoritura sp. nov.

Candidatus Rhizobium advoritura (NL. fem. n. *advoritura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhizobium sp002211285*. The type genome for the species is the GenBank assembly RS_GCF_002211285.1. The GC content of the type genome is 61.79 % and the genome length is 5.82 Mbp.

Description of *Candidatus* Rhizobium allubimonas sp. nov.

Candidatus Rhizobium allubimonas (NL. fem. n. *allubimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhizobium sp001429725*. The type genome for the species is the GenBank assembly RS_GCF_001429725.1. The GC content of the type genome is 60.28 % and the genome length is 6.29 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "root".

Description of *Candidatus* Rhizobium amfititas sp. nov.

Candidatus Rhizobium amfititas (NL. fem. n. *amfititas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhizobium sp900472625*. The type genome for the species is the GenBank assembly GCA_900472625.1. The GC content of the type genome is 60.4 % and the genome length is 6.86 Mbp.

Description of *Candidatus* Rhizobium bucelitia sp. nov.

Candidatus Rhizobium bucelitia (NL. fem. n. *bucelitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhizobium sp900468685*. The type genome for the species is the GenBank assembly RS_GCF_900473375.1. The GC content of the type genome is 61.49 % and the genome length is 6.43 Mbp.

Description of *Candidatus* Rhizobium bugilitrix sp. nov.

Candidatus Rhizobium bugilitrix (NL. fem. n. *bugilitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhizobium sp002211305*. The type genome for the species is the GenBank assembly RS_GCF_002211395.1. The GC content of the type genome is 61.59 % and the genome length is 6.81 Mbp.

Description of *Candidatus* Rhizobium catalilega sp. nov.

Candidatus Rhizobium catalilega (NL. fem. n. *catalilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhizobium sp002117485*. The type genome for the species is the GenBank assembly RS_GCF_014193135.1. The GC content of the type genome is 61.11 % and the genome length is 6.22 Mbp.

Description of *Candidatus* Rhizobium categugo sp. nov.

Candidatus Rhizobium categugo (NL. fem. n. *categugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhizobium sp012641435*. The type genome for the species is the GenBank assembly RS_GCF_012641435.1. The GC content of the type genome is 59.06 % and the genome length is 7.06 Mbp.

Description of *Candidatus* Rhizobium cerebitura sp. nov.

Candidatus Rhizobium cerebitura (NL. fem. n. *cerebitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhizobium sp900467885*. The type genome for the species is the GenBank assembly RS_GCF_014193565.1. The GC content of the type genome is 59.89 % and the genome length is 6.61 Mbp.

Description of *Candidatus* Rhizobium cerucastra sp. nov.

Candidatus Rhizobium cerucastra (NL. fem. n. *cerucastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhizobium sp900466605*. The type genome for the species is the GenBank assembly RS_GCF_900466605.1. The GC content of the type genome is 58.9 % and the genome length is 6.59 Mbp.

Description of *Candidatus* Rhizobium cicaressa sp. nov.

Candidatus Rhizobium cicaressa (NL. fem. n. *cicaressa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhizobium sp002531905*. The type genome for the species is the GenBank assembly RS_GCF_002531905.1. The GC content of the type genome is 61.04 % and the genome length is 7.24 Mbp.

Description of *Candidatus* Rhizobium cicatilenta sp. nov.

Candidatus Rhizobium cicatilenta (NL. fem. n. *cicatilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Rhizobium sp007000325*. The type genome for the species is the GenBank assembly RS_GCF_007000305.1. The GC content of the type genome is 60.0 % and the genome length is 6.0 Mbp.

Description of *Candidatus* Rhizobium cocibitoga sp. nov.

Candidatus Rhizobium cocibitoga (NL. fem. n. *cocibitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhizobium sp001424945*. The type genome for the species is the GenBank assembly RS_GCF_900473815.1. The GC content of the type genome is 60.35 % and the genome length is 6.16 Mbp.

Description of *Candidatus* Rhizobium conubicula sp. nov.

Candidatus Rhizobium conubicula (NL. fem. n. *conubicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhizobium sp900469475*. The type genome for the species is the GenBank assembly RS_GCF_900467535.1. The GC content of the type genome is 59.42 % and the genome length is 6.34 Mbp.

Description of *Candidatus* Rhizobium defaritura sp. nov.

Candidatus Rhizobium defaritura (NL. fem. n. *defaritura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhizobium sp900472485*. The type genome for the species is the GenBank assembly RS_GCF_900472485.1. The GC content of the type genome is 59.62 % and the genome length is 6.47 Mbp.

Description of *Candidatus* Rhizobium defesigena sp. nov.

Candidatus Rhizobium defesigena (NL. fem. n. *defesigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhizobium sp900467745*. The type genome for the species is the GenBank assembly RS_GCF_900467745.1. The GC content of the type genome is 60.57 % and the genome length is 6.83 Mbp.

Description of *Candidatus* Rhizobium delecifica sp. nov.

Candidatus Rhizobium delecifica (NL. fem. n. *delecifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhizobium sp900468625*. The type genome for the species is the GenBank assembly RS_GCF_900465865.1. The GC content of the type genome is 59.73 % and the genome length is 6.56 Mbp.

Description of *Candidatus* Rhizobium delubitas sp. nov.

Candidatus Rhizobium delubitas (NL. fem. n. *delubitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhizobium sp000799775*. The type genome for the species is the GenBank assembly RS_GCF_900467675.1. The GC content of the type genome is 61.13 % and the genome length is 6.28 Mbp.

Description of *Candidatus* Rhizobium denixetta sp. nov.

Candidatus Rhizobium denixetta (NL. fem. n. *denixetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhizobium sp000746385*. The type genome for the species is the GenBank assembly RS_GCF_000746385.1. The GC content of the type genome is 61.76 % and the genome length is 5.83 Mbp.

Description of *Candidatus* Rhizobium desurentia sp. nov.

Candidatus Rhizobium desurentia (NL. fem. n. *desurentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhizobium sp001657485*. The type genome for the species is the GenBank assembly RS_GCF_014198365.1. The GC content of the type genome is 60.68 % and the genome length is 7.66 Mbp.

Description of *Candidatus* Rhizobium detenentia sp. nov.

Candidatus Rhizobium detenentia (NL. fem. n. *detenentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhizobium sp900468535*. The type genome for the species is the GenBank assembly RS_GCF_900468535.1. The GC content of the type genome is 60.07 % and the genome length is 6.18 Mbp.

Description of *Candidatus* Rhizobium detepitica sp. nov.

Candidatus Rhizobium detepitica (NL. fem. n. *detepitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhizobium sp004345245*. The type genome for the species is the GenBank assembly RS_GCF_004345245.1. The GC content of the type genome is 61.53 % and the genome length is 6.7 Mbp.

Description of *Candidatus* Rhizobium detesitrix sp. nov.

Candidatus Rhizobium detesitrix (NL. fem. n. *detesitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhizobium sp004362445*. The type genome for the species is the GenBank assembly RS_GCF_004362445.1. The GC content of the type genome is 59.36 % and the genome length is 8.01 Mbp.

Description of *Candidatus* Rhizobium detesugo sp. nov.

Candidatus Rhizobium detesugo (NL. fem. n. *detesugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhizobium sp900489925*. The type genome for the species is the GenBank assembly RS_GCF_001692185.1. The GC content of the type genome is 60.35 % and the genome length is 6.1 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "plant".

Description of *Candidatus* Rhizobium detotentia sp. nov.

Candidatus Rhizobium detotentia (NL. fem. n. *detotentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhizobium sp004341625*. The type genome for the species is the GenBank assembly RS_GCF_008365395.1. The GC content of the type genome is 59.52 % and the genome length is 7.53 Mbp.

Description of *Candidatus* Rhizobium devecilega sp. nov.

Candidatus Rhizobium devecilega (NL. fem. n. *devecilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhizobium sp014193695*. The type genome for the species is the GenBank assembly RS_GCF_014193555.1. The GC content of the type genome is 60.31 % and the genome length is 6.25 Mbp.

Description of *Candidatus* Rhizobium dibapessa sp. nov.

Candidatus Rhizobium dibapessa (NL. fem. n. *dibapessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhizobium sp003024605*. The type genome for the species is the GenBank assembly RS_GCF_003024605.1. The GC content of the type genome is 60.16 % and the genome length is 4.01 Mbp.

Description of *Candidatus* Rhizobium dibucax sp. nov.

Candidatus Rhizobium dibucax (NL. fem. n. *dibucax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhizobium sp900466475*. The type genome for the species is the GenBank assembly RS_GCF_900465885.1. The GC content of the type genome is 60.06 % and the genome length is 7.34 Mbp.

Description of *Candidatus* Rhizobium divuledo sp. nov.

Candidatus Rhizobium divuledo (NL. fem. n. *divuledo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhizobium sp003627795*. The type genome for the species is the GenBank assembly RS_GCF_003627775.1. The GC content of the type genome is 60.0 % and the genome length is 6.92 Mbp.

Description of *Candidatus* Rhizobium domigiforma sp. nov.

Candidatus Rhizobium domigiforma (NL. fem. n. *domigiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhizobium sp014194695*. The type genome for the species is the GenBank assembly RS_GCF_014193945.1. The GC content of the type genome is 59.67 % and the genome length is 6.5 Mbp.

Description of *Candidatus* Rhizobium duricetta sp. nov.

Candidatus Rhizobium duricetta (NL. fem. n. *duricetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhizobium sp900472605*. The type genome for the species is the GenBank assembly RS_GCF_004345965.1. The GC content of the type genome is 60.32 % and the genome length is 7.07 Mbp.

Description of *Candidatus* Rhizobium duricitudo sp. nov.

Candidatus Rhizobium duricitudo (NL. fem. n. *duricitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhizobium sp902706285*. The type genome for the species is the GenBank assembly RS_GCF_902706285.1. The GC content of the type genome is 60.87 % and the genome length is 6.01 Mbp.

Description of *Candidatus* Rhizobium exturatio sp. nov.

Candidatus Rhizobium exturatio (NL. fem. n. *exturatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhizobium sp900470965*. The type genome for the species is the GenBank assembly RS_GCF_900470965.1. The GC content of the type genome is 60.04 % and the genome length is 7.5 Mbp.

Description of *Candidatus* Rhizobium feditentia sp. nov.

Candidatus Rhizobium feditentia (NL. fem. n. *feditentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhizobium sp001664485*. The type genome for the species is the GenBank assembly RS_GCF_002245285.1. The GC content of the type genome is 61.44 % and the genome length is 6.93 Mbp.

Description of *Candidatus* Rhizobium filifago sp. nov.

Candidatus Rhizobium filifago (NL. fem. n. *filifago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhizobium sp900471925*. The type genome for the species is the GenBank assembly RS_GCF_900471925.1. The GC content of the type genome is 60.13 % and the genome length is 7.16 Mbp.

Description of *Candidatus* Rhizobium fuligax sp. nov.

Candidatus Rhizobium fuligax (NL. fem. n. *fuligax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhizobium sp002277895*. The type genome for the species is the GenBank assembly RS_GCF_002277895.1. The GC content of the type genome is 59.43 % and the genome length is 7.07 Mbp.

Description of *Candidatus* Rhizobium hexagicella sp. nov.

Candidatus Rhizobium hexagicella (NL. fem. n. *hexagicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhizobium sp000799845*. The type genome for the species is the GenBank assembly RS_GCF_000799845.1. The GC content of the type genome is 59.93 % and the genome length is 6.82 Mbp.

Description of *Candidatus* Rhizobium holisifica sp. nov.

Candidatus Rhizobium holisifica (NL. fem. n. *holisifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Rhizobium sp004341105*. The type genome for the species is the GenBank assembly RS_GCF_004341105.1. The GC content of the type genome is 59.68 % and the genome length is 6.38 Mbp.

Description of *Candidatus* Rhizobium homogifica sp. nov.

Candidatus Rhizobium homogifica (NL. fem. n. *homogifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhizobium sp002944315*. The type genome for the species is the GenBank assembly RS_GCF_002944315.1. The GC content of the type genome is 59.33 % and the genome length is 7.3 Mbp.

Description of *Candidatus* Rhizobium impudastra sp. nov.

Candidatus Rhizobium impudastra (NL. fem. n. *impudastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhizobium sp014195325*. The type genome for the species is the GenBank assembly RS_GCF_014195325.1. The GC content of the type genome is 59.58 % and the genome length is 6.4 Mbp.

Description of *Candidatus* Rhizobium mahemitio sp. nov.

Candidatus Rhizobium mahemitio (NL. fem. n. *mahemitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhizobium sp000746265*. The type genome for the species is the GenBank assembly RS_GCF_000746265.1. The GC content of the type genome is 59.13 % and the genome length is 6.63 Mbp.

Description of *Candidatus* Rhizobium notabibra sp. nov.

Candidatus Rhizobium notabibra (NL. fem. n. *notabibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhizobium sp900471515*. The type genome for the species is the GenBank assembly RS_GCF_900473435.1. The GC content of the type genome is 62.12 % and the genome length is 6.03 Mbp.

Description of *Candidatus* Rhizobium nutamastra sp. nov.

Candidatus Rhizobium nutamastra (NL. fem. n. *nutamastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhizobium sp014193255*. The type genome for the species is the GenBank assembly RS_GCF_014193935.1. The GC content of the type genome is 59.95 % and the genome length is 5.99 Mbp.

Description of *Candidatus* Rhizobium obsurivita sp. nov.

Candidatus Rhizobium obsurivita (NL. fem. n. *obsurivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhizobium sp002531725*. The type genome for the species is the GenBank assembly RS_GCF_002531725.1. The GC content of the type genome is 61.22 % and the genome length is 7.12 Mbp.

Description of *Candidatus* Rhizobium offirigena sp. nov.

Candidatus Rhizobium offirigena (NL. fem. n. *offirigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhizobium sp009498525*. The type genome for the species is the GenBank assembly RS_GCF_009498525.1. The GC content of the type genome is 60.29 % and the genome length is 6.73 Mbp.

Description of *Candidatus* Rhizobium palifessa sp. nov.

Candidatus Rhizobium palifessa (NL. fem. n. *palifessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhizobium sp014193025*. The type genome for the species is the GenBank assembly RS_GCF_014193025.1. The GC content of the type genome is 60.81 % and the genome length is 7.31 Mbp.

Description of *Candidatus* Rhizobium papilifica sp. nov.

Candidatus Rhizobium papilifica (NL. fem. n. *papilifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhizobium sp000377565*. The type genome for the species is the GenBank assembly RS_GCF_000377565.1. The GC content of the type genome is 61.07 % and the genome length is 6.55 Mbp.

Description of *Candidatus* Rhizobium papilimonas sp. nov.

Candidatus Rhizobium papilimonas (NL. fem. n. *papilimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhizobium sp002531825*. The type genome for the species is the GenBank assembly RS_GCF_002531825.1. The GC content of the type genome is 61.72 % and the genome length is 6.67 Mbp.

Description of *Candidatus* Rhizobium patibatio sp. nov.

Candidatus Rhizobium patibatio (NL. fem. n. *patibatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhizobium sp900469175*. The type genome for the species is the GenBank assembly RS_GCF_007828395.1. The GC content of the type genome is 59.57 % and the genome length is 7.13 Mbp.

Description of *Candidatus* Rhizobium penicitas sp. nov.

Candidatus Rhizobium penicitas (NL. fem. n. *penicitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhizobium sp900465675*. The type genome for the species is the GenBank assembly GCA_900467465.1. The GC content of the type genome is 60.66 % and the genome length is 6.25 Mbp.

Description of *Candidatus* Rhizobium recocisca sp. nov.

Candidatus Rhizobium recocisca (NL. fem. n. *recocisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Rhizobium sp002531935*. The type genome for the species is the GenBank assembly RS_GCF_002531935.1. The GC content of the type genome is 61.38 % and the genome length is 6.88 Mbp.

Description of *Candidatus* Rhizobium regigatica sp. nov.

Candidatus Rhizobium regigatica (NL. fem. n. *regigatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhizobium sp900468805*. The type genome for the species is the GenBank assembly RS_GCF_900471665.1. The GC content of the type genome is 60.02 % and the genome length is 7.38 Mbp.

Description of *Candidatus* Rhizobium resacisca sp. nov.

Candidatus Rhizobium resacisca (NL. fem. n. *resacisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhizobium sp001692325*. The type genome for the species is the GenBank assembly RS_GCF_013320965.1. The GC content of the type genome is 59.85 % and the genome length is 6.87 Mbp.

Description of *Candidatus* Rhizobium sicinentia sp. nov.

Candidatus Rhizobium sicinentia (NL. fem. n. *sicinentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhizobium sp002531955*. The type genome for the species is the GenBank assembly RS_GCF_002531805.1. The GC content of the type genome is 61.56 % and the genome length is 6.78 Mbp.

Description of *Candidatus* Rhizobium solipentia sp. nov.

Candidatus Rhizobium solipentia (NL. fem. n. *solipentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhizobium sp000282035*. The type genome for the species is the GenBank assembly RS_GCF_004345405.1. The GC content of the type genome is 59.83 % and the genome length is 6.41 Mbp.

Description of *Candidatus* Rhizobium sonabitrix sp. nov.

Candidatus Rhizobium sonabitrix (NL. fem. n. *sonabitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhizobium sp012641395*. The type genome for the species is the GenBank assembly RS_GCF_012641395.1. The GC content of the type genome is 60.06 % and the genome length is 7.19 Mbp.

Description of *Candidatus* Rhizobium tenebimonia sp. nov.

Candidatus Rhizobium tenebimonia (NL. fem. n. *tenebimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhizobium sp002211365*. The type genome for the species is the GenBank assembly RS_GCF_002211385.1. The GC content of the type genome is 59.63 % and the genome length is 5.8 Mbp.

Description of *Candidatus* Rhizobium tetenatica sp. nov.

Candidatus Rhizobium tetenatica (NL. fem. n. *tetenatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhizobium sp012641405*. The type genome for the species is the GenBank assembly RS_GCF_012641385.1. The GC content of the type genome is 59.83 % and the genome length is 7.07 Mbp.

Description of *Candidatus* Rhizobium tirocimonia sp. nov.

Candidatus Rhizobium tirocimonia (NL. fem. n. *tirocimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhizobium sp900465665*. The type genome for the species is the GenBank assembly RS_GCF_900465665.1. The GC content of the type genome is 60.68 % and the genome length is 6.35 Mbp.

Description of *Candidatus* Rhizobium tirunago sp. nov.

Candidatus Rhizobium tirunago (NL. fem. n. *tirunago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhizobium sp900470805*. The type genome for the species is the GenBank assembly GCA_900470805.1. The GC content of the type genome is 60.53 % and the genome length is 6.49 Mbp.

Description of *Candidatus* Rhizobium tomogatica sp. nov.

Candidatus Rhizobium tomogatica (NL. fem. n. *tomogatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhizobium sp000172795*. The type genome for the species is the GenBank assembly RS_GCF_000172795.2. The GC content of the type genome is 61.12 % and the genome length is 6.66 Mbp.

Description of *Candidatus* Rhizobium utricax sp. nov.

Candidatus Rhizobium utricax (NL. fem. n. *utricax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhizobium sp014195095*. The type genome for the species is the GenBank assembly RS_GCF_014195095.1. The GC content of the type genome is 61.87 % and the genome length is 6.33 Mbp.

Description of *Candidatus* Rhizobium vitabivita sp. nov.

Candidatus Rhizobium vitabivita (NL. fem. n. *vitabivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhizobium sp900469615*. The type genome for the species is the GenBank assembly RS_GCF_900466595.1. The GC content of the type genome is 61.01 % and the genome length is 7.12 Mbp.

Description of *Candidatus* Rhizobium homulitica sp. nov.

Candidatus Rhizobium homulitica (NL. fem. n. *homulitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Rhizobium_A sp005222845*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_005222845.1. The GC content of the type genome is 59.98 % and the genome length is 5.05 Mbp.

Description of *Candidatus* Rhizobium inaccimonia sp. nov.

Candidatus Rhizobium inaccimonia (NL. fem. n. *inaccimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhizobium_A sp005222835*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_005222835.1. The GC content of the type genome is 57.42 % and the genome length is 4.91 Mbp.

Description of *Candidatus* Rhizomicrobium accenentia sp. nov.

Candidatus Rhizomicrobium accenentia (NL. fem. n. *accenentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhizomicrobium sp002307725*. The type genome for the species is the GenBank assembly GCA_002307725.1. The GC content of the type genome is 61.08 % and the genome length is 3.82 Mbp.

Description of *Candidatus* Rhizomicrobium adtemifica sp. nov.

Candidatus Rhizomicrobium adtemifica (NL. fem. n. *adtemifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhizomicrobium sp001896865*. The type genome for the species is the GenBank assembly GCA_001896865.1. The GC content of the type genome is 64.43 % and the genome length is 2.94 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Ammonium sulfate bioreactor".

Description of *Candidatus* Rhizomicrobium colepicula sp. nov.

Candidatus Rhizomicrobium colepicula (NL. fem. n. *colepicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhizomicrobium sp003131925*. The type genome for the species is the GenBank assembly GCA_003131925.1. The GC content of the type genome is 61.45 % and the genome length is 3.79 Mbp.

Description of *Candidatus* Rhizomicrobium colutousia sp. nov.

Candidatus Rhizomicrobium colutousia (NL. fem. n. *colutousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhizomicrobium sp013697055*. The type genome for the species is the GenBank assembly GCA_013697055.1. The GC content of the type genome is 62.78 % and the genome length is 3.77 Mbp.

Description of *Candidatus* Rhizomicrobium cuticilenta sp. nov.

Candidatus Rhizomicrobium cuticilenta (NL. fem. n. *cuticilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhizomicrobium sp903897605*. The type genome for the species is the GenBank assembly GCA_903897605.1. The GC content of the type genome is 61.44 % and the genome length is 2.79 Mbp.

Description of *Candidatus* Rhizomicrobium deforastra sp. nov.

Candidatus Rhizomicrobium deforastra (NL. fem. n. *deforastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhizomicrobium sp902825865*. The type genome for the species is the GenBank assembly GCA_902825865.1. The GC content of the type genome is 61.69 % and the genome length is 3.77 Mbp.

Description of *Candidatus* Rhizomicrobium ecnepilega sp. nov.

Candidatus Rhizomicrobium ecnepilega (NL. fem. n. *ecnepilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhizomicrobium sp002307315*. The type genome for the species is the GenBank assembly GCA_002307315.1. The GC content of the type genome is 60.74 % and the genome length is 2.83 Mbp.

Description of *Candidatus* Rhizomicrobium exhiledo sp. nov.

Candidatus Rhizomicrobium exhiledo (NL. fem. n. *exhiledo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhizomicrobium sp001898015*. The type genome for the species is the GenBank assembly GCA_001898015.1. The GC content of the type genome is 61.81 % and the genome length is 2.69 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Ammonium sulfate bioreactor".

Description of *Candidatus* Rhizomicrobium expopiforma sp. nov.

Candidatus Rhizomicrobium expopiforma (NL. fem. n. *expopiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhizomicrobium sp903922545*. The type genome for the species is the GenBank assembly GCA_903922545.1. The GC content of the type genome is 61.48 % and the genome length is 1.87 Mbp.

Description of *Candidatus* Rhizomicrobium fiducitica sp. nov.

Candidatus Rhizomicrobium fiducitica (NL. fem. n. *fiducitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhizomicrobium sp003139615*. The type genome for the species is the GenBank assembly GCA_003167975.1. The GC content of the type genome is 60.92 % and the genome length is 4.2 Mbp.

Description of *Candidatus* Rhizomicrobium filifivita sp. nov.

Candidatus Rhizomicrobium filifivita (NL. fem. n. *filifivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhizomicrobium sp903902075*. The type genome for the species is the GenBank assembly GCA_903845815.1. The GC content of the type genome is 63.74 % and the genome length is 2.33 Mbp.

Description of *Candidatus* Rhizomicrobium fragmimonia sp. nov.

Candidatus Rhizomicrobium fragmimonia (NL. fem. n. *fragmimonia* a species epithet

created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhizomicrobium sp003158585*. The type genome for the species is the GenBank assembly GCA_003158585.1. The GC content of the type genome is 62.89 % and the genome length is 3.13 Mbp.

Description of *Candidatus* Rhizomicrobium impudilenta sp. nov.

Candidatus Rhizomicrobium impudilenta (NL. fem. n. *impudilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhizomicrobium sp013149165*. The type genome for the species is the GenBank assembly RS_GCF_013149165.1. The GC content of the type genome is 59.57 % and the genome length is 4.59 Mbp.

Description of *Candidatus* Rhizomicrobium prognitudo sp. nov.

Candidatus Rhizomicrobium prognitudo (NL. fem. n. *prognitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhizomicrobium sp903837555*. The type genome for the species is the GenBank assembly GCA_903837555.1. The GC content of the type genome is 63.55 % and the genome length is 2.46 Mbp.

Description of *Candidatus* Rhizomicrobium turilax sp. nov.

Candidatus Rhizomicrobium turilax (NL. fem. n. *turilax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhizomicrobium sp002429315*. The type genome for the species is the GenBank assembly GCA_002429315.1. The GC content of the type genome is 63.13 % and the genome length is 3.51 Mbp.

Description of *Candidatus* Rhizomicrobium xeropigena sp. nov.

Candidatus Rhizomicrobium xeropigena (NL. fem. n. *xeropigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhizomicrobium sp903857685*. The type genome for the species is the GenBank assembly GCA_903925765.1. The GC content of the type genome is 62.95 % and the genome length is 2.47 Mbp.

Description of *Candidatus* Rhizorhabdus apsorentia sp. nov.

Candidatus Rhizorhabdus apsorentia (NL. fem. n. *apsorentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhizorhabdus sp000971055*. The type genome for the species is the GenBank assembly RS_GCF_000971055.1. The GC content of the type genome is 63.92 % and the genome length is 4.63 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Isoproturon-treated agricultural soil".

Description of *Candidatus* Rhizorhabdus ardifugo sp. nov.

Candidatus Rhizorhabdus ardifugo (NL. fem. n. *ardifugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhizorhabdus sp004297635*. The type genome for the species is the GenBank assembly GCA_004297635.1. The GC content of the type genome is 65.86 % and the genome length is 2.73 Mbp.

Description of *Candidatus* Rhizorhabdus cimelastra sp. nov.

Candidatus Rhizorhabdus cimelastra (NL. fem. n. *cimelastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhizorhabdus sp004005865*. The type genome for the species is the GenBank assembly RS_GCF_004005865.1. The GC content of the type genome is 64.54 % and the genome length is 4.88 Mbp.

Description of *Candidatus* Rhizorhabdus incenicella sp. nov.

Candidatus Rhizorhabdus incenicella (NL. fem. n. *incenicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhizorhabdus sp001015195*. The type genome for the species is the GenBank assembly RS_GCF_001015195.1. The GC content of the type genome is 65.97

% and the genome length is 5.6 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "soil".

Description of *Candidatus* Rhizorhabdus nivomifica sp. nov.

Candidatus Rhizorhabdus nivomifica (NL. fem. n. *nivomifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhizorhabdus sp900101455*. The type genome for the species is the GenBank assembly RS_GCF_900101455.1. The GC content of the type genome is 62.91 % and the genome length is 4.36 Mbp.

Description of *Candidatus* Rhizorhabdus pacifax sp. nov.

Candidatus Rhizorhabdus pacifax (NL. fem. n. *pacifax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhizorhabdus sp011044255*. The type genome for the species is the GenBank assembly RS_GCF_011044255.1. The GC content of the type genome is 65.5 % and the genome length is 4.33 Mbp.

Description of *Candidatus* Rhizorhabdus repepimonia sp. nov.

Candidatus Rhizorhabdus repepimonia (NL. fem. n. *repepimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhizorhabdus sp001428605*. The type genome for the species is the GenBank assembly RS_GCF_001426825.1. The GC content of the type genome is 66.61 % and the genome length is 5.5 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "root".

Description of *Candidatus* Rhizorhabdus sarabugo sp. nov.

Candidatus Rhizorhabdus sarabugo (NL. fem. n. *sarabugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhizorhabdus sp001429065*. The type genome for the species is the GenBank assembly RS_GCF_001429065.1. The GC content of the type genome is 64.46 % and the genome length is 4.77 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "root".

Description of *Candidatus* Rhodanobacter adfamigena sp. nov.

Candidatus Rhodanobacter adfamigena (NL. fem. n. *adfamigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodanobacter sp903827735*. The type genome for the species is the GenBank assembly GCA_903827735.1. The GC content of the type genome is 62.14 % and the genome length is 4.08 Mbp.

Description of *Candidatus* Rhodanobacter ammuritia sp. nov.

Candidatus Rhodanobacter ammuritia (NL. fem. n. *ammuritia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodanobacter sp002413455*. The type genome for the species is the GenBank assembly GCA_002413455.1. The GC content of the type genome is 64.92 % and the genome length is 3.76 Mbp.

Description of *Candidatus* Rhodanobacter aterrivita sp. nov.

Candidatus Rhodanobacter aterrivita (NL. fem. n. *aterrivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodanobacter sp002001175*. The type genome for the species is the GenBank assembly RS_GCF_002001175.1. The GC content of the type genome is 63.11 % and the genome length is 3.86 Mbp.

Description of *Candidatus* Rhodanobacter benifigena sp. nov.

Candidatus Rhodanobacter benifigena (NL. fem. n. *benifigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodanobacter sp001426645*. The type genome for the species is the GenBank assembly RS_GCF_001427835.1. The GC content of the type genome is 65.52 % and the genome length is 3.71 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "root".

Description of *Candidatus* Rhodanobacter betacitura sp. nov.

Candidatus Rhodanobacter betacitura (NL. fem. n. *betacitura* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodanobacter sp002749725*. The type genome for the species is the GenBank assembly RS_GCF_004366255.1. The GC content of the type genome is 64.18 % and the genome length is 3.82 Mbp.

Description of *Candidatus* Rhodanobacter catapitudo sp. nov.

Candidatus Rhodanobacter catapitudo (NL. fem. n. *catapitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodanobacter sp014205795*. The type genome for the species is the GenBank assembly RS_GCF_014205795.1. The GC content of the type genome is 61.64 % and the genome length is 4.56 Mbp.

Description of *Candidatus* Rhodanobacter cenobitura sp. nov.

Candidatus Rhodanobacter cenobitura (NL. fem. n. *cenobitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodanobacter sp004298505*. The type genome for the species is the GenBank assembly GCA_004298705.1. The GC content of the type genome is 64.36 % and the genome length is 2.65 Mbp.

Description of *Candidatus* Rhodanobacter cerimago sp. nov.

Candidatus Rhodanobacter cerimago (NL. fem. n. *cerimago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodanobacter sp009765755*. The type genome for the species is the GenBank assembly RS_GCF_009765755.1. The GC content of the type genome is 61.58 % and the genome length is 3.98 Mbp.

Description of *Candidatus* Rhodanobacter cicarax sp. nov.

Candidatus Rhodanobacter cicarax (NL. fem. n. *cicarax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodanobacter sp001617365*. The type genome for the species is the GenBank assembly RS_GCF_001617375.1. The GC content of the type genome is 67.89 % and the genome length is 3.72 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "shallow subsurface groundwater".

Description of *Candidatus* Rhodanobacter cisoredo sp. nov.

Candidatus Rhodanobacter cisoredo (NL. fem. n. *cisoredo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodanobacter sp001899565*. The type genome for the species is the GenBank assembly GCA_001899565.1. The GC content of the type genome is 68.51 % and the genome length is 4.06 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Thiocyanate stock biobioreactor".

Description of *Candidatus* Rhodanobacter cuferitio sp. nov.

Candidatus Rhodanobacter cuferitio (NL. fem. n. *cuferitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodanobacter sp004298045*. The type genome for the species is the GenBank assembly GCA_004297905.1. The GC content of the type genome is 66.92 % and the genome length is 3.17 Mbp.

Description of *Candidatus* Rhodanobacter curotitura sp. nov.

Candidatus Rhodanobacter curotitura (NL. fem. n. *curotitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodanobacter sp000427505*. The type genome for the species is the GenBank assembly GCA_004299745.1. The GC content of the type genome is 67.62 % and the genome length is 3.6 Mbp.

Description of *Candidatus* Rhodanobacter daducitudo sp. nov.

Candidatus Rhodanobacter daducitudo (NL. fem. n. *daducitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodanobacter sp014207185*. The type genome for the species is the

GenBank assembly RS_GCF_014207185.1. The GC content of the type genome is 59.93 % and the genome length is 5.08 Mbp.

Description of *Candidatus* Rhodanobacter denavimonas sp. nov.

Candidatus Rhodanobacter denavimonas (NL. fem. n. *denavimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodanobacter sp012270595*. The type genome for the species is the GenBank assembly GCA_012270595.1. The GC content of the type genome is 53.65 % and the genome length is 1.45 Mbp.

Description of *Candidatus* Rhodanobacter denunugo sp. nov.

Candidatus Rhodanobacter denunugo (NL. fem. n. *denunugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodanobacter sp009766065*. The type genome for the species is the GenBank assembly RS_GCF_009766065.1. The GC content of the type genome is 62.06 % and the genome length is 4.23 Mbp.

Description of *Candidatus* Rhodanobacter desacicella sp. nov.

Candidatus Rhodanobacter desacicella (NL. fem. n. *desacicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodanobacter sp001427365*. The type genome for the species is the GenBank assembly RS_GCF_001428465.1. The GC content of the type genome is 66.53 % and the genome length is 3.91 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "root".

Description of *Candidatus* Rhodanobacter documitrix sp. nov.

Candidatus Rhodanobacter documitrix (NL. fem. n. *documitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodanobacter sp004322005*. The type genome for the species is the GenBank assembly GCA_004322005.1. The GC content of the type genome is 65.37 % and the genome length is 3.6 Mbp.

Description of *Candidatus* Rhodanobacter expanatica sp. nov.

Candidatus Rhodanobacter expanatica (NL. fem. n. *expanatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodanobacter sp002001125*. The type genome for the species is the GenBank assembly RS_GCF_002001125.1. The GC content of the type genome is 64.34 % and the genome length is 3.81 Mbp.

Description of *Candidatus* Rhodanobacter exsomigena sp. nov.

Candidatus Rhodanobacter exsomigena (NL. fem. n. *exsomigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodanobacter sp002001105*. The type genome for the species is the GenBank assembly RS_GCF_002001105.1. The GC content of the type genome is 67.89 % and the genome length is 4.14 Mbp.

Description of *Candidatus* Rhodanobacter exsorisca sp. nov.

Candidatus Rhodanobacter exsorisca (NL. fem. n. *exsorisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodanobacter sp008329435*. The type genome for the species is the GenBank assembly RS_GCF_008329435.1. The GC content of the type genome is 65.1 % and the genome length is 3.98 Mbp.

Description of *Candidatus* Rhodanobacter ignosiforma sp. nov.

Candidatus Rhodanobacter ignosiforma (NL. fem. n. *ignosiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodanobacter sp002001045*. The type genome for the species is the GenBank assembly RS_GCF_002001045.1. The GC content of the type genome is 63.02 % and the genome length is 3.98 Mbp.

Description of *Candidatus* Rhodanobacter inobrilega sp. nov.

Candidatus Rhodanobacter inobrilega (NL. fem. n. *inobrilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodanobacter sp002001085*. The type genome for the species is the GenBank assembly RS_GCF_002001085.1. The GC content of the type genome is 65.43 % and the genome length is 3.82 Mbp.

Description of *Candidatus* Rhodanobacter locupax sp. nov.

Candidatus Rhodanobacter locupax (NL. fem. n. *locupax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodanobacter sp004298015*. The type genome for the species is the GenBank assembly GCA_004298015.1. The GC content of the type genome is 63.11 % and the genome length is 3.93 Mbp.

Description of *Candidatus* Rhodanobacter lupanigena sp. nov.

Candidatus Rhodanobacter lupanigena (NL. fem. n. *lupanigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodanobacter sp001898415*. The type genome for the species is the GenBank assembly GCA_001724655.1. The GC content of the type genome is 67.2 % and the genome length is 4.04 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Cyanide and thiocyanate bioreactor".

Description of *Candidatus* Rhodanobacter mimogifica sp. nov.

Candidatus Rhodanobacter mimogifica (NL. fem. n. *mimogifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodanobacter sp002001165*. The type genome for the species is the GenBank assembly RS_GCF_002001165.1. The GC content of the type genome is 62.32 % and the genome length is 4.25 Mbp.

Description of *Candidatus* Rhodanobacter nivomugo sp. nov.

Candidatus Rhodanobacter nivomugo (NL. fem. n. *nivomugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodanobacter sp001428385*. The type genome for the species is the GenBank assembly RS_GCF_001428385.1. The GC content of the type genome is 66.69 % and the genome length is 3.57 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "soil".

Description of *Candidatus* Rhodanobacter peradastra sp. nov.

Candidatus Rhodanobacter peradastra (NL. fem. n. *peradastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodanobacter sp900142825*. The type genome for the species is the GenBank assembly RS_GCF_900142825.1. The GC content of the type genome is 63.84 % and the genome length is 4.42 Mbp.

Description of *Candidatus* Rhodanobacter rosacicula sp. nov.

Candidatus Rhodanobacter rosacicula (NL. fem. n. *rosacicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodanobacter sp014200755*. The type genome for the species is the GenBank assembly RS_GCF_014200755.1. The GC content of the type genome is 62.1 % and the genome length is 4.65 Mbp.

Description of *Candidatus* Rhodobacter fetulitura sp. nov.

Candidatus Rhodobacter fetulitura (NL. fem. n. *fetulitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodobacter_B sp002701395*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_002701395.1. The GC content of the type genome is 65.54 % and the genome length is 5.31 Mbp.

Description of *Candidatus* Rhodobacter scintitoga sp. nov.

Candidatus Rhodobacter scintitoga (NL. fem. n. *scintitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Rhodobacter_B sp013184805*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_013184805.1. The GC content of the type genome is 63.34 % and the genome length is 5.06 Mbp.

Description of *Candidatus* Rhodobacter exurrentia sp. nov.

Candidatus Rhodobacter exurrentia (NL. fem. n. *exurrentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodobacter_F sp013297695*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_013297695.1. The GC content of the type genome is 66.76 % and the genome length is 3.66 Mbp.

Description of *Candidatus* Rhodobium affirastra sp. nov.

Candidatus Rhodobium affirastra (NL. fem. n. *affirastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodobium sp002869065*. The type genome for the species is the GenBank assembly GCA_002869065.1. The GC content of the type genome is 63.59 % and the genome length is 4.04 Mbp.

Description of *Candidatus* Rhodoblastus fatilitudo sp. nov.

Candidatus Rhodoblastus fatilitudo (NL. fem. n. *fatilitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodoblastus sp903903185*. The type genome for the species is the GenBank assembly GCA_903903185.1. The GC content of the type genome is 62.45 % and the genome length is 4.96 Mbp.

Description of *Candidatus* Rhodocista sicunousia sp. nov.

Candidatus Rhodocista sicunousia (NL. fem. n. *sicunousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Rhodocista sp001939945*. The type genome for the species is the GenBank assembly RS_GCF_012913305.1. The GC content of the type genome is 69.26 % and the genome length is 3.66 Mbp.

Description of *Candidatus* Rhodococcus acustifica sp. nov.

Candidatus Rhodococcus acustifica (NL. fem. n. *acustifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodococcus sp001312645*. The type genome for the species is the GenBank assembly GCA_001312645.1. The GC content of the type genome is 65.29 % and the genome length is 6.34 Mbp.

Description of *Candidatus* Rhodococcus albogentia sp. nov.

Candidatus Rhodococcus albogentia (NL. fem. n. *albogentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodococcus sp001767395*. The type genome for the species is the GenBank assembly RS_GCF_001767395.1. The GC content of the type genome is 64.08 % and the genome length is 4.44 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Sponge from waters off Florida keys".

Description of *Candidatus* Rhodococcus assubicula sp. nov.

Candidatus Rhodococcus assubicula (NL. fem. n. *assubicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodococcus sp004328705*. The type genome for the species is the GenBank assembly RS_GCF_004328705.1. The GC content of the type genome is 66.42 % and the genome length is 5.1 Mbp.

Description of *Candidatus* Rhodococcus avoncessa sp. nov.

Candidatus Rhodococcus avoncessa (NL. fem. n. *avoncessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodococcus sp004345605*. The type genome for the species is the GenBank assembly RS_GCF_004345605.1. The GC content of the type genome is 65.68 % and the genome length is 6.23 Mbp.

Description of *Candidatus* Rhodococcus decamousia sp. nov.

Candidatus Rhodococcus decamousia (NL. fem. n. *decamousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodococcus sp003350365*. The type genome for the species is the GenBank assembly RS_GCF_013348805.1. The GC content of the type genome is 68.13 % and the genome length is 5.71 Mbp.

Description of *Candidatus* Rhodococcus demadousia sp. nov.

Candidatus Rhodococcus demadousia (NL. fem. n. *demadousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodococcus sp006704125*. The type genome for the species is the GenBank assembly RS_GCF_006704125.1. The GC content of the type genome is 69.17 % and the genome length is 4.81 Mbp.

Description of *Candidatus* Rhodococcus denecousia sp. nov.

Candidatus Rhodococcus denecousia (NL. fem. n. *denecousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodococcus sp005484805*. The type genome for the species is the GenBank assembly RS_GCF_005484805.1. The GC content of the type genome is 69.71 % and the genome length is 4.97 Mbp.

Description of *Candidatus* Rhodococcus endivatio sp. nov.

Candidatus Rhodococcus endivatio (NL. fem. n. *endivatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodococcus sp013602415*. The type genome for the species is the GenBank assembly GCA_013602415.1. The GC content of the type genome is 67.24 % and the genome length is 6.17 Mbp.

Description of *Candidatus* Rhodococcus forabimonas sp. nov.

Candidatus Rhodococcus forabimonas (NL. fem. n. *forabimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodococcus sp001040705*. The type genome for the species is the GenBank assembly RS_GCF_001040705.1. The GC content of the type genome is 68.43 % and the genome length is 5.57 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "estuary sediments".

Description of *Candidatus* Rhodococcus gasifastra sp. nov.

Candidatus Rhodococcus gasifastra (NL. fem. n. *gasifastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodococcus sp003051005*. The type genome for the species is the GenBank assembly RS_GCF_003051005.1. The GC content of the type genome is 67.82 % and the genome length is 5.28 Mbp.

Description of *Candidatus* Rhodococcus invicatica sp. nov.

Candidatus Rhodococcus invicatica (NL. fem. n. *invicatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodococcus sp012726205*. The type genome for the species is the GenBank assembly RS_GCF_012726205.1. The GC content of the type genome is 69.25 % and the genome length is 4.41 Mbp.

Description of *Candidatus* Rhodococcus latibicella sp. nov.

Candidatus Rhodococcus latibicella (NL. fem. n. *latibicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodococcus sp003130705*. The type genome for the species is the GenBank assembly RS_GCF_009859915.1. The GC content of the type genome is 65.67 % and the genome length is 8.44 Mbp.

Description of *Candidatus* Rhodococcus macilisca sp. nov.

Candidatus Rhodococcus macilisca (NL. fem. n. *macilisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodococcus sp004011825*. The type genome for the species is the GenBank assembly RS_GCF_004011825.1. The GC content of the type genome is 66.5 % and the genome length is 3.71 Mbp.

Description of *Candidatus* Rhodococcus nocumimonas sp. nov.

Candidatus Rhodococcus nocumimonas (NL. fem. n. *nocumimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodococcus sp002245895*. The type genome for the species is the GenBank assembly RS_GCF_002245895.1. The GC content of the type genome is 61.3 % and the genome length is 6.79 Mbp.

Description of *Candidatus* Rhodococcus nugacilega sp. nov.

Candidatus Rhodococcus nugacilega (NL. fem. n. *nugacilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodococcus sp002165735*. The type genome for the species is the GenBank assembly RS_GCF_009872365.1. The GC content of the type genome is 67.01 % and the genome length is 10.69 Mbp.

Description of *Candidatus* Rhodococcus ocissitrix sp. nov.

Candidatus Rhodococcus ocissitrix (NL. fem. n. *ocissitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodococcus sp005938745*. The type genome for the species is the GenBank assembly RS_GCF_005938745.2. The GC content of the type genome is 61.62 % and the genome length is 7.25 Mbp.

Description of *Candidatus* Rhodococcus pinacitura sp. nov.

Candidatus Rhodococcus pinacitura (NL. fem. n. *pinacitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodococcus sp012514505*. The type genome for the species is the GenBank assembly GCA_012514505.1. The GC content of the type genome is 64.61 % and the genome length is 4.94 Mbp.

Description of *Candidatus* Rhodococcus rumifatica sp. nov.

Candidatus Rhodococcus rumifatica (NL. fem. n. *rumifatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodococcus sp012515885*. The type genome for the species is the GenBank assembly GCA_012515885.1. The GC content of the type genome is 62.57 % and the genome length is 2.83 Mbp.

Description of *Candidatus* Rhodococcus scombilenta sp. nov.

Candidatus Rhodococcus scombilenta (NL. fem. n. *scombilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodococcus sp012729135*. The type genome for the species is the GenBank assembly GCA_012729135.1. The GC content of the type genome is 68.82 % and the genome length is 3.93 Mbp.

Description of *Candidatus* Rhodococcus telegax sp. nov.

Candidatus Rhodococcus telegax (NL. fem. n. *telegax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodococcus sp012726195*. The type genome for the species is the GenBank assembly RS_GCF_012726195.1. The GC content of the type genome is 65.54 % and the genome length is 5.54 Mbp.

Description of *Candidatus* Rhodococcus tirunedo sp. nov.

Candidatus Rhodococcus tirunedo (NL. fem. n. *tirunedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodococcus sp004011835*. The type genome for the species is the GenBank assembly RS_GCF_004011835.1. The GC content of the type genome is 66.5 % and the genome length is 3.97 Mbp.

Description of *Candidatus* Rhodococcus viginilega sp. nov.

Candidatus Rhodococcus viginilega (NL. fem. n. *viginilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodococcus sp012844225*. The type genome for the species is the GenBank assembly RS_GCF_012844225.1. The GC content of the type genome is 67.27 % and the genome length is 4.46 Mbp.

Description of *Candidatus* Rhodococcus aclasousia sp. nov.

Candidatus Rhodococcus aclasousia (NL. fem. n. *aclasousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodococcus_B sp003641205*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_003641205.1. The GC content of the type genome is 63.19 % and the genome length is 5.87 Mbp.

Description of *Candidatus* Rhodococcus alsulitica sp. nov.

Candidatus Rhodococcus alsulitica (NL. fem. n. *alsulitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodococcus_B sp000333955*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_000333955.1. The GC content of the type genome is 64.12 % and the genome length is 5.64 Mbp.

Description of *Candidatus* Rhodococcus bipatastra sp. nov.

Candidatus Rhodococcus bipatastra (NL. fem. n. *bipatastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodococcus_B sp000954115*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_002258515.1. The GC content of the type genome is 64.75 % and the genome length is 5.73 Mbp.

Description of *Candidatus* Rhodococcus codifitia sp. nov.

Candidatus Rhodococcus codifitia (NL. fem. n. *codifitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodococcus_B sp002258785*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_002258785.1. The GC content of the type genome is 64.26 % and the genome length is 6.1 Mbp.

Description of *Candidatus* Rhodococcus cosigifica sp. nov.

Candidatus Rhodococcus cosigifica (NL. fem. n. *cosigifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodococcus_B sp004795915*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_004795875.1. The GC content of the type genome is 62.07 % and the genome length is 4.73 Mbp.

Description of *Candidatus* Rhodococcus dilicitio sp. nov.

Candidatus Rhodococcus dilicitio (NL. fem. n. *dilicitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodococcus_B sp000813105*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_000813105.1. The GC content of the type genome is 64.44 % and the genome length is 5.5 Mbp.

Description of *Candidatus* Rhodococcus domabimonas sp. nov.

Candidatus Rhodococcus domabimonas (NL. fem. n. *domabimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodococcus_B sp014281965*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The

type genome for the species is the GenBank assembly RS_GCF_014281965.1. The GC content of the type genome is 62.16 % and the genome length is 4.48 Mbp.

Description of *Candidatus* Rhodococcus ermeliforma sp. nov.

Candidatus Rhodococcus ermeliforma (NL. fem. n. *ermeliforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodococcus_B sp001426085*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_001426085.1. The GC content of the type genome is 64.09 % and the genome length is 5.72 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "leaf".

Description of *Candidatus* Rhodococcus femelibra sp. nov.

Candidatus Rhodococcus femelibra (NL. fem. n. *femelibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodococcus_B sp002091985*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_002091985.1. The GC content of the type genome is 62.32 % and the genome length is 4.46 Mbp.

Description of *Candidatus* Rhodococcus insomilega sp. nov.

Candidatus Rhodococcus insomilega (NL. fem. n. *insomilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodococcus_B sp003386655*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_003386655.1. The GC content of the type genome is 63.18 % and the genome length is 6.08 Mbp.

Description of *Candidatus* Rhodococcus labecisca sp. nov.

Candidatus Rhodococcus labecisca (NL. fem. n. *labecisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodococcus_B sp002258315*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_002258315.1. The GC content of the type genome is 64.7 % and the genome length is 5.76 Mbp.

Description of *Candidatus* Rhodococcus luculicula sp. nov.

Candidatus Rhodococcus luculicula (NL. fem. n. *luculicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodococcus_B sp001942265*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_001942265.1. The GC content of the type genome is 63.89 % and the genome length is 5.8 Mbp.

Description of *Candidatus* Rhodococcus minagicella sp. nov.

Candidatus Rhodococcus minagicella (NL. fem. n. *minagicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodococcus_B sp002259405*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_002259405.1. The GC content of the type genome is 64.57 % and the genome length is 5.87 Mbp.

Description of *Candidatus* Rhodococcus mutabousia sp. nov.

Candidatus Rhodococcus mutabousia (NL. fem. n. *mutabousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodococcus_B sp001647195*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_001647195.1. The GC content of the type genome is 63.47 % and the genome length is 5.94 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as

"seawater".

Description of *Candidatus* Rhodococcus omninax sp. nov.

Candidatus Rhodococcus omninax (NL. fem. n. *omninax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodococcus_B sp002091955*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_002091955.1. The GC content of the type genome is 62.06 % and the genome length is 5.06 Mbp.

Description of *Candidatus* Rhodococcus relenitoga sp. nov.

Candidatus Rhodococcus relenitoga (NL. fem. n. *relenitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodococcus_B sp002259335*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_000760685.1. The GC content of the type genome is 64.28 % and the genome length is 5.82 Mbp.

Description of *Candidatus* Rhodococcus repuratio sp. nov.

Candidatus Rhodococcus repuratio (NL. fem. n. *repuratio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodococcus_B sp002259415*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_002259415.1. The GC content of the type genome is 64.38 % and the genome length is 5.91 Mbp.

Description of *Candidatus* Rhodococcus salubago sp. nov.

Candidatus Rhodococcus salubago (NL. fem. n. *salubago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Rhodococcus_B sp002259485*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_002259485.1. The GC content of the type genome is 64.74 % and the genome length is 5.61 Mbp.

Description of *Candidatus* Rhodococcus baropitudo sp. nov.

Candidatus Rhodococcus baropitudo (NL. fem. n. *baropitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodococcus_C sp001426185*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_000834565.1. The GC content of the type genome is 67.04 % and the genome length is 4.66 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "leaf".

Description of *Candidatus* Rhodococcus documigena sp. nov.

Candidatus Rhodococcus documigena (NL. fem. n. *documigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodococcus_C sp000686025*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_001426145.1. The GC content of the type genome is 68.36 % and the genome length is 4.71 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "leaf".

Description of *Candidatus* Rhodoferax accerugo sp. nov.

Candidatus Rhodoferax accerugo (NL. fem. n. *accerugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodoferax sp903948045*. The type genome for the species is the GenBank assembly GCA_903948045.1. The GC content of the type genome is 62.75 % and the genome length is 4.83 Mbp.

Description of *Candidatus* Rhodoferax acusticula sp. nov.

Candidatus Rhodoferax acusticula (NL. fem. n. *acusticula* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodoferax sp903869595*. The type genome for the species is the GenBank assembly GCA_903869595.1. The GC content of the type genome is 58.59 % and the genome length is 3.43 Mbp.

Description of *Candidatus* Rhodoferax adaggitia sp. nov.

Candidatus Rhodoferax adaggitia (NL. fem. n. *adaggitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodoferax sp011391645*. The type genome for the species is the GenBank assembly GCA_011391645.1. The GC content of the type genome is 60.82 % and the genome length is 2.74 Mbp.

Description of *Candidatus* Rhodoferax adlocivita sp. nov.

Candidatus Rhodoferax adlocivita (NL. fem. n. *adlocivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodoferax sp903914985*. The type genome for the species is the GenBank assembly GCA_903914985.1. The GC content of the type genome is 60.2 % and the genome length is 2.59 Mbp.

Description of *Candidatus* Rhodoferax andabedo sp. nov.

Candidatus Rhodoferax andabedo (NL. fem. n. *andabedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodoferax sp903930255*. The type genome for the species is the GenBank assembly GCA_903930255.1. The GC content of the type genome is 54.49 % and the genome length is 4.5 Mbp.

Description of *Candidatus* Rhodoferax annecisca sp. nov.

Candidatus Rhodoferax annecisca (NL. fem. n. *annecisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodoferax sp903840825*. The type genome for the species is the GenBank assembly GCA_903840825.1. The GC content of the type genome is 56.22 % and the genome length is 3.29 Mbp.

Description of *Candidatus* Rhodoferax antepessa sp. nov.

Candidatus Rhodoferax antepessa (NL. fem. n. *antepessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodoferax sp002842265*. The type genome for the species is the GenBank assembly GCA_002842265.1. The GC content of the type genome is 59.19 % and the genome length is 3.58 Mbp.

Description of *Candidatus* Rhodoferax appugetta sp. nov.

Candidatus Rhodoferax appugetta (NL. fem. n. *appugetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodoferax sp002943465*. The type genome for the species is the GenBank assembly RS_GCF_002943465.1. The GC content of the type genome is 61.95 % and the genome length is 4.19 Mbp.

Description of *Candidatus* Rhodoferax arnacedo sp. nov.

Candidatus Rhodoferax arnacedo (NL. fem. n. *arnacedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodoferax sp002256115*. The type genome for the species is the GenBank assembly GCA_002256115.1. The GC content of the type genome is 58.96 % and the genome length is 4.76 Mbp.

Description of *Candidatus* Rhodoferax aterritura sp. nov.

Candidatus Rhodoferax aterritura (NL. fem. n. *aterritura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodoferax sp013791765*. The type genome for the species is the GenBank assembly GCA_013791765.1. The GC content of the type genome is 60.02 % and the genome length is 4.17 Mbp.

Description of *Candidatus* Rhodoferax beniventia sp. nov.

Candidatus Rhodoferax beniventia (NL. fem. n. *beniventia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodoferax sp009924455*. The type genome for the species is the GenBank assembly GCA_009924455.1. The GC content of the type genome is 61.88 % and the genome length is 2.5 Mbp.

Description of *Candidatus* Rhodoferax bicalivita sp. nov.

Candidatus Rhodoferax bicalivita (NL. fem. n. *bicalivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodoferax sp903859265*. The type genome for the species is the GenBank assembly GCA_903953435.1. The GC content of the type genome is 58.62 % and the genome length is 3.42 Mbp.

Description of *Candidatus* Rhodoferax caduritrix sp. nov.

Candidatus Rhodoferax caduritrix (NL. fem. n. *caduritrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodoferax sp002789915*. The type genome for the species is the GenBank assembly GCA_002784775.1. The GC content of the type genome is 59.71 % and the genome length is 2.89 Mbp.

Description of *Candidatus* Rhodoferax capudilega sp. nov.

Candidatus Rhodoferax capudilega (NL. fem. n. *capudilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodoferax sp903920405*. The type genome for the species is the GenBank assembly GCA_903920405.1. The GC content of the type genome is 51.27 % and the genome length is 2.68 Mbp.

Description of *Candidatus* Rhodoferax catocetta sp. nov.

Candidatus Rhodoferax catocetta (NL. fem. n. *catocetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodoferax sp002413825*. The type genome for the species is the GenBank assembly GCA_002413825.1. The GC content of the type genome is 60.46 % and the genome length is 4.01 Mbp.

Description of *Candidatus* Rhodoferax celamitrix sp. nov.

Candidatus Rhodoferax celamitrix (NL. fem. n. *celamitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodoferax sp005793295*. The type genome for the species is the GenBank assembly GCA_005793295.1. The GC content of the type genome is 53.21 % and the genome length is 2.1 Mbp.

Description of *Candidatus* Rhodoferax cerarilenta sp. nov.

Candidatus Rhodoferax cerarilenta (NL. fem. n. *cerarilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodoferax sp001871515*. The type genome for the species is the GenBank assembly GCA_009994125.1. The GC content of the type genome is 57.25 % and the genome length is 2.58 Mbp.

Description of *Candidatus* Rhodoferax chalbitica sp. nov.

Candidatus Rhodoferax chalbitica (NL. fem. n. *chalbitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodoferax sp014190675*. The type genome for the species is the GenBank assembly GCA_014190675.1. The GC content of the type genome is 61.59 % and the genome length is 3.69 Mbp.

Description of *Candidatus* Rhodoferax cimelicula sp. nov.

Candidatus Rhodoferax cimelicula (NL. fem. n. *cimelicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Rhodoferax sp903845935*. The type genome for the species is the GenBank assembly GCA_903889535.1. The GC content of the type genome is 61.43 % and the genome length is 3.36 Mbp.

Description of *Candidatus* Rhodoferax cituvicula sp. nov.

Candidatus Rhodoferax cituvicula (NL. fem. n. *cituvicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodoferax sp903928635*. The type genome for the species is the GenBank assembly GCA_903877625.1. The GC content of the type genome is 60.22 % and the genome length is 2.47 Mbp.

Description of *Candidatus* Rhodoferax cocibugo sp. nov.

Candidatus Rhodoferax cocibugo (NL. fem. n. *cocibugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodoferax sp903905735*. The type genome for the species is the GenBank assembly GCA_903905735.1. The GC content of the type genome is 58.72 % and the genome length is 5.26 Mbp.

Description of *Candidatus* Rhodoferax codifitica sp. nov.

Candidatus Rhodoferax codifitica (NL. fem. n. *codifitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodoferax sp008015235*. The type genome for the species is the GenBank assembly GCA_008015235.1. The GC content of the type genome is 62.24 % and the genome length is 3.65 Mbp.

Description of *Candidatus* Rhodoferax colutigena sp. nov.

Candidatus Rhodoferax colutigena (NL. fem. n. *colutigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodoferax sp903906695*. The type genome for the species is the GenBank assembly GCA_903906695.1. The GC content of the type genome is 59.24 % and the genome length is 4.42 Mbp.

Description of *Candidatus* Rhodoferax conaratio sp. nov.

Candidatus Rhodoferax conaratio (NL. fem. n. *conaratio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodoferax sp903897005*. The type genome for the species is the GenBank assembly GCA_903897005.1. The GC content of the type genome is 60.64 % and the genome length is 3.71 Mbp.

Description of *Candidatus* Rhodoferax conifedo sp. nov.

Candidatus Rhodoferax conifedo (NL. fem. n. *conifedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodoferax sp903951445*. The type genome for the species is the GenBank assembly GCA_903951445.1. The GC content of the type genome is 58.62 % and the genome length is 3.61 Mbp.

Description of *Candidatus* Rhodoferax culigitura sp. nov.

Candidatus Rhodoferax culigitura (NL. fem. n. *culigitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodoferax sp903864505*. The type genome for the species is the GenBank assembly GCA_903864505.1. The GC content of the type genome is 58.16 % and the genome length is 4.04 Mbp.

Description of *Candidatus* Rhodoferax cululiforma sp. nov.

Candidatus Rhodoferax cululiforma (NL. fem. n. *cululiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodoferax sp903839085*. The type genome for the species is the GenBank assembly GCA_903902555.1. The GC content of the type genome is 63.29 % and the genome length is 3.91 Mbp.

Description of *Candidatus* Rhodoferax cululitura sp. nov.

Candidatus Rhodoferax cululitura (NL. fem. n. *cululitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodoferax sp903920695*. The type genome for the species is the GenBank assembly GCA_903920695.1. The GC content of the type genome is 60.8 % and the genome length is 4.88 Mbp.

Description of *Candidatus* Rhodoferax curotigena sp. nov.

Candidatus Rhodoferax curotigena (NL. fem. n. *curotigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodoferax sp903828665*. The type genome for the species is the GenBank assembly GCA_903864095.1. The GC content of the type genome is 63.6 % and the genome length is 3.77 Mbp.

Description of *Candidatus* Rhodoferax decamibula sp. nov.

Candidatus Rhodoferax decamibula (NL. fem. n. *decamibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodoferax sp012927445*. The type genome for the species is the GenBank assembly GCA_012927445.1. The GC content of the type genome is 58.92 % and the genome length is 3.94 Mbp.

Description of *Candidatus* Rhodoferax defasentia sp. nov.

Candidatus Rhodoferax defasentia (NL. fem. n. *defasentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodoferax sp903954045*. The type genome for the species is the GenBank assembly GCA_903952765.1. The GC content of the type genome is 56.89 % and the genome length is 4.49 Mbp.

Description of *Candidatus* Rhodoferax defasousia sp. nov.

Candidatus Rhodoferax defasousia (NL. fem. n. *defasousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Rhodoferax sp903928325*. The type genome for the species is the GenBank assembly GCA_903928325.1. The GC content of the type genome is 61.31 % and the genome length is 2.34 Mbp.

Description of *Candidatus* Rhodoferax defesatio sp. nov.

Candidatus Rhodoferax defesatio (NL. fem. n. *defesatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodoferax sp903870065*. The type genome for the species is the GenBank assembly GCA_903870065.1. The GC content of the type genome is 56.86 % and the genome length is 5.45 Mbp.

Description of *Candidatus* Rhodoferax delacago sp. nov.

Candidatus Rhodoferax delacago (NL. fem. n. *delacago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodoferax sp001771065*. The type genome for the species is the GenBank assembly GCA_001771065.1. The GC content of the type genome is 59.05 % and the genome length is 4.05 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at 16ft depth; 1.2 micron filter at time point D".

Description of *Candidatus* Rhodoferax demagibula sp. nov.

Candidatus Rhodoferax demagibula (NL. fem. n. *demagibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodoferax sp903925725*. The type genome for the species is the GenBank assembly GCA_903925725.1. The GC content of the type genome is 58.76 % and the genome length is 4.22 Mbp.

Description of *Candidatus* Rhodoferax depasatio sp. nov.

Candidatus Rhodoferax depasatio (NL. fem. n. *depasatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodoferax sp903863395*. The type genome for the species is the GenBank assembly GCA_903880205.1. The GC content of the type genome is 62.86 %

and the genome length is 2.97 Mbp.

Description of *Candidatus* Rhodoferax direpicella sp. nov.

Candidatus Rhodoferax direpicella (NL. fem. n. *direpicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodoferax sp903873485*. The type genome for the species is the GenBank assembly GCA_903950205.1. The GC content of the type genome is 57.77 % and the genome length is 6.03 Mbp.

Description of *Candidatus* Rhodoferax disiditura sp. nov.

Candidatus Rhodoferax disiditura (NL. fem. n. *disiditura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodoferax sp903929815*. The type genome for the species is the GenBank assembly GCA_903929815.1. The GC content of the type genome is 50.91 % and the genome length is 2.6 Mbp.

Description of *Candidatus* Rhodoferax divolitoga sp. nov.

Candidatus Rhodoferax divolitoga (NL. fem. n. *divolitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodoferax sp002381045*. The type genome for the species is the GenBank assembly GCA_002381045.1. The GC content of the type genome is 57.22 % and the genome length is 3.63 Mbp.

Description of *Candidatus* Rhodoferax domipimonas sp. nov.

Candidatus Rhodoferax domipimonas (NL. fem. n. *domipimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodoferax sp002784245*. The type genome for the species is the GenBank assembly GCA_002781645.1. The GC content of the type genome is 59.74 % and the genome length is 3.26 Mbp.

Description of *Candidatus* Rhodoferax duricax sp. nov.

Candidatus Rhodoferax duricax (NL. fem. n. *duricax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodoferax sp903870955*. The type genome for the species is the GenBank assembly GCA_903870955.1. The GC content of the type genome is 58.53 % and the genome length is 4.39 Mbp.

Description of *Candidatus* Rhodoferax exhonitas sp. nov.

Candidatus Rhodoferax exhonitas (NL. fem. n. *exhonitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodoferax sp903861575*. The type genome for the species is the GenBank assembly GCA_903861575.1. The GC content of the type genome is 60.66 % and the genome length is 2.46 Mbp.

Description of *Candidatus* Rhodoferax expenentia sp. nov.

Candidatus Rhodoferax expenentia (NL. fem. n. *expenentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodoferax sp010365055*. The type genome for the species is the GenBank assembly GCA_010365055.1. The GC content of the type genome is 60.33 % and the genome length is 4.33 Mbp.

Description of *Candidatus* Rhodoferax exsufilega sp. nov.

Candidatus Rhodoferax exsufilega (NL. fem. n. *exsufilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodoferax sp903938955*. The type genome for the species is the GenBank assembly GCA_903938955.1. The GC content of the type genome is 59.77 % and the genome length is 3.77 Mbp.

Description of *Candidatus* Rhodoferax faticigena sp. nov.

Candidatus Rhodoferax faticigena (NL. fem. n. *faticigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodoferax sp903914175*. The type genome for the species is the GenBank assembly GCA_903924915.1. The GC content of the type genome is 60.96 % and the genome length is 3.54 Mbp.

Description of *Candidatus* Rhodoferax feculitas sp. nov.

Candidatus Rhodoferax feculitas (NL. fem. n. *feculitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodoferax sp903924955*. The type genome for the species is the GenBank assembly GCA_903924955.1. The GC content of the type genome is 58.02 % and the genome length is 4.55 Mbp.

Description of *Candidatus* Rhodoferax gemebatio sp. nov.

Candidatus Rhodoferax gemebatio (NL. fem. n. *gemebatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodoferax sp903958915*. The type genome for the species is the GenBank assembly GCA_903958915.1. The GC content of the type genome is 58.93 % and the genome length is 4.5 Mbp.

Description of *Candidatus* Rhodoferax gemebilenta sp. nov.

Candidatus Rhodoferax gemebilenta (NL. fem. n. *gemebilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodoferax sp903897925*. The type genome for the species is the GenBank assembly GCA_903897925.1. The GC content of the type genome is 61.58 % and the genome length is 4.18 Mbp.

Description of *Candidatus* Rhodoferax homuligena sp. nov.

Candidatus Rhodoferax homuligena (NL. fem. n. *homuligena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodoferax sp001795455*. The type genome for the species is the GenBank assembly GCA_003537935.1. The GC content of the type genome is 62.35 %

and the genome length is 3.85 Mbp.

Description of *Candidatus* Rhodoferax imbelugo sp. nov.

Candidatus Rhodoferax imbelugo (NL. fem. n. *imbelugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodoferax sp002251855*. The type genome for the species is the GenBank assembly RS_GCF_002251855.1. The GC content of the type genome is 61.39 % and the genome length is 3.99 Mbp.

Description of *Candidatus* Rhodoferax immurago sp. nov.

Candidatus Rhodoferax immurago (NL. fem. n. *immurago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodoferax sp013416775*. The type genome for the species is the GenBank assembly RS_GCF_013416775.1. The GC content of the type genome is 59.73 % and the genome length is 4.46 Mbp.

Description of *Candidatus* Rhodoferax impugigena sp. nov.

Candidatus Rhodoferax impugigena (NL. fem. n. *impugigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodoferax sp004293725*. The type genome for the species is the GenBank assembly GCA_004293725.1. The GC content of the type genome is 58.38 % and the genome length is 2.95 Mbp.

Description of *Candidatus* Rhodoferax inambicella sp. nov.

Candidatus Rhodoferax inambicella (NL. fem. n. *inambicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodoferax sp006974105*. The type genome for the species is the GenBank assembly RS_GCF_006974105.1. The GC content of the type genome is 57.43 % and the genome length is 4.74 Mbp.

Description of *Candidatus* Rhodoferax incunatica sp. nov.

Candidatus Rhodoferax incunatica (NL. fem. n. *incunatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodoferax sp007279715*. The type genome for the species is the GenBank assembly GCA_007279715.1. The GC content of the type genome is 52.78 % and the genome length is 1.64 Mbp.

Description of *Candidatus* Rhodoferax inregugo sp. nov.

Candidatus Rhodoferax inregugo (NL. fem. n. *inregugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodoferax sp003415675*. The type genome for the species is the GenBank assembly RS_GCF_003415675.1. The GC content of the type genome is 62.3 % and the genome length is 4.9 Mbp.

Description of *Candidatus* Rhodoferax legifitrix sp. nov.

Candidatus Rhodoferax legifitrix (NL. fem. n. *legifitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodoferax sp009925925*. The type genome for the species is the GenBank assembly GCA_009925925.1. The GC content of the type genome is 59.57 % and the genome length is 3.86 Mbp.

Description of *Candidatus* Rhodoferax lenimatica sp. nov.

Candidatus Rhodoferax lenimatica (NL. fem. n. *lenimatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodoferax sp903886275*. The type genome for the species is the GenBank assembly GCA_903823595.1. The GC content of the type genome is 61.31 % and the genome length is 5.23 Mbp.

Description of *Candidatus* Rhodoferax lenimitio sp. nov.

Candidatus Rhodoferax lenimitio (NL. fem. n. *lenimitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodoferax sp903823025*. The type genome for the species is the GenBank assembly GCA_903827005.1. The GC content of the type genome is 55.22 % and the genome length is 3.48 Mbp.

Description of *Candidatus* Rhodoferax levifousia sp. nov.

Candidatus Rhodoferax levifousia (NL. fem. n. *levifousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodoferax sp009693325*. The type genome for the species is the GenBank assembly GCA_009693325.1. The GC content of the type genome is 61.86 % and the genome length is 2.77 Mbp.

Description of *Candidatus* Rhodoferax licenitudo sp. nov.

Candidatus Rhodoferax licenitudo (NL. fem. n. *licenitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodoferax sp903876735*. The type genome for the species is the GenBank assembly GCA_903900925.1. The GC content of the type genome is 61.8 % and the genome length is 3.67 Mbp.

Description of *Candidatus* Rhodoferax miracitia sp. nov.

Candidatus Rhodoferax miracitia (NL. fem. n. *miracitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodoferax sp002390825*. The type genome for the species is the GenBank assembly GCA_002390825.1. The GC content of the type genome is 60.08 % and the genome length is 3.55 Mbp.

Description of *Candidatus* Rhodoferax nicomentia sp. nov.

Candidatus Rhodoferax nicomentia (NL. fem. n. *nicomentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodoferax sp007280205*. The type genome for the species is the GenBank assembly GCA_007280205.1. The GC content of the type genome is 59.86 %

and the genome length is 4.19 Mbp.

Description of *Candidatus* Rhodoferax nimiratio sp. nov.

Candidatus Rhodoferax nimiratio (NL. fem. n. *nimiratio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodoferax sp903944555*. The type genome for the species is the GenBank assembly GCA_903944555.1. The GC content of the type genome is 58.8 % and the genome length is 4.07 Mbp.

Description of *Candidatus* Rhodoferax nocumimonia sp. nov.

Candidatus Rhodoferax nocumimonia (NL. fem. n. *nocumimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodoferax sp903927295*. The type genome for the species is the GenBank assembly GCA_903929605.1. The GC content of the type genome is 58.64 % and the genome length is 4.93 Mbp.

Description of *Candidatus* Rhodoferax nugacitia sp. nov.

Candidatus Rhodoferax nugacitia (NL. fem. n. *nugacitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodoferax sp903960915*. The type genome for the species is the GenBank assembly GCA_903960915.1. The GC content of the type genome is 59.55 % and the genome length is 3.72 Mbp.

Description of *Candidatus* Rhodoferax nutamedo sp. nov.

Candidatus Rhodoferax nutamedo (NL. fem. n. *nutamedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodoferax sp903853895*. The type genome for the species is the GenBank assembly GCA_903853895.1. The GC content of the type genome is 60.27 % and the genome length is 4.69 Mbp.

Description of *Candidatus* Rhodoferax panifilenta sp. nov.

Candidatus Rhodoferax panifilenta (NL. fem. n. *panifilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodoferax sp903886165*. The type genome for the species is the GenBank assembly GCA_903899835.1. The GC content of the type genome is 58.57 % and the genome length is 2.95 Mbp.

Description of *Candidatus* Rhodoferax parocax sp. nov.

Candidatus Rhodoferax parocax (NL. fem. n. *parocax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodoferax sp008080595*. The type genome for the species is the GenBank assembly GCA_008080595.1. The GC content of the type genome is 57.72 % and the genome length is 5.42 Mbp.

Description of *Candidatus* Rhodoferax pericitio sp. nov.

Candidatus Rhodoferax pericitio (NL. fem. n. *pericitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodoferax sp011391545*. The type genome for the species is the GenBank assembly GCA_011391545.1. The GC content of the type genome is 61.78 % and the genome length is 3.06 Mbp.

Description of *Candidatus* Rhodoferax peripitura sp. nov.

Candidatus Rhodoferax peripitura (NL. fem. n. *peripitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodoferax sp003347515*. The type genome for the species is the GenBank assembly RS_GCF_003347515.1. The GC content of the type genome is 60.71 % and the genome length is 6.87 Mbp.

Description of *Candidatus* Rhodoferax peropatio sp. nov.

Candidatus Rhodoferax peropatio (NL. fem. n. *peropatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodoferax sp003133245*. The type genome for the species is the GenBank assembly GCA_003133245.1. The GC content of the type genome is 57.93 % and the genome length is 2.94 Mbp.

Description of *Candidatus* Rhodoferax refocitas sp. nov.

Candidatus Rhodoferax refocitas (NL. fem. n. *refocitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodoferax sp903822205*. The type genome for the species is the GenBank assembly GCA_903821215.1. The GC content of the type genome is 55.18 % and the genome length is 2.98 Mbp.

Description of *Candidatus* Rhodoferax reforitas sp. nov.

Candidatus Rhodoferax reforitas (NL. fem. n. *reforitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodoferax sp009922295*. The type genome for the species is the GenBank assembly GCA_009922295.1. The GC content of the type genome is 61.13 % and the genome length is 3.53 Mbp.

Description of *Candidatus* Rhodoferax repecastra sp. nov.

Candidatus Rhodoferax repecastra (NL. fem. n. *repecastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodoferax sp001770935*. The type genome for the species is the GenBank assembly GCA_001770935.1. The GC content of the type genome is 60.33 % and the genome length is 4.99 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under low O2 conditions; 1.2 micron filter; full assembly".

Description of *Candidatus* Rhodoferax repurax sp. nov.

Candidatus Rhodoferax repurax (NL. fem. n. *repurax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Rhodoferax sp903894475*. The type genome for the species is the GenBank assembly GCA_903889125.1. The GC content of the type genome is 59.56 % and the genome length is 3.61 Mbp.

Description of *Candidatus* Rhodoferax sanabago sp. nov.

Candidatus Rhodoferax sanabago (NL. fem. n. *sanabago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodoferax sp903876045*. The type genome for the species is the GenBank assembly GCA_903876045.1. The GC content of the type genome is 57.79 % and the genome length is 4.9 Mbp.

Description of *Candidatus* Rhodoferax saxopivita sp. nov.

Candidatus Rhodoferax saxopivita (NL. fem. n. *saxopivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodoferax sp002786915*. The type genome for the species is the GenBank assembly GCA_002786915.1. The GC content of the type genome is 58.88 % and the genome length is 4.34 Mbp.

Description of *Candidatus* Rhodoferax sicarentia sp. nov.

Candidatus Rhodoferax sicarentia (NL. fem. n. *sicarentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodoferax sp903945325*. The type genome for the species is the GenBank assembly GCA_903950335.1. The GC content of the type genome is 58.88 % and the genome length is 4.72 Mbp.

Description of *Candidatus* Rhodoferax sonipibra sp. nov.

Candidatus Rhodoferax sonipibra (NL. fem. n. *sonipibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodoferax sp903875275*. The type genome for the species is the GenBank assembly GCA_903914805.1. The GC content of the type genome is 60.22 % and the genome length is 3.32 Mbp.

Description of *Candidatus* Rhodoferax tolutitica sp. nov.

Candidatus Rhodoferax tolutitica (NL. fem. n. *tolutitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodoferax sp002163715*. The type genome for the species is the GenBank assembly RS_GCF_002163715.1. The GC content of the type genome is 58.95 % and the genome length is 4.38 Mbp.

Description of *Candidatus* Rhodoferax tubicicula sp. nov.

Candidatus Rhodoferax tubicicula (NL. fem. n. *tubicicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodoferax sp002422455*. The type genome for the species is the GenBank assembly GCA_002422455.1. The GC content of the type genome is 62.7 % and the genome length is 1.83 Mbp.

Description of *Candidatus* Rhodoferax venucitica sp. nov.

Candidatus Rhodoferax venucitica (NL. fem. n. *venucitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodoferax sp903896425*. The type genome for the species is the GenBank assembly GCA_903854145.1. The GC content of the type genome is 60.63 % and the genome length is 3.73 Mbp.

Description of *Candidatus* Rhodoferax verifibra sp. nov.

Candidatus Rhodoferax verifibra (NL. fem. n. *verifibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodoferax sp903856025*. The type genome for the species is the GenBank assembly GCA_903919085.1. The GC content of the type genome is 56.2 % and the genome length is 3.94 Mbp.

Description of *Candidatus* Rhodoferax volubax sp. nov.

Candidatus Rhodoferax volubax (NL. fem. n. *volubax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodoferax sp013297935*. The type genome for the species is the GenBank assembly GCA_013297935.1. The GC content of the type genome is 60.28 % and the genome length is 3.61 Mbp.

Description of *Candidatus* Rhodoferax adlenibula sp. nov.

Candidatus Rhodoferax adlenibula (NL. fem. n. *adlenibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodoferax_A sp002002705*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_002002705.1. The GC content of the type genome is 64.35 % and the genome length is 4.17 Mbp.

Description of *Candidatus* Rhodoferax culigatio sp. nov.

Candidatus Rhodoferax culigatio (NL. fem. n. *culigatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodoferax_A sp004322085*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_004322085.1. The GC content of the type genome is 63.6 % and the genome length is 3.6 Mbp.

Description of *Candidatus* Rhodoferax nutamago sp. nov.

Candidatus Rhodoferax nutamago (NL. fem. n. *nutamago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodoferax_A sp004323695*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_004323695.1. The GC content of the type genome is 64.07 % and the genome length is 3.81 Mbp.

Description of *Candidatus* Rhodoferax antipitura sp. nov.

Candidatus Rhodoferax antipitura (NL. fem. n. *antipitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodoferax_B sp003097105*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_003097105.1. The GC content of the type genome is 63.47 % and the genome length is 5.63 Mbp.

Description of *Candidatus* Rhodoferax homunivita sp. nov.

Candidatus Rhodoferax homunivita (NL. fem. n. *homunivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodoferax_B sp900104385*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_900104385.1. The GC content of the type genome is 63.33 % and the genome length is 5.74 Mbp.

Description of *Candidatus* Rhodoglobus adremessa sp. nov.

Candidatus Rhodoglobus adremessa (NL. fem. n. *adremessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodoglobus sp013410945*. The type genome for the species is the GenBank assembly RS_GCF_013410945.1. The GC content of the type genome is 66.81 % and the genome length is 3.01 Mbp.

Description of *Candidatus* Rhodoglobus cocodibula sp. nov.

Candidatus Rhodoglobus cocodibula (NL. fem. n. *cocodibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodoglobus sp001725325*. The type genome for the species is the GenBank assembly GCA_001725325.1. The GC content of the type genome is 70.37 % and the genome length is 3.12 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Thiocyanate bioreactor".

Description of *Candidatus* Rhodoglobus futatitio sp. nov.

Candidatus Rhodoglobus futatitio (NL. fem. n. *futatitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodoglobus sp004297555*. The type genome for the species is the GenBank assembly GCA_004297555.1. The GC content of the type genome is 64.68 % and the genome length is 2.25 Mbp.

Description of *Candidatus* Rhodoglobus infenimonas sp. nov.

Candidatus Rhodoglobus infenimonas (NL. fem. n. *infenimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodoglobus sp000153145*. The type genome for the species is the GenBank assembly RS_GCF_000153145.1. The GC content of the type genome is 59.09 % and the genome length is 2.77 Mbp.

Description of *Candidatus* Rhodoglobus oppanigena sp. nov.

Candidatus Rhodoglobus oppanigena (NL. fem. n. *oppanigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodoglobus sp000247645*. The type genome for the species is the GenBank assembly RS_GCF_000247645.1. The GC content of the type genome is 60.11 % and the genome length is 3.11 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "soil".

Description of *Candidatus* Rhodoglobus penurax sp. nov.

Candidatus Rhodoglobus penurax (NL. fem. n. *penurax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodoglobus sp903920435*. The type genome for the species is the GenBank assembly GCA_903886575.1. The GC content of the type genome is 68.9 % and the genome length is 3.3 Mbp.

Description of *Candidatus* Rhodoglobus thessessa sp. nov.

Candidatus Rhodoglobus thessessa (NL. fem. n. *thessessa* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodoglobus sp004118935*. The type genome for the species is the GenBank assembly RS_GCF_004118935.1. The GC content of the type genome is 61.46 % and the genome length is 3.0 Mbp.

Description of *Candidatus* Rhodohalobacter adpositudo sp. nov.

Candidatus Rhodohalobacter adpositudo (NL. fem. n. *adpositudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodohalobacter sp001564065*. The type genome for the species is the GenBank assembly GCA_001564065.1. The GC content of the type genome is 42.36 % and the genome length is 4.3 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "sample T5-Br; brine of Lake Tanatar-5".

Description of *Candidatus* Rhodoligotrophos octinibula sp. nov.

Candidatus Rhodoligotrophos octinibula (NL. fem. n. *octinibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodoligotrophos sp005281615*. The type genome for the species is the GenBank assembly RS_GCF_005281615.1. The GC content of the type genome is 64.41 % and the genome length is 5.49 Mbp.

Description of *Candidatus* Rhodoluna agricilega sp. nov.

Candidatus Rhodoluna agricilega (NL. fem. n. *agricilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodoluna sp903866485*. The type genome for the species is the GenBank assembly GCA_903866485.1. The GC content of the type genome is 55.4 % and the genome length is 1.08 Mbp.

Description of *Candidatus* Rhodoluna benifibra sp. nov.

Candidatus Rhodoluna benifibra (NL. fem. n. *benifibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodoluna sp903887175*. The type genome for the species is the GenBank assembly GCA_903922585.1. The GC content of the type genome is 52.97 % and the genome length is 1.32 Mbp.

Description of *Candidatus* Rhodoluna casigimonas sp. nov.

Candidatus Rhodoluna casigimonas (NL. fem. n. *casigimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodoluna sp009702645*. The type genome for the species is the GenBank assembly GCA_009702645.1. The GC content of the type genome is 50.17 % and the genome length is 0.7 Mbp.

Description of *Candidatus* Rhodoluna cilicitrix sp. nov.

Candidatus Rhodoluna cilicitrix (NL. fem. n. *cilicitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodoluna sp903824455*. The type genome for the species is the GenBank assembly GCA_903824205.1. The GC content of the type genome is 52.92 % and the genome length is 1.2 Mbp.

Description of *Candidatus* Rhodoluna curabicella sp. nov.

Candidatus Rhodoluna curabicella (NL. fem. n. *curabicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodoluna sp002342255*. The type genome for the species is the GenBank assembly GCA_002359595.1. The GC content of the type genome is 46.21 % and the genome length is 1.05 Mbp.

Description of *Candidatus* Rhodoluna direpetta sp. nov.

Candidatus Rhodoluna direpetta (NL. fem. n. *direpetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodoluna sp903935175*. The type genome for the species is the GenBank assembly GCA_903935175.1. The GC content of the type genome is 56.08 %

and the genome length is 1.5 Mbp.

Description of *Candidatus* Rhodoluna diritifica sp. nov.

Candidatus Rhodoluna diritifica (NL. fem. n. *diritifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodoluna sp903831585*. The type genome for the species is the GenBank assembly GCA_903831585.1. The GC content of the type genome is 53.9 % and the genome length is 1.26 Mbp.

Description of *Candidatus* Rhodoluna domipitia sp. nov.

Candidatus Rhodoluna domipitia (NL. fem. n. *domipitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodoluna sp903834635*. The type genome for the species is the GenBank assembly GCA_903923335.1. The GC content of the type genome is 54.59 % and the genome length is 1.24 Mbp.

Description of *Candidatus* Rhodoluna habacicella sp. nov.

Candidatus Rhodoluna habacicella (NL. fem. n. *habacicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodoluna sp009703455*. The type genome for the species is the GenBank assembly GCA_009703455.1. The GC content of the type genome is 50.18 % and the genome length is 1.17 Mbp.

Description of *Candidatus* Rhodoluna hexagitudo sp. nov.

Candidatus Rhodoluna hexagitudo (NL. fem. n. *hexagitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodoluna sp009704605*. The type genome for the species is the GenBank assembly GCA_009699975.1. The GC content of the type genome is 49.5 % and the genome length is 0.62 Mbp.

Description of *Candidatus* Rhodoluna impirimonia sp. nov.

Candidatus Rhodoluna impirimonia (NL. fem. n. *impirimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodoluna sp009703845*. The type genome for the species is the GenBank assembly GCA_009703845.1. The GC content of the type genome is 55.87 % and the genome length is 0.94 Mbp.

Description of *Candidatus* Rhodoluna inbecitoga sp. nov.

Candidatus Rhodoluna inbecitoga (NL. fem. n. *inbecitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodoluna sp009703635*. The type genome for the species is the GenBank assembly GCA_009703635.1. The GC content of the type genome is 50.13 % and the genome length is 0.53 Mbp.

Description of *Candidatus* Rhodoluna metapitura sp. nov.

Candidatus Rhodoluna metapitura (NL. fem. n. *metapitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodoluna sp903820955*. The type genome for the species is the GenBank assembly GCA_903888245.1. The GC content of the type genome is 56.54 % and the genome length is 1.27 Mbp.

Description of *Candidatus* Rhodoluna nefarimonia sp. nov.

Candidatus Rhodoluna nefarimonia (NL. fem. n. *nefarimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodoluna sp903922825*. The type genome for the species is the GenBank assembly GCA_903922825.1. The GC content of the type genome is 45.62 % and the genome length is 1.22 Mbp.

Description of *Candidatus* Rhodoluna negotimonia sp. nov.

Candidatus Rhodoluna negotimonia (NL. fem. n. *negotimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodoluna sp903880095*. The type genome for the species is the GenBank assembly GCA_903880095.1. The GC content of the type genome is 54.91 % and the genome length is 1.44 Mbp.

Description of *Candidatus* Rhodoluna occalibra sp. nov.

Candidatus Rhodoluna occalibra (NL. fem. n. *occalibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodoluna sp009703445*. The type genome for the species is the GenBank assembly GCA_009703445.1. The GC content of the type genome is 55.87 % and the genome length is 1.11 Mbp.

Description of *Candidatus* Rhodoluna panopax sp. nov.

Candidatus Rhodoluna panopax (NL. fem. n. *panopax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodoluna sp903909605*. The type genome for the species is the GenBank assembly GCA_903909605.1. The GC content of the type genome is 57.65 % and the genome length is 1.34 Mbp.

Description of *Candidatus* Rhodoluna pedifatica sp. nov.

Candidatus Rhodoluna pedifatica (NL. fem. n. *pedifatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodoluna sp009698805*. The type genome for the species is the GenBank assembly GCA_009698805.1. The GC content of the type genome is 56.77 % and the genome length is 1.18 Mbp.

Description of *Candidatus* Rhodoluna peridousia sp. nov.

Candidatus Rhodoluna peridousia (NL. fem. n. *peridousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodoluna sp009921165*. The type genome for the species is the GenBank assembly GCA_009928145.1. The GC content of the type genome is 46.24 %

and the genome length is 1.34 Mbp.

Description of *Candidatus* Rhodoluna redacilega sp. nov.

Candidatus Rhodoluna redacilega (NL. fem. n. *redacilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodoluna sp010028615*. The type genome for the species is the GenBank assembly GCA_010028615.1. The GC content of the type genome is 47.66 % and the genome length is 1.21 Mbp.

Description of *Candidatus* Rhodoluna relapilega sp. nov.

Candidatus Rhodoluna relapilega (NL. fem. n. *relapilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodoluna sp009702455*. The type genome for the species is the GenBank assembly GCA_009702455.1. The GC content of the type genome is 54.63 % and the genome length is 1.29 Mbp.

Description of *Candidatus* Rhodoluna repudivita sp. nov.

Candidatus Rhodoluna repudivita (NL. fem. n. *repudivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodoluna sp903832875*. The type genome for the species is the GenBank assembly GCA_903853695.1. The GC content of the type genome is 45.86 % and the genome length is 1.25 Mbp.

Description of *Candidatus* Rhodoluna semidedo sp. nov.

Candidatus Rhodoluna semidedo (NL. fem. n. *semidedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodoluna sp009703465*. The type genome for the species is the GenBank assembly GCA_009703465.1. The GC content of the type genome is 48.53 % and the genome length is 0.81 Mbp.

Description of *Candidatus* Rhodoluna semimitura sp. nov.

Candidatus Rhodoluna semimitura (NL. fem. n. *semimitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodoluna sp903853515*. The type genome for the species is the GenBank assembly GCA_903853515.1. The GC content of the type genome is 52.54 % and the genome length is 1.28 Mbp.

Description of *Candidatus* Rhodoluna sifunisca sp. nov.

Candidatus Rhodoluna sifunisca (NL. fem. n. *sifunisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodoluna sp903929105*. The type genome for the species is the GenBank assembly GCA_903929105.1. The GC content of the type genome is 53.4 % and the genome length is 1.29 Mbp.

Description of *Candidatus* Rhodoluna tametago sp. nov.

Candidatus Rhodoluna tametago (NL. fem. n. *tametago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodoluna sp009927245*. The type genome for the species is the GenBank assembly GCA_009923085.1. The GC content of the type genome is 47.07 % and the genome length is 1.23 Mbp.

Description of *Candidatus* Rhodoluna taxilicella sp. nov.

Candidatus Rhodoluna taxilicella (NL. fem. n. *taxilicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodoluna sp903893675*. The type genome for the species is the GenBank assembly GCA_903893675.1. The GC content of the type genome is 57.99 % and the genome length is 1.32 Mbp.

Description of *Candidatus* Rhodoluna timefimonas sp. nov.

Candidatus Rhodoluna timefimonas (NL. fem. n. *timefimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodoluna sp009702405*. The type genome for the species is the GenBank assembly GCA_009702405.1. The GC content of the type genome is 45.75 % and the genome length is 0.87 Mbp.

Description of *Candidatus* Rhodoluna utputastra sp. nov.

Candidatus Rhodoluna utputastra (NL. fem. n. *utputastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodoluna sp903927775*. The type genome for the species is the GenBank assembly GCA_903927775.1. The GC content of the type genome is 55.15 % and the genome length is 1.29 Mbp.

Description of *Candidatus* Rhodophyticola amfitilenta sp. nov.

Candidatus Rhodophyticola amfitilenta (NL. fem. n. *amfitilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodophyticola sp014323785*. The type genome for the species is the GenBank assembly GCA_014323785.1. The GC content of the type genome is 60.34 % and the genome length is 2.55 Mbp.

Description of *Candidatus* Rhodophyticola cinefastra sp. nov.

Candidatus Rhodophyticola cinefastra (NL. fem. n. *cinefastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodophyticola sp007827395*. The type genome for the species is the GenBank assembly RS_GCF_013106915.1. The GC content of the type genome is 60.23 % and the genome length is 4.41 Mbp.

Description of *Candidatus* Rhodophyticola depariforma sp. nov.

Candidatus Rhodophyticola depariforma (NL. fem. n. *depariforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodophyticola sp004751985*. The type genome for the species is the GenBank assembly RS_GCF_004751985.1. The GC content of the type genome is 60.5

% and the genome length is 3.86 Mbp.

Description of *Candidatus* Rhodopila aggesilega sp. nov.

Candidatus Rhodopila aggesilega (NL. fem. n. *aggesilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodopila sp003506895*. The type genome for the species is the GenBank assembly GCA_003506895.1. The GC content of the type genome is 63.38 % and the genome length is 5.58 Mbp.

Description of *Candidatus* Rhodopila effosiforma sp. nov.

Candidatus Rhodopila effosiforma (NL. fem. n. *effosiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodopila sp009765975*. The type genome for the species is the GenBank assembly RS_GCF_009765975.1. The GC content of the type genome is 63.54 % and the genome length is 8.37 Mbp.

Description of *Candidatus* Rhodopila retecigena sp. nov.

Candidatus Rhodopila retecigena (NL. fem. n. *retecigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodopila sp903851415*. The type genome for the species is the GenBank assembly GCA_903851415.1. The GC content of the type genome is 65.89 % and the genome length is 7.09 Mbp.

Description of *Candidatus* Rhodopila sicaritura sp. nov.

Candidatus Rhodopila sicaritura (NL. fem. n. *sicaritura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodopila sp903915725*. The type genome for the species is the GenBank assembly GCA_903936615.1. The GC content of the type genome is 64.94 % and the genome length is 6.57 Mbp.

Description of *Candidatus* Rhodopila supelastra sp. nov.

Candidatus Rhodopila supelastra (NL. fem. n. *supelastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodopila sp903932145*. The type genome for the species is the GenBank assembly GCA_903904345.1. The GC content of the type genome is 62.42 % and the genome length is 6.63 Mbp.

Description of *Candidatus* Rhodopila xeropilega sp. nov.

Candidatus Rhodopila xeropilega (NL. fem. n. *xeropilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodopila sp903944925*. The type genome for the species is the GenBank assembly GCA_903944925.1. The GC content of the type genome is 65.08 % and the genome length is 7.0 Mbp.

Description of *Candidatus* Rhodopirellula inhabessa sp. nov.

Candidatus Rhodopirellula inhabessa (NL. fem. n. *inhabessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodopirellula sp007860105*. The type genome for the species is the GenBank assembly RS_GCF_007860105.1. The GC content of the type genome is 56.54 % and the genome length is 7.18 Mbp.

Description of *Candidatus* Rhodopirellula totidilega sp. nov.

Candidatus Rhodopirellula totidilega (NL. fem. n. *totidilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodopirellula sp007859915*. The type genome for the species is the GenBank assembly RS_GCF_007859915.1. The GC content of the type genome is 55.85 % and the genome length is 8.5 Mbp.

Description of *Candidatus* Rhodopirellula antiritia sp. nov.

Candidatus Rhodopirellula antiritia (NL. fem. n. *antiritia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodopirellula_A sp007859835*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_007859835.1. The GC content of the type genome is 52.75 % and the genome length is 9.52 Mbp.

Description of *Candidatus* Rhodopirellula laxititio sp. nov.

Candidatus Rhodopirellula laxititio (NL. fem. n. *laxititio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodopirellula_A sp007860185*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_007860185.1. The GC content of the type genome is 52.9 % and the genome length is 7.27 Mbp.

Description of *Candidatus* Rhodopirellula nicotetta sp. nov.

Candidatus Rhodopirellula nicotetta (NL. fem. n. *nicotetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodopirellula_A sp007860095*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_007860095.1. The GC content of the type genome is 55.81 % and the genome length is 7.4 Mbp.

Description of *Candidatus* Rhodopirellula obmuritio sp. nov.

Candidatus Rhodopirellula obmuritio (NL. fem. n. *obmuritio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodopirellula_A sp007860135*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the

genus. The type genome for the species is the GenBank assembly RS_GCF_007860135.1. The GC content of the type genome is 55.28 % and the genome length is 9.2 Mbp.

Description of *Candidatus* Rhodopirellula acrimessa sp. nov.

Candidatus Rhodopirellula acrimessa (NL. fem. n. *acrimessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodopirellula_B sp002289565*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_002289565.1. The GC content of the type genome is 58.96 % and the genome length is 9.8 Mbp.

Description of *Candidatus* Rhodopirellula buxanatica sp. nov.

Candidatus Rhodopirellula buxanatica (NL. fem. n. *buxanatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodopirellula_B sp008035925*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_008035925.1. The GC content of the type genome is 59.26 % and the genome length is 9.89 Mbp.

Description of *Candidatus* Rhodopirellula capucitio sp. nov.

Candidatus Rhodopirellula capucitio (NL. fem. n. *capucitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodopirellula_B sp002167455*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_007745635.1. The GC content of the type genome is 55.3 % and the genome length is 7.11 Mbp.

Description of *Candidatus* Rhodopirellula depacousia sp. nov.

Candidatus Rhodopirellula depacousia (NL. fem. n. *depacousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodopirellula_B sp007860045*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_007860045.1. The GC content of the type genome is 56.01 % and the genome length is 9.59 Mbp.

Description of *Candidatus* Rhodopirellula immeditas sp. nov.

Candidatus Rhodopirellula immeditas (NL. fem. n. *immeditas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodopirellula_B sp008629675*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_008629675.1. The GC content of the type genome is 59.96 % and the genome length is 8.2 Mbp.

Description of *Candidatus* Rhodopirellula irrecitica sp. nov.

Candidatus Rhodopirellula irrecitica (NL. fem. n. *irrecitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodopirellula_B sp007754155*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_007754155.1. The GC content of the type genome is 58.88 % and the genome length is 10.98 Mbp.

Description of *Candidatus* Rhodopirellula murilousia sp. nov.

Candidatus Rhodopirellula murilousia (NL. fem. n. *murilousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Rhodopirellula_B sp007753675*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_007753675.1. The GC content of the type genome is 58.52 % and the genome length is 10.77 Mbp.

Description of *Candidatus* Rhodopirellula ruricimonia sp. nov.

Candidatus Rhodopirellula ruricimonia (NL. fem. n. *ruricimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodopirellula_B sp014154935*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_014154935.1. The GC content of the type genome is 59.47 % and the genome length is 9.56 Mbp.

Description of *Candidatus* Rhodopirellula siminimonia sp. nov.

Candidatus Rhodopirellula siminimonia (NL. fem. n. *siminimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodopirellula_B sp008312935*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_010367485.1. The GC content of the type genome is 55.14 % and the genome length is 7.91 Mbp.

Description of *Candidatus* Rhodoplanes delubitrix sp. nov.

Candidatus Rhodoplanes delubitrix (NL. fem. n. *delubitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodoplanes sp000293785*. The type genome for the species is the GenBank assembly RS_GCF_000293785.1. The GC content of the type genome is 69.28 % and the genome length is 4.83 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "soil".

Description of *Candidatus* Rhodoplanes obvolicula sp. nov.

Candidatus Rhodoplanes obvolicula (NL. fem. n. *obvolicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodoplanes sp013377085*. The type genome for the species is the GenBank assembly GCA_013377085.1. The GC content of the type genome is 68.82 % and the genome length is 6.48 Mbp.

Description of *Candidatus* Rhodopseudomonas excinitoga sp. nov.

Candidatus Rhodopseudomonas excinitoga (NL. fem. n. *excinitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodopseudomonas sp001295845*. The type genome for the species is the GenBank assembly RS_GCF_001295845.1. The GC content of the type genome is 65.66 % and the genome length is 6.16 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "freshwater lake".

Description of *Candidatus* Rhodopseudomonas ossaribra sp. nov.

Candidatus Rhodopseudomonas ossaribra (NL. fem. n. *ossaribra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodopseudomonas sp010907035*. The type genome for the species is the GenBank assembly RS_GCF_010907035.1. The GC content of the type genome is 65.2 % and the genome length is 5.29 Mbp.

Description of *Candidatus* Rhodopseudomonas pragmedo sp. nov.

Candidatus Rhodopseudomonas pragmedo (NL. fem. n. *pragmedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodopseudomonas sp013377015*. The type genome for the species is the GenBank assembly GCA_013377015.1. The GC content of the type genome is 64.37 % and the genome length is 4.83 Mbp.

Description of *Candidatus* Rhodopseudomonas sifunigena sp. nov.

Candidatus Rhodopseudomonas sifunigena (NL. fem. n. *sifunigena* a species epithet

created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodopseudomonas sp000333455*. The type genome for the species is the GenBank assembly RS_GCF_000333455.1. The GC content of the type genome is 64.96 % and the genome length is 5.52 Mbp.

Description of *Candidatus* Rhodosalinus vicecitas sp. nov.

Candidatus Rhodosalinus vicecitas (NL. fem. n. *vicecitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodosalinus sp003298775*. The type genome for the species is the GenBank assembly RS_GCF_003298775.1. The GC content of the type genome is 69.79 % and the genome length is 3.87 Mbp.

Description of *Candidatus* Rhodothermus pedepilega sp. nov.

Candidatus Rhodothermus pedepilega (NL. fem. n. *pedepilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodothermus sp002898335*. The type genome for the species is the GenBank assembly GCA_011047975.1. The GC content of the type genome is 56.15 % and the genome length is 2.89 Mbp.

Description of *Candidatus* Rhodovarius luticessa sp. nov.

Candidatus Rhodovarius luticessa (NL. fem. n. *luticessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodovarius sp004005855*. The type genome for the species is the GenBank assembly RS_GCF_004005855.1. The GC content of the type genome is 69.33 % and the genome length is 5.28 Mbp.

Description of *Candidatus* Rhodovarius rubigax sp. nov.

Candidatus Rhodovarius rubigax (NL. fem. n. *rubigax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodovarius sp013298245*. The type genome for the species is the GenBank assembly GCA_013298245.1. The GC content of the type genome is 67.79 % and the genome length is 3.7 Mbp.

Description of *Candidatus* Rhodovarius televousia sp. nov.

Candidatus Rhodovarius televousia (NL. fem. n. *televousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodovarius sp014376425*. The type genome for the species is the GenBank assembly GCA_014376425.1. The GC content of the type genome is 69.21 % and the genome length is 3.79 Mbp.

Description of *Candidatus* Rhodovulum almitentia sp. nov.

Candidatus Rhodovulum almitentia (NL. fem. n. *almitentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodovulum sp002073975*. The type genome for the species is the GenBank assembly RS_GCF_002073975.1. The GC content of the type genome is 67.07 % and the genome length is 4.16 Mbp.

Description of *Candidatus* Rhodovulum fecunedo sp. nov.

Candidatus Rhodovulum fecunedo (NL. fem. n. *fecunedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodovulum sp011048875*. The type genome for the species is the GenBank assembly GCA_011048875.1. The GC content of the type genome is 67.59 % and the genome length is 3.0 Mbp.

Description of *Candidatus* Rhodovulum insalatica sp. nov.

Candidatus Rhodovulum insalatica (NL. fem. n. *insalatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodovulum sp002079305*. The type genome for the species is the GenBank assembly RS_GCF_002079305.1. The GC content of the type genome is 64.64 % and the genome length is 4.47 Mbp.

Description of *Candidatus* Rhodovulum macilitudo sp. nov.

Candidatus Rhodovulum macilitudo (NL. fem. n. *macilitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rhodovulum sp900142935*. The type genome for the species is the GenBank assembly RS_GCF_900142935.1. The GC content of the type genome is 68.13 % and the genome length is 3.83 Mbp.

Description of *Candidatus* Rickettsia terebitudo sp. nov.

Candidatus Rickettsia terebitudo (NL. fem. n. *terebitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rickettsia sp002285905*. The type genome for the species is the GenBank assembly RS_GCF_001707805.1. The GC content of the type genome is 32.22 % and the genome length is 1.2 Mbp.

Description of *Candidatus* Rickettsiella fragmifica sp. nov.

Candidatus Rickettsiella fragmifica (NL. fem. n. *fragmifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rickettsiella_A sp005877695*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_005877695.1. The GC content of the type genome is 36.34 % and the genome length is 2.14 Mbp.

Description of *Candidatus* Rickettsiella homicifica sp. nov.

Candidatus Rickettsiella homicifica (NL. fem. n. *homicifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rickettsiella_A sp002290645*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_903834455.1. The GC content of the type genome is 39.29 % and the genome length is 1.47 Mbp.

Description of *Candidatus* Rickettsiella bipatitrix sp. nov.

Candidatus Rickettsiella bipatitrix (NL. fem. n. *bipatitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rickettsiella_B sp013288455*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_013288455.1. The GC content of the type genome is 41.81 % and the genome length is 0.71 Mbp.

Description of *Candidatus* Ridibana manufatica sp. nov.

Candidatus Ridibana manufatica (NL. fem. n. *manufatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *21-14-all-36-13 sp002771585*. The type genome for the species is the GenBank assembly GCA_002771585.1. The GC content of the type genome is 36.03 % and the genome length is 0.66 Mbp.

Description of *Candidatus* Ridibana gen. nov.

Candidatus Ridibana (NL. fem. n. *Ridibana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *21-14-all-36-13*. The type species for the genus is *Candidatus* Ridibana manufatica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *21-14-all-36-13*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Ridibanaceae.

Description of *Candidatus* Ridibanaceae fam. nov.

Candidatus Ridibanaceae (NL. fem. n. *Ridibanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *21-14-all-36-13.* The type genus for the taxon is *Candidatus* Ridibana .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA9983_A*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Ficedanales.

Description of *Candidatus* Ridibaria absuressa sp. nov.

Candidatus Ridibaria absuressa (NL. fem. n. *absuressa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *FEB-7 sp011391275*. The type genome for the species is the GenBank assembly GCA_011391275.1. The GC content of the type genome is 70.15 % and the genome length is 3.27 Mbp.

Description of *Candidatus* Ridibaria gen. nov.

Candidatus Ridibaria (NL. fem. n. *Ridibaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *FEB-7*. The type species for the genus is *Candidatus* Ridibaria absuressa .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UKL13-2*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Diponellaceae.

Description of *Candidatus* Ridibaria direcimonas sp. nov.

Candidatus Ridibaria direcimonas (NL. fem. n. *direcimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *FEB-7 sp003105245*. The type genome for the species is the GenBank assembly GCA_003105245.1. The GC content of the type genome is 70.61 % and the genome length is 3.18 Mbp.

Description of *Candidatus* Ridibella halucilenta sp. nov.

Candidatus Ridibella halucilenta (NL. fem. n. *halucilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1439 sp002329605*. The type genome for the species is the GenBank assembly GCA_002329605.1. The GC content of the type genome is 68.79 % and the genome length is 2.41 Mbp.

Description of *Candidatus* Ridibella gen. nov.

Candidatus Ridibella (NL. fem. n. *Ridibella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1439*. The type species for the genus is *Candidatus* Ridibella halucilenta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1439*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Ridibellaceae.

Description of *Candidatus* Ridibellaceae fam. nov.

Candidatus Ridibellaceae (NL. fem. n. *Ridibellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA1439.* The type genus for the taxon is *Candidatus* Ridibella .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA1439*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Ridibellales.

Description of *Candidatus* Ridibellales ord. nov.

Candidatus Ridibellales (NL. fem. n. *Ridibellales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA1439.* The type genus for the taxon is *Candidatus* Ridibella .

According to the original version of GTDB R06-RS202, this family belongs to the class *UBA1439*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Ridibellae.

Description of *Candidatus* Ridibellae class. nov.

Candidatus Ridibellae (NL. fem. n. *c__Ridibellae* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA1439.* The type genus for the taxon is *Candidatus* Ridibella .

According to GTDB R06-RS202, this class belongs to the phylum *Aureabacteria_A*.

Description of *Candidatus* Ridibia cocolessa sp. nov.

Candidatus Ridibia cocolessa (NL. fem. n. *cocolessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *TMED27 sp002687495*. The type genome for the species is the GenBank assembly GCA_002687495.1. The GC content of the type genome is 43.56 % and the genome length is 1.97 Mbp.

Description of *Candidatus* Ridibia gen. nov.

Candidatus Ridibia (NL. fem. n. *Ridibia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *TMED27*. The type species for the genus is *Candidatus* Ridibia cocolessa .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Ridibia nefanastra sp. nov.

Candidatus Ridibia nefanastra (NL. fem. n. *nefanastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *TMED27 sp002167715*. The type genome for the species is the GenBank assembly GCA_002167715.1. The GC content of the type genome is 42.55 % and the genome length is 2.5 Mbp.

Description of *Candidatus* Ridibida cimitibra sp. nov.

Candidatus Ridibida cimitibra (NL. fem. n. *cimitibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002722245 sp002722245*. The type genome for the species is the GenBank assembly GCA_002722245.1. The GC content of the type genome is 34.72 % and the genome length is 3.0 Mbp.

Description of *Candidatus* Ridibida gen. nov.

Candidatus Ridibida (NL. fem. n. *Ridibida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-002722245*. The type species for the genus is *Candidatus* Ridibida cimitibra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GCA-002722245*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Ridibidaceae.

Description of *Candidatus* Ridibidaceae fam. nov.

Candidatus Ridibidaceae (NL. fem. n. *Ridibidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *GCA-002722245.* The type genus for the taxon is *Candidatus* Ridibida .

According to GTDB R06-RS202, this family belongs to the order *Flavobacteriales*.

Description of *Candidatus* Ridibida inpinimonas sp. nov.

Candidatus Ridibida inpinimonas (NL. fem. n. *inpinimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002722245 sp002720635*. The type genome for the species is the GenBank assembly GCA_002720635.1. The GC content of the type genome is 33.92 % and the genome length is 1.95 Mbp.

Description of *Candidatus* Ridibida nivomibra sp. nov.

Candidatus Ridibida nivomibra (NL. fem. n. *nivomibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002722245 sp002717515*. The type genome for the species is the GenBank assembly GCA_002717515.1. The GC content of the type genome is 33.93 % and the genome length is 2.64 Mbp.

Description of *Candidatus* Ridibosa ceromitura sp. nov.

Candidatus Ridibosa ceromitura (NL. fem. n. *ceromitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *CAG-302 sp001916775*. The type genome for the species is the GenBank assembly GCA_000437695.1. The GC content of the type genome is 26.13 % and the genome length is 1.21 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "derived from human gut metagenome".

Description of *Candidatus* Ridibosa gen. nov.

Candidatus Ridibosa (NL. fem. n. *Ridibosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAG-302*. The type species for the genus is *Candidatus* Ridibosa ceromitura .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA660*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vitigellaceae.

Description of *Candidatus* Ridibosa demadessa sp. nov.

Candidatus Ridibosa demadessa (NL. fem. n. *demadessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-302 sp900543825*. The type genome for the species is the GenBank assembly RS_GCF_900759195.1. The GC content of the type genome is 26.67 % and the genome length is 1.14 Mbp.

Description of *Candidatus* Ridibosa docibago sp. nov.

Candidatus Ridibosa docibago (NL. fem. n. *docibago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-302 sp900549325*. The type genome for the species is the GenBank assembly RS_GCF_900772355.1. The GC content of the type genome is 27.15 % and the genome length is 1.15 Mbp.

Description of *Candidatus* Ridibosa nefanibula sp. nov.

Candidatus Ridibosa nefanibula (NL. fem. n. *nefanibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *CAG-302 sp900548425*. The type genome for the species is the GenBank assembly RS_GCF_900758615.1. The GC content of the type genome is 26.49 % and the genome length is 1.18 Mbp.

Description of *Candidatus* Ridibosa rarefousia sp. nov.

Candidatus Ridibosa rarefousia (NL. fem. n. *rarefousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-302 sp002375205*. The type genome for the species is the GenBank assembly GCA_002375205.1. The GC content of the type genome is 26.71 % and the genome length is 1.16 Mbp.

Description of *Candidatus* Ridibosa sacopifica sp. nov.

Candidatus Ridibosa sacopifica (NL. fem. n. *sacopifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-302 sp900554615*. The type genome for the species is the GenBank assembly RS_GCF_900772265.1. The GC content of the type genome is 26.87 % and the genome length is 1.14 Mbp.

Description of *Candidatus* Ridibosa tegumitia sp. nov.

Candidatus Ridibosa tegumitia (NL. fem. n. *tegumitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-302 sp000431795*. The type genome for the species is the GenBank assembly GCA_900543855.1. The GC content of the type genome is 26.81 % and the genome length is 1.25 Mbp.

Description of *Candidatus* Ridibula dehinax sp. nov.

Candidatus Ridibula dehinax (NL. fem. n. *dehinax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SFTJ01 sp004557385*. The type genome for the species is the GenBank assembly GCA_004557385.1. The GC content of the type genome is 49.52 % and the genome length is 2.76 Mbp.

Description of *Candidatus* Ridibula gen. nov.

Candidatus Ridibula (NL. fem. n. *Ridibula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SFTJ01*. The type species for the genus is *Candidatus* Ridibula dehinax .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Ridibula excocigena sp. nov.

Candidatus Ridibula excocigena (NL. fem. n. *excocigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SFTJ01 sp900769345*. The type genome for the species is the GenBank assembly RS_GCF_900769345.1. The GC content of the type genome is 47.23 % and the genome length is 2.9 Mbp.

Description of *Candidatus* Ridibula opuscitoga sp. nov.

Candidatus Ridibula opuscitoga (NL. fem. n. *opuscitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SFTJ01 sp004563195*. The type genome for the species is the GenBank assembly GCA_004563195.1. The GC content of the type genome is 47.51 % and the genome length is 3.69 Mbp.

Description of *Candidatus* Riesia inornatio sp. nov.

Candidatus Riesia inornatio (NL. fem. n. *inornatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Riesia sp002074035*. The type genome for the species is the GenBank assembly GCA_002074035.1. The GC content of the type genome is 25.07 % and the genome length is 0.53 Mbp.

Description of *Candidatus* Rifleibacterium epogditia sp. nov.

Candidatus Rifleibacterium epogditia (NL. fem. n. *epogditia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rifleibacterium sp009928855*. The type genome for the species is the GenBank assembly GCA_009928855.1. The GC content of the type genome is 45.8 % and the genome length is 4.47 Mbp.

Description of *Candidatus* Rifleibacterium impiribula sp. nov.

Candidatus Rifleibacterium impiribula (NL. fem. n. *impiribula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rifleibacterium sp001787855*. The type genome for the species is the GenBank assembly GCA_001787855.1. The GC content of the type genome is 49.58 % and the genome length is 4.39 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at time point 3 / C; 5m depth; 0.2 filter".

Description of *Candidatus* Rifleibacterium ratifago sp. nov.

Candidatus Rifleibacterium ratifago (NL. fem. n. *ratifago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rifleibacterium sp002839435*. The type genome for the species is the GenBank assembly GCA_002839435.1. The GC content of the type genome is 50.1 % and the genome length is 5.23 Mbp.

Description of *Candidatus* Rifleibacterium repudimonas sp. nov.

Candidatus Rifleibacterium repudimonas (NL. fem. n. *repudimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rifleibacterium sp002839445*. The type genome for the species is the GenBank assembly GCA_002839445.1. The GC content of the type genome is 49.88 % and the genome length is 5.68 Mbp.

Description of *Candidatus* Rinocana manupetta sp. nov.

Candidatus Rinocana manupetta (NL. fem. n. *manupetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *SZUA-182 sp003230635*. The type genome for the species is the GenBank assembly GCA_003230635.1. The GC content of the type genome is 50.46 % and the genome length is 1.87 Mbp.

Description of *Candidatus* Rinocana gen. nov.

Candidatus Rinocana (NL. fem. n. *Rinocana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SZUA-182*. The type species for the genus is *Candidatus* Rinocana manupetta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SZUA-182*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Rinocanaceae.

Description of *Candidatus* Rinocanaceae fam. nov.

Candidatus Rinocanaceae (NL. fem. n. *Rinocanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SZUA-182.* The type genus for the taxon is *Candidatus* Rinocana .

According to the original version of GTDB R06-RS202, this family belongs to the order *SZUA-182*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Rinocanales.

Description of *Candidatus* Rinocanales ord. nov.

Candidatus Rinocanales (NL. fem. n. *Rinocanales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SZUA-182.* The type genus for the taxon is *Candidatus* Rinocana .

According to the original version of GTDB R06-RS202, this family belongs to the class *SZUA-182*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Rinocanae.

Description of *Candidatus* Rinocanae class. nov.

Candidatus Rinocanae (NL. fem. n. *c__Rinocanae* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this taxon is *SZUA-182*. The type genus for the taxon is *Candidatus* Rinocana .

According to the original version of GTDB R06-RS202, this family belongs to the phylum *SZUA-182*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the phylum *Candidatus* Rinocanota.

Description of *Candidatus* Rinocanota phyl. nov.

Candidatus Rinocanota (NL. fem. n. *Rinocanota* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SZUA-182*. The type genus for the taxon is *Candidatus* Rinocana .

According to GTDB R06-RS202, this phylum belongs to the domain *Bacteria* .

Description of *Candidatus* Rinocaria vitifilenta sp. nov.

Candidatus Rinocaria vitifilenta (NL. fem. n. *vitifilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAZPG01 sp012797375*. The type genome for the species is the GenBank assembly GCA_012797375.1. The GC content of the type genome is 62.92 % and the genome length is 2.41 Mbp.

Description of *Candidatus* Rinocaria gen. nov.

Candidatus Rinocaria (NL. fem. n. *Rinocaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAZPG01*. The type species for the genus is *Candidatus* Rinocaria vitifilenta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA4085*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Tomacellaceae.

Description of *Candidatus* Rinocella mimogitrix sp. nov.

Candidatus Rinocella mimogitrix (NL. fem. n. *mimogitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *JABCPO02 sp013333105*. The type genome for the species is the GenBank assembly GCA_013333105.2. The GC content of the type genome is 24.66 % and the genome length is 0.9 Mbp.

Description of *Candidatus* Rinocella gen. nov.

Candidatus Rinocella (NL. fem. n. *Rinocella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABCPO02*. The type species for the genus is *Candidatus* Rinocella mimogitrix .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-508*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Fidenidaceae.

Description of *Candidatus* Rinocia bicoditrix sp. nov.

Candidatus Rinocia bicoditrix (NL. fem. n. *bicoditrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6382 sp002439755*. The type genome for the species is the GenBank assembly GCA_002439755.1. The GC content of the type genome is 47.38 % and the genome length is 2.38 Mbp.

Description of *Candidatus* Rinocia gen. nov.

Candidatus Rinocia (NL. fem. n. *Rinocia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA6382*. The type species for the genus is *Candidatus* Rinocia bicoditrix .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Rinocia bugilitoga sp. nov.

Candidatus Rinocia bugilitoga (NL. fem. n. *bugilitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6382 sp900316315*. The type genome for the species is the

GenBank assembly GCA_900316315.1. The GC content of the type genome is 52.0 % and the genome length is 2.45 Mbp.

Description of *Candidatus* Rinocia casabisca sp. nov.

Candidatus Rinocia casabisca (NL. fem. n. *casabisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6382 sp902792555*. The type genome for the species is the GenBank assembly GCA_902792555.1. The GC content of the type genome is 53.3 % and the genome length is 2.29 Mbp.

Description of *Candidatus* Rinocia coninousia sp. nov.

Candidatus Rinocia coninousia (NL. fem. n. *coninousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6382 sp002372095*. The type genome for the species is the GenBank assembly GCA_902766625.1. The GC content of the type genome is 44.77 % and the genome length is 2.29 Mbp.

Description of *Candidatus* Rinocia daducimonas sp. nov.

Candidatus Rinocia daducimonas (NL. fem. n. *daducimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6382 sp900557555*. The type genome for the species is the GenBank assembly GCA_900557555.1. The GC content of the type genome is 47.0 % and the genome length is 1.42 Mbp.

Description of *Candidatus* Rinocia defalax sp. nov.

Candidatus Rinocia defalax (NL. fem. n. *defalax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6382 sp002315195*. The type genome for the species is the GenBank assembly GCA_002315195.1. The GC content of the type genome is 45.7 % and the genome length is 1.85 Mbp.

Description of *Candidatus* Rinocia denigitia sp. nov.

Candidatus Rinocia denigitia (NL. fem. n. *denigitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6382 sp900318305*. The type genome for the species is the GenBank assembly GCA_902759935.1. The GC content of the type genome is 44.53 % and the genome length is 2.32 Mbp.

Description of *Candidatus* Rinocia futatitia sp. nov.

Candidatus Rinocia futatitia (NL. fem. n. *futatitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6382 sp902788275*. The type genome for the species is the GenBank assembly GCA_902788275.1. The GC content of the type genome is 51.89 % and the genome length is 2.48 Mbp.

Description of *Candidatus* Rinocia halucigena sp. nov.

Candidatus Rinocia halucigena (NL. fem. n. *halucigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6382 sp003446955*. The type genome for the species is the GenBank assembly GCA_003446955.1. The GC content of the type genome is 44.28 % and the genome length is 2.03 Mbp.

Description of *Candidatus* Rinocia vecorago sp. nov.

Candidatus Rinocia vecorago (NL. fem. n. *vecorago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6382 sp902773055*. The type genome for the species is the GenBank assembly GCA_902773055.1. The GC content of the type genome is 45.39 % and the genome length is 2.62 Mbp.

Description of *Candidatus* Rinocida negotastra sp. nov.

Candidatus Rinocida negotastra (NL. fem. n. *negotastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *40CM-4-65-8 sp001917905*. The type genome for the species is the GenBank assembly GCA_001920805.1. The GC content of the type genome is 64.95 % and the genome length is 4.49 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Soil sample from Angelo meadow plot 1; 20cm depth; 4 days after first rain event (27mm)".

Description of *Candidatus* Rinocida gen. nov.

Candidatus Rinocida (NL. fem. n. *Rinocida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *40CM-4-65-8*. The type species for the genus is *Candidatus* Rinocida negotastra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2999*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Lucifanaceae.

Description of *Candidatus* Rinocosa adfanimonas sp. nov.

Candidatus Rinocosa adfanimonas (NL. fem. n. *adfanimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA721 sp012965455*. The type genome for the species is the GenBank assembly GCA_012965455.1. The GC content of the type genome is 48.88 % and the genome length is 4.03 Mbp.

Description of *Candidatus* Rinocosa gen. nov.

Candidatus Rinocosa (NL. fem. n. *Rinocosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA721*. The type species for the genus is *Candidatus* Rinocosa adfanimonas .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Rinocosa arvecibra sp. nov.

Candidatus Rinocosa arvecibra (NL. fem. n. *arvecibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA721 sp002705165*. The type genome for the species is the GenBank assembly GCA_002705165.1. The GC content of the type genome is 48.09 % and the genome length is 2.94 Mbp.

Description of *Candidatus* Rinocosa bigaratica sp. nov.

Candidatus Rinocosa bigaratica (NL. fem. n. *bigaratica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA721 sp002709045*. The type genome for the species is the GenBank assembly GCA_002709045.1. The GC content of the type genome is 46.53 % and the genome length is 4.54 Mbp.

Description of *Candidatus* Rinocosa cucuritudo sp. nov.

Candidatus Rinocosa cucuritudo (NL. fem. n. *cucuritudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA721 sp002348315*. The type genome for the species is the GenBank assembly GCA_002348315.1. The GC content of the type genome is 49.07 % and the genome length is 4.36 Mbp.

Description of *Candidatus* Rinocosa decunitura sp. nov.

Candidatus Rinocosa decunitura (NL. fem. n. *decunitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA721 sp002701385*. The type genome for the species is the GenBank assembly GCA_002480325.1. The GC content of the type genome is 48.37 % and the genome length is 4.7 Mbp.

Description of *Candidatus* Rinocosa defarugo sp. nov.

Candidatus Rinocosa defarugo (NL. fem. n. *defarugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *UBA721 sp002698965*. The type genome for the species is the GenBank assembly GCA_002698965.1. The GC content of the type genome is 46.52 % and the genome length is 5.42 Mbp.

Description of *Candidatus* Rinocosa expuriforma sp. nov.

Candidatus Rinocosa expuriforma (NL. fem. n. *expuriforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA721 sp002717145*. The type genome for the species is the GenBank assembly GCA_002717145.1. The GC content of the type genome is 47.85 % and the genome length is 4.42 Mbp.

Description of *Candidatus* Rinocula cucuritica sp. nov.

Candidatus Rinocula cucuritica (NL. fem. n. *cucuritica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4744 sp002403855*. The type genome for the species is the GenBank assembly GCA_002403855.1. The GC content of the type genome is 63.97 % and the genome length is 3.11 Mbp.

Description of *Candidatus* Rinocula gen. nov.

Candidatus Rinocula (NL. fem. n. *Rinocula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA4744*. The type species for the genus is *Candidatus* Rinocula cucuritica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA4744*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Rinoculaceae.

Description of *Candidatus* Rinoculaceae fam. nov.

Candidatus Rinoculaceae (NL. fem. n. *Rinoculaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA4744.* The type genus for the taxon is *Candidatus* Rinocula .

According to the original version of GTDB R06-RS202, this family belongs to the order

UBA5794. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Rudicellales.

Description of *Candidatus* Rippkaea admuribula sp. nov.

Candidatus Rippkaea admuribula (NL. fem. n. *admuribula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rippkaea sp002110465*. The type genome for the species is the GenBank assembly RS_GCF_002110465.1. The GC content of the type genome is 38.67 % and the genome length is 5.24 Mbp.

Description of *Candidatus* Rippkaea ignifentia sp. nov.

Candidatus Rippkaea ignifentia (NL. fem. n. *ignifentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rippkaea sp000829235*. The type genome for the species is the GenBank assembly RS_GCF_000829235.1. The GC content of the type genome is 33.41 % and the genome length is 2.79 Mbp.

Description of *Candidatus* Rippkaea munimatio sp. nov.

Candidatus Rippkaea munimatio (NL. fem. n. *munimatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rippkaea sp003448685*. The type genome for the species is the GenBank assembly GCA_003448685.1. The GC content of the type genome is 37.34 % and the genome length is 4.65 Mbp.

Description of *Candidatus* Rippkaea smegmiforma sp. nov.

Candidatus Rippkaea smegmiforma (NL. fem. n. *smegmiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rippkaea sp003574135*. The type genome for the species is the GenBank assembly RS_GCF_003574135.1. The GC content of the type genome is 33.93 % and the genome length is 3.02 Mbp.

Description of *Candidatus* Risibana conopatica sp. nov.

Candidatus Risibana conopatica (NL. fem. n. *conopatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).
