A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-12-FULL-45-22 sp001803565*. The type genome for the species is the GenBank assembly GCA_001803565.1. The GC content of the type genome is 45.15 % and the genome length is 3.67 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under low O2 conditions; 1.2 micron filter; full assembly".

Description of *Candidatus* Risibana gen. nov.

Candidatus Risibana (NL. fem. n. *Risibana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *2-12-FULL-45-22*. The type species for the genus is *Candidatus* Risibana conopatica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *2-12-FULL-45-22*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Risibanaceae.

Description of *Candidatus* Risibanaceae fam. nov.

Candidatus Risibanaceae (NL. fem. n. *Risibanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *2-12-FULL-45-22.* The type genus for the taxon is *Candidatus* Risibana .

According to the original version of GTDB R06-RS202, this family belongs to the order *2-12-FULL-45-22*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Risibanales.

Description of *Candidatus* Risibanales ord. nov.

Candidatus Risibanales (NL. fem. n. *Risibanales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *2-12-FULL-45-22.* The type genus for the taxon is *Candidatus* Risibana .

According to the original version of GTDB R06-RS202, this family belongs to the class *2-12-FULL-45-22*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Risibanae.

Description of *Candidatus* Risibanae class. nov.

Candidatus Risibanae (NL. fem. n. *c__Risibanae* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *2-12-FULL-45-22.* The type genus for the taxon is *Candidatus* Risibana .

According to GTDB R06-RS202, this class belongs to the phylum *Nitrospinota_B*.

Description of *Candidatus* Risibaria acistitrix sp. nov.

Candidatus Risibaria acistitrix (NL. fem. n. *acistitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABFXC01 sp013361745*. The type genome for the species is the GenBank assembly GCA_013361745.1. The GC content of the type genome is 69.53 % and the genome length is 2.97 Mbp.

Description of *Candidatus* Risibaria gen. nov.

Candidatus Risibaria (NL. fem. n. *Risibaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABFXC01*. The type species for the genus is *Candidatus* Risibaria acistitrix .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Risibaria ludifitoga sp. nov.

Candidatus Risibaria ludifitoga (NL. fem. n. *ludifitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABFXC01 sp013361935*. The type genome for the species is the GenBank assembly GCA_013362655.1. The GC content of the type genome is 70.19 %

and the genome length is 3.68 Mbp.

Description of *Candidatus* Risibella pinifigena sp. nov.

Candidatus Risibella pinifigena (NL. fem. n. *pinifigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5123 sp002414225*. The type genome for the species is the GenBank assembly GCA_002414225.1. The GC content of the type genome is 63.19 % and the genome length is 3.53 Mbp.

Description of *Candidatus* Risibella gen. nov.

Candidatus Risibella (NL. fem. n. *Risibella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA5123*. The type species for the genus is *Candidatus* Risibella pinifigena .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Risibella tolutitoga sp. nov.

Candidatus Risibella tolutitoga (NL. fem. n. *tolutitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5123 sp002415465*. The type genome for the species is the GenBank assembly GCA_002415465.1. The GC content of the type genome is 61.01 % and the genome length is 2.28 Mbp.

Description of *Candidatus* Risibida bipenessa sp. nov.

Candidatus Risibida bipenessa (NL. fem. n. *bipenessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAZHN01 sp012510695*. The type genome for the species is the GenBank assembly GCA_012510695.1. The GC content of the type genome is 27.83 % and the genome length is 0.84 Mbp.

Description of *Candidatus* Risibida gen. nov.

Candidatus Risibida (NL. fem. n. *Risibida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAZHN01*. The type species for the genus is *Candidatus* Risibida bipenessa .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA660*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vitigellaceae.

Description of *Candidatus* Risibosa nimirisca sp. nov.

Candidatus Risibosa nimirisca (NL. fem. n. *nimirisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIKBL01 sp903825645*. The type genome for the species is the GenBank assembly GCA_903912675.1. The GC content of the type genome is 57.7 % and the genome length is 4.21 Mbp.

Description of *Candidatus* Risibosa gen. nov.

Candidatus Risibosa (NL. fem. n. *Risibosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIKBL01*. The type species for the genus is *Candidatus* Risibosa nimirisca .

According to the original version of GTDB R06-RS202, this genus belongs to the family *Ga0077536*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Delebidaceae.

Description of *Candidatus* Risibosa sacopibra sp. nov.

Candidatus Risibosa sacopibra (NL. fem. n. *sacopibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIKBL01 sp009692265*. The type genome for the species is the GenBank assembly GCA_009692265.1. The GC content of the type genome is 57.09 % and the genome length is 3.41 Mbp.

Description of *Candidatus* Risibula regigitio sp. nov.

Candidatus Risibula regigitio (NL. fem. n. *regigitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CADDYQ01 sp902810725*. The type genome for the species is the GenBank assembly RS_GCF_902810725.1. The GC content of the type genome is 55.18 % and the genome length is 2.46 Mbp.

Description of *Candidatus* Risibula gen. nov.

Candidatus Risibula (NL. fem. n. *Risibula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CADDYQ01*. The type species for the genus is *Candidatus* Risibula regigitio .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Rivicola lanigilenta sp. nov.

Candidatus Rivicola lanigilenta (NL. fem. n. *lanigilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rivicola sp002002905*. The type genome for the species is the GenBank assembly RS_GCF_002002905.1. The GC content of the type genome is 61.58 % and the genome length is 3.96 Mbp.

Description of *Candidatus* Rivularia conabilenta sp. nov.

Candidatus Rivularia conabilenta (NL. fem. n. *conabilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rivularia sp002361335*. The type genome for the species is the GenBank assembly GCA_002385345.1. The GC content of the type genome is 37.21 % and the genome length is 8.06 Mbp.

Description of *Candidatus* Rivularia deciticula sp. nov.

Candidatus Rivularia deciticula (NL. fem. n. *deciticula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rivularia sp012033205*. The type genome for the species is the GenBank assembly GCA_012032385.1. The GC content of the type genome is 37.42 % and the genome length is 9.61 Mbp.

Description of *Candidatus* Rivularia vagabitio sp. nov.

Candidatus Rivularia vagabitio (NL. fem. n. *vagabitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rivularia sp000316665*. The type genome for the species is the GenBank assembly RS_GCF_000316665.1. The GC content of the type genome is 37.53 % and the genome length is 8.73 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "unialgal culture in marine water".

Description of *Candidatus* Robbsia homoledo sp. nov.

Candidatus Robbsia homoledo (NL. fem. n. *homoledo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Robbsia sp900095735*. The type genome for the species is the GenBank assembly RS_GCF_900095735.1. The GC content of the type genome is 66.24 % and the genome length is 5.36 Mbp.

Description of *Candidatus* Robertmurraya infisimonia sp. nov.

Candidatus Robertmurraya infisimonia (NL. fem. n. *infisimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Robertmurraya sp003586445*. The type genome for the species is the GenBank assembly RS_GCF_003586445.1. The GC content of the type genome is 38.49 % and the genome length is 5.03 Mbp.

Description of *Candidatus* Robertmurraya inmoricella sp. nov.

Candidatus Robertmurraya inmoricella (NL. fem. n. *inmoricella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Robertmurraya sp002480735*. The type genome for the species is the GenBank assembly GCA_002480735.1. The GC content of the type genome is 40.58 % and the genome length is 3.56 Mbp.

Description of *Candidatus* Robertmurraya nugivisca sp. nov.

Candidatus Robertmurraya nugivisca (NL. fem. n. *nugivisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Robertmurraya sp009917645*. The type genome for the species is the GenBank assembly RS_GCF_009917645.1. The GC content of the type genome is 37.95 % and the genome length is 5.07 Mbp.

Description of *Candidatus* Robertmurraya vepaligena sp. nov.

Candidatus Robertmurraya vepaligena (NL. fem. n. *vepaligena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Robertmurraya sp011524525*. The type genome for the species is the GenBank assembly GCA_011524525.1. The GC content of the type genome is 38.83 % and the genome length is 2.92 Mbp.

Description of *Candidatus* Robigana blactitia sp. nov.

Candidatus Robigana blactitia (NL. fem. n. *blactitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAZDN01 sp012512595*. The type genome for the species is the GenBank assembly GCA_012512595.1. The GC content of the type genome is 32.28 % and the genome length is 0.95 Mbp.

Description of *Candidatus* Robigana gen. nov.

Candidatus Robigana (NL. fem. n. *Robigana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAZDN01*. The type species for the genus is *Candidatus* Robigana blactitia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Robigana maligimonia sp. nov.

Candidatus Robigana maligimonia (NL. fem. n. *maligimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAZDN01 sp012512805*. The type genome for the species is the GenBank assembly GCA_012512805.1. The GC content of the type genome is 35.3 % and the genome length is 1.17 Mbp.

Description of *Candidatus* Robigana perabitio sp. nov.

Candidatus Robigana perabitio (NL. fem. n. *perabitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAZDN01 sp012735275*. The type genome for the species is the GenBank assembly GCA_012735275.1. The GC content of the type genome is 33.34 % and the genome length is 1.07 Mbp.

Description of *Candidatus* Robigaria satacibra sp. nov.

Candidatus Robigaria satacibra (NL. fem. n. *satacibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SLSR01 sp007130365*. The type genome for the species is the GenBank assembly GCA_007130365.1. The GC content of the type genome is 61.05 % and the genome length is 2.38 Mbp.

Description of *Candidatus* Robigaria gen. nov.

Candidatus Robigaria (NL. fem. n. *Robigaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SLSR01*. The type species for the genus is *Candidatus* Robigaria satacibra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *PUNB01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Desepellaceae.

Description of *Candidatus* Robigella foriniforma sp. nov.

Candidatus Robigella foriniforma (NL. fem. n. *foriniforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG705 sp902788975*. The type genome for the species is the GenBank assembly GCA_902788975.1. The GC content of the type genome is 26.63 % and the genome length is 1.23 Mbp.

Description of *Candidatus* Robigella gen. nov.

Candidatus Robigella (NL. fem. n. *Robigella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RUG705*. The type species for the genus is *Candidatus* Robigella foriniforma .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA660*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vitigellaceae.

Description of *Candidatus* Robigella ratifastra sp. nov.

Candidatus Robigella ratifastra (NL. fem. n. *ratifastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG705 sp900759875*. The type genome for the species is the GenBank assembly RS_GCF_900759875.1. The GC content of the type genome is 27.77 % and the genome length is 1.16 Mbp.

Description of *Candidatus* Robigella semibentia sp. nov.

Candidatus Robigella semibentia (NL. fem. n. *semibentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG705 sp900321645*. The type genome for the species is the GenBank assembly GCA_900321645.1. The GC content of the type genome is 29.09 % and the genome length is 1.08 Mbp.

Description of *Candidatus* Robigella vitifitudo sp. nov.

Candidatus Robigella vitifitudo (NL. fem. n. *vitifitudo* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG705 sp900551455*. The type genome for the species is the GenBank assembly GCA_900551455.1. The GC content of the type genome is 28.05 % and the genome length is 1.06 Mbp.

Description of *Candidatus* Robigia fidenimonia sp. nov.

Candidatus Robigia fidenimonia (NL. fem. n. *fidenimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIMPC01 sp903843285*. The type genome for the species is the GenBank assembly GCA_903899255.1. The GC content of the type genome is 45.61 % and the genome length is 1.72 Mbp.

Description of *Candidatus* Robigia gen. nov.

Candidatus Robigia (NL. fem. n. *Robigia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIMPC01*. The type species for the genus is *Candidatus* Robigia fidenimonia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *2-01-FULL-45-10*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Buxanulaceae.

Description of *Candidatus* Robiginitalea dilogetta sp. nov.

Candidatus Robiginitalea dilogetta (NL. fem. n. *dilogetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Robiginitalea sp006227965*. The type genome for the species is the GenBank assembly GCA_006227965.1. The GC content of the type genome is 51.6 % and the genome length is 2.28 Mbp.

Description of *Candidatus* Robiginitalea regifitio sp. nov.

Candidatus Robiginitalea regifitio (NL. fem. n. *regifitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Robiginitalea sp014243345*. The type genome for the species is the GenBank assembly RS_GCF_014243345.1. The GC content of the type genome is 55.3 % and the genome length is 3.58 Mbp.

Description of *Candidatus* Robiginitomaculum arancitas sp. nov.

Candidatus Robiginitomaculum arancitas (NL. fem. n. *arancitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Robiginitomaculum_A sp002732685*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_002732685.1. The GC content of the type genome is 47.48 % and the genome length is 1.81 Mbp.

Description of *Candidatus* Robiginitomaculum feditritrix sp. nov.

Candidatus Robiginitomaculum feditritrix (NL. fem. n. *feditritrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Robiginitomaculum_A sp002733605*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_002733605.1. The GC content of the type genome is 50.01 % and the genome length is 3.07 Mbp.

Description of *Candidatus* Robiginitomaculum musuliforma sp. nov.

Candidatus Robiginitomaculum musuliforma (NL. fem. n. *musuliforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Robiginitomaculum_A sp002733385*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_002733385.1. The GC content of the type genome is 49.88 % and the genome length is 2.92 Mbp.

Description of *Candidatus* Robiginitomaculum obvoletta sp. nov.

Candidatus Robiginitomaculum obvoletta (NL. fem. n. *obvoletta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Robiginitomaculum_A sp002733905*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_002733905.1. The GC content of the type genome is 45.12 % and the genome length is 3.48 Mbp.

Description of *Candidatus* Robiginitomaculum pedifitura sp. nov.

Candidatus Robiginitomaculum pedifitura (NL. fem. n. *pedifitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Robiginitomaculum_A sp002732905*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_002732905.1. The GC content of the type genome is 47.57 % and the genome length is 1.97 Mbp.

Description of *Candidatus* Robiginitomaculum solacetta sp. nov.

Candidatus Robiginitomaculum solacetta (NL. fem. n. *solacetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Robiginitomaculum_A sp004283035*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_004283035.1. The GC content of the type genome is 49.85 % and the genome length is 2.71 Mbp.

Description of *Candidatus* Robiginitomaculum abagmentia sp. nov.

Candidatus Robiginitomaculum abagmentia (NL. fem. n. *abagmentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Robiginitomaculum_B sp002733805*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the

genus. The type genome for the species is the GenBank assembly GCA_002733805.1. The GC content of the type genome is 51.54 % and the genome length is 3.72 Mbp.

Description of *Candidatus* Robiginitomaculum eclecifica sp. nov.

Candidatus Robiginitomaculum eclecifica (NL. fem. n. *eclecifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Robiginitomaculum_B sp002733495*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_002733495.1. The GC content of the type genome is 52.53 % and the genome length is 3.19 Mbp.

Description of *Candidatus* Robiginitomaculum medimimonas sp. nov.

Candidatus Robiginitomaculum medimimonas (NL. fem. n. *medimimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Robiginitomaculum_B sp002733485*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_002733485.1. The GC content of the type genome is 53.89 % and the genome length is 2.95 Mbp.

Description of *Candidatus* Robigosa pulegastra sp. nov.

Candidatus Robigosa pulegastra (NL. fem. n. *pulegastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GWC2-42-11 sp001797495*. The type genome for the species is the GenBank assembly GCA_003532155.1. The GC content of the type genome is 42.1 % and the genome length is 1.91 Mbp.

Description of *Candidatus* Robigosa gen. nov.

Candidatus Robigosa (NL. fem. n. *Robigosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GWC2-42-11*. The type species for the genus is *Candidatus* Robigosa pulegastra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GWC2-42-11*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Robigosaceae.

Description of *Candidatus* Robigosaceae fam. nov.

Candidatus Robigosaceae (NL. fem. n. *Robigosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *GWC2-42-11.* The type genus for the taxon is *Candidatus* Robigosa .

According to the original version of GTDB R06-RS202, this family belongs to the order *GWC2-55-46*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Tabifellales.

Description of *Candidatus* Robigula figilivita sp. nov.

Candidatus Robigula figilivita (NL. fem. n. *figilivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *50-218 sp001508855*. The type genome for the species is the GenBank assembly GCA_001508855.1. The GC content of the type genome is 50.39 % and the genome length is 1.77 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "oil reservoir sample K3".

Description of *Candidatus* Robigula gen. nov.

Candidatus Robigula (NL. fem. n. *Robigula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *50-218*. The type species for the genus is *Candidatus* Robigula figilivita .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Robinsoniella daducitio sp. nov.

Candidatus Robinsoniella daducitio (NL. fem. n. *daducitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Robinsoniella sp900555455*. The type genome for the species is the GenBank assembly GCA_900555455.1. The GC content of the type genome is 42.12 % and the genome length is 4.94 Mbp.

Description of *Candidatus* Robinsoniella forabitoga sp. nov.

Candidatus Robinsoniella forabitoga (NL. fem. n. *forabitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Robinsoniella sp900540475*. The type genome for the species is the GenBank assembly GCA_900755125.1. The GC content of the type genome is 41.82 % and the genome length is 7.64 Mbp.

Description of *Candidatus* Robinsoniella lucelago sp. nov.

Candidatus Robinsoniella lucelago (NL. fem. n. *lucelago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Robinsoniella sp900539655*. The type genome for the species is the GenBank assembly GCA_900755165.1. The GC content of the type genome is 41.7 % and the genome length is 7.47 Mbp.

Description of *Candidatus* Rodentibacter coturitrix sp. nov.

Candidatus Rodentibacter coturitrix (NL. fem. n. *coturitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rodentibacter sp901420285*. The type genome for the species is the GenBank assembly GCA_901420285.1. The GC content of the type genome is 44.22 % and the genome length is 1.93 Mbp.

Description of *Candidatus* Rodentibacter monodibula sp. nov.

Candidatus Rodentibacter monodibula (NL. fem. n. *monodibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rodentibacter sp001999425*. The type genome for the species is the GenBank assembly RS_GCF_001999425.1. The GC content of the type genome is 39.84 % and the genome length is 2.51 Mbp.

Description of *Candidatus* Rodentibacter solivitas sp. nov.

Candidatus Rodentibacter solivitas (NL. fem. n. *solivitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rodentibacter sp001999335*. The type genome for the species is the GenBank assembly RS_GCF_001999335.1. The GC content of the type genome is 40.16 % and the genome length is 2.45 Mbp.

Description of *Candidatus* Rodentibacter vocamitica sp. nov.

Candidatus Rodentibacter vocamitica (NL. fem. n. *vocamitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rodentibacter sp001999285*. The type genome for the species is the GenBank assembly RS_GCF_001999285.1. The GC content of the type genome is 39.99 % and the genome length is 2.35 Mbp.

Description of *Candidatus* Romboutsia ignifigena sp. nov.

Candidatus Romboutsia ignifigena (NL. fem. n. *ignifigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Romboutsia sp000686145*. The type genome for the species is the GenBank assembly RS_GCF_000686145.1. The GC content of the type genome is 28.63 % and the genome length is 3.58 Mbp.

Description of *Candidatus* Rorarana recomugo sp. nov.

Candidatus Rorarana recomugo (NL. fem. n. *recomugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *M0112 sp006227085*. The type genome for the species is the GenBank assembly GCA_006227085.1. The GC content of the type genome is 57.82 % and the genome length is 2.21 Mbp.

Description of *Candidatus* Rorarana gen. nov.

Candidatus Rorarana (NL. fem. n. *Rorarana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *M0112*. The type species for the genus is *Candidatus* Rorarana recomugo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *M0112*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Roraranaceae.

Description of *Candidatus* Roraranaceae fam. nov.

Candidatus Roraranaceae (NL. fem. n. *Roraranaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *M0112.* The type genus for the taxon is *Candidatus* Rorarana .

According to GTDB R06-RS202, this family belongs to the order *Pseudomonadales*.

Description of *Candidatus* Rorararia adfulax sp. nov.

Candidatus Rorararia adfulax (NL. fem. n. *adfulax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAACPI01 sp009995545*. The type genome for the species is the GenBank assembly GCA_009995545.1. The GC content of the type genome is 34.69 % and the genome length is 0.87 Mbp.

Description of *Candidatus* Rorararia gen. nov.

Candidatus Rorararia (NL. fem. n. *Rorararia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAACPI01*. The type species for the genus is *Candidatus* Rorararia adfulax .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JAACPI01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Rorararia ceae.

Description of *Candidatus* Rorararia ceae fam. nov.

Candidatus Rorararia ceae (NL. fem. n. *Rorararia ceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JAACPI01*. The type genus for the taxon is *Candidatus* Rorararia .

According to the original version of GTDB R06-RS202, this family belongs to the order *2-01-FULL-39-13*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Domiculales.

Description of *Candidatus* Rorarella benifastra sp. nov.

Candidatus Rorarella benifastra (NL. fem. n. *benifastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYMJ01 sp012521455*. The type genome for the species is the GenBank assembly GCA_012521455.1. The GC content of the type genome is 41.22 % and the genome length is 1.82 Mbp.

Description of *Candidatus* Rorarella gen. nov.

Candidatus Rorarella (NL. fem. n. *Rorarella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAYMJ01*. The type species for the genus is *Candidatus* Rorarella benifastra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JAAYMJ01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Rorarellaceae.

Description of *Candidatus* Rorarellaceae fam. nov.

Candidatus Rorarellaceae (NL. fem. n. *Rorarellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JAAYMJ01*. The type genus for the taxon is *Candidatus* Rorarella .

According to the original version of GTDB R06-RS202, this family belongs to the order *UMGS1883*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Defasiales.

Description of *Candidatus* Roraria abinditoga sp. nov.

Candidatus Roraria abinditoga (NL. fem. n. *abinditoga* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1711 sp902783595*. The type genome for the species is the GenBank assembly GCA_902783595.1. The GC content of the type genome is 54.08 % and the genome length is 1.77 Mbp.

Description of *Candidatus* Roraria gen. nov.

Candidatus Roraria (NL. fem. n. *Roraria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1711*. The type species for the genus is *Candidatus* Roraria abinditoga .

According to the original version of GTDB R06-RS202, this genus belongs to the family *P3*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Halucosaceae.

Description of *Candidatus* Roraria abrepago sp. nov.

Candidatus Roraria abrepago (NL. fem. n. *abrepago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1711 sp002368955*. The type genome for the species is the GenBank assembly GCA_002368955.1. The GC content of the type genome is 52.13 % and the genome length is 2.63 Mbp.

Description of *Candidatus* Roraria acertitas sp. nov.

Candidatus Roraria acertitas (NL. fem. n. *acertitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1711 sp001543385*. The type genome for the species is the GenBank assembly GCA_001543385.1. The GC content of the type genome is 52.5 % and the genome length is 3.04 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rumen fluid".

Description of *Candidatus* Roraria acricibula sp. nov.

Candidatus Roraria acricibula (NL. fem. n. *acricibula* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1711 sp002317325*. The type genome for the species is the GenBank assembly GCA_002317325.1. The GC content of the type genome is 57.88 % and the genome length is 1.74 Mbp.

Description of *Candidatus* Roraria admoriforma sp. nov.

Candidatus Roraria admoriforma (NL. fem. n. *admoriforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1711 sp002392965*. The type genome for the species is the GenBank assembly GCA_002392965.1. The GC content of the type genome is 54.16 % and the genome length is 2.1 Mbp.

Description of *Candidatus* Roraria arbavetta sp. nov.

Candidatus Roraria arbavetta (NL. fem. n. *arbavetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1711 sp002373995*. The type genome for the species is the GenBank assembly GCA_002373995.1. The GC content of the type genome is 56.15 % and the genome length is 2.16 Mbp.

Description of *Candidatus* Roraria assubifica sp. nov.

Candidatus Roraria assubifica (NL. fem. n. *assubifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1711 sp902774395*. The type genome for the species is the GenBank assembly GCA_902774395.1. The GC content of the type genome is 54.73 % and the genome length is 2.35 Mbp.

Description of *Candidatus* Roraria bipaticula sp. nov.

Candidatus Roraria bipaticula (NL. fem. n. *bipaticula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1711 sp902791695*. The type genome for the species is the GenBank assembly GCA_902791695.1. The GC content of the type genome is 54.85 % and the genome length is 2.17 Mbp.

Description of *Candidatus* Roraria cacopedo sp. nov.

Candidatus Roraria cacopedo (NL. fem. n. *cacopedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1711 sp902771735*. The type genome for the species is the GenBank assembly GCA_902769615.1. The GC content of the type genome is 54.1 % and the genome length is 2.28 Mbp.

Description of *Candidatus* Roraria catapibra sp. nov.

Candidatus Roraria catapibra (NL. fem. n. *catapibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1711 sp900314925*. The type genome for the species is the GenBank assembly GCA_900314925.1. The GC content of the type genome is 56.87 % and the genome length is 2.42 Mbp.

Description of *Candidatus* Roraria cibaritica sp. nov.

Candidatus Roraria cibaritica (NL. fem. n. *cibaritica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1711 sp900317125*. The type genome for the species is the GenBank assembly GCA_902759065.1. The GC content of the type genome is 52.75 % and the genome length is 2.92 Mbp.

Description of *Candidatus* Roraria colubilega sp. nov.

Candidatus Roraria colubilega (NL. fem. n. *colubilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1711 sp900318665*. The type genome for the species is the GenBank assembly GCA_900318665.1. The GC content of the type genome is 50.18 % and the genome length is 2.3 Mbp.

Description of *Candidatus* Roraria crasticella sp. nov.

Candidatus Roraria crasticella (NL. fem. n. *crasticella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1711 sp002394185*. The type genome for the species is the GenBank assembly GCA_002394185.1. The GC content of the type genome is 57.41 % and the genome length is 2.04 Mbp.

Description of *Candidatus* Roraria detecedo sp. nov.

Candidatus Roraria detecedo (NL. fem. n. *detecedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1711 sp902803395*. The type genome for the species is the GenBank assembly GCA_902803395.1. The GC content of the type genome is 53.18 % and the genome length is 1.82 Mbp.

Description of *Candidatus* Roraria divolivita sp. nov.

Candidatus Roraria divolivita (NL. fem. n. *divolivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1711 sp900316515*. The type genome for the species is the GenBank assembly GCA_900316515.1. The GC content of the type genome is 53.87 % and the genome length is 2.46 Mbp.

Description of *Candidatus* Roraria ermelivita sp. nov.

Candidatus Roraria ermelivita (NL. fem. n. *ermelivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1711 sp902800395*. The type genome for the species is the GenBank assembly GCA_902800395.1. The GC content of the type genome is 53.21 % and the genome length is 2.41 Mbp.

Description of *Candidatus* Roraria fameliforma sp. nov.

Candidatus Roraria fameliforma (NL. fem. n. *fameliforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1711 sp900321975*. The type genome for the species is the GenBank assembly GCA_900321975.1. The GC content of the type genome is 54.7 % and the genome length is 1.97 Mbp.

Description of *Candidatus* Roraria fetifugo sp. nov.

Candidatus Roraria fetifugo (NL. fem. n. *fetifugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1711 sp002354035*. The type genome for the species is the GenBank assembly GCA_002353375.1. The GC content of the type genome is 54.61 % and the genome length is 2.74 Mbp.

Description of *Candidatus* Roraria forinessa sp. nov.

Candidatus Roraria forinessa (NL. fem. n. *forinessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1711 sp900319865*. The type genome for the species is the GenBank assembly GCA_902787205.1. The GC content of the type genome is 49.37 % and the genome length is 2.46 Mbp.

Description of *Candidatus* Roraria halucifica sp. nov.

Candidatus Roraria halucifica (NL. fem. n. *halucifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1711 sp900318275*. The type genome for the species is the GenBank assembly GCA_902761505.1. The GC content of the type genome is 56.85 % and the genome length is 1.98 Mbp.

Description of *Candidatus* Roraria hexamedo sp. nov.

Candidatus Roraria hexamedo (NL. fem. n. *hexamedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *UBA1711 sp902776365*. The type genome for the species is the GenBank assembly GCA_902773575.1. The GC content of the type genome is 54.38 % and the genome length is 2.17 Mbp.

Description of *Candidatus* Roraria homagatica sp. nov.

Candidatus Roraria homagatica (NL. fem. n. *homagatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1711 sp900320975*. The type genome for the species is the GenBank assembly GCA_902779835.1. The GC content of the type genome is 54.77 % and the genome length is 2.26 Mbp.

Description of *Candidatus* Roraria homolicula sp. nov.

Candidatus Roraria homolicula (NL. fem. n. *homolicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1711 sp902777005*. The type genome for the species is the GenBank assembly GCA_902777005.1. The GC content of the type genome is 54.12 % and the genome length is 2.3 Mbp.

Description of *Candidatus* Roraria inmobivita sp. nov.

Candidatus Roraria inmobivita (NL. fem. n. *inmobivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1711 sp002309955*. The type genome for the species is the GenBank assembly GCA_002309955.1. The GC content of the type genome is 49.43 % and the genome length is 2.71 Mbp.

Description of *Candidatus* Roraria ludimibula sp. nov.

Candidatus Roraria ludimibula (NL. fem. n. *ludimibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1711 sp902762805*. The type genome for the species is the GenBank assembly GCA_902762805.1. The GC content of the type genome is 58.23 % and the genome length is 2.49 Mbp.

Description of *Candidatus* Roraria macilitoga sp. nov.

Candidatus Roraria macilitoga (NL. fem. n. *macilitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1711 sp900316235*. The type genome for the species is the GenBank assembly GCA_900316235.1. The GC content of the type genome is 52.83 % and the genome length is 2.43 Mbp.

Description of *Candidatus* Roraria metapitudo sp. nov.

Candidatus Roraria metapitudo (NL. fem. n. *metapitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1711 sp902790215*. The type genome for the species is the GenBank assembly GCA_902782425.1. The GC content of the type genome is 52.09 % and the genome length is 2.97 Mbp.

Description of *Candidatus* Roraria monimibra sp. nov.

Candidatus Roraria monimibra (NL. fem. n. *monimibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1711 sp900771365*. The type genome for the species is the GenBank assembly RS_GCF_900771365.1. The GC content of the type genome is 52.01 % and the genome length is 3.06 Mbp.

Description of *Candidatus* Roraria murelatio sp. nov.

Candidatus Roraria murelatio (NL. fem. n. *murelatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1711 sp900317285*. The type genome for the species is the GenBank assembly GCA_900317285.1. The GC content of the type genome is 54.43 % and the genome length is 2.07 Mbp.

Description of *Candidatus* Roraria pimenessa sp. nov.

Candidatus Roraria pimenessa (NL. fem. n. *pimenessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1711 sp900317955*. The type genome for the species is the GenBank assembly GCA_900317955.1. The GC content of the type genome is 49.45 % and the genome length is 2.8 Mbp.

Description of *Candidatus* Roraria pinacitudo sp. nov.

Candidatus Roraria pinacitudo (NL. fem. n. *pinacitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1711 sp002349055*. The type genome for the species is the GenBank assembly GCA_002349055.1. The GC content of the type genome is 54.49 % and the genome length is 2.65 Mbp.

Description of *Candidatus* Roraria proprastra sp. nov.

Candidatus Roraria proprastra (NL. fem. n. *proprastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1711 sp902774845*. The type genome for the species is the GenBank assembly GCA_902774845.1. The GC content of the type genome is 50.75 % and the genome length is 2.38 Mbp.

Description of *Candidatus* Roraria ranunugo sp. nov.

Candidatus Roraria ranunugo (NL. fem. n. *ranunugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1711 sp900318835*. The type genome for the species is the GenBank assembly GCA_900318835.1. The GC content of the type genome is 52.32 % and the genome length is 2.34 Mbp.

Description of *Candidatus* Roraria rubecibula sp. nov.

Candidatus Roraria rubecibula (NL. fem. n. *rubecibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *UBA1711 sp902778925*. The type genome for the species is the GenBank assembly GCA_902778925.1. The GC content of the type genome is 56.87 % and the genome length is 2.23 Mbp.

Description of *Candidatus* Roraria selecetta sp. nov.

Candidatus Roraria selecetta (NL. fem. n. *selecetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1711 sp902784865*. The type genome for the species is the GenBank assembly GCA_902777525.1. The GC content of the type genome is 58.36 % and the genome length is 2.32 Mbp.

Description of *Candidatus* Roraria semilicula sp. nov.

Candidatus Roraria semilicula (NL. fem. n. *semilicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1711 sp002372855*. The type genome for the species is the GenBank assembly GCA_902798215.1. The GC content of the type genome is 57.48 % and the genome length is 2.2 Mbp.

Description of *Candidatus* Roraria tenilitoga sp. nov.

Candidatus Roraria tenilitoga (NL. fem. n. *tenilitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1711 sp902782185*. The type genome for the species is the GenBank assembly GCA_902782185.1. The GC content of the type genome is 57.32 % and the genome length is 2.11 Mbp.

Description of *Candidatus* Roraria tiguredo sp. nov.

Candidatus Roraria tiguredo (NL. fem. n. *tiguredo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1711 sp900318175*. The type genome for the species is the GenBank assembly GCA_900318175.1. The GC content of the type genome is 52.76 % and the genome length is 2.9 Mbp.

Description of *Candidatus* Roraria utpotitudo sp. nov.

Candidatus Roraria utpotitudo (NL. fem. n. *utpotitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1711 sp902775135*. The type genome for the species is the GenBank assembly GCA_902775135.1. The GC content of the type genome is 55.41 % and the genome length is 2.57 Mbp.

Description of *Candidatus* Roraria vinolatica sp. nov.

Candidatus Roraria vinolatica (NL. fem. n. *vinolatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1711 sp900315935*. The type genome for the species is the GenBank assembly GCA_902788295.1. The GC content of the type genome is 57.99 % and the genome length is 2.13 Mbp.

Description of *Candidatus* Roraria viripax sp. nov.

Candidatus Roraria viripax (NL. fem. n. *viripax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1711 sp900316055*. The type genome for the species is the GenBank assembly GCA_900316055.1. The GC content of the type genome is 51.65 % and the genome length is 2.43 Mbp.

Description of *Candidatus* Rorarida benifivita sp. nov.

Candidatus Rorarida benifivita (NL. fem. n. *benifivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Palsa-881 sp903870555*. The type genome for the species is the GenBank assembly GCA_903839265.1. The GC content of the type genome is 67.51 % and the genome length is 4.34 Mbp.

Description of *Candidatus* Rorarida gen. nov.

Candidatus Rorarida (NL. fem. n. *Rorarida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Palsa-881*. The type species for the genus is *Candidatus* Rorarida benifivita .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Rorarida bipenastra sp. nov.

Candidatus Rorarida bipenastra (NL. fem. n. *bipenastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Palsa-881 sp903923135*. The type genome for the species is the GenBank assembly GCA_903923135.1. The GC content of the type genome is 68.83 % and the genome length is 4.64 Mbp.

Description of *Candidatus* Rorarida cepuritio sp. nov.

Candidatus Rorarida cepuritio (NL. fem. n. *cepuritio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Palsa-881 sp013815405*. The type genome for the species is the GenBank assembly GCA_013815405.1. The GC content of the type genome is 68.56 % and the genome length is 2.72 Mbp.

Description of *Candidatus* Rorarida dimidedo sp. nov.

Candidatus Rorarida dimidedo (NL. fem. n. *dimidedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Palsa-881 sp003136615*. The type genome for the species is the GenBank assembly GCA_003136615.1. The GC content of the type genome is 65.37 % and the genome length is 2.85 Mbp.

Description of *Candidatus* Rorarida irregastra sp. nov.

Candidatus Rorarida irregastra (NL. fem. n. *irregastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *Palsa-881 sp003161535*. The type genome for the species is the GenBank assembly GCA_003161535.1. The GC content of the type genome is 67.25 % and the genome length is 1.91 Mbp.

Description of *Candidatus* Rorarida subadetta sp. nov.

Candidatus Rorarida subadetta (NL. fem. n. *subadetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Palsa-881 sp903872075*. The type genome for the species is the GenBank assembly GCA_903841115.1. The GC content of the type genome is 67.41 % and the genome length is 4.15 Mbp.

Description of *Candidatus* Rorarosa malifitio sp. nov.

Candidatus Rorarosa malifitio (NL. fem. n. *malifitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HO2-49-34 sp001781205*. The type genome for the species is the GenBank assembly GCA_001781205.1. The GC content of the type genome is 48.41 % and the genome length is 0.83 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 0.2 micron filter; full assembly".

Description of *Candidatus* Rorarosa gen. nov.

Candidatus Rorarosa (NL. fem. n. *Rorarosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *HO2-49-34*. The type species for the genus is *Candidatus* Rorarosa malifitio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2163*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Legifariaceae.

Description of *Candidatus* Rorarosa telefugo sp. nov.

Candidatus Rorarosa telefugo (NL. fem. n. *telefugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HO2-49-34 sp001783515*. The type genome for the species is the GenBank assembly GCA_001781255.1. The GC content of the type genome is 50.42 % and the genome length is 0.83 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 0.2 micron filter; full assembly".

Description of *Candidatus* Rorarula lanigatica sp. nov.

Candidatus Rorarula lanigatica (NL. fem. n. *lanigatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA10122 sp001817215*. The type genome for the species is the GenBank assembly GCA_001817195.1. The GC content of the type genome is 40.94 % and the genome length is 0.63 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at 16ft depth; 0.1 micron filter at time point B".

Description of *Candidatus* Rorarula gen. nov.

Candidatus Rorarula (NL. fem. n. *Rorarula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA10122*. The type species for the genus is *Candidatus* Rorarula lanigatica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Rorarula paropitrix sp. nov.

Candidatus Rorarula paropitrix (NL. fem. n. *paropitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA10122 sp001001185*. The type genome for the species is the GenBank assembly GCA_001002095.1. The GC content of the type genome is 45.13 % and the genome length is 0.56 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "aquifer sediment".

Description of *Candidatus* Rorifana nugivugo sp. nov.

Candidatus Rorifana nugivugo (NL. fem. n. *nugivugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6502 sp002436415*. The type genome for the species is the GenBank assembly GCA_002500395.1. The GC content of the type genome is 37.75 % and the genome length is 3.72 Mbp.

Description of *Candidatus* Rorifana gen. nov.

Candidatus Rorifana (NL. fem. n. *Rorifana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA6502*. The type species for the genus is *Candidatus* Rorifana nugivugo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA840*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Hemidanaceae.

Description of *Candidatus* Rorifaria rorarentia sp. nov.

Candidatus Rorifaria rorarentia (NL. fem. n. *rorarentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *ASF356 sp000364165*. The type genome for the species is the GenBank assembly RS_GCF_010206345.1. The GC content of the type genome is 30.66 % and the genome length is 2.81 Mbp.

Description of *Candidatus* Rorifaria gen. nov.

Candidatus Rorifaria (NL. fem. n. *Rorifaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *ASF356*. The type species for the genus is *Candidatus* Rorifaria rorarentia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Rorifella venefivita sp. nov.

Candidatus Rorifella venefivita (NL. fem. n. *venefivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIVZM01 sp903910385*. The type genome for the species is the GenBank assembly GCA_903882635.1. The GC content of the type genome is 54.39 % and the genome length is 4.54 Mbp.

Description of *Candidatus* Rorifella gen. nov.

Candidatus Rorifella (NL. fem. n. *Rorifella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIVZM01*. The type species for the genus is *Candidatus* Rorifella venefivita .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Rorifia figilax sp. nov.

Candidatus Rorifia figilax (NL. fem. n. *figilax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS1519 sp900552585*. The type genome for the species is the GenBank assembly GCA_900552585.1. The GC content of the type genome is 60.9 % and the genome length is 1.95 Mbp.

Description of *Candidatus* Rorifia gen. nov.

Candidatus Rorifia (NL. fem. n. *Rorifia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UMGS1519*. The type species for the genus is *Candidatus* Rorifia figilax .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Rorifida venabivita sp. nov.

Candidatus Rorifida venabivita (NL. fem. n. *venabivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *M10-OD1-4 sp003056085*. The type genome for the species is the GenBank assembly GCA_003056185.1. The GC content of the type genome is 32.79 % and the genome length is 0.57 Mbp.

Description of *Candidatus* Rorifida gen. nov.

Candidatus Rorifida (NL. fem. n. *Rorifida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *M10-OD1-4*. The type species for the genus is *Candidatus* Rorifida venabivita .

According to the original version of GTDB R06-RS202, this genus belongs to the family *M10-OD1-4*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Rorifidaceae.

Description of *Candidatus* Rorifidaceae fam. nov.

Candidatus Rorifidaceae (NL. fem. n. *Rorifidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *M10-OD1-4.* The type genus for the taxon is *Candidatus* Rorifida .

According to the original version of GTDB R06-RS202, this family belongs to the order *GWC2-36-17*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Turicariales.

Description of *Candidatus* Rorifosa adfanivita sp. nov.

Candidatus Rorifosa adfanivita (NL. fem. n. *adfanivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RBG-16-45-19 sp001803415*. The type genome for the species is the GenBank assembly GCA_001803415.1. The GC content of the type genome is 47.71 % and the genome length is 1.37 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle background sediment; well D04 at 16ft depth".

Description of *Candidatus* Rorifosa gen. nov.

Candidatus Rorifosa (NL. fem. n. *Rorifosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RBG-16-45-19*. The type species for the genus is *Candidatus* Rorifosa adfanivita .

According to the original version of GTDB R06-RS202, this genus belongs to the family *RBG-16-45-19*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Rorifosaceae.

Description of *Candidatus* Rorifosaceae fam. nov.

Candidatus Rorifosaceae (NL. fem. n. *Rorifosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *RBG-16-45-19.* The type genus for the taxon is *Candidatus* Rorifosa .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA1400*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Bucolulales.

Description of *Candidatus* Rorifula camilicella sp. nov.

Candidatus Rorifula camilicella (NL. fem. n. *camilicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1328 sp002306815*. The type genome for the species is the GenBank assembly GCA_002724375.1. The GC content of the type genome is 52.03 % and the genome length is 2.23 Mbp.

Description of *Candidatus* Rorifula gen. nov.

Candidatus Rorifula (NL. fem. n. *Rorifula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1328*. The type species for the genus is *Candidatus* Rorifula camilicella .

According to the original version of GTDB R06-RS202, this genus belongs to the family *Bin127*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Lucelanaceae.

Description of *Candidatus* Rorifula detunicella sp. nov.

Candidatus Rorifula detunicella (NL. fem. n. *detunicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1328 sp012959765*. The type genome for the species is the GenBank assembly GCA_012959765.1. The GC content of the type genome is 54.11 % and the genome length is 2.63 Mbp.

Description of *Candidatus* Rorifula feditita sp. nov.

Candidatus Rorifula feditita (NL. fem. n. *feditita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1328 sp002501045*. The type genome for the species is the GenBank assembly GCA_002726035.1. The GC content of the type genome is 53.91 % and the genome length is 2.69 Mbp.

Description of *Candidatus* Rorifula nehalifica sp. nov.

Candidatus Rorifula nehalifica (NL. fem. n. *nehalifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1328 sp002306745*. The type genome for the species is the GenBank assembly GCA_002348235.1. The GC content of the type genome is 45.1 % and the genome length is 2.55 Mbp.

Description of *Candidatus* Rorifula vitabisca sp. nov.

Candidatus Rorifula vitabisca (NL. fem. n. *vitabisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1328 sp013204545*. The type genome for the species is the GenBank assembly GCA_013204545.1. The GC content of the type genome is 50.46 % and the genome length is 2.95 Mbp.

Description of *Candidatus* Rorulana octodivita sp. nov.

Candidatus Rorulana octodivita (NL. fem. n. *octodivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *B8-G9 sp003647765*. The type genome for the species is the GenBank assembly GCA_003647765.1. The GC content of the type genome is 32.25 % and the genome length is 1.97 Mbp.

Description of *Candidatus* Rorulana gen. nov.

Candidatus Rorulana (NL. fem. n. *Rorulana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *B8-G9*. The type species for the genus is *Candidatus* Rorulana octodivita .

According to the original version of GTDB R06-RS202, this genus belongs to the family *B8-G9*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Rorulanaceae.

Description of *Candidatus* Rorulanaceae fam. nov.

Candidatus Rorulanaceae (NL. fem. n. *Rorulanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *B8-G9.* The type genus for the taxon is *Candidatus* Rorulana .

According to the original version of GTDB R06-RS202, this family belongs to the order *JGIOTU-2*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Bimetanales.

Description of *Candidatus* Rorularia incomiforma sp. nov.

Candidatus Rorularia incomiforma (NL. fem. n. *incomiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DRQE01 sp011371515*. The type genome for the species is the GenBank assembly GCA_011371515.1. The GC content of the type genome is 49.01 % and the genome length is 1.3 Mbp.

Description of *Candidatus* Rorularia gen. nov.

Candidatus Rorularia (NL. fem. n. *Rorularia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DRQE01*. The type species for the genus is *Candidatus* Rorularia incomiforma .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DRQE01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to

the family *Candidatus* Rorulariaceae.

Description of *Candidatus* Rorulariaceae fam. nov.

Candidatus Rorulariaceae (NL. fem. n. *Rorulariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *DRQE01.* The type genus for the taxon is *Candidatus* Rorularia .

According to the original version of GTDB R06-RS202, this family belongs to the order *GWC2-55-46*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Tabifellales.

Description of *Candidatus* Rorulella attemimonas sp. nov.

Candidatus Rorulella attemimonas (NL. fem. n. *attemimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SZUA-36 sp014238945*. The type genome for the species is the GenBank assembly GCA_014238945.1. The GC content of the type genome is 52.68 % and the genome length is 4.85 Mbp.

Description of *Candidatus* Rorulella gen. nov.

Candidatus Rorulella (NL. fem. n. *Rorulella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SZUA-36*. The type species for the genus is *Candidatus* Rorulella attemimonas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SZUA-36*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Rorulellaceae.

Description of *Candidatus* Rorulellaceae fam. nov.

Candidatus Rorulellaceae (NL. fem. n. *Rorulellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SZUA-36.* The type genus for the taxon is *Candidatus* Rorulella .

According to GTDB R06-RS202, this family belongs to the order *Xanthomonadales*.

Description of *Candidatus* Rorulella conarentia sp. nov.

Candidatus Rorulella conarentia (NL. fem. n. *conarentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SZUA-36 sp003233115*. The type genome for the species is the GenBank assembly GCA_003233115.1. The GC content of the type genome is 54.32 % and the genome length is 3.19 Mbp.

Description of *Candidatus* Rorulella offulugo sp. nov.

Candidatus Rorulella offulugo (NL. fem. n. *offulugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SZUA-36 sp013042835*. The type genome for the species is the GenBank assembly GCA_013042835.1. The GC content of the type genome is 55.61 % and the genome length is 3.43 Mbp.

Description of *Candidatus* Rorulia demagitica sp. nov.

Candidatus Rorulia demagitica (NL. fem. n. *demagitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2718715 sp002718715*. The type genome for the species is the GenBank assembly GCA_002718715.1. The GC content of the type genome is 28.23 % and the genome length is 1.55 Mbp.

Description of *Candidatus* Rorulia gen. nov.

Candidatus Rorulia (NL. fem. n. *Rorulia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2718715*. The type species for the genus is *Candidatus* Rorulia demagitica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GCA-2718715*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Roruliaceae.

Description of *Candidatus* Roruliaceae fam. nov.

Candidatus Roruliaceae (NL. fem. n. *Roruliaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *GCA-2718715.* The type genus for the taxon is *Candidatus* Rorulia .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA1369*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Malogiales.

Description of *Candidatus* Rorulida caravimonia sp. nov.

Candidatus Rorulida caravimonia (NL. fem. n. *caravimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2720935 sp002720935*. The type genome for the species is the GenBank assembly GCA_002720935.1. The GC content of the type genome is 38.99 % and the genome length is 1.72 Mbp.

Description of *Candidatus* Rorulida gen. nov.

Candidatus Rorulida (NL. fem. n. *Rorulida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2720935*. The type species for the genus is *Candidatus* Rorulida caravimonia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GCA-2720935*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Rorulidaceae.

Description of *Candidatus* Rorulidaceae fam. nov.

Candidatus Rorulidaceae (NL. fem. n. *Rorulidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *GCA-2720935.* The type genus for the taxon is *Candidatus* Rorulida .

According to GTDB R06-RS202, this family belongs to the order *Micavibrionales*.

Description of *Candidatus* Rorulosa exsorimonas sp. nov.

Candidatus Rorulosa exsorimonas (NL. fem. n. *exsorimonas* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DG-23 sp001302825*. The type genome for the species is the GenBank assembly GCA_001302825.1. The GC content of the type genome is 52.39 % and the genome length is 2.02 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Methane-rich estuary sediments 52-54 cm".

Description of *Candidatus* Rorulosa gen. nov.

Candidatus Rorulosa (NL. fem. n. *Rorulosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DG-23*. The type species for the genus is *Candidatus* Rorulosa exsorimonas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DG-23*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Rorulosaceae.

Description of *Candidatus* Rorulosaceae fam. nov.

Candidatus Rorulosaceae (NL. fem. n. *Rorulosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *DG-23.* The type genus for the taxon is *Candidatus* Rorulosa .

According to the original version of GTDB R06-RS202, this family belongs to the order *DG-23*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Rorulosales.

Description of *Candidatus* Rorulosales ord. nov.

Candidatus Rorulosales (NL. fem. n. *Rorulosales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *DG-23.* The type genus for the taxon is *Candidatus* Rorulosa .

According to the original version of GTDB R06-RS202, this family belongs to the class *DG-23*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Rorulosae.

Description of *Candidatus* Rorulosae class. nov.

Candidatus Rorulosae (NL. fem. n. *c__Rorulosae* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *DG-23.* The type genus for the taxon is *Candidatus* Rorulosa .

According to GTDB R06-RS202, this class belongs to the phylum *Planctomycetota*.

Description of *Candidatus* Rorulula buxanax sp. nov.

Candidatus Rorulula buxanax (NL. fem. n. *buxanax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Cx-87 sp014529995*. The type genome for the species is the GenBank assembly RS_GCF_014530025.1. The GC content of the type genome is 66.62 % and the genome length is 3.13 Mbp.

Description of *Candidatus* Rorulula gen. nov.

Candidatus Rorulula (NL. fem. n. *Rorulula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Cx-87*. The type species for the genus is *Candidatus* Rorulula buxanax .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Rosacana citipitrix sp. nov.

Candidatus Rosacana citipitrix (NL. fem. n. *citipitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7434 sp002339085*. The type genome for the species is the GenBank assembly GCA_002339085.1. The GC content of the type genome is 43.84 % and the genome length is 2.26 Mbp.

Description of *Candidatus* Rosacana gen. nov.

Candidatus Rosacana (NL. fem. n. *Rosacana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA7434*. The type species for the genus is *Candidatus* Rosacana citipitrix .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA7434*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Rosacanaceae.

Description of *Candidatus* Rosacanaceae fam. nov.

Candidatus Rosacanaceae (NL. fem. n. *Rosacanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA7434.* The type genus for the taxon is *Candidatus* Rosacana .

According to GTDB R06-RS202, this family belongs to the order *Pseudomonadales*.

Description of *Candidatus* Rosacana deforitio sp. nov.

Candidatus Rosacana deforitio (NL. fem. n. *deforitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7434 sp002726445*. The type genome for the species is the GenBank assembly GCA_003521865.1. The GC content of the type genome is 45.73 % and the genome length is 1.42 Mbp.

Description of *Candidatus* Rosacana diluditrix sp. nov.

Candidatus Rosacana diluditrix (NL. fem. n. *diluditrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7434 sp002336035*. The type genome for the species is the GenBank assembly GCA_002336035.1. The GC content of the type genome is 43.9 % and the genome length is 2.41 Mbp.

Description of *Candidatus* Rosacana expasicula sp. nov.

Candidatus Rosacana expasicula (NL. fem. n. *expasicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *UBA7434 sp003492055*. The type genome for the species is the GenBank assembly GCA_003492055.1. The GC content of the type genome is 42.99 % and the genome length is 1.5 Mbp.

Description of *Candidatus* Rosacana megalitudo sp. nov.

Candidatus Rosacana megalitudo (NL. fem. n. *megalitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7434 sp002480045*. The type genome for the species is the GenBank assembly GCA_002387705.1. The GC content of the type genome is 47.98 % and the genome length is 2.19 Mbp.

Description of *Candidatus* Rosacana nutabax sp. nov.

Candidatus Rosacana nutabax (NL. fem. n. *nutabax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7434 sp004283095*. The type genome for the species is the GenBank assembly GCA_004283095.1. The GC content of the type genome is 53.52 % and the genome length is 2.84 Mbp.

Description of *Candidatus* Rosacaria armipivita sp. nov.

Candidatus Rosacaria armipivita (NL. fem. n. *armipivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *NSJ-53 sp014384795*. The type genome for the species is the GenBank assembly GCA_014384795.1. The GC content of the type genome is 56.48 % and the genome length is 2.22 Mbp.

Description of *Candidatus* Rosacaria gen. nov.

Candidatus Rosacaria (NL. fem. n. *Rosacaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *NSJ-53*. The type species for the genus is *Candidatus* Rosacaria armipivita .

According to the original version of GTDB R06-RS202, this genus belongs to the family *NSJ-53*. According to the renamed version of GTDB R06-RS202, this taxon belongs to

the family *Candidatus* Rosacariaceae.

Description of *Candidatus* Rosacariaceae fam. nov.

Candidatus Rosacariaceae (NL. fem. n. *Rosacariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *NSJ-53*. The type genus for the taxon is *Candidatus* Rosacaria .

According to GTDB R06-RS202, this family belongs to the order *Christensenellales*.

Description of *Candidatus* Rosacia adpenastra sp. nov.

Candidatus Rosacia adpenastra (NL. fem. n. *adpenastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA10281 sp902797515*. The type genome for the species is the GenBank assembly GCA_902797515.1. The GC content of the type genome is 47.55 % and the genome length is 1.36 Mbp.

Description of *Candidatus* Rosacia gen. nov.

Candidatus Rosacia (NL. fem. n. *Rosacia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA10281*. The type species for the genus is *Candidatus* Rosacia adpenastra .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Rosacia bisacicella sp. nov.

Candidatus Rosacia bisacicella (NL. fem. n. *bisacicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA10281 sp000437515*. The type genome for the species is the GenBank assembly GCA_000437515.1. The GC content of the type genome is 45.44 % and the genome length is 1.73 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "derived from human gut metagenome".

Description of *Candidatus* Rosacia butubitudo sp. nov.

Candidatus Rosacia butubitudo (NL. fem. n. *butubitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA10281 sp900548285*. The type genome for the species is the GenBank assembly GCA_900548285.1. The GC content of the type genome is 46.48 % and the genome length is 1.89 Mbp.

Description of *Candidatus* Rosacia ectenibra sp. nov.

Candidatus Rosacia ectenibra (NL. fem. n. *ectenibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA10281 sp902766475*. The type genome for the species is the GenBank assembly GCA_902766475.1. The GC content of the type genome is 45.61 % and the genome length is 1.54 Mbp.

Description of *Candidatus* Rosacia effulilenta sp. nov.

Candidatus Rosacia effulilenta (NL. fem. n. *effulilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA10281 sp900767885*. The type genome for the species is the GenBank assembly RS_GCF_900767885.1. The GC content of the type genome is 45.56 % and the genome length is 1.44 Mbp.

Description of *Candidatus* Rosacia inlapibula sp. nov.

Candidatus Rosacia inlapibula (NL. fem. n. *inlapibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA10281 sp900764105*. The type genome for the species is the GenBank assembly RS_GCF_900764105.1. The GC content of the type genome is 44.55 % and the genome length is 1.97 Mbp.

Description of *Candidatus* Rosacia lavacedo sp. nov.

Candidatus Rosacia lavacedo (NL. fem. n. *lavacedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA10281 sp900767815*. The type genome for the species is the GenBank assembly GCA_902797545.1. The GC content of the type genome is 44.28 % and the genome length is 1.93 Mbp.

Description of *Candidatus* Rosacia obfiressa sp. nov.

Candidatus Rosacia obfiressa (NL. fem. n. *obfiressa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA10281 sp900767495*. The type genome for the species is the GenBank assembly RS_GCF_900767495.1. The GC content of the type genome is 46.06 % and the genome length is 1.43 Mbp.

Description of *Candidatus* Rosacia petulivita sp. nov.

Candidatus Rosacia petulivita (NL. fem. n. *petulivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA10281 sp900554485*. The type genome for the species is the GenBank assembly RS_GCF_900766465.1. The GC content of the type genome is 46.12 % and the genome length is 1.71 Mbp.

Description of *Candidatus* Rosacia refulicella sp. nov.

Candidatus Rosacia refulicella (NL. fem. n. *refulicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA10281 sp902797945*. The type genome for the species is the GenBank assembly GCA_902797945.1. The GC content of the type genome is 41.05 % and the genome length is 1.55 Mbp.

Description of *Candidatus* Rosacia urbicitica sp. nov.

Candidatus Rosacia urbicitica (NL. fem. n. *urbicitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *UBA10281 sp900556195*. The type genome for the species is the GenBank assembly GCA_900556195.1. The GC content of the type genome is 45.84 % and the genome length is 1.4 Mbp.

Description of *Candidatus* Rosacida defuligena sp. nov.

Candidatus Rosacida defuligena (NL. fem. n. *defuligena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA11872 sp009839425*. The type genome for the species is the GenBank assembly GCA_009839425.1. The GC content of the type genome is 66.04 % and the genome length is 4.1 Mbp.

Description of *Candidatus* Rosacida gen. nov.

Candidatus Rosacida (NL. fem. n. *Rosacida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA11872*. The type species for the genus is *Candidatus* Rosacida defuligena .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA11872*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Rosacidaceae.

Description of *Candidatus* Rosacidaceae fam. nov.

Candidatus Rosacidaceae (NL. fem. n. *Rosacidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA11872.* The type genus for the taxon is *Candidatus* Rosacida .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA11872*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Rosacidales.

Description of *Candidatus* Rosacidales ord. nov.

Candidatus Rosacidales (NL. fem. n. *Rosacidales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA11872.* The type genus for the taxon is *Candidatus* Rosacida .

According to the original version of GTDB R06-RS202, this family belongs to the class *UBA11872*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Rosacidae.

Description of *Candidatus* Rosacidae class. nov.

Candidatus Rosacidae (NL. fem. n. *c__Rosacidae* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA11872.* The type genus for the taxon is *Candidatus* Rosacida .

According to GTDB R06-RS202, this class belongs to the phylum *Chloroflexota*.

Description of *Candidatus* Rosacida utputilega sp. nov.

Candidatus Rosacida utputilega (NL. fem. n. *utputilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA11872 sp011523785*. The type genome for the species is the GenBank assembly GCA_011523785.1. The GC content of the type genome is 66.1 % and the genome length is 3.3 Mbp.

Description of *Candidatus* Rosacida viginugo sp. nov.

Candidatus Rosacida viginugo (NL. fem. n. *viginugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA11872 sp002433065*. The type genome for the species is the GenBank assembly GCA_002433065.1. The GC content of the type genome is 53.93 % and the genome length is 2.06 Mbp.

Description of *Candidatus* Rosarana latibago sp. nov.

Candidatus Rosarana latibago (NL. fem. n. *latibago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA12574 sp002712305*. The type genome for the species is the GenBank assembly GCA_002718795.1. The GC content of the type genome is 59.62 % and the genome length is 3.49 Mbp.

Description of *Candidatus* Rosarana gen. nov.

Candidatus Rosarana (NL. fem. n. *Rosarana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA12574*. The type species for the genus is *Candidatus* Rosarana latibago .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA8231*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cicatosaceae.

Description of *Candidatus* Rosararia denigicula sp. nov.

Candidatus Rosararia denigicula (NL. fem. n. *denigicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA10806 sp003520965*. The type genome for the species is the GenBank assembly GCA_003489885.1. The GC content of the type genome is 46.97 % and the genome length is 2.72 Mbp.

Description of *Candidatus* Rosararia gen. nov.

Candidatus Rosararia (NL. fem. n. *Rosararia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA10806*. The type species for the genus is *Candidatus* Rosararia denigicula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA10806*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Rosararia ceae.

Description of *Candidatus* Rosararia ceae fam. nov.

Candidatus Rosararia ceae (NL. fem. n. *Rosararia ceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA10806.* The type genus for the taxon is *Candidatus* Rosararia .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA10806*. According to the renamed version of GTDB R06-RS202, this taxon belongs

to the order *Candidatus* Rosarariales.

Description of *Candidatus* Rosarariales ord. nov.

Candidatus Rosarariales (NL. fem. n. *Rosarariales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA10806.* The type genus for the taxon is *Candidatus* Rosararia .

According to the original version of GTDB R06-RS202, this family belongs to the class *MSB-5A5*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Loripellae.

Description of *Candidatus* Rosararia rorarugo sp. nov.

Candidatus Rosararia rorarugo (NL. fem. n. *rorarugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA10806 sp001775395*. The type genome for the species is the GenBank assembly GCA_001775395.1. The GC content of the type genome is 53.25 % and the genome length is 3.86 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle background sediment; well D04 at 16ft depth".

Description of *Candidatus* Rosarella conubibula sp. nov.

Candidatus Rosarella conubibula (NL. fem. n. *conubibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *IMCC26256 sp001023575*. The type genome for the species is the GenBank assembly GCA_009698865.1. The GC content of the type genome is 55.26 % and the genome length is 1.63 Mbp.

Description of *Candidatus* Rosarella gen. nov.

Candidatus Rosarella (NL. fem. n. *Rosarella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *IMCC26256*. The type species for the genus is *Candidatus* Rosarella conubibula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *IMCC26256*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Rosarellaceae.

Description of *Candidatus* Rosarellaceae fam. nov.

Candidatus Rosarellaceae (NL. fem. n. *Rosarellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *IMCC26256.* The type genus for the taxon is *Candidatus* Rosarella .

According to the original version of GTDB R06-RS202, this family belongs to the order *IMCC26256*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Rosarellales.

Description of *Candidatus* Rosarellales ord. nov.

Candidatus Rosarellales (NL. fem. n. *Rosarellales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *IMCC26256.* The type genus for the taxon is *Candidatus* Rosarella .

According to the GTDB R06-RS202, this order belongs to the class *Acidimicrobiia*.

Description of *Candidatus* Rosarella desonimonas sp. nov.

Candidatus Rosarella desonimonas (NL. fem. n. *desonimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *IMCC26256 sp009702955*. The type genome for the species is the GenBank assembly GCA_009698145.1. The GC content of the type genome is 55.89 % and the genome length is 1.65 Mbp.

Description of *Candidatus* Rosarida risibago sp. nov.

Candidatus Rosarida risibago (NL. fem. n. *risibago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *O2-12-FULL-27-8 sp001796155*. The type genome for the species is the GenBank assembly GCA_001796155.1. The GC content of the type genome is 27.43

% and the genome length is 0.97 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 1.2 micron filter; full assembly".

Description of *Candidatus* Rosarida gen. nov.

Candidatus Rosarida (NL. fem. n. *Rosarida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *O2-12-FULL-27-8*. The type species for the genus is *Candidatus* Rosarida risibago .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SM23-39*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Levifiaceae.

Description of *Candidatus* Rosarosa curabax sp. nov.

Candidatus Rosarosa curabax (NL. fem. n. *curabax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIXEA01 sp903877125*. The type genome for the species is the GenBank assembly GCA_903877125.1. The GC content of the type genome is 64.51 % and the genome length is 5.15 Mbp.

Description of *Candidatus* Rosarosa gen. nov.

Candidatus Rosarosa (NL. fem. n. *Rosarosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIXEA01*. The type species for the genus is *Candidatus* Rosarosa curabax .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Rosarosa debucatio sp. nov.

Candidatus Rosarosa debucatio (NL. fem. n. *debucatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIXEA01 sp903924985*. The type genome for the species is the

GenBank assembly GCA_903890565.1. The GC content of the type genome is 64.62 % and the genome length is 5.66 Mbp.

Description of *Candidatus* Rosarosa desupugo sp. nov.

Candidatus Rosarosa desupugo (NL. fem. n. *desupugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIXEA01 sp903918315*. The type genome for the species is the GenBank assembly GCA_903885225.1. The GC content of the type genome is 64.67 % and the genome length is 4.8 Mbp.

Description of *Candidatus* Rosarosa luticiforma sp. nov.

Candidatus Rosarosa luticiforma (NL. fem. n. *luticiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIXEA01 sp903900905*. The type genome for the species is the GenBank assembly GCA_903900905.1. The GC content of the type genome is 64.9 % and the genome length is 5.59 Mbp.

Description of *Candidatus* Rosarosa solipastra sp. nov.

Candidatus Rosarosa solipastra (NL. fem. n. *solipastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIXEA01 sp903895595*. The type genome for the species is the GenBank assembly GCA_903843765.1. The GC content of the type genome is 64.66 % and the genome length is 5.48 Mbp.

Description of *Candidatus* Rosarula bipatitas sp. nov.

Candidatus Rosarula bipatitas (NL. fem. n. *bipatitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *B1Sed10-166 sp003552665*. The type genome for the species is the GenBank assembly GCA_003552665.1. The GC content of the type genome is 61.05 % and the genome length is 3.02 Mbp.

Description of *Candidatus* Rosarula gen. nov.

Candidatus Rosarula (NL. fem. n. *Rosarula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *B1Sed10-166*. The type species for the genus is *Candidatus* Rosarula bipatitas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SLAA01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Dilicidaceae.

Description of *Candidatus* Rosarula casigastra sp. nov.

Candidatus Rosarula casigastra (NL. fem. n. *casigastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *B1Sed10-166 sp007126415*. The type genome for the species is the GenBank assembly GCA_007122715.1. The GC content of the type genome is 61.22 % and the genome length is 2.69 Mbp.

Description of *Candidatus* Rosarula occumigena sp. nov.

Candidatus Rosarula occumigena (NL. fem. n. *occumigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *B1Sed10-166 sp003552985*. The type genome for the species is the GenBank assembly GCA_003552985.1. The GC content of the type genome is 60.72 % and the genome length is 3.93 Mbp.

Description of *Candidatus* Rosarula pragmax sp. nov.

Candidatus Rosarula pragmax (NL. fem. n. *pragmax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *B1Sed10-166 sp003552185*. The type genome for the species is the GenBank assembly GCA_003552185.1. The GC content of the type genome is 61.37 % and the genome length is 3.49 Mbp.

Description of *Candidatus* Rosarula velifetta sp. nov.

Candidatus Rosarula velifetta (NL. fem. n. *velifetta* a species epithet created arbitrarily,

while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *B1Sed10-166 sp003556605*. The type genome for the species is the GenBank assembly GCA_003562055.1. The GC content of the type genome is 58.47 % and the genome length is 4.06 Mbp.

Description of *Candidatus* Roseateles pepenedo sp. nov.

Candidatus Roseateles pepenedo (NL. fem. n. *pepenedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Roseateles sp900109745*. The type genome for the species is the GenBank assembly RS_GCF_900109745.1. The GC content of the type genome is 65.9 % and the genome length is 5.98 Mbp.

Description of *Candidatus* Roseburia amatrugo sp. nov.

Candidatus Roseburia amatrugo (NL. fem. n. *amatrugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Roseburia sp900753715*. The type genome for the species is the GenBank assembly GCA_900753715.1. The GC content of the type genome is 43.83 % and the genome length is 3.79 Mbp.

Description of *Candidatus* Roseburia apporitrix sp. nov.

Candidatus Roseburia apporitrix (NL. fem. n. *apporitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Roseburia sp001940165*. The type genome for the species is the GenBank assembly RS_GCF_001940165.1. The GC content of the type genome is 40.68 % and the genome length is 3.39 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "feces".

Description of *Candidatus* Roseburia deculitas sp. nov.

Candidatus Roseburia deculitas (NL. fem. n. *deculitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Roseburia sp003470905*. The type genome for the species is the GenBank assembly GCA_900539515.1. The GC content of the type genome is 41.56 % and the genome length is 3.6 Mbp.

Description of *Candidatus* Roseburia defalitudo sp. nov.

Candidatus Roseburia defalitudo (NL. fem. n. *defalitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Roseburia sp900542495*. The type genome for the species is the GenBank assembly GCA_900542495.1. The GC content of the type genome is 41.18 % and the genome length is 3.18 Mbp.

Description of *Candidatus* Roseburia defasilenta sp. nov.

Candidatus Roseburia defasilenta (NL. fem. n. *defasilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Roseburia sp900548205*. The type genome for the species is the GenBank assembly GCA_900548205.1. The GC content of the type genome is 48.24 % and the genome length is 2.32 Mbp.

Description of *Candidatus* Roseburia invinastra sp. nov.

Candidatus Roseburia invinastra (NL. fem. n. *invinastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Roseburia sp004562005*. The type genome for the species is the GenBank assembly GCA_004562005.1. The GC content of the type genome is 41.92 % and the genome length is 4.1 Mbp.

Description of *Candidatus* Roseburia nimiribra sp. nov.

Candidatus Roseburia nimiribra (NL. fem. n. *nimiribra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Roseburia sp003483745*. The type genome for the species is the GenBank assembly GCA_900552595.1. The GC content of the type genome is 42.55 %

and the genome length is 2.56 Mbp.

Description of *Candidatus* Roseburia pulegetta sp. nov.

Candidatus Roseburia pulegetta (NL. fem. n. *pulegetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Roseburia sp900552665*. The type genome for the species is the GenBank assembly RS_GCF_003458815.1. The GC content of the type genome is 41.45 % and the genome length is 3.73 Mbp.

Description of *Candidatus* Roseburia rubefatica sp. nov.

Candidatus Roseburia rubefatica (NL. fem. n. *rubefatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Roseburia sp900756925*. The type genome for the species is the GenBank assembly GCA_900756925.1. The GC content of the type genome is 46.57 % and the genome length is 1.57 Mbp.

Description of *Candidatus* Roseburia vigenedo sp. nov.

Candidatus Roseburia vigenedo (NL. fem. n. *vigenedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Roseburia sp900550935*. The type genome for the species is the GenBank assembly GCA_900550935.1. The GC content of the type genome is 44.18 % and the genome length is 2.78 Mbp.

Description of *Candidatus* Roseiarcus nubifitrix sp. nov.

Candidatus Roseiarcus nubifitrix (NL. fem. n. *nubifitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Roseiarcus sp004799435*. The type genome for the species is the GenBank assembly GCA_004799435.1. The GC content of the type genome is 65.24 % and the genome length is 3.51 Mbp.

Description of *Candidatus* Roseiarcus pavimago sp. nov.

Candidatus Roseiarcus pavimago (NL. fem. n. *pavimago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Roseiarcus sp903932535*. The type genome for the species is the GenBank assembly GCA_903932535.1. The GC content of the type genome is 67.41 % and the genome length is 6.94 Mbp.

Description of *Candidatus* Roseiarcus pinacitio sp. nov.

Candidatus Roseiarcus pinacitio (NL. fem. n. *pinacitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Roseiarcus sp009765995*. The type genome for the species is the GenBank assembly RS_GCF_009765995.1. The GC content of the type genome is 62.72 % and the genome length is 6.87 Mbp.

Description of *Candidatus* Roseiarcus rubefessa sp. nov.

Candidatus Roseiarcus rubefessa (NL. fem. n. *rubefessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Roseiarcus sp003164825*. The type genome for the species is the GenBank assembly GCA_003131995.1. The GC content of the type genome is 65.15 % and the genome length is 4.69 Mbp.

Description of *Candidatus* Roseiarcus seposicella sp. nov.

Candidatus Roseiarcus seposicella (NL. fem. n. *seposicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Roseiarcus sp003164915*. The type genome for the species is the GenBank assembly GCA_003155095.1. The GC content of the type genome is 67.46 % and the genome length is 4.25 Mbp.

Description of *Candidatus* Roseibaca demaditrix sp. nov.

Candidatus Roseibaca demaditrix (NL. fem. n. *demaditrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Roseibaca sp009908405*. The type genome for the species is the GenBank assembly GCA_009908405.1. The GC content of the type genome is 64.12 % and the genome length is 2.58 Mbp.

Description of *Candidatus* Roseibacillus abrumitrix sp. nov.

Candidatus Roseibacillus abrumitrix (NL. fem. n. *abrumitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Roseibacillus_B sp002721695*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_002721695.1. The GC content of the type genome is 60.79 % and the genome length is 4.16 Mbp.

Description of *Candidatus* Roseibacillus adnunitura sp. nov.

Candidatus Roseibacillus adnunitura (NL. fem. n. *adnunitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Roseibacillus_B sp003483645*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003483645.1. The GC content of the type genome is 60.54 % and the genome length is 2.93 Mbp.

Description of *Candidatus* Roseibacillus cisoritas sp. nov.

Candidatus Roseibacillus cisoritas (NL. fem. n. *cisoritas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Roseibacillus_B sp002380675*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_002380675.1. The GC content of the type genome is 54.79 % and the genome length is 3.48 Mbp.

Description of *Candidatus* Roseibacillus decupugo sp. nov.

Candidatus Roseibacillus decupugo (NL. fem. n. *decupugo* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Roseibacillus_B sp002715825*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_002291645.1. The GC content of the type genome is 54.2 % and the genome length is 3.21 Mbp.

Description of *Candidatus* Roseibacillus feculatica sp. nov.

Candidatus Roseibacillus feculatica (NL. fem. n. *feculatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Roseibacillus_B sp002729275*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003503375.1. The GC content of the type genome is 54.92 % and the genome length is 3.08 Mbp.

Description of *Candidatus* Roseibacillus forinugo sp. nov.

Candidatus Roseibacillus forinugo (NL. fem. n. *forinugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Roseibacillus_B sp002709915*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_002709915.1. The GC content of the type genome is 53.91 % and the genome length is 3.63 Mbp.

Description of *Candidatus* Roseibacillus manufilenta sp. nov.

Candidatus Roseibacillus manufilenta (NL. fem. n. *manufilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Roseibacillus_B sp002686085*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_002323615.1. The GC

content of the type genome is 54.47 % and the genome length is 3.86 Mbp.

Description of *Candidatus* Roseibacillus mirifedo sp. nov.

Candidatus Roseibacillus mirifedo (NL. fem. n. *mirifedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Roseibacillus_B sp002501065*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_002501065.1. The GC content of the type genome is 60.32 % and the genome length is 5.04 Mbp.

Description of *Candidatus* Roseibacillus monopibula sp. nov.

Candidatus Roseibacillus monopibula (NL. fem. n. *monopibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Roseibacillus_B sp002420305*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_002709205.1. The GC content of the type genome is 53.66 % and the genome length is 3.35 Mbp.

Description of *Candidatus* Roseibacillus morigimonas sp. nov.

Candidatus Roseibacillus morigimonas (NL. fem. n. *morigimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Roseibacillus_B sp002723015*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_002336445.1. The GC content of the type genome is 56.23 % and the genome length is 3.23 Mbp.

Description of *Candidatus* Roseibacillus petulessa sp. nov.

Candidatus Roseibacillus petulessa (NL. fem. n. *petulessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Roseibacillus_B sp013001695*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_013001695.1. The GC content of the type genome is 67.28 % and the genome length is 5.13 Mbp.

Description of *Candidatus* Roseibacillus sitelitura sp. nov.

Candidatus Roseibacillus sitelitura (NL. fem. n. *sitelitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Roseibacillus_B sp014240355*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_014240355.1. The GC content of the type genome is 60.26 % and the genome length is 3.56 Mbp.

Description of *Candidatus* Roseibacillus tumefitura sp. nov.

Candidatus Roseibacillus tumefitura (NL. fem. n. *tumefitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Roseibacillus_B sp002709395*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_002699035.1. The GC content of the type genome is 57.35 % and the genome length is 3.16 Mbp.

Description of *Candidatus* Roseibium adtenastra sp. nov.

Candidatus Roseibium adtenastra (NL. fem. n. *adtenastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Roseibium sp001624695*. The type genome for the species is the GenBank assembly RS_GCF_001624695.1. The GC content of the type genome is 59.41 % and the genome length is 6.0 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "coastal seawater".

Description of *Candidatus* Roseibium armicimonia sp. nov.

Candidatus Roseibium armicimonia (NL. fem. n. *armicimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Roseibium sp008477545*. The type genome for the species is the GenBank assembly RS_GCF_008477545.1. The GC content of the type genome is 64.76 % and the genome length is 4.35 Mbp.

Description of *Candidatus* Roseibium artocitas sp. nov.

Candidatus Roseibium artocitas (NL. fem. n. *artocitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Roseibium sp013373445*. The type genome for the species is the GenBank assembly GCA_013373445.1. The GC content of the type genome is 54.08 % and the genome length is 3.64 Mbp.

Description of *Candidatus* Roseibium camilitio sp. nov.

Candidatus Roseibium camilitio (NL. fem. n. *camilitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Roseibium sp006517275*. The type genome for the species is the GenBank assembly RS_GCF_006517275.1. The GC content of the type genome is 55.02 % and the genome length is 6.19 Mbp.

Description of *Candidatus* Roseibium deparitas sp. nov.

Candidatus Roseibium deparitas (NL. fem. n. *deparitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Roseibium sp002237595*. The type genome for the species is the GenBank assembly RS_GCF_002237595.1. The GC content of the type genome is 59.89 % and the genome length is 5.98 Mbp.

Description of *Candidatus* Roseibium domicetta sp. nov.

Candidatus Roseibium domicetta (NL. fem. n. *domicetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Roseibium sp001890945*. The type genome for the species is the GenBank assembly GCA_001890945.1. The GC content of the type genome is 56.41 % and the genome length is 5.23 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "non-axenic enrichment culture inoculated from diseased coral".

Description of *Candidatus* Roseibium indecugo sp. nov.

Candidatus Roseibium indecugo (NL. fem. n. *indecugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Roseibium sp009363435*. The type genome for the species is the GenBank assembly RS_GCF_009363435.1. The GC content of the type genome is 54.99 % and the genome length is 6.4 Mbp.

Description of *Candidatus* Roseibium nidifivita sp. nov.

Candidatus Roseibium nidifivita (NL. fem. n. *nidifivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Roseibium sp008107755*. The type genome for the species is the GenBank assembly RS_GCF_008107755.1. The GC content of the type genome is 60.49 % and the genome length is 6.1 Mbp.

Description of *Candidatus* Roseibium octipibula sp. nov.

Candidatus Roseibium octipibula (NL. fem. n. *octipibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Roseibium sp000148725*. The type genome for the species is the GenBank assembly RS_GCF_000148725.1. The GC content of the type genome is 53.88 % and the genome length is 5.7 Mbp.

Description of *Candidatus* Roseibium onocritrix sp. nov.

Candidatus Roseibium onocritrix (NL. fem. n. *onocritrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Roseibium sp009650605*. The type genome for the species is the GenBank assembly RS_GCF_009650605.1. The GC content of the type genome is 57.15

% and the genome length is 4.74 Mbp.

Description of *Candidatus* Roseibium pedififica sp. nov.

Candidatus Roseibium pedififica (NL. fem. n. *pedififica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Roseibium sp000521215*. The type genome for the species is the GenBank assembly RS_GCF_000521215.1. The GC content of the type genome is 56.25 % and the genome length is 7.63 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "laboratory algal culture of the dinoflagellate Scrippsiella trochoidea CCAP 1134/1".

Description of *Candidatus* Roseibium tubicitura sp. nov.

Candidatus Roseibium tubicitura (NL. fem. n. *tubicitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Roseibium sp008107695*. The type genome for the species is the GenBank assembly RS_GCF_008107695.1. The GC content of the type genome is 59.04 % and the genome length is 6.44 Mbp.

Description of *Candidatus* Roseibium ulcisitrix sp. nov.

Candidatus Roseibium ulcisitrix (NL. fem. n. *ulcisitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Roseibium sp003075075*. The type genome for the species is the GenBank assembly RS_GCF_003075075.1. The GC content of the type genome is 61.55 % and the genome length is 5.1 Mbp.

Description of *Candidatus* Roseicyclus catobentia sp. nov.

Candidatus Roseicyclus catobentia (NL. fem. n. *catobentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Roseicyclus sp000013565*. The type genome for the species is the GenBank assembly RS_GCF_000013565.1. The GC content of the type genome is 62.24 % and the genome length is 4.4 Mbp.

Description of *Candidatus* Roseicyclus offulimonia sp. nov.

Candidatus Roseicyclus offulimonia (NL. fem. n. *offulimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Roseicyclus sp012395815*. The type genome for the species is the GenBank assembly RS_GCF_012395815.1. The GC content of the type genome is 70.78 % and the genome length is 3.71 Mbp.

Description of *Candidatus* Roseicyclus oppugitura sp. nov.

Candidatus Roseicyclus oppugitura (NL. fem. n. *oppugitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Roseicyclus sp001314805*. The type genome for the species is the GenBank assembly GCA_001314805.1. The GC content of the type genome is 67.07 % and the genome length is 3.68 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "enrichment culture HLUCC-O from microbial mat sample; contains cyanobacterium Phormidium OSCR and associated heterotrophs".

Description of *Candidatus* Roseicyclus optumitura sp. nov.

Candidatus Roseicyclus optumitura (NL. fem. n. *optumitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Roseicyclus sp001650845*. The type genome for the species is the GenBank assembly RS_GCF_001650845.1. The GC content of the type genome is 62.69 % and the genome length is 4.58 Mbp.

Description of *Candidatus* Roseiflexus arcipitoga sp. nov.

Candidatus Roseiflexus arcipitoga (NL. fem. n. *arcipitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Roseiflexus sp000016665*. The type genome for the species is the GenBank assembly RS_GCF_000016665.1. The GC content of the type genome is 60.39 % and the genome length is 5.8 Mbp.

Description of *Candidatus* Roseilinea munimitudo sp. nov.

Candidatus Roseilinea munimitudo (NL. fem. n. *munimitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Roseilinea sp003696945*. The type genome for the species is the GenBank assembly GCA_003696945.1. The GC content of the type genome is 63.7 % and the genome length is 3.07 Mbp.

Description of *Candidatus* Roseimaritima arancivita sp. nov.

Candidatus Roseimaritima arancivita (NL. fem. n. *arancivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Roseimaritima sp007741495*. The type genome for the species is the GenBank assembly RS_GCF_007741495.1. The GC content of the type genome is 54.53 % and the genome length is 7.22 Mbp.

Description of *Candidatus* Roseimaritima invesibra sp. nov.

Candidatus Roseimaritima invesibra (NL. fem. n. *invesibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Roseimaritima sp009618275*. The type genome for the species is the GenBank assembly RS_GCF_009618275.1. The GC content of the type genome is 62.36 % and the genome length is 6.25 Mbp.

Description of *Candidatus* Roseimaritima monacibula sp. nov.

Candidatus Roseimaritima monacibula (NL. fem. n. *monacibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Roseimaritima sp007124075*. The type genome for the species is the GenBank assembly GCA_007124075.1. The GC content of the type genome is 56.19 % and the genome length is 4.27 Mbp.

Description of *Candidatus* Roseimicrobium penurentia sp. nov.

Candidatus Roseimicrobium penurentia (NL. fem. n. *penurentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Roseimicrobium sp011044495*. The type genome for the species is the GenBank assembly RS_GCF_011044495.1. The GC content of the type genome is 59.87 % and the genome length is 7.96 Mbp.

Description of *Candidatus* Roseinatronobacter affulibula sp. nov.

Candidatus Roseinatronobacter affulibula (NL. fem. n. *affulibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Roseinatronobacter sp007692585*. The type genome for the species is the GenBank assembly GCA_007692585.1. The GC content of the type genome is 62.47 % and the genome length is 3.26 Mbp.

Description of *Candidatus* Roseinatronobacter artocivita sp. nov.

Candidatus Roseinatronobacter artocivita (NL. fem. n. *artocivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Roseinatronobacter sp007695345*. The type genome for the species is the GenBank assembly GCA_007695345.1. The GC content of the type genome is 64.23 % and the genome length is 3.26 Mbp.

Description of *Candidatus* Roseinatronobacter cacomax sp. nov.

Candidatus Roseinatronobacter cacomax (NL. fem. n. *cacomax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Roseinatronobacter sp007123015*. The type genome for the species is the GenBank assembly GCA_007123015.1. The GC content of the type genome is 61.14 % and the genome length is 2.87 Mbp.

Description of *Candidatus* Roseinatronobacter cibaressa sp. nov.

Candidatus Roseinatronobacter cibaressa (NL. fem. n. *cibaressa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Roseinatronobacter sp007118295*. The type genome for the species is the GenBank assembly GCA_007118295.1. The GC content of the type genome is 62.59

% and the genome length is 3.46 Mbp.

Description of *Candidatus* Roseinatronobacter culigicula sp. nov.

Candidatus Roseinatronobacter culigicula (NL. fem. n. *culigicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Roseinatronobacter sp003561595*. The type genome for the species is the GenBank assembly GCA_003552445.1. The GC content of the type genome is 64.03 % and the genome length is 3.38 Mbp.

Description of *Candidatus* Roseinatronobacter defosetta sp. nov.

Candidatus Roseinatronobacter defosetta (NL. fem. n. *defosetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Roseinatronobacter sp007118445*. The type genome for the species is the GenBank assembly GCA_007118445.1. The GC content of the type genome is 63.17 % and the genome length is 2.85 Mbp.

Description of *Candidatus* Roseinatronobacter denixatica sp. nov.

Candidatus Roseinatronobacter denixatica (NL. fem. n. *denixatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Roseinatronobacter sp007125005*. The type genome for the species is the GenBank assembly GCA_007131995.1. The GC content of the type genome is 59.35 % and the genome length is 2.93 Mbp.

Description of *Candidatus* Roseinatronobacter derunatica sp. nov.

Candidatus Roseinatronobacter derunatica (NL. fem. n. *derunatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Roseinatronobacter sp003567315*. The type genome for the species is the GenBank assembly GCA_003567315.1. The GC content of the type genome is 63.48 % and the genome length is 2.84 Mbp.

Description of *Candidatus* Roseinatronobacter detesax sp. nov.

Candidatus Roseinatronobacter detesax (NL. fem. n. *detesax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Roseinatronobacter sp007116445*. The type genome for the species is the GenBank assembly GCA_007116445.1. The GC content of the type genome is 62.09 % and the genome length is 2.42 Mbp.

Description of *Candidatus* Roseinatronobacter exinditura sp. nov.

Candidatus Roseinatronobacter exinditura (NL. fem. n. *exinditura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Roseinatronobacter sp003564655*. The type genome for the species is the GenBank assembly GCA_003564655.1. The GC content of the type genome is 66.45 % and the genome length is 3.21 Mbp.

Description of *Candidatus* Roseinatronobacter impolimonia sp. nov.

Candidatus Roseinatronobacter impolimonia (NL. fem. n. *impolimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Roseinatronobacter sp007117255*. The type genome for the species is the GenBank assembly GCA_007117255.1. The GC content of the type genome is 59.59 % and the genome length is 2.8 Mbp.

Description of *Candidatus* Roseinatronobacter inmitousia sp. nov.

Candidatus Roseinatronobacter inmitousia (NL. fem. n. *inmitousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Roseinatronobacter sp007131465*. The type genome for the species is the GenBank assembly GCA_007131465.1. The GC content of the type genome is 62.72 % and the genome length is 3.03 Mbp.

Description of *Candidatus* Roseinatronobacter lapicedo sp. nov.

Candidatus Roseinatronobacter lapicedo (NL. fem. n. *lapicedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Roseinatronobacter sp003567295*. The type genome for the species is the GenBank assembly GCA_003567295.1. The GC content of the type genome is 65.55 % and the genome length is 1.68 Mbp.

Description of *Candidatus* Roseinatronobacter laxitessa sp. nov.

Candidatus Roseinatronobacter laxitessa (NL. fem. n. *laxitessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Roseinatronobacter sp007134805*. The type genome for the species is the GenBank assembly GCA_007134805.1. The GC content of the type genome is 65.06 % and the genome length is 2.68 Mbp.

Description of *Candidatus* Roseinatronobacter lucifatica sp. nov.

Candidatus Roseinatronobacter lucifatica (NL. fem. n. *lucifatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Roseinatronobacter sp007694945*. The type genome for the species is the GenBank assembly GCA_007694945.1. The GC content of the type genome is 62.63 % and the genome length is 3.18 Mbp.

Description of *Candidatus* Roseinatronobacter navicitrix sp. nov.

Candidatus Roseinatronobacter navicitrix (NL. fem. n. *navicitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Roseinatronobacter sp007126715*. The type genome for the species is the GenBank assembly GCA_007126715.1. The GC content of the type genome is 58.75 % and the genome length is 3.26 Mbp.

Description of *Candidatus* Roseinatronobacter nocumibula sp. nov.

Candidatus Roseinatronobacter nocumibula (NL. fem. n. *nocumibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Roseinatronobacter sp007116575*. The type genome for the species is the GenBank assembly GCA_007116575.1. The GC content of the type genome is 63.92

% and the genome length is 2.65 Mbp.

Description of *Candidatus* Roseinatronobacter reduvifica sp. nov.

Candidatus Roseinatronobacter reduvifica (NL. fem. n. *reduvifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Roseinatronobacter sp003565055*. The type genome for the species is the GenBank assembly GCA_003565055.1. The GC content of the type genome is 62.3 % and the genome length is 3.42 Mbp.

Description of *Candidatus* Roseinatronobacter sonivax sp. nov.

Candidatus Roseinatronobacter sonivax (NL. fem. n. *sonivax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Roseinatronobacter sp007134865*. The type genome for the species is the GenBank assembly GCA_007123845.1. The GC content of the type genome is 63.05 % and the genome length is 2.53 Mbp.

Description of *Candidatus* Roseinatronobacter televitia sp. nov.

Candidatus Roseinatronobacter televitia (NL. fem. n. *televitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Roseinatronobacter sp007128995*. The type genome for the species is the GenBank assembly GCA_007128995.1. The GC content of the type genome is 59.59 % and the genome length is 3.2 Mbp.

Description of *Candidatus* Roseinatronobacter vecoritoga sp. nov.

Candidatus Roseinatronobacter vecoritoga (NL. fem. n. *vecoritoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Roseinatronobacter sp007128135*. The type genome for the species is the GenBank assembly GCA_007128135.1. The GC content of the type genome is 64.87 % and the genome length is 3.31 Mbp.

Description of *Candidatus* Roseivirga demogilega sp. nov.

Candidatus Roseivirga demogilega (NL. fem. n. *demogilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Roseivirga sp002786855*. The type genome for the species is the GenBank assembly GCA_002786855.1. The GC content of the type genome is 40.31 % and the genome length is 4.06 Mbp.

Description of *Candidatus* Roseivirga monumessa sp. nov.

Candidatus Roseivirga monumessa (NL. fem. n. *monumessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Roseivirga sp002427745*. The type genome for the species is the GenBank assembly GCA_002427745.1. The GC content of the type genome is 45.98 % and the genome length is 8.18 Mbp.

Description of *Candidatus* Roseivivax meriditia sp. nov.

Candidatus Roseivivax meriditia (NL. fem. n. *meriditia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Roseivivax sp009363255*. The type genome for the species is the GenBank assembly RS_GCF_009363495.1. The GC content of the type genome is 63.81 % and the genome length is 4.3 Mbp.

Description of *Candidatus* Rosenbergiella avuncilenta sp. nov.

Candidatus Rosenbergiella avuncilenta (NL. fem. n. *avuncilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rosenbergiella sp009762255*. The type genome for the species is the GenBank assembly RS_GCF_009762255.1. The GC content of the type genome is 48.56 % and the genome length is 3.44 Mbp.

Description of *Candidatus* Rosenbergiella cenotimonas sp. nov.

Candidatus Rosenbergiella cenotimonas (NL. fem. n. *cenotimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rosenbergiella sp002752555*. The type genome for the species is the GenBank assembly GCA_001602535.1. The GC content of the type genome is 47.93 % and the genome length is 2.7 Mbp.

Description of *Candidatus* Roseobacter elastivita sp. nov.

Candidatus Roseobacter elastivita (NL. fem. n. *elastivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Roseobacter sp009811755*. The type genome for the species is the GenBank assembly RS_GCF_009811755.1. The GC content of the type genome is 61.04 % and the genome length is 4.47 Mbp.

Description of *Candidatus* Roseococcus bulapago sp. nov.

Candidatus Roseococcus bulapago (NL. fem. n. *bulapago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Roseococcus sp007129145*. The type genome for the species is the GenBank assembly GCA_007129145.1. The GC content of the type genome is 70.6 % and the genome length is 2.46 Mbp.

Description of *Candidatus* Roseococcus excinax sp. nov.

Candidatus Roseococcus excinax (NL. fem. n. *excinax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Roseococcus sp004336745*. The type genome for the species is the GenBank assembly RS_GCF_004336745.1. The GC content of the type genome is 70.58 % and the genome length is 4.71 Mbp.

Description of *Candidatus* Roseofilum bipalisca sp. nov.

Candidatus Roseofilum bipalisca (NL. fem. n. *bipalisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Roseofilum sp002340255*. The type genome for the species is the GenBank assembly GCA_002429095.1. The GC content of the type genome is 44.95 %

and the genome length is 5.4 Mbp.

Description of *Candidatus* Roseomonas alsiditio sp. nov.

Candidatus Roseomonas alsiditio (NL. fem. n. *alsiditio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Roseomonas sp902706185*. The type genome for the species is the GenBank assembly RS_GCF_902706185.1. The GC content of the type genome is 71.14 % and the genome length is 6.38 Mbp.

Description of *Candidatus* Roseomonas benepibula sp. nov.

Candidatus Roseomonas benepibula (NL. fem. n. *benepibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Roseomonas sp003696345*. The type genome for the species is the GenBank assembly RS_GCF_003611975.1. The GC content of the type genome is 68.59 % and the genome length is 5.82 Mbp.

Description of *Candidatus* Roseomonas exindousia sp. nov.

Candidatus Roseomonas exindousia (NL. fem. n. *exindousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Roseomonas sp009829925*. The type genome for the species is the GenBank assembly RS_GCF_009829925.1. The GC content of the type genome is 70.95 % and the genome length is 5.02 Mbp.

Description of *Candidatus* Roseomonas vepalitica sp. nov.

Candidatus Roseomonas vepalitica (NL. fem. n. *vepalitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Roseomonas sp000245075*. The type genome for the species is the GenBank assembly RS_GCF_000245075.1. The GC content of the type genome is 66.99 % and the genome length is 5.19 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "skin".

Description of *Candidatus* Roseomonas cinefitura sp. nov.

Candidatus Roseomonas cinefitura (NL. fem. n. *cinefitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Roseomonas_A sp003173615*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_003173615.1. The GC content of the type genome is 71.49 % and the genome length is 5.94 Mbp.

Description of *Candidatus* Roseomonas defenicella sp. nov.

Candidatus Roseomonas defenicella (NL. fem. n. *defenicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Roseomonas_A sp005222815*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_005222815.1. The GC content of the type genome is 70.87 % and the genome length is 6.31 Mbp.

Description of *Candidatus* Roseomonas inturilega sp. nov.

Candidatus Roseomonas inturilega (NL. fem. n. *inturilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Roseomonas_A sp012103215*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_012103215.1. The GC content of the type genome is 71.74 % and the genome length is 5.79 Mbp.

Description of *Candidatus* Roseomonas opercitrix sp. nov.

Candidatus Roseomonas opercitrix (NL. fem. n. *opercitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Roseomonas_A sp011040385*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The

type genome for the species is the GenBank assembly RS_GCF_011040385.1. The GC content of the type genome is 71.01 % and the genome length is 6.56 Mbp.

Description of *Candidatus* Roseomonas adpagatica sp. nov.

Candidatus Roseomonas adpagatica (NL. fem. n. *adpagatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Roseomonas_B sp903927465*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_903927465.1. The GC content of the type genome is 61.28 % and the genome length is 3.78 Mbp.

Description of *Candidatus* Roseomonas anaplicula sp. nov.

Candidatus Roseomonas anaplicula (NL. fem. n. *anaplicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Roseomonas_B sp012927745*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_012927745.1. The GC content of the type genome is 70.93 % and the genome length is 5.16 Mbp.

Description of *Candidatus* Roseomonas insibibra sp. nov.

Candidatus Roseomonas insibibra (NL. fem. n. *insibibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Roseomonas_B sp903844785*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_903844785.1. The GC content of the type genome is 61.34 % and the genome length is 3.39 Mbp.

Description of *Candidatus* Roseomonas rubefimonia sp. nov.

Candidatus Roseomonas rubefimonia (NL. fem. n. *rubefimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Roseomonas_B sp001464375*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_001464375.1. The GC content of the type genome is 71.04 % and the genome length is 4.77 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "dual media filters at the Ann Arbor; Michigan drinking water treatment plant".

Description of *Candidatus* Roseomonas tubicatica sp. nov.

Candidatus Roseomonas tubicatica (NL. fem. n. *tubicatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Roseomonas_B sp005222755*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_005222755.1. The GC content of the type genome is 71.89 % and the genome length is 5.35 Mbp.

Description of *Candidatus* Roseovarius absuratio sp. nov.

Candidatus Roseovarius absuratio (NL. fem. n. *absuratio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Roseovarius sp002166865*. The type genome for the species is the GenBank assembly RS_GCF_002166865.1. The GC content of the type genome is 67.54 % and the genome length is 3.36 Mbp.

Description of *Candidatus* Roseovarius admorimonas sp. nov.

Candidatus Roseovarius admorimonas (NL. fem. n. *admorimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Roseovarius sp014359765*. The type genome for the species is the GenBank assembly GCA_014359765.1. The GC content of the type genome is 67.98 % and the genome length is 2.65 Mbp.

Description of *Candidatus* Roseovarius adoscitio sp. nov.

Candidatus Roseovarius adoscitio (NL. fem. n. *adoscitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Roseovarius sp002366775*. The type genome for the species is the GenBank assembly GCA_002366775.1. The GC content of the type genome is 57.0 % and the genome length is 2.58 Mbp.

Description of *Candidatus* Roseovarius adtolax sp. nov.

Candidatus Roseovarius adtolax (NL. fem. n. *adtolax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Roseovarius sp009363715*. The type genome for the species is the GenBank assembly RS_GCF_009363715.1. The GC content of the type genome is 62.88 % and the genome length is 4.56 Mbp.

Description of *Candidatus* Roseovarius apogritica sp. nov.

Candidatus Roseovarius apogritica (NL. fem. n. *apogritica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Roseovarius sp009762325*. The type genome for the species is the GenBank assembly RS_GCF_009762325.1. The GC content of the type genome is 62.49 % and the genome length is 3.93 Mbp.

Description of *Candidatus* Roseovarius biparigena sp. nov.

Candidatus Roseovarius biparigena (NL. fem. n. *biparigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Roseovarius sp003260265*. The type genome for the species is the GenBank assembly RS_GCF_003260265.1. The GC content of the type genome is 64.11 % and the genome length is 3.82 Mbp.

Description of *Candidatus* Roseovarius cetaritudo sp. nov.

Candidatus Roseovarius cetaritudo (NL. fem. n. *cetaritudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Roseovarius sp009363655*. The type genome for the species is the GenBank assembly RS_GCF_009363655.1. The GC content of the type genome is 64.18 % and the genome length is 4.46 Mbp.

Description of *Candidatus* Roseovarius citipastra sp. nov.

Candidatus Roseovarius citipastra (NL. fem. n. *citipastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Roseovarius sp002428225*. The type genome for the species is the GenBank assembly GCA_014359815.1. The GC content of the type genome is 67.07 % and the genome length is 2.48 Mbp.

Description of *Candidatus* Roseovarius conopibula sp. nov.

Candidatus Roseovarius conopibula (NL. fem. n. *conopibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Roseovarius sp002783205*. The type genome for the species is the GenBank assembly GCA_002783205.1. The GC content of the type genome is 62.62 % and the genome length is 3.34 Mbp.

Description of *Candidatus* Roseovarius encepisca sp. nov.

Candidatus Roseovarius encepisca (NL. fem. n. *encepisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Roseovarius sp003122245*. The type genome for the species is the GenBank assembly RS_GCF_003122245.1. The GC content of the type genome is 60.98 % and the genome length is 3.1 Mbp.

Description of *Candidatus* Roseovarius epiclitia sp. nov.

Candidatus Roseovarius epiclitia (NL. fem. n. *epiclitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Roseovarius sp002842985*. The type genome for the species is the GenBank assembly GCA_002842985.1. The GC content of the type genome is 64.72 % and the genome length is 4.02 Mbp.

Description of *Candidatus* Roseovarius impavitas sp. nov.

Candidatus Roseovarius impavitas (NL. fem. n. *impavitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Roseovarius sp003298505*. The type genome for the species is the GenBank assembly RS_GCF_003298505.1. The GC content of the type genome is 63.31 % and the genome length is 3.72 Mbp.

Description of *Candidatus* Roseovarius impinigena sp. nov.

Candidatus Roseovarius impinigena (NL. fem. n. *impinigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Roseovarius sp000744325*. The type genome for the species is the GenBank assembly RS_GCF_000744325.1. The GC content of the type genome is 60.75 % and the genome length is 5.11 Mbp.

Description of *Candidatus* Roseovarius impiritoga sp. nov.

Candidatus Roseovarius impiritoga (NL. fem. n. *impiritoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Roseovarius sp002421985*. The type genome for the species is the GenBank assembly GCA_002421985.1. The GC content of the type genome is 65.53 % and the genome length is 2.86 Mbp.

Description of *Candidatus* Roseovarius oscilax sp. nov.

Candidatus Roseovarius oscilax (NL. fem. n. *oscilax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Roseovarius sp900313005*. The type genome for the species is the GenBank assembly RS_GCF_900313005.1. The GC content of the type genome is 57.32 % and the genome length is 3.94 Mbp.

Description of *Candidatus* Roseovarius pepenitio sp. nov.

Candidatus Roseovarius pepenitio (NL. fem. n. *pepenitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Roseovarius sp900327775*. The type genome for the species is the GenBank assembly RS_GCF_900327775.1. The GC content of the type genome is 53.34 % and the genome length is 3.91 Mbp.

Description of *Candidatus* Roseovarius ridibitudo sp. nov.

Candidatus Roseovarius ridibitudo (NL. fem. n. *ridibitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Roseovarius sp000152845*. The type genome for the species is the GenBank assembly RS_GCF_000152845.1. The GC content of the type genome is 60.81 % and the genome length is 4.77 Mbp.

Description of *Candidatus* Roseovarius robigimonia sp. nov.

Candidatus Roseovarius robigimonia (NL. fem. n. *robigimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Roseovarius sp007125415*. The type genome for the species is the GenBank assembly GCA_007123305.1. The GC content of the type genome is 62.87 % and the genome length is 2.8 Mbp.

Description of *Candidatus* Roseovarius rumifax sp. nov.

Candidatus Roseovarius rumifax (NL. fem. n. *rumifax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Roseovarius sp002072155*. The type genome for the species is the GenBank assembly RS_GCF_002072155.1. The GC content of the type genome is 62.83 % and the genome length is 4.58 Mbp.

Description of *Candidatus* Roseovarius venefax sp. nov.

Candidatus Roseovarius venefax (NL. fem. n. *venefax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Roseovarius sp002720475*. The type genome for the species is the GenBank assembly GCA_002720475.1. The GC content of the type genome is 67.03 % and the genome length is 2.68 Mbp.

Description of *Candidatus* Rossellomorea advinicella sp. nov.

Candidatus Rossellomorea advinicella (NL. fem. n. *advinicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rossellomorea sp008364765*. The type genome for the species is the GenBank assembly RS_GCF_008364765.1. The GC content of the type genome is 40.75 % and the genome length is 4.91 Mbp.

Description of *Candidatus* Rossellomorea cerimivita sp. nov.

Candidatus Rossellomorea cerimivita (NL. fem. n. *cerimivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rossellomorea sp002561455*. The type genome for the species is the GenBank assembly RS_GCF_002561455.1. The GC content of the type genome is 44.06 % and the genome length is 4.37 Mbp.

Description of *Candidatus* Rossellomorea cicarilega sp. nov.

Candidatus Rossellomorea cicarilega (NL. fem. n. *cicarilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rossellomorea sp011398925*. The type genome for the species is the GenBank assembly RS_GCF_011398925.1. The GC content of the type genome is 44.84 % and the genome length is 4.25 Mbp.

Description of *Candidatus* Rossellomorea cicilitica sp. nov.

Candidatus Rossellomorea cicilitica (NL. fem. n. *cicilitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rossellomorea sp006715245*. The type genome for the species is the GenBank assembly RS_GCF_006715245.1. The GC content of the type genome is 48.14 % and the genome length is 4.47 Mbp.

Description of *Candidatus* Rossellomorea domicitia sp. nov.

Candidatus Rossellomorea domicitia (NL. fem. n. *domicitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rossellomorea sp005938125*. The type genome for the species is the GenBank assembly RS_GCF_005938125.1. The GC content of the type genome is 41.03 % and the genome length is 4.23 Mbp.

Description of *Candidatus* Rossellomorea exsanisca sp. nov.

Candidatus Rossellomorea exsanisca (NL. fem. n. *exsanisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rossellomorea sp012911895*. The type genome for the species is the GenBank assembly RS_GCF_012911895.1. The GC content of the type genome is 42.81 % and the genome length is 4.22 Mbp.

Description of *Candidatus* Rossellomorea incunitio sp. nov.

Candidatus Rossellomorea incunitio (NL. fem. n. *incunitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rossellomorea sp903645295*. The type genome for the species is the GenBank assembly RS_GCF_903645295.1. The GC content of the type genome is 43.32 % and the genome length is 4.37 Mbp.

Description of *Candidatus* Rossellomorea plascax sp. nov.

Candidatus Rossellomorea plascax (NL. fem. n. *plascax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rossellomorea sp002563655*. The type genome for the species is the GenBank assembly RS_GCF_002563655.1. The GC content of the type genome is 43.74 % and the genome length is 4.51 Mbp.

Description of *Candidatus* Rothia actarimonia sp. nov.

Candidatus Rothia actarimonia (NL. fem. n. *actarimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rothia sp000710345*. The type genome for the species is the GenBank assembly RS_GCF_000710345.2. The GC content of the type genome is 65.07 % and the genome length is 2.75 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "leaves".

Description of *Candidatus* Rothia casigitoga sp. nov.

Candidatus Rothia casigitoga (NL. fem. n. *casigitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rothia sp004137765*. The type genome for the species is the GenBank assembly RS_GCF_004137765.1. The GC content of the type genome is 61.05 % and the genome length is 2.96 Mbp.

Description of *Candidatus* Rothia depelimonas sp. nov.

Candidatus Rothia depelimonas (NL. fem. n. *depelimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rothia sp004136585*. The type genome for the species is the GenBank assembly RS_GCF_004136585.1. The GC content of the type genome is 60.76 % and the genome length is 2.89 Mbp.

Description of *Candidatus* Rothia depicigena sp. nov.

Candidatus Rothia depicigena (NL. fem. n. *depicigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rothia sp002492045*. The type genome for the species is the GenBank assembly GCA_002492045.1. The GC content of the type genome is 59.39 % and the genome length is 1.57 Mbp.

Description of *Candidatus* Rothia fetutitudo sp. nov.

Candidatus Rothia fetutitudo (NL. fem. n. *fetutitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rothia sp001683935*. The type genome for the species is the GenBank assembly RS_GCF_007666515.1. The GC content of the type genome is 52.18 % and the genome length is 2.4 Mbp.

Description of *Candidatus* Rothia fuligitoga sp. nov.

Candidatus Rothia fuligitoga (NL. fem. n. *fuligitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rothia sp002418375*. The type genome for the species is the GenBank assembly GCA_002418375.1. The GC content of the type genome is 56.13 % and the genome length is 2.29 Mbp.

Description of *Candidatus* Rothia luxurugo sp. nov.

Candidatus Rothia luxurugo (NL. fem. n. *luxurugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rothia sp902373285*. The type genome for the species is the GenBank assembly GCA_900755465.1. The GC content of the type genome is 60.17 % and the genome length is 2.14 Mbp.

Description of *Candidatus* Rothia manupigena sp. nov.

Candidatus Rothia manupigena (NL. fem. n. *manupigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rothia sp001808955*. The type genome for the species is the GenBank assembly RS_GCF_000011025.1. The GC content of the type genome is 59.62 % and the genome length is 2.26 Mbp.

Description of *Candidatus* Rouxiella apsenifica sp. nov.

Candidatus Rouxiella apsenifica (NL. fem. n. *apsenifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rouxiella sp012933545*. The type genome for the species is the GenBank assembly RS_GCF_012933545.1. The GC content of the type genome is 51.35 % and the genome length is 5.37 Mbp.

Description of *Candidatus* Rouxiella apsimitio sp. nov.

Candidatus Rouxiella apsimitio (NL. fem. n. *apsimitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rouxiella sp000257645*. The type genome for the species is the GenBank assembly RS_GCF_000257645.1. The GC content of the type genome is 50.09 % and the genome length is 5.25 Mbp.

Description of *Candidatus* Rouxiella atricax sp. nov.

Candidatus Rouxiella atricax (NL. fem. n. *atricax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rouxiella sp009208105*. The type genome for the species is the GenBank assembly RS_GCF_009208105.1. The GC content of the type genome is 50.88 % and the genome length is 5.36 Mbp.

Description of *Candidatus* Ruania gemebiforma sp. nov.

Candidatus Ruania gemebiforma (NL. fem. n. *gemebiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ruania sp008000995*. The type genome for the species is the GenBank assembly RS_GCF_008000995.1. The GC content of the type genome is 69.08 % and the genome length is 5.11 Mbp.

Description of *Candidatus* Rubecana ficedivita sp. nov.

Candidatus Rubecana ficedivita (NL. fem. n. *ficedivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8110 sp002707655*. The type genome for the species is the GenBank assembly GCA_002313905.1. The GC content of the type genome is 57.13 % and the genome length is 3.15 Mbp.

Description of *Candidatus* Rubecana gen. nov.

Candidatus Rubecana (NL. fem. n. *Rubecana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA8110*. The type species for the genus is *Candidatus* Rubecana ficedivita .

According to the original version of GTDB R06-RS202, this genus belongs to the family *NAC60-12*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Peripidaceae.

Description of *Candidatus* Rubecana hirunilenta sp. nov.

Candidatus Rubecana hirunilenta (NL. fem. n. *hirunilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8110 sp002726945*. The type genome for the species is the GenBank assembly GCA_002726945.1. The GC content of the type genome is 57.38 % and the genome length is 2.6 Mbp.

Description of *Candidatus* Rubecaria domipax sp. nov.

Candidatus Rubecaria domipax (NL. fem. n. *domipax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6539 sp002687175*. The type genome for the species is the GenBank assembly GCA_002687175.1. The GC content of the type genome is 36.69 % and the genome length is 1.12 Mbp.

Description of *Candidatus* Rubecaria gen. nov.

Candidatus Rubecaria (NL. fem. n. *Rubecaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA6539*. The type species for the genus is *Candidatus* Rubecaria domipax .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA6539*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Rubecariaceae.

Description of *Candidatus* Rubecariaceae fam. nov.

Candidatus Rubecariaceae (NL. fem. n. *Rubecariaceae* a name created from the name of

the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA6539.* The type genus for the taxon is *Candidatus* Rubecaria .

According to GTDB R06-RS202, this family belongs to the order *Buchananbacterales*.

Description of *Candidatus* Rubecella benevilenta sp. nov.

Candidatus Rubecella benevilenta (NL. fem. n. *benevilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIKLP01 sp903838995*. The type genome for the species is the GenBank assembly GCA_903838995.1. The GC content of the type genome is 34.94 % and the genome length is 1.99 Mbp.

Description of *Candidatus* Rubecella gen. nov.

Candidatus Rubecella (NL. fem. n. *Rubecella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIKLP01*. The type species for the genus is *Candidatus* Rubecella benevilenta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAIKLP01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Rubecellaceae.

Description of *Candidatus* Rubecellaceae fam. nov.

Candidatus Rubecellaceae (NL. fem. n. *Rubecellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CAIKLP01.* The type genus for the taxon is *Candidatus* Rubecella .

According to GTDB R06-RS202, this family belongs to the order *Sphingobacteriales*.

Description of *Candidatus* Rubecella desonitia sp. nov.

Candidatus Rubecella desonitia (NL. fem. n. *desonitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIKLP01 sp903951325*. The type genome for the species is the GenBank assembly GCA_903951325.1. The GC content of the type genome is 35.02 % and the genome length is 1.92 Mbp.

Description of *Candidatus* Rubecella regifitica sp. nov.

Candidatus Rubecella regifitica (NL. fem. n. *regifitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIKLP01 sp903828245*. The type genome for the species is the GenBank assembly GCA_903828245.1. The GC content of the type genome is 35.16 % and the genome length is 1.95 Mbp.

Description of *Candidatus* Rubecia bimetousia sp. nov.

Candidatus Rubecia bimetousia (NL. fem. n. *bimetousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA629 sp900317915*. The type genome for the species is the GenBank assembly GCA_002393885.1. The GC content of the type genome is 43.98 % and the genome length is 2.09 Mbp.

Description of *Candidatus* Rubecia gen. nov.

Candidatus Rubecia (NL. fem. n. *Rubecia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA629*. The type species for the genus is *Candidatus* Rubecia bimetousia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Rubecia furibisca sp. nov.

Candidatus Rubecia furibisca (NL. fem. n. *furibisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA629 sp900316625*. The type genome for the species is the

GenBank assembly GCA_900315415.1. The GC content of the type genome is 46.16 % and the genome length is 2.08 Mbp.

Description of *Candidatus* Rubecia ludimitrix sp. nov.

Candidatus Rubecia ludimitrix (NL. fem. n. *ludimitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA629 sp900316665*. The type genome for the species is the GenBank assembly GCA_900316665.1. The GC content of the type genome is 43.91 % and the genome length is 2.07 Mbp.

Description of *Candidatus* Rubecia tubicimonia sp. nov.

Candidatus Rubecia tubicimonia (NL. fem. n. *tubicimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA629 sp005465875*. The type genome for the species is the GenBank assembly GCA_009771085.1. The GC content of the type genome is 31.54 % and the genome length is 1.58 Mbp.

Description of *Candidatus* Rubecida genufimonas sp. nov.

Candidatus Rubecida genufimonas (NL. fem. n. *genufimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5389 sp002409965*. The type genome for the species is the GenBank assembly GCA_002409965.1. The GC content of the type genome is 59.9 % and the genome length is 3.23 Mbp.

Description of *Candidatus* Rubecida gen. nov.

Candidatus Rubecida (NL. fem. n. *Rubecida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA5389*. The type species for the genus is *Candidatus* Rubecida genufimonas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DTU025*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Benemanaceae.

Description of *Candidatus* Rubecosa arancitura sp. nov.

Candidatus Rubecosa arancitura (NL. fem. n. *arancitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5500 sp012727835*. The type genome for the species is the GenBank assembly GCA_012727835.1. The GC content of the type genome is 51.65 % and the genome length is 1.94 Mbp.

Description of *Candidatus* Rubecosa gen. nov.

Candidatus Rubecosa (NL. fem. n. *Rubecosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA5500*. The type species for the genus is *Candidatus* Rubecosa arancitura .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA5500*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Rubecosaceae.

Description of *Candidatus* Rubecosaceae fam. nov.

Candidatus Rubecosaceae (NL. fem. n. *Rubecosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA5500.* The type genus for the taxon is *Candidatus* Rubecosa .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA994*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Dehonellales.

Description of *Candidatus* Rubecosa armipigena sp. nov.

Candidatus Rubecosa armipigena (NL. fem. n. *armipigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5500 sp002427055*. The type genome for the species is the GenBank assembly GCA_002427055.1. The GC content of the type genome is 49.05 % and the genome length is 2.28 Mbp.

Description of *Candidatus* Rubefana monogiforma sp. nov.

Candidatus Rubefana monogiforma (NL. fem. n. *monogiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCF-000787395 sp000787395*. The type genome for the species is the GenBank assembly GCA_002021265.1. The GC content of the type genome is 50.85 % and the genome length is 2.53 Mbp.

Description of *Candidatus* Rubefana gen. nov.

Candidatus Rubefana (NL. fem. n. *Rubefana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCF-000787395*. The type species for the genus is *Candidatus* Rubefana monogiforma .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Rubefana pepenifica sp. nov.

Candidatus Rubefana pepenifica (NL. fem. n. *pepenifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCF-000787395 sp002021095*. The type genome for the species is the GenBank assembly RS_GCF_002021095.1. The GC content of the type genome is 50.79 % and the genome length is 2.05 Mbp.

Description of *Candidatus* Rubefaria adfabessa sp. nov.

Candidatus Rubefaria adfabessa (NL. fem. n. *adfabessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9664 sp002710775*. The type genome for the species is the GenBank assembly GCA_002710775.1. The GC content of the type genome is 44.96 % and the genome length is 1.66 Mbp.

Description of *Candidatus* Rubefaria gen. nov.

Candidatus Rubefaria (NL. fem. n. *Rubefaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA9664*. The type species for the genus is *Candidatus* Rubefaria adfabessa .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Rubefaria celumitia sp. nov.

Candidatus Rubefaria celumitia (NL. fem. n. *celumitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9664 sp002699085*. The type genome for the species is the GenBank assembly GCA_002699085.1. The GC content of the type genome is 41.69 % and the genome length is 1.89 Mbp.

Description of *Candidatus* Rubefella corocicella sp. nov.

Candidatus Rubefella corocicella (NL. fem. n. *corocicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6191 sp002422125*. The type genome for the species is the GenBank assembly GCA_002422125.1. The GC content of the type genome is 44.44 % and the genome length is 3.37 Mbp.

Description of *Candidatus* Rubefella gen. nov.

Candidatus Rubefella (NL. fem. n. *Rubefella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA6191*. The type species for the genus is *Candidatus* Rubefella corocicella .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA6191*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Rubefellaceae.

Description of *Candidatus* Rubefellaceae fam. nov.

Candidatus Rubefellaceae (NL. fem. n. *Rubefellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA6191.* The type genus for the taxon is *Candidatus* Rubefella .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA6191*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Rubefellales.

Description of *Candidatus* Rubefellales ord. nov.

Candidatus Rubefellales (NL. fem. n. *Rubefellales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA6191.* The type genus for the taxon is *Candidatus* Rubefella .

According to the original version of GTDB R06-RS202, this family belongs to the class *UBA6191*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Rubefellae.

Description of *Candidatus* Rubefellae class. nov.

Candidatus Rubefellae (NL. fem. n. *c__Rubefellae* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA6191.* The type genus for the taxon is *Candidatus* Rubefella .

According to the original version of GTDB R06-RS202, this family belongs to the phylum *UBP17*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the phylum *Candidatus* Demuliota.

Description of *Candidatus* Rubefia anagnitica sp. nov.

Candidatus Rubefia anagnitica (NL. fem. n. *anagnitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYZQ01 sp012514775*. The type genome for the species is the GenBank assembly GCA_012514775.1. The GC content of the type genome is 66.69 % and the genome length is 6.18 Mbp.

Description of *Candidatus* Rubefia gen. nov.

Candidatus Rubefia (NL. fem. n. *Rubefia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAYZQ01*. The type species for the genus is *Candidatus* Rubefia anagnitica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JAAYZQ01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Rubefiaceae.

Description of *Candidatus* Rubefiaceae fam. nov.

Candidatus Rubefiaceae (NL. fem. n. *Rubefiaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JAAYZQ01.* The type genus for the taxon is *Candidatus* Rubefia .

According to the original version of GTDB R06-RS202, this family belongs to the order *JAAYZQ01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Rubefiales.

Description of *Candidatus* Rubefiales ord. nov.

Candidatus Rubefiales (NL. fem. n. *Rubefiales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JAAYZQ01.* The type genus for the taxon is *Candidatus* Rubefia .

According to the GTDB R06-RS202, this order belongs to the class *Anaerolineae*.

Description of *Candidatus* Rubefida faticimonas sp. nov.

Candidatus Rubefida faticimonas (NL. fem. n. *faticimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABDJQ01 sp013002425*. The type genome for the species is the GenBank assembly GCA_013002425.1. The GC content of the type genome is 63.24 % and the genome length is 3.89 Mbp.

Description of *Candidatus* Rubefida gen. nov.

Candidatus Rubefida (NL. fem. n. *Rubefida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this genus is *JABDJQ01*. The type species for the genus is *Candidatus* Rubefida faticimonas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JABDJQ01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Rubefidaceae.

Description of *Candidatus* Rubefidaceae fam. nov.

Candidatus Rubefidaceae (NL. fem. n. *Rubefidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JABDJQ01.* The type genus for the taxon is *Candidatus* Rubefida .

According to the original version of GTDB R06-RS202, this family belongs to the order *JABDJQ01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Rubefidales.

Description of *Candidatus* Rubefidales ord. nov.

Candidatus Rubefidales (NL. fem. n. *Rubefidales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JABDJQ01.* The type genus for the taxon is *Candidatus* Rubefida .

According to the original version of GTDB R06-RS202, this family belongs to the class *JABDJQ01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Rubefidae.

Description of *Candidatus* Rubefidae class. nov.

Candidatus Rubefidae (NL. fem. n. *c__Rubefidae* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JABDJQ01.* The type genus for the taxon is *Candidatus* Rubefida .

According to the original version of GTDB R06-RS202, this family belongs to the phylum *JABDJQ01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the phylum *Candidatus* Rubefidota.

Description of *Candidatus* Rubefidota phyl. nov.

Candidatus Rubefidota (NL. fem. n. *Rubefidota* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JABDJQ01*. The type genus for the taxon is *Candidatus* Rubefida .

According to GTDB R06-RS202, this phylum belongs to the domain *Bacteria* .

Description of *Candidatus* Rubefosa catalitrix sp. nov.

Candidatus Rubefosa catalitrix (NL. fem. n. *catalitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-448 sp000433415*. The type genome for the species is the GenBank assembly GCA_000433415.1. The GC content of the type genome is 52.59 % and the genome length is 2.28 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "derived from human gut metagenome".

Description of *Candidatus* Rubefosa gen. nov.

Candidatus Rubefosa (NL. fem. n. *Rubefosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAG-448*. The type species for the genus is *Candidatus* Rubefosa catalitrix .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-272*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Colipariaceae.

Description of *Candidatus* Rubefosa renavitica sp. nov.

Candidatus Rubefosa renavitica (NL. fem. n. *renavitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-448 sp003150135*. The type genome for the species is the GenBank assembly GCA_900545385.1. The GC content of the type genome is 60.46 % and the genome length is 2.0 Mbp.

Description of *Candidatus* Rubefula divulicella sp. nov.

Candidatus Rubefula divulicella (NL. fem. n. *divulicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HRBIN29 sp002898215*. The type genome for the species is the GenBank assembly GCA_002898215.1. The GC content of the type genome is 69.28 % and the genome length is 2.34 Mbp.

Description of *Candidatus* Rubefula gen. nov.

Candidatus Rubefula (NL. fem. n. *Rubefula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *HRBIN29*. The type species for the genus is *Candidatus* Rubefula divulicella .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2991*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Letifariaceae.

Description of *Candidatus* Rubefula vicatetta sp. nov.

Candidatus Rubefula vicatetta (NL. fem. n. *vicatetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HRBIN29 sp011048275*. The type genome for the species is the GenBank assembly GCA_011054735.1. The GC content of the type genome is 69.13 % and the genome length is 2.33 Mbp.

Description of *Candidatus* Rubellimicrobium adlubitura sp. nov.

Candidatus Rubellimicrobium adlubitura (NL. fem. n. *adlubitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rubellimicrobium sp009904055*. The type genome for the species is the GenBank assembly RS_GCF_009904055.1. The GC content of the type genome is 71.98 % and the genome length is 3.32 Mbp.

Description of *Candidatus* Rubellimicrobium exaggigena sp. nov.

Candidatus Rubellimicrobium exaggigena (NL. fem. n. *exaggigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rubellimicrobium sp902805995*. The type genome for the species is the GenBank assembly GCA_902805995.1. The GC content of the type genome is 68.85 % and the genome length is 3.03 Mbp.

Description of *Candidatus* Rubicana bipinitudo sp. nov.

Candidatus Rubicana bipinitudo (NL. fem. n. *bipinitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA12059 sp001829185*. The type genome for the species is the GenBank assembly GCA_003498145.1. The GC content of the type genome is 61.39 % and the genome length is 3.05 Mbp.

Description of *Candidatus* Rubicana gen. nov.

Candidatus Rubicana (NL. fem. n. *Rubicana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA12059*. The type species for the genus is *Candidatus* Rubicana bipinitudo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA12059*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Rubicanaceae.

Description of *Candidatus* Rubicanaceae fam. nov.

Candidatus Rubicanaceae (NL. fem. n. *Rubicanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA12059.* The type genus for the taxon is *Candidatus* Rubicana .

According to GTDB R06-RS202, this family belongs to the order *Treponematales*.

Description of *Candidatus* Rubicaria ammulitas sp. nov.

Candidatus Rubicaria ammulitas (NL. fem. n. *ammulitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7398 sp014190155*. The type genome for the species is the

GenBank assembly GCA_014190155.1. The GC content of the type genome is 44.04 % and the genome length is 1.37 Mbp.

Description of *Candidatus* Rubicaria gen. nov.

Candidatus Rubicaria (NL. fem. n. *Rubicaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA7398*. The type species for the genus is *Candidatus* Rubicaria ammulitas .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Rubicaria decupago sp. nov.

Candidatus Rubicaria decupago (NL. fem. n. *decupago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7398 sp009927575*. The type genome for the species is the GenBank assembly GCA_009927575.1. The GC content of the type genome is 46.09 % and the genome length is 1.41 Mbp.

Description of *Candidatus* Rubicaria depecilenta sp. nov.

Candidatus Rubicaria depecilenta (NL. fem. n. *depecilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7398 sp002470135*. The type genome for the species is the GenBank assembly GCA_009927605.1. The GC content of the type genome is 44.09 % and the genome length is 1.54 Mbp.

Description of *Candidatus* Rubicaria homicedo sp. nov.

Candidatus Rubicaria homicedo (NL. fem. n. *homicedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7398 sp903878415*. The type genome for the species is the GenBank assembly GCA_009697665.1. The GC content of the type genome is 43.77 % and the genome length is 0.87 Mbp.

Description of *Candidatus* Rubicaria monodugo sp. nov.

Candidatus Rubicaria monodugo (NL. fem. n. *monodugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7398 sp013205455*. The type genome for the species is the GenBank assembly GCA_013205455.1. The GC content of the type genome is 44.23 % and the genome length is 1.07 Mbp.

Description of *Candidatus* Rubicella viripicella sp. nov.

Candidatus Rubicella viripicella (NL. fem. n. *viripicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2160 sp002328865*. The type genome for the species is the GenBank assembly GCA_002686145.1. The GC content of the type genome is 60.89 % and the genome length is 3.48 Mbp.

Description of *Candidatus* Rubicella gen. nov.

Candidatus Rubicella (NL. fem. n. *Rubicella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA2160*. The type species for the genus is *Candidatus* Rubicella viripicella .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA11138*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Resupellaceae.

Description of *Candidatus* Rubicida bifisitura sp. nov.

Candidatus Rubicida bifisitura (NL. fem. n. *bifisitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GWA2-44-10 sp001794755*. The type genome for the species is the GenBank assembly GCA_001795875.1. The GC content of the type genome is 43.68 % and the genome length is 0.62 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under low O2 conditions; 1.2 micron filter; full assembly".

Description of *Candidatus* Rubicida gen. nov.

Candidatus Rubicida (NL. fem. n. *Rubicida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GWA2-44-10*. The type species for the genus is *Candidatus* Rubicida bifisitura .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GWA2-44-9*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Beniviaceae.

Description of *Candidatus* Rubicosa negidigena sp. nov.

Candidatus Rubicosa negidigena (NL. fem. n. *negidigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PWJC01 sp003560165*. The type genome for the species is the GenBank assembly GCA_007134595.1. The GC content of the type genome is 54.19 % and the genome length is 2.38 Mbp.

Description of *Candidatus* Rubicosa gen. nov.

Candidatus Rubicosa (NL. fem. n. *Rubicosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PWJC01*. The type species for the genus is *Candidatus* Rubicosa negidigena .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA7960*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Detotosaceae.

Description of *Candidatus* Rubicula bicorilenta sp. nov.

Candidatus Rubicula bicorilenta (NL. fem. n. *bicorilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *QNFE01 sp003645455*. The type genome for the species is the GenBank assembly GCA_003645455.1. The GC content of the type genome is 33.17 % and the genome length is 2.06 Mbp.

Description of *Candidatus* Rubicula gen. nov.

Candidatus Rubicula (NL. fem. n. *Rubicula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *QNFE01*. The type species for the genus is *Candidatus* Rubicula bicorilenta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *QNFE01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Rubiculaceae.

Description of *Candidatus* Rubiculaceae fam. nov.

Candidatus Rubiculaceae (NL. fem. n. *Rubiculaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *QNFE01.* The type genus for the taxon is *Candidatus* Rubicula .

According to the original version of GTDB R06-RS202, this family belongs to the order *QNFE01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Rubiculales.

Description of *Candidatus* Rubiculales ord. nov.

Candidatus Rubiculales (NL. fem. n. *Rubiculales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *QNFE01.* The type genus for the taxon is *Candidatus* Rubicula .

According to the GTDB R06-RS202, this order belongs to the class *Gammaproteobacteria*.

Description of *Candidatus* Rubigana sitelatio sp. nov.

Candidatus Rubigana sitelatio (NL. fem. n. *sitelatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA10027 sp001003725*. The type genome for the species is the GenBank assembly GCA_003523165.1. The GC content of the type genome is 47.65 % and the genome length is 1.05 Mbp.

Description of *Candidatus* Rubigana gen. nov.

Candidatus Rubigana (NL. fem. n. *Rubigana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA10027*. The type species for the genus is *Candidatus* Rubigana sitelatio .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Rubigaria depacago sp. nov.

Candidatus Rubigaria depacago (NL. fem. n. *depacago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9042 sp002726535*. The type genome for the species is the GenBank assembly GCA_003452515.1. The GC content of the type genome is 56.75 % and the genome length is 3.25 Mbp.

Description of *Candidatus* Rubigaria gen. nov.

Candidatus Rubigaria (NL. fem. n. *Rubigaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA9042*. The type species for the genus is *Candidatus* Rubigaria depacago .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA9042*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Rubigariaceae.

Description of *Candidatus* Rubigariaceae fam. nov.

Candidatus Rubigariaceae (NL. fem. n. *Rubigariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA9042.* The type genus for the taxon is *Candidatus* Rubigaria .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA9042*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Rubigariales.

Description of *Candidatus* Rubigariales ord. nov.

Candidatus Rubigariales (NL. fem. n. *Rubigariales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA9042.* The type genus for the taxon is *Candidatus* Rubigaria .

According to the original version of GTDB R06-RS202, this family belongs to the class *UBA9042*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Rubigariae.

Description of *Candidatus* Rubigariae class. nov.

Candidatus Rubigariae (NL. fem. n. *c__Rubigariae* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA9042.* The type genus for the taxon is *Candidatus* Rubigaria .

According to GTDB R06-RS202, this class belongs to the phylum *Myxococcota*.

Description of *Candidatus* Rubigella semibifica sp. nov.

Candidatus Rubigella semibifica (NL. fem. n. *semibifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS1648 sp900553765*. The type genome for the species is the GenBank assembly GCA_900553765.1. The GC content of the type genome is 34.34 % and the genome length is 0.99 Mbp.

Description of *Candidatus* Rubigella gen. nov.

Candidatus Rubigella (NL. fem. n. *Rubigella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UMGS1648*. The type species for the genus is *Candidatus* Rubigella semibifica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA660*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vitigellaceae.

Description of *Candidatus* Rubigia relapitoga sp. nov.

Candidatus Rubigia relapitoga (NL. fem. n. *relapitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2329 sp002344975*. The type genome for the species is the GenBank assembly GCA_002344975.1. The GC content of the type genome is 52.56 % and the genome length is 5.57 Mbp.

Description of *Candidatus* Rubigia gen. nov.

Candidatus Rubigia (NL. fem. n. *Rubigia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA2329*. The type species for the genus is *Candidatus* Rubigia relapitoga .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Rubigida buxifitudo sp. nov.

Candidatus Rubigida buxifitudo (NL. fem. n. *buxifitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1426 sp012719215*. The type genome for the species is the GenBank assembly GCA_012719215.1. The GC content of the type genome is 46.48 % and the genome length is 2.43 Mbp.

Description of *Candidatus* Rubigida gen. nov.

Candidatus Rubigida (NL. fem. n. *Rubigida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1426*. The type species for the genus is *Candidatus* Rubigida buxifitudo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Rubigida curabedo sp. nov.

Candidatus Rubigida curabedo (NL. fem. n. *curabedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1426 sp002385825*. The type genome for the species is the GenBank assembly GCA_003445605.1. The GC content of the type genome is 47.23 % and the genome length is 1.2 Mbp.

Description of *Candidatus* Rubigida inregilenta sp. nov.

Candidatus Rubigida inregilenta (NL. fem. n. *inregilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1426 sp002329675*. The type genome for the species is the GenBank assembly GCA_002329675.1. The GC content of the type genome is 46.49 % and the genome length is 2.23 Mbp.

Description of *Candidatus* Rubigosa adsocigena sp. nov.

Candidatus Rubigosa adsocigena (NL. fem. n. *adsocigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PWMZ01 sp003559065*. The type genome for the species is the GenBank assembly GCA_003559065.1. The GC content of the type genome is 33.77 % and the genome length is 0.47 Mbp.

Description of *Candidatus* Rubigosa gen. nov.

Candidatus Rubigosa (NL. fem. n. *Rubigosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PWMZ01*. The type species for the genus is *Candidatus* Rubigosa adsocigena .

According to the original version of GTDB R06-RS202, this genus belongs to the family *PWMZ01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Rubigosaceae.

Description of *Candidatus* Rubigosaceae fam. nov.

Candidatus Rubigosaceae (NL. fem. n. *Rubigosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this taxon is *PWMZ01*. The type genus for the taxon is *Candidatus* Rubigosa .

According to GTDB R06-RS202, this family belongs to the order *Paceibacterales*.

Description of *Candidatus* Rubigosa nefanentia sp. nov.

Candidatus Rubigosa nefanentia (NL. fem. n. *nefanentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PWMZ01 sp003556925*. The type genome for the species is the GenBank assembly GCA_003556925.1. The GC content of the type genome is 35.85 % and the genome length is 0.34 Mbp.

Description of *Candidatus* Rubinisphaera detositrix sp. nov.

Candidatus Rubinisphaera detositrix (NL. fem. n. *detositrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rubinisphaera sp014584345*. The type genome for the species is the GenBank assembly GCA_014584345.1. The GC content of the type genome is 57.88 % and the genome length is 5.56 Mbp.

Description of *Candidatus* Rubinisphaera rarefago sp. nov.

Candidatus Rubinisphaera rarefago (NL. fem. n. *rarefago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rubinisphaera sp002359185*. The type genome for the species is the GenBank assembly GCA_002731545.1. The GC content of the type genome is 48.66 % and the genome length is 6.2 Mbp.

Description of *Candidatus* Rubneribacter adsesilega sp. nov.

Candidatus Rubneribacter adsesilega (NL. fem. n. *adsesilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rubneribacter sp002159915*. The type genome for the species is the GenBank assembly RS_GCF_002159915.1. The GC content of the type genome is 64.15 % and the genome length is 3.88 Mbp.

Description of *Candidatus* Rubricoccus adcucousia sp. nov.

Candidatus Rubricoccus adcucousia (NL. fem. n. *adcucousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rubricoccus sp012960515*. The type genome for the species is the GenBank assembly GCA_012960515.1. The GC content of the type genome is 71.25 % and the genome length is 3.88 Mbp.

Description of *Candidatus* Rubrimentiphilum catapigena sp. nov.

Candidatus Rubrimentiphilum catapigena (NL. fem. n. *catapigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rubrimentiphilum sp013036095*. The type genome for the species is the GenBank assembly RS_GCF_013036095.1. The GC content of the type genome is 60.7 % and the genome length is 2.58 Mbp.

Description of *Candidatus* Rubrimentiphilum infesibra sp. nov.

Candidatus Rubrimentiphilum infesibra (NL. fem. n. *infesibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rubrimentiphilum sp013036315*. The type genome for the species is the GenBank assembly RS_GCF_013036315.1. The GC content of the type genome is 60.66 % and the genome length is 1.67 Mbp.

Description of *Candidatus* Rubrimentiphilum nefanibra sp. nov.

Candidatus Rubrimentiphilum nefanibra (NL. fem. n. *nefanibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rubrimentiphilum sp003136355*. The type genome for the species is the GenBank assembly GCA_003131905.1. The GC content of the type genome is 60.96 % and the genome length is 2.65 Mbp.

Description of *Candidatus* Rubrimentiphilum odollitura sp. nov.

Candidatus Rubrimentiphilum odollitura (NL. fem. n. *odollitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rubrimentiphilum sp003140855*. The type genome for the species is the GenBank assembly GCA_003140855.1. The GC content of the type genome is 60.37 % and the genome length is 2.28 Mbp.

Description of *Candidatus* Rubrimentiphilum tigurisca sp. nov.

Candidatus Rubrimentiphilum tigurisca (NL. fem. n. *tigurisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rubrimentiphilum sp003151115*. The type genome for the species is the GenBank assembly GCA_003151115.1. The GC content of the type genome is 60.93 % and the genome length is 2.56 Mbp.

Description of *Candidatus* Rubrimentiphilum videlessa sp. nov.

Candidatus Rubrimentiphilum videlessa (NL. fem. n. *videlessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rubrimentiphilum sp013036105*. The type genome for the species is the GenBank assembly RS_GCF_013036105.1. The GC content of the type genome is 61.04 % and the genome length is 2.34 Mbp.

Description of *Candidatus* Rubrimonas linigitio sp. nov.

Candidatus Rubrimonas linigitio (NL. fem. n. *linigitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rubrimonas sp007693835*. The type genome for the species is the GenBank assembly GCA_007693835.1. The GC content of the type genome is 72.04 % and the genome length is 3.24 Mbp.

Description of *Candidatus* Rubripirellula assifimonia sp. nov.

Candidatus Rubripirellula assifimonia (NL. fem. n. *assifimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Rubripirellula sp002862205*. The type genome for the species is the GenBank assembly GCA_002862205.1. The GC content of the type genome is 52.58 % and the genome length is 7.77 Mbp.

Description of *Candidatus* Rubripirellula intabibula sp. nov.

Candidatus Rubripirellula intabibula (NL. fem. n. *intabibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rubripirellula sp007741535*. The type genome for the species is the GenBank assembly RS_GCF_007741535.1. The GC content of the type genome is 57.35 % and the genome length is 8.54 Mbp.

Description of *Candidatus* Rubripirellula obsigitas sp. nov.

Candidatus Rubripirellula obsigitas (NL. fem. n. *obsigitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rubripirellula sp002690925*. The type genome for the species is the GenBank assembly GCA_002690925.1. The GC content of the type genome is 51.76 % and the genome length is 7.78 Mbp.

Description of *Candidatus* Rubripirellula rosaretta sp. nov.

Candidatus Rubripirellula rosaretta (NL. fem. n. *rosaretta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rubripirellula sp002712845*. The type genome for the species is the GenBank assembly GCA_002712845.1. The GC content of the type genome is 51.95 % and the genome length is 2.41 Mbp.

Description of *Candidatus* Rubripirellula rubicicula sp. nov.

Candidatus Rubripirellula rubicicula (NL. fem. n. *rubicicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rubripirellula sp003513555*. The type genome for the species is the GenBank assembly GCA_003513555.1. The GC content of the type genome is 51.78 % and the genome length is 6.97 Mbp.

Description of *Candidatus* Rubripirellula sicaritudo sp. nov.

Candidatus Rubripirellula sicaritudo (NL. fem. n. *sicaritudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rubripirellula sp012270385*. The type genome for the species is the GenBank assembly GCA_012270385.1. The GC content of the type genome is 49.84 % and the genome length is 5.11 Mbp.

Description of *Candidatus* Rubripirellula tomogitas sp. nov.

Candidatus Rubripirellula tomogitas (NL. fem. n. *tomogitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rubripirellula sp002689655*. The type genome for the species is the GenBank assembly GCA_002689655.1. The GC content of the type genome is 51.86 % and the genome length is 7.09 Mbp.

Description of *Candidatus* Rubripirellula vitifibula sp. nov.

Candidatus Rubripirellula vitifibula (NL. fem. n. *vitifibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rubripirellula sp012270065*. The type genome for the species is the GenBank assembly GCA_012270065.1. The GC content of the type genome is 52.43 % and the genome length is 6.99 Mbp.

Description of *Candidatus* Rubrivirga humecibula sp. nov.

Candidatus Rubrivirga humecibula (NL. fem. n. *humecibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rubrivirga sp002283555*. The type genome for the species is the GenBank assembly GCA_002711615.1. The GC content of the type genome is 71.29 % and the genome length is 4.86 Mbp.

Description of *Candidatus* Rubrivirga lubenimonas sp. nov.

Candidatus Rubrivirga lubenimonas (NL. fem. n. *lubenimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rubrivirga sp012269805*. The type genome for the species is the GenBank assembly GCA_012269805.1. The GC content of the type genome is 72.04 % and the genome length is 3.91 Mbp.

Description of *Candidatus* Rubrivivax adlocatio sp. nov.

Candidatus Rubrivivax adlocatio (NL. fem. n. *adlocatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rubrivivax sp903885585*. The type genome for the species is the GenBank assembly GCA_903885585.1. The GC content of the type genome is 66.69 % and the genome length is 5.48 Mbp.

Description of *Candidatus* Rubrivivax altipilenta sp. nov.

Candidatus Rubrivivax altipilenta (NL. fem. n. *altipilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rubrivivax sp011391855*. The type genome for the species is the GenBank assembly GCA_011391855.1. The GC content of the type genome is 69.07 % and the genome length is 3.54 Mbp.

Description of *Candidatus* Rubrivivax bigarivita sp. nov.

Candidatus Rubrivivax bigarivita (NL. fem. n. *bigarivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rubrivivax sp903914615*. The type genome for the species is the GenBank assembly GCA_903914615.1. The GC content of the type genome is 70.12 % and the genome length is 5.88 Mbp.

Description of *Candidatus* Rubrivivax clancitas sp. nov.

Candidatus Rubrivivax clancitas (NL. fem. n. *clancitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Rubrivivax sp013822265*. The type genome for the species is the GenBank assembly GCA_013822265.1. The GC content of the type genome is 70.25 % and the genome length is 4.38 Mbp.

Description of *Candidatus* Rubrivivax desupifica sp. nov.

Candidatus Rubrivivax desupifica (NL. fem. n. *desupifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rubrivivax sp903938815*. The type genome for the species is the GenBank assembly GCA_903951765.1. The GC content of the type genome is 69.29 % and the genome length is 5.08 Mbp.

Description of *Candidatus* Rubrivivax fusifessa sp. nov.

Candidatus Rubrivivax fusifessa (NL. fem. n. *fusifessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rubrivivax sp903828235*. The type genome for the species is the GenBank assembly GCA_903927695.1. The GC content of the type genome is 71.94 % and the genome length is 4.5 Mbp.

Description of *Candidatus* Rubrivivax incomibra sp. nov.

Candidatus Rubrivivax incomibra (NL. fem. n. *incomibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rubrivivax sp001724995*. The type genome for the species is the GenBank assembly GCA_001724995.1. The GC content of the type genome is 70.78 % and the genome length is 3.92 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Cyanide and thiocyanate bioreactor".

Description of *Candidatus* Rubrivivax indevilenta sp. nov.

Candidatus Rubrivivax indevilenta (NL. fem. n. *indevilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rubrivivax sp001725505*. The type genome for the species is the GenBank assembly GCA_001725505.1. The GC content of the type genome is 70.47 % and the genome length is 4.03 Mbp. The isolation source for the NCBI BioSample

associated with the type genome is descibed as "Thiocyanate bioreactor".

Description of *Candidatus* Rubrivivax lapicago sp. nov.

Candidatus Rubrivivax lapicago (NL. fem. n. *lapicago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rubrivivax sp001295865*. The type genome for the species is the GenBank assembly RS_GCF_001295865.1. The GC content of the type genome is 69.58 % and the genome length is 4.84 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "freshwater lake".

Description of *Candidatus* Rubrivivax lapilibra sp. nov.

Candidatus Rubrivivax lapilibra (NL. fem. n. *lapilibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rubrivivax sp001295905*. The type genome for the species is the GenBank assembly RS_GCF_001295905.1. The GC content of the type genome is 69.71 % and the genome length is 5.1 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "freshwater lake".

Description of *Candidatus* Rubrivivax latibentia sp. nov.

Candidatus Rubrivivax latibentia (NL. fem. n. *latibentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rubrivivax sp004016505*. The type genome for the species is the GenBank assembly RS_GCF_004016505.1. The GC content of the type genome is 70.05 % and the genome length is 4.93 Mbp.

Description of *Candidatus* Rubrivivax metabicula sp. nov.

Candidatus Rubrivivax metabicula (NL. fem. n. *metabicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rubrivivax sp903876715*. The type genome for the species is the GenBank assembly GCA_903876715.1. The GC content of the type genome is 70.06 % and the genome length is 5.58 Mbp.

Description of *Candidatus* Rubrivivax notabibula sp. nov.

Candidatus Rubrivivax notabibula (NL. fem. n. *notabibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rubrivivax sp001464055*. The type genome for the species is the GenBank assembly GCA_001464055.1. The GC content of the type genome is 68.29 % and the genome length is 5.19 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "dual media filters at the Ann Arbor; Michigan drinking water treatment plant".

Description of *Candidatus* Rubrivivax nutabago sp. nov.

Candidatus Rubrivivax nutabago (NL. fem. n. *nutabago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rubrivivax sp011525985*. The type genome for the species is the GenBank assembly GCA_011525985.1. The GC content of the type genome is 72.56 % and the genome length is 2.31 Mbp.

Description of *Candidatus* Rubrivivax oppanimonas sp. nov.

Candidatus Rubrivivax oppanimonas (NL. fem. n. *oppanimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rubrivivax sp903822435*. The type genome for the species is the GenBank assembly GCA_903822435.1. The GC content of the type genome is 68.73 % and the genome length is 6.07 Mbp.

Description of *Candidatus* Rubrivivax pericitudo sp. nov.

Candidatus Rubrivivax pericitudo (NL. fem. n. *pericitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rubrivivax sp903834645*. The type genome for the species is the GenBank assembly GCA_903834645.1. The GC content of the type genome is 70.49 % and the genome length is 3.87 Mbp.

Description of *Candidatus* Rubrivivax utraledo sp. nov.

Candidatus Rubrivivax utraledo (NL. fem. n. *utraledo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rubrivivax sp009923895*. The type genome for the species is the GenBank assembly GCA_009923895.1. The GC content of the type genome is 61.51 % and the genome length is 2.14 Mbp.

Description of *Candidatus* Rubrobacter petulitoga sp. nov.

Candidatus Rubrobacter petulitoga (NL. fem. n. *petulitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rubrobacter_A sp013695915*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_013695915.1. The GC content of the type genome is 67.39 % and the genome length is 2.77 Mbp.

Description of *Candidatus* Rudaea algifessa sp. nov.

Candidatus Rudaea algifessa (NL. fem. n. *algifessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rudaea sp005503555*. The type genome for the species is the GenBank assembly RS_GCF_005503555.1. The GC content of the type genome is 63.82 % and the genome length is 5.7 Mbp.

Description of *Candidatus* Rudaea pecuniforma sp. nov.

Candidatus Rudaea pecuniforma (NL. fem. n. *pecuniforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rudaea sp005877675*. The type genome for the species is the GenBank assembly GCA_005877675.1. The GC content of the type genome is 62.45 % and the genome length is 3.55 Mbp.

Description of *Candidatus* Rudanella semimilenta sp. nov.

Candidatus Rudanella semimilenta (NL. fem. n. *semimilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rudanella sp004292855*. The type genome for the species is the GenBank assembly GCA_013297945.1. The GC content of the type genome is 53.65 % and the genome length is 7.02 Mbp.

Description of *Candidatus* Rudecana susicitura sp. nov.

Candidatus Rudecana susicitura (NL. fem. n. *susicitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DSWA01 sp011327745*. The type genome for the species is the GenBank assembly GCA_011327745.1. The GC content of the type genome is 69.91 % and the genome length is 4.88 Mbp.

Description of *Candidatus* Rudecana gen. nov.

Candidatus Rudecana (NL. fem. n. *Rudecana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DSWA01*. The type species for the genus is *Candidatus* Rudecana susicitura .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DSWA01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Rudecanaceae.

Description of *Candidatus* Rudecanaceae fam. nov.

Candidatus Rudecanaceae (NL. fem. n. *Rudecanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *DSWA01.* The type genus for the taxon is *Candidatus* Rudecana .

According to the original version of GTDB R06-RS202, this family belongs to the order *DSWA01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Rudecanales.

Description of *Candidatus* Rudecanales ord. nov.

Candidatus Rudecanales (NL. fem. n. *Rudecanales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *DSWA01.* The type genus for the taxon is *Candidatus* Rudecana .

According to the original version of GTDB R06-RS202, this family belongs to the class *MHYJ01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Fetifosae.

Description of *Candidatus* Rudecaria fefelitudo sp. nov.

Candidatus Rudecaria fefelitudo (NL. fem. n. *fefelitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6522 sp002434915*. The type genome for the species is the GenBank assembly GCA_002434915.1. The GC content of the type genome is 42.81 % and the genome length is 2.07 Mbp.

Description of *Candidatus* Rudecaria gen. nov.

Candidatus Rudecaria (NL. fem. n. *Rudecaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA6522*. The type species for the genus is *Candidatus* Rudecaria fefelitudo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA6522*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Rudecariaceae.

Description of *Candidatus* Rudecariaceae fam. nov.

Candidatus Rudecariaceae (NL. fem. n. *Rudecariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA6522.* The type genus for the taxon is *Candidatus* Rudecaria .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA6522*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Rudecariales.

Description of *Candidatus* Rudecariales ord. nov.

Candidatus Rudecariales (NL. fem. n. *Rudecariales* a name created from the name of the

type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA6522.* The type genus for the taxon is *Candidatus* Rudecaria .

According to the GTDB R06-RS202, this order belongs to the class *Gammaproteobacteria*.

Description of *Candidatus* Rudecaria noninilenta sp. nov.

Candidatus Rudecaria noninilenta (NL. fem. n. *noninilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6522 sp002718345*. The type genome for the species is the GenBank assembly GCA_002718345.1. The GC content of the type genome is 42.05 % and the genome length is 2.29 Mbp.

Description of *Candidatus* Rudecaria nubecigena sp. nov.

Candidatus Rudecaria nubecigena (NL. fem. n. *nubecigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6522 sp002311835*. The type genome for the species is the GenBank assembly GCA_002311835.1. The GC content of the type genome is 50.44 % and the genome length is 2.63 Mbp.

Description of *Candidatus* Rudecella famelitia sp. nov.

Candidatus Rudecella famelitia (NL. fem. n. *famelitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Bin36 sp002238565*. The type genome for the species is the GenBank assembly GCA_002238565.1. The GC content of the type genome is 58.04 % and the genome length is 5.6 Mbp.

Description of *Candidatus* Rudecella gen. nov.

Candidatus Rudecella (NL. fem. n. *Rudecella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this genus is *Bin36*. The type species for the genus is *Candidatus* Rudecella famelitia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Rudecia adlocentia sp. nov.

Candidatus Rudecia adlocentia (NL. fem. n. *adlocentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6055 sp011523515*. The type genome for the species is the GenBank assembly GCA_011523515.1. The GC content of the type genome is 59.64 % and the genome length is 4.15 Mbp.

Description of *Candidatus* Rudecia gen. nov.

Candidatus Rudecia (NL. fem. n. *Rudecia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA6055*. The type species for the genus is *Candidatus* Rudecia adlocentia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *A4b*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Telegiaceae.

Description of *Candidatus* Rudecia antacigena sp. nov.

Candidatus Rudecia antacigena (NL. fem. n. *antacigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6055 sp012270545*. The type genome for the species is the GenBank assembly GCA_012270545.1. The GC content of the type genome is 58.38 % and the genome length is 3.97 Mbp.

Description of *Candidatus* Rudecia argimitoga sp. nov.

Candidatus Rudecia argimitoga (NL. fem. n. *argimitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *UBA6055 sp011525385*. The type genome for the species is the GenBank assembly GCA_011525385.1. The GC content of the type genome is 56.63 % and the genome length is 4.91 Mbp.

Description of *Candidatus* Rudecia caselitoga sp. nov.

Candidatus Rudecia caselitoga (NL. fem. n. *caselitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6055 sp009841405*. The type genome for the species is the GenBank assembly GCA_009841405.1. The GC content of the type genome is 61.23 % and the genome length is 4.24 Mbp.

Description of *Candidatus* Rudecia nucificella sp. nov.

Candidatus Rudecia nucificella (NL. fem. n. *nucificella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6055 sp011523545*. The type genome for the species is the GenBank assembly GCA_011523545.1. The GC content of the type genome is 60.02 % and the genome length is 4.54 Mbp.

Description of *Candidatus* Rudecia pudibugo sp. nov.

Candidatus Rudecia pudibugo (NL. fem. n. *pudibugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6055 sp009840575*. The type genome for the species is the GenBank assembly GCA_009838095.1. The GC content of the type genome is 59.85 % and the genome length is 3.4 Mbp.

Description of *Candidatus* Rudecia recucousia sp. nov.

Candidatus Rudecia recucousia (NL. fem. n. *recucousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6055 sp002428985*. The type genome for the species is the GenBank assembly GCA_002428985.1. The GC content of the type genome is 43.16 % and the genome length is 8.51 Mbp.

Description of *Candidatus* Rudecia reduvugo sp. nov.

Candidatus Rudecia reduvugo (NL. fem. n. *reduvugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6055 sp011523735*. The type genome for the species is the GenBank assembly GCA_011523735.1. The GC content of the type genome is 57.28 % and the genome length is 4.37 Mbp.

Description of *Candidatus* Rudecia roraretta sp. nov.

Candidatus Rudecia roraretta (NL. fem. n. *roraretta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6055 sp002238485*. The type genome for the species is the GenBank assembly GCA_002238485.1. The GC content of the type genome is 59.31 % and the genome length is 3.66 Mbp.

Description of *Candidatus* Rudecia satacitio sp. nov.

Candidatus Rudecia satacitio (NL. fem. n. *satacitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6055 sp011523705*. The type genome for the species is the GenBank assembly GCA_011523705.1. The GC content of the type genome is 58.92 % and the genome length is 4.71 Mbp.

Description of *Candidatus* Rudecida conubatica sp. nov.

Candidatus Rudecida conubatica (NL. fem. n. *conubatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *B9-G15 sp003650185*. The type genome for the species is the GenBank assembly GCA_003650225.1. The GC content of the type genome is 59.28 % and the genome length is 1.96 Mbp.

Description of *Candidatus* Rudecida gen. nov.

Candidatus Rudecida (NL. fem. n. *Rudecida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *B9-G15*. The type species for the genus is *Candidatus* Rudecida conubatica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *RBG-13-53-26*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Reforidaceae.

Description of *Candidatus* Rudecosa defanugo sp. nov.

Candidatus Rudecosa defanugo (NL. fem. n. *defanugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Fen-999 sp003157035*. The type genome for the species is the GenBank assembly GCA_003157035.1. The GC content of the type genome is 62.29 % and the genome length is 3.6 Mbp.

Description of *Candidatus* Rudecosa gen. nov.

Candidatus Rudecosa (NL. fem. n. *Rudecosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Fen-999*. The type species for the genus is *Candidatus* Rudecosa defanugo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Rudecosa ellebugo sp. nov.

Candidatus Rudecosa ellebugo (NL. fem. n. *ellebugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Fen-999 sp003158255*. The type genome for the species is the GenBank assembly GCA_003158255.1. The GC content of the type genome is 62.02 % and the genome length is 3.45 Mbp.

Description of *Candidatus* Rudecula absocitica sp. nov.

Candidatus Rudecula absocitica (NL. fem. n. *absocitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA877 sp903873975*. The type genome for the species is the GenBank assembly GCA_903873975.1. The GC content of the type genome is 54.75 % and the genome length is 3.56 Mbp.

Description of *Candidatus* Rudecula gen. nov.

Candidatus Rudecula (NL. fem. n. *Rudecula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA877*. The type species for the genus is *Candidatus* Rudecula absocitica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *EnvOPS12*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vinoliaceae.

Description of *Candidatus* Rudecula defosivita sp. nov.

Candidatus Rudecula defosivita (NL. fem. n. *defosivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA877 sp903884265*. The type genome for the species is the GenBank assembly GCA_903884265.1. The GC content of the type genome is 53.49 % and the genome length is 1.66 Mbp.

Description of *Candidatus* Rudecula embamousia sp. nov.

Candidatus Rudecula embamousia (NL. fem. n. *embamousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA877 sp002294405*. The type genome for the species is the GenBank assembly GCA_002294405.1. The GC content of the type genome is 49.76 % and the genome length is 1.44 Mbp.

Description of *Candidatus* Rudecula mahelitoga sp. nov.

Candidatus Rudecula mahelitoga (NL. fem. n. *mahelitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA877 sp009772985*. The type genome for the species is the GenBank assembly GCA_009772985.1. The GC content of the type genome is 61.22 % and the genome length is 3.03 Mbp.

Description of *Candidatus* Rudecula velivitica sp. nov.

Candidatus Rudecula velivitica (NL. fem. n. *velivitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA877 sp903829085*. The type genome for the species is the GenBank assembly GCA_903829085.1. The GC content of the type genome is 54.73 % and the genome length is 3.24 Mbp.

Description of *Candidatus* Rudicana cenobousia sp. nov.

Candidatus Rudicana cenobousia (NL. fem. n. *cenobousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SZUA-150 sp003228915*. The type genome for the species is the GenBank assembly GCA_003228915.1. The GC content of the type genome is 45.84 % and the genome length is 2.66 Mbp.

Description of *Candidatus* Rudicana gen. nov.

Candidatus Rudicana (NL. fem. n. *Rudicana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SZUA-150*. The type species for the genus is *Candidatus* Rudicana cenobousia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SZUA-150*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Rudicanaceae.

Description of *Candidatus* Rudicanaceae fam. nov.

Candidatus Rudicanaceae (NL. fem. n. *Rudicanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SZUA-150.* The type genus for the taxon is *Candidatus* Rudicana .

According to GTDB R06-RS202, this family belongs to the order *Acidiferrobacterales*.

Description of *Candidatus* Rudicaria tabitibra sp. nov.

Candidatus Rudicaria tabitibra (NL. fem. n. *tabitibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2718815 sp002726515*. The type genome for the species is the GenBank assembly GCA_002718815.1. The GC content of the type genome is 55.25 % and the genome length is 6.38 Mbp.

Description of *Candidatus* Rudicaria gen. nov.

Candidatus Rudicaria (NL. fem. n. *Rudicaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2718815*. The type species for the genus is *Candidatus* Rudicaria tabitibra .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Rudicella divulilega sp. nov.

Candidatus Rudicella divulilega (NL. fem. n. *divulilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5794 sp002418265*. The type genome for the species is the GenBank assembly GCA_002418265.1. The GC content of the type genome is 59.25 % and the genome length is 2.64 Mbp.

Description of *Candidatus* Rudicella gen. nov.

Candidatus Rudicella (NL. fem. n. *Rudicella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA5794*. The type species for the genus is *Candidatus* Rudicella divulilega .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA5794*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Rudicellaceae.

Description of *Candidatus* Rudicellaceae fam. nov.

Candidatus Rudicellaceae (NL. fem. n. *Rudicellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA5794.* The type genus for the taxon is *Candidatus* Rudicella .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA5794*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Rudicellales.

Description of *Candidatus* Rudicellales ord. nov.

Candidatus Rudicellales (NL. fem. n. *Rudicellales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA5794.* The type genus for the taxon is *Candidatus* Rudicella .

According to the GTDB R06-RS202, this order belongs to the class *Acidimicrobiia*.

Description of *Candidatus* Rudicella vanititudo sp. nov.

Candidatus Rudicella vanititudo (NL. fem. n. *vanititudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5794 sp008501565*. The type genome for the species is the GenBank assembly GCA_008501565.1. The GC content of the type genome is 60.28 % and the genome length is 2.14 Mbp.

Description of *Candidatus* Rudicia hexagedo sp. nov.

Candidatus Rudicia hexagedo (NL. fem. n. *hexagedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SKNC01 sp007120745*. The type genome for the species is the GenBank assembly GCA_007120745.1. The GC content of the type genome is 45.87 % and the genome length is 1.44 Mbp.

Description of *Candidatus* Rudicia gen. nov.

Candidatus Rudicia (NL. fem. n. *Rudicia* a name created arbitrarily, while preserving the

phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SKNC01*. The type species for the genus is *Candidatus* Rudicia hexagedo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SKNC01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Rudiciaceae.

Description of *Candidatus* Rudiciaceae fam. nov.

Candidatus Rudiciaceae (NL. fem. n. *Rudiciaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SKNC01.* The type genus for the taxon is *Candidatus* Rudicia .

According to the original version of GTDB R06-RS202, this family belongs to the order *SKNC01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Rudiciales.

Description of *Candidatus* Rudiciales ord. nov.

Candidatus Rudiciales (NL. fem. n. *Rudiciales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SKNC01.* The type genus for the taxon is *Candidatus* Rudicia .

According to the GTDB R06-RS202, this order belongs to the class *Dethiobacteria*.

Description of *Candidatus* Rudicia occenitia sp. nov.

Candidatus Rudicia occenitia (NL. fem. n. *occenitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SKNC01 sp003560915*. The type genome for the species is the GenBank assembly GCA_003560915.1. The GC content of the type genome is 44.29 % and the genome length is 1.87 Mbp.

Description of *Candidatus* Rudicida defasitudo sp. nov.

Candidatus Rudicida defasitudo (NL. fem. n. *defasitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *TMED13 sp902595755*. The type genome for the species is the GenBank assembly GCA_902595755.1. The GC content of the type genome is 29.62 % and the genome length is 1.3 Mbp.

Description of *Candidatus* Rudicida gen. nov.

Candidatus Rudicida (NL. fem. n. *Rudicida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *TMED13*. The type species for the genus is *Candidatus* Rudicida defasitudo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *TMED127*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Tubicariaceae.

Description of *Candidatus* Rudicida sicinigena sp. nov.

Candidatus Rudicida sicinigena (NL. fem. n. *sicinigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *TMED13 sp002167825*. The type genome for the species is the GenBank assembly GCA_002167825.1. The GC content of the type genome is 29.85 % and the genome length is 1.35 Mbp.

Description of *Candidatus* Rudicosa camilitia sp. nov.

Candidatus Rudicosa camilitia (NL. fem. n. *camilitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-303 sp000437755*. The type genome for the species is the GenBank assembly GCA_000437755.1. The GC content of the type genome is 40.93 % and the genome length is 2.71 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "derived from human gut metagenome".

Description of *Candidatus* Rudicosa gen. nov.

Candidatus Rudicosa (NL. fem. n. *Rudicosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAG-303*. The type species for the genus is *Candidatus* Rudicosa camilitia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Rudicosa cisorigena sp. nov.

Candidatus Rudicosa cisorigena (NL. fem. n. *cisorigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-303 sp902797675*. The type genome for the species is the GenBank assembly GCA_902797675.1. The GC content of the type genome is 44.16 % and the genome length is 2.23 Mbp.

Description of *Candidatus* Rudicosa cocibitia sp. nov.

Candidatus Rudicosa cocibitia (NL. fem. n. *cocibitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-303 sp012520815*. The type genome for the species is the GenBank assembly GCA_012520815.1. The GC content of the type genome is 34.44 % and the genome length is 1.82 Mbp.

Description of *Candidatus* Rudicosa fatilibula sp. nov.

Candidatus Rudicosa fatilibula (NL. fem. n. *fatilibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-303 sp900539455*. The type genome for the species is the GenBank assembly GCA_900539455.1. The GC content of the type genome is 34.02 % and the genome length is 2.2 Mbp.

Description of *Candidatus* Ruegeria apsenedo sp. nov.

Candidatus Ruegeria apsenedo (NL. fem. n. *apsenedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Ruegeria sp001238295*. The type genome for the species is the GenBank assembly RS_GCF_001238295.1. The GC content of the type genome is 56.79 % and the genome length is 4.46 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Surface seawater".

Description of *Candidatus* Ruegeria conamibula sp. nov.

Candidatus Ruegeria conamibula (NL. fem. n. *conamibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ruegeria sp013112245*. The type genome for the species is the GenBank assembly RS_GCF_013031175.1. The GC content of the type genome is 56.74 % and the genome length is 4.27 Mbp.

Description of *Candidatus* Ruegeria defetiforma sp. nov.

Candidatus Ruegeria defetiforma (NL. fem. n. *defetiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ruegeria sp903914075*. The type genome for the species is the GenBank assembly RS_GCF_903914075.1. The GC content of the type genome is 57.28 % and the genome length is 4.28 Mbp.

Description of *Candidatus* Ruegeria faticilega sp. nov.

Candidatus Ruegeria faticilega (NL. fem. n. *faticilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ruegeria sp013031405*. The type genome for the species is the GenBank assembly RS_GCF_013031405.1. The GC content of the type genome is 61.03 % and the genome length is 6.08 Mbp.

Description of *Candidatus* Ruegeria homogibra sp. nov.

Candidatus Ruegeria homogibra (NL. fem. n. *homogibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ruegeria sp013377785*. The type genome for the species is the GenBank assembly RS_GCF_013377785.1. The GC content of the type genome is 56.61 % and the genome length is 4.81 Mbp.

Description of *Candidatus* Ruegeria ignosessa sp. nov.

Candidatus Ruegeria ignosessa (NL. fem. n. *ignosessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ruegeria sp003318255*. The type genome for the species is the GenBank assembly RS_GCF_003318255.1. The GC content of the type genome is 56.88 % and the genome length is 4.44 Mbp.

Description of *Candidatus* Ruegeria illapessa sp. nov.

Candidatus Ruegeria illapessa (NL. fem. n. *illapessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ruegeria sp000814005*. The type genome for the species is the GenBank assembly RS_GCF_000814005.1. The GC content of the type genome is 57.26 % and the genome length is 4.54 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "accessory nidamental gland".

Description of *Candidatus* Ruegeria inabsastra sp. nov.

Candidatus Ruegeria inabsastra (NL. fem. n. *inabsastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ruegeria sp003443535*. The type genome for the species is the GenBank assembly RS_GCF_003443535.1. The GC content of the type genome is 56.99 % and the genome length is 4.41 Mbp.

Description of *Candidatus* Ruegeria insinax sp. nov.

Candidatus Ruegeria insinax (NL. fem. n. *insinax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ruegeria sp900143525*. The type genome for the species is the GenBank assembly RS_GCF_900143525.1. The GC content of the type genome is 56.53 % and the genome length is 4.92 Mbp.

Description of *Candidatus* Ruegeria melopax sp. nov.

Candidatus Ruegeria melopax (NL. fem. n. *melopax* a species epithet created arbitrarily,

while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ruegeria sp013111185*. The type genome for the species is the GenBank assembly RS_GCF_013111185.1. The GC content of the type genome is 56.36 % and the genome length is 4.62 Mbp.

Description of *Candidatus* Ruegeria odollimonia sp. nov.

Candidatus Ruegeria odollimonia (NL. fem. n. *odollimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ruegeria sp000158135*. The type genome for the species is the GenBank assembly RS_GCF_000158135.1. The GC content of the type genome is 57.67 % and the genome length is 4.49 Mbp.

Description of *Candidatus* Ruegeria recocugo sp. nov.

Candidatus Ruegeria recocugo (NL. fem. n. *recocugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ruegeria sp000813985*. The type genome for the species is the GenBank assembly RS_GCF_000813985.1. The GC content of the type genome is 57.52 % and the genome length is 4.68 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "accessory nidamental gland".

Description of *Candidatus* Ruegeria redacivita sp. nov.

Candidatus Ruegeria redacivita (NL. fem. n. *redacivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ruegeria sp900313035*. The type genome for the species is the GenBank assembly RS_GCF_900313035.1. The GC content of the type genome is 56.15 % and the genome length is 5.32 Mbp.

Description of *Candidatus* Ruegeria semimimonia sp. nov.

Candidatus Ruegeria semimimonia (NL. fem. n. *semimimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ruegeria sp009363615*. The type genome for the species is the GenBank assembly RS_GCF_013033705.1. The GC content of the type genome is 58.02 % and the genome length is 4.46 Mbp.

Description of *Candidatus* Ruegeria vinulitia sp. nov.

Candidatus Ruegeria vinulitia (NL. fem. n. *vinulitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ruegeria sp013033515*. The type genome for the species is the GenBank assembly RS_GCF_013035825.1. The GC content of the type genome is 57.17 % and the genome length is 4.54 Mbp.

Description of *Candidatus* Ruegeria sicinousia sp. nov.

Candidatus Ruegeria sicinousia (NL. fem. n. *sicinousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ruegeria_B sp010500245*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_010500245.1. The GC content of the type genome is 62.79 % and the genome length is 5.07 Mbp.

Description of *Candidatus* Ruegeria vinulitio sp. nov.

Candidatus Ruegeria vinulitio (NL. fem. n. *vinulitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ruegeria_E sp900537075*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_900537075.1. The GC content of the type genome is 57.78 % and the genome length is 4.66 Mbp.

Description of *Candidatus* Rufibacter cicililega sp. nov.

Candidatus Rufibacter cicililega (NL. fem. n. *cicililega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rufibacter sp008271695*. The type genome for the species is the GenBank assembly RS_GCF_008271695.1. The GC content of the type genome is 51.34 % and the genome length is 5.84 Mbp.

Description of *Candidatus* Rufibacter devecetta sp. nov.

Candidatus Rufibacter devecetta (NL. fem. n. *devecetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rufibacter sp003721515*. The type genome for the species is the GenBank assembly RS_GCF_003721515.1. The GC content of the type genome is 50.23 % and the genome length is 5.67 Mbp.

Description of *Candidatus* Rufibacter intecivita sp. nov.

Candidatus Rufibacter intecivita (NL. fem. n. *intecivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rufibacter sp013623775*. The type genome for the species is the GenBank assembly RS_GCF_013623775.1. The GC content of the type genome is 50.61 % and the genome length is 5.3 Mbp.

Description of *Candidatus* Rufibacter pacifousia sp. nov.

Candidatus Rufibacter pacifousia (NL. fem. n. *pacifousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rufibacter sp001078055*. The type genome for the species is the GenBank assembly RS_GCF_001078055.1. The GC content of the type genome is 51.35 % and the genome length is 4.82 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "soil".

Description of *Candidatus* Rufibacter solivimonia sp. nov.

Candidatus Rufibacter solivimonia (NL. fem. n. *solivimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rufibacter sp014269285*. The type genome for the species is the

GenBank assembly RS_GCF_014269285.1. The GC content of the type genome is 52.08 % and the genome length is 5.56 Mbp.

Description of *Candidatus* Rugamonas virecicella sp. nov.

Candidatus Rugamonas virecicella (NL. fem. n. *virecicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rugamonas sp013284265*. The type genome for the species is the GenBank assembly RS_GCF_013284265.1. The GC content of the type genome is 63.19 % and the genome length is 6.94 Mbp.

Description of *Candidatus* Rugosibacter adpenicella sp. nov.

Candidatus Rugosibacter adpenicella (NL. fem. n. *adpenicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rugosibacter sp002842395*. The type genome for the species is the GenBank assembly GCA_002842395.1. The GC content of the type genome is 62.68 % and the genome length is 2.34 Mbp.

Description of *Candidatus* Rugosibacter bimetitio sp. nov.

Candidatus Rugosibacter bimetitio (NL. fem. n. *bimetitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rugosibacter sp002424865*. The type genome for the species is the GenBank assembly GCA_002422445.1. The GC content of the type genome is 56.87 % and the genome length is 2.13 Mbp.

Description of *Candidatus* Rugosibacter denicigena sp. nov.

Candidatus Rugosibacter denicigena (NL. fem. n. *denicigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rugosibacter sp002422995*. The type genome for the species is the GenBank assembly GCA_002422995.1. The GC content of the type genome is 51.76 % and the genome length is 1.75 Mbp.

Description of *Candidatus* Rugosibacter regigitia sp. nov.

Candidatus Rugosibacter regigitia (NL. fem. n. *regigitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rugosibacter sp011620215*. The type genome for the species is the GenBank assembly GCA_011620215.1. The GC content of the type genome is 54.03 % and the genome length is 2.38 Mbp.

Description of *Candidatus* Rugosibacter taraxigena sp. nov.

Candidatus Rugosibacter taraxigena (NL. fem. n. *taraxigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rugosibacter sp004322535*. The type genome for the species is the GenBank assembly GCA_004322535.1. The GC content of the type genome is 54.04 % and the genome length is 2.57 Mbp.

Description of *Candidatus* Rumifana conamicella sp. nov.

Candidatus Rumifana conamicella (NL. fem. n. *conamicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SHYG01 sp009692925*. The type genome for the species is the GenBank assembly GCA_009692925.1. The GC content of the type genome is 64.29 % and the genome length is 2.07 Mbp.

Description of *Candidatus* Rumifana gen. nov.

Candidatus Rumifana (NL. fem. n. *Rumifana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SHYG01*. The type species for the genus is *Candidatus* Rumifana conamicella .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA3495*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Bicipellaceae.

Description of *Candidatus* Rumifaria detunitica sp. nov.

Candidatus Rumifaria detunitica (NL. fem. n. *detunitica* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *V9D3004 sp002349525*. The type genome for the species is the GenBank assembly GCA_002349525.1. The GC content of the type genome is 37.26 % and the genome length is 2.21 Mbp.

Description of *Candidatus* Rumifaria gen. nov.

Candidatus Rumifaria (NL. fem. n. *Rumifaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *V9D3004*. The type species for the genus is *Candidatus* Rumifaria detunitica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Rumifaria expasentia sp. nov.

Candidatus Rumifaria expasentia (NL. fem. n. *expasentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *V9D3004 sp900760345*. The type genome for the species is the GenBank assembly RS_GCF_900760345.1. The GC content of the type genome is 37.91 % and the genome length is 2.34 Mbp.

Description of *Candidatus* Rumifaria pavicicella sp. nov.

Candidatus Rumifaria pavicicella (NL. fem. n. *pavicicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *V9D3004 sp000621985*. The type genome for the species is the GenBank assembly RS_GCF_000621985.1. The GC content of the type genome is 40.63 % and the genome length is 3.42 Mbp.

Description of *Candidatus* Rumifella culilivita sp. nov.

Candidatus Rumifella culilivita (NL. fem. n. *culilivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *NIOZ-UU100 sp013349825*. The type genome for the species is the GenBank assembly GCA_013349855.1. The GC content of the type genome is 49.09 % and the genome length is 2.85 Mbp.

Description of *Candidatus* Rumifella gen. nov.

Candidatus Rumifella (NL. fem. n. *Rumifella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *NIOZ-UU100*. The type species for the genus is *Candidatus* Rumifella culilivita .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GCF-002020875*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Valefariaceae.

Description of *Candidatus* Rumifella retecitura sp. nov.

Candidatus Rumifella retecitura (NL. fem. n. *retecitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *NIOZ-UU100 sp014384675*. The type genome for the species is the GenBank assembly GCA_014384675.1. The GC content of the type genome is 49.18 % and the genome length is 1.58 Mbp.

Description of *Candidatus* Rumifia cenotugo sp. nov.

Candidatus Rumifia cenotugo (NL. fem. n. *cenotugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HK1 sp000583135*. The type genome for the species is the GenBank assembly GCA_002296665.1. The GC content of the type genome is 58.28 % and the genome length is 3.44 Mbp.

Description of *Candidatus* Rumifia gen. nov.

Candidatus Rumifia (NL. fem. n. *Rumifia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *HK1*. The type species for the genus is *Candidatus* Rumifia cenotugo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *HK1*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Rumifiaceae.

Description of *Candidatus* Rumifiaceae fam. nov.

Candidatus Rumifiaceae (NL. fem. n. *Rumifiaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *HK1*. The type genus for the taxon is *Candidatus* Rumifia .

According to the original version of GTDB R06-RS202, this family belongs to the order *HK1*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Rumifiales.

Description of *Candidatus* Rumifiales ord. nov.

Candidatus Rumifiales (NL. fem. n. *Rumifiales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *HK1*. The type genus for the taxon is *Candidatus* Rumifia .

According to the GTDB R06-RS202, this order belongs to the class *Gammaproteobacteria*.

Description of *Candidatus* Rumifida lugubimonia sp. nov.

Candidatus Rumifida lugubimonia (NL. fem. n. *lugubimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABDOU01 sp013043085*. The type genome for the species is the GenBank assembly GCA_013001065.1. The GC content of the type genome is 59.64 % and the genome length is 2.21 Mbp.

Description of *Candidatus* Rumifida gen. nov.

Candidatus Rumifida (NL. fem. n. *Rumifida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABDOU01*. The type species for the genus is *Candidatus* Rumifida lugubimonia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SHLN01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Ducilariaceae.

Description of *Candidatus* Rumifosa bipatedo sp. nov.

Candidatus Rumifosa bipatedo (NL. fem. n. *bipatedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1858 sp002338385*. The type genome for the species is the GenBank assembly GCA_003332345.1. The GC content of the type genome is 47.1 % and the genome length is 1.19 Mbp.

Description of *Candidatus* Rumifosa gen. nov.

Candidatus Rumifosa (NL. fem. n. *Rumifosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1858*. The type species for the genus is *Candidatus* Rumifosa bipatedo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA4575*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Paraciaceae.

Description of *Candidatus* Rumifula tomacitia sp. nov.

Candidatus Rumifula tomacitia (NL. fem. n. *tomacitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4765 sp002365175*. The type genome for the species is the GenBank assembly GCA_002365175.1. The GC content of the type genome is 60.96 % and the genome length is 3.05 Mbp.

Description of *Candidatus* Rumifula gen. nov.

Candidatus Rumifula (NL. fem. n. *Rumifula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA4765*. The type species for the genus is *Candidatus* Rumifula

tomacitia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA4765*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Rumifulaceae.

Description of *Candidatus* Rumifulaceae fam. nov.

Candidatus Rumifulaceae (NL. fem. n. *Rumifulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA4765.* The type genus for the taxon is *Candidatus* Rumifula .

According to GTDB R06-RS202, this family belongs to the order *Rhizobiales*.

Description of *Candidatus* Ruminiclostridium altipibra sp. nov.

Candidatus Ruminiclostridium altipibra (NL. fem. n. *altipibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ruminiclostridium sp005473905*. The type genome for the species is the GenBank assembly RS_GCF_005473905.1. The GC content of the type genome is 33.02 % and the genome length is 4.73 Mbp.

Description of *Candidatus* Ruminiclostridium ammuritoga sp. nov.

Candidatus Ruminiclostridium ammuritoga (NL. fem. n. *ammuritoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ruminiclostridium sp000244875*. The type genome for the species is the GenBank assembly RS_GCF_000244875.1. The GC content of the type genome is 37.26 % and the genome length is 4.61 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "not provided; submitted under MIGS 2.1".

Description of *Candidatus* Ruminiclostridium xeramatica sp. nov.

Candidatus Ruminiclostridium xeramatica (NL. fem. n. *xeramatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Ruminiclostridium_D sp002306975*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_002306975.1. The GC content of the type genome is 44.13 % and the genome length is 3.37 Mbp.

Description of *Candidatus* Ruminiclostridium accogago sp. nov.

Candidatus Ruminiclostridium accogago (NL. fem. n. *accogago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ruminiclostridium_E sp003508605*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003508605.1. The GC content of the type genome is 44.54 % and the genome length is 2.29 Mbp.

Description of *Candidatus* Ruminiclostridium acertentia sp. nov.

Candidatus Ruminiclostridium acertentia (NL. fem. n. *acertentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ruminiclostridium_E sp009784825*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_009784825.1. The GC content of the type genome is 43.09 % and the genome length is 2.18 Mbp.

Description of *Candidatus* Ruminiclostridium acrimitura sp. nov.

Candidatus Ruminiclostridium acrimitura (NL. fem. n. *acrimitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ruminiclostridium_E sp009782265*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_009782265.1. The GC content of the type genome is 43.43 % and the genome length is 1.84 Mbp.

Description of *Candidatus* Ruminiclostridium adfulastra sp. nov.

Candidatus Ruminiclostridium adfulastra (NL. fem. n. *adfulastra* a species epithet

created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ruminiclostridium_E sp009783205*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_009783205.1. The GC content of the type genome is 43.9 % and the genome length is 1.91 Mbp.

Description of *Candidatus* Ruminiclostridium adlecitura sp. nov.

Candidatus Ruminiclostridium adlecitura (NL. fem. n. *adlecitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ruminiclostridium_E sp009783695*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_009783695.1. The GC content of the type genome is 47.45 % and the genome length is 2.23 Mbp.

Description of *Candidatus* Ruminiclostridium astipivita sp. nov.

Candidatus Ruminiclostridium astipivita (NL. fem. n. *astipivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ruminiclostridium_E sp009786985*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_009786985.1. The GC content of the type genome is 40.47 % and the genome length is 1.81 Mbp.

Description of *Candidatus* Ruminiclostridium attoribula sp. nov.

Candidatus Ruminiclostridium attoribula (NL. fem. n. *attoribula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ruminiclostridium_E sp902780695*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902780695.1.

The GC content of the type genome is 49.28 % and the genome length is 3.29 Mbp.

Description of *Candidatus* Ruminiclostridium betacibula sp. nov.

Candidatus Ruminiclostridium betacibula (NL. fem. n. *betacibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ruminiclostridium_E sp002363155*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003508215.1. The GC content of the type genome is 49.06 % and the genome length is 2.24 Mbp.

Description of *Candidatus* Ruminiclostridium bifariforma sp. nov.

Candidatus Ruminiclostridium bifariforma (NL. fem. n. *bifariforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ruminiclostridium_E sp009778605*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_009778605.1. The GC content of the type genome is 49.37 % and the genome length is 1.63 Mbp.

Description of *Candidatus* Ruminiclostridium bulapisca sp. nov.

Candidatus Ruminiclostridium bulapisca (NL. fem. n. *bulapisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ruminiclostridium_E sp009776305*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_009776305.1. The GC content of the type genome is 44.29 % and the genome length is 1.54 Mbp.

Description of *Candidatus* Ruminiclostridium cituvitoga sp. nov.

Candidatus Ruminiclostridium cituvitoga (NL. fem. n. *cituvitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Ruminiclostridium_E sp009784765*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_009784765.1. The GC content of the type genome is 50.09 % and the genome length is 1.33 Mbp.

Description of *Candidatus* Ruminiclostridium cruppimonia sp. nov.

Candidatus Ruminiclostridium cruppimonia (NL. fem. n. *cruppimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ruminiclostridium_E sp009777445*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_009777445.1. The GC content of the type genome is 43.06 % and the genome length is 1.98 Mbp.

Description of *Candidatus* Ruminiclostridium dibapousia sp. nov.

Candidatus Ruminiclostridium dibapousia (NL. fem. n. *dibapousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ruminiclostridium_E sp900768675*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_900768675.1. The GC content of the type genome is 46.81 % and the genome length is 2.27 Mbp.

Description of *Candidatus* Ruminiclostridium documatio sp. nov.

Candidatus Ruminiclostridium documatio (NL. fem. n. *documatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ruminiclostridium_E sp009777415*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_009777415.1. The GC content of the type genome is 45.16 % and the genome length is 1.78 Mbp.

Description of *Candidatus* Ruminiclostridium extipessa sp. nov.

Candidatus Ruminiclostridium extipessa (NL. fem. n. *extipessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ruminiclostridium_E sp900768735*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_900768735.1. The GC content of the type genome is 47.64 % and the genome length is 2.32 Mbp.

Description of *Candidatus* Ruminiclostridium lenocedo sp. nov.

Candidatus Ruminiclostridium lenocedo (NL. fem. n. *lenocedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ruminiclostridium_E sp009781425*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_009781425.1. The GC content of the type genome is 45.88 % and the genome length is 2.55 Mbp.

Description of *Candidatus* Ruminiclostridium miracilenta sp. nov.

Candidatus Ruminiclostridium miracilenta (NL. fem. n. *miracilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ruminiclostridium_E sp002437415*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_002451735.1. The GC content of the type genome is 45.71 % and the genome length is 2.55 Mbp.

Description of *Candidatus* Ruminiclostridium nucifetta sp. nov.

Candidatus Ruminiclostridium nucifetta (NL. fem. n. *nucifetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ruminiclostridium_E sp009778065*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into

a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_009778065.1. The GC content of the type genome is 42.98 % and the genome length is 2.55 Mbp.

Description of *Candidatus* Ruminiclostridium opporilega sp. nov.

Candidatus Ruminiclostridium opporilega (NL. fem. n. *opporilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ruminiclostridium_E sp009777835*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_009777835.1. The GC content of the type genome is 46.98 % and the genome length is 1.74 Mbp.

Description of *Candidatus* Ruminiclostridium turibago sp. nov.

Candidatus Ruminiclostridium turibago (NL. fem. n. *turibago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ruminiclostridium_E sp900556525*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_900772545.1. The GC content of the type genome is 47.49 % and the genome length is 1.87 Mbp.

Description of *Candidatus* Ruminiclostridium turifilenta sp. nov.

Candidatus Ruminiclostridium turifilenta (NL. fem. n. *turifilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ruminiclostridium_E sp003512525*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_900758115.1. The GC content of the type genome is 45.09 % and the genome length is 2.39 Mbp.

Description of *Candidatus* Ruminiclostridium vehemicula sp. nov.

Candidatus Ruminiclostridium vehemicula (NL. fem. n. *vehemicula* a species epithet

created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ruminiclostridium_E sp009777155*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_009777155.1. The GC content of the type genome is 48.91 % and the genome length is 2.36 Mbp.

Description of *Candidatus* Ruminiclostridium vilititia sp. nov.

Candidatus Ruminiclostridium vilititia (NL. fem. n. *vilititia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ruminiclostridium_E sp900539195*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_900758745.1. The GC content of the type genome is 44.86 % and the genome length is 2.64 Mbp.

Description of *Candidatus* Ruminobacter locelitio sp. nov.

Candidatus Ruminobacter locelitio (NL. fem. n. *locelitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ruminobacter sp900315145*. The type genome for the species is the GenBank assembly GCA_900315145.1. The GC content of the type genome is 40.77 % and the genome length is 2.98 Mbp.

Description of *Candidatus* Ruminobacter milipiforma sp. nov.

Candidatus Ruminobacter milipiforma (NL. fem. n. *milipiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ruminobacter sp002309455*. The type genome for the species is the GenBank assembly GCA_002309455.1. The GC content of the type genome is 44.62 % and the genome length is 1.38 Mbp.

Description of *Candidatus* Ruminococcus adfulimonia sp. nov.

Candidatus Ruminococcus adfulimonia (NL. fem. n. *adfulimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ruminococcus sp002362175*. The type genome for the species is the GenBank assembly GCA_002362175.1. The GC content of the type genome is 38.73 % and the genome length is 2.34 Mbp.

Description of *Candidatus* Ruminococcus allubitura sp. nov.

Candidatus Ruminococcus allubitura (NL. fem. n. *allubitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ruminococcus sp009177225*. The type genome for the species is the GenBank assembly GCA_009177225.1. The GC content of the type genome is 38.66 % and the genome length is 3.11 Mbp.

Description of *Candidatus* Ruminococcus anastitura sp. nov.

Candidatus Ruminococcus anastitura (NL. fem. n. *anastitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ruminococcus sp900752785*. The type genome for the species is the GenBank assembly GCA_900752785.1. The GC content of the type genome is 41.6 % and the genome length is 2.73 Mbp.

Description of *Candidatus* Ruminococcus biverax sp. nov.

Candidatus Ruminococcus biverax (NL. fem. n. *biverax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ruminococcus sp012718885*. The type genome for the species is the GenBank assembly GCA_012718885.1. The GC content of the type genome is 45.86 % and the genome length is 3.06 Mbp.

Description of *Candidatus* Ruminococcus citocitoga sp. nov.

Candidatus Ruminococcus citocitoga (NL. fem. n. *citocitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ruminococcus sp900545125*. The type genome for the species is the GenBank assembly GCA_900545125.1. The GC content of the type genome is 43.31 % and the genome length is 2.4 Mbp.

Description of *Candidatus* Ruminococcus cosigicula sp. nov.

Candidatus Ruminococcus cosigicula (NL. fem. n. *cosigicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ruminococcus sp002438605*. The type genome for the species is the GenBank assembly GCA_002438605.1. The GC content of the type genome is 37.24 % and the genome length is 2.14 Mbp.

Description of *Candidatus* Ruminococcus deforago sp. nov.

Candidatus Ruminococcus deforago (NL. fem. n. *deforago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ruminococcus sp900318825*. The type genome for the species is the GenBank assembly GCA_900318825.1. The GC content of the type genome is 49.15 % and the genome length is 2.02 Mbp.

Description of *Candidatus* Ruminococcus diritilega sp. nov.

Candidatus Ruminococcus diritilega (NL. fem. n. *diritilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ruminococcus sp900315755*. The type genome for the species is the GenBank assembly RS_GCF_902762695.1. The GC content of the type genome is 44.73 % and the genome length is 2.81 Mbp.

Description of *Candidatus* Ruminococcus ducilimonas sp. nov.

Candidatus Ruminococcus ducilimonas (NL. fem. n. *ducilimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ruminococcus sp002362135*. The type genome for the species is the GenBank assembly GCA_002362135.1. The GC content of the type genome is 44.29 %

and the genome length is 1.94 Mbp.

Description of *Candidatus* Ruminococcus inergetta sp. nov.

Candidatus Ruminococcus inergetta (NL. fem. n. *inergetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ruminococcus sp900761275*. The type genome for the species is the GenBank assembly GCA_900761275.1. The GC content of the type genome is 41.21 % and the genome length is 3.61 Mbp.

Description of *Candidatus* Ruminococcus lanugilega sp. nov.

Candidatus Ruminococcus lanugilega (NL. fem. n. *lanugilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ruminococcus sp003488415*. The type genome for the species is the GenBank assembly GCA_003488415.1. The GC content of the type genome is 49.6 % and the genome length is 1.99 Mbp.

Description of *Candidatus* Ruminococcus lavacugo sp. nov.

Candidatus Ruminococcus lavacugo (NL. fem. n. *lavacugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ruminococcus sp900319195*. The type genome for the species is the GenBank assembly GCA_900319195.1. The GC content of the type genome is 49.18 % and the genome length is 1.98 Mbp.

Description of *Candidatus* Ruminococcus penecigena sp. nov.

Candidatus Ruminococcus penecigena (NL. fem. n. *penecigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ruminococcus sp900315975*. The type genome for the species is the GenBank assembly RS_GCF_902792235.1. The GC content of the type genome is 46.12 % and the genome length is 1.95 Mbp.

Description of *Candidatus* Ruminococcus relapentia sp. nov.

Candidatus Ruminococcus relapentia (NL. fem. n. *relapentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ruminococcus sp900321885*. The type genome for the species is the GenBank assembly GCA_900321885.1. The GC content of the type genome is 51.21 % and the genome length is 2.32 Mbp.

Description of *Candidatus* Ruminococcus resulimonas sp. nov.

Candidatus Ruminococcus resulimonas (NL. fem. n. *resulimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ruminococcus sp002389995*. The type genome for the species is the GenBank assembly GCA_003446395.1. The GC content of the type genome is 40.08 % and the genome length is 1.73 Mbp.

Description of *Candidatus* Ruminococcus semifentia sp. nov.

Candidatus Ruminococcus semifentia (NL. fem. n. *semifentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ruminococcus sp900540005*. The type genome for the species is the GenBank assembly GCA_900540005.1. The GC content of the type genome is 46.23 % and the genome length is 2.53 Mbp.

Description of *Candidatus* Ruminococcus tabificula sp. nov.

Candidatus Ruminococcus tabificula (NL. fem. n. *tabificula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ruminococcus sp001604035*. The type genome for the species is the GenBank assembly GCA_001604035.1. The GC content of the type genome is 45.72 % and the genome length is 2.97 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "3 replicate cellulose-degrading anaerobic digesters sampled at day 96 and day 362".

Description of *Candidatus* Ruminococcus vepalentia sp. nov.

Candidatus Ruminococcus vepalentia (NL. fem. n. *vepalentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ruminococcus sp002394695*. The type genome for the species is the GenBank assembly RS_GCF_902760805.1. The GC content of the type genome is 52.01 % and the genome length is 2.73 Mbp.

Description of *Candidatus* Ruminococcus viripetta sp. nov.

Candidatus Ruminococcus viripetta (NL. fem. n. *viripetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ruminococcus sp002414125*. The type genome for the species is the GenBank assembly GCA_002414125.1. The GC content of the type genome is 47.47 % and the genome length is 1.75 Mbp.

Description of *Candidatus* Ruminococcus culigiforma sp. nov.

Candidatus Ruminococcus culigiforma (NL. fem. n. *culigiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ruminococcus_A sp003011855*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_009696065.1. The GC content of the type genome is 44.07 % and the genome length is 3.23 Mbp.

Description of *Candidatus* Ruminococcus derecitura sp. nov.

Candidatus Ruminococcus derecitura (NL. fem. n. *derecitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ruminococcus_A sp000432335*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_900549115.1. The GC content of the type genome is 43.63 % and the genome length is 2.7 Mbp.

Description of *Candidatus* Ruminococcus illepicula sp. nov.

Candidatus Ruminococcus illepicula (NL. fem. n. *illepicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ruminococcus_A sp004562915*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_004562915.1. The GC content of the type genome is 41.77 % and the genome length is 4.07 Mbp.

Description of *Candidatus* Ruminococcus invetax sp. nov.

Candidatus Ruminococcus invetax (NL. fem. n. *invetax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ruminococcus_A sp004556655*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_004556655.1. The GC content of the type genome is 41.25 % and the genome length is 3.97 Mbp.

Description of *Candidatus* Ruminococcus refinitrix sp. nov.

Candidatus Ruminococcus refinitrix (NL. fem. n. *refinitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ruminococcus_A sp002361775*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_002361885.1. The GC content of the type genome is 41.32 % and the genome length is 2.26 Mbp.

Description of *Candidatus* Ruminococcus vepalilega sp. nov.

Candidatus Ruminococcus vepalilega (NL. fem. n. *vepalilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ruminococcus_A sp009929525*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_009929895.1. The GC content of the type genome is 42.44 % and the genome length is 3.75 Mbp.

Description of *Candidatus* Ruminococcus bisacicula sp. nov.

Candidatus Ruminococcus bisacicula (NL. fem. n. *bisacicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ruminococcus_B sp900544395*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_900544395.1. The GC content of the type genome is 43.61 % and the genome length is 2.63 Mbp.

Description of *Candidatus* Ruminococcus encomessa sp. nov.

Candidatus Ruminococcus encomessa (NL. fem. n. *encomessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ruminococcus_C sp900765125*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_900765125.1. The GC content of the type genome is 39.65 % and the genome length is 2.46 Mbp.

Description of *Candidatus* Ruminococcus fatifatio sp. nov.

Candidatus Ruminococcus fatifatio (NL. fem. n. *fatifatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ruminococcus_C sp000433635*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_000980235.1. The GC content of the type genome is 46.96 % and the genome length is 2.92 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "stool sample from 84 year old male with stage 3 colorectal cancer".

Description of *Candidatus* Ruminococcus gasomilega sp. nov.

Candidatus Ruminococcus gasomilega (NL. fem. n. *gasomilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ruminococcus_C sp900545285*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_900545285.1. The GC content of the type genome is 49.28 % and the genome length is 2.04 Mbp.

Description of *Candidatus* Ruminococcus negotitas sp. nov.

Candidatus Ruminococcus negotitas (NL. fem. n. *negotitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ruminococcus_C sp000437175*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_000437175.1. The GC content of the type genome is 52.41 % and the genome length is 2.47 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "derived from human gut metagenome".

Description of *Candidatus* Ruminococcus nugivousia sp. nov.

Candidatus Ruminococcus nugivousia (NL. fem. n. *nugivousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ruminococcus_C sp000980705*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_008667655.1. The GC content of the type genome is 53.22 % and the genome length is 1.85 Mbp.

Description of *Candidatus* Ruminococcus rubecibra sp. nov.

Candidatus Ruminococcus rubecibra (NL. fem. n. *rubecibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ruminococcus_C sp900770195*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_900770195.1. The GC content of the type genome is 34.59 % and the genome length is 2.19 Mbp.

Description of *Candidatus* Ruminococcus socagicula sp. nov.

Candidatus Ruminococcus socagicula (NL. fem. n. *socagicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ruminococcus_C sp000437255*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_000437255.1. The GC content of the type genome is 45.65 % and the genome length is 2.21 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "derived from human gut metagenome".

Description of *Candidatus* Ruminococcus acrolitudo sp. nov.

Candidatus Ruminococcus acrolitudo (NL. fem. n. *acrolitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ruminococcus_D sp902767035*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902767035.1. The GC content of the type genome is 48.13 % and the genome length is 2.09 Mbp.

Description of *Candidatus* Ruminococcus adpinimonas sp. nov.

Candidatus Ruminococcus adpinimonas (NL. fem. n. *adpinimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ruminococcus_D sp902781565*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902781565.1. The GC content of the type genome is 53.59 % and the genome length is 2.87 Mbp.

Description of *Candidatus* Ruminococcus affanetta sp. nov.

Candidatus Ruminococcus affanetta (NL. fem. n. *affanetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ruminococcus_D sp902787365*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902787365.1. The GC content of the type genome is 47.14 % and the genome length is 2.92 Mbp.

Description of *Candidatus* Ruminococcus alsidilega sp. nov.

Candidatus Ruminococcus alsidilega (NL. fem. n. *alsidilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ruminococcus_D sp000686125*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_000686125.1. The GC content of the type genome is 46.94 % and the genome length is 3.56 Mbp.

Description of *Candidatus* Ruminococcus ambusilenta sp. nov.

Candidatus Ruminococcus ambusilenta (NL. fem. n. *ambusilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ruminococcus_D sp902766335*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902766335.1. The GC content of the type genome is 52.15 % and the genome length is 2.53 Mbp.

Description of *Candidatus* Ruminococcus aphorifica sp. nov.

Candidatus Ruminococcus aphorifica (NL. fem. n. *aphorifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ruminococcus_D sp902788785*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902788785.1. The GC content of the type genome is 46.68 % and the genome length is 2.95 Mbp.

Description of *Candidatus* Ruminococcus atlanessa sp. nov.

Candidatus Ruminococcus atlanessa (NL. fem. n. *atlanessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ruminococcus_D sp900604945*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_900604945.1. The GC content of the type genome is 44.49 % and the genome length is 2.64 Mbp.

Description of *Candidatus* Ruminococcus bacifentia sp. nov.

Candidatus Ruminococcus bacifentia (NL. fem. n. *bacifentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ruminococcus_D sp902762735*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902762735.1. The GC content of the type genome is 47.93 % and the genome length is 4.06 Mbp.

Description of *Candidatus* Ruminococcus bigarimonas sp. nov.

Candidatus Ruminococcus bigarimonas (NL. fem. n. *bigarimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ruminococcus_D sp002371625*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_002361395.1. The GC content of the type genome is 47.03 % and the genome length is 1.75 Mbp.

Description of *Candidatus* Ruminococcus bipalitura sp. nov.

Candidatus Ruminococcus bipalitura (NL. fem. n. *bipalitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ruminococcus_D sp002391065*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The

type genome for the species is the GenBank assembly GCA_002391065.1. The GC content of the type genome is 45.71 % and the genome length is 2.34 Mbp.

Description of *Candidatus* Ruminococcus catecessa sp. nov.

Candidatus Ruminococcus catecessa (NL. fem. n. *catecessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ruminococcus_D sp900539095*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_900757345.1. The GC content of the type genome is 43.89 % and the genome length is 2.42 Mbp.

Description of *Candidatus* Ruminococcus cerimibra sp. nov.

Candidatus Ruminococcus cerimibra (NL. fem. n. *cerimibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ruminococcus_D sp000434695*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_000434695.1. The GC content of the type genome is 49.94 % and the genome length is 2.44 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "derived from human gut metagenome".

Description of *Candidatus* Ruminococcus colopedo sp. nov.

Candidatus Ruminococcus colopedo (NL. fem. n. *colopedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ruminococcus_D sp002358895*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_002358895.1. The GC content of the type genome is 40.5 % and the genome length is 1.28 Mbp.

Description of *Candidatus* Ruminococcus corocitrix sp. nov.

Candidatus Ruminococcus corocitrix (NL. fem. n. *corocitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ruminococcus_D sp900119155*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_900103235.1. The GC content of the type genome is 51.0 % and the genome length is 4.15 Mbp.

Description of *Candidatus* Ruminococcus cucurago sp. nov.

Candidatus Ruminococcus cucurago (NL. fem. n. *cucurago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ruminococcus_D sp902797535*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902797535.1. The GC content of the type genome is 46.24 % and the genome length is 2.69 Mbp.

Description of *Candidatus* Ruminococcus culiliforma sp. nov.

Candidatus Ruminococcus culiliforma (NL. fem. n. *culiliforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ruminococcus_D sp902786975*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902786975.1. The GC content of the type genome is 48.52 % and the genome length is 2.37 Mbp.

Description of *Candidatus* Ruminococcus curotilenta sp. nov.

Candidatus Ruminococcus curotilenta (NL. fem. n. *curotilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ruminococcus_D sp900319075*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902792055.1. The GC content of the type genome is 45.56 % and the genome length is 1.92 Mbp.

Description of *Candidatus* Ruminococcus daducitrix sp. nov.

Candidatus Ruminococcus daducitrix (NL. fem. n. *daducitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ruminococcus_D sp900104495*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_900104495.1. The GC content of the type genome is 51.1 % and the genome length is 3.76 Mbp.

Description of *Candidatus* Ruminococcus effulitrix sp. nov.

Candidatus Ruminococcus effulitrix (NL. fem. n. *effulitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ruminococcus_D sp902797485*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902797485.1. The GC content of the type genome is 49.83 % and the genome length is 2.65 Mbp.

Description of *Candidatus* Ruminococcus ephipisca sp. nov.

Candidatus Ruminococcus ephipisca (NL. fem. n. *ephipisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ruminococcus_D sp902787825*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902787825.1. The GC content of the type genome is 45.68 % and the genome length is 2.59 Mbp.

Description of *Candidatus* Ruminococcus exaspibula sp. nov.

Candidatus Ruminococcus exaspibula (NL. fem. n. *exaspibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ruminococcus_D sp900752625*. Although GTDB has assigned a genus

name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_900752625.1. The GC content of the type genome is 43.64 % and the genome length is 1.87 Mbp.

Description of *Candidatus* Ruminococcus fediticula sp. nov.

Candidatus Ruminococcus fediticula (NL. fem. n. *fediticula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ruminococcus_D sp900543145*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_900543145.1. The GC content of the type genome is 42.61 % and the genome length is 2.28 Mbp.

Description of *Candidatus* Ruminococcus hirunimonas sp. nov.

Candidatus Ruminococcus hirunimonas (NL. fem. n. *hirunimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ruminococcus_D sp902800795*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902800795.1. The GC content of the type genome is 48.63 % and the genome length is 2.54 Mbp.

Description of *Candidatus* Ruminococcus intabentia sp. nov.

Candidatus Ruminococcus intabentia (NL. fem. n. *intabentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ruminococcus_D sp902776945*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902776945.1. The GC content of the type genome is 49.99 % and the genome length is 4.0 Mbp.

Description of *Candidatus* Ruminococcus ludibugo sp. nov.

Candidatus Ruminococcus ludibugo (NL. fem. n. *ludibugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ruminococcus_D sp900539835*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_900539835.1. The GC content of the type genome is 37.16 % and the genome length is 1.99 Mbp.

Description of *Candidatus* Ruminococcus momoretta sp. nov.

Candidatus Ruminococcus momoretta (NL. fem. n. *momoretta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ruminococcus_D sp902780505*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902780505.1. The GC content of the type genome is 44.48 % and the genome length is 2.82 Mbp.

Description of *Candidatus* Ruminococcus nutamitia sp. nov.

Candidatus Ruminococcus nutamitia (NL. fem. n. *nutamitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ruminococcus_D sp900770285*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_900770285.1. The GC content of the type genome is 38.03 % and the genome length is 1.56 Mbp.

Description of *Candidatus* Ruminococcus palifax sp. nov.

Candidatus Ruminococcus palifax (NL. fem. n. *palifax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ruminococcus_D sp902786965*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902786965.1. The GC content of the type genome is 47.91 % and the genome length is 2.61 Mbp.

Description of *Candidatus* Ruminococcus paracitrix sp. nov.

Candidatus Ruminococcus paracitrix (NL. fem. n. *paracitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ruminococcus_D sp900318545*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902762995.1. The GC content of the type genome is 46.62 % and the genome length is 2.35 Mbp.

Description of *Candidatus* Ruminococcus recucitudo sp. nov.

Candidatus Ruminococcus recucitudo (NL. fem. n. *recucitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ruminococcus_D sp002368715*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_002368715.1. The GC content of the type genome is 49.13 % and the genome length is 1.84 Mbp.

Description of *Candidatus* Ruminococcus rudicicella sp. nov.

Candidatus Ruminococcus rudicicella (NL. fem. n. *rudicicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ruminococcus_D sp000621805*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_000621805.1. The GC content of the type genome is 45.87 % and the genome length is 2.4 Mbp.

Description of *Candidatus* Ruminococcus solifax sp. nov.

Candidatus Ruminococcus solifax (NL. fem. n. *solifax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ruminococcus_D sp900314975*. Although GTDB has assigned a genus

name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902756975.1. The GC content of the type genome is 47.1 % and the genome length is 2.92 Mbp.

Description of *Candidatus* Ruminococcus absocugo sp. nov.

Candidatus Ruminococcus absocugo (NL. fem. n. *absocugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ruminococcus_E sp902790475*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902790475.1. The GC content of the type genome is 48.8 % and the genome length is 2.74 Mbp.

Description of *Candidatus* Ruminococcus accomessa sp. nov.

Candidatus Ruminococcus accomessa (NL. fem. n. *accomessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ruminococcus_E sp902797655*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902797655.1. The GC content of the type genome is 47.59 % and the genome length is 1.86 Mbp.

Description of *Candidatus* Ruminococcus acculivita sp. nov.

Candidatus Ruminococcus acculivita (NL. fem. n. *acculivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ruminococcus_E sp902764715*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902764715.1. The GC content of the type genome is 52.72 % and the genome length is 2.19 Mbp.

Description of *Candidatus* Ruminococcus adorditrix sp. nov.

Candidatus Ruminococcus adorditrix (NL. fem. n. *adorditrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ruminococcus_E sp902777275*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902777275.1. The GC content of the type genome is 48.64 % and the genome length is 2.59 Mbp.

Description of *Candidatus* Ruminococcus adpanitia sp. nov.

Candidatus Ruminococcus adpanitia (NL. fem. n. *adpanitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ruminococcus_E sp902796225*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902796225.1. The GC content of the type genome is 52.74 % and the genome length is 2.18 Mbp.

Description of *Candidatus* Ruminococcus adtenedo sp. nov.

Candidatus Ruminococcus adtenedo (NL. fem. n. *adtenedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ruminococcus_E sp900755995*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_900755995.1. The GC content of the type genome is 40.8 % and the genome length is 2.31 Mbp.

Description of *Candidatus* Ruminococcus arrugilega sp. nov.

Candidatus Ruminococcus arrugilega (NL. fem. n. *arrugilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ruminococcus_E sp902773635*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902773635.1. The GC content of the type genome is 55.84 % and the genome length is 1.66 Mbp.

Description of *Candidatus* Ruminococcus benepitoga sp. nov.

Candidatus Ruminococcus benepitoga (NL. fem. n. *benepitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ruminococcus_E sp902798755*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902798755.1. The GC content of the type genome is 51.57 % and the genome length is 2.44 Mbp.

Description of *Candidatus* Ruminococcus betacitas sp. nov.

Candidatus Ruminococcus betacitas (NL. fem. n. *betacitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ruminococcus_E sp902794395*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902794395.1. The GC content of the type genome is 53.64 % and the genome length is 2.21 Mbp.

Description of *Candidatus* Ruminococcus bifaredo sp. nov.

Candidatus Ruminococcus bifaredo (NL. fem. n. *bifaredo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ruminococcus_E sp902797225*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902797225.1. The GC content of the type genome is 44.17 % and the genome length is 1.77 Mbp.

Description of *Candidatus* Ruminococcus capucicula sp. nov.

Candidatus Ruminococcus capucicula (NL. fem. n. *capucicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ruminococcus_E sp002350765*. Although GTDB has assigned a genus

name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902763765.1. The GC content of the type genome is 42.69 % and the genome length is 2.37 Mbp.

Description of *Candidatus* Ruminococcus carucicella sp. nov.

Candidatus Ruminococcus carucicella (NL. fem. n. *carucicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ruminococcus_E sp902793125*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902793125.1. The GC content of the type genome is 41.05 % and the genome length is 2.0 Mbp.

Description of *Candidatus* Ruminococcus catocitia sp. nov.

Candidatus Ruminococcus catocitia (NL. fem. n. *catocitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ruminococcus_E sp902765625*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902770485.1. The GC content of the type genome is 52.05 % and the genome length is 1.96 Mbp.

Description of *Candidatus* Ruminococcus celamentia sp. nov.

Candidatus Ruminococcus celamentia (NL. fem. n. *celamentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ruminococcus_E sp902799325*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902799325.1. The GC content of the type genome is 54.14 % and the genome length is 1.86 Mbp.

Description of *Candidatus* Ruminococcus cicatiforma sp. nov.

Candidatus Ruminococcus cicatiforma (NL. fem. n. *cicatiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ruminococcus_E sp902771755*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902771755.1. The GC content of the type genome is 41.03 % and the genome length is 2.01 Mbp.

Description of *Candidatus* Ruminococcus cimelimonas sp. nov.

Candidatus Ruminococcus cimelimonas (NL. fem. n. *cimelimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ruminococcus_E sp900315195*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_900315195.1. The GC content of the type genome is 47.67 % and the genome length is 2.11 Mbp.

Description of *Candidatus* Ruminococcus cisalastra sp. nov.

Candidatus Ruminococcus cisalastra (NL. fem. n. *cisalastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ruminococcus_E sp900320995*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_900320995.1. The GC content of the type genome is 52.71 % and the genome length is 2.24 Mbp.

Description of *Candidatus* Ruminococcus cisorifica sp. nov.

Candidatus Ruminococcus cisorifica (NL. fem. n. *cisorifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ruminococcus_E sp900319615*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902776815.1. The GC content of the type genome is 53.42 % and the genome length is 1.88 Mbp.

Description of *Candidatus* Ruminococcus citipessa sp. nov.

Candidatus Ruminococcus citipessa (NL. fem. n. *citipessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ruminococcus_E sp900318495*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902757735.1. The GC content of the type genome is 46.77 % and the genome length is 1.88 Mbp.

Description of *Candidatus* Ruminococcus colimisca sp. nov.

Candidatus Ruminococcus colimisca (NL. fem. n. *colimisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ruminococcus_E sp902787145*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902787145.1. The GC content of the type genome is 46.01 % and the genome length is 2.01 Mbp.

Description of *Candidatus* Ruminococcus coninatica sp. nov.

Candidatus Ruminococcus coninatica (NL. fem. n. *coninatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ruminococcus_E sp900317875*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902775265.1. The GC content of the type genome is 50.96 % and the genome length is 2.13 Mbp.

Description of *Candidatus* Ruminococcus dilemastra sp. nov.

Candidatus Ruminococcus dilemastra (NL. fem. n. *dilemastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ruminococcus_E sp902785365*. Although GTDB has assigned a genus

name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902785365.1. The GC content of the type genome is 44.15 % and the genome length is 1.96 Mbp.

Description of *Candidatus* Ruminococcus diponax sp. nov.

Candidatus Ruminococcus diponax (NL. fem. n. *diponax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ruminococcus_E sp902779225*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902782215.1. The GC content of the type genome is 52.59 % and the genome length is 2.07 Mbp.

Description of *Candidatus* Ruminococcus direcatio sp. nov.

Candidatus Ruminococcus direcatio (NL. fem. n. *direcatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ruminococcus_E sp902766775*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902766775.1. The GC content of the type genome is 40.68 % and the genome length is 1.94 Mbp.

Description of *Candidatus* Ruminococcus doxolicula sp. nov.

Candidatus Ruminococcus doxolicula (NL. fem. n. *doxolicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ruminococcus_E sp003526955*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003452635.1. The GC content of the type genome is 38.99 % and the genome length is 1.76 Mbp.

Description of *Candidatus* Ruminococcus ecciligena sp. nov.

Candidatus Ruminococcus ecciligena (NL. fem. n. *ecciligena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ruminococcus_E sp002491825*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_002491825.1. The GC content of the type genome is 42.82 % and the genome length is 1.37 Mbp.

Description of *Candidatus* Ruminococcus encepitas sp. nov.

Candidatus Ruminococcus encepitas (NL. fem. n. *encepitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ruminococcus_E sp902776375*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902776375.1. The GC content of the type genome is 50.31 % and the genome length is 2.64 Mbp.

Description of *Candidatus* Ruminococcus enharatio sp. nov.

Candidatus Ruminococcus enharatio (NL. fem. n. *enharatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ruminococcus_E sp902776185*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902776185.1. The GC content of the type genome is 52.57 % and the genome length is 1.88 Mbp.

Description of *Candidatus* Ruminococcus enuclousia sp. nov.

Candidatus Ruminococcus enuclousia (NL. fem. n. *enuclousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ruminococcus_E sp902784855*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902784855.1. The GC content of the type genome is 57.2 % and the genome length is 2.05 Mbp.

Description of *Candidatus* Ruminococcus ephemitrix sp. nov.

Candidatus Ruminococcus ephemitrix (NL. fem. n. *ephemitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ruminococcus_E sp003521625*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003521625.1. The GC content of the type genome is 41.66 % and the genome length is 1.92 Mbp.

Description of *Candidatus* Ruminococcus episcitio sp. nov.

Candidatus Ruminococcus episcitio (NL. fem. n. *episcitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ruminococcus_E sp902761375*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902761375.1. The GC content of the type genome is 55.56 % and the genome length is 1.59 Mbp.

Description of *Candidatus* Ruminococcus facuniforma sp. nov.

Candidatus Ruminococcus facuniforma (NL. fem. n. *facuniforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ruminococcus_E sp002493635*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003503955.1. The GC content of the type genome is 38.73 % and the genome length is 1.9 Mbp.

Description of *Candidatus* Ruminococcus fumifedo sp. nov.

Candidatus Ruminococcus fumifedo (NL. fem. n. *fumifedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ruminococcus_E sp900314705*. Although GTDB has assigned a genus

name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_000437975.1. The GC content of the type genome is 33.87 % and the genome length is 1.9 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "derived from human gut metagenome".

Description of *Candidatus* Ruminococcus hexapitudo sp. nov.

Candidatus Ruminococcus hexapitudo (NL. fem. n. *hexapitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ruminococcus_E sp902776975*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902767485.1. The GC content of the type genome is 50.27 % and the genome length is 2.01 Mbp.

Description of *Candidatus* Ruminococcus hirunicula sp. nov.

Candidatus Ruminococcus hirunicula (NL. fem. n. *hirunicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ruminococcus_E sp902767845*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902761305.1. The GC content of the type genome is 51.72 % and the genome length is 1.66 Mbp.

Description of *Candidatus* Ruminococcus homolimonia sp. nov.

Candidatus Ruminococcus homolimonia (NL. fem. n. *homolimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ruminococcus_E sp902774325*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902774325.1. The GC content of the type genome is 52.78 % and the genome length is 2.11 Mbp.

Description of *Candidatus* Ruminococcus homunitrix sp. nov.

Candidatus Ruminococcus homunitrix (NL. fem. n. *homunitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ruminococcus_E sp900314795*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902768385.1. The GC content of the type genome is 51.69 % and the genome length is 2.31 Mbp.

Description of *Candidatus* Ruminococcus infesitrix sp. nov.

Candidatus Ruminococcus infesitrix (NL. fem. n. *infesitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ruminococcus_E sp002353935*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_002353935.1. The GC content of the type genome is 37.48 % and the genome length is 1.41 Mbp.

Description of *Candidatus* Ruminococcus inlibifica sp. nov.

Candidatus Ruminococcus inlibifica (NL. fem. n. *inlibifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ruminococcus_E sp004560275*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_004560275.1. The GC content of the type genome is 41.33 % and the genome length is 2.74 Mbp.

Description of *Candidatus* Ruminococcus insufago sp. nov.

Candidatus Ruminococcus insufago (NL. fem. n. *insufago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ruminococcus_E sp003499325*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The

type genome for the species is the GenBank assembly GCA_003499325.1. The GC content of the type genome is 53.68 % and the genome length is 1.56 Mbp.

Description of *Candidatus* Ruminococcus lucubitica sp. nov.

Candidatus Ruminococcus lucubitica (NL. fem. n. *lucubitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ruminococcus_E sp900543095*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_900772465.1. The GC content of the type genome is 42.74 % and the genome length is 1.81 Mbp.

Description of *Candidatus* Ruminococcus ludibitas sp. nov.

Candidatus Ruminococcus ludibitas (NL. fem. n. *ludibitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ruminococcus_E sp900319655*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902761485.1. The GC content of the type genome is 47.79 % and the genome length is 1.59 Mbp.

Description of *Candidatus* Ruminococcus mahemitica sp. nov.

Candidatus Ruminococcus mahemitica (NL. fem. n. *mahemitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ruminococcus_E sp902790985*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902790985.1. The GC content of the type genome is 52.85 % and the genome length is 2.0 Mbp.

Description of *Candidatus* Ruminococcus malogiforma sp. nov.

Candidatus Ruminococcus malogiforma (NL. fem. n. *malogiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ruminococcus_E sp900318905*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902764265.1. The GC content of the type genome is 49.03 % and the genome length is 1.93 Mbp.

Description of *Candidatus* Ruminococcus manibigena sp. nov.

Candidatus Ruminococcus manibigena (NL. fem. n. *manibigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ruminococcus_E sp902785355*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902785355.1. The GC content of the type genome is 52.54 % and the genome length is 2.23 Mbp.

Description of *Candidatus* Ruminococcus maxumedo sp. nov.

Candidatus Ruminococcus maxumedo (NL. fem. n. *maxumedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ruminococcus_E sp900317595*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902758015.1. The GC content of the type genome is 54.39 % and the genome length is 1.87 Mbp.

Description of *Candidatus* Ruminococcus munimilenta sp. nov.

Candidatus Ruminococcus munimilenta (NL. fem. n. *munimilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ruminococcus_E sp900316555*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902759365.1. The GC content of the type genome is 52.26 % and the genome length is 1.88 Mbp.

Description of *Candidatus* Ruminococcus musulitas sp. nov.

Candidatus Ruminococcus musulitas (NL. fem. n. *musulitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ruminococcus_E sp900316815*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_900316815.1. The GC content of the type genome is 54.96 % and the genome length is 2.13 Mbp.

Description of *Candidatus* Ruminococcus nefarilega sp. nov.

Candidatus Ruminococcus nefarilega (NL. fem. n. *nefarilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ruminococcus_E sp902767325*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902767325.1. The GC content of the type genome is 50.27 % and the genome length is 1.88 Mbp.

Description of *Candidatus* Ruminococcus nidifax sp. nov.

Candidatus Ruminococcus nidifax (NL. fem. n. *nidifax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ruminococcus_E sp900316385*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902785965.1. The GC content of the type genome is 49.24 % and the genome length is 1.81 Mbp.

Description of *Candidatus* Ruminococcus nitelago sp. nov.

Candidatus Ruminococcus nitelago (NL. fem. n. *nitelago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ruminococcus_E sp902798605*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The

type genome for the species is the GenBank assembly GCA_902798605.1. The GC content of the type genome is 47.02 % and the genome length is 2.62 Mbp.

Description of *Candidatus* Ruminococcus notabimonas sp. nov.

Candidatus Ruminococcus notabimonas (NL. fem. n. *notabimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ruminococcus_E sp900315785*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_900315785.1. The GC content of the type genome is 49.35 % and the genome length is 1.67 Mbp.

Description of *Candidatus* Ruminococcus oblanentia sp. nov.

Candidatus Ruminococcus oblanentia (NL. fem. n. *oblanentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ruminococcus_E sp002493005*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_002493005.1. The GC content of the type genome is 40.21 % and the genome length is 1.74 Mbp.

Description of *Candidatus* Ruminococcus papavitrix sp. nov.

Candidatus Ruminococcus papavitrix (NL. fem. n. *papavitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ruminococcus_E sp900315605*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_900318135.1. The GC content of the type genome is 46.86 % and the genome length is 1.96 Mbp.

Description of *Candidatus* Ruminococcus paviciforma sp. nov.

Candidatus Ruminococcus paviciforma (NL. fem. n. *paviciforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ruminococcus_E sp002394725*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902790005.1. The GC content of the type genome is 52.25 % and the genome length is 2.11 Mbp.

Description of *Candidatus* Ruminococcus peripimonia sp. nov.

Candidatus Ruminococcus peripimonia (NL. fem. n. *peripimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ruminococcus_E sp900320415*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_900320415.1. The GC content of the type genome is 54.65 % and the genome length is 1.68 Mbp.

Description of *Candidatus* Ruminococcus proclago sp. nov.

Candidatus Ruminococcus proclago (NL. fem. n. *proclago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ruminococcus_E sp003520555*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003520555.1. The GC content of the type genome is 47.3 % and the genome length is 1.33 Mbp.

Description of *Candidatus* Ruminococcus ranunivita sp. nov.

Candidatus Ruminococcus ranunivita (NL. fem. n. *ranunivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ruminococcus_E sp902766885*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902766885.1. The GC content of the type genome is 41.77 % and the genome length is 2.02 Mbp.

Description of *Candidatus* Ruminococcus ratifugo sp. nov.

Candidatus Ruminococcus ratifugo (NL. fem. n. *ratifugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ruminococcus_E sp902798365*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902798365.1. The GC content of the type genome is 51.54 % and the genome length is 2.03 Mbp.

Description of *Candidatus* Ruminococcus recogax sp. nov.

Candidatus Ruminococcus recogax (NL. fem. n. *recogax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ruminococcus_E sp900317315*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_900321025.1. The GC content of the type genome is 55.29 % and the genome length is 1.76 Mbp.

Description of *Candidatus* Ruminococcus relecitica sp. nov.

Candidatus Ruminococcus relecitica (NL. fem. n. *relecitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ruminococcus_E sp900313895*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902780445.1. The GC content of the type genome is 52.43 % and the genome length is 2.1 Mbp.

Description of *Candidatus* Ruminococcus retecessa sp. nov.

Candidatus Ruminococcus retecessa (NL. fem. n. *retecessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ruminococcus_E sp003438075*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The

type genome for the species is the GenBank assembly RS_GCF_902385565.1. The GC content of the type genome is 39.2 % and the genome length is 2.57 Mbp.

Description of *Candidatus* Ruminococcus rorarilega sp. nov.

Candidatus Ruminococcus rorarilega (NL. fem. n. *rorarilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ruminococcus_E sp900100595*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902758345.1. The GC content of the type genome is 54.17 % and the genome length is 1.89 Mbp.

Description of *Candidatus* Ruminococcus rorificula sp. nov.

Candidatus Ruminococcus rorificula (NL. fem. n. *rorificula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ruminococcus_E sp900313865*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_900313865.1. The GC content of the type genome is 54.05 % and the genome length is 1.71 Mbp.

Description of *Candidatus* Ruminococcus rorulitia sp. nov.

Candidatus Ruminococcus rorulitia (NL. fem. n. *rorulitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ruminococcus_E sp900315085*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902801315.1. The GC content of the type genome is 47.18 % and the genome length is 1.99 Mbp.

Description of *Candidatus* Ruminococcus saburugo sp. nov.

Candidatus Ruminococcus saburugo (NL. fem. n. *saburugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ruminococcus_E sp902773035*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902773035.1. The GC content of the type genome is 48.26 % and the genome length is 1.79 Mbp.

Description of *Candidatus* Ruminococcus semodatio sp. nov.

Candidatus Ruminococcus semodatio (NL. fem. n. *semodatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ruminococcus_E sp902797525*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902797525.1. The GC content of the type genome is 52.14 % and the genome length is 1.51 Mbp.

Description of *Candidatus* Ruminococcus semunatio sp. nov.

Candidatus Ruminococcus semunatio (NL. fem. n. *semunatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ruminococcus_E sp902772755*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902772755.1. The GC content of the type genome is 45.36 % and the genome length is 1.64 Mbp.

Description of *Candidatus* Ruminococcus senacilenta sp. nov.

Candidatus Ruminococcus senacilenta (NL. fem. n. *senacilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ruminococcus_E sp902773155*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902773155.1. The GC content of the type genome is 48.6 % and the genome length is 1.54 Mbp.

Description of *Candidatus* Ruminococcus sicubiforma sp. nov.

Candidatus Ruminococcus sicubiforma (NL. fem. n. *sicubiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ruminococcus_E sp900316435*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_900316435.1. The GC content of the type genome is 47.71 % and the genome length is 2.09 Mbp.

Description of *Candidatus* Ruminococcus verecigena sp. nov.

Candidatus Ruminococcus verecigena (NL. fem. n. *verecigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ruminococcus_E sp902792105*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902792105.1. The GC content of the type genome is 46.59 % and the genome length is 2.06 Mbp.

Description of *Candidatus* Ruminococcus vicecicula sp. nov.

Candidatus Ruminococcus vicecicula (NL. fem. n. *vicecicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ruminococcus_E sp902763855*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902763855.1. The GC content of the type genome is 51.87 % and the genome length is 2.44 Mbp.

Description of *Candidatus* Ruminococcus viripicula sp. nov.

Candidatus Ruminococcus viripicula (NL. fem. n. *viripicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ruminococcus_E sp900315815*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The

type genome for the species is the GenBank assembly GCA_900315815.1. The GC content of the type genome is 54.96 % and the genome length is 2.38 Mbp.

Description of *Candidatus* Ruminococcus decatax sp. nov.

Candidatus Ruminococcus decatax (NL. fem. n. *decatax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ruminococcus_F sp004558835*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_004558835.1. The GC content of the type genome is 55.3 % and the genome length is 2.11 Mbp.

Description of *Candidatus* Rummeliibacillus melopilenta sp. nov.

Candidatus Rummeliibacillus melopilenta (NL. fem. n. *melopilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Rummeliibacillus sp003576525*. The type genome for the species is the GenBank assembly RS_GCF_003576525.1. The GC content of the type genome is 34.52 % and the genome length is 3.69 Mbp.

Description of *Candidatus* Runella allubedo sp. nov.

Candidatus Runella allubedo (NL. fem. n. *allubedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Runella sp009905605*. The type genome for the species is the GenBank assembly RS_GCF_009905605.1. The GC content of the type genome is 44.83 % and the genome length is 7.14 Mbp.

Description of *Candidatus* Runella bucolibula sp. nov.

Candidatus Runella bucolibula (NL. fem. n. *bucolibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Runella sp003325355*. The type genome for the species is the GenBank assembly RS_GCF_003325355.1. The GC content of the type genome is 44.66 % and the genome length is 7.16 Mbp.

Description of *Candidatus* Runella decinimonia sp. nov.

Candidatus Runella decinimonia (NL. fem. n. *decinimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Runella sp003711225*. The type genome for the species is the GenBank assembly RS_GCF_003711225.1. The GC content of the type genome is 44.44 % and the genome length is 7.61 Mbp.

Description of *Candidatus* Runella siticicella sp. nov.

Candidatus Runella siticicella (NL. fem. n. *siticicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Runella sp003339505*. The type genome for the species is the GenBank assembly RS_GCF_003339505.1. The GC content of the type genome is 44.79 % and the genome length is 7.21 Mbp.

Description of *Candidatus* Ruricana xeropentia sp. nov.

Candidatus Ruricana xeropentia (NL. fem. n. *xeropentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GWB2-55-19 sp001797465*. The type genome for the species is the GenBank assembly GCA_001797505.1. The GC content of the type genome is 56.38 % and the genome length is 1.96 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at time point 3 / C; 5m depth; 0.2 filter".

Description of *Candidatus* Ruricana gen. nov.

Candidatus Ruricana (NL. fem. n. *Ruricana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GWB2-55-19*. The type species for the genus is *Candidatus* Ruricana xeropentia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GWC2-55-46*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Tabifellaceae.

Description of *Candidatus* Ruricaria exsanetta sp. nov.

Candidatus Ruricaria exsanetta (NL. fem. n. *exsanetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UM-FILTER-43-11 sp002792495*. The type genome for the species is the GenBank assembly GCA_002792495.1. The GC content of the type genome is 43.04 % and the genome length is 1.37 Mbp.

Description of *Candidatus* Ruricaria gen. nov.

Candidatus Ruricaria (NL. fem. n. *Ruricaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UM-FILTER-43-11*. The type species for the genus is *Candidatus* Ruricaria exsanetta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UM-FILTER-43-11*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Ruricariaceae.

Description of *Candidatus* Ruricariaceae fam. nov.

Candidatus Ruricariaceae (NL. fem. n. *Ruricariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UM-FILTER-43-11*. The type genus for the taxon is *Candidatus* Ruricaria .

According to the original version of GTDB R06-RS202, this family belongs to the order *UM-FILTER-43-11*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Ruricariales.

Description of *Candidatus* Ruricariales ord. nov.

Candidatus Ruricariales (NL. fem. n. *Ruricariales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UM-FILTER-43-11*. The type genus for the taxon is *Candidatus* Ruricaria .

According to the GTDB R06-RS202, this order belongs to the class *Gracilibacteria*.

Description of *Candidatus* Ruricella ficulitudo sp. nov.

Candidatus Ruricella ficulitudo (NL. fem. n. *ficulitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *TMED6 sp014239355*. The type genome for the species is the GenBank assembly GCA_014239355.1. The GC content of the type genome is 27.89 % and the genome length is 1.35 Mbp.

Description of *Candidatus* Ruricella gen. nov.

Candidatus Ruricella (NL. fem. n. *Ruricella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *TMED6*. The type species for the genus is *Candidatus* Ruricella ficulitudo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *TMED6*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Ruricellaceae.

Description of *Candidatus* Ruricellaceae fam. nov.

Candidatus Ruricellaceae (NL. fem. n. *Ruricellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *TMED6.* The type genus for the taxon is *Candidatus* Ruricella .

According to the original version of GTDB R06-RS202, this family belongs to the order *SCGC-AAA003-L08*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Redaciales.

Description of *Candidatus* Ruricella inaccitudo sp. nov.

Candidatus Ruricella inaccitudo (NL. fem. n. *inaccitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *TMED6 sp002701185*. The type genome for the species is the GenBank assembly GCA_002701185.1. The GC content of the type genome is 28.75 % and the genome length is 1.21 Mbp.

Description of *Candidatus* Ruricella lenimatio sp. nov.

Candidatus Ruricella lenimatio (NL. fem. n. *lenimatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *TMED6 sp002710085*. The type genome for the species is the GenBank assembly GCA_002710085.1. The GC content of the type genome is 28.61 % and the genome length is 0.78 Mbp.

Description of *Candidatus* Ruricella rubicatio sp. nov.

Candidatus Ruricella rubicatio (NL. fem. n. *rubicatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *TMED6 sp002167465*. The type genome for the species is the GenBank assembly GCA_002167465.1. The GC content of the type genome is 28.48 % and the genome length is 1.48 Mbp.

Description of *Candidatus* Ruricella xeramifica sp. nov.

Candidatus Ruricella xeramifica (NL. fem. n. *xeramifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *TMED6 sp002711465*. The type genome for the species is the GenBank assembly GCA_002711465.1. The GC content of the type genome is 28.46 % and the genome length is 1.12 Mbp.

Description of *Candidatus* Ruricia redunugo sp. nov.

Candidatus Ruricia redunugo (NL. fem. n. *redunugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAJAQL01 sp903944135*. The type genome for the species is the GenBank assembly GCA_903944135.1. The GC content of the type genome is 50.09 % and the genome length is 0.86 Mbp.

Description of *Candidatus* Ruricia gen. nov.

Candidatus Ruricia (NL. fem. n. *Ruricia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAJAQL01*. The type species for the genus is *Candidatus* Ruricia redunugo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *2-01-FULL-56-20*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Socagosaceae.

Description of *Candidatus* Ruricida depicugo sp. nov.

Candidatus Ruricida depicugo (NL. fem. n. *depicugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2197 sp002424625*. The type genome for the species is the GenBank assembly GCA_002327325.1. The GC content of the type genome is 56.73 % and the genome length is 2.06 Mbp.

Description of *Candidatus* Ruricida gen. nov.

Candidatus Ruricida (NL. fem. n. *Ruricida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA2197*. The type species for the genus is *Candidatus* Ruricida depicugo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Ruricida invicitica sp. nov.

Candidatus Ruricida invicitica (NL. fem. n. *invicitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2197 sp002841765*. The type genome for the species is the GenBank assembly GCA_002841765.1. The GC content of the type genome is 55.77 % and the genome length is 3.02 Mbp.

Description of *Candidatus* Ruricosa defaricula sp. nov.

Candidatus Ruricosa defaricula (NL. fem. n. *defaricula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *FEB-35 sp003105225*. The type genome for the species is the GenBank assembly GCA_003105225.1. The GC content of the type genome is 65.26 % and the genome length is 2.61 Mbp.

Description of *Candidatus* Ruricosa gen. nov.

Candidatus Ruricosa (NL. fem. n. *Ruricosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *FEB-35*. The type species for the genus is *Candidatus* Ruricosa defaricula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *MBNT15*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Bipenulaceae.

Description of *Candidatus* Ruricula detosimonia sp. nov.

Candidatus Ruricula detosimonia (NL. fem. n. *detosimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8530 sp003503675*. The type genome for the species is the GenBank assembly GCA_002083785.1. The GC content of the type genome is 59.36 % and the genome length is 3.33 Mbp.

Description of *Candidatus* Ruricula gen. nov.

Candidatus Ruricula (NL. fem. n. *Ruricula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA8530*. The type species for the genus is *Candidatus* Ruricula detosimonia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA8530*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Ruriculaceae.

Description of *Candidatus* Ruriculaceae fam. nov.

Candidatus Ruriculaceae (NL. fem. n. *Ruriculaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA8530.* The type genus for the taxon is *Candidatus* Ruricula .

According to the original version of GTDB R06-RS202, this family belongs to the order *S15B-MN24*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Recumariales.

Description of *Candidatus* Rurigana agrapitoga sp. nov.

Candidatus Rurigana agrapitoga (NL. fem. n. *agrapitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *BRH-c0 sp000961645*. The type genome for the species is the GenBank assembly GCA_000961645.1. The GC content of the type genome is 57.39 % and the genome length is 3.53 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Opalinus Clay rock porewater BRC-3 borehole".

Description of *Candidatus* Rurigana gen. nov.

Candidatus Rurigana (NL. fem. n. *Rurigana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *BRH-c0*. The type species for the genus is *Candidatus* Rurigana agrapitoga .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Rurigana avoncousia sp. nov.

Candidatus Rurigana avoncousia (NL. fem. n. *avoncousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *BRH-c0 sp002388905*. The type genome for the species is the GenBank assembly GCA_002388905.1. The GC content of the type genome is 61.04 % and the genome length is 3.38 Mbp.

Description of *Candidatus* Rurigana cocodugo sp. nov.

Candidatus Rurigana cocodugo (NL. fem. n. *cocodugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *BRH-c0 sp002702725*. The type genome for the species is the GenBank assembly GCA_002702725.1. The GC content of the type genome is 57.68 % and the genome length is 3.56 Mbp.

Description of *Candidatus* Rurigaria bicalitica sp. nov.

Candidatus Rurigaria bicalitica (NL. fem. n. *bicalitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2699025 sp002699025*. The type genome for the species is the GenBank assembly GCA_002720945.1. The GC content of the type genome is 73.82 % and the genome length is 7.54 Mbp.

Description of *Candidatus* Rurigaria gen. nov.

Candidatus Rurigaria (NL. fem. n. *Rurigaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2699025*. The type species for the genus is *Candidatus* Rurigaria bicalitica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SG8-38*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Benivosaceae.

Description of *Candidatus* Rurigella cosidisca sp. nov.

Candidatus Rurigella cosidisca (NL. fem. n. *cosidisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8401 sp903958625*. The type genome for the species is the GenBank assembly GCA_903958625.1. The GC content of the type genome is 45.87 % and the genome length is 3.99 Mbp.

Description of *Candidatus* Rurigella gen. nov.

Candidatus Rurigella (NL. fem. n. *Rurigella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA8401*. The type species for the genus is *Candidatus* Rurigella cosidisca .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA8401*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Rurigellaceae.

Description of *Candidatus* Rurigellaceae fam. nov.

Candidatus Rurigellaceae (NL. fem. n. *Rurigellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA8401.* The type genus for the taxon is *Candidatus* Rurigella .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA10030*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Vagabanales.

Description of *Candidatus* Rurigella devecitrix sp. nov.

Candidatus Rurigella devecitrix (NL. fem. n. *devecitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8401 sp903861125*. The type genome for the species is the GenBank assembly GCA_903855825.1. The GC content of the type genome is 44.65 % and the genome length is 4.36 Mbp.

Description of *Candidatus* Rurigella ficulifica sp. nov.

Candidatus Rurigella ficulifica (NL. fem. n. *ficulifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8401 sp003456055*. The type genome for the species is the GenBank assembly GCA_003456055.1. The GC content of the type genome is 40.3 % and the genome length is 2.94 Mbp.

Description of *Candidatus* Rurigella genufibra sp. nov.

Candidatus Rurigella genufibra (NL. fem. n. *genufibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8401 sp013361065*. The type genome for the species is the GenBank assembly GCA_013361065.1. The GC content of the type genome is 57.14 % and the genome length is 3.81 Mbp.

Description of *Candidatus* Rurigella vanidatio sp. nov.

Candidatus Rurigella vanidatio (NL. fem. n. *vanidatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8401 sp903907305*. The type genome for the species is the GenBank assembly GCA_903907305.1. The GC content of the type genome is 47.59 % and the genome length is 3.68 Mbp.

Description of *Candidatus* Rurigia turifentia sp. nov.

Candidatus Rurigia turifentia (NL. fem. n. *turifentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA12247 sp003477185*. The type genome for the species is the GenBank assembly GCA_003477185.1. The GC content of the type genome is 58.36 % and the genome length is 3.95 Mbp.

Description of *Candidatus* Rurigia gen. nov.

Candidatus Rurigia (NL. fem. n. *Rurigia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA12247*. The type species for the genus is *Candidatus* Rurigia turifentia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA12247*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Rurigiaceae.

Description of *Candidatus* Rurigiaceae fam. nov.

Candidatus Rurigiaceae (NL. fem. n. *Rurigiaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this taxon is *UBA12247*. The type genus for the taxon is *Candidatus* Rurigia .

According to GTDB R06-RS202, this family belongs to the order *Lentisphaerales*.

Description of *Candidatus* Rurigida adrotedo sp. nov.

Candidatus Rurigida adrotedo (NL. fem. n. *adrotedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *TMED80 sp002169695*. The type genome for the species is the GenBank assembly GCA_002169695.1. The GC content of the type genome is 32.54 % and the genome length is 1.11 Mbp.

Description of *Candidatus* Rurigida gen. nov.

Candidatus Rurigida (NL. fem. n. *Rurigida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *TMED80*. The type species for the genus is *Candidatus* Rurigida adrotedo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1611*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Tenilariaceae.

Description of *Candidatus* Rurigida hemitatio sp. nov.

Candidatus Rurigida hemitatio (NL. fem. n. *hemitatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *TMED80 sp002170405*. The type genome for the species is the GenBank assembly GCA_004321745.1. The GC content of the type genome is 33.17 % and the genome length is 1.75 Mbp.

Description of *Candidatus* Rurigida ingurilega sp. nov.

Candidatus Rurigida ingurilega (NL. fem. n. *ingurilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *TMED80 sp002713885*. The type genome for the species is the

GenBank assembly GCA_002713885.1. The GC content of the type genome is 35.5 % and the genome length is 1.43 Mbp.

Description of *Candidatus* Rurigida vagabigena sp. nov.

Candidatus Rurigida vagabigena (NL. fem. n. *vagabigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *TMED80 sp902559415*. The type genome for the species is the GenBank assembly GCA_902559415.1. The GC content of the type genome is 32.92 % and the genome length is 1.21 Mbp.

Description of *Candidatus* Rurigosa catagugo sp. nov.

Candidatus Rurigosa catagugo (NL. fem. n. *catagugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABMSA01 sp013202185*. The type genome for the species is the GenBank assembly GCA_013202185.1. The GC content of the type genome is 60.27 % and the genome length is 4.45 Mbp.

Description of *Candidatus* Rurigosa gen. nov.

Candidatus Rurigosa (NL. fem. n. *Rurigosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABMSA01*. The type species for the genus is *Candidatus* Rurigosa catagugo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JABMSA01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Rurigosaceae.

Description of *Candidatus* Rurigosaceae fam. nov.

Candidatus Rurigosaceae (NL. fem. n. *Rurigosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JABMSA01.* The type genus for the taxon is *Candidatus* Rurigosa .

According to the original version of GTDB R06-RS202, this family belongs to the order *JABMSA01*. According to the renamed version of GTDB R06-RS202, this taxon belongs

to the order *Candidatus* Rurigosales.

Description of *Candidatus* Rurigosales ord. nov.

Candidatus Rurigosales (NL. fem. n. *Rurigosales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JABMSA01.* The type genus for the taxon is *Candidatus* Rurigosa .

According to the original version of GTDB R06-RS202, this family belongs to the class *PUPC01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Siteliae.

Description of *Candidatus* Rurigula acrimigena sp. nov.

Candidatus Rurigula acrimigena (NL. fem. n. *acrimigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1550 sp001823575*. The type genome for the species is the GenBank assembly GCA_001823575.1. The GC content of the type genome is 46.72 % and the genome length is 0.72 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under low O2 conditions; 0.1 micron filter; full assembly".

Description of *Candidatus* Rurigula gen. nov.

Candidatus Rurigula (NL. fem. n. *Rurigula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1550*. The type species for the genus is *Candidatus* Rurigula acrimigena .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1539*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Xeramellaceae.

Description of *Candidatus* Rurigula agravousia sp. nov.

Candidatus Rurigula agravousia (NL. fem. n. *agravousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1550 sp000996605*. The type genome for the species is the GenBank assembly GCA_000996605.1. The GC content of the type genome is 47.07 % and the genome length is 0.84 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "aquifer sediment".

Description of *Candidatus* Rurigula ambusisca sp. nov.

Candidatus Rurigula ambusisca (NL. fem. n. *ambusisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1550 sp003483855*. The type genome for the species is the GenBank assembly GCA_003483855.1. The GC content of the type genome is 43.63 % and the genome length is 0.73 Mbp.

Description of *Candidatus* Rurigula capucisca sp. nov.

Candidatus Rurigula capucisca (NL. fem. n. *capucisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1550 sp001825115*. The type genome for the species is the GenBank assembly GCA_001825115.1. The GC content of the type genome is 46.14 % and the genome length is 0.83 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at 16ft depth; 0.2 micron filter at time point C".

Description of *Candidatus* Rurigula decupilega sp. nov.

Candidatus Rurigula decupilega (NL. fem. n. *decupilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1550 sp003489395*. The type genome for the species is the GenBank assembly GCA_001000355.1. The GC content of the type genome is 43.95 % and the genome length is 0.45 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "aquifer sediment".

Description of *Candidatus* Rurigula depelibra sp. nov.

Candidatus Rurigula depelibra (NL. fem. n. *depelibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1550 sp001871765*. The type genome for the species is the GenBank assembly GCA_002323665.1. The GC content of the type genome is 43.05 % and the genome length is 0.67 Mbp.

Description of *Candidatus* Rurigula monogitia sp. nov.

Candidatus Rurigula monogitia (NL. fem. n. *monogitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1550 sp000998425*. The type genome for the species is the GenBank assembly GCA_003508085.1. The GC content of the type genome is 42.33 % and the genome length is 0.59 Mbp.

Description of *Candidatus* Rurigula pedepilenta sp. nov.

Candidatus Rurigula pedepilenta (NL. fem. n. *pedepilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1550 sp001823535*. The type genome for the species is the GenBank assembly GCA_001823535.1. The GC content of the type genome is 44.2 % and the genome length is 0.76 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 0.2 micron filter; full assembly".

Description of *Candidatus* Rurigula purulitio sp. nov.

Candidatus Rurigula purulitio (NL. fem. n. *purulitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1550 sp001823545*. The type genome for the species is the GenBank assembly GCA_001823545.1. The GC content of the type genome is 43.08 % and the genome length is 0.74 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under low O2 conditions; 0.1 micron filter; full assembly".

Description of *Candidatus* Rurigula sacomitas sp. nov.

Candidatus Rurigula sacomitas (NL. fem. n. *sacomitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1550 sp002771015*. The type genome for the species is the GenBank assembly GCA_002771115.1. The GC content of the type genome is 43.02 % and the genome length is 0.65 Mbp.

Description of *Candidatus* Rutabana eccisitudo sp. nov.

Candidatus Rutabana eccisitudo (NL. fem. n. *eccisitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SICM01 sp009694805*. The type genome for the species is the GenBank assembly GCA_009694805.1. The GC content of the type genome is 64.52 % and the genome length is 4.89 Mbp.

Description of *Candidatus* Rutabana gen. nov.

Candidatus Rutabana (NL. fem. n. *Rutabana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SICM01*. The type species for the genus is *Candidatus* Rutabana eccisitudo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SICM01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Rutabanaceae.

Description of *Candidatus* Rutabanaceae fam. nov.

Candidatus Rutabanaceae (NL. fem. n. *Rutabanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SICM01.* The type genus for the taxon is *Candidatus* Rutabana .

According to the original version of GTDB R06-RS202, this family belongs to the order *SICM01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Rutabanales.

Description of *Candidatus* Rutabanales ord. nov.

Candidatus Rutabanales (NL. fem. n. *Rutabanales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this taxon is *SICM01*. The type genus for the taxon is *Candidatus* Rutabana .

According to the original version of GTDB R06-RS202, this family belongs to the class *UBA2968*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Medimellae.

Description of *Candidatus* Rutabaria dupunisca sp. nov.

Candidatus Rutabaria dupunisca (NL. fem. n. *dupunisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAADFL01 sp013152945*. The type genome for the species is the GenBank assembly GCA_013152945.1. The GC content of the type genome is 51.4 % and the genome length is 4.84 Mbp.

Description of *Candidatus* Rutabaria gen. nov.

Candidatus Rutabaria (NL. fem. n. *Rutabaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAADFL01*. The type species for the genus is *Candidatus* Rutabaria dupunisca .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JAADFL01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Rutabariaceae.

Description of *Candidatus* Rutabariaceae fam. nov.

Candidatus Rutabariaceae (NL. fem. n. *Rutabariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JAADFL01*. The type genus for the taxon is *Candidatus* Rutabaria .

According to the original version of GTDB R06-RS202, this family belongs to the order *JAADFL01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Rutabariales.

Description of *Candidatus* Rutabariales ord. nov.

Candidatus Rutabariales (NL. fem. n. *Rutabariales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JAADFL01.* The type genus for the taxon is *Candidatus* Rutabaria .

According to the original version of GTDB R06-RS202, this family belongs to the class *JAADFL01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Rutabariae.

Description of *Candidatus* Rutabariae class. nov.

Candidatus Rutabariae (NL. fem. n. *c__Rutabariae* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JAADFL01.* The type genus for the taxon is *Candidatus* Rutabaria .

According to GTDB R06-RS202, this class belongs to the phylum *Myxococcota*.

Description of *Candidatus* Rutabella cilotetta sp. nov.

Candidatus Rutabella cilotetta (NL. fem. n. *cilotetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIPMZ01 sp903866285*. The type genome for the species is the GenBank assembly GCA_903908655.1. The GC content of the type genome is 39.13 % and the genome length is 1.15 Mbp.

Description of *Candidatus* Rutabella gen. nov.

Candidatus Rutabella (NL. fem. n. *Rutabella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIPMZ01*. The type species for the genus is *Candidatus* Rutabella cilotetta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GWC2-37-73*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Camilariaceae.

Description of *Candidatus* Rutabella colapimonas sp. nov.

Candidatus Rutabella colapimonas (NL. fem. n. *colapimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIPMZ01 sp903861715*. The type genome for the species is the GenBank assembly GCA_903926225.1. The GC content of the type genome is 39.87 % and the genome length is 1.29 Mbp.

Description of *Candidatus* Rutabella cululetta sp. nov.

Candidatus Rutabella cululetta (NL. fem. n. *cululetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIPMZ01 sp903885965*. The type genome for the species is the GenBank assembly GCA_903885965.1. The GC content of the type genome is 37.9 % and the genome length is 1.27 Mbp.

Description of *Candidatus* Rutabella dilacifica sp. nov.

Candidatus Rutabella dilacifica (NL. fem. n. *dilacifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIPMZ01 sp903824515*. The type genome for the species is the GenBank assembly GCA_903891745.1. The GC content of the type genome is 38.32 % and the genome length is 1.28 Mbp.

Description of *Candidatus* Rutabella fusifitas sp. nov.

Candidatus Rutabella fusifitas (NL. fem. n. *fusifitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIPMZ01 sp903837175*. The type genome for the species is the GenBank assembly GCA_903837175.1. The GC content of the type genome is 38.21 % and the genome length is 1.37 Mbp.

Description of *Candidatus* Rutabella monocisca sp. nov.

Candidatus Rutabella monocisca (NL. fem. n. *monocisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIPMZ01 sp903851135*. The type genome for the species is the GenBank assembly GCA_903885875.1. The GC content of the type genome is 38.54 % and the genome length is 1.28 Mbp.

Description of *Candidatus* Rutabia adtolugo sp. nov.

Candidatus Rutabia adtolugo (NL. fem. n. *adtolugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1777 sp900754515*. The type genome for the species is the GenBank assembly GCA_900754515.1. The GC content of the type genome is 52.34 % and the genome length is 2.65 Mbp.

Description of *Candidatus* Rutabia gen. nov.

Candidatus Rutabia (NL. fem. n. *Rutabia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1777*. The type species for the genus is *Candidatus* Rutabia adtolugo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Rutabia alcalilenta sp. nov.

Candidatus Rutabia alcalilenta (NL. fem. n. *alcalilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1777 sp900316205*. The type genome for the species is the GenBank assembly GCA_900316205.1. The GC content of the type genome is 59.45 % and the genome length is 2.78 Mbp.

Description of *Candidatus* Rutabia annifugo sp. nov.

Candidatus Rutabia annifugo (NL. fem. n. *annifugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1777 sp002350825*. The type genome for the species is the GenBank assembly GCA_002350825.1. The GC content of the type genome is 60.91 % and the genome length is 1.58 Mbp.

Description of *Candidatus* Rutabia assibitrix sp. nov.

Candidatus Rutabia assibitrix (NL. fem. n. *assibitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1777 sp900320595*. The type genome for the species is the GenBank assembly GCA_900320595.1. The GC content of the type genome is 58.95 % and the genome length is 2.07 Mbp.

Description of *Candidatus* Rutabia bipinago sp. nov.

Candidatus Rutabia bipinago (NL. fem. n. *bipinago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1777 sp004560305*. The type genome for the species is the GenBank assembly GCA_004560305.1. The GC content of the type genome is 58.88 % and the genome length is 1.52 Mbp.

Description of *Candidatus* Rutabia cenacitudo sp. nov.

Candidatus Rutabia cenacitudo (NL. fem. n. *cenacitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1777 sp900547315*. The type genome for the species is the GenBank assembly GCA_900759035.1. The GC content of the type genome is 57.26 % and the genome length is 1.94 Mbp.

Description of *Candidatus* Rutabia cisoribra sp. nov.

Candidatus Rutabia cisoribra (NL. fem. n. *cisoribra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1777 sp900319835*. The type genome for the species is the GenBank assembly GCA_900319835.1. The GC content of the type genome is 60.17 % and the genome length is 2.65 Mbp.

Description of *Candidatus* Rutabia colutago sp. nov.

Candidatus Rutabia colutago (NL. fem. n. *colutago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *UBA1777 sp900321275*. The type genome for the species is the GenBank assembly GCA_900321275.1. The GC content of the type genome is 58.4 % and the genome length is 2.74 Mbp.

Description of *Candidatus* Rutabia culigigena sp. nov.

Candidatus Rutabia culigigena (NL. fem. n. *culigigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1777 sp900319275*. The type genome for the species is the GenBank assembly GCA_900319275.1. The GC content of the type genome is 57.95 % and the genome length is 3.04 Mbp.

Description of *Candidatus* Rutabia dececitio sp. nov.

Candidatus Rutabia dececitio (NL. fem. n. *dececitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1777 sp900549645*. The type genome for the species is the GenBank assembly GCA_004562585.1. The GC content of the type genome is 57.63 % and the genome length is 1.79 Mbp.

Description of *Candidatus* Rutabia defacastra sp. nov.

Candidatus Rutabia defacastra (NL. fem. n. *defacastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1777 sp900317375*. The type genome for the species is the GenBank assembly GCA_900319665.1. The GC content of the type genome is 58.7 % and the genome length is 2.72 Mbp.

Description of *Candidatus* Rutabia desomilega sp. nov.

Candidatus Rutabia desomilega (NL. fem. n. *desomilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1777 sp900546515*. The type genome for the species is the GenBank assembly GCA_900546515.1. The GC content of the type genome is 54.59 % and the genome length is 2.31 Mbp.

Description of *Candidatus* Rutabia desucivita sp. nov.

Candidatus Rutabia desucivita (NL. fem. n. *desucivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1777 sp900319935*. The type genome for the species is the GenBank assembly GCA_900319935.1. The GC content of the type genome is 62.16 % and the genome length is 1.94 Mbp.

Description of *Candidatus* Rutabia detoricula sp. nov.

Candidatus Rutabia detoricula (NL. fem. n. *detoricula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1777 sp002320035*. The type genome for the species is the GenBank assembly GCA_002320035.1. The GC content of the type genome is 55.26 % and the genome length is 1.93 Mbp.

Description of *Candidatus* Rutabia ficulilega sp. nov.

Candidatus Rutabia ficulilega (NL. fem. n. *ficulilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1777 sp900549485*. The type genome for the species is the GenBank assembly GCA_900772205.1. The GC content of the type genome is 52.59 % and the genome length is 2.56 Mbp.

Description of *Candidatus* Rutabia funamibula sp. nov.

Candidatus Rutabia funamibula (NL. fem. n. *funamibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1777 sp900319635*. The type genome for the species is the GenBank assembly GCA_900319635.1. The GC content of the type genome is 61.02 % and the genome length is 2.16 Mbp.

Description of *Candidatus* Rutabia galacessa sp. nov.

Candidatus Rutabia galacessa (NL. fem. n. *galacessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1777 sp002493305*. The type genome for the species is the GenBank assembly GCA_002493305.1. The GC content of the type genome is 54.32 % and the genome length is 2.2 Mbp.

Description of *Candidatus* Rutabia habacetta sp. nov.

Candidatus Rutabia habacetta (NL. fem. n. *habacetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1777 sp900549865*. The type genome for the species is the GenBank assembly GCA_900549865.1. The GC content of the type genome is 58.08 % and the genome length is 2.29 Mbp.

Description of *Candidatus* Rutabia inargigena sp. nov.

Candidatus Rutabia inargigena (NL. fem. n. *inargigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1777 sp900320465*. The type genome for the species is the GenBank assembly GCA_900320465.1. The GC content of the type genome is 60.6 % and the genome length is 2.36 Mbp.

Description of *Candidatus* Rutabia indipugo sp. nov.

Candidatus Rutabia indipugo (NL. fem. n. *indipugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1777 sp900319695*. The type genome for the species is the GenBank assembly GCA_900319695.1. The GC content of the type genome is 59.56 % and the genome length is 2.82 Mbp.

Description of *Candidatus* Rutabia intesisca sp. nov.

Candidatus Rutabia intesisca (NL. fem. n. *intesisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *UBA1777 sp900316255*. The type genome for the species is the GenBank assembly GCA_900316255.1. The GC content of the type genome is 60.33 % and the genome length is 2.71 Mbp.

Description of *Candidatus* Rutabia lametimonia sp. nov.

Candidatus Rutabia lametimonia (NL. fem. n. *lametimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1777 sp900319465*. The type genome for the species is the GenBank assembly GCA_900319465.1. The GC content of the type genome is 62.36 % and the genome length is 2.0 Mbp.

Description of *Candidatus* Rutabia melopentia sp. nov.

Candidatus Rutabia melopentia (NL. fem. n. *melopentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1777 sp003150355*. The type genome for the species is the GenBank assembly GCA_900549255.1. The GC content of the type genome is 56.21 % and the genome length is 2.18 Mbp.

Description of *Candidatus* Rutabia peradicula sp. nov.

Candidatus Rutabia peradicula (NL. fem. n. *peradicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1777 sp002371675*. The type genome for the species is the GenBank assembly GCA_002363595.1. The GC content of the type genome is 61.25 % and the genome length is 1.8 Mbp.

Description of *Candidatus* Rutabia recogifica sp. nov.

Candidatus Rutabia recogifica (NL. fem. n. *recogifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1777 sp002450075*. The type genome for the species is the GenBank assembly GCA_002449835.1. The GC content of the type genome is 60.59 % and the genome length is 1.37 Mbp.

Description of *Candidatus* Rutabia vatilitudo sp. nov.

Candidatus Rutabia vatilitudo (NL. fem. n. *vatilitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1777 sp900549545*. The type genome for the species is the GenBank assembly GCA_900549545.1. The GC content of the type genome is 55.33 % and the genome length is 2.2 Mbp.

Description of *Candidatus* Rutabia vicatousia sp. nov.

Candidatus Rutabia vicatousia (NL. fem. n. *vicatousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1777 sp002431965*. The type genome for the species is the GenBank assembly GCA_002313745.1. The GC content of the type genome is 57.78 % and the genome length is 1.52 Mbp.

Description of *Candidatus* Rutabia virecessa sp. nov.

Candidatus Rutabia virecessa (NL. fem. n. *virecessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1777 sp002315275*. The type genome for the species is the GenBank assembly GCA_002315275.1. The GC content of the type genome is 53.44 % and the genome length is 1.77 Mbp.

Description of *Candidatus* Rutabida cerebetta sp. nov.

Candidatus Rutabida cerebetta (NL. fem. n. *cerebetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA10166 sp001799695*. The type genome for the species is the GenBank assembly GCA_003505215.1. The GC content of the type genome is 68.17 % and the genome length is 4.76 Mbp.

Description of *Candidatus* Rutabida gen. nov.

Candidatus Rutabida (NL. fem. n. *Rutabida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA10166*. The type species for the genus is *Candidatus* Rutabida cerebetta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1565*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Papiliaceae.

Description of *Candidatus* Rutabosa episticula sp. nov.

Candidatus Rutabosa episticula (NL. fem. n. *episticula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-01-FULL-40-14 sp001788215*. The type genome for the species is the GenBank assembly GCA_001788215.1. The GC content of the type genome is 40.38 % and the genome length is 0.85 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under low O2 conditions; 0.1 micron filter; full assembly".

Description of *Candidatus* Rutabosa gen. nov.

Candidatus Rutabosa (NL. fem. n. *Rutabosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *2-01-FULL-40-14*. The type species for the genus is *Candidatus* Rutabosa episticula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *2-01-FULL-40-14*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Rutabosaceae.

Description of *Candidatus* Rutabosaceae fam. nov.

Candidatus Rutabosaceae (NL. fem. n. *Rutabosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *2-01-FULL-40-14.* The type genus for the taxon is *Candidatus* Rutabosa .

According to the original version of GTDB R06-RS202, this family belongs to the order *GCA-001788215*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Vocifosales.

Description of *Candidatus* Ruthenibacterium artilicula sp. nov.

Candidatus Ruthenibacterium artilicula (NL. fem. n. *artilicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ruthenibacterium sp003149955*. The type genome for the species is the GenBank assembly GCA_003149955.1. The GC content of the type genome is 58.19 % and the genome length is 1.95 Mbp.

Description of *Candidatus* Ruthenibacterium calipisca sp. nov.

Candidatus Ruthenibacterium calipisca (NL. fem. n. *calipisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ruthenibacterium sp002315015*. The type genome for the species is the GenBank assembly GCA_002315015.1. The GC content of the type genome is 50.74 % and the genome length is 2.25 Mbp.

Description of *Candidatus* Ruthenibacterium cilicitoga sp. nov.

Candidatus Ruthenibacterium cilicitoga (NL. fem. n. *cilicitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ruthenibacterium sp013316265*. The type genome for the species is the GenBank assembly GCA_013316265.1. The GC content of the type genome is 58.85 % and the genome length is 1.82 Mbp.

Description of *Candidatus* Ruthenibacterium masocago sp. nov.

Candidatus Ruthenibacterium masocago (NL. fem. n. *masocago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ruthenibacterium sp009929695*. The type genome for the species is the GenBank assembly GCA_009929695.1. The GC content of the type genome is 49.63 % and the genome length is 2.68 Mbp.

Description of *Candidatus* Ruthenibacterium nidifibula sp. nov.

Candidatus Ruthenibacterium nidifibula (NL. fem. n. *nidifibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ruthenibacterium sp900546885*. The type genome for the species is the GenBank assembly RS_GCF_900763405.1. The GC content of the type genome is 59.43 % and the genome length is 2.24 Mbp.

Description of *Candidatus* Ruthenibacterium turilugo sp. nov.

Candidatus Ruthenibacterium turilugo (NL. fem. n. *turilugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ruthenibacterium sp900759375*. The type genome for the species is the GenBank assembly GCA_900550665.1. The GC content of the type genome is 59.16 % and the genome length is 2.33 Mbp.

Description of *Candidatus* SDB manufiforma sp. nov.

Candidatus SDB manufiforma (NL. fem. n. *manufiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *SDB sp001412425*. The type genome for the species is the GenBank assembly GCA_001412425.1. The GC content of the type genome is 37.27 % and the genome length is 2.94 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "methanogenic consortium capable of long-chain paraffin degradation (SDB culture) enriched from contaminated sediments of San Diego Bay; California; degrades n-alkanes from C25 to C50".

Description of *Candidatus* Sabulitectum diludibula sp. nov.

Candidatus Sabulitectum diludibula (NL. fem. n. *diludibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sabulitectum sp002748705*. The type genome for the species is the GenBank assembly GCA_002748705.1. The GC content of the type genome is 48.1 % and the genome length is 2.89 Mbp.

Description of *Candidatus* Sabulitectum meridicula sp. nov.

Candidatus Sabulitectum meridicula (NL. fem. n. *meridicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sabulitectum sp003646025*. The type genome for the species is the GenBank assembly GCA_003646025.1. The GC content of the type genome is 48.79 % and the genome length is 2.46 Mbp.

Description of *Candidatus* Saburana agravigena sp. nov.

Candidatus Saburana agravigena (NL. fem. n. *agravigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8950 sp002840685*. The type genome for the species is the GenBank assembly GCA_002840685.1. The GC content of the type genome is 54.24 % and the genome length is 5.26 Mbp.

Description of *Candidatus* Saburana gen. nov.

Candidatus Saburana (NL. fem. n. *Saburana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA8950*. The type species for the genus is *Candidatus* Saburana agravigena .

According to the original version of GTDB R06-RS202, this genus belongs to the family *EnvOPS12*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vinoliaceae.

Description of *Candidatus* Saburana demogibra sp. nov.

Candidatus Saburana demogibra (NL. fem. n. *demogibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8950 sp001872455*. The type genome for the species is the GenBank assembly GCA_002789715.1. The GC content of the type genome is 56.62 % and the genome length is 3.1 Mbp.

Description of *Candidatus* Saburaria levifilenta sp. nov.

Candidatus Saburaria levifilenta (NL. fem. n. *levifilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIJMI01 sp903821745*. The type genome for the species is the GenBank assembly GCA_903894245.1. The GC content of the type genome is 40.57 % and the genome length is 0.77 Mbp.

Description of *Candidatus* Saburaria gen. nov.

Candidatus Saburaria (NL. fem. n. *Saburaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIJMI01*. The type species for the genus is *Candidatus* Saburaria levifilenta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA927*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Casigellaceae.

Description of *Candidatus* Saburella alismedo sp. nov.

Candidatus Saburella alismedo (NL. fem. n. *alismedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA11663 sp002683345*. The type genome for the species is the GenBank assembly GCA_002683345.1. The GC content of the type genome is 58.56 % and the genome length is 1.85 Mbp.

Description of *Candidatus* Saburella gen. nov.

Candidatus Saburella (NL. fem. n. *Saburella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA11663*. The type species for the genus is *Candidatus* Saburella alismedo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UA16*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vatilosaceae.

Description of *Candidatus* Saburella infenatio sp. nov.

Candidatus Saburella infenatio (NL. fem. n. *infenatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA11663 sp002469765*. The type genome for the species is the GenBank assembly GCA_002469765.1. The GC content of the type genome is 57.53 % and the genome length is 2.0 Mbp.

Description of *Candidatus* Saburella minurago sp. nov.

Candidatus Saburella minurago (NL. fem. n. *minurago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA11663 sp002863145*. The type genome for the species is the GenBank assembly GCA_002167585.1. The GC content of the type genome is 53.52 % and the genome length is 2.39 Mbp.

Description of *Candidatus* Saburella miracentia sp. nov.

Candidatus Saburella miracentia (NL. fem. n. *miracentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA11663 sp002729115*. The type genome for the species is the GenBank assembly GCA_002729115.1. The GC content of the type genome is 59.95 % and the genome length is 1.68 Mbp.

Description of *Candidatus* Saburella regifigena sp. nov.

Candidatus Saburella regifigena (NL. fem. n. *regifigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA11663 sp011524845*. The type genome for the species is the GenBank assembly GCA_011524845.1. The GC content of the type genome is 59.54 % and the genome length is 1.84 Mbp.

Description of *Candidatus* Saburella repurimonas sp. nov.

Candidatus Saburella repurimonas (NL. fem. n. *repurimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA11663 sp002313415*. The type genome for the species is the GenBank assembly GCA_902523505.1. The GC content of the type genome is 50.97 %

and the genome length is 1.35 Mbp.

Description of *Candidatus* Saburia dicabicella sp. nov.

Candidatus Saburia dicabicella (NL. fem. n. *dicabicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9644 sp003519445*. The type genome for the species is the GenBank assembly GCA_001779835.1. The GC content of the type genome is 38.07 % and the genome length is 1.0 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under low O2 conditions; 1.2 micron filter; full assembly".

Description of *Candidatus* Saburia gen. nov.

Candidatus Saburia (NL. fem. n. *Saburia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA9644*. The type species for the genus is *Candidatus* Saburia dicabicella .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA10151*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Sugiliaceae.

Description of *Candidatus* Saburosa denecitia sp. nov.

Candidatus Saburosa denecitia (NL. fem. n. *denecitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *BCD18 sp013112545*. The type genome for the species is the GenBank assembly GCA_013112545.1. The GC content of the type genome is 34.0 % and the genome length is 3.27 Mbp.

Description of *Candidatus* Saburosa gen. nov.

Candidatus Saburosa (NL. fem. n. *Saburosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *BCD18*. The type species for the genus is *Candidatus* Saburosa denecitia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Saburula attubicella sp. nov.

Candidatus Saburula attubicella (NL. fem. n. *attubicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *F1-140-MAGs086 sp005792205*. The type genome for the species is the GenBank assembly GCA_005792205.1. The GC content of the type genome is 28.32 % and the genome length is 1.24 Mbp.

Description of *Candidatus* Saburula gen. nov.

Candidatus Saburula (NL. fem. n. *Saburula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *F1-140-MAGs086*. The type species for the genus is *Candidatus* Saburula attubicella .

According to the original version of GTDB R06-RS202, this genus belongs to the family *F1-140-MAGs086*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Saburulaceae.

Description of *Candidatus* Saburulaceae fam. nov.

Candidatus Saburulaceae (NL. fem. n. *Saburulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *F1-140-MAGs086.* The type genus for the taxon is *Candidatus* Saburula .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA10030*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Vagabanales.

Description of *Candidatus* Saccharibacillus abmatitoga sp. nov.

Candidatus Saccharibacillus abmatitoga (NL. fem. n. *abmatitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Saccharibacillus sp002205895*. The type genome for the species is the GenBank assembly RS_GCF_002205895.1. The GC content of the type genome is 56.96 % and the genome length is 6.04 Mbp.

Description of *Candidatus* Saccharibacillus amnenivita sp. nov.

Candidatus Saccharibacillus amnenivita (NL. fem. n. *amnenivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Saccharibacillus sp002189105*. The type genome for the species is the GenBank assembly GCA_002189105.1. The GC content of the type genome is 53.36 % and the genome length is 5.72 Mbp.

Description of *Candidatus* Saccharibacillus robigibra sp. nov.

Candidatus Saccharibacillus robigibra (NL. fem. n. *robigibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Saccharibacillus sp011090185*. The type genome for the species is the GenBank assembly RS_GCF_011090185.1. The GC content of the type genome is 57.9 % and the genome length is 5.39 Mbp.

Description of *Candidatus* Saccharibacter domigitas sp. nov.

Candidatus Saccharibacter domigitas (NL. fem. n. *domigitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Saccharibacter sp009834805*. The type genome for the species is the GenBank assembly RS_GCF_009834805.1. The GC content of the type genome is 48.61 % and the genome length is 2.1 Mbp.

Description of *Candidatus* Saccharibacter sarabimonas sp. nov.

Candidatus Saccharibacter sarabimonas (NL. fem. n. *sarabimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Saccharibacter sp009834765*. The type genome for the species is the GenBank assembly RS_GCF_009834795.1. The GC content of the type genome is 51.47 % and the genome length is 2.25 Mbp.

Description of *Candidatus* Saccharicenans adsusimonia sp. nov.

Candidatus Saccharicenans adsusimonia (NL. fem. n. *adsusimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Saccharicenans sp014359965*. The type genome for the species is the GenBank assembly GCA_014359965.1. The GC content of the type genome is 45.54 % and the genome length is 2.63 Mbp.

Description of *Candidatus* Saccharicenans daducago sp. nov.

Candidatus Saccharicenans daducago (NL. fem. n. *daducago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Saccharicenans sp013178315*. The type genome for the species is the GenBank assembly GCA_013178315.1. The GC content of the type genome is 54.3 % and the genome length is 2.94 Mbp.

Description of *Candidatus* Saccharicenans delebimonia sp. nov.

Candidatus Saccharicenans delebimonia (NL. fem. n. *delebimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Saccharicenans sp002877915*. The type genome for the species is the GenBank assembly GCA_002877915.1. The GC content of the type genome is 43.29 % and the genome length is 2.55 Mbp.

Description of *Candidatus* Saccharicenans habacitia sp. nov.

Candidatus Saccharicenans habacitia (NL. fem. n. *habacitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Saccharicenans sp003476685*. The type genome for the species is the GenBank assembly GCA_003476685.1. The GC content of the type genome is 53.7 % and the genome length is 1.93 Mbp.

Description of *Candidatus* Saccharicenans inadfousia sp. nov.

Candidatus Saccharicenans inadfousia (NL. fem. n. *inadfousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Saccharicenans sp014360015*. The type genome for the species is the GenBank assembly GCA_014360015.1. The GC content of the type genome is 45.05 % and the genome length is 2.72 Mbp.

Description of *Candidatus* Saccharicenans insepago sp. nov.

Candidatus Saccharicenans insepago (NL. fem. n. *insepago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Saccharicenans sp002316315*. The type genome for the species is the GenBank assembly GCA_002316315.1. The GC content of the type genome is 45.74 % and the genome length is 2.51 Mbp.

Description of *Candidatus* Saccharicenans paropedo sp. nov.

Candidatus Saccharicenans paropedo (NL. fem. n. *paropedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Saccharicenans sp002441005*. The type genome for the species is the GenBank assembly GCA_003485065.1. The GC content of the type genome is 47.48 % and the genome length is 1.64 Mbp.

Description of *Candidatus* Saccharicenans scaccilenta sp. nov.

Candidatus Saccharicenans scaccilenta (NL. fem. n. *scaccilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Saccharicenans sp014360005*. The type genome for the species is the GenBank assembly GCA_014360005.1. The GC content of the type genome is 52.26 % and the genome length is 2.91 Mbp.

Description of *Candidatus* Saccharicenans vitupimonas sp. nov.

Candidatus Saccharicenans vitupimonas (NL. fem. n. *vitupimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Saccharicenans sp011373685*. The type genome for the species is the GenBank assembly GCA_011373685.1. The GC content of the type genome is 46.65 % and the genome length is 2.01 Mbp.

Description of *Candidatus* Saccharimonas abnepicula sp. nov.

Candidatus Saccharimonas abnepicula (NL. fem. n. *abnepicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Saccharimonas sp002441145*. The type genome for the species is the GenBank assembly GCA_002441145.1. The GC content of the type genome is 48.26 % and the genome length is 0.79 Mbp.

Description of *Candidatus* Saccharimonas acontibra sp. nov.

Candidatus Saccharimonas acontibra (NL. fem. n. *acontibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Saccharimonas sp013333675*. The type genome for the species is the GenBank assembly GCA_013333675.2. The GC content of the type genome is 48.9 % and the genome length is 0.85 Mbp.

Description of *Candidatus* Saccharimonas arcebibula sp. nov.

Candidatus Saccharimonas arcebibula (NL. fem. n. *arcebibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Saccharimonas sp002336935*. The type genome for the species is the GenBank assembly GCA_002336935.1. The GC content of the type genome is 48.56 % and the genome length is 0.95 Mbp.

Description of *Candidatus* Saccharimonas caselitudo sp. nov.

Candidatus Saccharimonas caselitudo (NL. fem. n. *caselitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Saccharimonas sp010202265*. The type genome for the species is the GenBank assembly RS_GCF_010202265.1. The GC content of the type genome is 46.73 % and the genome length is 0.87 Mbp.

Description of *Candidatus* Saccharimonas colepugo sp. nov.

Candidatus Saccharimonas colepugo (NL. fem. n. *colepugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Saccharimonas sp002337095*. The type genome for the species is the GenBank assembly GCA_002337095.1. The GC content of the type genome is 53.17 % and the genome length is 0.86 Mbp.

Description of *Candidatus* Saccharimonas crabrisca sp. nov.

Candidatus Saccharimonas crabrisca (NL. fem. n. *crabrisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Saccharimonas sp013333645*. The type genome for the species is the GenBank assembly GCA_013333645.2. The GC content of the type genome is 52.05 % and the genome length is 0.99 Mbp.

Description of *Candidatus* Saccharimonas decomimonas sp. nov.

Candidatus Saccharimonas decomimonas (NL. fem. n. *decomimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Saccharimonas sp002421785*. The type genome for the species is the GenBank assembly GCA_002421785.1. The GC content of the type genome is 50.31 % and the genome length is 1.04 Mbp.

Description of *Candidatus* Saccharimonas dicimatio sp. nov.

Candidatus Saccharimonas dicimatio (NL. fem. n. *dicimatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Saccharimonas sp013333625*. The type genome for the species is the GenBank assembly GCA_013333625.2. The GC content of the type genome is 48.07 % and the genome length is 0.83 Mbp.

Description of *Candidatus* Saccharimonas divolitudo sp. nov.

Candidatus Saccharimonas divolitudo (NL. fem. n. *divolitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Saccharimonas sp002299795*. The type genome for the species is the GenBank assembly GCA_002299795.1. The GC content of the type genome is 51.03 % and the genome length is 0.69 Mbp.

Description of *Candidatus* Saccharimonas malagifica sp. nov.

Candidatus Saccharimonas malagifica (NL. fem. n. *malagifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Saccharimonas sp013333845*. The type genome for the species is the GenBank assembly GCA_013333845.2. The GC content of the type genome is 47.79 % and the genome length is 0.76 Mbp.

Description of *Candidatus* Saccharimonas prognilenta sp. nov.

Candidatus Saccharimonas prognilenta (NL. fem. n. *prognilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Saccharimonas sp002336735*. The type genome for the species is the GenBank assembly GCA_002336735.1. The GC content of the type genome is 49.02 % and the genome length is 0.76 Mbp.

Description of *Candidatus* Saccharimonas scombousia sp. nov.

Candidatus Saccharimonas scombousia (NL. fem. n. *scombousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Saccharimonas sp013333795*. The type genome for the species is the GenBank assembly GCA_013333795.2. The GC content of the type genome is 47.53 % and the genome length is 0.78 Mbp.

Description of *Candidatus* Saccharococcus infacitudo sp. nov.

Candidatus Saccharococcus infacitudo (NL. fem. n. *infacitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Saccharococcus sp000632515*. The type genome for the species is the GenBank assembly RS_GCF_000632515.1. The GC content of the type genome is 44.38 % and the genome length is 3.62 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "MNNG mutagenesis derived mutant of the parent strain NUB36".

Description of *Candidatus* Saccharofermentans ancipousia sp. nov.

Candidatus Saccharofermentans ancipousia (NL. fem. n. *ancipousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Saccharofermentans sp002450155*. The type genome for the species is the GenBank assembly GCA_002450155.1. The GC content of the type genome is 45.76 % and the genome length is 2.18 Mbp.

Description of *Candidatus* Saccharofermentans cerarentia sp. nov.

Candidatus Saccharofermentans cerarentia (NL. fem. n. *cerarentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Saccharofermentans sp900107185*. The type genome for the species is the GenBank assembly RS_GCF_900107185.1. The GC content of the type genome is 43.65 % and the genome length is 2.67 Mbp.

Description of *Candidatus* Saccharofermentans excoritrix sp. nov.

Candidatus Saccharofermentans excoritrix (NL. fem. n. *excoritrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Saccharofermentans sp012728275*. The type genome for the species is the GenBank assembly GCA_012728275.1. The GC content of the type genome is 39.43 % and the genome length is 1.62 Mbp.

Description of *Candidatus* Saccharofermentans forinimonia sp. nov.

Candidatus Saccharofermentans forinimonia (NL. fem. n. *forinimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Saccharofermentans sp900313405*. The type genome for the species is the GenBank assembly GCA_002373235.1. The GC content of the type genome is 48.62

% and the genome length is 2.19 Mbp.

Description of *Candidatus* Saccharofermentans hegumentia sp. nov.

Candidatus Saccharofermentans hegumentia (NL. fem. n. *hegumentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Saccharofermentans sp003543635*. The type genome for the species is the GenBank assembly GCA_003543635.1. The GC content of the type genome is 51.67 % and the genome length is 1.56 Mbp.

Description of *Candidatus* Saccharofermentans inhumago sp. nov.

Candidatus Saccharofermentans inhumago (NL. fem. n. *inhumago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Saccharofermentans sp000621765*. The type genome for the species is the GenBank assembly RS_GCF_000621765.1. The GC content of the type genome is 45.66 % and the genome length is 3.25 Mbp.

Description of *Candidatus* Saccharofermentans monimax sp. nov.

Candidatus Saccharofermentans monimax (NL. fem. n. *monimax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Saccharofermentans sp003149065*. The type genome for the species is the GenBank assembly RS_GCF_900199645.1. The GC content of the type genome is 44.84 % and the genome length is 3.07 Mbp.

Description of *Candidatus* Saccharofermentans monogitoga sp. nov.

Candidatus Saccharofermentans monogitoga (NL. fem. n. *monogitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Saccharofermentans sp900099715*. The type genome for the species is the GenBank assembly RS_GCF_900099715.1. The GC content of the type genome is 47.83 % and the genome length is 3.01 Mbp.

Description of *Candidatus* Saccharofermentans octinago sp. nov.

Candidatus Saccharofermentans octinago (NL. fem. n. *octinago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Saccharofermentans sp002371375*. The type genome for the species is the GenBank assembly GCA_002371375.1. The GC content of the type genome is 47.5 % and the genome length is 2.4 Mbp.

Description of *Candidatus* Saccharofermentans recorivita sp. nov.

Candidatus Saccharofermentans recorivita (NL. fem. n. *recorivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Saccharofermentans sp001604135*. The type genome for the species is the GenBank assembly GCA_001604135.1. The GC content of the type genome is 46.32 % and the genome length is 3.12 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "3 replicate cellulose-degrading anaerobic digesters sampled at day 96 and day 362".

Description of *Candidatus* Saccharofermentans recumessa sp. nov.

Candidatus Saccharofermentans recumessa (NL. fem. n. *recumessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Saccharofermentans sp900111435*. The type genome for the species is the GenBank assembly RS_GCF_900111435.1. The GC content of the type genome is 46.87 % and the genome length is 2.92 Mbp.

Description of *Candidatus* Saccharofermentans revulivita sp. nov.

Candidatus Saccharofermentans revulivita (NL. fem. n. *revulivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Saccharofermentans sp900176545*. The type genome for the species is the GenBank assembly RS_GCF_900176545.1. The GC content of the type genome is 46.4 % and the genome length is 2.98 Mbp.

Description of *Candidatus* Saccharofermentans sonivitas sp. nov.

Candidatus Saccharofermentans sonivitas (NL. fem. n. *sonivitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Saccharofermentans sp002394605*. The type genome for the species is the GenBank assembly GCA_002394605.1. The GC content of the type genome is 47.92 % and the genome length is 2.26 Mbp.

Description of *Candidatus* Saccharofermentans vilitatica sp. nov.

Candidatus Saccharofermentans vilitatica (NL. fem. n. *vilitatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Saccharofermentans sp900314745*. The type genome for the species is the GenBank assembly GCA_900314745.1. The GC content of the type genome is 47.8 % and the genome length is 2.28 Mbp.

Description of *Candidatus* Saccharofermentans xerametta sp. nov.

Candidatus Saccharofermentans xerametta (NL. fem. n. *xerametta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Saccharofermentans sp002450095*. The type genome for the species is the GenBank assembly GCA_002394055.1. The GC content of the type genome is 46.33 % and the genome length is 2.09 Mbp.

Description of *Candidatus* Saccharomonospora echogiforma sp. nov.

Candidatus Saccharomonospora echogiforma (NL. fem. n. *echogiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Saccharomonospora sp003202235*. The type genome for the species is the GenBank assembly RS_GCF_003202235.1. The GC content of the type genome is 70.83 % and the genome length is 8.1 Mbp.

Description of *Candidatus* Saccharomonospora inarditas sp. nov.

Candidatus Saccharomonospora inarditas (NL. fem. n. *inarditas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Saccharomonospora sp001942305*. The type genome for the species is the GenBank assembly RS_GCF_001942305.1. The GC content of the type genome is 69.98 % and the genome length is 5.42 Mbp.

Description of *Candidatus* Saccharopolyspora acrimitio sp. nov.

Candidatus Saccharopolyspora acrimitio (NL. fem. n. *acrimitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Saccharopolyspora sp012277335*. The type genome for the species is the GenBank assembly RS_GCF_012277335.1. The GC content of the type genome is 68.1 % and the genome length is 8.05 Mbp.

Description of *Candidatus* Saccharopolyspora enimvatica sp. nov.

Candidatus Saccharopolyspora enimvatica (NL. fem. n. *enimvatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Saccharopolyspora sp004348445*. The type genome for the species is the GenBank assembly RS_GCF_004348445.1. The GC content of the type genome is 69.56 % and the genome length is 6.01 Mbp.

Description of *Candidatus* Saccharopolyspora exsufetta sp. nov.

Candidatus Saccharopolyspora exsufetta (NL. fem. n. *exsufetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Saccharopolyspora sp004348985*. The type genome for the species is the GenBank assembly RS_GCF_004348985.1. The GC content of the type genome is 69.67 % and the genome length is 10.3 Mbp.

Description of *Candidatus* Saccharopolyspora malifedo sp. nov.

Candidatus Saccharopolyspora malifedo (NL. fem. n. *malifedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Saccharopolyspora sp003931915*. The type genome for the species is the GenBank assembly RS_GCF_003931915.1. The GC content of the type genome is 70.63 % and the genome length is 5.82 Mbp.

Description of *Candidatus* Saccharopolyspora redacibra sp. nov.

Candidatus Saccharopolyspora redacibra (NL. fem. n. *redacibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Saccharopolyspora sp004348435*. The type genome for the species is the GenBank assembly RS_GCF_004348435.1. The GC content of the type genome is 69.66 % and the genome length is 6.65 Mbp.

Description of *Candidatus* Saccharospirillum obvericella sp. nov.

Candidatus Saccharospirillum obvericella (NL. fem. n. *obvericella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Saccharospirillum sp003054965*. The type genome for the species is the GenBank assembly RS_GCF_003054965.1. The GC content of the type genome is 55.4 % and the genome length is 3.75 Mbp.

Description of *Candidatus* Sacomana citivitura sp. nov.

Candidatus Sacomana citivitura (NL. fem. n. *citivitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-12-FULL-57-11 sp001791115*. The type genome for the species is the GenBank assembly GCA_001791115.1. The GC content of the type genome is 56.76 % and the genome length is 0.96 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 0.2 micron filter; full assembly".

Description of *Candidatus* Sacomana gen. nov.

Candidatus Sacomana (NL. fem. n. *Sacomana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *2-12-FULL-57-11*. The type species for the genus is *Candidatus* Sacomana citivitura .

According to the original version of GTDB R06-RS202, this genus belongs to the family *2-12-FULL-57-11*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Sacomanaceae.

Description of *Candidatus* Sacomanaceae fam. nov.

Candidatus Sacomanaceae (NL. fem. n. *Sacomanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *2-12-FULL-57-11.* The type genus for the taxon is *Candidatus* Sacomana .

According to the original version of GTDB R06-RS202, this family belongs to the order *SG8-24*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Labecellales.

Description of *Candidatus* Sacomaria cenacitica sp. nov.

Candidatus Sacomaria cenacitica (NL. fem. n. *cenacitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTLI01 sp011389195*. The type genome for the species is the GenBank assembly GCA_011389195.1. The GC content of the type genome is 41.52 % and the genome length is 2.14 Mbp.

Description of *Candidatus* Sacomaria gen. nov.

Candidatus Sacomaria (NL. fem. n. *Sacomaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DTLI01*. The type species for the genus is *Candidatus* Sacomaria cenacitica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DTLI01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Sacomariaceae.

Description of *Candidatus* Sacomariaceae fam. nov.

Candidatus Sacomariaceae (NL. fem. n. *Sacomariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *DTLI01.* The type genus for the taxon is *Candidatus* Sacomaria .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA2258*. According to the renamed version of GTDB R06-RS202, this taxon belongs to

the order *Candidatus* Homulosales.

Description of *Candidatus* Sacomella exforago sp. nov.

Candidatus Sacomella exforago (NL. fem. n. *exforago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1427 sp012838545*. The type genome for the species is the GenBank assembly GCA_012838545.1. The GC content of the type genome is 38.78 % and the genome length is 1.71 Mbp.

Description of *Candidatus* Sacomella gen. nov.

Candidatus Sacomella (NL. fem. n. *Sacomella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1427*. The type species for the genus is *Candidatus* Sacomella exforago .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-313*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Caliposaceae.

Description of *Candidatus* Sacomella rorifitura sp. nov.

Candidatus Sacomella rorifitura (NL. fem. n. *rorifitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1427 sp002329485*. The type genome for the species is the GenBank assembly GCA_002070525.1. The GC content of the type genome is 42.72 % and the genome length is 1.74 Mbp.

Description of *Candidatus* Sacomia catabicula sp. nov.

Candidatus Sacomia catabicula (NL. fem. n. *catabicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTU018 sp001513155*. The type genome for the species is the GenBank assembly GCA_001513155.1. The GC content of the type genome is 48.27 %

and the genome length is 2.56 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "pool of bioreactors CSTR01a; CSTR02a; and CSTR03a; thermophilic anaerobic digestion of cattle manure in continuous reactors for biogas production (methane)".

Description of *Candidatus* Sacomia gen. nov.

Candidatus Sacomia (NL. fem. n. *Sacomia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DTU018*. The type species for the genus is *Candidatus* Sacomia catabicula .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Sacomia renavedo sp. nov.

Candidatus Sacomia renavedo (NL. fem. n. *renavedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTU018 sp003444615*. The type genome for the species is the GenBank assembly GCA_003444615.1. The GC content of the type genome is 45.28 % and the genome length is 1.85 Mbp.

Description of *Candidatus* Sacomia tenebifica sp. nov.

Candidatus Sacomia tenebifica (NL. fem. n. *tenebifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTU018 sp002305535*. The type genome for the species is the GenBank assembly GCA_012523795.1. The GC content of the type genome is 46.19 % and the genome length is 2.79 Mbp.

Description of *Candidatus* Sacomida mahelitas sp. nov.

Candidatus Sacomida mahelitas (NL. fem. n. *mahelitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MEBICO9517 sp003285105*. The type genome for the species is the GenBank assembly GCA_003696175.1. The GC content of the type genome is 68.62 %

and the genome length is 4.37 Mbp.

Description of *Candidatus* Sacomida gen. nov.

Candidatus Sacomida (NL. fem. n. *Sacomida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *MEBICO9517*. The type species for the genus is *Candidatus* Sacomida mahelitas .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Sacomosa sugililega sp. nov.

Candidatus Sacomosa sugililega (NL. fem. n. *sugililega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CG2-30-36-39 sp001873435*. The type genome for the species is the GenBank assembly GCA_001873435.1. The GC content of the type genome is 35.65 % and the genome length is 0.98 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "groundwater filtered through a 3.0 um filter".

Description of *Candidatus* Sacomosa gen. nov.

Candidatus Sacomosa (NL. fem. n. *Sacomosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CG2-30-36-39*. The type species for the genus is *Candidatus* Sacomosa sugililega .

According to the original version of GTDB R06-RS202, this genus belongs to the family *PJMF01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vepalulaceae.

Description of *Candidatus* Sacomula amatratica sp. nov.

Candidatus Sacomula amatratica (NL. fem. n. *amatratica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAITWF01 sp903948415*. The type genome for the species is the

GenBank assembly GCA_903948415.1. The GC content of the type genome is 66.98 % and the genome length is 6.71 Mbp.

Description of *Candidatus* Sacomula gen. nov.

Candidatus Sacomula (NL. fem. n. *Sacomula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAITWF01*. The type species for the genus is *Candidatus* Sacomula amatratica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Sacomula cerimicella sp. nov.

Candidatus Sacomula cerimicella (NL. fem. n. *cerimicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAITWF01 sp005799525*. The type genome for the species is the GenBank assembly GCA_005799525.1. The GC content of the type genome is 63.21 % and the genome length is 4.71 Mbp.

Description of *Candidatus* Sacomula nehaletta sp. nov.

Candidatus Sacomula nehaletta (NL. fem. n. *nehaletta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAITWF01 sp009695305*. The type genome for the species is the GenBank assembly GCA_009695305.1. The GC content of the type genome is 64.91 % and the genome length is 4.29 Mbp.

Description of *Candidatus* Sacomula vivifimonia sp. nov.

Candidatus Sacomula vivifimonia (NL. fem. n. *vivifimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAITWF01 sp903840415*. The type genome for the species is the GenBank assembly GCA_903903025.1. The GC content of the type genome is 61.86 % and the genome length is 5.48 Mbp.

Description of *Candidatus* Sacomula xenodago sp. nov.

Candidatus Sacomula xenodago (NL. fem. n. *xenodago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAITWF01 sp903896015*. The type genome for the species is the GenBank assembly GCA_903825225.1. The GC content of the type genome is 63.36 % and the genome length is 3.77 Mbp.

Description of *Candidatus* Sacopana dehinitica sp. nov.

Candidatus Sacopana dehinitica (NL. fem. n. *dehinitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GLO-12 sp003353845*. The type genome for the species is the GenBank assembly GCA_003353845.1. The GC content of the type genome is 55.19 % and the genome length is 4.97 Mbp.

Description of *Candidatus* Sacopana gen. nov.

Candidatus Sacopana (NL. fem. n. *Sacopana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GLO-12*. The type species for the genus is *Candidatus* Sacopana dehinitica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GLO-12*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Sacopanaceae.

Description of *Candidatus* Sacopanaceae fam. nov.

Candidatus Sacopanaceae (NL. fem. n. *Sacopanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *GLO-12.* The type genus for the taxon is *Candidatus* Sacopana .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA9160*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Buxifiales.

Description of *Candidatus* Sacopella noninivita sp. nov.

Candidatus Sacopella noninivita (NL. fem. n. *noninivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5941 sp002430735*. The type genome for the species is the GenBank assembly GCA_002430615.1. The GC content of the type genome is 41.93 % and the genome length is 0.9 Mbp.

Description of *Candidatus* Sacopella gen. nov.

Candidatus Sacopella (NL. fem. n. *Sacopella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA5941*. The type species for the genus is *Candidatus* Sacopella noninivita .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA8517*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Xenoposaceae.

Description of *Candidatus* Sacopia hemiditrix sp. nov.

Candidatus Sacopia hemiditrix (NL. fem. n. *hemiditrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CG2-30-33-31 sp001872625*. The type genome for the species is the GenBank assembly GCA_001872625.1. The GC content of the type genome is 32.94 % and the genome length is 2.87 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "groundwater filtered through a 3.0 um filter".

Description of *Candidatus* Sacopia gen. nov.

Candidatus Sacopia (NL. fem. n. *Sacopia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CG2-30-33-31*. The type species for the genus is *Candidatus* Sacopia hemiditrix .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1556*. According to the renamed version of GTDB R06-RS202, this taxon belongs to

the family *Candidatus* Depopellaceae.

Description of *Candidatus* Sacopida pacififorma sp. nov.

Candidatus Sacopida pacififorma (NL. fem. n. *pacififorma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5081 sp002415785*. The type genome for the species is the GenBank assembly GCA_002415785.1. The GC content of the type genome is 36.13 % and the genome length is 3.4 Mbp.

Description of *Candidatus* Sacopida gen. nov.

Candidatus Sacopida (NL. fem. n. *Sacopida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA5081*. The type species for the genus is *Candidatus* Sacopida pacififorma .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Sacoposa delacax sp. nov.

Candidatus Sacoposa delacax (NL. fem. n. *delacax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACIYH01 sp014360055*. The type genome for the species is the GenBank assembly GCA_014360055.1. The GC content of the type genome is 68.02 % and the genome length is 2.72 Mbp.

Description of *Candidatus* Sacoposa gen. nov.

Candidatus Sacoposa (NL. fem. n. *Sacoposa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACIYH01*. The type species for the genus is *Candidatus* Sacoposa delacax .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JACIYH01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Sacoposaceae.

Description of *Candidatus* Sacoposaceae fam. nov.

Candidatus Sacoposaceae (NL. fem. n. *Sacoposaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JACIYH01*. The type genus for the taxon is *Candidatus* Sacoposa .

According to the original version of GTDB R06-RS202, this family belongs to the order *JACIYH01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Sacoposales.

Description of *Candidatus* Sacoposales ord. nov.

Candidatus Sacoposales (NL. fem. n. *Sacoposales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JACIYH01*. The type genus for the taxon is *Candidatus* Sacoposa .

According to the original version of GTDB R06-RS202, this family belongs to the class *DTU015*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Cetariae.

Description of *Candidatus* Sacopula adambax sp. nov.

Candidatus Sacopula adambax (NL. fem. n. *adambax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2979 sp002701625*. The type genome for the species is the GenBank assembly GCA_002701625.1. The GC content of the type genome is 45.4 % and the genome length is 1.57 Mbp.

Description of *Candidatus* Sacopula gen. nov.

Candidatus Sacopula (NL. fem. n. *Sacopula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA2979*. The type species for the genus is *Candidatus* Sacopula adambax .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2979*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Sacopulaceae.

Description of *Candidatus* Sacopulaceae fam. nov.

Candidatus Sacopulaceae (NL. fem. n. *Sacopulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA2979.* The type genus for the taxon is *Candidatus* Sacopula .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA2979*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Sacopulales.

Description of *Candidatus* Sacopulales ord. nov.

Candidatus Sacopulales (NL. fem. n. *Sacopulales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA2979.* The type genus for the taxon is *Candidatus* Sacopula .

According to the GTDB R06-RS202, this order belongs to the class *Dehalococcoidia*.

Description of *Candidatus* Sacopula impiribra sp. nov.

Candidatus Sacopula impiribra (NL. fem. n. *impiribra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2979 sp002725365*. The type genome for the species is the GenBank assembly GCA_002725365.1. The GC content of the type genome is 47.61 % and the genome length is 1.49 Mbp.

Description of *Candidatus* Sacopula redacessa sp. nov.

Candidatus Sacopula redacessa (NL. fem. n. *redacessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2979 sp002348225*. The type genome for the species is the GenBank assembly GCA_002348225.1. The GC content of the type genome is 47.73 % and the genome length is 1.68 Mbp.

Description of *Candidatus* Sagittula hexagitio sp. nov.

Candidatus Sagittula hexagitio (NL. fem. n. *hexagitio* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sagittula sp002814095*. The type genome for the species is the GenBank assembly RS_GCF_002814095.1. The GC content of the type genome is 66.28 % and the genome length is 5.58 Mbp.

Description of *Candidatus* Salegentibacter adnaritio sp. nov.

Candidatus Salegentibacter adnaritio (NL. fem. n. *adnaritio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Salegentibacter sp004362395*. The type genome for the species is the GenBank assembly RS_GCF_004362395.1. The GC content of the type genome is 37.36 % and the genome length is 4.15 Mbp.

Description of *Candidatus* Salegentibacter antimitura sp. nov.

Candidatus Salegentibacter antimitura (NL. fem. n. *antimitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Salegentibacter sp000745315*. The type genome for the species is the GenBank assembly RS_GCF_000745315.1. The GC content of the type genome is 36.55 % and the genome length is 4.21 Mbp.

Description of *Candidatus* Salibacter repagax sp. nov.

Candidatus Salibacter repagax (NL. fem. n. *repagax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Salibacter sp003564735*. The type genome for the species is the GenBank assembly GCA_003564735.1. The GC content of the type genome is 42.69 % and the genome length is 2.29 Mbp.

Description of *Candidatus* Salimicrobium panififorma sp. nov.

Candidatus Salimicrobium panififorma (NL. fem. n. *panififorma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Salimicrobium sp002295105*. The type genome for the species is the GenBank assembly RS_GCF_900188545.1. The GC content of the type genome is 47.06 % and the genome length is 2.59 Mbp.

Description of *Candidatus* Salinarimonas avuncousia sp. nov.

Candidatus Salinarimonas avuncousia (NL. fem. n. *avuncousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Salinarimonas sp003567055*. The type genome for the species is the GenBank assembly GCA_003567055.1. The GC content of the type genome is 65.22 % and the genome length is 3.19 Mbp.

Description of *Candidatus* Salinarimonas sotulimonas sp. nov.

Candidatus Salinarimonas sotulimonas (NL. fem. n. *sotulimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Salinarimonas sp900094735*. The type genome for the species is the GenBank assembly RS_GCF_900094735.1. The GC content of the type genome is 64.19 % and the genome length is 4.18 Mbp.

Description of *Candidatus* Salinarimonas taraxifica sp. nov.

Candidatus Salinarimonas taraxifica (NL. fem. n. *taraxifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Salinarimonas sp007693435*. The type genome for the species is the GenBank assembly GCA_007693435.1. The GC content of the type genome is 66.69 % and the genome length is 3.65 Mbp.

Description of *Candidatus* Salinibacillus cimitatica sp. nov.

Candidatus Salinibacillus cimitatica (NL. fem. n. *cimitatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Salinibacillus sp010092505*. The type genome for the species is the GenBank assembly RS_GCF_010092505.1. The GC content of the type genome is 40.96 % and the genome length is 3.33 Mbp.

Description of *Candidatus* Salinibacter fibicedo sp. nov.

Candidatus Salinibacter fibicedo (NL. fem. n. *fibicedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Salinibacter sp003022655*. The type genome for the species is the GenBank assembly GCA_003022655.1. The GC content of the type genome is 64.25 % and the genome length is 2.11 Mbp.

Description of *Candidatus* Salinibacter nitelivita sp. nov.

Candidatus Salinibacter nitelivita (NL. fem. n. *nitelivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Salinibacter sp003023105*. The type genome for the species is the GenBank assembly GCA_003023105.1. The GC content of the type genome is 64.25 % and the genome length is 1.42 Mbp.

Description of *Candidatus* Salinibacter redunatica sp. nov.

Candidatus Salinibacter redunatica (NL. fem. n. *redunatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Salinibacter sp003023125*. The type genome for the species is the GenBank assembly GCA_003023025.1. The GC content of the type genome is 63.46 % and the genome length is 1.63 Mbp.

Description of *Candidatus* Salinibacter verifitia sp. nov.

Candidatus Salinibacter verifitia (NL. fem. n. *verifitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Salinibacter sp003022565*. The type genome for the species is the GenBank assembly GCA_003022565.1. The GC content of the type genome is 63.87 % and the genome length is 2.62 Mbp.

Description of *Candidatus* Salinicoccus immeditoga sp. nov.

Candidatus Salinicoccus immeditoga (NL. fem. n. *immeditoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Salinicoccus sp001265075*. The type genome for the species is the GenBank assembly RS_GCF_001265075.1. The GC content of the type genome is 41.76 % and the genome length is 2.73 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "dust collection of the indoor air".

Description of *Candidatus* Salinicoccus odontatica sp. nov.

Candidatus Salinicoccus odontatica (NL. fem. n. *odontatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Salinicoccus sp002360325*. The type genome for the species is the GenBank assembly GCA_002360325.1. The GC content of the type genome is 43.5 % and the genome length is 2.05 Mbp.

Description of *Candidatus* Salinicola milifessa sp. nov.

Candidatus Salinicola milifessa (NL. fem. n. *milifessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Salinicola sp008298015*. The type genome for the species is the GenBank assembly RS_GCF_008298015.1. The GC content of the type genome is 62.6 % and the genome length is 4.66 Mbp.

Description of *Candidatus* Salinicola mirificula sp. nov.

Candidatus Salinicola mirificula (NL. fem. n. *mirificula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Salinicola sp000737985*. The type genome for the species is the GenBank assembly RS_GCF_000737985.1. The GC content of the type genome is 65.71 % and the genome length is 4.44 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "saline environment".

Description of *Candidatus* Salinicola rubigetta sp. nov.

Candidatus Salinicola rubigetta (NL. fem. n. *rubigetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Salinicola sp002695065*. The type genome for the species is the GenBank assembly GCA_013214345.1. The GC content of the type genome is 64.16 % and the genome length is 4.29 Mbp.

Description of *Candidatus* Salinimicrobium cemenedo sp. nov.

Candidatus Salinimicrobium cemenedo (NL. fem. n. *cemenedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Salinimicrobium sp012038135*. The type genome for the species is the GenBank assembly RS_GCF_012038135.1. The GC content of the type genome is 41.7 % and the genome length is 3.63 Mbp.

Description of *Candidatus* Salinimonas adsenitoga sp. nov.

Candidatus Salinimonas adsenitoga (NL. fem. n. *adsenitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Salinimonas sp006228385*. The type genome for the species is the GenBank assembly RS_GCF_006228385.1. The GC content of the type genome is 47.29 % and the genome length is 4.16 Mbp.

Description of *Candidatus* Salinisphaera agratimonas sp. nov.

Candidatus Salinisphaera agratimonas (NL. fem. n. *agratimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Salinisphaera sp002729955*. The type genome for the species is the GenBank assembly GCA_002729955.1. The GC content of the type genome is 63.46 % and the genome length is 3.84 Mbp.

Description of *Candidatus* Salinisphaera buxifastra sp. nov.

Candidatus Salinisphaera buxifastra (NL. fem. n. *buxifastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Salinisphaera sp002715985*. The type genome for the species is the GenBank assembly GCA_002291565.1. The GC content of the type genome is 63.97 %

and the genome length is 2.74 Mbp.

Description of *Candidatus* Salinisphaera immatitura sp. nov.

Candidatus Salinisphaera immatitura (NL. fem. n. *immatitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Salinisphaera sp003602005*. The type genome for the species is the GenBank assembly RS_GCF_003602005.1. The GC content of the type genome is 64.19 % and the genome length is 3.87 Mbp.

Description of *Candidatus* Salinisphaera levifatio sp. nov.

Candidatus Salinisphaera levifatio (NL. fem. n. *levifatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Salinisphaera sp003177035*. The type genome for the species is the GenBank assembly RS_GCF_003177035.1. The GC content of the type genome is 63.98 % and the genome length is 4.14 Mbp.

Description of *Candidatus* Salinisphaera ocissicula sp. nov.

Candidatus Salinisphaera ocissicula (NL. fem. n. *ocissicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Salinisphaera sp002320455*. The type genome for the species is the GenBank assembly GCA_002320455.1. The GC content of the type genome is 63.9 % and the genome length is 2.89 Mbp.

Description of *Candidatus* Salinisphaera semivifica sp. nov.

Candidatus Salinisphaera semivifica (NL. fem. n. *semivifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Salinisphaera sp002433465*. The type genome for the species is the GenBank assembly GCA_002433465.1. The GC content of the type genome is 63.67 % and the genome length is 3.37 Mbp.

Description of *Candidatus* Salinisphaera armifitio sp. nov.

Candidatus Salinisphaera armifitio (NL. fem. n. *armifitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Salinisphaera_A sp002403445*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_002403445.1. The GC content of the type genome is 56.79 % and the genome length is 2.0 Mbp.

Description of *Candidatus* Salinivenus aneclitia sp. nov.

Candidatus Salinivenus aneclitia (NL. fem. n. *aneclitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Salinivenus sp002954405*. The type genome for the species is the GenBank assembly RS_GCF_002954405.1. The GC content of the type genome is 60.71 % and the genome length is 4.75 Mbp.

Description of *Candidatus* Salinivenus armipimonia sp. nov.

Candidatus Salinivenus armipimonia (NL. fem. n. *armipimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Salinivenus sp003022435*. The type genome for the species is the GenBank assembly GCA_003022435.1. The GC content of the type genome is 63.03 % and the genome length is 2.84 Mbp.

Description of *Candidatus* Salinivenus inoffilenta sp. nov.

Candidatus Salinivenus inoffilenta (NL. fem. n. *inoffilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Salinivenus sp003023365*. The type genome for the species is the GenBank assembly GCA_003023365.1. The GC content of the type genome is 61.77 % and the genome length is 2.07 Mbp.

Description of *Candidatus* Salinivibrio accomitica sp. nov.

Candidatus Salinivibrio accomitica (NL. fem. n. *accomitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Salinivibrio sp900141775*. The type genome for the species is the GenBank assembly RS_GCF_900141775.1. The GC content of the type genome is 49.26 % and the genome length is 3.57 Mbp.

Description of *Candidatus* Salinivirga inlacax sp. nov.

Candidatus Salinivirga inlacax (NL. fem. n. *inlacax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Salinivirga sp002869335*. The type genome for the species is the GenBank assembly GCA_002869335.1. The GC content of the type genome is 35.01 % and the genome length is 4.32 Mbp.

Description of *Candidatus* Salipiger pinacatica sp. nov.

Candidatus Salipiger pinacatica (NL. fem. n. *pinacatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Salipiger sp002300555*. The type genome for the species is the GenBank assembly RS_GCF_002300555.1. The GC content of the type genome is 66.39 % and the genome length is 4.9 Mbp.

Description of *Candidatus* Salipiger tumefibula sp. nov.

Candidatus Salipiger tumefibula (NL. fem. n. *tumefibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Salipiger sp001687105*. The type genome for the species is the GenBank assembly RS_GCF_010500775.1. The GC content of the type genome is 65.32 % and the genome length is 5.58 Mbp.

Description of *Candidatus* Salubana cadurimonia sp. nov.

Candidatus Salubana cadurimonia (NL. fem. n. *cadurimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *2-02-FULL-50-16 sp001798715*. The type genome for the species is the GenBank assembly GCA_001798535.1. The GC content of the type genome is 49.1 % and the genome length is 1.76 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under low O2 conditions; 1.2 micron filter; full assembly".

Description of *Candidatus* Salubana gen. nov.

Candidatus Salubana (NL. fem. n. *Salubana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *2-02-FULL-50-16*. The type species for the genus is *Candidatus* Salubana cadurimonia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *2-02-FULL-50-16*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Salubanaceae.

Description of *Candidatus* Salubanaceae fam. nov.

Candidatus Salubanaceae (NL. fem. n. *Salubanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *2-02-FULL-50-16.* The type genus for the taxon is *Candidatus* Salubana .

According to the original version of GTDB R06-RS202, this family belongs to the order *2-02-FULL-50-16*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Salubanales.

Description of *Candidatus* Salubanales ord. nov.

Candidatus Salubanales (NL. fem. n. *Salubanales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *2-02-FULL-50-16.* The type genus for the taxon is *Candidatus* Salubana .

According to the original version of GTDB R06-RS202, this family belongs to the class *UBA10199*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Domigosae.

Description of *Candidatus* Salubaria relapitura sp. nov.

Candidatus Salubaria relapitura (NL. fem. n. *relapitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Bog-1181 sp003159495*. The type genome for the species is the GenBank assembly GCA_003142155.1. The GC content of the type genome is 46.26 % and the genome length is 2.95 Mbp.

Description of *Candidatus* Salubaria gen. nov.

Candidatus Salubaria (NL. fem. n. *Salubaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Bog-1181*. The type species for the genus is *Candidatus* Salubaria relapitura .

According to the original version of GTDB R06-RS202, this genus belongs to the family *Palsa-1178*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Obrigosaceae.

Description of *Candidatus* Salubella culibitio sp. nov.

Candidatus Salubella culibitio (NL. fem. n. *culibitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2796 sp002352035*. The type genome for the species is the GenBank assembly GCA_002352035.1. The GC content of the type genome is 56.95 % and the genome length is 4.18 Mbp.

Description of *Candidatus* Salubella gen. nov.

Candidatus Salubella (NL. fem. n. *Salubella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA2796*. The type species for the genus is *Candidatus* Salubella culibitio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2796*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Salubellaceae.

Description of *Candidatus* Salubellaceae fam. nov.

Candidatus Salubellaceae (NL. fem. n. *Salubellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA2796.* The type genus for the taxon is *Candidatus* Salubella .

According to the original version of GTDB R06-RS202, this family belongs to the order *SBR1031*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Nocumellales.

Description of *Candidatus* Salubia satacisca sp. nov.

Candidatus Salubia satacisca (NL. fem. n. *satacisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RBG-13-55-18 sp001768645*. The type genome for the species is the GenBank assembly GCA_001768645.1. The GC content of the type genome is 54.62 % and the genome length is 2.6 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle background sediment; well D04 at 13ft depth".

Description of *Candidatus* Salubia gen. nov.

Candidatus Salubia (NL. fem. n. *Salubia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RBG-13-55-18*. The type species for the genus is *Candidatus* Salubia satacisca .

According to the original version of GTDB R06-RS202, this genus belongs to the family *RBG-13-55-18*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Salubiaceae.

Description of *Candidatus* Salubiaceae fam. nov.

Candidatus Salubiaceae (NL. fem. n. *Salubiaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *RBG-13-55-18.* The type genus for the taxon is *Candidatus* Salubia .

According to the original version of GTDB R06-RS202, this family belongs to the order

RBG-13-55-18. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Salubiales.

Description of *Candidatus* Salubiales ord. nov.

Candidatus Salubiales (NL. fem. n. *Salubiales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *RBG-13-55-18.* The type genus for the taxon is *Candidatus* Salubia .

According to the original version of GTDB R06-RS202, this family belongs to the class *RBG-13-55-18*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Salubiae.

Description of *Candidatus* Salubiae class. nov.

Candidatus Salubiae (NL. fem. n. *c__Salubiae* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *RBG-13-55-18.* The type genus for the taxon is *Candidatus* Salubia .

According to GTDB R06-RS202, this class belongs to the phylum *Actinobacteriota*.

Description of *Candidatus* Salubida adsesigena sp. nov.

Candidatus Salubida adsesigena (NL. fem. n. *adsesigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1066 sp902766955*. The type genome for the species is the GenBank assembly GCA_902766955.1. The GC content of the type genome is 54.34 % and the genome length is 2.97 Mbp.

Description of *Candidatus* Salubida gen. nov.

Candidatus Salubida (NL. fem. n. *Salubida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1066*. The type species for the genus is *Candidatus* Salubida adsesigena .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Salubida almitisca sp. nov.

Candidatus Salubida almitisca (NL. fem. n. *almitisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1066 sp002316215*. The type genome for the species is the GenBank assembly GCA_002316215.1. The GC content of the type genome is 47.62 % and the genome length is 3.31 Mbp.

Description of *Candidatus* Salubida annicicula sp. nov.

Candidatus Salubida annicicula (NL. fem. n. *annicicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1066 sp902783325*. The type genome for the species is the GenBank assembly GCA_902783325.1. The GC content of the type genome is 54.55 % and the genome length is 2.0 Mbp.

Description of *Candidatus* Salubida bicubastra sp. nov.

Candidatus Salubida bicubastra (NL. fem. n. *bicubastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1066 sp900313955*. The type genome for the species is the GenBank assembly GCA_902803935.1. The GC content of the type genome is 52.06 % and the genome length is 2.68 Mbp.

Description of *Candidatus* Salubida conibentia sp. nov.

Candidatus Salubida conibentia (NL. fem. n. *conibentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1066 sp900315305*. The type genome for the species is the GenBank assembly GCA_900314055.1. The GC content of the type genome is 54.64 % and the genome length is 2.36 Mbp.

Description of *Candidatus* Salubida conibousia sp. nov.

Candidatus Salubida conibousia (NL. fem. n. *conibousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1066 sp902779245*. The type genome for the species is the GenBank assembly GCA_902779245.1. The GC content of the type genome is 56.9 % and the genome length is 2.57 Mbp.

Description of *Candidatus* Salubida crastitura sp. nov.

Candidatus Salubida crastitura (NL. fem. n. *crastitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1066 sp902785985*. The type genome for the species is the GenBank assembly GCA_902785985.1. The GC content of the type genome is 50.41 % and the genome length is 3.88 Mbp.

Description of *Candidatus* Salubida culibugo sp. nov.

Candidatus Salubida culibugo (NL. fem. n. *culibugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1066 sp900319795*. The type genome for the species is the GenBank assembly GCA_902790145.1. The GC content of the type genome is 52.23 % and the genome length is 2.17 Mbp.

Description of *Candidatus* Salubida cuticigena sp. nov.

Candidatus Salubida cuticigena (NL. fem. n. *cuticigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1066 sp902773195*. The type genome for the species is the GenBank assembly GCA_902773195.1. The GC content of the type genome is 60.95 % and the genome length is 2.6 Mbp.

Description of *Candidatus* Salubida daducousia sp. nov.

Candidatus Salubida daducousia (NL. fem. n. *daducousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *UBA1066 sp902776305*. The type genome for the species is the GenBank assembly GCA_902779725.1. The GC content of the type genome is 47.46 % and the genome length is 4.65 Mbp.

Description of *Candidatus* Salubida decomivita sp. nov.

Candidatus Salubida decomivita (NL. fem. n. *decomivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1066 sp902803245*. The type genome for the species is the GenBank assembly GCA_902766275.1. The GC content of the type genome is 56.52 % and the genome length is 2.11 Mbp.

Description of *Candidatus* Salubida expisilenta sp. nov.

Candidatus Salubida expisilenta (NL. fem. n. *expisilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1066 sp902773435*. The type genome for the species is the GenBank assembly GCA_902773435.1. The GC content of the type genome is 59.63 % and the genome length is 2.74 Mbp.

Description of *Candidatus* Salubida frigdilenta sp. nov.

Candidatus Salubida frigdilenta (NL. fem. n. *frigdilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1066 sp902766655*. The type genome for the species is the GenBank assembly GCA_902766655.1. The GC content of the type genome is 58.68 % and the genome length is 2.86 Mbp.

Description of *Candidatus* Salubida funivitas sp. nov.

Candidatus Salubida funivitas (NL. fem. n. *funivitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1066 sp902803505*. The type genome for the species is the GenBank assembly GCA_902803505.1. The GC content of the type genome is 54.32 % and the genome length is 2.5 Mbp.

Description of *Candidatus* Salubida halucitrix sp. nov.

Candidatus Salubida halucitrix (NL. fem. n. *halucitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1066 sp900320575*. The type genome for the species is the GenBank assembly GCA_902795305.1. The GC content of the type genome is 58.77 % and the genome length is 2.29 Mbp.

Description of *Candidatus* Salubida infuciforma sp. nov.

Candidatus Salubida infuciforma (NL. fem. n. *infuciforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1066 sp002371465*. The type genome for the species is the GenBank assembly GCA_002371465.1. The GC content of the type genome is 52.17 % and the genome length is 2.19 Mbp.

Description of *Candidatus* Salubida inherimonia sp. nov.

Candidatus Salubida inherimonia (NL. fem. n. *inherimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1066 sp902783935*. The type genome for the species is the GenBank assembly GCA_902783935.1. The GC content of the type genome is 53.81 % and the genome length is 1.82 Mbp.

Description of *Candidatus* Salubida inlumago sp. nov.

Candidatus Salubida inlumago (NL. fem. n. *inlumago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1066 sp902803635*. The type genome for the species is the GenBank assembly GCA_902803635.1. The GC content of the type genome is 56.27 % and the genome length is 2.42 Mbp.

Description of *Candidatus* Salubida inmutisca sp. nov.

Candidatus Salubida inmutisca (NL. fem. n. *inmutisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1066 sp003446335*. The type genome for the species is the GenBank assembly GCA_003446335.1. The GC content of the type genome is 48.48 % and the genome length is 1.98 Mbp.

Description of *Candidatus* Salubida lacinitrix sp. nov.

Candidatus Salubida lacinitrix (NL. fem. n. *lacinitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1066 sp002350625*. The type genome for the species is the GenBank assembly GCA_902765775.1. The GC content of the type genome is 57.71 % and the genome length is 2.35 Mbp.

Description of *Candidatus* Salubida locelivita sp. nov.

Candidatus Salubida locelivita (NL. fem. n. *locelivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1066 sp902788035*. The type genome for the species is the GenBank assembly GCA_902775165.1. The GC content of the type genome is 49.79 % and the genome length is 3.58 Mbp.

Description of *Candidatus* Salubida munimigena sp. nov.

Candidatus Salubida munimigena (NL. fem. n. *munimigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1066 sp900317045*. The type genome for the species is the GenBank assembly GCA_900313965.1. The GC content of the type genome is 57.09 % and the genome length is 2.07 Mbp.

Description of *Candidatus* Salubida nicomilenta sp. nov.

Candidatus Salubida nicomilenta (NL. fem. n. *nicomilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *UBA1066 sp900320615*. The type genome for the species is the GenBank assembly GCA_902792315.1. The GC content of the type genome is 54.59 % and the genome length is 1.94 Mbp.

Description of *Candidatus* Salubida notabimonia sp. nov.

Candidatus Salubida notabimonia (NL. fem. n. *notabimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1066 sp902766945*. The type genome for the species is the GenBank assembly GCA_902766945.1. The GC content of the type genome is 56.05 % and the genome length is 2.24 Mbp.

Description of *Candidatus* Salubida paralicula sp. nov.

Candidatus Salubida paralicula (NL. fem. n. *paralicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1066 sp900317515*. The type genome for the species is the GenBank assembly GCA_900317515.1. The GC content of the type genome is 56.13 % and the genome length is 2.72 Mbp.

Description of *Candidatus* Salubida recomigena sp. nov.

Candidatus Salubida recomigena (NL. fem. n. *recomigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1066 sp002369495*. The type genome for the species is the GenBank assembly GCA_002369495.1. The GC content of the type genome is 58.3 % and the genome length is 2.43 Mbp.

Description of *Candidatus* Salubida resalimonas sp. nov.

Candidatus Salubida resalimonas (NL. fem. n. *resalimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1066 sp900314565*. The type genome for the species is the GenBank assembly GCA_902781085.1. The GC content of the type genome is 52.93 % and the genome length is 1.75 Mbp.

Description of *Candidatus* Salubida turibivita sp. nov.

Candidatus Salubida turibivita (NL. fem. n. *turibivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1066 sp902797075*. The type genome for the species is the GenBank assembly GCA_902797075.1. The GC content of the type genome is 52.18 % and the genome length is 2.54 Mbp.

Description of *Candidatus* Salubosa adsecitia sp. nov.

Candidatus Salubosa adsecitia (NL. fem. n. *adsecitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2450 sp902802905*. The type genome for the species is the GenBank assembly GCA_902802905.1. The GC content of the type genome is 34.97 % and the genome length is 1.54 Mbp.

Description of *Candidatus* Salubosa gen. nov.

Candidatus Salubosa (NL. fem. n. *Salubosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA2450*. The type species for the genus is *Candidatus* Salubosa adsecitia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-826*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Pudibellaceae.

Description of *Candidatus* Salubosa anarrastra sp. nov.

Candidatus Salubosa anarrastra (NL. fem. n. *anarrastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2450 sp902800905*. The type genome for the species is the GenBank assembly GCA_902800905.1. The GC content of the type genome is 34.39 % and the genome length is 1.85 Mbp.

Description of *Candidatus* Salubosa antecilega sp. nov.

Candidatus Salubosa antecilega (NL. fem. n. *antecilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2450 sp902800355*. The type genome for the species is the GenBank assembly GCA_902800355.1. The GC content of the type genome is 33.86 % and the genome length is 1.14 Mbp.

Description of *Candidatus* Salubosa catalastra sp. nov.

Candidatus Salubosa catalastra (NL. fem. n. *catalastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2450 sp902800025*. The type genome for the species is the GenBank assembly GCA_902772155.1. The GC content of the type genome is 34.85 % and the genome length is 1.4 Mbp.

Description of *Candidatus* Salubosa catalicella sp. nov.

Candidatus Salubosa catalicella (NL. fem. n. *catalicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2450 sp002392945*. The type genome for the species is the GenBank assembly GCA_002392945.1. The GC content of the type genome is 33.29 % and the genome length is 0.99 Mbp.

Description of *Candidatus* Salubosa cepulago sp. nov.

Candidatus Salubosa cepulago (NL. fem. n. *cepulago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2450 sp900314865*. The type genome for the species is the GenBank assembly GCA_902757615.1. The GC content of the type genome is 34.82 % and the genome length is 1.37 Mbp.

Description of *Candidatus* Salubosa desomitoga sp. nov.

Candidatus Salubosa desomitoga (NL. fem. n. *desomitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2450 sp002353275*. The type genome for the species is the GenBank assembly GCA_002353275.1. The GC content of the type genome is 33.52 % and the genome length is 1.26 Mbp.

Description of *Candidatus* Salubosa maligax sp. nov.

Candidatus Salubosa maligax (NL. fem. n. *maligax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2450 sp002373085*. The type genome for the species is the GenBank assembly GCA_002373085.1. The GC content of the type genome is 34.56 % and the genome length is 1.28 Mbp.

Description of *Candidatus* Salubosa meridiforma sp. nov.

Candidatus Salubosa meridiforma (NL. fem. n. *meridiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2450 sp902797795*. The type genome for the species is the GenBank assembly GCA_902797795.1. The GC content of the type genome is 33.72 % and the genome length is 1.17 Mbp.

Description of *Candidatus* Salubosa nefarugo sp. nov.

Candidatus Salubosa nefarugo (NL. fem. n. *nefarugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2450 sp002342545*. The type genome for the species is the GenBank assembly GCA_002342545.1. The GC content of the type genome is 32.81 % and the genome length is 1.34 Mbp.

Description of *Candidatus* Salubosa risibetta sp. nov.

Candidatus Salubosa risibetta (NL. fem. n. *risibetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2450 sp902803285*. The type genome for the species is the GenBank assembly GCA_902803285.1. The GC content of the type genome is 34.65 %

and the genome length is 1.04 Mbp.

Description of *Candidatus* Salubosa semipessa sp. nov.

Candidatus Salubosa semipessa (NL. fem. n. *semipessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2450 sp902769185*. The type genome for the species is the GenBank assembly GCA_902769185.1. The GC content of the type genome is 33.26 % and the genome length is 1.34 Mbp.

Description of *Candidatus* Salubosa visocimonia sp. nov.

Candidatus Salubosa visocimonia (NL. fem. n. *visocimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2450 sp902800645*. The type genome for the species is the GenBank assembly GCA_902800645.1. The GC content of the type genome is 33.79 % and the genome length is 1.31 Mbp.

Description of *Candidatus* Salubula exsanentia sp. nov.

Candidatus Salubula exsanentia (NL. fem. n. *exsanentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HRBIN15 sp002898555*. The type genome for the species is the GenBank assembly GCA_002898555.1. The GC content of the type genome is 58.15 % and the genome length is 3.04 Mbp.

Description of *Candidatus* Salubula gen. nov.

Candidatus Salubula (NL. fem. n. *Salubula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *HRBIN15*. The type species for the genus is *Candidatus* Salubula exsanentia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GBS-DC*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Tenebiaceae.

Description of *Candidatus* Salubula pedifitoga sp. nov.

Candidatus Salubula pedifitoga (NL. fem. n. *pedifitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HRBIN15 sp011055025*. The type genome for the species is the GenBank assembly GCA_011055025.1. The GC content of the type genome is 58.73 % and the genome length is 2.94 Mbp.

Description of *Candidatus* Sanabana cilotugo sp. nov.

Candidatus Sanabana cilotugo (NL. fem. n. *cilotugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-02-FULL-42-43 sp013287505*. The type genome for the species is the GenBank assembly GCA_013287505.1. The GC content of the type genome is 39.25 % and the genome length is 1.37 Mbp.

Description of *Candidatus* Sanabana gen. nov.

Candidatus Sanabana (NL. fem. n. *Sanabana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *2-02-FULL-42-43*. The type species for the genus is *Candidatus* Sanabana cilotugo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Sanabana coticago sp. nov.

Candidatus Sanabana coticago (NL. fem. n. *coticago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-02-FULL-42-43 sp001802455*. The type genome for the species is the GenBank assembly GCA_001802455.1. The GC content of the type genome is 39.15 % and the genome length is 1.59 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 1.2 micron filter; full assembly".

Description of *Candidatus* Sanabana derecitica sp. nov.

Candidatus Sanabana derecitica (NL. fem. n. *derecitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-02-FULL-42-43 sp002793195*. The type genome for the species is the GenBank assembly GCA_002793195.1. The GC content of the type genome is 38.31 % and the genome length is 1.93 Mbp.

Description of *Candidatus* Sanabana exsufibra sp. nov.

Candidatus Sanabana exsufibra (NL. fem. n. *exsufibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-02-FULL-42-43 sp001801815*. The type genome for the species is the GenBank assembly GCA_001801815.1. The GC content of the type genome is 35.59 % and the genome length is 1.74 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 1.2 micron filter; full assembly".

Description of *Candidatus* Sanabana inculisca sp. nov.

Candidatus Sanabana inculisca (NL. fem. n. *inculisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-02-FULL-42-43 sp001801515*. The type genome for the species is the GenBank assembly GCA_001801515.1. The GC content of the type genome is 37.87 % and the genome length is 2.08 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 1.2 micron filter; full assembly".

Description of *Candidatus* Sanabana visocedo sp. nov.

Candidatus Sanabana visocedo (NL. fem. n. *visocedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-02-FULL-42-43 sp013287435*. The type genome for the species is the GenBank assembly GCA_013287435.1. The GC content of the type genome is 38.4 % and the genome length is 1.38 Mbp.

Description of *Candidatus* Sanabana volubicula sp. nov.

Candidatus Sanabana volubicula (NL. fem. n. *volubicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-02-FULL-42-43 sp001801425*. The type genome for the species is the GenBank assembly GCA_001801375.1. The GC content of the type genome is 41.23 % and the genome length is 1.48 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 0.1 micron filter; full assembly".

Description of *Candidatus* Sanabaria abmativita sp. nov.

Candidatus Sanabaria abmativita (NL. fem. n. *abmativita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SMWH01 sp004357005*. The type genome for the species is the GenBank assembly GCA_004357005.1. The GC content of the type genome is 60.48 % and the genome length is 1.52 Mbp.

Description of *Candidatus* Sanabaria gen. nov.

Candidatus Sanabaria (NL. fem. n. *Sanabaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SMWH01*. The type species for the genus is *Candidatus* Sanabaria abmativita .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SMWH01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Sanabariaceae.

Description of *Candidatus* Sanabariaceae fam. nov.

Candidatus Sanabariaceae (NL. fem. n. *Sanabariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SMWH01*. The type genus for the taxon is *Candidatus* Sanabaria .

According to GTDB R06-RS202, this family belongs to the order *Xanthomonadales*.

Description of *Candidatus* Sanabella adsocatica sp. nov.

Candidatus Sanabella adsocatica (NL. fem. n. *adsocatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA10085 sp012842765*. The type genome for the species is the GenBank assembly GCA_012842765.1. The GC content of the type genome is 54.18 % and the genome length is 2.19 Mbp.

Description of *Candidatus* Sanabella gen. nov.

Candidatus Sanabella (NL. fem. n. *Sanabella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA10085*. The type species for the genus is *Candidatus* Sanabella adsocatica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DTU025*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Benemanaceae.

Description of *Candidatus* Sanabella caseletta sp. nov.

Candidatus Sanabella caseletta (NL. fem. n. *caseletta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA10085 sp003456765*. The type genome for the species is the GenBank assembly GCA_003456765.1. The GC content of the type genome is 55.4 % and the genome length is 1.71 Mbp.

Description of *Candidatus* Sanabia noceniforma sp. nov.

Candidatus Sanabia noceniforma (NL. fem. n. *noceniforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-552 sp000435495*. The type genome for the species is the GenBank assembly GCA_900544785.1. The GC content of the type genome is 42.85 % and the genome length is 1.39 Mbp.

Description of *Candidatus* Sanabia gen. nov.

Candidatus Sanabia (NL. fem. n. *Sanabia* a name created arbitrarily, while preserving the

phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAG-552*. The type species for the genus is *Candidatus* Sanabia noceniforma .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-552*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Sanabiaceae.

Description of *Candidatus* Sanabiaceae fam. nov.

Candidatus Sanabiaceae (NL. fem. n. *Sanabiaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CAG-552.* The type genus for the taxon is *Candidatus* Sanabia .

According to GTDB R06-RS202, this family belongs to the order *Christensenellales*.

Description of *Candidatus* Sanabida bonifastra sp. nov.

Candidatus Sanabida bonifastra (NL. fem. n. *bonifastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PUNC01 sp003551625*. The type genome for the species is the GenBank assembly GCA_003551625.1. The GC content of the type genome is 60.11 % and the genome length is 2.8 Mbp.

Description of *Candidatus* Sanabida gen. nov.

Candidatus Sanabida (NL. fem. n. *Sanabida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PUNC01*. The type species for the genus is *Candidatus* Sanabida bonifastra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *PUNC01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Sanabidaceae.

Description of *Candidatus* Sanabidaceae fam. nov.

Candidatus Sanabidaceae (NL. fem. n. *Sanabidaceae* a name created from the name of

the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *PUNC01.* The type genus for the taxon is *Candidatus* Sanabida .

According to the original version of GTDB R06-RS202, this family belongs to the order *PUNC01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Sanabidales.

Description of *Candidatus* Sanabidales ord. nov.

Candidatus Sanabidales (NL. fem. n. *Sanabidales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *PUNC01.* The type genus for the taxon is *Candidatus* Sanabida .

According to the original version of GTDB R06-RS202, this family belongs to the class *PUNC01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Sanabidae.

Description of *Candidatus* Sanabidae class. nov.

Candidatus Sanabidae (NL. fem. n. *c__Sanabidae* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *PUNC01.* The type genus for the taxon is *Candidatus* Sanabida .

According to GTDB R06-RS202, this class belongs to the phylum *Aureabacteria_A*.

Description of *Candidatus* Sanabosa selecimonas sp. nov.

Candidatus Sanabosa selecimonas (NL. fem. n. *selecimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DSFT01 sp011057045*. The type genome for the species is the GenBank assembly GCA_011053525.1. The GC content of the type genome is 27.26 % and the genome length is 1.21 Mbp.

Description of *Candidatus* Sanabosa gen. nov.

Candidatus Sanabosa (NL. fem. n. *Sanabosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DSFT01*. The type species for the genus is *Candidatus* Sanabosa selecimonas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DSFT01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Sanabosaceae.

Description of *Candidatus* Sanabosaceae fam. nov.

Candidatus Sanabosaceae (NL. fem. n. *Sanabosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *DSFT01.* The type genus for the taxon is *Candidatus* Sanabosa .

According to the original version of GTDB R06-RS202, this family belongs to the order *LBFQ01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Bigemellales.

Description of *Candidatus* Sandaracinobacter femeligena sp. nov.

Candidatus Sandaracinobacter femeligena (NL. fem. n. *femeligena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sandaracinobacter sp003248865*. The type genome for the species is the GenBank assembly GCA_003248865.1. The GC content of the type genome is 65.24 % and the genome length is 3.84 Mbp.

Description of *Candidatus* Sandaracinobacter scaccousia sp. nov.

Candidatus Sandaracinobacter scaccousia (NL. fem. n. *scaccousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sandaracinobacter sp002422985*. The type genome for the species is the GenBank assembly GCA_002422985.1. The GC content of the type genome is 65.74 % and the genome length is 1.96 Mbp.

Description of *Candidatus* Sandaracinus invecastra sp. nov.

Candidatus Sandaracinus invecastra (NL. fem. n. *invecastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sandaracinus sp903828805*. The type genome for the species is the GenBank assembly GCA_903828805.1. The GC content of the type genome is 71.99 % and the genome length is 6.03 Mbp.

Description of *Candidatus* Sandarakinorhabdus desulitia sp. nov.

Candidatus Sandarakinorhabdus desulitia (NL. fem. n. *desulitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sandarakinorhabdus sp009733735*. The type genome for the species is the GenBank assembly RS_GCF_009733735.1. The GC content of the type genome is 66.56 % and the genome length is 3.27 Mbp.

Description of *Candidatus* Sandarakinorhabdus immoditrix sp. nov.

Candidatus Sandarakinorhabdus immoditrix (NL. fem. n. *immoditrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sandarakinorhabdus sp000331225*. The type genome for the species is the GenBank assembly RS_GCF_000331225.1. The GC content of the type genome is 65.48 % and the genome length is 3.13 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "surface water of the Shahu Lake".

Description of *Candidatus* Sandarakinorhabdus legifilega sp. nov.

Candidatus Sandarakinorhabdus legifilega (NL. fem. n. *legifilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sandarakinorhabdus sp002280855*. The type genome for the species is the GenBank assembly GCA_002281615.1. The GC content of the type genome is 64.58 % and the genome length is 3.37 Mbp.

Description of *Candidatus* Sandarakinorhabdus vanitedo sp. nov.

Candidatus Sandarakinorhabdus vanitedo (NL. fem. n. *vanitedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sandarakinorhabdus sp010994245*. The type genome for the species is the GenBank assembly RS_GCF_010994245.1. The GC content of the type genome is 67.65 % and the genome length is 2.82 Mbp.

Description of *Candidatus* Saonia viburicula sp. nov.

Candidatus Saonia viburicula (NL. fem. n. *viburicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Saonia sp002746415*. The type genome for the species is the GenBank assembly GCA_002746415.1. The GC content of the type genome is 35.5 % and the genome length is 3.82 Mbp.

Description of *Candidatus* Saprospira tametilega sp. nov.

Candidatus Saprospira tametilega (NL. fem. n. *tametilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Saprospira sp903854205*. The type genome for the species is the GenBank assembly GCA_903930595.1. The GC content of the type genome is 38.45 % and the genome length is 5.3 Mbp.

Description of *Candidatus* Sarabana holovitoga sp. nov.

Candidatus Sarabana holovitoga (NL. fem. n. *holovitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA12473 sp000993615*. The type genome for the species is the GenBank assembly GCA_000993615.1. The GC content of the type genome is 38.8 % and the genome length is 1.31 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "aquifer sediment".

Description of *Candidatus* Sarabana gen. nov.

Candidatus Sarabana (NL. fem. n. *Sarabana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA12473*. The type species for the genus is *Candidatus* Sarabana holovitoga .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA12473*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Sarabanaceae.

Description of *Candidatus* Sarabanaceae fam. nov.

Candidatus Sarabanaceae (NL. fem. n. *Sarabanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA12473.* The type genus for the taxon is *Candidatus* Sarabana .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA1369*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Malogiales.

Description of *Candidatus* Sarabaria biparifica sp. nov.

Candidatus Sarabaria biparifica (NL. fem. n. *biparifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4417 sp903879715*. The type genome for the species is the GenBank assembly GCA_903879715.1. The GC content of the type genome is 39.99 % and the genome length is 6.07 Mbp.

Description of *Candidatus* Sarabaria gen. nov.

Candidatus Sarabaria (NL. fem. n. *Sarabaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA4417*. The type species for the genus is *Candidatus* Sarabaria biparifica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Sarabaria butubilega sp. nov.

Candidatus Sarabaria butubilega (NL. fem. n. *butubilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4417 sp903913645*. The type genome for the species is the

GenBank assembly GCA_903913645.1. The GC content of the type genome is 40.09 % and the genome length is 5.71 Mbp.

Description of *Candidatus* Sarabaria cerucedo sp. nov.

Candidatus Sarabaria cerucedo (NL. fem. n. *cerucedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4417 sp903887815*. The type genome for the species is the GenBank assembly GCA_903887815.1. The GC content of the type genome is 43.38 % and the genome length is 4.26 Mbp.

Description of *Candidatus* Sarabaria denecicella sp. nov.

Candidatus Sarabaria denecicella (NL. fem. n. *denecicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4417 sp903917425*. The type genome for the species is the GenBank assembly GCA_903917425.1. The GC content of the type genome is 41.48 % and the genome length is 4.64 Mbp.

Description of *Candidatus* Sarabaria denomibra sp. nov.

Candidatus Sarabaria denomibra (NL. fem. n. *denomibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4417 sp903822525*. The type genome for the species is the GenBank assembly GCA_903831445.1. The GC content of the type genome is 42.08 % and the genome length is 4.07 Mbp.

Description of *Candidatus* Sarabaria epogdatio sp. nov.

Candidatus Sarabaria epogdatio (NL. fem. n. *epogdatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4417 sp903864265*. The type genome for the species is the GenBank assembly GCA_903864265.1. The GC content of the type genome is 45.68 % and the genome length is 3.6 Mbp.

Description of *Candidatus* Sarabaria exhedigena sp. nov.

Candidatus Sarabaria exhedigena (NL. fem. n. *exhedigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4417 sp002389705*. The type genome for the species is the GenBank assembly GCA_002389705.1. The GC content of the type genome is 43.84 % and the genome length is 3.74 Mbp.

Description of *Candidatus* Sarabaria secunatica sp. nov.

Candidatus Sarabaria secunatica (NL. fem. n. *secunatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4417 sp903946925*. The type genome for the species is the GenBank assembly GCA_903946925.1. The GC content of the type genome is 40.35 % and the genome length is 6.17 Mbp.

Description of *Candidatus* Sarabaria televentia sp. nov.

Candidatus Sarabaria televentia (NL. fem. n. *televentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4417 sp903878265*. The type genome for the species is the GenBank assembly GCA_903919875.1. The GC content of the type genome is 41.23 % and the genome length is 4.77 Mbp.

Description of *Candidatus* Sarabella sicunitudo sp. nov.

Candidatus Sarabella sicunitudo (NL. fem. n. *sicunitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *VXYK01 sp009845995*. The type genome for the species is the GenBank assembly GCA_009836285.1. The GC content of the type genome is 61.09 % and the genome length is 3.28 Mbp.

Description of *Candidatus* Sarabella gen. nov.

Candidatus Sarabella (NL. fem. n. *Sarabella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *VXYK01*. The type species for the genus is *Candidatus* Sarabella sicunitudo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA11606*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Munifanaceae.

Description of *Candidatus* Sarabida decenitio sp. nov.

Candidatus Sarabida decenitio (NL. fem. n. *decenitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6187 sp002422795*. The type genome for the species is the GenBank assembly GCA_002422795.1. The GC content of the type genome is 40.31 % and the genome length is 2.37 Mbp.

Description of *Candidatus* Sarabida gen. nov.

Candidatus Sarabida (NL. fem. n. *Sarabida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA6187*. The type species for the genus is *Candidatus* Sarabida decenitio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA6187*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Sarabidaceae.

Description of *Candidatus* Sarabidaceae fam. nov.

Candidatus Sarabidaceae (NL. fem. n. *Sarabidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA6187*. The type genus for the taxon is *Candidatus* Sarabida .

According to GTDB R06-RS202, this family belongs to the order *Rickettsiales*.

Description of *Candidatus* Sarabosa assefibra sp. nov.

Candidatus Sarabosa assefibra (NL. fem. n. *assefibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SRT547 sp009002475*. The type genome for the species is the GenBank assembly RS_GCF_009002475.1. The GC content of the type genome is 39.38 % and the genome length is 9.5 Mbp.

Description of *Candidatus* Sarabosa gen. nov.

Candidatus Sarabosa (NL. fem. n. *Sarabosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SRT547*. The type species for the genus is *Candidatus* Sarabosa assefibra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SRT547*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Sarabosaceae.

Description of *Candidatus* Sarabosaceae fam. nov.

Candidatus Sarabosaceae (NL. fem. n. *Sarabosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SRT547.* The type genus for the taxon is *Candidatus* Sarabosa .

According to the original version of GTDB R06-RS202, this family belongs to the order *SRT547*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Sarabosales.

Description of *Candidatus* Sarabosales ord. nov.

Candidatus Sarabosales (NL. fem. n. *Sarabosales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SRT547.* The type genus for the taxon is *Candidatus* Sarabosa .

According to the original version of GTDB R06-RS202, this family belongs to the class *J132*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Purulanae.

Description of *Candidatus* Sarabula citocitas sp. nov.

Candidatus Sarabula citocitas (NL. fem. n. *citocitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Palsa-1233 sp013694695*. The type genome for the species is the GenBank assembly GCA_013694695.1. The GC content of the type genome is 66.51 % and the genome length is 2.8 Mbp.

Description of *Candidatus* Sarabula gen. nov.

Candidatus Sarabula (NL. fem. n. *Sarabula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Palsa-1233*. The type species for the genus is *Candidatus* Sarabula citocitas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GWC2-71-9*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Relenulaceae.

Description of *Candidatus* Sarabula ephemax sp. nov.

Candidatus Sarabula ephemax (NL. fem. n. *ephemax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Palsa-1233 sp011390645*. The type genome for the species is the GenBank assembly GCA_011390645.1. The GC content of the type genome is 67.13 % and the genome length is 2.93 Mbp.

Description of *Candidatus* Sarabula nubecetta sp. nov.

Candidatus Sarabula nubecetta (NL. fem. n. *nubecetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Palsa-1233 sp003169895*. The type genome for the species is the GenBank assembly GCA_003131805.1. The GC content of the type genome is 65.87 % and the genome length is 3.32 Mbp.

Description of *Candidatus* Satacana desonivita sp. nov.

Candidatus Satacana desonivita (NL. fem. n. *desonivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAITLX01 sp903893335*. The type genome for the species is the GenBank assembly GCA_903893335.1. The GC content of the type genome is 73.55 % and the genome length is 5.4 Mbp.

Description of *Candidatus* Satacana gen. nov.

Candidatus Satacana (NL. fem. n. *Satacana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAITLX01*. The type species for the genus is *Candidatus* Satacana desonivita .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Satacaria holovousia sp. nov.

Candidatus Satacaria holovousia (NL. fem. n. *holovousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CG2-30-40-12 sp002770755*. The type genome for the species is the GenBank assembly GCA_002774005.1. The GC content of the type genome is 39.21 % and the genome length is 0.61 Mbp.

Description of *Candidatus* Satacaria gen. nov.

Candidatus Satacaria (NL. fem. n. *Satacaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CG2-30-40-12*. The type species for the genus is *Candidatus* Satacaria holovousia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CG2-30-40-12*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Satacariaceae.

Description of *Candidatus* Satacariaceae fam. nov.

Candidatus Satacariaceae (NL. fem. n. *Satacariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this taxon is *CG2-30-40-12.* The type genus for the taxon is *Candidatus* Satacaria .

According to the original version of GTDB R06-RS202, this family belongs to the order *CG2-30-40-12*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Satacariales.

Description of *Candidatus* Satacariales ord. nov.

Candidatus Satacariales (NL. fem. n. *Satacariales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CG2-30-40-12.* The type genus for the taxon is *Candidatus* Satacaria .

According to the original version of GTDB R06-RS202, this family belongs to the class *WWE3*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Veridulae.

Description of *Candidatus* Satacella troclisca sp. nov.

Candidatus Satacella troclisca (NL. fem. n. *troclisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DQWO01 sp011042595*. The type genome for the species is the GenBank assembly GCA_011042595.1. The GC content of the type genome is 48.15 % and the genome length is 1.85 Mbp.

Description of *Candidatus* Satacella gen. nov.

Candidatus Satacella (NL. fem. n. *Satacella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DQWO01*. The type species for the genus is *Candidatus* Satacella troclisca .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DQWO01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Satacellaceae.

Description of *Candidatus* Satacellaceae fam. nov.

Candidatus Satacellaceae (NL. fem. n. *Satacellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *DQWO01.* The type genus for the taxon is *Candidatus* Satacella .

According to the original version of GTDB R06-RS202, this family belongs to the order *DQWO01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Satacellales.

Description of *Candidatus* Satacellales ord. nov.

Candidatus Satacellales (NL. fem. n. *Satacellales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *DQWO01.* The type genus for the taxon is *Candidatus* Satacella .

According to the original version of GTDB R06-RS202, this family belongs to the class *DQWO01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Satacellae.

Description of *Candidatus* Satacellae class. nov.

Candidatus Satacellae (NL. fem. n. *c__Satacellae* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *DQWO01.* The type genus for the taxon is *Candidatus* Satacella .

According to the original version of GTDB R06-RS202, this family belongs to the phylum *DQWO01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the phylum *Candidatus* Satacellota.

Description of *Candidatus* Satacellota phyl. nov.

Candidatus Satacellota (NL. fem. n. *Satacellota* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *DQWO01.* The type genus for the taxon is *Candidatus* Satacella .

According to GTDB R06-RS202, this phylum belongs to the domain *Bacteria* .

Description of *Candidatus* Satacia insenilega sp. nov.

Candidatus Satacia insenilega (NL. fem. n. *insenilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-698 sp000431235*. The type genome for the species is the GenBank assembly GCA_000431235.1. The GC content of the type genome is 28.18 % and the genome length is 1.87 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "derived from human gut metagenome".

Description of *Candidatus* Satacia gen. nov.

Candidatus Satacia (NL. fem. n. *Satacia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAG-698*. The type species for the genus is *Candidatus* Satacia insenilega .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-698*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Sataciaceae.

Description of *Candidatus* Sataciaceae fam. nov.

Candidatus Sataciaceae (NL. fem. n. *Sataciaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CAG-698.* The type genus for the taxon is *Candidatus* Satacia .

According to the original version of GTDB R06-RS202, this family belongs to the order *ML615J-28*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Monopidales.

Description of *Candidatus* Satacida ludibisca sp. nov.

Candidatus Satacida ludibisca (NL. fem. n. *ludibisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABWCM01 sp013360285*. The type genome for the species is the GenBank assembly GCA_013360285.1. The GC content of the type genome is 53.47 % and the genome length is 7.15 Mbp.

Description of *Candidatus* Satacida gen. nov.

Candidatus Satacida (NL. fem. n. *Satacida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABWCM01*. The type species for the genus is *Candidatus* Satacida ludibisca .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JABWCM01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Satacidaceae.

Description of *Candidatus* Satacidaceae fam. nov.

Candidatus Satacidaceae (NL. fem. n. *Satacidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JABWCM01.* The type genus for the taxon is *Candidatus* Satacida .

According to the original version of GTDB R06-RS202, this family belongs to the order *JABWCM01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Satacidales.

Description of *Candidatus* Satacidales ord. nov.

Candidatus Satacidales (NL. fem. n. *Satacidales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JABWCM01.* The type genus for the taxon is *Candidatus* Satacida .

According to the original version of GTDB R06-RS202, this family belongs to the class *UBA9042*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Rubigariae.

Description of *Candidatus* Satacula denigibula sp. nov.

Candidatus Satacula denigibula (NL. fem. n. *denigibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG115 sp900315735*. The type genome for the species is the GenBank assembly GCA_902777075.1. The GC content of the type genome is 40.69 % and the genome length is 3.06 Mbp.

Description of *Candidatus* Satacula gen. nov.

Candidatus Satacula (NL. fem. n. *Satacula* a name created arbitrarily, while preserving

the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RUG115*. The type species for the genus is *Candidatus* Satacula denigibula .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Satacula detoritrix sp. nov.

Candidatus Satacula detoritrix (NL. fem. n. *detoritrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG115 sp900066395*. The type genome for the species is the GenBank assembly GCA_000432815.1. The GC content of the type genome is 41.08 % and the genome length is 2.54 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "derived from human gut metagenome".

Description of *Candidatus* Satacula sicaritoga sp. nov.

Candidatus Satacula sicaritoga (NL. fem. n. *sicaritoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG115 sp902782995*. The type genome for the species is the GenBank assembly GCA_902782995.1. The GC content of the type genome is 44.7 % and the genome length is 2.26 Mbp.

Description of *Candidatus* Saxifana lutulastra sp. nov.

Candidatus Saxifana lutulastra (NL. fem. n. *lutulastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1431 sp002329665*. The type genome for the species is the GenBank assembly GCA_012718835.1. The GC content of the type genome is 61.29 % and the genome length is 1.73 Mbp.

Description of *Candidatus* Saxifana gen. nov.

Candidatus Saxifana (NL. fem. n. *Saxifana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1431*. The type species for the genus is *Candidatus* Saxifana lutulastra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1431*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Saxifanaceae.

Description of *Candidatus* Saxifanaceae fam. nov.

Candidatus Saxifanaceae (NL. fem. n. *Saxifanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA1431.* The type genus for the taxon is *Candidatus* Saxifana .

According to GTDB R06-RS202, this family belongs to the order *Christensenellales*.

Description of *Candidatus* Saxifella cenodifica sp. nov.

Candidatus Saxifella cenodifica (NL. fem. n. *cenodifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *VBAS01 sp005882975*. The type genome for the species is the GenBank assembly GCA_005882975.1. The GC content of the type genome is 37.35 % and the genome length is 4.76 Mbp.

Description of *Candidatus* Saxifella gen. nov.

Candidatus Saxifella (NL. fem. n. *Saxifella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *VBAS01*. The type species for the genus is *Candidatus* Saxifella cenodifica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Saxifella lenocilenta sp. nov.

Candidatus Saxifella lenocilenta (NL. fem. n. *lenocilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *VBAS01 sp005798905*. The type genome for the species is the GenBank assembly GCA_005792345.1. The GC content of the type genome is 33.73 % and the genome length is 1.23 Mbp.

Description of *Candidatus* Saxifella luculousia sp. nov.

Candidatus Saxifella luculousia (NL. fem. n. *luculousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *VBAS01 sp004322425*. The type genome for the species is the GenBank assembly GCA_004322425.1. The GC content of the type genome is 40.86 % and the genome length is 2.24 Mbp.

Description of *Candidatus* Saxifella odontitudo sp. nov.

Candidatus Saxifella odontitudo (NL. fem. n. *odontitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *VBAS01 sp005882315*. The type genome for the species is the GenBank assembly GCA_005882315.1. The GC content of the type genome is 38.33 % and the genome length is 4.71 Mbp.

Description of *Candidatus* Saxifia sonipugo sp. nov.

Candidatus Saxifia sonipugo (NL. fem. n. *sonipugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIVDX01 sp903904805*. The type genome for the species is the GenBank assembly GCA_903904805.1. The GC content of the type genome is 66.3 % and the genome length is 3.97 Mbp.

Description of *Candidatus* Saxifia gen. nov.

Candidatus Saxifia (NL. fem. n. *Saxifia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIVDX01*. The type species for the genus is *Candidatus* Saxifia sonipugo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Saxifida entomicella sp. nov.

Candidatus Saxifida entomicella (NL. fem. n. *entomicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RPQS01 sp003818605*. The type genome for the species is the GenBank assembly GCA_003818605.1. The GC content of the type genome is 53.52 % and the genome length is 3.23 Mbp.

Description of *Candidatus* Saxifida gen. nov.

Candidatus Saxifida (NL. fem. n. *Saxifida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RPQS01*. The type species for the genus is *Candidatus* Saxifida entomicella .

According to the original version of GTDB R06-RS202, this genus belongs to the family *RPQS01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Saxifidaceae.

Description of *Candidatus* Saxifidaceae fam. nov.

Candidatus Saxifidaceae (NL. fem. n. *Saxifidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *RPQS01*. The type genus for the taxon is *Candidatus* Saxifida .

According to the original version of GTDB R06-RS202, this family belongs to the order *RPQS01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Saxifidales.

Description of *Candidatus* Saxifidales ord. nov.

Candidatus Saxifidales (NL. fem. n. *Saxifidales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *RPQS01*. The type genus for the taxon is *Candidatus* Saxifida .

According to the original version of GTDB R06-RS202, this family belongs to the class *RPQS01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Saxifidae.

Description of *Candidatus* Saxifidae class. nov.

Candidatus Saxifidae (NL. fem. n. *c__Saxifidae* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *RPQS01*. The type genus for the taxon is *Candidatus* Saxifida .

According to the original version of GTDB R06-RS202, this family belongs to the phylum *AABM5-125-24*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the phylum *Candidatus* Desonellota.

Description of *Candidatus* Saxifosa cerebicella sp. nov.

Candidatus Saxifosa cerebicella (NL. fem. n. *cerebicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACDHN01 sp013821025*. The type genome for the species is the GenBank assembly GCA_013821025.1. The GC content of the type genome is 67.83 % and the genome length is 2.85 Mbp.

Description of *Candidatus* Saxifosa gen. nov.

Candidatus Saxifosa (NL. fem. n. *Saxifosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACDHN01*. The type species for the genus is *Candidatus* Saxifosa cerebicella .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Saxifosa infiritas sp. nov.

Candidatus Saxifosa infiritas (NL. fem. n. *infiritas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACDHN01 sp013815505*. The type genome for the species is the GenBank assembly GCA_013815505.1. The GC content of the type genome is 69.08 % and the genome length is 2.56 Mbp.

Description of *Candidatus* Saxifula faticibra sp. nov.

Candidatus Saxifula faticibra (NL. fem. n. *faticibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HO2-FULL-38-9 sp001793095*. The type genome for the species is the GenBank assembly GCA_001792065.1. The GC content of the type genome is 38.46 % and the genome length is 1.1 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle background sediment; well D04 at 16ft depth".

Description of *Candidatus* Saxifula gen. nov.

Candidatus Saxifula (NL. fem. n. *Saxifula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *HO2-FULL-38-9*. The type species for the genus is *Candidatus* Saxifula faticibra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA8517*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Xenoposaceae.

Description of *Candidatus* Saxoparia adnicisca sp. nov.

Candidatus Saxoparia adnicisca (NL. fem. n. *adnicisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-791 sp902780385*. The type genome for the species is the GenBank assembly GCA_902780385.1. The GC content of the type genome is 51.71 % and the genome length is 3.3 Mbp.

Description of *Candidatus* Saxoparia gen. nov.

Candidatus Saxoparia (NL. fem. n. *Saxoparia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAG-791*. The type species for the genus is *Candidatus* Saxoparia adnicisca .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Saxoparia adsifitoga sp. nov.

Candidatus Saxoparia adsifitoga (NL. fem. n. *adsifitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-791 sp902783385*. The type genome for the species is the GenBank assembly GCA_902783385.1. The GC content of the type genome is 56.69 % and the genome length is 2.21 Mbp.

Description of *Candidatus* Saxoparia affabilega sp. nov.

Candidatus Saxoparia affabilega (NL. fem. n. *affabilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-791 sp900625025*. The type genome for the species is the GenBank assembly RS_GCF_900625025.1. The GC content of the type genome is 55.45 % and the genome length is 3.13 Mbp.

Description of *Candidatus* Saxoparia affabitia sp. nov.

Candidatus Saxoparia affabitia (NL. fem. n. *affabitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-791 sp002448395*. The type genome for the species is the GenBank assembly GCA_002448395.1. The GC content of the type genome is 52.19 % and the genome length is 2.42 Mbp.

Description of *Candidatus* Saxoparia bonifilenta sp. nov.

Candidatus Saxoparia bonifilenta (NL. fem. n. *bonifilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-791 sp900319245*. The type genome for the species is the GenBank assembly GCA_902774595.1. The GC content of the type genome is 52.04 % and the genome length is 3.19 Mbp.

Description of *Candidatus* Saxoparia bugilibra sp. nov.

Candidatus Saxoparia bugilibra (NL. fem. n. *bugilibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-791 sp900320325*. The type genome for the species is the GenBank assembly GCA_900320635.1. The GC content of the type genome is 54.79 % and the genome length is 2.01 Mbp.

Description of *Candidatus* Saxoparia cadavitura sp. nov.

Candidatus Saxoparia cadavitura (NL. fem. n. *cadavitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-791 sp902801415*. The type genome for the species is the GenBank assembly GCA_902761795.1. The GC content of the type genome is 52.97 % and the genome length is 2.38 Mbp.

Description of *Candidatus* Saxoparia catecivita sp. nov.

Candidatus Saxoparia catecivita (NL. fem. n. *catecivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-791 sp900313745*. The type genome for the species is the GenBank assembly GCA_900313745.1. The GC content of the type genome is 58.12 % and the genome length is 2.54 Mbp.

Description of *Candidatus* Saxoparia colepisca sp. nov.

Candidatus Saxoparia colepisca (NL. fem. n. *colepisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-791 sp900315055*. The type genome for the species is the GenBank assembly GCA_002351235.1. The GC content of the type genome is 55.83 % and the genome length is 3.2 Mbp.

Description of *Candidatus* Saxoparia crusmastra sp. nov.

Candidatus Saxoparia crusmastra (NL. fem. n. *crusmastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *CAG-791 sp002390025*. The type genome for the species is the GenBank assembly GCA_002390025.1. The GC content of the type genome is 53.45 % and the genome length is 2.9 Mbp.

Description of *Candidatus* Saxoparia culibatio sp. nov.

Candidatus Saxoparia culibatio (NL. fem. n. *culibatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-791 sp002362155*. The type genome for the species is the GenBank assembly GCA_002362155.1. The GC content of the type genome is 55.24 % and the genome length is 2.69 Mbp.

Description of *Candidatus* Saxoparia delubitia sp. nov.

Candidatus Saxoparia delubitia (NL. fem. n. *delubitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-791 sp002449595*. The type genome for the species is the GenBank assembly GCA_002449595.1. The GC content of the type genome is 59.35 % and the genome length is 1.91 Mbp.

Description of *Candidatus* Saxoparia derunastra sp. nov.

Candidatus Saxoparia derunastra (NL. fem. n. *derunastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-791 sp900317475*. The type genome for the species is the GenBank assembly GCA_902775885.1. The GC content of the type genome is 53.04 % and the genome length is 2.23 Mbp.

Description of *Candidatus* Saxoparia detenifica sp. nov.

Candidatus Saxoparia detenifica (NL. fem. n. *detenifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-791 sp900318375*. The type genome for the species is the GenBank assembly GCA_902758845.1. The GC content of the type genome is 50.91 % and the genome length is 3.68 Mbp.

Description of *Candidatus* Saxoparia dicabitrix sp. nov.

Candidatus Saxoparia dicabitrix (NL. fem. n. *dicabitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-791 sp002358875*. The type genome for the species is the GenBank assembly GCA_002358875.1. The GC content of the type genome is 52.06 % and the genome length is 3.72 Mbp.

Description of *Candidatus* Saxoparia didacilega sp. nov.

Candidatus Saxoparia didacilega (NL. fem. n. *didacilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-791 sp900317555*. The type genome for the species is the GenBank assembly GCA_900313635.1. The GC content of the type genome is 52.55 % and the genome length is 1.81 Mbp.

Description of *Candidatus* Saxoparia dilogitudo sp. nov.

Candidatus Saxoparia dilogitudo (NL. fem. n. *dilogitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-791 sp900316855*. The type genome for the species is the GenBank assembly GCA_902795145.1. The GC content of the type genome is 56.26 % and the genome length is 2.51 Mbp.

Description of *Candidatus* Saxoparia ermelatio sp. nov.

Candidatus Saxoparia ermelatio (NL. fem. n. *ermelatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-791 sp002372815*. The type genome for the species is the GenBank assembly GCA_002372815.1. The GC content of the type genome is 60.53 % and the genome length is 2.59 Mbp.

Description of *Candidatus* Saxoparia excamicula sp. nov.

Candidatus Saxoparia excamicula (NL. fem. n. *excamicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-791 sp902781655*. The type genome for the species is the GenBank assembly GCA_902781655.1. The GC content of the type genome is 55.32 % and the genome length is 2.76 Mbp.

Description of *Candidatus* Saxoparia gabinatio sp. nov.

Candidatus Saxoparia gabinatio (NL. fem. n. *gabinatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-791 sp902785055*. The type genome for the species is the GenBank assembly GCA_902785055.1. The GC content of the type genome is 51.92 % and the genome length is 3.13 Mbp.

Description of *Candidatus* Saxoparia galacifica sp. nov.

Candidatus Saxoparia galacifica (NL. fem. n. *galacifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-791 sp900318875*. The type genome for the species is the GenBank assembly GCA_902756205.1. The GC content of the type genome is 57.86 % and the genome length is 2.82 Mbp.

Description of *Candidatus* Saxoparia hexapibula sp. nov.

Candidatus Saxoparia hexapibula (NL. fem. n. *hexapibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-791 sp900320335*. The type genome for the species is the GenBank assembly GCA_902768735.1. The GC content of the type genome is 53.81 % and the genome length is 2.73 Mbp.

Description of *Candidatus* Saxoparia inlocatica sp. nov.

Candidatus Saxoparia inlocatica (NL. fem. n. *inlocatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *CAG-791 sp002394525*. The type genome for the species is the GenBank assembly GCA_002394525.1. The GC content of the type genome is 58.04 % and the genome length is 2.54 Mbp.

Description of *Candidatus* Saxoparia irregatica sp. nov.

Candidatus Saxoparia irregatica (NL. fem. n. *irregatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-791 sp902796425*. The type genome for the species is the GenBank assembly GCA_902796425.1. The GC content of the type genome is 53.61 % and the genome length is 3.08 Mbp.

Description of *Candidatus* Saxoparia lanifatica sp. nov.

Candidatus Saxoparia lanifatica (NL. fem. n. *lanifatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-791 sp000431495*. The type genome for the species is the GenBank assembly GCA_900539235.1. The GC content of the type genome is 50.82 % and the genome length is 2.68 Mbp.

Description of *Candidatus* Saxoparia lanugago sp. nov.

Candidatus Saxoparia lanugago (NL. fem. n. *lanugago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-791 sp900320025*. The type genome for the species is the GenBank assembly GCA_902760725.1. The GC content of the type genome is 55.94 % and the genome length is 2.53 Mbp.

Description of *Candidatus* Saxoparia luxuratio sp. nov.

Candidatus Saxoparia luxuratio (NL. fem. n. *luxuratio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-791 sp900321785*. The type genome for the species is the GenBank assembly GCA_902778435.1. The GC content of the type genome is 51.77 % and the genome length is 2.83 Mbp.

Description of *Candidatus* Saxoparia minuressa sp. nov.

Candidatus Saxoparia minuressa (NL. fem. n. *minuressa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-791 sp900101015*. The type genome for the species is the GenBank assembly GCA_902762645.1. The GC content of the type genome is 52.91 % and the genome length is 2.3 Mbp.

Description of *Candidatus* Saxoparia monopisca sp. nov.

Candidatus Saxoparia monopisca (NL. fem. n. *monopisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-791 sp002395235*. The type genome for the species is the GenBank assembly GCA_002395235.1. The GC content of the type genome is 53.38 % and the genome length is 2.74 Mbp.

Description of *Candidatus* Saxoparia notabisca sp. nov.

Candidatus Saxoparia notabisca (NL. fem. n. *notabisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-791 sp902794825*. The type genome for the species is the GenBank assembly GCA_902763225.1. The GC content of the type genome is 52.04 % and the genome length is 2.52 Mbp.

Description of *Candidatus* Saxoparia offunivita sp. nov.

Candidatus Saxoparia offunivita (NL. fem. n. *offunivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-791 sp012512995*. The type genome for the species is the GenBank assembly GCA_012512995.1. The GC content of the type genome is 46.33 % and the genome length is 2.41 Mbp.

Description of *Candidatus* Saxoparia omnifugo sp. nov.

Candidatus Saxoparia omnifugo (NL. fem. n. *omnifugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-791 sp902767235*. The type genome for the species is the GenBank assembly GCA_902767235.1. The GC content of the type genome is 55.01 % and the genome length is 2.0 Mbp.

Description of *Candidatus* Saxoparia ossarimonas sp. nov.

Candidatus Saxoparia ossarimonas (NL. fem. n. *ossarimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-791 sp002353635*. The type genome for the species is the GenBank assembly GCA_002353635.1. The GC content of the type genome is 53.67 % and the genome length is 2.01 Mbp.

Description of *Candidatus* Saxoparia podagessa sp. nov.

Candidatus Saxoparia podagessa (NL. fem. n. *podagessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-791 sp902781325*. The type genome for the species is the GenBank assembly GCA_902781325.1. The GC content of the type genome is 51.81 % and the genome length is 3.0 Mbp.

Description of *Candidatus* Saxoparia purulitia sp. nov.

Candidatus Saxoparia purulitia (NL. fem. n. *purulitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-791 sp902781215*. The type genome for the species is the GenBank assembly GCA_902781215.1. The GC content of the type genome is 56.64 % and the genome length is 3.33 Mbp.

Description of *Candidatus* Saxoparia semipigena sp. nov.

Candidatus Saxoparia semipigena (NL. fem. n. *semipigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *CAG-791 sp902801585*. The type genome for the species is the GenBank assembly GCA_902801585.1. The GC content of the type genome is 52.22 % and the genome length is 3.3 Mbp.

Description of *Candidatus* Saxoparia telefimonas sp. nov.

Candidatus Saxoparia telefimonas (NL. fem. n. *telefimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-791 sp902789735*. The type genome for the species is the GenBank assembly GCA_902790025.1. The GC content of the type genome is 53.64 % and the genome length is 2.37 Mbp.

Description of *Candidatus* Saxoparia utrarilega sp. nov.

Candidatus Saxoparia utrarilega (NL. fem. n. *utrarilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-791 sp003447895*. The type genome for the species is the GenBank assembly GCA_003447895.1. The GC content of the type genome is 54.77 % and the genome length is 2.25 Mbp.

Description of *Candidatus* Saxoparia utrolitrix sp. nov.

Candidatus Saxoparia utrolitrix (NL. fem. n. *utrolitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-791 sp002392385*. The type genome for the species is the GenBank assembly GCA_002392385.1. The GC content of the type genome is 59.72 % and the genome length is 2.4 Mbp.

Description of *Candidatus* Saxoparia vepaletta sp. nov.

Candidatus Saxoparia vepaletta (NL. fem. n. *vepaletta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-791 sp900107575*. The type genome for the species is the GenBank assembly RS_GCF_900107575.1. The GC content of the type genome is 54.26 % and the genome length is 2.96 Mbp.

Description of *Candidatus* Saxoparia xenopugo sp. nov.

Candidatus Saxoparia xenopugo (NL. fem. n. *xenopugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-791 sp902777355*. The type genome for the species is the GenBank assembly GCA_902777355.1. The GC content of the type genome is 51.37 % and the genome length is 3.87 Mbp.

Description of *Candidatus* Saxopella cinefitrix sp. nov.

Candidatus Saxopella cinefitrix (NL. fem. n. *cinefitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4975 sp002427015*. The type genome for the species is the GenBank assembly GCA_002427015.1. The GC content of the type genome is 51.93 % and the genome length is 1.86 Mbp.

Description of *Candidatus* Saxopella gen. nov.

Candidatus Saxopella (NL. fem. n. *Saxopella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA4975*. The type species for the genus is *Candidatus* Saxopella cinefitrix .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA4975*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Saxopellaceae.

Description of *Candidatus* Saxopellaceae fam. nov.

Candidatus Saxopellaceae (NL. fem. n. *Saxopellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA4975.* The type genus for the taxon is *Candidatus* Saxopella .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA4975*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Saxopellales.

Description of *Candidatus* Saxopellales ord. nov.

Candidatus Saxopellales (NL. fem. n. *Saxopellales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA4975.* The type genus for the taxon is *Candidatus* Saxopella .

According to the GTDB R06-RS202, this order belongs to the class *Proteinivoracia*.

Description of *Candidatus* Saxopella dilacitura sp. nov.

Candidatus Saxopella dilacitura (NL. fem. n. *dilacitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4975 sp002408465*. The type genome for the species is the GenBank assembly GCA_002316925.1. The GC content of the type genome is 51.57 % and the genome length is 1.61 Mbp.

Description of *Candidatus* Saxopella intecax sp. nov.

Candidatus Saxopella intecax (NL. fem. n. *intecax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4975 sp002397155*. The type genome for the species is the GenBank assembly GCA_002397155.1. The GC content of the type genome is 58.39 % and the genome length is 1.52 Mbp.

Description of *Candidatus* Saxopella penicicella sp. nov.

Candidatus Saxopella penicicella (NL. fem. n. *penicicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4975 sp002423965*. The type genome for the species is the GenBank assembly GCA_002398855.1. The GC content of the type genome is 47.97 % and the genome length is 2.02 Mbp.

Description of *Candidatus* Saxopella utillitrix sp. nov.

Candidatus Saxopella utillitrix (NL. fem. n. *utillitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4975 sp012727415*. The type genome for the species is the GenBank assembly GCA_012727415.1. The GC content of the type genome is 52.32 % and the genome length is 1.84 Mbp.

Description of *Candidatus* Saxopia bugilatica sp. nov.

Candidatus Saxopia bugilatica (NL. fem. n. *bugilatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SZUA-8 sp003232175*. The type genome for the species is the GenBank assembly GCA_003232175.1. The GC content of the type genome is 57.92 % and the genome length is 1.95 Mbp.

Description of *Candidatus* Saxopia gen. nov.

Candidatus Saxopia (NL. fem. n. *Saxopia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SZUA-8*. The type species for the genus is *Candidatus* Saxopia bugilatica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SZUA-8*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Saxopiaceae.

Description of *Candidatus* Saxopiaceae fam. nov.

Candidatus Saxopiaceae (NL. fem. n. *Saxopiaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SZUA-8.* The type genus for the taxon is *Candidatus* Saxopia .

According to GTDB R06-RS202, this family belongs to the order *Rhizobiales*.

Description of *Candidatus* Saxopida fediticella sp. nov.

Candidatus Saxopida fediticella (NL. fem. n. *fediticella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *CAJAWW01 sp903946745*. The type genome for the species is the GenBank assembly GCA_903940955.1. The GC content of the type genome is 58.69 % and the genome length is 2.76 Mbp.

Description of *Candidatus* Saxopida gen. nov.

Candidatus Saxopida (NL. fem. n. *Saxopida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAJAWW01*. The type species for the genus is *Candidatus* Saxopida fediticella .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Saxoposa decametta sp. nov.

Candidatus Saxoposa decametta (NL. fem. n. *decametta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2686765 sp002686765*. The type genome for the species is the GenBank assembly GCA_002686765.1. The GC content of the type genome is 59.64 % and the genome length is 2.02 Mbp.

Description of *Candidatus* Saxoposa gen. nov.

Candidatus Saxoposa (NL. fem. n. *Saxoposa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2686765*. The type species for the genus is *Candidatus* Saxoposa decametta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *2-02-FULL-58-16*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Denicellaceae.

Description of *Candidatus* Saxoposa totidentia sp. nov.

Candidatus Saxoposa totidentia (NL. fem. n. *totidentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2686765 sp013349695*. The type genome for the species is the

GenBank assembly GCA_013349335.1. The GC content of the type genome is 61.01 % and the genome length is 2.55 Mbp.

Description of *Candidatus* Saxopula colopessa sp. nov.

Candidatus Saxopula colopessa (NL. fem. n. *colopessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2730 sp900319955*. The type genome for the species is the GenBank assembly GCA_902790695.1. The GC content of the type genome is 26.85 % and the genome length is 1.14 Mbp.

Description of *Candidatus* Saxopula gen. nov.

Candidatus Saxopula (NL. fem. n. *Saxopula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA2730*. The type species for the genus is *Candidatus* Saxopula colopessa .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA660*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vitigellaceae.

Description of *Candidatus* Saxopula derelitudo sp. nov.

Candidatus Saxopula derelitudo (NL. fem. n. *derelitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2730 sp900313345*. The type genome for the species is the GenBank assembly GCA_900313345.1. The GC content of the type genome is 24.68 % and the genome length is 0.82 Mbp.

Description of *Candidatus* Saxopula levifax sp. nov.

Candidatus Saxopula levifax (NL. fem. n. *levifax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2730 sp900320505*. The type genome for the species is the GenBank assembly GCA_900320505.1. The GC content of the type genome is 26.99 %

and the genome length is 1.2 Mbp.

Description of *Candidatus* Scaccana arrecimonas sp. nov.

Candidatus Scaccana arrecimonas (NL. fem. n. *arrecimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *ETA-A8 sp007747655*. The type genome for the species is the GenBank assembly RS_GCF_007747655.1. The GC content of the type genome is 57.78 % and the genome length is 9.01 Mbp.

Description of *Candidatus* Scaccana gen. nov.

Candidatus Scaccana (NL. fem. n. *Scaccana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *ETA-A8*. The type species for the genus is *Candidatus* Scaccana arrecimonas .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Scaccida cocolitudo sp. nov.

Candidatus Scaccida cocolitudo (NL. fem. n. *cocolitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PUND01 sp003551645*. The type genome for the species is the GenBank assembly GCA_003551645.1. The GC content of the type genome is 63.48 % and the genome length is 2.83 Mbp.

Description of *Candidatus* Scaccida gen. nov.

Candidatus Scaccida (NL. fem. n. *Scaccida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PUND01*. The type species for the genus is *Candidatus* Scaccida cocolitudo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SM23-33*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Megalanaceae.

Description of *Candidatus* Scaccosa vilipax sp. nov.

Candidatus Scaccosa vilipax (NL. fem. n. *vilipax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAXGV01 sp012271185*. The type genome for the species is the GenBank assembly GCA_012271185.1. The GC content of the type genome is 59.32 % and the genome length is 2.7 Mbp.

Description of *Candidatus* Scaccosa gen. nov.

Candidatus Scaccosa (NL. fem. n. *Scaccosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAXGV01*. The type species for the genus is *Candidatus* Scaccosa vilipax .

According to the original version of GTDB R06-RS202, this genus belongs to the family *Bin80*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Revecanaceae.

Description of *Candidatus* Scalindua vocamastra sp. nov.

Candidatus Scalindua vocamastra (NL. fem. n. *vocamastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Scalindua sp001828595*. The type genome for the species is the GenBank assembly GCA_001824605.1. The GC content of the type genome is 39.6 % and the genome length is 1.35 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at time point 6 / F; 5m depth; 0.2 filter".

Description of *Candidatus* Scammaria exsomivita sp. nov.

Candidatus Scammaria exsomivita (NL. fem. n. *exsomivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAZNL01 sp012798315*. The type genome for the species is the GenBank assembly GCA_012798315.1. The GC content of the type genome is 38.55 % and the genome length is 0.9 Mbp.

Description of *Candidatus* Scammaria gen. nov.

Candidatus Scammaria (NL. fem. n. *Scammaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAZNL01*. The type species for the genus is *Candidatus* Scammaria exsomivita .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA10185*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Musulellaceae.

Description of *Candidatus* Scammella apsenilenta sp. nov.

Candidatus Scammella apsenilenta (NL. fem. n. *apsenilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SXLG01 sp005777805*. The type genome for the species is the GenBank assembly GCA_005777805.1. The GC content of the type genome is 69.17 % and the genome length is 3.61 Mbp.

Description of *Candidatus* Scammella gen. nov.

Candidatus Scammella (NL. fem. n. *Scammella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SXLG01*. The type species for the genus is *Candidatus* Scammella apsenilenta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA12015*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Negotariaceae.

Description of *Candidatus* Scammella impiledo sp. nov.

Candidatus Scammella impiledo (NL. fem. n. *impiledo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SXLG01 sp009885395*. The type genome for the species is the GenBank assembly GCA_009885395.1. The GC content of the type genome is 64.46 % and the genome length is 3.38 Mbp.

Description of *Candidatus* Scammia fragledo sp. nov.

Candidatus Scammia fragledo (NL. fem. n. *fragledo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SXND01 sp005777235*. The type genome for the species is the GenBank assembly GCA_005777235.1. The GC content of the type genome is 61.23 % and the genome length is 6.03 Mbp.

Description of *Candidatus* Scammia gen. nov.

Candidatus Scammia (NL. fem. n. *Scammia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SXND01*. The type species for the genus is *Candidatus* Scammia fragledo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Scammosa papavisca sp. nov.

Candidatus Scammosa papavisca (NL. fem. n. *papavisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WRFF01 sp009778945*. The type genome for the species is the GenBank assembly GCA_009778945.1. The GC content of the type genome is 55.99 % and the genome length is 1.71 Mbp.

Description of *Candidatus* Scammosa gen. nov.

Candidatus Scammosa (NL. fem. n. *Scammosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WRFF01*. The type species for the genus is *Candidatus* Scammosa papavisca .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Scammula cicililenta sp. nov.

Candidatus Scammula cicililenta (NL. fem. n. *cicililenta* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1776 sp002314605*. The type genome for the species is the GenBank assembly GCA_002314605.1. The GC content of the type genome is 56.64 % and the genome length is 2.72 Mbp.

Description of *Candidatus* Scammula gen. nov.

Candidatus Scammula (NL. fem. n. *Scammula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1776*. The type species for the genus is *Candidatus* Scammula cicililenta .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Scandinavium bucelitas sp. nov.

Candidatus Scandinavium bucelitas (NL. fem. n. *bucelitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Scandinavium sp009668205*. The type genome for the species is the GenBank assembly RS_GCF_009668205.1. The GC content of the type genome is 54.25 % and the genome length is 4.71 Mbp.

Description of *Candidatus* Scandinavium energilega sp. nov.

Candidatus Scandinavium energilega (NL. fem. n. *energilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Scandinavium sp014156375*. The type genome for the species is the GenBank assembly GCA_014156375.1. The GC content of the type genome is 54.69 % and the genome length is 4.72 Mbp.

Description of *Candidatus* Scandinavium gasifitura sp. nov.

Candidatus Scandinavium gasifitura (NL. fem. n. *gasifitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Scandinavium sp900215375*. The type genome for the species is the GenBank assembly RS_GCF_900215375.1. The GC content of the type genome is 55.64 % and the genome length is 4.69 Mbp.

Description of *Candidatus* Scandinavium hibisilenta sp. nov.

Candidatus Scandinavium hibisilenta (NL. fem. n. *hibisilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Scandinavium sp902706235*. The type genome for the species is the GenBank assembly RS_GCF_902706235.1. The GC content of the type genome is 53.71 % and the genome length is 5.32 Mbp.

Description of *Candidatus* Scandinavium innoxitia sp. nov.

Candidatus Scandinavium innoxitia (NL. fem. n. *innoxitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Scandinavium sp002470465*. The type genome for the species is the GenBank assembly GCA_002470465.1. The GC content of the type genome is 55.08 % and the genome length is 4.39 Mbp.

Description of *Candidatus* Scandinavium turilivita sp. nov.

Candidatus Scandinavium turilivita (NL. fem. n. *turilivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Scandinavium sp902706205*. The type genome for the species is the GenBank assembly RS_GCF_902706205.1. The GC content of the type genome is 53.45 % and the genome length is 5.32 Mbp.

Description of *Candidatus* Scellana casigousia sp. nov.

Candidatus Scellana casigousia (NL. fem. n. *casigousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DSBG01 sp011046135*. The type genome for the species is the GenBank assembly GCA_011046135.1. The GC content of the type genome is 55.17 % and the genome length is 2.92 Mbp.

Description of *Candidatus* Scellana gen. nov.

Candidatus Scellana (NL. fem. n. *Scellana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DSBG01*. The type species for the genus is *Candidatus* Scellana casigousia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1062*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Hexapariaceae.

Description of *Candidatus* Scellaria depacessa sp. nov.

Candidatus Scellaria depacessa (NL. fem. n. *depacessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABFVX01 sp013362555*. The type genome for the species is the GenBank assembly GCA_013362555.1. The GC content of the type genome is 68.67 % and the genome length is 4.19 Mbp.

Description of *Candidatus* Scellaria gen. nov.

Candidatus Scellaria (NL. fem. n. *Scellaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABFVX01*. The type species for the genus is *Candidatus* Scellaria depacessa .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Scellella exentitura sp. nov.

Candidatus Scellella exentitura (NL. fem. n. *exentitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *OHK40 sp004367505*. The type genome for the species is the GenBank assembly GCA_004367505.1. The GC content of the type genome is 67.79 % and the genome length is 6.93 Mbp.

Description of *Candidatus* Scellella gen. nov.

Candidatus Scellella (NL. fem. n. *Scellella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *OHK40*. The type species for the genus is *Candidatus* Scellella exentitura .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Scellia chalbibra sp. nov.

Candidatus Scellia chalbibra (NL. fem. n. *chalbibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *BN140002 sp008386575*. The type genome for the species is the GenBank assembly RS_GCF_008386575.1. The GC content of the type genome is 70.07 % and the genome length is 5.35 Mbp.

Description of *Candidatus* Scellia gen. nov.

Candidatus Scellia (NL. fem. n. *Scellia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *BN140002*. The type species for the genus is *Candidatus* Scellia chalbibra .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Scellida luticigena sp. nov.

Candidatus Scellida luticigena (NL. fem. n. *luticigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CF-162 sp005880055*. The type genome for the species is the GenBank assembly GCA_005880055.1. The GC content of the type genome is 63.87 % and the genome length is 2.47 Mbp.

Description of *Candidatus* Scellida gen. nov.

Candidatus Scellida (NL. fem. n. *Scellida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CF-162*. The type species for the genus is *Candidatus* Scellida luticigena .

According to the original version of GTDB R06-RS202, this genus belongs to the family *RBG-16-64-32*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Dedigellaceae.

Description of *Candidatus* Scellosa citivax sp. nov.

Candidatus Scellosa citivax (NL. fem. n. *citivax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Fen-1038 sp003141915*. The type genome for the species is the GenBank assembly GCA_003141915.1. The GC content of the type genome is 50.03 % and the genome length is 3.1 Mbp.

Description of *Candidatus* Scellosa gen. nov.

Candidatus Scellosa (NL. fem. n. *Scellosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Fen-1038*. The type species for the genus is *Candidatus* Scellosa citivax .

According to the original version of GTDB R06-RS202, this genus belongs to the family *EnvOPS12*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vinoliaceae.

Description of *Candidatus* Scellosa inrefitoga sp. nov.

Candidatus Scellosa inrefitoga (NL. fem. n. *inrefitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Fen-1038 sp003158885*. The type genome for the species is the GenBank assembly GCA_003158885.1. The GC content of the type genome is 52.53 % and the genome length is 3.07 Mbp.

Description of *Candidatus* Sceptana exsorago sp. nov.

Candidatus Sceptana exsorago (NL. fem. n. *exsorago* a species epithet created arbitrarily,

while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG14106 sp902795825*. The type genome for the species is the GenBank assembly GCA_902795825.1. The GC content of the type genome is 51.34 % and the genome length is 2.15 Mbp.

Description of *Candidatus* Sceptana gen. nov.

Candidatus Sceptana (NL. fem. n. *Sceptana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RUG14106*. The type species for the genus is *Candidatus* Sceptana exsorago .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Sceptaria tubicibula sp. nov.

Candidatus Sceptaria tubicibula (NL. fem. n. *tubicibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYQI01 sp012519385*. The type genome for the species is the GenBank assembly GCA_012519385.1. The GC content of the type genome is 38.34 % and the genome length is 2.19 Mbp.

Description of *Candidatus* Sceptaria gen. nov.

Candidatus Sceptaria (NL. fem. n. *Sceptaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAYQI01*. The type species for the genus is *Candidatus* Sceptaria tubicibula .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Sceptella intolibra sp. nov.

Candidatus Sceptella intolibra (NL. fem. n. *intolibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DUQB01 sp012838035*. The type genome for the species is the GenBank assembly GCA_012838035.1. The GC content of the type genome is 53.53 % and the genome length is 3.72 Mbp.

Description of *Candidatus* Sceptella gen. nov.

Candidatus Sceptella (NL. fem. n. *Sceptella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DUQB01*. The type species for the genus is *Candidatus* Sceptella intolibra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DTU080*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Defosellaceae.

Description of *Candidatus* Sceptida infisicella sp. nov.

Candidatus Sceptida infisicella (NL. fem. n. *infisicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *1-14-0-10-49-15 sp002773415*. The type genome for the species is the GenBank assembly GCA_002773415.1. The GC content of the type genome is 49.18 % and the genome length is 0.88 Mbp.

Description of *Candidatus* Sceptida gen. nov.

Candidatus Sceptida (NL. fem. n. *Sceptida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *1-14-0-10-49-15*. The type species for the genus is *Candidatus* Sceptida infisicella .

According to the original version of GTDB R06-RS202, this genus belongs to the family *1-14-0-10-44-23*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Revulidaceae.

Description of *Candidatus* Sceptosa venunetta sp. nov.

Candidatus Sceptosa venunetta (NL. fem. n. *venunetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DRGK01 sp011050075*. The type genome for the species is the GenBank assembly GCA_011050075.1. The GC content of the type genome is 43.68 % and the genome length is 0.53 Mbp.

Description of *Candidatus* Sceptosa gen. nov.

Candidatus Sceptosa (NL. fem. n. *Sceptosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DRGK01*. The type species for the genus is *Candidatus* Sceptosa venunetta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GWB1-50-10*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Venefulaceae.

Description of *Candidatus* Sceptula adporatica sp. nov.

Candidatus Sceptula adporatica (NL. fem. n. *adporatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACDBF01 sp013695055*. The type genome for the species is the GenBank assembly GCA_013695055.1. The GC content of the type genome is 63.62 % and the genome length is 2.33 Mbp.

Description of *Candidatus* Sceptula gen. nov.

Candidatus Sceptula (NL. fem. n. *Sceptula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACDBF01*. The type species for the genus is *Candidatus* Sceptula adporatica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *WHSQ01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Recumanaceae.

Description of *Candidatus* Schaedlerella adgesitura sp. nov.

Candidatus Schaedlerella adgesitura (NL. fem. n. *adgesitura* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Schaedlerella sp009774255*. The type genome for the species is the GenBank assembly GCA_009774255.1. The GC content of the type genome is 47.4 % and the genome length is 5.99 Mbp.

Description of *Candidatus* Schaedlerella adtilitoga sp. nov.

Candidatus Schaedlerella adtilitoga (NL. fem. n. *adtilitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Schaedlerella sp004556565*. The type genome for the species is the GenBank assembly GCA_004556565.1. The GC content of the type genome is 43.39 % and the genome length is 4.15 Mbp.

Description of *Candidatus* Schaedlerella alsisago sp. nov.

Candidatus Schaedlerella alsisago (NL. fem. n. *alsisago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Schaedlerella sp009911175*. The type genome for the species is the GenBank assembly RS_GCF_009911175.1. The GC content of the type genome is 47.47 % and the genome length is 6.71 Mbp.

Description of *Candidatus* Schaedlerella carucitio sp. nov.

Candidatus Schaedlerella carucitio (NL. fem. n. *carucitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Schaedlerella sp900066545*. The type genome for the species is the GenBank assembly RS_GCF_003628495.1. The GC content of the type genome is 38.72 % and the genome length is 3.58 Mbp.

Description of *Candidatus* Schaedlerella decatimonas sp. nov.

Candidatus Schaedlerella decatimonas (NL. fem. n. *decatimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Schaedlerella sp900765975*. The type genome for the species is the GenBank assembly RS_GCF_900765975.1. The GC content of the type genome is 40.46 % and the genome length is 2.65 Mbp.

Description of *Candidatus* Schaedlerella ephipugo sp. nov.

Candidatus Schaedlerella ephipugo (NL. fem. n. *ephipugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Schaedlerella sp002320245*. The type genome for the species is the GenBank assembly GCA_002320245.1. The GC content of the type genome is 43.73 % and the genome length is 2.96 Mbp.

Description of *Candidatus* Schaedlerella gasomax sp. nov.

Candidatus Schaedlerella gasomax (NL. fem. n. *gasomax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Schaedlerella sp000403295*. The type genome for the species is the GenBank assembly RS_GCF_000403295.1. The GC content of the type genome is 47.16 % and the genome length is 5.8 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Ceca".

Description of *Candidatus* Schlesneria biverivita sp. nov.

Candidatus Schlesneria biverivita (NL. fem. n. *biverivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Schlesneria sp903858935*. The type genome for the species is the GenBank assembly GCA_903908885.1. The GC content of the type genome is 52.29 % and the genome length is 8.0 Mbp.

Description of *Candidatus* Schlesneria cisalousia sp. nov.

Candidatus Schlesneria cisalousia (NL. fem. n. *cisalousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Schlesneria sp903871875*. The type genome for the species is the GenBank assembly GCA_903915595.1. The GC content of the type genome is 55.75 %

and the genome length is 7.64 Mbp.

Description of *Candidatus* Schlesneria detenicula sp. nov.

Candidatus Schlesneria detenicula (NL. fem. n. *detenicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Schlesneria sp903840265*. The type genome for the species is the GenBank assembly GCA_903840265.1. The GC content of the type genome is 56.43 % and the genome length is 7.49 Mbp.

Description of *Candidatus* Schlesneria lapilatio sp. nov.

Candidatus Schlesneria lapilatio (NL. fem. n. *lapilatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Schlesneria sp903899985*. The type genome for the species is the GenBank assembly GCA_903898875.1. The GC content of the type genome is 52.67 % and the genome length is 7.62 Mbp.

Description of *Candidatus* Schlesneria nocumilenta sp. nov.

Candidatus Schlesneria nocumilenta (NL. fem. n. *nocumilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Schlesneria sp903834925*. The type genome for the species is the GenBank assembly GCA_903834925.1. The GC content of the type genome is 52.2 % and the genome length is 9.02 Mbp.

Description of *Candidatus* Schlesneria seroticella sp. nov.

Candidatus Schlesneria seroticella (NL. fem. n. *seroticella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Schlesneria sp903904835*. The type genome for the species is the GenBank assembly GCA_903932225.1. The GC content of the type genome is 52.38 % and the genome length is 8.21 Mbp.

Description of *Candidatus* Schumannella angipedo sp. nov.

Candidatus Schumannella angipedo (NL. fem. n. *angipedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Schumannella sp006517535*. The type genome for the species is the GenBank assembly RS_GCF_006517535.1. The GC content of the type genome is 71.8 % and the genome length is 3.28 Mbp.

Description of *Candidatus* Schumannella enuclitudo sp. nov.

Candidatus Schumannella enuclitudo (NL. fem. n. *enuclitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Schumannella sp006517435*. The type genome for the species is the GenBank assembly RS_GCF_006517435.1. The GC content of the type genome is 71.5 % and the genome length is 3.68 Mbp.

Description of *Candidatus* Scintana arcubitica sp. nov.

Candidatus Scintana arcubitica (NL. fem. n. *arcubitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GWF2-37-49 sp000989955*. The type genome for the species is the GenBank assembly GCA_000989955.1. The GC content of the type genome is 37.04 % and the genome length is 1.49 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "aquifer sediment".

Description of *Candidatus* Scintana gen. nov.

Candidatus Scintana (NL. fem. n. *Scintana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GWF2-37-49*. The type species for the genus is *Candidatus* Scintana arcubitica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *RVW-14*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Direpanaceae.

Description of *Candidatus* Scintella apperilega sp. nov.

Candidatus Scintella apperilega (NL. fem. n. *apperilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAADEQ01 sp013153345*. The type genome for the species is the GenBank assembly GCA_013153345.1. The GC content of the type genome is 33.59 % and the genome length is 1.03 Mbp.

Description of *Candidatus* Scintella gen. nov.

Candidatus Scintella (NL. fem. n. *Scintella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAADEQ01*. The type species for the genus is *Candidatus* Scintella apperilega .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Scintella fuligitio sp. nov.

Candidatus Scintella fuligitio (NL. fem. n. *fuligitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAADEQ01 sp013153675*. The type genome for the species is the GenBank assembly GCA_013153675.1. The GC content of the type genome is 30.54 % and the genome length is 1.14 Mbp.

Description of *Candidatus* Scintia vatiligena sp. nov.

Candidatus Scintia vatiligena (NL. fem. n. *vatiligena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DONG20-135 sp009831105*. The type genome for the species is the GenBank assembly RS_GCF_009831105.1. The GC content of the type genome is 42.22 % and the genome length is 2.3 Mbp.

Description of *Candidatus* Scintia gen. nov.

Candidatus Scintia (NL. fem. n. *Scintia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DONG20-135*. The type species for the genus is *Candidatus* Scintia vatiligena .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Scintida podagitas sp. nov.

Candidatus Scintida podagitas (NL. fem. n. *podagitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DSYC01 sp011367615*. The type genome for the species is the GenBank assembly GCA_011367615.1. The GC content of the type genome is 32.65 % and the genome length is 2.45 Mbp.

Description of *Candidatus* Scintida gen. nov.

Candidatus Scintida (NL. fem. n. *Scintida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DSYC01*. The type species for the genus is *Candidatus* Scintida podagitas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2268*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Linigiaceae.

Description of *Candidatus* Scintosa uberratio sp. nov.

Candidatus Scintosa uberratio (NL. fem. n. *uberratio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SBAW01 sp005239955*. The type genome for the species is the GenBank assembly GCA_005239955.1. The GC content of the type genome is 51.9 % and the genome length is 0.72 Mbp.

Description of *Candidatus* Scintosa gen. nov.

Candidatus Scintosa (NL. fem. n. *Scintosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this genus is *SBAW01*. The type species for the genus is *Candidatus* Scintosa uberratio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2163*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Legifariaceae.

Description of *Candidatus* Sciscionella ontolimonas sp. nov.

Candidatus Sciscionella ontolimonas (NL. fem. n. *ontolimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sciscionella sp000737195*. The type genome for the species is the GenBank assembly RS_GCF_000737195.2. The GC content of the type genome is 68.67 % and the genome length is 7.42 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "intertidal sediment".

Description of *Candidatus* Scombana adoscitoga sp. nov.

Candidatus Scombana adoscitoga (NL. fem. n. *adoscitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3362 sp002360455*. The type genome for the species is the GenBank assembly GCA_002360455.1. The GC content of the type genome is 36.36 % and the genome length is 3.27 Mbp.

Description of *Candidatus* Scombana gen. nov.

Candidatus Scombana (NL. fem. n. *Scombana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA3362*. The type species for the genus is *Candidatus* Scombana adoscitoga .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Scombana apsimitica sp. nov.

Candidatus Scombana apsimitica (NL. fem. n. *apsimitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3362 sp013140975*. The type genome for the species is the GenBank assembly GCA_013140975.1. The GC content of the type genome is 33.67 % and the genome length is 3.97 Mbp.

Description of *Candidatus* Scombaria visifilega sp. nov.

Candidatus Scombaria visifilega (NL. fem. n. *visifilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DSM-9736 sp900187405*. The type genome for the species is the GenBank assembly RS_GCF_900187405.1. The GC content of the type genome is 56.1 % and the genome length is 3.96 Mbp.

Description of *Candidatus* Scombaria gen. nov.

Candidatus Scombaria (NL. fem. n. *Scombaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DSM-9736*. The type species for the genus is *Candidatus* Scombaria visifilega .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Scombella mavoritio sp. nov.

Candidatus Scombella mavoritio (NL. fem. n. *mavoritio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACCXZ01 sp013696745*. The type genome for the species is the GenBank assembly GCA_013696745.1. The GC content of the type genome is 69.72 % and the genome length is 2.61 Mbp.

Description of *Candidatus* Scombella gen. nov.

Candidatus Scombella (NL. fem. n. *Scombella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACCXZ01*. The type species for the genus is *Candidatus* Scombella mavoritio .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Scombia citipitas sp. nov.

Candidatus Scombia citipitas (NL. fem. n. *citipitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA987 sp002428905*. The type genome for the species is the GenBank assembly GCA_002428905.1. The GC content of the type genome is 42.92 % and the genome length is 3.62 Mbp.

Description of *Candidatus* Scombia gen. nov.

Candidatus Scombia (NL. fem. n. *Scombia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA987*. The type species for the genus is *Candidatus* Scombia citipitas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA9320*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Lapilariaceae.

Description of *Candidatus* Scombia lutulifica sp. nov.

Candidatus Scombia lutulifica (NL. fem. n. *lutulifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA987 sp002292105*. The type genome for the species is the GenBank assembly GCA_002292105.1. The GC content of the type genome is 39.97 % and the genome length is 2.63 Mbp.

Description of *Candidatus* Scombosa videlago sp. nov.

Candidatus Scombosa videlago (NL. fem. n. *videlago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CACYEI01 sp902773355*. The type genome for the species is the GenBank assembly GCA_902773355.1. The GC content of the type genome is 30.15 % and the genome length is 1.18 Mbp.

Description of *Candidatus* Scombosa gen. nov.

Candidatus Scombosa (NL. fem. n. *Scombosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CACYEI01*. The type species for the genus is *Candidatus* Scombosa videlago .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Scombula fusificula sp. nov.

Candidatus Scombula fusificula (NL. fem. n. *fusificula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYAH01 sp012719445*. The type genome for the species is the GenBank assembly GCA_012719445.1. The GC content of the type genome is 72.35 % and the genome length is 5.42 Mbp.

Description of *Candidatus* Scombula gen. nov.

Candidatus Scombula (NL. fem. n. *Scombula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAYAH01*. The type species for the genus is *Candidatus* Scombula fusificula .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Scorbana dinupatica sp. nov.

Candidatus Scorbana dinupatica (NL. fem. n. *dinupatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SZUA-451 sp003646525*. The type genome for the species is the GenBank assembly GCA_003646525.1. The GC content of the type genome is 39.09 % and the genome length is 2.08 Mbp.

Description of *Candidatus* Scorbana gen. nov.

Candidatus Scorbana (NL. fem. n. *Scorbana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SZUA-451*. The type species for the genus is *Candidatus* Scorbana dinupatica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Scorbana insepitia sp. nov.

Candidatus Scorbana insepitia (NL. fem. n. *insepitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SZUA-451 sp003252535*. The type genome for the species is the GenBank assembly GCA_003252535.1. The GC content of the type genome is 50.99 % and the genome length is 2.92 Mbp.

Description of *Candidatus* Scorbaria tolutivita sp. nov.

Candidatus Scorbaria tolutivita (NL. fem. n. *tolutivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MFGM01 sp001778275*. The type genome for the species is the GenBank assembly GCA_001778275.1. The GC content of the type genome is 47.74 % and the genome length is 1.02 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at 16ft depth; 0.2 micron filter at time point C".

Description of *Candidatus* Scorbaria gen. nov.

Candidatus Scorbaria (NL. fem. n. *Scorbaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *MFGM01*. The type species for the genus is *Candidatus* Scorbaria tolutivita .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA11705*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Relenanaceae.

Description of *Candidatus* Scorbida demagitia sp. nov.

Candidatus Scorbida demagitia (NL. fem. n. *demagitia* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DUPY01 sp012838065*. The type genome for the species is the GenBank assembly GCA_012838065.1. The GC content of the type genome is 32.39 % and the genome length is 1.18 Mbp.

Description of *Candidatus* Scorbida gen. nov.

Candidatus Scorbida (NL. fem. n. *Scorbida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DUPY01*. The type species for the genus is *Candidatus* Scorbida demagitia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Scorbula vilipetta sp. nov.

Candidatus Scorbula vilipetta (NL. fem. n. *vilipetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABDKO01 sp013002165*. The type genome for the species is the GenBank assembly GCA_013002165.1. The GC content of the type genome is 51.66 % and the genome length is 3.98 Mbp.

Description of *Candidatus* Scorbula gen. nov.

Candidatus Scorbula (NL. fem. n. *Scorbula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABDKO01*. The type species for the genus is *Candidatus* Scorbula vilipetta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA10348*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Divorosaceae.

Description of *Candidatus* Secunana delaciforma sp. nov.

Candidatus Secunana delaciforma (NL. fem. n. *delaciforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SFHK01 sp004556395*. The type genome for the species is the GenBank assembly RS_GCF_900758175.1. The GC content of the type genome is 60.72 % and the genome length is 2.93 Mbp.

Description of *Candidatus* Secunana gen. nov.

Candidatus Secunana (NL. fem. n. *Secunana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SFHK01*. The type species for the genus is *Candidatus* Secunana delaciforma .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-74*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Subabosaceae.

Description of *Candidatus* Secunaria inretitio sp. nov.

Candidatus Secunaria inretitio (NL. fem. n. *inretitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PIWD01 sp003354005*. The type genome for the species is the GenBank assembly GCA_003354005.1. The GC content of the type genome is 40.49 % and the genome length is 1.51 Mbp.

Description of *Candidatus* Secunaria gen. nov.

Candidatus Secunaria (NL. fem. n. *Secunaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PIWD01*. The type species for the genus is *Candidatus* Secunaria inretitio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *PIWD01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Secunariaceae.

Description of *Candidatus* Secunariaceae fam. nov.

Candidatus Secunariaceae (NL. fem. n. *Secunariaceae* a name created from the name of

the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *PIWD01.* The type genus for the taxon is *Candidatus* Secunaria .

According to the original version of GTDB R06-RS202, this family belongs to the order *PIWD01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Secunariales.

Description of *Candidatus* Secunariales ord. nov.

Candidatus Secunariales (NL. fem. n. *Secunariales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *PIWD01.* The type genus for the taxon is *Candidatus* Secunaria .

According to the GTDB R06-RS202, this order belongs to the class *Gammaproteobacteria*.

Description of *Candidatus* Secundilactobacillus absocitoga sp. nov.

Candidatus Secundilactobacillus absocitoga (NL. fem. n. *absocitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Secundilactobacillus sp012641075*. The type genome for the species is the GenBank assembly RS_GCF_012641075.1. The GC content of the type genome is 43.33 % and the genome length is 2.61 Mbp.

Description of *Candidatus* Secundilactobacillus anagnivita sp. nov.

Candidatus Secundilactobacillus anagnivita (NL. fem. n. *anagnivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Secundilactobacillus sp005405185*. The type genome for the species is the GenBank assembly RS_GCF_005405185.1. The GC content of the type genome is 44.29 % and the genome length is 2.71 Mbp.

Description of *Candidatus* Secundilactobacillus inmolicula sp. nov.

Candidatus Secundilactobacillus inmolicula (NL. fem. n. *inmolicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Secundilactobacillus sp009720675*. The type genome for the species is the GenBank assembly RS_GCF_009720675.1. The GC content of the type genome is 44.47 % and the genome length is 2.68 Mbp.

Description of *Candidatus* Secunella undevimonas sp. nov.

Candidatus Secunella undevimonas (NL. fem. n. *undevimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WQRI01 sp009786825*. The type genome for the species is the GenBank assembly GCA_009786825.1. The GC content of the type genome is 40.03 % and the genome length is 1.7 Mbp.

Description of *Candidatus* Secunella gen. nov.

Candidatus Secunella (NL. fem. n. *Secunella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WQRI01*. The type species for the genus is *Candidatus* Secunella undevimonas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *WQRI01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Secunellaceae.

Description of *Candidatus* Secunellaceae fam. nov.

Candidatus Secunellaceae (NL. fem. n. *Secunellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *WQRI01.* The type genus for the taxon is *Candidatus* Secunella .

According to GTDB R06-RS202, this family belongs to the order *Christensenellales*.

Description of *Candidatus* Secunia nubecibula sp. nov.

Candidatus Secunia nubecibula (NL. fem. n. *nubecibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *SYDY01 sp005801425*. The type genome for the species is the GenBank assembly GCA_005801425.1. The GC content of the type genome is 50.16 % and the genome length is 3.38 Mbp.

Description of *Candidatus* Secunia gen. nov.

Candidatus Secunia (NL. fem. n. *Secunia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SYDY01*. The type species for the genus is *Candidatus* Secunia nubecibula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *XYA12-FULL-58-9*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Citipariaceae.

Description of *Candidatus* Secunida semivitica sp. nov.

Candidatus Secunida semivitica (NL. fem. n. *semivitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-12-FULL-66-21 sp001767455*. The type genome for the species is the GenBank assembly GCA_001767055.1. The GC content of the type genome is 67.11 % and the genome length is 6.38 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under low O2 conditions; 0.2 micron filter; full assembly".

Description of *Candidatus* Secunida gen. nov.

Candidatus Secunida (NL. fem. n. *Secunida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *2-12-FULL-66-21*. The type species for the genus is *Candidatus* Secunida semivitica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *2-12-FULL-66-21*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Secunidaceae.

Description of *Candidatus* Secunidaceae fam. nov.

Candidatus Secunidaceae (NL. fem. n. *Secunidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *2-12-FULL-66-21.* The type genus for the taxon is *Candidatus* Secunida .

According to GTDB R06-RS202, this family belongs to the order *Vicinamibacterales*.

Description of *Candidatus* Secunosa noniniforma sp. nov.

Candidatus Secunosa noniniforma (NL. fem. n. *noniniforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CG1-02-37-22 sp002785215*. The type genome for the species is the GenBank assembly GCA_002785215.1. The GC content of the type genome is 36.75 % and the genome length is 1.28 Mbp.

Description of *Candidatus* Secunosa gen. nov.

Candidatus Secunosa (NL. fem. n. *Secunosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CG1-02-37-22*. The type species for the genus is *Candidatus* Secunosa noniniforma .

According to the original version of GTDB R06-RS202, this genus belongs to the family *2-02-FULL-39-11*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Venefiaceae.

Description of *Candidatus* Secunula filifimonia sp. nov.

Candidatus Secunula filifimonia (NL. fem. n. *filifimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Palsa-1400 sp003138485*. The type genome for the species is the GenBank assembly GCA_003138485.1. The GC content of the type genome is 60.24 % and the genome length is 4.75 Mbp.

Description of *Candidatus* Secunula gen. nov.

Candidatus Secunula (NL. fem. n. *Secunula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Palsa-1400*. The type species for the genus is *Candidatus* Secunula filifimonia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *Palsa-1400*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Secunulaceae.

Description of *Candidatus* Secunulaceae fam. nov.

Candidatus Secunulaceae (NL. fem. n. *Secunulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *Palsa-1400.* The type genus for the taxon is *Candidatus* Secunula .

According to GTDB R06-RS202, this family belongs to the order *Pedosphaerales*.

Description of *Candidatus* Secunula vocifatica sp. nov.

Candidatus Secunula vocifatica (NL. fem. n. *vocifatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Palsa-1400 sp003140095*. The type genome for the species is the GenBank assembly GCA_003140095.1. The GC content of the type genome is 57.84 % and the genome length is 7.81 Mbp.

Description of *Candidatus* Sedimentibacter acratibula sp. nov.

Candidatus Sedimentibacter acratibula (NL. fem. n. *acratibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sedimentibacter sp002409285*. The type genome for the species is the GenBank assembly GCA_002409285.1. The GC content of the type genome is 36.38 % and the genome length is 2.95 Mbp.

Description of *Candidatus* Sedimentibacter assicisca sp. nov.

Candidatus Sedimentibacter assicisca (NL. fem. n. *assicisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Sedimentibacter sp012520455*. The type genome for the species is the GenBank assembly GCA_012520455.1. The GC content of the type genome is 39.63 % and the genome length is 1.99 Mbp.

Description of *Candidatus* Sedimentibacter bipalitio sp. nov.

Candidatus Sedimentibacter bipalitio (NL. fem. n. *bipalitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sedimentibacter sp002316225*. The type genome for the species is the GenBank assembly GCA_002316225.1. The GC content of the type genome is 39.5 % and the genome length is 2.04 Mbp.

Description of *Candidatus* Sedimentibacter colepitoga sp. nov.

Candidatus Sedimentibacter colepitoga (NL. fem. n. *colepitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sedimentibacter sp003487955*. The type genome for the species is the GenBank assembly GCA_003487955.1. The GC content of the type genome is 35.68 % and the genome length is 3.21 Mbp.

Description of *Candidatus* Sedimentibacter exforimonas sp. nov.

Candidatus Sedimentibacter exforimonas (NL. fem. n. *exforimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sedimentibacter sp002399975*. The type genome for the species is the GenBank assembly GCA_002399975.1. The GC content of the type genome is 35.36 % and the genome length is 3.12 Mbp.

Description of *Candidatus* Sedimentibacter expenitio sp. nov.

Candidatus Sedimentibacter expenitio (NL. fem. n. *expenitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sedimentibacter sp002316585*. The type genome for the species is the GenBank assembly GCA_002316585.1. The GC content of the type genome is 35.82 % and the genome length is 1.94 Mbp.

Description of *Candidatus* Sedimentibacter fatifimonia sp. nov.

Candidatus Sedimentibacter fatifimonia (NL. fem. n. *fatifimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sedimentibacter sp003483345*. The type genome for the species is the GenBank assembly GCA_012510665.1. The GC content of the type genome is 34.84 % and the genome length is 2.17 Mbp.

Description of *Candidatus* Sedimentibacter illunitoga sp. nov.

Candidatus Sedimentibacter illunitoga (NL. fem. n. *illunitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sedimentibacter sp003514865*. The type genome for the species is the GenBank assembly GCA_003514865.1. The GC content of the type genome is 38.45 % and the genome length is 2.47 Mbp.

Description of *Candidatus* Sedimentibacter inordago sp. nov.

Candidatus Sedimentibacter inordago (NL. fem. n. *inordago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sedimentibacter sp012518555*. The type genome for the species is the GenBank assembly GCA_012518555.1. The GC content of the type genome is 33.41 % and the genome length is 2.09 Mbp.

Description of *Candidatus* Sedimentibacter luceribra sp. nov.

Candidatus Sedimentibacter luceribra (NL. fem. n. *luceribra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sedimentibacter sp002340985*. The type genome for the species is the GenBank assembly GCA_002494095.1. The GC content of the type genome is 38.18 % and the genome length is 3.05 Mbp.

Description of *Candidatus* Sedimentibacter manufifica sp. nov.

Candidatus Sedimentibacter manufifica (NL. fem. n. *manufifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sedimentibacter sp002385835*. The type genome for the species is the GenBank assembly GCA_002385835.1. The GC content of the type genome is 34.17 % and the genome length is 2.76 Mbp.

Description of *Candidatus* Sedimentibacter murelitura sp. nov.

Candidatus Sedimentibacter murelitura (NL. fem. n. *murelitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sedimentibacter sp012519555*. The type genome for the species is the GenBank assembly GCA_012519555.1. The GC content of the type genome is 35.46 % and the genome length is 2.43 Mbp.

Description of *Candidatus* Sedimentibacter peracisca sp. nov.

Candidatus Sedimentibacter peracisca (NL. fem. n. *peracisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sedimentibacter sp002422545*. The type genome for the species is the GenBank assembly GCA_002422545.1. The GC content of the type genome is 36.32 % and the genome length is 3.58 Mbp.

Description of *Candidatus* Sedimentibacter peribitura sp. nov.

Candidatus Sedimentibacter peribitura (NL. fem. n. *peribitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sedimentibacter sp002331025*. The type genome for the species is the GenBank assembly GCA_003537995.1. The GC content of the type genome is 35.34 % and the genome length is 2.71 Mbp.

Description of *Candidatus* Sedimentibacter pimenivita sp. nov.

Candidatus Sedimentibacter pimenivita (NL. fem. n. *pimenivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Sedimentibacter sp002381185*. The type genome for the species is the GenBank assembly GCA_002367575.1. The GC content of the type genome is 35.37 % and the genome length is 3.57 Mbp.

Description of *Candidatus* Sedimentibacter ranunibra sp. nov.

Candidatus Sedimentibacter ranunibra (NL. fem. n. *ranunibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sedimentibacter sp003457065*. The type genome for the species is the GenBank assembly GCA_900549425.1. The GC content of the type genome is 37.74 % and the genome length is 2.96 Mbp.

Description of *Candidatus* Sedimentibacter xenodousia sp. nov.

Candidatus Sedimentibacter xenodousia (NL. fem. n. *xenodousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sedimentibacter sp003497505*. The type genome for the species is the GenBank assembly GCA_003497505.1. The GC content of the type genome is 38.96 % and the genome length is 2.54 Mbp.

Description of *Candidatus* Sediminibacterium abnorisca sp. nov.

Candidatus Sediminibacterium abnorisca (NL. fem. n. *abnorisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sediminibacterium sp009996675*. The type genome for the species is the GenBank assembly GCA_009996675.1. The GC content of the type genome is 46.31 % and the genome length is 3.25 Mbp.

Description of *Candidatus* Sediminibacterium adrenatica sp. nov.

Candidatus Sediminibacterium adrenatica (NL. fem. n. *adrenatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sediminibacterium sp003526435*. The type genome for the species is the GenBank assembly GCA_003526435.1. The GC content of the type genome is 41.08 % and the genome length is 3.02 Mbp.

Description of *Candidatus* Sediminibacterium adrenigena sp. nov.

Candidatus Sediminibacterium adrenigena (NL. fem. n. *adrenigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sediminibacterium sp009939225*. The type genome for the species is the GenBank assembly RS_GCF_009939225.1. The GC content of the type genome is 50.08 % and the genome length is 3.88 Mbp.

Description of *Candidatus* Sediminibacterium agnicitica sp. nov.

Candidatus Sediminibacterium agnicitica (NL. fem. n. *agnicitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sediminibacterium sp903848125*. The type genome for the species is the GenBank assembly GCA_903848125.1. The GC content of the type genome is 35.11 % and the genome length is 1.84 Mbp.

Description of *Candidatus* Sediminibacterium algifimonas sp. nov.

Candidatus Sediminibacterium algifimonas (NL. fem. n. *algifimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sediminibacterium sp902168225*. The type genome for the species is the GenBank assembly GCA_902168225.1. The GC content of the type genome is 37.51 % and the genome length is 3.61 Mbp.

Description of *Candidatus* Sediminibacterium altifitia sp. nov.

Candidatus Sediminibacterium altifitia (NL. fem. n. *altifitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sediminibacterium sp903929425*. The type genome for the species is the GenBank assembly GCA_903929425.1. The GC content of the type genome is 34.23 % and the genome length is 2.23 Mbp.

Description of *Candidatus* Sediminibacterium ammuratio sp. nov.

Candidatus Sediminibacterium ammuratio (NL. fem. n. *ammuratio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a

noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sediminibacterium sp903913355*. The type genome for the species is the GenBank assembly GCA_903913355.1. The GC content of the type genome is 39.63 % and the genome length is 3.42 Mbp.

Description of *Candidatus* Sediminibacterium atrusousia sp. nov.

Candidatus Sediminibacterium atrusousia (NL. fem. n. *atrusousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sediminibacterium sp903933765*. The type genome for the species is the GenBank assembly GCA_903933765.1. The GC content of the type genome is 36.7 % and the genome length is 1.64 Mbp.

Description of *Candidatus* Sediminibacterium cilibimonas sp. nov.

Candidatus Sediminibacterium cilibimonas (NL. fem. n. *cilibimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sediminibacterium sp903862505*. The type genome for the species is the GenBank assembly GCA_903862505.1. The GC content of the type genome is 36.0 % and the genome length is 2.01 Mbp.

Description of *Candidatus* Sediminibacterium cocibibula sp. nov.

Candidatus Sediminibacterium cocibibula (NL. fem. n. *cocibibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sediminibacterium sp004028765*. The type genome for the species is the GenBank assembly GCA_004028765.1. The GC content of the type genome is 45.31 % and the genome length is 3.72 Mbp.

Description of *Candidatus* Sediminibacterium cohorivita sp. nov.

Candidatus Sediminibacterium cohorivita (NL. fem. n. *cohorivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Sediminibacterium sp903874055*. The type genome for the species is the GenBank assembly GCA_903913075.1. The GC content of the type genome is 34.41 % and the genome length is 2.07 Mbp.

Description of *Candidatus* Sediminibacterium conopitura sp. nov.

Candidatus Sediminibacterium conopitura (NL. fem. n. *conopitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sediminibacterium sp009924165*. The type genome for the species is the GenBank assembly GCA_009924165.1. The GC content of the type genome is 36.26 % and the genome length is 1.78 Mbp.

Description of *Candidatus* Sediminibacterium crabredo sp. nov.

Candidatus Sediminibacterium crabredo (NL. fem. n. *crabredo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sediminibacterium sp012270485*. The type genome for the species is the GenBank assembly GCA_012270485.1. The GC content of the type genome is 39.27 % and the genome length is 4.04 Mbp.

Description of *Candidatus* Sediminibacterium curabitrix sp. nov.

Candidatus Sediminibacterium curabitrix (NL. fem. n. *curabitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sediminibacterium sp000515315*. The type genome for the species is the GenBank assembly GCA_000427525.1. The GC content of the type genome is 45.65 % and the genome length is 3.77 Mbp.

Description of *Candidatus* Sediminibacterium dehinilega sp. nov.

Candidatus Sediminibacterium dehinilega (NL. fem. n. *dehinilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sediminibacterium sp903944755*. The type genome for the species is the GenBank assembly GCA_903944755.1. The GC content of the type genome is 35.85 % and the genome length is 1.98 Mbp.

Description of *Candidatus* Sediminibacterium denunisca sp. nov.

Candidatus Sediminibacterium denunisca (NL. fem. n. *denunisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sediminibacterium sp003509845*. The type genome for the species is the GenBank assembly GCA_003509845.1. The GC content of the type genome is 35.52 % and the genome length is 2.07 Mbp.

Description of *Candidatus* Sediminibacterium depocugo sp. nov.

Candidatus Sediminibacterium depocugo (NL. fem. n. *depocugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sediminibacterium sp004294465*. The type genome for the species is the GenBank assembly GCA_004294465.1. The GC content of the type genome is 35.5 % and the genome length is 1.78 Mbp.

Description of *Candidatus* Sediminibacterium derecilega sp. nov.

Candidatus Sediminibacterium derecilega (NL. fem. n. *derecilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sediminibacterium sp903926855*. The type genome for the species is the GenBank assembly GCA_903869845.1. The GC content of the type genome is 39.67 % and the genome length is 3.16 Mbp.

Description of *Candidatus* Sediminibacterium dicabitudo sp. nov.

Candidatus Sediminibacterium dicabitudo (NL. fem. n. *dicabitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sediminibacterium sp004293505*. The type genome for the species is the GenBank assembly GCA_004293505.1. The GC content of the type genome is 47.7 % and the genome length is 1.85 Mbp.

Description of *Candidatus* Sediminibacterium dilementia sp. nov.

Candidatus Sediminibacterium dilementia (NL. fem. n. *dilementia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a

noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sediminibacterium sp903819975*. The type genome for the species is the GenBank assembly GCA_903871355.1. The GC content of the type genome is 34.82 % and the genome length is 2.23 Mbp.

Description of *Candidatus* Sediminibacterium eccisugo sp. nov.

Candidatus Sediminibacterium eccisugo (NL. fem. n. *eccisugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sediminibacterium sp009920495*. The type genome for the species is the GenBank assembly GCA_009920495.1. The GC content of the type genome is 35.6 % and the genome length is 2.29 Mbp.

Description of *Candidatus* Sediminibacterium echiditica sp. nov.

Candidatus Sediminibacterium echiditica (NL. fem. n. *echiditica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sediminibacterium sp903824725*. The type genome for the species is the GenBank assembly GCA_903824725.1. The GC content of the type genome is 34.97 % and the genome length is 2.21 Mbp.

Description of *Candidatus* Sediminibacterium ectenentia sp. nov.

Candidatus Sediminibacterium ectenentia (NL. fem. n. *ectenentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sediminibacterium sp000508085*. The type genome for the species is the GenBank assembly RS_GCF_000508085.1. The GC content of the type genome is 39.24 % and the genome length is 3.22 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "activated sludge".

Description of *Candidatus* Sediminibacterium fatilitica sp. nov.

Candidatus Sediminibacterium fatilitica (NL. fem. n. *fatilitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sediminibacterium sp009928005*. The type genome for the species is the GenBank assembly GCA_009922485.1. The GC content of the type genome is 34.15 % and the genome length is 2.32 Mbp.

Description of *Candidatus* Sediminibacterium furibetta sp. nov.

Candidatus Sediminibacterium furibetta (NL. fem. n. *furibetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sediminibacterium sp002786355*. The type genome for the species is the GenBank assembly GCA_013823605.1. The GC content of the type genome is 35.98 % and the genome length is 3.27 Mbp.

Description of *Candidatus* Sediminibacterium hecatentia sp. nov.

Candidatus Sediminibacterium hecatentia (NL. fem. n. *hecatentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sediminibacterium sp903899675*. The type genome for the species is the GenBank assembly GCA_903899675.1. The GC content of the type genome is 41.67 % and the genome length is 2.79 Mbp.

Description of *Candidatus* Sediminibacterium hegumimonas sp. nov.

Candidatus Sediminibacterium hegumimonas (NL. fem. n. *hegumimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sediminibacterium sp903910765*. The type genome for the species is the GenBank assembly GCA_903910765.1. The GC content of the type genome is 35.34 % and the genome length is 2.5 Mbp.

Description of *Candidatus* Sediminibacterium hexamibra sp. nov.

Candidatus Sediminibacterium hexamibra (NL. fem. n. *hexamibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sediminibacterium sp903847655*. The type genome for the species is the GenBank assembly GCA_903847655.1. The GC content of the type genome is 36.76 % and the genome length is 1.86 Mbp.

Description of *Candidatus* Sediminibacterium homolentia sp. nov.

Candidatus Sediminibacterium homolentia (NL. fem. n. *homolentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sediminibacterium sp013297995*. The type genome for the species is the GenBank assembly GCA_013297995.1. The GC content of the type genome is 37.19 % and the genome length is 3.23 Mbp.

Description of *Candidatus* Sediminibacterium illepitio sp. nov.

Candidatus Sediminibacterium illepitio (NL. fem. n. *illepitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sediminibacterium sp008080615*. The type genome for the species is the GenBank assembly GCA_008080615.1. The GC content of the type genome is 35.74 % and the genome length is 2.03 Mbp.

Description of *Candidatus* Sediminibacterium inabrifica sp. nov.

Candidatus Sediminibacterium inabrifica (NL. fem. n. *inabrifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sediminibacterium sp013205585*. The type genome for the species is the GenBank assembly GCA_013205585.1. The GC content of the type genome is 35.0 % and the genome length is 1.89 Mbp.

Description of *Candidatus* Sediminibacterium inabsilenta sp. nov.

Candidatus Sediminibacterium inabsilenta (NL. fem. n. *inabsilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sediminibacterium sp903821465*. The type genome for the species is the GenBank assembly GCA_903821465.1. The GC content of the type genome is 37.12 % and the genome length is 3.37 Mbp.

Description of *Candidatus* Sediminibacterium inexpisca sp. nov.

Candidatus Sediminibacterium inexpisca (NL. fem. n. *inexpisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sediminibacterium sp009693715*. The type genome for the species is the GenBank assembly GCA_009693715.1. The GC content of the type genome is 35.86 % and the genome length is 1.98 Mbp.

Description of *Candidatus* Sediminibacterium infenousia sp. nov.

Candidatus Sediminibacterium infenousia (NL. fem. n. *infenousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sediminibacterium sp007280515*. The type genome for the species is the GenBank assembly GCA_007280515.1. The GC content of the type genome is 35.13 % and the genome length is 1.82 Mbp.

Description of *Candidatus* Sediminibacterium inurbimonia sp. nov.

Candidatus Sediminibacterium inurbimonia (NL. fem. n. *inurbimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sediminibacterium sp002281575*. The type genome for the species is the GenBank assembly GCA_002281575.1. The GC content of the type genome is 36.13 % and the genome length is 3.18 Mbp.

Description of *Candidatus* Sediminibacterium lacinimonia sp. nov.

Candidatus Sediminibacterium lacinimonia (NL. fem. n. *lacinimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sediminibacterium sp002281875*. The type genome for the species is the GenBank assembly GCA_002281875.1. The GC content of the type genome is 36.2 % and the genome length is 3.07 Mbp.

Description of *Candidatus* Sediminibacterium lanugitrix sp. nov.

Candidatus Sediminibacterium lanugitrix (NL. fem. n. *lanugitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Sediminibacterium sp903953815*. The type genome for the species is the GenBank assembly GCA_903951895.1. The GC content of the type genome is 35.26 % and the genome length is 2.54 Mbp.

Description of *Candidatus* Sediminibacterium lapililenta sp. nov.

Candidatus Sediminibacterium lapililenta (NL. fem. n. *lapililenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sediminibacterium sp004297075*. The type genome for the species is the GenBank assembly GCA_004297075.1. The GC content of the type genome is 46.09 % and the genome length is 4.07 Mbp.

Description of *Candidatus* Sediminibacterium manufimonas sp. nov.

Candidatus Sediminibacterium manufimonas (NL. fem. n. *manufimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sediminibacterium sp002256765*. The type genome for the species is the GenBank assembly GCA_002282285.1. The GC content of the type genome is 39.03 % and the genome length is 3.05 Mbp.

Description of *Candidatus* Sediminibacterium molecitudo sp. nov.

Candidatus Sediminibacterium molecitudo (NL. fem. n. *molecitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sediminibacterium sp903924075*. The type genome for the species is the GenBank assembly GCA_903924075.1. The GC content of the type genome is 37.64 % and the genome length is 3.44 Mbp.

Description of *Candidatus* Sediminibacterium nubifitica sp. nov.

Candidatus Sediminibacterium nubifitica (NL. fem. n. *nubifitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sediminibacterium sp903938445*. The type genome for the species is the GenBank assembly GCA_903938445.1. The GC content of the type genome is 34.38 % and the genome length is 2.24 Mbp.

Description of *Candidatus* Sediminibacterium octoditrix sp. nov.

Candidatus Sediminibacterium octoditrix (NL. fem. n. *octoditrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sediminibacterium sp000438985*. The type genome for the species is the GenBank assembly GCA_000438985.1. The GC content of the type genome is 35.68 % and the genome length is 1.44 Mbp.

Description of *Candidatus* Sediminibacterium petulentia sp. nov.

Candidatus Sediminibacterium petulentia (NL. fem. n. *petulentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sediminibacterium sp903854725*. The type genome for the species is the GenBank assembly GCA_903864285.1. The GC content of the type genome is 34.76 % and the genome length is 2.04 Mbp.

Description of *Candidatus* Sediminibacterium podagivita sp. nov.

Candidatus Sediminibacterium podagivita (NL. fem. n. *podagivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sediminibacterium sp009773795*. The type genome for the species is the GenBank assembly GCA_009773795.1. The GC content of the type genome is 36.45 % and the genome length is 1.68 Mbp.

Description of *Candidatus* Sediminibacterium repuditas sp. nov.

Candidatus Sediminibacterium repuditas (NL. fem. n. *repuditas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sediminibacterium sp903825065*. The type genome for the species is the GenBank assembly GCA_903888675.1. The GC content of the type genome is 34.88 % and the genome length is 2.01 Mbp.

Description of *Candidatus* Sediminibacterium ridibousia sp. nov.

Candidatus Sediminibacterium ridibousia (NL. fem. n. *ridibousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a

noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sediminibacterium sp004294135*. The type genome for the species is the GenBank assembly GCA_004294135.1. The GC content of the type genome is 37.49 % and the genome length is 2.6 Mbp.

Description of *Candidatus* Sediminibacterium risibicula sp. nov.

Candidatus Sediminibacterium risibicula (NL. fem. n. *risibicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sediminibacterium sp009693615*. The type genome for the species is the GenBank assembly GCA_009693615.1. The GC content of the type genome is 35.27 % and the genome length is 1.5 Mbp.

Description of *Candidatus* Sediminibacterium rosacivita sp. nov.

Candidatus Sediminibacterium rosacivita (NL. fem. n. *rosacivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sediminibacterium sp001829005*. The type genome for the species is the GenBank assembly GCA_001829035.1. The GC content of the type genome is 35.91 % and the genome length is 3.3 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at 16ft depth; 0.2 micron filter at time point D".

Description of *Candidatus* Sediminibacterium selibilenta sp. nov.

Candidatus Sediminibacterium selibilenta (NL. fem. n. *selibilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sediminibacterium sp013391385*. The type genome for the species is the GenBank assembly GCA_013391385.1. The GC content of the type genome is 39.32 % and the genome length is 3.52 Mbp.

Description of *Candidatus* Sediminibacterium semapicula sp. nov.

Candidatus Sediminibacterium semapicula (NL. fem. n. *semapicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sediminibacterium sp903825095*. The type genome for the species is the GenBank assembly GCA_903825095.1. The GC content of the type genome is 35.05 % and the genome length is 2.07 Mbp.

Description of *Candidatus* Sediminibacterium semuniforma sp. nov.

Candidatus Sediminibacterium semuniforma (NL. fem. n. *semuniforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sediminibacterium sp903851465*. The type genome for the species is the GenBank assembly GCA_903882585.1. The GC content of the type genome is 36.43 % and the genome length is 1.87 Mbp.

Description of *Candidatus* Sediminibacterium siligastra sp. nov.

Candidatus Sediminibacterium siligastra (NL. fem. n. *siligastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sediminibacterium sp903927185*. The type genome for the species is the GenBank assembly GCA_903920625.1. The GC content of the type genome is 34.85 % and the genome length is 3.5 Mbp.

Description of *Candidatus* Sediminibacterium subaditudo sp. nov.

Candidatus Sediminibacterium subaditudo (NL. fem. n. *subaditudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sediminibacterium sp013289065*. The type genome for the species is the GenBank assembly GCA_013289065.1. The GC content of the type genome is 41.92 % and the genome length is 2.44 Mbp.

Description of *Candidatus* Sediminibacterium teniletta sp. nov.

Candidatus Sediminibacterium teniletta (NL. fem. n. *teniletta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sediminibacterium sp903958045*. The type genome for the species is the GenBank assembly GCA_903938795.1. The GC content of the type genome is 38.41

% and the genome length is 2.34 Mbp.

Description of *Candidatus* Sediminibacterium totidedo sp. nov.

Candidatus Sediminibacterium totidedo (NL. fem. n. *totidedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sediminibacterium sp002299885*. The type genome for the species is the GenBank assembly GCA_002299885.1. The GC content of the type genome is 35.91 % and the genome length is 1.92 Mbp.

Description of *Candidatus* Sediminibacterium turifatio sp. nov.

Candidatus Sediminibacterium turifatio (NL. fem. n. *turifatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sediminibacterium sp903831935*. The type genome for the species is the GenBank assembly GCA_903858435.1. The GC content of the type genome is 35.52 % and the genome length is 2.34 Mbp.

Description of *Candidatus* Sediminibacterium uberritura sp. nov.

Candidatus Sediminibacterium uberritura (NL. fem. n. *uberritura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sediminibacterium sp005800655*. The type genome for the species is the GenBank assembly GCA_005800655.1. The GC content of the type genome is 35.8 % and the genome length is 1.91 Mbp.

Description of *Candidatus* Sediminibacterium velivago sp. nov.

Candidatus Sediminibacterium velivago (NL. fem. n. *velivago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sediminibacterium sp903865435*. The type genome for the species is the GenBank assembly GCA_903873625.1. The GC content of the type genome is 35.59 % and the genome length is 2.12 Mbp.

Description of *Candidatus* Sediminibacterium venucilega sp. nov.

Candidatus Sediminibacterium venucilega (NL. fem. n. *venucilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sediminibacterium sp903933995*. The type genome for the species is the GenBank assembly GCA_903933995.1. The GC content of the type genome is 38.82 % and the genome length is 3.74 Mbp.

Description of *Candidatus* Sediminibacterium voragatica sp. nov.

Candidatus Sediminibacterium voragatica (NL. fem. n. *voragatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sediminibacterium sp002256435*. The type genome for the species is the GenBank assembly GCA_002256435.1. The GC content of the type genome is 38.58 % and the genome length is 4.34 Mbp.

Description of *Candidatus* Sediminicola adpenifica sp. nov.

Candidatus Sediminicola adpenifica (NL. fem. n. *adpenifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sediminicola sp001430825*. The type genome for the species is the GenBank assembly RS_GCF_001430825.1. The GC content of the type genome is 39.4 % and the genome length is 3.57 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "environmental".

Description of *Candidatus* Sediminihabitans ammaticella sp. nov.

Candidatus Sediminihabitans ammaticella (NL. fem. n. *ammaticella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sediminihabitans sp003752595*. The type genome for the species is the GenBank assembly RS_GCF_003752595.1. The GC content of the type genome is 74.1 % and the genome length is 3.21 Mbp.

Description of *Candidatus* Sediminimonas fecunibula sp. nov.

Candidatus Sediminimonas fecunibula (NL. fem. n. *fecunibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sediminimonas sp011389955*. The type genome for the species is the GenBank assembly GCA_011389955.1. The GC content of the type genome is 63.73 % and the genome length is 1.86 Mbp.

Description of *Candidatus* Segetibacter irrevibra sp. nov.

Candidatus Segetibacter irrevibra (NL. fem. n. *irrevibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Segetibacter sp002050375*. The type genome for the species is the GenBank assembly GCA_002050375.1. The GC content of the type genome is 38.41 % and the genome length is 4.91 Mbp.

Description of *Candidatus* Segetibacter ossaritia sp. nov.

Candidatus Segetibacter ossaritia (NL. fem. n. *ossaritia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Segetibacter sp004354985*. The type genome for the species is the GenBank assembly RS_GCF_004354985.1. The GC content of the type genome is 45.31 % and the genome length is 6.75 Mbp.

Description of *Candidatus* Selecana dicanitas sp. nov.

Candidatus Selecana dicanitas (NL. fem. n. *dicanitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *QOAZ01 sp003574675*. The type genome for the species is the GenBank assembly RS_GCF_003574615.1. The GC content of the type genome is 71.94 % and the genome length is 3.74 Mbp.

Description of *Candidatus* Selecana gen. nov.

Candidatus Selecana (NL. fem. n. *Selecana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *QOAZ01*. The type species for the genus is *Candidatus* Selecana dicanitas .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Selecaria desulitrix sp. nov.

Candidatus Selecaria desulitrix (NL. fem. n. *desulitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAUTN01 sp012031415*. The type genome for the species is the GenBank assembly GCA_012031415.1. The GC content of the type genome is 48.94 % and the genome length is 7.79 Mbp.

Description of *Candidatus* Selecaria gen. nov.

Candidatus Selecaria (NL. fem. n. *Selecaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAUTN01*. The type species for the genus is *Candidatus* Selecaria desulitrix .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Selecaria inargousia sp. nov.

Candidatus Selecaria inargousia (NL. fem. n. *inargousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAUTN01 sp012033355*. The type genome for the species is the GenBank assembly GCA_012033355.1. The GC content of the type genome is 49.59 % and the genome length is 5.47 Mbp.

Description of *Candidatus* Selecia vitupilenta sp. nov.

Candidatus Selecia vitupilenta (NL. fem. n. *vitupilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2400 sp002343265*. The type genome for the species is the GenBank assembly GCA_002343265.1. The GC content of the type genome is 57.53 % and the genome length is 1.98 Mbp.

Description of *Candidatus* Selecia gen. nov.

Candidatus Selecia (NL. fem. n. *Selecia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA2400*. The type species for the genus is *Candidatus* Selecia vitupilenta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2400*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Seleciaceae.

Description of *Candidatus* Seleciaceae fam. nov.

Candidatus Seleciaceae (NL. fem. n. *Seleciaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA2400.* The type genus for the taxon is *Candidatus* Selecia .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA2400*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Seleciales.

Description of *Candidatus* Seleciales ord. nov.

Candidatus Seleciales (NL. fem. n. *Seleciales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA2400.* The type genus for the taxon is *Candidatus* Selecia .

According to the GTDB R06-RS202, this order belongs to the class *Alphaproteobacteria*.

Description of *Candidatus* Selecosa funiviforma sp. nov.

Candidatus Selecosa funiviforma (NL. fem. n. *funiviforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RS62 sp000496475*. The type genome for the species is the GenBank assembly GCA_002430165.1. The GC content of the type genome is 54.22 % and the genome length is 2.51 Mbp.

Description of *Candidatus* Selecosa gen. nov.

Candidatus Selecosa (NL. fem. n. *Selecosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RS62*. The type species for the genus is *Candidatus* Selecosa funiviforma .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Selecosa negidessa sp. nov.

Candidatus Selecosa negidessa (NL. fem. n. *negidessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RS62 sp002340675*. The type genome for the species is the GenBank assembly GCA_002340675.1. The GC content of the type genome is 56.77 % and the genome length is 2.44 Mbp.

Description of *Candidatus* Selecula direpibra sp. nov.

Candidatus Selecula direpibra (NL. fem. n. *direpibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SLNM01 sp007133055*. The type genome for the species is the GenBank assembly GCA_003557695.1. The GC content of the type genome is 57.06 % and the genome length is 2.92 Mbp.

Description of *Candidatus* Selecula gen. nov.

Candidatus Selecula (NL. fem. n. *Selecula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SLNM01*. The type species for the genus is *Candidatus* Selecula direpibra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *PUNB01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Desepellaceae.

Description of *Candidatus* Seleniivibrio inguratica sp. nov.

Candidatus Seleniivibrio inguratica (NL. fem. n. *inguratica* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Seleniivibrio sp002452405*. The type genome for the species is the GenBank assembly GCA_002452405.1. The GC content of the type genome is 46.68 % and the genome length is 2.97 Mbp.

Description of *Candidatus* Seleniivibrio obmutitoga sp. nov.

Candidatus Seleniivibrio obmutitoga (NL. fem. n. *obmutitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Seleniivibrio sp002452335*. The type genome for the species is the GenBank assembly GCA_002452335.1. The GC content of the type genome is 47.66 % and the genome length is 2.63 Mbp.

Description of *Candidatus* Selenomonas agrimimonia sp. nov.

Candidatus Selenomonas agrimimonia (NL. fem. n. *agrimimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Selenomonas_A sp000686945*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_000686945.1. The GC content of the type genome is 49.02 % and the genome length is 2.82 Mbp.

Description of *Candidatus* Selenomonas debucousia sp. nov.

Candidatus Selenomonas debucousia (NL. fem. n. *debucousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Selenomonas_A sp004552655*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_009697385.1. The GC content of the type genome is 52.68 % and the genome length is 2.64 Mbp.

Description of *Candidatus* Selenomonas imbecitoga sp. nov.

Candidatus Selenomonas imbecitoga (NL. fem. n. *imbecitoga* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Selenomonas_A sp900769615*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_900769615.1. The GC content of the type genome is 41.13 % and the genome length is 2.18 Mbp.

Description of *Candidatus* Selenomonas resulitudo sp. nov.

Candidatus Selenomonas resulitudo (NL. fem. n. *resulitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Selenomonas_A sp000702005*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_000702005.1. The GC content of the type genome is 48.75 % and the genome length is 2.87 Mbp.

Description of *Candidatus* Selenomonas tabitatica sp. nov.

Candidatus Selenomonas tabitatica (NL. fem. n. *tabitatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Selenomonas_A sp008271295*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_008271295.1. The GC content of the type genome is 50.06 % and the genome length is 2.96 Mbp.

Description of *Candidatus* Selenomonas cepurilenta sp. nov.

Candidatus Selenomonas cepurilenta (NL. fem. n. *cepurilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Selenomonas_C sp900314825*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902794105.1. The GC

content of the type genome is 58.41 % and the genome length is 3.13 Mbp.

Description of *Candidatus* Selenomonas cicarivita sp. nov.

Candidatus Selenomonas cicarivita (NL. fem. n. *cicarivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Selenomonas_C sp002351185*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_002351185.1. The GC content of the type genome is 61.57 % and the genome length is 1.77 Mbp.

Description of *Candidatus* Selenomonas cotenitudo sp. nov.

Candidatus Selenomonas cotenitudo (NL. fem. n. *cotenitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Selenomonas_C sp900315575*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902776045.1. The GC content of the type genome is 58.63 % and the genome length is 2.78 Mbp.

Description of *Candidatus* Selenomonas defenousia sp. nov.

Candidatus Selenomonas defenousia (NL. fem. n. *defenousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Selenomonas_C sp900318215*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902795175.1. The GC content of the type genome is 58.95 % and the genome length is 2.77 Mbp.

Description of *Candidatus* Selenomonas vinuledo sp. nov.

Candidatus Selenomonas vinuledo (NL. fem. n. *vinuledo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Selenomonas_C sp902780535*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902780535.1. The GC content of the type genome is 59.11 % and the genome length is 2.94 Mbp.

Description of *Candidatus* Selibana detepax sp. nov.

Candidatus Selibana detepax (NL. fem. n. *detepax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-964 sp902773265*. The type genome for the species is the GenBank assembly GCA_902773265.1. The GC content of the type genome is 38.93 % and the genome length is 1.79 Mbp.

Description of *Candidatus* Selibana gen. nov.

Candidatus Selibana (NL. fem. n. *Selibana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAG-964*. The type species for the genus is *Candidatus* Selibana detepax .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Selibana letifibra sp. nov.

Candidatus Selibana letifibra (NL. fem. n. *letifibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-964 sp902772795*. The type genome for the species is the GenBank assembly GCA_902772795.1. The GC content of the type genome is 40.77 % and the genome length is 2.24 Mbp.

Description of *Candidatus* Selibana locupitio sp. nov.

Candidatus Selibana locupitio (NL. fem. n. *locupitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-964 sp902789345*. The type genome for the species is the

GenBank assembly GCA_902789345.1. The GC content of the type genome is 39.68 % and the genome length is 2.11 Mbp.

Description of *Candidatus* Selibana medimitudo sp. nov.

Candidatus Selibana medimitudo (NL. fem. n. *medimitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-964 sp900316025*. The type genome for the species is the GenBank assembly GCA_902800885.1. The GC content of the type genome is 40.1 % and the genome length is 1.96 Mbp.

Description of *Candidatus* Selibana noninessa sp. nov.

Candidatus Selibana noninessa (NL. fem. n. *noninessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-964 sp900316615*. The type genome for the species is the GenBank assembly GCA_902764765.1. The GC content of the type genome is 40.26 % and the genome length is 1.79 Mbp.

Description of *Candidatus* Selibana obnupitio sp. nov.

Candidatus Selibana obnupitio (NL. fem. n. *obnupitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-964 sp902762375*. The type genome for the species is the GenBank assembly GCA_902762375.1. The GC content of the type genome is 38.48 % and the genome length is 2.45 Mbp.

Description of *Candidatus* Selibana perexicella sp. nov.

Candidatus Selibana perexicella (NL. fem. n. *perexicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-964 sp000435335*. The type genome for the species is the GenBank assembly GCA_900540025.1. The GC content of the type genome is 40.51 % and the genome length is 1.97 Mbp.

Description of *Candidatus* Selibaria catocago sp. nov.

Candidatus Selibaria catocago (NL. fem. n. *catocago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2029 sp002332795*. The type genome for the species is the GenBank assembly GCA_002332795.1. The GC content of the type genome is 63.9 % and the genome length is 3.89 Mbp.

Description of *Candidatus* Selibaria gen. nov.

Candidatus Selibaria (NL. fem. n. *Selibaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA2029*. The type species for the genus is *Candidatus* Selibaria catocago .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2029*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Selibariaceae.

Description of *Candidatus* Selibariaceae fam. nov.

Candidatus Selibariaceae (NL. fem. n. *Selibariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA2029.* The type genus for the taxon is *Candidatus* Selibaria .

According to the original version of GTDB R06-RS202, this family belongs to the order *SBR1031*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Nocumellales.

Description of *Candidatus* Selibella demogiforma sp. nov.

Candidatus Selibella demogiforma (NL. fem. n. *demogiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7057 sp002493865*. The type genome for the species is the GenBank assembly GCA_002493865.1. The GC content of the type genome is 31.13 % and the genome length is 1.28 Mbp.

Description of *Candidatus* Selibella gen. nov.

Candidatus Selibella (NL. fem. n. *Selibella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA7057*. The type species for the genus is *Candidatus* Selibella demogiforma .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA660*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vitigellaceae.

Description of *Candidatus* Selibella pudibatio sp. nov.

Candidatus Selibella pudibatio (NL. fem. n. *pudibatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7057 sp900543675*. The type genome for the species is the GenBank assembly RS_GCF_900760015.1. The GC content of the type genome is 31.78 % and the genome length is 1.43 Mbp.

Description of *Candidatus* Selibella turifilega sp. nov.

Candidatus Selibella turifilega (NL. fem. n. *turifilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7057 sp900542735*. The type genome for the species is the GenBank assembly RS_GCF_900759975.1. The GC content of the type genome is 27.1 % and the genome length is 1.38 Mbp.

Description of *Candidatus* Selibia defositas sp. nov.

Candidatus Selibia defositas (NL. fem. n. *defositas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *W0P31-042 sp004557195*. The type genome for the species is the GenBank assembly GCA_004556725.1. The GC content of the type genome is 49.59 % and the genome length is 1.71 Mbp.

Description of *Candidatus* Selibia gen. nov.

Candidatus Selibia (NL. fem. n. *Selibia* a name created arbitrarily, while preserving the

phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *W0P31-042*. The type species for the genus is *Candidatus* Selibia defositas .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Selibida murelugo sp. nov.

Candidatus Selibida murelugo (NL. fem. n. *murelugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SZUA-371 sp003246475*. The type genome for the species is the GenBank assembly GCA_003246475.1. The GC content of the type genome is 50.55 % and the genome length is 3.21 Mbp.

Description of *Candidatus* Selibida gen. nov.

Candidatus Selibida (NL. fem. n. *Selibida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SZUA-371*. The type species for the genus is *Candidatus* Selibida murelugo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SZUA-371*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Selibidaceae.

Description of *Candidatus* Selibidaceae fam. nov.

Candidatus Selibidaceae (NL. fem. n. *Selibidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SZUA-371.* The type genus for the taxon is *Candidatus* Selibida .

According to GTDB R06-RS202, this family belongs to the order *Victivallales*.

Description of *Candidatus* Selibosa ceromitudo sp. nov.

Candidatus Selibosa ceromitudo (NL. fem. n. *ceromitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MWAK01 sp002069365*. The type genome for the species is the GenBank assembly GCA_002069365.1. The GC content of the type genome is 64.44 % and the genome length is 1.86 Mbp.

Description of *Candidatus* Selibosa gen. nov.

Candidatus Selibosa (NL. fem. n. *Selibosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *MWAK01*. The type species for the genus is *Candidatus* Selibosa ceromitudo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *MWAK01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Selibosaceae.

Description of *Candidatus* Selibosaceae fam. nov.

Candidatus Selibosaceae (NL. fem. n. *Selibosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *MWAK01.* The type genus for the taxon is *Candidatus* Selibosa .

According to the original version of GTDB R06-RS202, this family belongs to the order *MWAK01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Selibosales.

Description of *Candidatus* Selibosales ord. nov.

Candidatus Selibosales (NL. fem. n. *Selibosales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *MWAK01.* The type genus for the taxon is *Candidatus* Selibosa .

According to the original version of GTDB R06-RS202, this family belongs to the class *UBA8468*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Semodulae.

Description of *Candidatus* Selibula adaggedo sp. nov.

Candidatus Selibula adaggedo (NL. fem. n. *adaggedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PWUC01 sp007128555*. The type genome for the species is the GenBank assembly GCA_007128555.1. The GC content of the type genome is 59.63 % and the genome length is 2.68 Mbp.

Description of *Candidatus* Selibula gen. nov.

Candidatus Selibula (NL. fem. n. *Selibula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PWUC01*. The type species for the genus is *Candidatus* Selibula adaggedo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *PUMD01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Reforariaceae.

Description of *Candidatus* Selibula alcalibula sp. nov.

Candidatus Selibula alcalibula (NL. fem. n. *alcalibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PWUC01 sp003562655*. The type genome for the species is the GenBank assembly GCA_003562655.1. The GC content of the type genome is 61.84 % and the genome length is 1.96 Mbp.

Description of *Candidatus* Selibula xeramugo sp. nov.

Candidatus Selibula xeramugo (NL. fem. n. *xeramugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PWUC01 sp003566675*. The type genome for the species is the GenBank assembly GCA_007119245.1. The GC content of the type genome is 58.73 % and the genome length is 2.42 Mbp.

Description of *Candidatus* Sellimonas homagousia sp. nov.

Candidatus Sellimonas homagousia (NL. fem. n. *homagousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sellimonas sp002161525*. The type genome for the species is the GenBank assembly RS_GCF_002161525.1. The GC content of the type genome is 45.71 % and the genome length is 3.29 Mbp.

Description of *Candidatus* Sellimonas locelitudo sp. nov.

Candidatus Sellimonas locelitudo (NL. fem. n. *locelitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sellimonas sp002159995*. The type genome for the species is the GenBank assembly RS_GCF_002160415.1. The GC content of the type genome is 44.76 % and the genome length is 2.97 Mbp.

Description of *Candidatus* Semapana delebugo sp. nov.

Candidatus Semapana delebugo (NL. fem. n. *delebugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PNON01 sp013824865*. The type genome for the species is the GenBank assembly GCA_013824865.1. The GC content of the type genome is 49.39 % and the genome length is 2.1 Mbp.

Description of *Candidatus* Semapana gen. nov.

Candidatus Semapana (NL. fem. n. *Semapana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PNON01*. The type species for the genus is *Candidatus* Semapana delebugo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Semapana gasifessa sp. nov.

Candidatus Semapana gasifessa (NL. fem. n. *gasifessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PNON01 sp903828565*. The type genome for the species is the

GenBank assembly GCA_903828565.1. The GC content of the type genome is 52.12 % and the genome length is 2.22 Mbp.

Description of *Candidatus* Semaparia desupastra sp. nov.

Candidatus Semaparia desupastra (NL. fem. n. *desupastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTLJ01 sp011333345*. The type genome for the species is the GenBank assembly GCA_011333345.1. The GC content of the type genome is 47.89 % and the genome length is 2.08 Mbp.

Description of *Candidatus* Semaparia gen. nov.

Candidatus Semaparia (NL. fem. n. *Semaparia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DTLJ01*. The type species for the genus is *Candidatus* Semaparia desupastra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DTLJ01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Semapariaceae.

Description of *Candidatus* Semapariaceae fam. nov.

Candidatus Semapariaceae (NL. fem. n. *Semapariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *DTLJ01.* The type genus for the taxon is *Candidatus* Semaparia .

According to GTDB R06-RS202, this family belongs to the order *Syntrophales*.

Description of *Candidatus* Semapella carunicula sp. nov.

Candidatus Semapella carunicula (NL. fem. n. *carunicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PALSA-600 sp009702325*. The type genome for the species is the GenBank assembly GCA_009702325.1. The GC content of the type genome is 64.81 % and the genome length is 1.91 Mbp.

Description of *Candidatus* Semapella gen. nov.

Candidatus Semapella (NL. fem. n. *Semapella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PALSA-600*. The type species for the genus is *Candidatus* Semapella carunicula .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Semapella culigibula sp. nov.

Candidatus Semapella culigibula (NL. fem. n. *culigibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PALSA-600 sp903915545*. The type genome for the species is the GenBank assembly GCA_903881195.1. The GC content of the type genome is 65.15 % and the genome length is 2.32 Mbp.

Description of *Candidatus* Semapella exurrivita sp. nov.

Candidatus Semapella exurrivita (NL. fem. n. *exurrivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PALSA-600 sp003136795*. The type genome for the species is the GenBank assembly GCA_003136795.1. The GC content of the type genome is 69.11 % and the genome length is 2.61 Mbp.

Description of *Candidatus* Semapella minurilega sp. nov.

Candidatus Semapella minurilega (NL. fem. n. *minurilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PALSA-600 sp903930195*. The type genome for the species is the GenBank assembly GCA_903930195.1. The GC content of the type genome is 70.13 % and the genome length is 2.06 Mbp.

Description of *Candidatus* Semapella revecilenta sp. nov.

Candidatus Semapella revecilenta (NL. fem. n. *revecilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PALSA-600 sp013362295*. The type genome for the species is the GenBank assembly GCA_013362295.1. The GC content of the type genome is 70.14 % and the genome length is 3.79 Mbp.

Description of *Candidatus* Semapella triscetta sp. nov.

Candidatus Semapella triscetta (NL. fem. n. *triscetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PALSA-600 sp013821525*. The type genome for the species is the GenBank assembly GCA_013821525.1. The GC content of the type genome is 67.28 % and the genome length is 3.63 Mbp.

Description of *Candidatus* Semapella vocifitudo sp. nov.

Candidatus Semapella vocifitudo (NL. fem. n. *vocifitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PALSA-600 sp900299235*. The type genome for the species is the GenBank assembly GCA_900299235.1. The GC content of the type genome is 65.31 % and the genome length is 2.11 Mbp.

Description of *Candidatus* Semapia artocatio sp. nov.

Candidatus Semapia artocatio (NL. fem. n. *artocatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACDBZ01 sp013697395*. The type genome for the species is the GenBank assembly GCA_013697395.1. The GC content of the type genome is 69.0 % and the genome length is 3.42 Mbp.

Description of *Candidatus* Semapia gen. nov.

Candidatus Semapia (NL. fem. n. *Semapia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACDBZ01*. The type species for the genus is *Candidatus* Semapia

artocatio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *QHBO01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Venefariaceae.

Description of *Candidatus* Semapia lavacitoga sp. nov.

Candidatus Semapia lavacitoga (NL. fem. n. *lavacitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACDBZ01 sp013694795*. The type genome for the species is the GenBank assembly GCA_013694795.1. The GC content of the type genome is 68.62 % and the genome length is 1.58 Mbp.

Description of *Candidatus* Semapia obtecetta sp. nov.

Candidatus Semapia obtecetta (NL. fem. n. *obtecetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACDBZ01 sp013694645*. The type genome for the species is the GenBank assembly GCA_013694645.1. The GC content of the type genome is 68.03 % and the genome length is 1.84 Mbp.

Description of *Candidatus* Semapia repecentia sp. nov.

Candidatus Semapia repecentia (NL. fem. n. *repecentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACDBZ01 sp013820865*. The type genome for the species is the GenBank assembly GCA_013820865.1. The GC content of the type genome is 67.21 % and the genome length is 2.1 Mbp.

Description of *Candidatus* Semapida delecitrix sp. nov.

Candidatus Semapida delecitrix (NL. fem. n. *delecitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Gp7-AA6 sp003222385*. The type genome for the species is the

GenBank assembly GCA_003222385.1. The GC content of the type genome is 66.86 % and the genome length is 3.6 Mbp.

Description of *Candidatus* Semapida gen. nov.

Candidatus Semapida (NL. fem. n. *Semapida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Gp7-AA6*. The type species for the genus is *Candidatus* Semapida delecitrix .

According to the original version of GTDB R06-RS202, this genus belongs to the family *Gp7-AA6*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Semapidaceae.

Description of *Candidatus* Semapidaceae fam. nov.

Candidatus Semapidaceae (NL. fem. n. *Semapidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *Gp7-AA6.* The type genus for the taxon is *Candidatus* Semapida .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA5066*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Tenebosales.

Description of *Candidatus* Semaposa umbilessa sp. nov.

Candidatus Semaposa umbilessa (NL. fem. n. *umbilessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5620 sp002423605*. The type genome for the species is the GenBank assembly GCA_002423605.1. The GC content of the type genome is 48.1 % and the genome length is 1.66 Mbp.

Description of *Candidatus* Semaposa gen. nov.

Candidatus Semaposa (NL. fem. n. *Semaposa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA5620*. The type species for the genus is *Candidatus* Semaposa umbilessa .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA5620*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Semaposaceae.

Description of *Candidatus* Semaposaceae fam. nov.

Candidatus Semaposaceae (NL. fem. n. *Semaposaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA5620.* The type genus for the taxon is *Candidatus* Semaposa .

According to the original version of GTDB R06-RS202, this family belongs to the order *GIF9*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Dedigiales.

Description of *Candidatus* Semapula cocolifica sp. nov.

Candidatus Semapula cocolifica (NL. fem. n. *cocolifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6669 sp002455175*. The type genome for the species is the GenBank assembly GCA_002455175.1. The GC content of the type genome is 57.04 % and the genome length is 5.72 Mbp.

Description of *Candidatus* Semapula gen. nov.

Candidatus Semapula (NL. fem. n. *Semapula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA6669*. The type species for the genus is *Candidatus* Semapula cocolifica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Semapula domipibra sp. nov.

Candidatus Semapula domipibra (NL. fem. n. *domipibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6669 sp903862595*. The type genome for the species is the

GenBank assembly GCA_903944795.1. The GC content of the type genome is 66.57 % and the genome length is 3.56 Mbp.

Description of *Candidatus* Semapula octopibula sp. nov.

Candidatus Semapula octopibula (NL. fem. n. *octopibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6669 sp014584295*. The type genome for the species is the GenBank assembly GCA_014584295.1. The GC content of the type genome is 59.1 % and the genome length is 4.07 Mbp.

Description of *Candidatus* Semibana retecibula sp. nov.

Candidatus Semibana retecibula (NL. fem. n. *retecibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *NZNC01 sp002692965*. The type genome for the species is the GenBank assembly GCA_002414445.1. The GC content of the type genome is 64.73 % and the genome length is 3.69 Mbp.

Description of *Candidatus* Semibana gen. nov.

Candidatus Semibana (NL. fem. n. *Semibana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *NZNC01*. The type species for the genus is *Candidatus* Semibana retecibula .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Semibaria regigicula sp. nov.

Candidatus Semibaria regigicula (NL. fem. n. *regigicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2730555 sp002730555*. The type genome for the species is the GenBank assembly GCA_003542155.1. The GC content of the type genome is 61.46 % and the genome length is 2.1 Mbp.

Description of *Candidatus* Semibaria gen. nov.

Candidatus Semibaria (NL. fem. n. *Semibaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2730555*. The type species for the genus is *Candidatus* Semibaria regigicula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1151*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Carucellaceae.

Description of *Candidatus* Semibaria vagabetta sp. nov.

Candidatus Semibaria vagabetta (NL. fem. n. *vagabetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2730555 sp014239685*. The type genome for the species is the GenBank assembly GCA_014239685.1. The GC content of the type genome is 56.42 % and the genome length is 2.1 Mbp.

Description of *Candidatus* Semibella obsurimonas sp. nov.

Candidatus Semibella obsurimonas (NL. fem. n. *obsurimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIQIC01 sp903871765*. The type genome for the species is the GenBank assembly GCA_903871765.1. The GC content of the type genome is 63.56 % and the genome length is 3.92 Mbp.

Description of *Candidatus* Semibella gen. nov.

Candidatus Semibella (NL. fem. n. *Semibella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIQIC01*. The type species for the genus is *Candidatus* Semibella obsurimonas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAIQIC01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Semibellaceae.

Description of *Candidatus* Semibellaceae fam. nov.

Candidatus Semibellaceae (NL. fem. n. *Semibellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CAIQIC01*. The type genus for the taxon is *Candidatus* Semibella .

According to the original version of GTDB R06-RS202, this family belongs to the order *LD1-PB3*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Delacariales.

Description of *Candidatus* Semibia adtorugo sp. nov.

Candidatus Semibia adtorugo (NL. fem. n. *adtorugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIVAT01 sp903903985*. The type genome for the species is the GenBank assembly GCA_903903985.1. The GC content of the type genome is 45.51 % and the genome length is 5.2 Mbp.

Description of *Candidatus* Semibia gen. nov.

Candidatus Semibia (NL. fem. n. *Semibia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIVAT01*. The type species for the genus is *Candidatus* Semibia adtorugo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *FEN-979*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Pedepariaceae.

Description of *Candidatus* Semibia ammatitio sp. nov.

Candidatus Semibia ammatitio (NL. fem. n. *ammatitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIVAT01 sp903928285*. The type genome for the species is the GenBank assembly GCA_903928285.1. The GC content of the type genome is 48.95 % and the genome length is 3.99 Mbp.

Description of *Candidatus* Semibia decamimonia sp. nov.

Candidatus Semibia decamimonia (NL. fem. n. *decamimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIVAT01 sp903828645*. The type genome for the species is the GenBank assembly GCA_903918305.1. The GC content of the type genome is 48.37 % and the genome length is 3.82 Mbp.

Description of *Candidatus* Semibia echogastra sp. nov.

Candidatus Semibia echogastra (NL. fem. n. *echogastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIVAT01 sp903925275*. The type genome for the species is the GenBank assembly GCA_903925275.1. The GC content of the type genome is 43.19 % and the genome length is 5.65 Mbp.

Description of *Candidatus* Semibia hexagitas sp. nov.

Candidatus Semibia hexagitas (NL. fem. n. *hexagitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIVAT01 sp903913885*. The type genome for the species is the GenBank assembly GCA_903871895.1. The GC content of the type genome is 49.45 % and the genome length is 4.1 Mbp.

Description of *Candidatus* Semibia manubitica sp. nov.

Candidatus Semibia manubitica (NL. fem. n. *manubitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIVAT01 sp903875045*. The type genome for the species is the GenBank assembly GCA_903875045.1. The GC content of the type genome is 44.27 % and the genome length is 5.96 Mbp.

Description of *Candidatus* Semibia pulegivita sp. nov.

Candidatus Semibia pulegivita (NL. fem. n. *pulegivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIVAT01 sp903845055*. The type genome for the species is the GenBank assembly GCA_903917245.1. The GC content of the type genome is 51.91 % and the genome length is 3.07 Mbp.

Description of *Candidatus* Semibia resuritio sp. nov.

Candidatus Semibia resuritio (NL. fem. n. *resuritio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIVAT01 sp903959905*. The type genome for the species is the GenBank assembly GCA_903935625.1. The GC content of the type genome is 47.09 % and the genome length is 4.93 Mbp.

Description of *Candidatus* Semibia secunitio sp. nov.

Candidatus Semibia secunitio (NL. fem. n. *secunitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIVAT01 sp903945175*. The type genome for the species is the GenBank assembly GCA_903844745.1. The GC content of the type genome is 45.38 % and the genome length is 3.44 Mbp.

Description of *Candidatus* Semibia venucitio sp. nov.

Candidatus Semibia venucitio (NL. fem. n. *venucitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIVAT01 sp903926565*. The type genome for the species is the GenBank assembly GCA_903926565.1. The GC content of the type genome is 45.6 % and the genome length is 4.69 Mbp.

Description of *Candidatus* Semibia vitupivita sp. nov.

Candidatus Semibia vitupivita (NL. fem. n. *vitupivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *CAIVAT01 sp903885595*. The type genome for the species is the GenBank assembly GCA_903885595.1. The GC content of the type genome is 44.04 % and the genome length is 6.02 Mbp.

Description of *Candidatus* Semibida tenebitoga sp. nov.

Candidatus Semibida tenebitoga (NL. fem. n. *tenebitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Bog-793 sp003159795*. The type genome for the species is the GenBank assembly GCA_003162835.1. The GC content of the type genome is 68.96 % and the genome length is 1.97 Mbp.

Description of *Candidatus* Semibida gen. nov.

Candidatus Semibida (NL. fem. n. *Semibida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Bog-793*. The type species for the genus is *Candidatus* Semibida tenebitoga .

According to the original version of GTDB R06-RS202, this genus belongs to the family *Bog-793*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Semibidaceae.

Description of *Candidatus* Semibidaceae fam. nov.

Candidatus Semibidaceae (NL. fem. n. *Semibidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *Bog-793.* The type genus for the taxon is *Candidatus* Semibida .

According to GTDB R06-RS202, this family belongs to the order *Acidimicrobiales*.

Description of *Candidatus* Semibosa accorifica sp. nov.

Candidatus Semibosa accorifica (NL. fem. n. *accorifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTU059 sp012521615*. The type genome for the species is the GenBank assembly GCA_012521615.1. The GC content of the type genome is 38.83 %

and the genome length is 2.23 Mbp.

Description of *Candidatus* Semibosa gen. nov.

Candidatus Semibosa (NL. fem. n. *Semibosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DTU059*. The type species for the genus is *Candidatus* Semibosa accorifica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DSM-8532*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Catabidaceae.

Description of *Candidatus* Semibosa arbavedo sp. nov.

Candidatus Semibosa arbavedo (NL. fem. n. *arbavedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTU059 sp012521705*. The type genome for the species is the GenBank assembly GCA_012521705.1. The GC content of the type genome is 41.53 % and the genome length is 2.25 Mbp.

Description of *Candidatus* Semibosa cohorousia sp. nov.

Candidatus Semibosa cohorousia (NL. fem. n. *cohorousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTU059 sp012523685*. The type genome for the species is the GenBank assembly GCA_012523685.1. The GC content of the type genome is 39.11 % and the genome length is 2.28 Mbp.

Description of *Candidatus* Semibosa dinupicella sp. nov.

Candidatus Semibosa dinupicella (NL. fem. n. *dinupicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTU059 sp012728095*. The type genome for the species is the GenBank assembly GCA_012728095.1. The GC content of the type genome is 40.73 % and the genome length is 2.22 Mbp.

Description of *Candidatus* Semibosa egregisca sp. nov.

Candidatus Semibosa egregisca (NL. fem. n. *egregisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTU059 sp012520855*. The type genome for the species is the GenBank assembly GCA_012520855.1. The GC content of the type genome is 41.16 % and the genome length is 2.33 Mbp.

Description of *Candidatus* Semibosa feculifica sp. nov.

Candidatus Semibosa feculifica (NL. fem. n. *feculifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTU059 sp003535195*. The type genome for the species is the GenBank assembly GCA_003535195.1. The GC content of the type genome is 45.08 % and the genome length is 3.1 Mbp.

Description of *Candidatus* Semibosa fibicilega sp. nov.

Candidatus Semibosa fibicilega (NL. fem. n. *fibicilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTU059 sp012842645*. The type genome for the species is the GenBank assembly GCA_012842645.1. The GC content of the type genome is 47.07 % and the genome length is 2.06 Mbp.

Description of *Candidatus* Semibosa idcirilenta sp. nov.

Candidatus Semibosa idcirilenta (NL. fem. n. *idcirilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTU059 sp012520615*. The type genome for the species is the GenBank assembly GCA_012520615.1. The GC content of the type genome is 37.94 % and the genome length is 2.67 Mbp.

Description of *Candidatus* Semibosa inconetta sp. nov.

Candidatus Semibosa inconetta (NL. fem. n. *inconetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTU059 sp002376415*. The type genome for the species is the GenBank assembly GCA_002376415.1. The GC content of the type genome is 48.2 % and the genome length is 2.84 Mbp.

Description of *Candidatus* Semibosa inrevitica sp. nov.

Candidatus Semibosa inrevitica (NL. fem. n. *inrevitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTU059 sp012719545*. The type genome for the species is the GenBank assembly GCA_012719545.1. The GC content of the type genome is 40.89 % and the genome length is 2.95 Mbp.

Description of *Candidatus* Semibosa irrefiforma sp. nov.

Candidatus Semibosa irrefiforma (NL. fem. n. *irrefiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTU059 sp012839205*. The type genome for the species is the GenBank assembly GCA_012839205.1. The GC content of the type genome is 39.25 % and the genome length is 2.31 Mbp.

Description of *Candidatus* Semibosa levifibra sp. nov.

Candidatus Semibosa levifibra (NL. fem. n. *levifibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTU059 sp012523705*. The type genome for the species is the GenBank assembly GCA_012523705.1. The GC content of the type genome is 39.28 % and the genome length is 1.94 Mbp.

Description of *Candidatus* Semibosa supelitoga sp. nov.

Candidatus Semibosa supelitoga (NL. fem. n. *supelitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *DTU059 sp012840245*. The type genome for the species is the GenBank assembly GCA_012840245.1. The GC content of the type genome is 44.01 % and the genome length is 2.91 Mbp.

Description of *Candidatus* Semibula absorivita sp. nov.

Candidatus Semibula absorivita (NL. fem. n. *absorivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SZUA-76 sp003232725*. The type genome for the species is the GenBank assembly GCA_003232725.1. The GC content of the type genome is 47.65 % and the genome length is 2.66 Mbp.

Description of *Candidatus* Semibula gen. nov.

Candidatus Semibula (NL. fem. n. *Semibula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SZUA-76*. The type species for the genus is *Candidatus* Semibula absorivita .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SZUA-140*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Curotiaceae.

Description of *Candidatus* Semibula domigessa sp. nov.

Candidatus Semibula domigessa (NL. fem. n. *domigessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SZUA-76 sp011053135*. The type genome for the species is the GenBank assembly GCA_011053135.1. The GC content of the type genome is 51.83 % and the genome length is 2.27 Mbp.

Description of *Candidatus* Semibula funebicula sp. nov.

Candidatus Semibula funebicula (NL. fem. n. *funebicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SZUA-76 sp003230195*. The type genome for the species is the

GenBank assembly GCA_003230195.1. The GC content of the type genome is 47.31 % and the genome length is 1.82 Mbp.

Description of *Candidatus* Semidana perabibula sp. nov.

Candidatus Semidana perabibula (NL. fem. n. *perabibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2108 sp002713215*. The type genome for the species is the GenBank assembly GCA_002331745.1. The GC content of the type genome is 39.82 % and the genome length is 2.92 Mbp.

Description of *Candidatus* Semidana gen. nov.

Candidatus Semidana (NL. fem. n. *Semidana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA2108*. The type species for the genus is *Candidatus* Semidana perabibula .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Semidaria colimatica sp. nov.

Candidatus Semidaria colimatica (NL. fem. n. *colimatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4175 sp002379855*. The type genome for the species is the GenBank assembly GCA_002070895.1. The GC content of the type genome is 53.89 % and the genome length is 1.81 Mbp.

Description of *Candidatus* Semidaria gen. nov.

Candidatus Semidaria (NL. fem. n. *Semidaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA4175*. The type species for the genus is *Candidatus* Semidaria colimatica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Semidella arcifentia sp. nov.

Candidatus Semidella arcifentia (NL. fem. n. *arcifentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA967 sp903915315*. The type genome for the species is the GenBank assembly GCA_903915315.1. The GC content of the type genome is 54.52 % and the genome length is 2.5 Mbp.

Description of *Candidatus* Semidella gen. nov.

Candidatus Semidella (NL. fem. n. *Semidella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA967*. The type species for the genus is *Candidatus* Semidella arcifentia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Semidella ensicisca sp. nov.

Candidatus Semidella ensicisca (NL. fem. n. *ensicisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA967 sp002396485*. The type genome for the species is the GenBank assembly GCA_002396485.1. The GC content of the type genome is 56.16 % and the genome length is 2.77 Mbp.

Description of *Candidatus* Semidella fumifugo sp. nov.

Candidatus Semidella fumifugo (NL. fem. n. *fumifugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA967 sp002290555*. The type genome for the species is the GenBank assembly GCA_002290555.1. The GC content of the type genome is 56.62 % and the genome length is 1.82 Mbp.

Description of *Candidatus* Semidella occucibra sp. nov.

Candidatus Semidella occucibra (NL. fem. n. *occucibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA967 sp009886045*. The type genome for the species is the GenBank assembly GCA_009886045.1. The GC content of the type genome is 54.14 % and the genome length is 3.52 Mbp.

Description of *Candidatus* Semidella semigilega sp. nov.

Candidatus Semidella semigilega (NL. fem. n. *semigilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA967 sp009920585*. The type genome for the species is the GenBank assembly GCA_009920585.1. The GC content of the type genome is 53.57 % and the genome length is 2.83 Mbp.

Description of *Candidatus* Semidia colapessa sp. nov.

Candidatus Semidia colapessa (NL. fem. n. *colapessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA11713 sp001778985*. The type genome for the species is the GenBank assembly GCA_001778775.1. The GC content of the type genome is 48.02 % and the genome length is 0.66 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under low O2 conditions; 0.1 micron filter; full assembly".

Description of *Candidatus* Semidia gen. nov.

Candidatus Semidia (NL. fem. n. *Semidia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA11713*. The type species for the genus is *Candidatus* Semidia colapessa .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA11713*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Semidiaceae.

Description of *Candidatus* Semidiaceae fam. nov.

Candidatus Semidiaceae (NL. fem. n. *Semidiaceae* a name created from the name of the

type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA11713*. The type genus for the taxon is *Candidatus* Semidia .

According to the original version of GTDB R06-RS202, this family belongs to the order *WO2-41-13*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Refulariales.

Description of *Candidatus* Semidida desupibra sp. nov.

Candidatus Semidida desupibra (NL. fem. n. *desupibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *An92 sp002159175*. The type genome for the species is the GenBank assembly RS_GCF_002160795.1. The GC content of the type genome is 61.45 % and the genome length is 3.89 Mbp.

Description of *Candidatus* Semidida gen. nov.

Candidatus Semidida (NL. fem. n. *Semidida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *An92*. The type species for the genus is *Candidatus* Semidida desupibra .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Semidida molecifica sp. nov.

Candidatus Semidida molecifica (NL. fem. n. *molecifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *An92 sp009935845*. The type genome for the species is the GenBank assembly RS_GCF_009935845.1. The GC content of the type genome is 58.11 % and the genome length is 3.72 Mbp.

Description of *Candidatus* Semidida selibivita sp. nov.

Candidatus Semidida selibivita (NL. fem. n. *selibivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *An92 sp900199495*. The type genome for the species is the GenBank assembly RS_GCF_014288125.1. The GC content of the type genome is 60.13 % and the genome length is 3.06 Mbp.

Description of *Candidatus* Semidosa effarimonia sp. nov.

Candidatus Semidosa effarimonia (NL. fem. n. *effarimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CADCTP01 sp902805565*. The type genome for the species is the GenBank assembly GCA_902805565.1. The GC content of the type genome is 75.15 % and the genome length is 4.64 Mbp.

Description of *Candidatus* Semidosa gen. nov.

Candidatus Semidosa (NL. fem. n. *Semidosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CADCTP01*. The type species for the genus is *Candidatus* Semidosa effarimonia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CADCTP01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Semidosaceae.

Description of *Candidatus* Semidosaceae fam. nov.

Candidatus Semidosaceae (NL. fem. n. *Semidosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CADCTP01.* The type genus for the taxon is *Candidatus* Semidosa .

According to GTDB R06-RS202, this family belongs to the order *Mycobacteriales*.

Description of *Candidatus* Semidula inargicella sp. nov.

Candidatus Semidula inargicella (NL. fem. n. *inargicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *GWA2-52-8 sp001804025*. The type genome for the species is the GenBank assembly GCA_001804025.1. The GC content of the type genome is 51.7 % and the genome length is 2.2 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at time point 1 / A; 5m depth; 0.2 filter".

Description of *Candidatus* Semidula gen. nov.

Candidatus Semidula (NL. fem. n. *Semidula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GWA2-52-8*. The type species for the genus is *Candidatus* Semidula inargicella .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GWA2-52-8*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Semidulaceae.

Description of *Candidatus* Semidulaceae fam. nov.

Candidatus Semidulaceae (NL. fem. n. *Semidulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *GWA2-52-8.* The type genus for the taxon is *Candidatus* Semidula .

According to GTDB R06-RS202, this family belongs to the order *Omnitrophales*.

Description of *Candidatus* Semifana carunilega sp. nov.

Candidatus Semifana carunilega (NL. fem. n. *carunilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA11996 sp002500485*. The type genome for the species is the GenBank assembly GCA_002500485.1. The GC content of the type genome is 42.35 % and the genome length is 2.55 Mbp.

Description of *Candidatus* Semifana gen. nov.

Candidatus Semifana (NL. fem. n. *Semifana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA11996*. The type species for the genus is *Candidatus* Semifana

carunilega .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA826*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Nugivariaceae.

Description of *Candidatus* Semifana culilitudo sp. nov.

Candidatus Semifana culilitudo (NL. fem. n. *culilitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA11996 sp002728195*. The type genome for the species is the GenBank assembly GCA_002728195.1. The GC content of the type genome is 41.5 % and the genome length is 1.72 Mbp.

Description of *Candidatus* Semifana denoritrix sp. nov.

Candidatus Semifana denoritrix (NL. fem. n. *denoritrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA11996 sp002320875*. The type genome for the species is the GenBank assembly GCA_008373285.1. The GC content of the type genome is 41.87 % and the genome length is 1.8 Mbp.

Description of *Candidatus* Semifana gemebimonia sp. nov.

Candidatus Semifana gemebimonia (NL. fem. n. *gemebimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA11996 sp002708495*. The type genome for the species is the GenBank assembly GCA_002708495.1. The GC content of the type genome is 42.22 % and the genome length is 1.44 Mbp.

Description of *Candidatus* Semifana inurbilega sp. nov.

Candidatus Semifana inurbilega (NL. fem. n. *inurbilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA11996 sp003228105*. The type genome for the species is the

GenBank assembly GCA_003228105.1. The GC content of the type genome is 42.07 % and the genome length is 1.62 Mbp.

Description of *Candidatus* Semifana lubenugo sp. nov.

Candidatus Semifana lubenugo (NL. fem. n. *lubenugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA11996 sp009392675*. The type genome for the species is the GenBank assembly GCA_009392675.1. The GC content of the type genome is 42.39 % and the genome length is 1.71 Mbp.

Description of *Candidatus* Semifana pavimitura sp. nov.

Candidatus Semifana pavimitura (NL. fem. n. *pavimitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA11996 sp002722155*. The type genome for the species is the GenBank assembly GCA_003519885.1. The GC content of the type genome is 41.62 % and the genome length is 2.2 Mbp.

Description of *Candidatus* Semifana retunimonas sp. nov.

Candidatus Semifana retunimonas (NL. fem. n. *retunimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA11996 sp002435305*. The type genome for the species is the GenBank assembly GCA_003500865.1. The GC content of the type genome is 42.77 % and the genome length is 1.92 Mbp.

Description of *Candidatus* Semifana turicedo sp. nov.

Candidatus Semifana turicedo (NL. fem. n. *turicedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA11996 sp012965485*. The type genome for the species is the GenBank assembly GCA_012965485.1. The GC content of the type genome is 42.83 % and the genome length is 1.72 Mbp.

Description of *Candidatus* Semifaria bimotedo sp. nov.

Candidatus Semifaria bimotedo (NL. fem. n. *bimotedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7985 sp002705565*. The type genome for the species is the GenBank assembly GCA_002705565.1. The GC content of the type genome is 58.43 % and the genome length is 3.0 Mbp.

Description of *Candidatus* Semifaria gen. nov.

Candidatus Semifaria (NL. fem. n. *Semifaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA7985*. The type species for the genus is *Candidatus* Semifaria bimotedo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA7985*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Semifariaceae.

Description of *Candidatus* Semifariaceae fam. nov.

Candidatus Semifariaceae (NL. fem. n. *Semifariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA7985.* The type genus for the taxon is *Candidatus* Semifaria .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA7985*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Semifariales.

Description of *Candidatus* Semifariales ord. nov.

Candidatus Semifariales (NL. fem. n. *Semifariales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA7985.* The type genus for the taxon is *Candidatus* Semifaria .

According to the GTDB R06-RS202, this order belongs to the class *Alphaproteobacteria*.

Description of *Candidatus* Semifaria bonifitura sp. nov.

Candidatus Semifaria bonifitura (NL. fem. n. *bonifitura* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7985 sp002711265*. The type genome for the species is the GenBank assembly GCA_002172855.1. The GC content of the type genome is 64.05 % and the genome length is 1.74 Mbp.

Description of *Candidatus* Semifaria defalifica sp. nov.

Candidatus Semifaria defalifica (NL. fem. n. *defalifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7985 sp002708995*. The type genome for the species is the GenBank assembly GCA_002708995.1. The GC content of the type genome is 63.24 % and the genome length is 2.6 Mbp.

Description of *Candidatus* Semifaria semodatica sp. nov.

Candidatus Semifaria semodatica (NL. fem. n. *semodatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7985 sp002690455*. The type genome for the species is the GenBank assembly GCA_002690455.1. The GC content of the type genome is 59.21 % and the genome length is 1.69 Mbp.

Description of *Candidatus* Semifaria subadifica sp. nov.

Candidatus Semifaria subadifica (NL. fem. n. *subadifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7985 sp002700865*. The type genome for the species is the GenBank assembly GCA_002172925.2. The GC content of the type genome is 58.84 % and the genome length is 2.49 Mbp.

Description of *Candidatus* Semifella televicella sp. nov.

Candidatus Semifella televicella (NL. fem. n. *televicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *OLB4 sp002050165*. The type genome for the species is the GenBank assembly GCA_001567325.1. The GC content of the type genome is 37.61 % and the genome length is 2.47 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "partial-nitritation anammox (PNA) reactor; full scale (600m3) reactor for the removal of ammonium from wastewater from the potato processing industry".

Description of *Candidatus* Semifella gen. nov.

Candidatus Semifella (NL. fem. n. *Semifella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *OLB4*. The type species for the genus is *Candidatus* Semifella televicella .

According to the original version of GTDB R06-RS202, this genus belongs to the family *B-1AR*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Genufosaceae.

Description of *Candidatus* Semifida decapifica sp. nov.

Candidatus Semifida decapifica (NL. fem. n. *decapifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HO2-37-13b sp001789395*. The type genome for the species is the GenBank assembly GCA_001788225.1. The GC content of the type genome is 36.01 % and the genome length is 1.23 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under low O2 conditions; 0.2 micron filter; full assembly".

Description of *Candidatus* Semifida gen. nov.

Candidatus Semifida (NL. fem. n. *Semifida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *HO2-37-13b*. The type species for the genus is *Candidatus* Semifida decapifica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *HO2-37-13b*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Semifidaceae.

Description of *Candidatus* Semifidaceae fam. nov.

Candidatus Semifidaceae (NL. fem. n. *Semifidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *HO2-37-13b.* The type genus for the taxon is *Candidatus* Semifida .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA1406*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Molecanales.

Description of *Candidatus* Semifosa negidilega sp. nov.

Candidatus Semifosa negidilega (NL. fem. n. *negidilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6013 sp002428105*. The type genome for the species is the GenBank assembly GCA_002428105.1. The GC content of the type genome is 61.54 % and the genome length is 4.06 Mbp.

Description of *Candidatus* Semifosa gen. nov.

Candidatus Semifosa (NL. fem. n. *Semifosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA6013*. The type species for the genus is *Candidatus* Semifosa negidilega .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA6013*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Semifosaceae.

Description of *Candidatus* Semifosaceae fam. nov.

Candidatus Semifosaceae (NL. fem. n. *Semifosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA6013.* The type genus for the taxon is *Candidatus* Semifosa .

According to GTDB R06-RS202, this family belongs to the order *Bacteroidales*.

Description of *Candidatus* Semifula dupunousia sp. nov.

Candidatus Semifula dupunousia (NL. fem. n. *dupunousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-12-FULL-38-22 sp001820055*. The type genome for the species is the GenBank assembly GCA_001820055.1. The GC content of the type genome is 37.95 % and the genome length is 0.62 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under low O2 conditions; 1.2 micron filter; full assembly".

Description of *Candidatus* Semifula gen. nov.

Candidatus Semifula (NL. fem. n. *Semifula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *2-12-FULL-38-22*. The type species for the genus is *Candidatus* Semifula dupunousia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *2-12-FULL-38-22*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Semifulaceae.

Description of *Candidatus* Semifulaceae fam. nov.

Candidatus Semifulaceae (NL. fem. n. *Semifulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *2-12-FULL-38-22.* The type genus for the taxon is *Candidatus* Semifula .

According to GTDB R06-RS202, this family belongs to the order *Spechtbacterales*.

Description of *Candidatus* Semigana conibitudo sp. nov.

Candidatus Semigana conibitudo (NL. fem. n. *conibitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HTCC5015 sp000155715*. The type genome for the species is the GenBank assembly RS_GCF_000155715.1. The GC content of the type genome is 54.05 % and the genome length is 2.63 Mbp.

Description of *Candidatus* Semigana gen. nov.

Candidatus Semigana (NL. fem. n. *Semigana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *HTCC5015*. The type species for the genus is *Candidatus* Semigana conibitudo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *HTCC5015*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Semiganaceae.

Description of *Candidatus* Semiganaceae fam. nov.

Candidatus Semiganaceae (NL. fem. n. *Semiganaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *HTCC5015.* The type genus for the taxon is *Candidatus* Semigana .

According to the original version of GTDB R06-RS202, this family belongs to the order *HTCC5015*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Semiganales.

Description of *Candidatus* Semiganales ord. nov.

Candidatus Semiganales (NL. fem. n. *Semiganales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *HTCC5015.* The type genus for the taxon is *Candidatus* Semigana .

According to the GTDB R06-RS202, this order belongs to the class *Gammaproteobacteria*.

Description of *Candidatus* Semigaria calipentia sp. nov.

Candidatus Semigaria calipentia (NL. fem. n. *calipentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CHH4-2 sp002899675*. The type genome for the species is the GenBank assembly RS_GCF_002899675.1. The GC content of the type genome is 45.64 % and the genome length is 6.09 Mbp.

Description of *Candidatus* Semigaria gen. nov.

Candidatus Semigaria (NL. fem. n. *Semigaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CHH4-2*. The type species for the genus is *Candidatus* Semigaria calipentia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Semigella lanigax sp. nov.

Candidatus Semigella lanigax (NL. fem. n. *lanigax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *VSJD01 sp008636095*. The type genome for the species is the GenBank assembly GCA_008636085.1. The GC content of the type genome is 54.94 % and the genome length is 3.86 Mbp.

Description of *Candidatus* Semigella gen. nov.

Candidatus Semigella (NL. fem. n. *Semigella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *VSJD01*. The type species for the genus is *Candidatus* Semigella lanigax .

According to the original version of GTDB R06-RS202, this genus belongs to the family *VSJD01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Semigellaceae.

Description of *Candidatus* Semigellaceae fam. nov.

Candidatus Semigellaceae (NL. fem. n. *Semigellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *VSJD01*. The type genus for the taxon is *Candidatus* Semigella .

According to the original version of GTDB R06-RS202, this family belongs to the order *JAAZAB01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Deforosales.

Description of *Candidatus* Semigia visocivita sp. nov.

Candidatus Semigia visocivita (NL. fem. n. *visocivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MnTg04 sp008975185*. The type genome for the species is the GenBank assembly GCA_008975185.1. The GC content of the type genome is 57.99 % and the genome length is 1.73 Mbp.

Description of *Candidatus* Semigia gen. nov.

Candidatus Semigia (NL. fem. n. *Semigia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *MnTg04*. The type species for the genus is *Candidatus* Semigia visocivita .

According to the original version of GTDB R06-RS202, this genus belongs to the family *MnTg04*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Semigiaceae.

Description of *Candidatus* Semigiaceae fam. nov.

Candidatus Semigiaceae (NL. fem. n. *Semigiaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *MnTg04.* The type genus for the taxon is *Candidatus* Semigia .

According to the original version of GTDB R06-RS202, this family belongs to the order *MnTg04*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Semigiales.

Description of *Candidatus* Semigiales ord. nov.

Candidatus Semigiales (NL. fem. n. *Semigiales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *MnTg04.* The type genus for the taxon is *Candidatus* Semigia .

According to the GTDB R06-RS202, this order belongs to the class *Gammaproteobacteria*.

Description of *Candidatus* Semigida nosocisca sp. nov.

Candidatus Semigida nosocisca (NL. fem. n. *nosocisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-724 sp003524145*. The type genome for the species is the GenBank assembly GCA_900546815.1. The GC content of the type genome is 48.77 % and the genome length is 1.76 Mbp.

Description of *Candidatus* Semigida gen. nov.

Candidatus Semigida (NL. fem. n. *Semigida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAG-724*. The type species for the genus is *Candidatus* Semigida nosocisca .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-272*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Colipariaceae.

Description of *Candidatus* Semigida senacitudo sp. nov.

Candidatus Semigida senacitudo (NL. fem. n. *senacitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-724 sp900551005*. The type genome for the species is the GenBank assembly GCA_900551005.1. The GC content of the type genome is 47.75 % and the genome length is 1.93 Mbp.

Description of *Candidatus* Semigosa domicedo sp. nov.

Candidatus Semigosa domicedo (NL. fem. n. *domicedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PWXP01 sp007127495*. The type genome for the species is the GenBank assembly GCA_007127495.1. The GC content of the type genome is 63.75 % and the genome length is 3.17 Mbp.

Description of *Candidatus* Semigosa gen. nov.

Candidatus Semigosa (NL. fem. n. *Semigosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PWXP01*. The type species for the genus is *Candidatus* Semigosa domicedo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA11386*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Feficariaceae.

Description of *Candidatus* Semigosa gasomifica sp. nov.

Candidatus Semigosa gasomifica (NL. fem. n. *gasomifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PWXP01 sp003561895*. The type genome for the species is the GenBank assembly GCA_003561895.1. The GC content of the type genome is 65.35 % and the genome length is 4.63 Mbp.

Description of *Candidatus* Semigosa semibivita sp. nov.

Candidatus Semigosa semibivita (NL. fem. n. *semibivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PWXP01 sp007122045*. The type genome for the species is the GenBank assembly GCA_007122045.1. The GC content of the type genome is 66.7 % and the genome length is 4.3 Mbp.

Description of *Candidatus* Semigosa xenopitas sp. nov.

Candidatus Semigosa xenopitas (NL. fem. n. *xenopitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PWXP01 sp003563515*. The type genome for the species is the GenBank assembly GCA_003563515.1. The GC content of the type genome is 61.97 % and the genome length is 2.62 Mbp.

Description of *Candidatus* Semigula clancimonia sp. nov.

Candidatus Semigula clancimonia (NL. fem. n. *clancimonia* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WLWV01 sp012103395*. The type genome for the species is the GenBank assembly GCA_012103395.1. The GC content of the type genome is 45.9 % and the genome length is 3.36 Mbp.

Description of *Candidatus* Semigula gen. nov.

Candidatus Semigula (NL. fem. n. *Semigula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WLWV01*. The type species for the genus is *Candidatus* Semigula clancimonia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *LS-SOB*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Repeciaceae.

Description of *Candidatus* Semigula legifugo sp. nov.

Candidatus Semigula legifugo (NL. fem. n. *legifugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WLWV01 sp011088265*. The type genome for the species is the GenBank assembly GCA_011088025.1. The GC content of the type genome is 46.14 % and the genome length is 3.95 Mbp.

Description of *Candidatus* Semilana adobritica sp. nov.

Candidatus Semilana adobritica (NL. fem. n. *adobritica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2868 sp002394535*. The type genome for the species is the GenBank assembly GCA_002394535.1. The GC content of the type genome is 44.7 % and the genome length is 2.12 Mbp.

Description of *Candidatus* Semilana gen. nov.

Candidatus Semilana (NL. fem. n. *Semilana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA2868*. The type species for the genus is *Candidatus* Semilana adobritica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Semilana agripimonia sp. nov.

Candidatus Semilana agripimonia (NL. fem. n. *agripimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2868 sp002373875*. The type genome for the species is the GenBank assembly GCA_002373875.1. The GC content of the type genome is 46.27 % and the genome length is 2.54 Mbp.

Description of *Candidatus* Semilana anatrastra sp. nov.

Candidatus Semilana anatrastra (NL. fem. n. *anatrastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2868 sp003484785*. The type genome for the species is the GenBank assembly GCA_003484785.1. The GC content of the type genome is 49.18 % and the genome length is 2.3 Mbp.

Description of *Candidatus* Semilana butubax sp. nov.

Candidatus Semilana butubax (NL. fem. n. *butubax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2868 sp002371615*. The type genome for the species is the GenBank assembly GCA_002371615.1. The GC content of the type genome is 43.95 % and the genome length is 3.0 Mbp.

Description of *Candidatus* Semilana cepurimonas sp. nov.

Candidatus Semilana cepurimonas (NL. fem. n. *cepurimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *UBA2868 sp902779305*. The type genome for the species is the GenBank assembly GCA_902779305.1. The GC content of the type genome is 48.9 % and the genome length is 3.25 Mbp.

Description of *Candidatus* Semilana dedigitas sp. nov.

Candidatus Semilana dedigitas (NL. fem. n. *dedigitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2868 sp002350465*. The type genome for the species is the GenBank assembly GCA_902765765.1. The GC content of the type genome is 44.92 % and the genome length is 2.08 Mbp.

Description of *Candidatus* Semilana domicousia sp. nov.

Candidatus Semilana domicousia (NL. fem. n. *domicousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2868 sp003535955*. The type genome for the species is the GenBank assembly GCA_003535955.1. The GC content of the type genome is 46.04 % and the genome length is 2.31 Mbp.

Description of *Candidatus* Semilana forinifica sp. nov.

Candidatus Semilana forinifica (NL. fem. n. *forinifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2868 sp902803305*. The type genome for the species is the GenBank assembly GCA_902803305.1. The GC content of the type genome is 47.0 % and the genome length is 1.96 Mbp.

Description of *Candidatus* Semilana ineffax sp. nov.

Candidatus Semilana ineffax (NL. fem. n. *ineffax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2868 sp004552595*. The type genome for the species is the GenBank assembly GCA_004552595.1. The GC content of the type genome is 37.92 % and the genome length is 2.4 Mbp.

Description of *Candidatus* Semilana malivax sp. nov.

Candidatus Semilana malivax (NL. fem. n. *malivax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2868 sp900320345*. The type genome for the species is the GenBank assembly GCA_900320345.1. The GC content of the type genome is 45.61 % and the genome length is 2.69 Mbp.

Description of *Candidatus* Semilana taxilatio sp. nov.

Candidatus Semilana taxilatio (NL. fem. n. *taxilatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2868 sp002368575*. The type genome for the species is the GenBank assembly GCA_003450975.1. The GC content of the type genome is 49.38 % and the genome length is 2.43 Mbp.

Description of *Candidatus* Semilana tibicedo sp. nov.

Candidatus Semilana tibicedo (NL. fem. n. *tibicedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2868 sp902775485*. The type genome for the species is the GenBank assembly GCA_902775485.1. The GC content of the type genome is 46.74 % and the genome length is 2.33 Mbp.

Description of *Candidatus* Semilaria bucelax sp. nov.

Candidatus Semilaria bucelax (NL. fem. n. *bucelax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PCPOR2b sp003635265*. The type genome for the species is the GenBank assembly GCA_003635265.1. The GC content of the type genome is 49.36 % and the genome length is 5.3 Mbp.

Description of *Candidatus* Semilaria gen. nov.

Candidatus Semilaria (NL. fem. n. *Semilaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PCPOR2b*. The type species for the genus is *Candidatus* Semilaria bucelax .

According to the original version of GTDB R06-RS202, this genus belongs to the family *PCPOR2b*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Semilariaceae.

Description of *Candidatus* Semilariaceae fam. nov.

Candidatus Semilariaceae (NL. fem. n. *Semilariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *PCPOR2b.* The type genus for the taxon is *Candidatus* Semilaria .

According to the original version of GTDB R06-RS202, this family belongs to the order *WGA-4E*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Demociales.

Description of *Candidatus* Semilella habacitrix sp. nov.

Candidatus Semilella habacitrix (NL. fem. n. *habacitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIYID01 sp903926205*. The type genome for the species is the GenBank assembly GCA_903897095.1. The GC content of the type genome is 41.82 % and the genome length is 3.28 Mbp.

Description of *Candidatus* Semilella gen. nov.

Candidatus Semilella (NL. fem. n. *Semilella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIYID01*. The type species for the genus is *Candidatus* Semilella habacitrix .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Semilella inabritoga sp. nov.

Candidatus Semilella inabritoga (NL. fem. n. *inabritoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIYID01 sp013286585*. The type genome for the species is the GenBank assembly GCA_013286585.1. The GC content of the type genome is 48.6 % and the genome length is 1.91 Mbp.

Description of *Candidatus* Semilia siligago sp. nov.

Candidatus Semilia siligago (NL. fem. n. *siligago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002782285 sp002790655*. The type genome for the species is the GenBank assembly GCA_002790655.1. The GC content of the type genome is 43.54 % and the genome length is 0.79 Mbp.

Description of *Candidatus* Semilia gen. nov.

Candidatus Semilia (NL. fem. n. *Semilia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-002782285*. The type species for the genus is *Candidatus* Semilia siligago .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA11712*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Faticariaceae.

Description of *Candidatus* Semilida cohorigena sp. nov.

Candidatus Semilida cohorigena (NL. fem. n. *cohorigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1407 sp902776645*. The type genome for the species is the GenBank assembly GCA_902794255.1. The GC content of the type genome is 55.81 % and the genome length is 4.54 Mbp.

Description of *Candidatus* Semilida gen. nov.

Candidatus Semilida (NL. fem. n. *Semilida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1407*. The type species for the genus is *Candidatus* Semilida cohorigena .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1407*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Semilidaceae.

Description of *Candidatus* Semilidaceae fam. nov.

Candidatus Semilidaceae (NL. fem. n. *Semilidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA1407*. The type genus for the taxon is *Candidatus* Semilida .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA1407*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Semilidales.

Description of *Candidatus* Semilidales ord. nov.

Candidatus Semilidales (NL. fem. n. *Semilidales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA1407*. The type genus for the taxon is *Candidatus* Semilida .

According to the GTDB R06-RS202, this order belongs to the class *Lentisphaeria*.

Description of *Candidatus* Semilida ruricedo sp. nov.

Candidatus Semilida ruricedo (NL. fem. n. *ruricedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1407 sp002305655*. The type genome for the species is the GenBank assembly GCA_012515425.1. The GC content of the type genome is 52.38 % and the genome length is 4.33 Mbp.

Description of *Candidatus* Semilosa letifitudo sp. nov.

Candidatus Semilosa letifitudo (NL. fem. n. *letifitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DSNQ01 sp011047215*. The type genome for the species is the GenBank assembly GCA_011047215.1. The GC content of the type genome is 24.22 % and the genome length is 1.83 Mbp.

Description of *Candidatus* Semilosa gen. nov.

Candidatus Semilosa (NL. fem. n. *Semilosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DSNQ01*. The type species for the genus is *Candidatus* Semilosa letifitudo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DRYD01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Luculidaceae.

Description of *Candidatus* Semilula monodimonas sp. nov.

Candidatus Semilula monodimonas (NL. fem. n. *monodimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *M0603 sp006226755*. The type genome for the species is the GenBank assembly GCA_006226755.1. The GC content of the type genome is 39.29 % and the genome length is 3.85 Mbp.

Description of *Candidatus* Semilula gen. nov.

Candidatus Semilula (NL. fem. n. *Semilula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *M0603*. The type species for the genus is *Candidatus* Semilula monodimonas .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Semimana adtolilega sp. nov.

Candidatus Semimana adtolilega (NL. fem. n. *adtolilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *UBA5619 sp002424545*. The type genome for the species is the GenBank assembly GCA_002424545.1. The GC content of the type genome is 58.82 % and the genome length is 2.6 Mbp.

Description of *Candidatus* Semimana gen. nov.

Candidatus Semimana (NL. fem. n. *Semimana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA5619*. The type species for the genus is *Candidatus* Semimana adtolilega .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA5619*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Semimanaceae.

Description of *Candidatus* Semimanaceae fam. nov.

Candidatus Semimanaceae (NL. fem. n. *Semimanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA5619.* The type genus for the taxon is *Candidatus* Semimana .

According to GTDB R06-RS202, this family belongs to the order *Syntrophales*.

Description of *Candidatus* Semimana biveritio sp. nov.

Candidatus Semimana biveritio (NL. fem. n. *biveritio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5619 sp903928915*. The type genome for the species is the GenBank assembly GCA_903905465.1. The GC content of the type genome is 64.64 % and the genome length is 3.72 Mbp.

Description of *Candidatus* Semimana cacopisca sp. nov.

Candidatus Semimana cacopisca (NL. fem. n. *cacopisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5619 sp001830835*. The type genome for the species is the GenBank assembly GCA_001797945.1. The GC content of the type genome is 56.62 %

and the genome length is 2.41 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle background sediment; well D04 at 16ft depth".

Description of *Candidatus* Semimana cerofatio sp. nov.

Candidatus Semimana cerofatio (NL. fem. n. *cerofatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5619 sp001829875*. The type genome for the species is the GenBank assembly GCA_003489585.1. The GC content of the type genome is 55.98 % and the genome length is 3.44 Mbp.

Description of *Candidatus* Semimana homolastra sp. nov.

Candidatus Semimana homolastra (NL. fem. n. *homolastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5619 sp013824905*. The type genome for the species is the GenBank assembly GCA_013824905.1. The GC content of the type genome is 56.15 % and the genome length is 2.74 Mbp.

Description of *Candidatus* Semimana illapitoga sp. nov.

Candidatus Semimana illapitoga (NL. fem. n. *illapitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5619 sp002423465*. The type genome for the species is the GenBank assembly GCA_002423465.1. The GC content of the type genome is 56.34 % and the genome length is 3.18 Mbp.

Description of *Candidatus* Semimana meridetta sp. nov.

Candidatus Semimana meridetta (NL. fem. n. *meridetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5619 sp001873745*. The type genome for the species is the GenBank assembly GCA_002788055.1. The GC content of the type genome is 57.68 % and the genome length is 2.74 Mbp.

Description of *Candidatus* Semimana rorulatio sp. nov.

Candidatus Semimana rorulatio (NL. fem. n. *rorulatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5619 sp903903205*. The type genome for the species is the GenBank assembly GCA_903903205.1. The GC content of the type genome is 56.99 % and the genome length is 2.63 Mbp.

Description of *Candidatus* Semimana saxopimonas sp. nov.

Candidatus Semimana saxopimonas (NL. fem. n. *saxopimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5619 sp003141195*. The type genome for the species is the GenBank assembly GCA_003141195.1. The GC content of the type genome is 57.46 % and the genome length is 3.27 Mbp.

Description of *Candidatus* Semimaria apporilenta sp. nov.

Candidatus Semimaria apporilenta (NL. fem. n. *apporilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SGZJ01 sp902515565*. The type genome for the species is the GenBank assembly GCA_902515565.1. The GC content of the type genome is 29.69 % and the genome length is 1.27 Mbp.

Description of *Candidatus* Semimaria gen. nov.

Candidatus Semimaria (NL. fem. n. *Semimaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SGZJ01*. The type species for the genus is *Candidatus* Semimaria apporilenta .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Semimaria ficeditio sp. nov.

Candidatus Semimaria ficeditio (NL. fem. n. *ficeditio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SGZJ01 sp004213995*. The type genome for the species is the GenBank assembly GCA_004213995.1. The GC content of the type genome is 29.24 % and the genome length is 1.27 Mbp.

Description of *Candidatus* Semimella bonitimonas sp. nov.

Candidatus Semimella bonitimonas (NL. fem. n. *bonitimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SPDA01 sp004525155*. The type genome for the species is the GenBank assembly GCA_004525155.1. The GC content of the type genome is 52.48 % and the genome length is 3.18 Mbp.

Description of *Candidatus* Semimella gen. nov.

Candidatus Semimella (NL. fem. n. *Semimella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SPDA01*. The type species for the genus is *Candidatus* Semimella bonitimonas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SPDA01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Semimellaceae.

Description of *Candidatus* Semimellaceae fam. nov.

Candidatus Semimellaceae (NL. fem. n. *Semimellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SPDA01*. The type genus for the taxon is *Candidatus* Semimella .

According to the original version of GTDB R06-RS202, this family belongs to the order *SPDA01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Semimellales.

Description of *Candidatus* Semimellales ord. nov.

Candidatus Semimellales (NL. fem. n. *Semimellales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SPDA01*. The type genus for the taxon is *Candidatus* Semimella .

According to the GTDB R06-RS202, this order belongs to the class *Spirochaetia*.

Description of *Candidatus* Semimia bimetitas sp. nov.

Candidatus Semimia bimetitas (NL. fem. n. *bimetitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MED-G78 sp902514105*. The type genome for the species is the GenBank assembly GCA_902514105.1. The GC content of the type genome is 33.61 % and the genome length is 0.96 Mbp.

Description of *Candidatus* Semimia gen. nov.

Candidatus Semimia (NL. fem. n. *Semimia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *MED-G78*. The type species for the genus is *Candidatus* Semimia bimetitas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *D2472*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Bisulosaceae.

Description of *Candidatus* Semimia inambatica sp. nov.

Candidatus Semimia inambatica (NL. fem. n. *inambatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MED-G78 sp902514455*. The type genome for the species is the GenBank assembly GCA_902514455.1. The GC content of the type genome is 33.93 % and the genome length is 0.75 Mbp.

Description of *Candidatus* Semimia manubatica sp. nov.

Candidatus Semimia manubatica (NL. fem. n. *manubatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MED-G78 sp902509965*. The type genome for the species is the GenBank assembly GCA_902509965.1. The GC content of the type genome is 33.79 % and the genome length is 1.08 Mbp.

Description of *Candidatus* Semimia notabigena sp. nov.

Candidatus Semimia notabigena (NL. fem. n. *notabigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MED-G78 sp003331645*. The type genome for the species is the GenBank assembly GCA_003331645.1. The GC content of the type genome is 32.95 % and the genome length is 0.75 Mbp.

Description of *Candidatus* Semimia socagitas sp. nov.

Candidatus Semimia socagitas (NL. fem. n. *socagitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MED-G78 sp902558645*. The type genome for the species is the GenBank assembly GCA_902557645.1. The GC content of the type genome is 32.86 % and the genome length is 1.25 Mbp.

Description of *Candidatus* Semimida cacopimonas sp. nov.

Candidatus Semimida cacopimonas (NL. fem. n. *cacopimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA12028 sp001002285*. The type genome for the species is the GenBank assembly GCA_003525295.1. The GC content of the type genome is 45.45 % and the genome length is 0.87 Mbp.

Description of *Candidatus* Semimida gen. nov.

Candidatus Semimida (NL. fem. n. *Semimida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA12028*. The type species for the genus is *Candidatus* Semimida cacopimonas .

According to the original version of GTDB R06-RS202, this genus belongs to the family

UBA12028. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Semimidaceae.

Description of *Candidatus* Semimidaceae fam. nov.

Candidatus Semimidaceae (NL. fem. n. *Semimidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA12028.* The type genus for the taxon is *Candidatus* Semimida .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA1400*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Bucolulales.

Description of *Candidatus* Semimosa aphorilega sp. nov.

Candidatus Semimosa aphorilega (NL. fem. n. *aphorilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DSWW01 sp011370045*. The type genome for the species is the GenBank assembly GCA_011370045.1. The GC content of the type genome is 61.26 % and the genome length is 4.7 Mbp.

Description of *Candidatus* Semimosa gen. nov.

Candidatus Semimosa (NL. fem. n. *Semimosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DSWW01*. The type species for the genus is *Candidatus* Semimosa aphorilega .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DSWW01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Semimosaceae.

Description of *Candidatus* Semimosaceae fam. nov.

Candidatus Semimosaceae (NL. fem. n. *Semimosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *DSWW01.* The type genus for the taxon is *Candidatus* Semimosa .

According to the original version of GTDB R06-RS202, this family belongs to the order *DSWW01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Semimosales.

Description of *Candidatus* Semimosales ord. nov.

Candidatus Semimosales (NL. fem. n. *Semimosales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *DSWW01*. The type genus for the taxon is *Candidatus* Semimosa .

According to the original version of GTDB R06-RS202, this family belongs to the class *DSWW01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Semimosae.

Description of *Candidatus* Semimosae class. nov.

Candidatus Semimosae (NL. fem. n. *c__Semimosae* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *DSWW01*. The type genus for the taxon is *Candidatus* Semimosa .

According to the original version of GTDB R06-RS202, this family belongs to the phylum *DSWW01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the phylum *Candidatus* Semimosota.

Description of *Candidatus* Semimosota phyl. nov.

Candidatus Semimosota (NL. fem. n. *Semimosota* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *DSWW01*. The type genus for the taxon is *Candidatus* Semimosa .

According to GTDB R06-RS202, this phylum belongs to the domain *Bacteria* .

Description of *Candidatus* Semimula cunabentia sp. nov.

Candidatus Semimula cunabentia (NL. fem. n. *cunabentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAABTG01 sp011389995*. The type genome for the species is the

GenBank assembly GCA_011389995.1. The GC content of the type genome is 67.38 % and the genome length is 3.95 Mbp.

Description of *Candidatus* Semimula gen. nov.

Candidatus Semimula (NL. fem. n. *Semimula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAABTG01*. The type species for the genus is *Candidatus* Semimula cunabentia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JAABTG01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Semimulaceae.

Description of *Candidatus* Semimulaceae fam. nov.

Candidatus Semimulaceae (NL. fem. n. *Semimulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JAABTG01.* The type genus for the taxon is *Candidatus* Semimula .

According to the original version of GTDB R06-RS202, this family belongs to the order *JAABTG01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Semimulales.

Description of *Candidatus* Semimulales ord. nov.

Candidatus Semimulales (NL. fem. n. *Semimulales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JAABTG01.* The type genus for the taxon is *Candidatus* Semimula .

According to the GTDB R06-RS202, this order belongs to the class *Gammaproteobacteria*.

Description of *Candidatus* Semipana decucilenta sp. nov.

Candidatus Semipana decucilenta (NL. fem. n. *decucilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CA54 sp007747995*. The type genome for the species is the GenBank

assembly RS_GCF_007747995.1. The GC content of the type genome is 55.32 % and the genome length is 7.77 Mbp.

Description of *Candidatus* Semipana gen. nov.

Candidatus Semipana (NL. fem. n. *Semipana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CA54*. The type species for the genus is *Candidatus* Semipana decucilenta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CA54*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Semipanaceae.

Description of *Candidatus* Semipanaceae fam. nov.

Candidatus Semipanaceae (NL. fem. n. *Semipanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CA54.* The type genus for the taxon is *Candidatus* Semipana .

According to GTDB R06-RS202, this family belongs to the order *Planctomycetales*.

Description of *Candidatus* Semipana hecatitica sp. nov.

Candidatus Semipana hecatitica (NL. fem. n. *hecatitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CA54 sp007860075*. The type genome for the species is the GenBank assembly RS_GCF_007860075.1. The GC content of the type genome is 55.22 % and the genome length is 7.57 Mbp.

Description of *Candidatus* Semiparia bicodessa sp. nov.

Candidatus Semiparia bicodessa (NL. fem. n. *bicodessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS973 sp900547295*. The type genome for the species is the GenBank assembly GCA_900547295.1. The GC content of the type genome is 43.18 % and the genome length is 2.45 Mbp.

Description of *Candidatus* Semiparia gen. nov.

Candidatus Semiparia (NL. fem. n. *Semiparia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UMGS973*. The type species for the genus is *Candidatus* Semiparia bicodessa .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Semipella denixastra sp. nov.

Candidatus Semipella denixastra (NL. fem. n. *denixastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HCM1 sp002995645*. The type genome for the species is the GenBank assembly GCA_002995645.1. The GC content of the type genome is 35.15 % and the genome length is 1.6 Mbp.

Description of *Candidatus* Semipella gen. nov.

Candidatus Semipella (NL. fem. n. *Semipella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *HCM1*. The type species for the genus is *Candidatus* Semipella denixastra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *HCM1*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Semipellaceae.

Description of *Candidatus* Semipellaceae fam. nov.

Candidatus Semipellaceae (NL. fem. n. *Semipellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *HCM1*. The type genus for the taxon is *Candidatus* Semipella .

According to the original version of GTDB R06-RS202, this family belongs to the order *XYD2-FULL-50-16*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Nicomellales.

Description of *Candidatus* Semipia cosidimonia sp. nov.

Candidatus Semipia cosidimonia (NL. fem. n. *cosidimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA11051 sp003542955*. The type genome for the species is the GenBank assembly GCA_003542955.1. The GC content of the type genome is 65.66 % and the genome length is 6.64 Mbp.

Description of *Candidatus* Semipia gen. nov.

Candidatus Semipia (NL. fem. n. *Semipia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA11051*. The type species for the genus is *Candidatus* Semipia cosidimonia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA11051*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Semipiaceae.

Description of *Candidatus* Semipiaceae fam. nov.

Candidatus Semipiaceae (NL. fem. n. *Semipiaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA11051.* The type genus for the taxon is *Candidatus* Semipia .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA5377*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Latibosales.

Description of *Candidatus* Semipida fusifitrix sp. nov.

Candidatus Semipida fusifitrix (NL. fem. n. *fusifitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *01-FULL-45-10b sp001804205*. The type genome for the species is the GenBank assembly GCA_001804205.1. The GC content of the type genome is 45.02 % and the genome length is 1.84 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under low O2

conditions; 0.1 micron filter; full assembly".

Description of *Candidatus* Semipida gen. nov.

Candidatus Semipida (NL. fem. n. *Semipida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *01-FULL-45-10b*. The type species for the genus is *Candidatus* Semipida fusifitrix .

According to the original version of GTDB R06-RS202, this genus belongs to the family *01-FULL-45-10b*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Semipidaceae.

Description of *Candidatus* Semipidaceae fam. nov.

Candidatus Semipidaceae (NL. fem. n. *Semipidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *01-FULL-45-10b.* The type genus for the taxon is *Candidatus* Semipida .

According to GTDB R06-RS202, this family belongs to the order *Omnitrophales*.

Description of *Candidatus* Semiposa adpenatica sp. nov.

Candidatus Semiposa adpenatica (NL. fem. n. *adpenatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DSXP01 sp011367825*. The type genome for the species is the GenBank assembly GCA_011367825.1. The GC content of the type genome is 59.01 % and the genome length is 3.32 Mbp.

Description of *Candidatus* Semiposa gen. nov.

Candidatus Semiposa (NL. fem. n. *Semiposa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DSXP01*. The type species for the genus is *Candidatus* Semiposa adpenatica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DSXP01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to

the family *Candidatus* Semiposaceae.

Description of *Candidatus* Semiposaceae fam. nov.

Candidatus Semiposaceae (NL. fem. n. *Semiposaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *DSXP01*. The type genus for the taxon is *Candidatus* Semiposa .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA8416*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Depupellales.

Description of *Candidatus* Semipula depocastra sp. nov.

Candidatus Semipula depocastra (NL. fem. n. *depocastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-02-FULL-43-11-A sp001789515*. The type genome for the species is the GenBank assembly GCA_001789515.1. The GC content of the type genome is 42.72 % and the genome length is 0.71 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 0.2 micron filter; full assembly".

Description of *Candidatus* Semipula gen. nov.

Candidatus Semipula (NL. fem. n. *Semipula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *2-02-FULL-43-11-A*. The type species for the genus is *Candidatus* Semipula depocastra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *HO2-37-13b*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Semifidaceae.

Description of *Candidatus* Semivana catililega sp. nov.

Candidatus Semivana catililega (NL. fem. n. *catililega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *TMED48 sp002731695*. The type genome for the species is the GenBank assembly GCA_002731695.1. The GC content of the type genome is 43.19 % and the genome length is 2.35 Mbp.

Description of *Candidatus* Semivana gen. nov.

Candidatus Semivana (NL. fem. n. *Semivana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *TMED48*. The type species for the genus is *Candidatus* Semivana catililega .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Semivana cotenatio sp. nov.

Candidatus Semivana cotenatio (NL. fem. n. *cotenatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *TMED48 sp002692165*. The type genome for the species is the GenBank assembly GCA_002692165.1. The GC content of the type genome is 44.91 % and the genome length is 1.71 Mbp.

Description of *Candidatus* Semivana denixitura sp. nov.

Candidatus Semivana denixitura (NL. fem. n. *denixitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *TMED48 sp002720735*. The type genome for the species is the GenBank assembly GCA_002720735.1. The GC content of the type genome is 43.02 % and the genome length is 2.11 Mbp.

Description of *Candidatus* Semivana gerunibula sp. nov.

Candidatus Semivana gerunibula (NL. fem. n. *gerunibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *TMED48 sp002701765*. The type genome for the species is the GenBank assembly RS_GCF_902519285.1. The GC content of the type genome is 44.29

% and the genome length is 2.2 Mbp.

Description of *Candidatus* Semivana locupitrix sp. nov.

Candidatus Semivana locupitrix (NL. fem. n. *locupitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *TMED48 sp003509025*. The type genome for the species is the GenBank assembly GCA_003509025.1. The GC content of the type genome is 49.78 % and the genome length is 1.75 Mbp.

Description of *Candidatus* Semivana obfiritas sp. nov.

Candidatus Semivana obfiritas (NL. fem. n. *obfiritas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *TMED48 sp002591625*. The type genome for the species is the GenBank assembly GCA_002591625.1. The GC content of the type genome is 44.58 % and the genome length is 2.56 Mbp.

Description of *Candidatus* Semivana obvalibula sp. nov.

Candidatus Semivana obvalibula (NL. fem. n. *obvalibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *TMED48 sp902557735*. The type genome for the species is the GenBank assembly RS_GCF_902557735.1. The GC content of the type genome is 44.79 % and the genome length is 1.95 Mbp.

Description of *Candidatus* Semivana podagatica sp. nov.

Candidatus Semivana podagatica (NL. fem. n. *podagatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *TMED48 sp002691825*. The type genome for the species is the GenBank assembly GCA_002691825.1. The GC content of the type genome is 42.95 % and the genome length is 1.84 Mbp.

Description of *Candidatus* Semivana sicunisca sp. nov.

Candidatus Semivana sicunisca (NL. fem. n. *sicunisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *TMED48 sp002338445*. The type genome for the species is the GenBank assembly GCA_002338445.1. The GC content of the type genome is 42.66 % and the genome length is 2.26 Mbp.

Description of *Candidatus* Semivana turililega sp. nov.

Candidatus Semivana turililega (NL. fem. n. *turililega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *TMED48 sp002689135*. The type genome for the species is the GenBank assembly GCA_002689135.1. The GC content of the type genome is 41.41 % and the genome length is 1.86 Mbp.

Description of *Candidatus* Semivana vecorimonas sp. nov.

Candidatus Semivana vecorimonas (NL. fem. n. *vecorimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *TMED48 sp902562425*. The type genome for the species is the GenBank assembly RS_GCF_902562425.1. The GC content of the type genome is 42.55 % and the genome length is 2.24 Mbp.

Description of *Candidatus* Semivana venabugo sp. nov.

Candidatus Semivana venabugo (NL. fem. n. *venabugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *TMED48 sp002339165*. The type genome for the species is the GenBank assembly GCA_002339165.1. The GC content of the type genome is 52.49 % and the genome length is 2.58 Mbp.

Description of *Candidatus* Semivaria adtenago sp. nov.

Candidatus Semivaria adtenago (NL. fem. n. *adtenago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6857 sp900768075*. The type genome for the species is the GenBank assembly RS_GCF_900768075.1. The GC content of the type genome is 41.4 % and the genome length is 2.23 Mbp.

Description of *Candidatus* Semivaria gen. nov.

Candidatus Semivaria (NL. fem. n. *Semivaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA6857*. The type species for the genus is *Candidatus* Semivaria adtenago .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Semivaria ascenatio sp. nov.

Candidatus Semivaria ascenatio (NL. fem. n. *ascenatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6857 sp002451715*. The type genome for the species is the GenBank assembly GCA_002451715.1. The GC content of the type genome is 43.62 % and the genome length is 2.16 Mbp.

Description of *Candidatus* Semivaria carucisca sp. nov.

Candidatus Semivaria carucisca (NL. fem. n. *carucisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6857 sp900555805*. The type genome for the species is the GenBank assembly GCA_900555805.1. The GC content of the type genome is 49.02 % and the genome length is 1.59 Mbp.

Description of *Candidatus* Semivaria deculentia sp. nov.

Candidatus Semivaria deculentia (NL. fem. n. *deculentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6857 sp002438505*. The type genome for the species is the

GenBank assembly GCA_002404495.1. The GC content of the type genome is 46.21 % and the genome length is 2.0 Mbp.

Description of *Candidatus* Semivaria ensicitica sp. nov.

Candidatus Semivaria ensicitica (NL. fem. n. *ensicitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6857 sp900767015*. The type genome for the species is the GenBank assembly RS_GCF_900767015.1. The GC content of the type genome is 47.66 % and the genome length is 2.33 Mbp.

Description of *Candidatus* Semivella bovicibra sp. nov.

Candidatus Semivella bovicibra (NL. fem. n. *bovicibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *T3246-1 sp004353825*. The type genome for the species is the GenBank assembly RS_GCF_004353825.1. The GC content of the type genome is 71.38 % and the genome length is 5.34 Mbp.

Description of *Candidatus* Semivella gen. nov.

Candidatus Semivella (NL. fem. n. *Semivella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *T3246-1*. The type species for the genus is *Candidatus* Semivella bovicibra .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Semivella catalilenta sp. nov.

Candidatus Semivella catalilenta (NL. fem. n. *catalilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *T3246-1 sp902703175*. The type genome for the species is the GenBank assembly RS_GCF_902703175.1. The GC content of the type genome is 70.62 % and the genome length is 5.86 Mbp.

Description of *Candidatus* Semivella defanago sp. nov.

Candidatus Semivella defanago (NL. fem. n. *defanago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *T3246-1 sp009708215*. The type genome for the species is the GenBank assembly RS_GCF_009708215.1. The GC content of the type genome is 71.04 % and the genome length is 5.65 Mbp.

Description of *Candidatus* Semivia bimetitia sp. nov.

Candidatus Semivia bimetitia (NL. fem. n. *bimetitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *XYC2-FULL-35-21 sp001804705*. The type genome for the species is the GenBank assembly GCA_001802975.1. The GC content of the type genome is 34.9 % and the genome length is 4.05 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at 16ft depth; 0.2 micron filter at time point A".

Description of *Candidatus* Semivia gen. nov.

Candidatus Semivia (NL. fem. n. *Semivia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *XYC2-FULL-35-21*. The type species for the genus is *Candidatus* Semivia bimetitia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2268*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Linigiaceae.

Description of *Candidatus* Semivia infiratio sp. nov.

Candidatus Semivia infiratio (NL. fem. n. *infiratio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *XYC2-FULL-35-21 sp004322215*. The type genome for the species is the GenBank assembly GCA_004322215.1. The GC content of the type genome is 34.6 % and the genome length is 4.2 Mbp.

Description of *Candidatus* Semivosa sacomimonas sp. nov.

Candidatus Semivosa sacomimonas (NL. fem. n. *sacomimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SYDM01 sp008638125*. The type genome for the species is the GenBank assembly GCA_008638175.1. The GC content of the type genome is 30.0 % and the genome length is 0.9 Mbp.

Description of *Candidatus* Semivosa gen. nov.

Candidatus Semivosa (NL. fem. n. *Semivosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SYDM01*. The type species for the genus is *Candidatus* Semivosa sacomimonas .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Semivosa semapimonia sp. nov.

Candidatus Semivosa semapimonia (NL. fem. n. *semapimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SYDM01 sp005801485*. The type genome for the species is the GenBank assembly GCA_005801485.1. The GC content of the type genome is 28.68 % and the genome length is 0.64 Mbp.

Description of *Candidatus* Semivula bicinitrix sp. nov.

Candidatus Semivula bicinitrix (NL. fem. n. *bicinitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS856 sp900546265*. The type genome for the species is the GenBank assembly RS_GCF_900751855.1. The GC content of the type genome is 59.17 % and the genome length is 3.43 Mbp.

Description of *Candidatus* Semivula gen. nov.

Candidatus Semivula (NL. fem. n. *Semivula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UMGS856*. The type species for the genus is *Candidatus* Semivula bicinitrix .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Semivula extunago sp. nov.

Candidatus Semivula extunago (NL. fem. n. *extunago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS856 sp900760305*. The type genome for the species is the GenBank assembly RS_GCF_900760305.1. The GC content of the type genome is 60.91 % and the genome length is 2.45 Mbp.

Description of *Candidatus* Semodaria lanifugo sp. nov.

Candidatus Semodaria lanifugo (NL. fem. n. *lanifugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABFXA01 sp013361955*. The type genome for the species is the GenBank assembly GCA_013361955.1. The GC content of the type genome is 72.53 % and the genome length is 4.71 Mbp.

Description of *Candidatus* Semodaria gen. nov.

Candidatus Semodaria (NL. fem. n. *Semodaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABFXA01*. The type species for the genus is *Candidatus* Semodaria lanifugo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Semodella penicisca sp. nov.

Candidatus Semodella penicisca (NL. fem. n. *penicisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *CG2-30-36-38 sp001873465*. The type genome for the species is the GenBank assembly GCA_009992825.1. The GC content of the type genome is 36.26 % and the genome length is 0.41 Mbp.

Description of *Candidatus* Semodella gen. nov.

Candidatus Semodella (NL. fem. n. *Semodella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CG2-30-36-38*. The type species for the genus is *Candidatus* Semodella penicisca .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA6264*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Curotulaceae.

Description of *Candidatus* Semodia arnacitudo sp. nov.

Candidatus Semodia arnacitudo (NL. fem. n. *arnacitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAABPW01 sp011391785*. The type genome for the species is the GenBank assembly GCA_011391785.1. The GC content of the type genome is 58.93 % and the genome length is 3.07 Mbp.

Description of *Candidatus* Semodia gen. nov.

Candidatus Semodia (NL. fem. n. *Semodia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAABPW01*. The type species for the genus is *Candidatus* Semodia arnacitudo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAITUY01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Dupunosaceae.

Description of *Candidatus* Semodia venefitia sp. nov.

Candidatus Semodia venefitia (NL. fem. n. *venefitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAABPW01 sp903934155*. The type genome for the species is the GenBank assembly GCA_903934155.1. The GC content of the type genome is 57.16 % and the genome length is 2.52 Mbp.

Description of *Candidatus* Semodia voragitoga sp. nov.

Candidatus Semodia voragitoga (NL. fem. n. *voragitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAABPW01 sp903958395*. The type genome for the species is the GenBank assembly GCA_903934585.1. The GC content of the type genome is 57.15 % and the genome length is 4.98 Mbp.

Description of *Candidatus* Semodida diminicula sp. nov.

Candidatus Semodida diminicula (NL. fem. n. *diminicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAADGH01 sp013152475*. The type genome for the species is the GenBank assembly GCA_013152475.1. The GC content of the type genome is 61.41 % and the genome length is 6.5 Mbp.

Description of *Candidatus* Semodida gen. nov.

Candidatus Semodida (NL. fem. n. *Semodida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAADGH01*. The type species for the genus is *Candidatus* Semodida diminicula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JAADGH01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Semodidaceae.

Description of *Candidatus* Semodidaceae fam. nov.

Candidatus Semodidaceae (NL. fem. n. *Semodidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JAADGH01*. The type genus for the taxon is *Candidatus* Semodida .

According to the original version of GTDB R06-RS202, this family belongs to the order *JAADGH01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Semodidales.

Description of *Candidatus* Semodidales ord. nov.

Candidatus Semodidales (NL. fem. n. *Semodidales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JAADGH01.* The type genus for the taxon is *Candidatus* Semodida .

According to the GTDB R06-RS202, this order belongs to the class *Brocadiae*.

Description of *Candidatus* Semodosa tegimigena sp. nov.

Candidatus Semodosa tegimigena (NL. fem. n. *tegimigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9294 sp003545155*. The type genome for the species is the GenBank assembly GCA_003545155.1. The GC content of the type genome is 55.34 % and the genome length is 1.06 Mbp.

Description of *Candidatus* Semodosa gen. nov.

Candidatus Semodosa (NL. fem. n. *Semodosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA9294*. The type species for the genus is *Candidatus* Semodosa tegimigena .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA9294*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Semodosaceae.

Description of *Candidatus* Semodosaceae fam. nov.

Candidatus Semodosaceae (NL. fem. n. *Semodosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA9294.* The type genus for the taxon is *Candidatus* Semodosa .

According to the original version of GTDB R06-RS202, this family belongs to the order

UBA7950. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Feficosales.

Description of *Candidatus* Semodula benifousia sp. nov.

Candidatus Semodula benifousia (NL. fem. n. *benifousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8468 sp002791075*. The type genome for the species is the GenBank assembly GCA_001871865.1. The GC content of the type genome is 40.7 % and the genome length is 0.92 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "groundwater filtered through a a 3.0 um filter and then through a 0.2 um filter".

Description of *Candidatus* Semodula gen. nov.

Candidatus Semodula (NL. fem. n. *Semodula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA8468*. The type species for the genus is *Candidatus* Semodula benifousia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA8468*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Semodulaceae.

Description of *Candidatus* Semodulaceae fam. nov.

Candidatus Semodulaceae (NL. fem. n. *Semodulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA8468.* The type genus for the taxon is *Candidatus* Semodula .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA8468*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Semodulales.

Description of *Candidatus* Semodulales ord. nov.

Candidatus Semodulales (NL. fem. n. *Semodulales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA8468.* The type genus for the taxon is *Candidatus* Semodula .

According to the original version of GTDB R06-RS202, this family belongs to the class *UBA8468*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Semodulae.

Description of *Candidatus* Semodulae class. nov.

Candidatus Semodulae (NL. fem. n. *c__Semodulae* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA8468.* The type genus for the taxon is *Candidatus* Semodula .

According to GTDB R06-RS202, this class belongs to the phylum *Ratteibacteria*.

Description of *Candidatus* Semunana omnipitrix sp. nov.

Candidatus Semunana omnipitrix (NL. fem. n. *omnipitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAZDU01 sp012512665*. The type genome for the species is the GenBank assembly GCA_012512665.1. The GC content of the type genome is 44.76 % and the genome length is 1.69 Mbp.

Description of *Candidatus* Semunana gen. nov.

Candidatus Semunana (NL. fem. n. *Semunana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAZDU01*. The type species for the genus is *Candidatus* Semunana omnipitrix .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JAAZDU01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Semunanaceae.

Description of *Candidatus* Semunanaceae fam. nov.

Candidatus Semunanaceae (NL. fem. n. *Semunanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this taxon is *JAAZDU01*. The type genus for the taxon is *Candidatus* Semunana .

According to the original version of GTDB R06-RS202, this family belongs to the order *DTU022*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Depelidales.

Description of *Candidatus* Semunaria accapimonia sp. nov.

Candidatus Semunaria accapimonia (NL. fem. n. *accapimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SZUA-226 sp003229345*. The type genome for the species is the GenBank assembly GCA_003229345.1. The GC content of the type genome is 50.35 % and the genome length is 2.11 Mbp.

Description of *Candidatus* Semunaria gen. nov.

Candidatus Semunaria (NL. fem. n. *Semunaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SZUA-226*. The type species for the genus is *Candidatus* Semunaria accapimonia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Semunaria citocitudo sp. nov.

Candidatus Semunaria citocitudo (NL. fem. n. *citocitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SZUA-226 sp004357365*. The type genome for the species is the GenBank assembly GCA_004357485.1. The GC content of the type genome is 54.56 % and the genome length is 1.19 Mbp.

Description of *Candidatus* Semunella lenimousia sp. nov.

Candidatus Semunella lenimousia (NL. fem. n. *lenimousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2242 sp002347855*. The type genome for the species is the

GenBank assembly GCA_002347855.1. The GC content of the type genome is 44.43 % and the genome length is 2.63 Mbp.

Description of *Candidatus* Semunella gen. nov.

Candidatus Semunella (NL. fem. n. *Semunella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA2242*. The type species for the genus is *Candidatus* Semunella lenimousia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2242*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Semunellaceae.

Description of *Candidatus* Semunellaceae fam. nov.

Candidatus Semunellaceae (NL. fem. n. *Semunellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA2242.* The type genus for the taxon is *Candidatus* Semunella .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA2242*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Semunellales.

Description of *Candidatus* Semunellales ord. nov.

Candidatus Semunellales (NL. fem. n. *Semunellales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA2242.* The type genus for the taxon is *Candidatus* Semunella .

According to the original version of GTDB R06-RS202, this family belongs to the class *UBA2242*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Semunellae.

Description of *Candidatus* Semunellae class. nov.

Candidatus Semunellae (NL. fem. n. *c__Semunellae* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA2242.* The type genus for the taxon is *Candidatus* Semunella .

According to GTDB R06-RS202, this class belongs to the phylum *Marinisomatota*.

Description of *Candidatus* Semunia bonitigena sp. nov.

Candidatus Semunia bonitigena (NL. fem. n. *bonitigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CSSed11-175R1 sp003563915*. The type genome for the species is the GenBank assembly GCA_003563915.1. The GC content of the type genome is 69.95 % and the genome length is 4.15 Mbp.

Description of *Candidatus* Semunia gen. nov.

Candidatus Semunia (NL. fem. n. *Semunia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CSSed11-175R1*. The type species for the genus is *Candidatus* Semunia bonitigena .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Semunia dirititia sp. nov.

Candidatus Semunia dirititia (NL. fem. n. *dirititia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CSSed11-175R1 sp007136095*. The type genome for the species is the GenBank assembly GCA_003561955.1. The GC content of the type genome is 69.66 % and the genome length is 3.43 Mbp.

Description of *Candidatus* Semunia hirunetta sp. nov.

Candidatus Semunia hirunetta (NL. fem. n. *hirunetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CSSed11-175R1 sp007120565*. The type genome for the species is the GenBank assembly GCA_007135585.1. The GC content of the type genome is 68.75 % and the genome length is 3.13 Mbp.

Description of *Candidatus* Semunia immigax sp. nov.

Candidatus Semunia immigax (NL. fem. n. *immigax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CSSed11-175R1 sp007120465*. The type genome for the species is the GenBank assembly GCA_007120465.1. The GC content of the type genome is 72.52 % and the genome length is 3.26 Mbp.

Description of *Candidatus* Semunida adrecitudo sp. nov.

Candidatus Semunida adrecitudo (NL. fem. n. *adrecitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SXYR01 sp903957405*. The type genome for the species is the GenBank assembly GCA_903957405.1. The GC content of the type genome is 50.88 % and the genome length is 4.03 Mbp.

Description of *Candidatus* Semunida gen. nov.

Candidatus Semunida (NL. fem. n. *Semunida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SXYR01*. The type species for the genus is *Candidatus* Semunida adrecitudo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Semunida apsenessa sp. nov.

Candidatus Semunida apsenessa (NL. fem. n. *apsenessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SXYR01 sp903834825*. The type genome for the species is the GenBank assembly GCA_903834825.1. The GC content of the type genome is 44.45 % and the genome length is 2.63 Mbp.

Description of *Candidatus* Semunida cinefax sp. nov.

Candidatus Semunida cinefax (NL. fem. n. *cinefax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SXYR01 sp009919185*. The type genome for the species is the GenBank assembly GCA_009919185.1. The GC content of the type genome is 38.5 % and the genome length is 2.01 Mbp.

Description of *Candidatus* Semunida defalitia sp. nov.

Candidatus Semunida defalitia (NL. fem. n. *defalitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SXYR01 sp903826405*. The type genome for the species is the GenBank assembly GCA_903920815.1. The GC content of the type genome is 47.71 % and the genome length is 3.58 Mbp.

Description of *Candidatus* Semunida demogibula sp. nov.

Candidatus Semunida demogibula (NL. fem. n. *demogibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SXYR01 sp009922495*. The type genome for the species is the GenBank assembly GCA_009922495.1. The GC content of the type genome is 45.35 % and the genome length is 2.52 Mbp.

Description of *Candidatus* Semunida denigifica sp. nov.

Candidatus Semunida denigifica (NL. fem. n. *denigifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SXYR01 sp005788265*. The type genome for the species is the GenBank assembly GCA_005788265.1. The GC content of the type genome is 41.05 % and the genome length is 1.62 Mbp.

Description of *Candidatus* Semunida homilibra sp. nov.

Candidatus Semunida homilibra (NL. fem. n. *homilibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *SXYR01 sp903894575*. The type genome for the species is the GenBank assembly GCA_903894575.1. The GC content of the type genome is 44.0 % and the genome length is 3.18 Mbp.

Description of *Candidatus* Semunida inrepitoga sp. nov.

Candidatus Semunida inrepitoga (NL. fem. n. *inrepitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SXYR01 sp004294195*. The type genome for the species is the GenBank assembly GCA_004294195.1. The GC content of the type genome is 46.71 % and the genome length is 1.96 Mbp.

Description of *Candidatus* Semunida obvaliforma sp. nov.

Candidatus Semunida obvaliforma (NL. fem. n. *obvaliforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SXYR01 sp010027295*. The type genome for the species is the GenBank assembly GCA_010027295.1. The GC content of the type genome is 60.81 % and the genome length is 3.57 Mbp.

Description of *Candidatus* Semunida proscitoga sp. nov.

Candidatus Semunida proscitoga (NL. fem. n. *proscitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SXYR01 sp903959965*. The type genome for the species is the GenBank assembly GCA_903959965.1. The GC content of the type genome is 52.43 % and the genome length is 3.7 Mbp.

Description of *Candidatus* Semunida reforitia sp. nov.

Candidatus Semunida reforitia (NL. fem. n. *reforitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SXYR01 sp903920455*. The type genome for the species is the GenBank assembly GCA_903948435.1. The GC content of the type genome is 40.39 % and the genome length is 2.29 Mbp.

Description of *Candidatus* Semunida tibicago sp. nov.

Candidatus Semunida tibicago (NL. fem. n. *tibicago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SXYR01 sp903951405*. The type genome for the species is the GenBank assembly GCA_903831275.1. The GC content of the type genome is 37.3 % and the genome length is 2.74 Mbp.

Description of *Candidatus* Semunosa rubecousia sp. nov.

Candidatus Semunosa rubecousia (NL. fem. n. *rubecousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002779875 sp002792165*. The type genome for the species is the GenBank assembly GCA_002792165.1. The GC content of the type genome is 40.41 % and the genome length is 0.49 Mbp.

Description of *Candidatus* Semunosa gen. nov.

Candidatus Semunosa (NL. fem. n. *Semunosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-002779875*. The type species for the genus is *Candidatus* Semunosa rubecousia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Semunula idcirugo sp. nov.

Candidatus Semunula idcirugo (NL. fem. n. *idcirugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6262 sp002441095*. The type genome for the species is the GenBank assembly GCA_002441095.1. The GC content of the type genome is 45.12 % and the genome length is 1.91 Mbp.

Description of *Candidatus* Semunula gen. nov.

Candidatus Semunula (NL. fem. n. *Semunula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA6262*. The type species for the genus is *Candidatus* Semunula idcirugo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA6262*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Semunulaceae.

Description of *Candidatus* Semunulaceae fam. nov.

Candidatus Semunulaceae (NL. fem. n. *Semunulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA6262.* The type genus for the taxon is *Candidatus* Semunula .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA6262*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Semunulales.

Description of *Candidatus* Semunulales ord. nov.

Candidatus Semunulales (NL. fem. n. *Semunulales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA6262.* The type genus for the taxon is *Candidatus* Semunula .

According to the original version of GTDB R06-RS202, this family belongs to the class *UBA6262*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Semunulae.

Description of *Candidatus* Semunulae class. nov.

Candidatus Semunulae (NL. fem. n. *c__Semunulae* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA6262.* The type genus for the taxon is *Candidatus* Semunula .

According to the original version of GTDB R06-RS202, this family belongs to the phylum *UBA6262*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the phylum *Candidatus* Semunulota.

Description of *Candidatus* Semunulota phyl. nov.

Candidatus Semunulota (NL. fem. n. *Semunulota* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA6262.* The type genus for the taxon is *Candidatus* Semunula .

According to GTDB R06-RS202, this phylum belongs to the domain *Bacteria* .

Description of *Candidatus* Senacana nefarisca sp. nov.

Candidatus Senacana nefarisca (NL. fem. n. *nefarisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS1124 sp900548725*. The type genome for the species is the GenBank assembly RS_GCF_900771845.1. The GC content of the type genome is 23.79 % and the genome length is 1.18 Mbp.

Description of *Candidatus* Senacana gen. nov.

Candidatus Senacana (NL. fem. n. *Senacana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UMGS1124*. The type species for the genus is *Candidatus* Senacana nefarisca .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA660*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vitigellaceae.

Description of *Candidatus* Senacaria coticentia sp. nov.

Candidatus Senacaria coticentia (NL. fem. n. *coticentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CACCCN01 sp902544525*. The type genome for the species is the GenBank assembly GCA_902603935.1. The GC content of the type genome is 32.32 % and the genome length is 1.13 Mbp.

Description of *Candidatus* Senacaria gen. nov.

Candidatus Senacaria (NL. fem. n. *Senacaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CACCCN01*. The type species for the genus is *Candidatus* Senacaria coticentia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *AG-422-B15*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Mirifosaceae.

Description of *Candidatus* Senacella annucigena sp. nov.

Candidatus Senacella annucigena (NL. fem. n. *annucigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PIVX01 sp003353785*. The type genome for the species is the GenBank assembly GCA_003353785.1. The GC content of the type genome is 32.03 % and the genome length is 3.07 Mbp.

Description of *Candidatus* Senacella gen. nov.

Candidatus Senacella (NL. fem. n. *Senacella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PIVX01*. The type species for the genus is *Candidatus* Senacella annucigena .

According to the original version of GTDB R06-RS202, this genus belongs to the family *PIVX01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Senacellaceae.

Description of *Candidatus* Senacellaceae fam. nov.

Candidatus Senacellaceae (NL. fem. n. *Senacellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *PIVX01*. The type genus for the taxon is *Candidatus* Senacella .

According to the original version of GTDB R06-RS202, this family belongs to the order *PIVX01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Senacellales.

Description of *Candidatus* Senacellales ord. nov.

Candidatus Senacellales (NL. fem. n. *Senacellales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *PIVX01*. The type genus for the taxon is *Candidatus* Senacella .

According to the GTDB R06-RS202, this order belongs to the class *Gammaproteobacteria*.

Description of *Candidatus* Senacella ignomivita sp. nov.

Candidatus Senacella ignomivita (NL. fem. n. *ignomivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PIVX01 sp013215905*. The type genome for the species is the GenBank assembly GCA_013215905.1. The GC content of the type genome is 30.56 % and the genome length is 2.37 Mbp.

Description of *Candidatus* Senacida corociforma sp. nov.

Candidatus Senacida corociforma (NL. fem. n. *corociforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1820 sp003150615*. The type genome for the species is the GenBank assembly GCA_003150615.1. The GC content of the type genome is 47.93 % and the genome length is 2.04 Mbp.

Description of *Candidatus* Senacida gen. nov.

Candidatus Senacida (NL. fem. n. *Senacida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1820*. The type species for the genus is *Candidatus* Senacida corociforma .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1820*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Senacidaceae.

Description of *Candidatus* Senacidaceae fam. nov.

Candidatus Senacidaceae (NL. fem. n. *Senacidaceae* a name created from the name of

the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA1820.* The type genus for the taxon is *Candidatus* Senacida .

According to GTDB R06-RS202, this family belongs to the order *Flavobacteriales*.

Description of *Candidatus* Senacida subodatica sp. nov.

Candidatus Senacida subodatica (NL. fem. n. *subodatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1820 sp002314265*. The type genome for the species is the GenBank assembly GCA_002314265.1. The GC content of the type genome is 56.64 % and the genome length is 1.81 Mbp.

Description of *Candidatus* Senacosa avuncago sp. nov.

Candidatus Senacosa avuncago (NL. fem. n. *avuncago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SZUA-584 sp012719815*. The type genome for the species is the GenBank assembly GCA_012719815.1. The GC content of the type genome is 57.36 % and the genome length is 2.34 Mbp.

Description of *Candidatus* Senacosa gen. nov.

Candidatus Senacosa (NL. fem. n. *Senacosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SZUA-584*. The type species for the genus is *Candidatus* Senacosa avuncago .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SZUA-584*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Senacosaceae.

Description of *Candidatus* Senacosaceae fam. nov.

Candidatus Senacosaceae (NL. fem. n. *Senacosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SZUA-584.* The type genus for the taxon is *Candidatus* Senacosa .

According to GTDB R06-RS202, this family belongs to the order *Christensenellales*.

Description of *Candidatus* Senacosa tabititudo sp. nov.

Candidatus Senacosa tabititudo (NL. fem. n. *tabititudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SZUA-584 sp003249555*. The type genome for the species is the GenBank assembly GCA_003249555.1. The GC content of the type genome is 47.56 % and the genome length is 2.97 Mbp.

Description of *Candidatus* Senegalimassilia adsucago sp. nov.

Candidatus Senegalimassilia adsucago (NL. fem. n. *adsucago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Senegalimassilia sp002431805*. The type genome for the species is the GenBank assembly GCA_002431805.1. The GC content of the type genome is 59.28 % and the genome length is 2.36 Mbp.

Description of *Candidatus* Senegalimassilia dupunibra sp. nov.

Candidatus Senegalimassilia dupunibra (NL. fem. n. *dupunibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Senegalimassilia sp900550055*. The type genome for the species is the GenBank assembly GCA_900763835.1. The GC content of the type genome is 62.28 % and the genome length is 2.43 Mbp.

Description of *Candidatus* Senipana nugacitoga sp. nov.

Candidatus Senipana nugacitoga (NL. fem. n. *nugacitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAJBBX01 sp903885605*. The type genome for the species is the

GenBank assembly GCA_903890005.1. The GC content of the type genome is 68.88 % and the genome length is 5.64 Mbp.

Description of *Candidatus* Senipana gen. nov.

Candidatus Senipana (NL. fem. n. *Senipana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAJBBX01*. The type species for the genus is *Candidatus* Senipana nugacitoga .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAJBBX01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Senipanaceae.

Description of *Candidatus* Senipanaceae fam. nov.

Candidatus Senipanaceae (NL. fem. n. *Senipanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CAJBBX01*. The type genus for the taxon is *Candidatus* Senipana .

According to GTDB R06-RS202, this family belongs to the order *Chthonomonadales*.

Description of *Candidatus* Senipana volubitica sp. nov.

Candidatus Senipana volubitica (NL. fem. n. *volubitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAJBBX01 sp903951425*. The type genome for the species is the GenBank assembly GCA_903952775.1. The GC content of the type genome is 68.25 % and the genome length is 6.09 Mbp.

Description of *Candidatus* Seniparia infelentia sp. nov.

Candidatus Seniparia infelentia (NL. fem. n. *infelentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SAR202-VII-2 sp003228115*. The type genome for the species is the GenBank assembly GCA_003228115.1. The GC content of the type genome is 58.47 % and the genome length is 2.78 Mbp.

Description of *Candidatus* Seniparia gen. nov.

Candidatus Seniparia (NL. fem. n. *Seniparia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SAR202-VII-2*. The type species for the genus is *Candidatus* Seniparia infelentia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SAR202-VII-2*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Senipariaceae.

Description of *Candidatus* Senipariaceae fam. nov.

Candidatus Senipariaceae (NL. fem. n. *Senipariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SAR202-VII-2.* The type genus for the taxon is *Candidatus* Seniparia .

According to the original version of GTDB R06-RS202, this family belongs to the order *SAR202-VII-2*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Senipariales.

Description of *Candidatus* Senipariales ord. nov.

Candidatus Senipariales (NL. fem. n. *Senipariales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SAR202-VII-2.* The type genus for the taxon is *Candidatus* Seniparia .

According to the GTDB R06-RS202, this order belongs to the class *Dehalococcoidia*.

Description of *Candidatus* Senipella bicodifica sp. nov.

Candidatus Senipella bicodifica (NL. fem. n. *bicodifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS915 sp900546795*. The type genome for the species is the GenBank assembly GCA_902406125.1. The GC content of the type genome is 48.28 % and the genome length is 1.87 Mbp.

Description of *Candidatus* Senipella gen. nov.

Candidatus Senipella (NL. fem. n. *Senipella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UMGS915*. The type species for the genus is *Candidatus* Senipella bicodifica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Senipia omnigugo sp. nov.

Candidatus Senipia omnigugo (NL. fem. n. *omnigugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACAEB01 sp013389075*. The type genome for the species is the GenBank assembly GCA_013389075.1. The GC content of the type genome is 69.13 % and the genome length is 2.74 Mbp.

Description of *Candidatus* Senipia gen. nov.

Candidatus Senipia (NL. fem. n. *Senipia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACAEB01*. The type species for the genus is *Candidatus* Senipia omnigugo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JACAEB01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Senipiaceae.

Description of *Candidatus* Senipiaceae fam. nov.

Candidatus Senipiaceae (NL. fem. n. *Senipiaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JACAEB01.* The type genus for the taxon is *Candidatus* Senipia .

According to the original version of GTDB R06-RS202, this family belongs to the order *JACAEB01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Senipiales.

Description of *Candidatus* Senipiales ord. nov.

Candidatus Senipiales (NL. fem. n. *Senipiales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JACAEB01.* The type genus for the taxon is *Candidatus* Senipia .

According to the GTDB R06-RS202, this order belongs to the class *Alphaproteobacteria*.

Description of *Candidatus* Senipida sifunatica sp. nov.

Candidatus Senipida sifunatica (NL. fem. n. *sifunatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIRTR01 sp903881565*. The type genome for the species is the GenBank assembly GCA_903918395.1. The GC content of the type genome is 50.37 % and the genome length is 4.58 Mbp.

Description of *Candidatus* Senipida gen. nov.

Candidatus Senipida (NL. fem. n. *Senipida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIRTR01*. The type species for the genus is *Candidatus* Senipida sifunatica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1018*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Desorariaceae.

Description of *Candidatus* Seniposa cibicax sp. nov.

Candidatus Seniposa cibicax (NL. fem. n. *cibicax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *VYEH01 sp009843005*. The type genome for the species is the GenBank assembly GCA_009845555.1. The GC content of the type genome is 62.83 % and the genome length is 3.77 Mbp.

Description of *Candidatus* Seniposa gen. nov.

Candidatus Seniposa (NL. fem. n. *Seniposa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *VYEH01*. The type species for the genus is *Candidatus* Seniposa cibicax .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA6522*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Rudecariaceae.

Description of *Candidatus* Senipula abnepitas sp. nov.

Candidatus Senipula abnepitas (NL. fem. n. *abnepitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2912 sp902796775*. The type genome for the species is the GenBank assembly GCA_902796775.1. The GC content of the type genome is 48.03 % and the genome length is 2.96 Mbp.

Description of *Candidatus* Senipula gen. nov.

Candidatus Senipula (NL. fem. n. *Senipula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA2912*. The type species for the genus is *Candidatus* Senipula abnepitas .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Senipula benevitudo sp. nov.

Candidatus Senipula benevitudo (NL. fem. n. *benevitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2912 sp900314845*. The type genome for the species is the GenBank assembly GCA_900313975.1. The GC content of the type genome is 50.3 % and the genome length is 2.65 Mbp.

Description of *Candidatus* Senipula locelitoga sp. nov.

Candidatus Senipula locelitoga (NL. fem. n. *locelitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2912 sp902787905*. The type genome for the species is the GenBank assembly GCA_902787905.1. The GC content of the type genome is 54.07 % and the genome length is 2.02 Mbp.

Description of *Candidatus* Senipula senipatica sp. nov.

Candidatus Senipula senipatica (NL. fem. n. *senipatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2912 sp900317095*. The type genome for the species is the GenBank assembly GCA_900314275.1. The GC content of the type genome is 52.26 % and the genome length is 2.42 Mbp.

Description of *Candidatus* Senipula vitupibra sp. nov.

Candidatus Senipula vitupibra (NL. fem. n. *vitupibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2912 sp900314775*. The type genome for the species is the GenBank assembly GCA_002349455.1. The GC content of the type genome is 53.39 % and the genome length is 2.04 Mbp.

Description of *Candidatus* Seonamhaeicola divuliforma sp. nov.

Candidatus Seonamhaeicola divuliforma (NL. fem. n. *divuliforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Seonamhaeicola sp001971785*. The type genome for the species is the GenBank assembly RS_GCF_001971785.1. The GC content of the type genome is 32.26 % and the genome length is 3.75 Mbp.

Description of *Candidatus* Seonamhaeicola obtecivita sp. nov.

Candidatus Seonamhaeicola obtecivita (NL. fem. n. *obtecivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Seonamhaeicola sp004358095*. The type genome for the species is the GenBank assembly RS_GCF_004358095.2. The GC content of the type genome is 33.52

% and the genome length is 3.54 Mbp.

Description of *Candidatus* Seposana ruricibula sp. nov.

Candidatus Seposana ruricibula (NL. fem. n. *ruricibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GWB1-36-13 sp001829155*. The type genome for the species is the GenBank assembly GCA_001829155.1. The GC content of the type genome is 36.14 % and the genome length is 3.04 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at time point 2 / B; 5m depth; 0.1 filter".

Description of *Candidatus* Seposana gen. nov.

Candidatus Seposana (NL. fem. n. *Seposana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GWB1-36-13*. The type species for the genus is *Candidatus* Seposana ruricibula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GWB1-36-13*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Seposanaceae.

Description of *Candidatus* Seposanaceae fam. nov.

Candidatus Seposanaceae (NL. fem. n. *Seposanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *GWB1-36-13.* The type genus for the taxon is *Candidatus* Seposana .

According to the original version of GTDB R06-RS202, this family belongs to the order *GWB1-36-13*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Seposanales.

Description of *Candidatus* Seposanales ord. nov.

Candidatus Seposanales (NL. fem. n. *Seposanales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *GWB1-36-13.* The type genus for the taxon is *Candidatus* Seposana .

According to the original version of GTDB R06-RS202, this family belongs to the class *UBA6919*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Navifidae.

Description of *Candidatus* Seposaria arrecitrix sp. nov.

Candidatus Seposaria arrecitrix (NL. fem. n. *arrecitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-339-G14 sp902527995*. The type genome for the species is the GenBank assembly GCA_902527995.1. The GC content of the type genome is 33.97 % and the genome length is 0.78 Mbp.

Description of *Candidatus* Seposaria gen. nov.

Candidatus Seposaria (NL. fem. n. *Seposaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *AG-339-G14*. The type species for the genus is *Candidatus* Seposaria arrecitrix .

According to the original version of GTDB R06-RS202, this genus belongs to the family *AG-339-G14*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Seposariaceae.

Description of *Candidatus* Seposariaceae fam. nov.

Candidatus Seposariaceae (NL. fem. n. *Seposariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *AG-339-G14.* The type genus for the taxon is *Candidatus* Seposaria .

According to the original version of GTDB R06-RS202, this family belongs to the order *SAR86*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Ludimulales.

Description of *Candidatus* Seposaria benifentia sp. nov.

Candidatus Seposaria benifentia (NL. fem. n. *benifentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-339-G14 sp902613455*. The type genome for the species is the GenBank assembly GCA_902542105.1. The GC content of the type genome is 34.3 % and the genome length is 0.97 Mbp.

Description of *Candidatus* Seposaria diminimonas sp. nov.

Candidatus Seposaria diminimonas (NL. fem. n. *diminimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-339-G14 sp902635045*. The type genome for the species is the GenBank assembly GCA_902576305.1. The GC content of the type genome is 33.57 % and the genome length is 1.09 Mbp.

Description of *Candidatus* Seposaria melilax sp. nov.

Candidatus Seposaria melilax (NL. fem. n. *melilax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-339-G14 sp902536295*. The type genome for the species is the GenBank assembly GCA_902523285.1. The GC content of the type genome is 33.47 % and the genome length is 0.96 Mbp.

Description of *Candidatus* Seposaria meridibra sp. nov.

Candidatus Seposaria meridibra (NL. fem. n. *meridibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-339-G14 sp902525735*. The type genome for the species is the GenBank assembly GCA_902525515.1. The GC content of the type genome is 33.49 % and the genome length is 1.04 Mbp.

Description of *Candidatus* Seposaria munimago sp. nov.

Candidatus Seposaria munimago (NL. fem. n. *munimago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-339-G14 sp004213955*. The type genome for the species is the GenBank assembly GCA_004213955.1. The GC content of the type genome is 33.55 % and the genome length is 1.06 Mbp.

Description of *Candidatus* Seposaria obnupimonia sp. nov.

Candidatus Seposaria obnupimonia (NL. fem. n. *obnupimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-339-G14 sp902523885*. The type genome for the species is the GenBank assembly GCA_902523885.1. The GC content of the type genome is 33.43 % and the genome length is 1.11 Mbp.

Description of *Candidatus* Seposaria peribitoga sp. nov.

Candidatus Seposaria peribitoga (NL. fem. n. *peribitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-339-G14 sp902524805*. The type genome for the species is the GenBank assembly GCA_902524805.1. The GC content of the type genome is 33.47 % and the genome length is 1.05 Mbp.

Description of *Candidatus* Seposaria semifibula sp. nov.

Candidatus Seposaria semifibula (NL. fem. n. *semifibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-339-G14 sp003282105*. The type genome for the species is the GenBank assembly GCA_902588135.1. The GC content of the type genome is 34.16 % and the genome length is 1.13 Mbp.

Description of *Candidatus* Seposaria socagisca sp. nov.

Candidatus Seposaria socagisca (NL. fem. n. *socagisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-339-G14 sp902562135*. The type genome for the species is the GenBank assembly GCA_902524465.1. The GC content of the type genome is 33.87 % and the genome length is 0.77 Mbp.

Description of *Candidatus* Seposaria tenebivita sp. nov.

Candidatus Seposaria tenebivita (NL. fem. n. *tenebivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-339-G14 sp902522825*. The type genome for the species is the GenBank assembly GCA_902522825.1. The GC content of the type genome is 33.1 % and the genome length is 1.11 Mbp.

Description of *Candidatus* Seposaria vinacilenta sp. nov.

Candidatus Seposaria vinacilenta (NL. fem. n. *vinacilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-339-G14 sp902616715*. The type genome for the species is the GenBank assembly GCA_902578455.1. The GC content of the type genome is 33.73 % and the genome length is 1.08 Mbp.

Description of *Candidatus* Seposaria vitigilenta sp. nov.

Candidatus Seposaria vitigilenta (NL. fem. n. *vitigilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-339-G14 sp902614235*. The type genome for the species is the GenBank assembly GCA_902519485.1. The GC content of the type genome is 33.59 % and the genome length is 1.09 Mbp.

Description of *Candidatus* Seposella catapedo sp. nov.

Candidatus Seposella catapedo (NL. fem. n. *catapedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9631 sp003483925*. The type genome for the species is the GenBank assembly GCA_003451275.1. The GC content of the type genome is 58.07 % and the genome length is 1.34 Mbp.

Description of *Candidatus* Seposella gen. nov.

Candidatus Seposella (NL. fem. n. *Seposella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA9631*. The type species for the genus is *Candidatus* Seposella

catapedo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Seposia adlubisca sp. nov.

Candidatus Seposia adlubisca (NL. fem. n. *adlubisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Palsa-948 sp004297845*. The type genome for the species is the GenBank assembly GCA_004297845.1. The GC content of the type genome is 42.12 % and the genome length is 3.47 Mbp.

Description of *Candidatus* Seposia gen. nov.

Candidatus Seposia (NL. fem. n. *Seposia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Palsa-948*. The type species for the genus is *Candidatus* Seposia adlubisca .

According to the original version of GTDB R06-RS202, this genus belongs to the family *Palsa-948*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Seposiaceae.

Description of *Candidatus* Seposiaceae fam. nov.

Candidatus Seposiaceae (NL. fem. n. *Seposiaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *Palsa-948.* The type genus for the taxon is *Candidatus* Seposia .

According to the original version of GTDB R06-RS202, this family belongs to the order *AKYH767*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Satacosales.

Description of *Candidatus* Seposia bovicicula sp. nov.

Candidatus Seposia bovicicula (NL. fem. n. *bovicicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *Palsa-948 sp003164895*. The type genome for the species is the GenBank assembly GCA_003168055.1. The GC content of the type genome is 36.94 % and the genome length is 2.68 Mbp.

Description of *Candidatus* Seposida maxilastra sp. nov.

Candidatus Seposida maxilastra (NL. fem. n. *maxilastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-02-FULL-38-14-A sp001790855*. The type genome for the species is the GenBank assembly GCA_001790865.1. The GC content of the type genome is 37.48 % and the genome length is 2.75 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under low O2 conditions; 1.2 micron filter; full assembly".

Description of *Candidatus* Seposida gen. nov.

Candidatus Seposida (NL. fem. n. *Seposida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *2-02-FULL-38-14-A*. The type species for the genus is *Candidatus* Seposida maxilastra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GWA2-38-11*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Ducilanaceae.

Description of *Candidatus* Sepososa maxililega sp. nov.

Candidatus Sepososa maxililega (NL. fem. n. *maxililega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIMOR01 sp903835235*. The type genome for the species is the GenBank assembly GCA_903875175.1. The GC content of the type genome is 69.78 % and the genome length is 5.97 Mbp.

Description of *Candidatus* Sepososa gen. nov.

Candidatus Sepososa (NL. fem. n. *Sepososa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this genus is *CAIMOR01*. The type species for the genus is *Candidatus* Sepososa maxililega .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Sepososa relecax sp. nov.

Candidatus Sepososa relecax (NL. fem. n. *relecax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIMOR01 sp903843125*. The type genome for the species is the GenBank assembly GCA_903922565.1. The GC content of the type genome is 70.89 % and the genome length is 5.85 Mbp.

Description of *Candidatus* Seposula adgenibula sp. nov.

Candidatus Seposula adgenibula (NL. fem. n. *adgenibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PUKZ01 sp003559855*. The type genome for the species is the GenBank assembly GCA_003559855.1. The GC content of the type genome is 38.44 % and the genome length is 2.97 Mbp.

Description of *Candidatus* Seposula gen. nov.

Candidatus Seposula (NL. fem. n. *Seposula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PUKZ01*. The type species for the genus is *Candidatus* Seposula adgenibula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA7960*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Detotosaceae.

Description of *Candidatus* Seposula gasifitoga sp. nov.

Candidatus Seposula gasifitoga (NL. fem. n. *gasifitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *PUKZ01 sp003550725*. The type genome for the species is the GenBank assembly GCA_003550725.1. The GC content of the type genome is 35.92 % and the genome length is 3.02 Mbp.

Description of *Candidatus* Seposula insoritura sp. nov.

Candidatus Seposula insoritura (NL. fem. n. *insoritura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PUKZ01 sp003567625*. The type genome for the species is the GenBank assembly GCA_003567625.1. The GC content of the type genome is 37.52 % and the genome length is 2.38 Mbp.

Description of *Candidatus* Seposula pepenugo sp. nov.

Candidatus Seposula pepenugo (NL. fem. n. *pepenugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PUKZ01 sp007130125*. The type genome for the species is the GenBank assembly GCA_003559015.1. The GC content of the type genome is 36.96 % and the genome length is 2.33 Mbp.

Description of *Candidatus* Serinibacter lenunetta sp. nov.

Candidatus Serinibacter lenunetta (NL. fem. n. *lenunetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Serinibacter_A sp003121705*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_003121705.1. The GC content of the type genome is 73.04 % and the genome length is 4.06 Mbp.

Description of *Candidatus* Serinicoccus adnumigena sp. nov.

Candidatus Serinicoccus adnumigena (NL. fem. n. *adnumigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Serinicoccus sp008919445*. The type genome for the species is the GenBank assembly RS_GCF_008919445.1. The GC content of the type genome is 72.22

% and the genome length is 3.5 Mbp.

Description of *Candidatus* Serinicoccus inexsilega sp. nov.

Candidatus Serinicoccus inexsilega (NL. fem. n. *inexsilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Serinicoccus sp008843165*. The type genome for the species is the GenBank assembly RS_GCF_008843165.1. The GC content of the type genome is 70.79 % and the genome length is 3.54 Mbp.

Description of *Candidatus* Serinicoccus murilisca sp. nov.

Candidatus Serinicoccus murilisca (NL. fem. n. *murilisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Serinicoccus sp004322775*. The type genome for the species is the GenBank assembly RS_GCF_004352975.1. The GC content of the type genome is 71.45 % and the genome length is 4.15 Mbp.

Description of *Candidatus* Serotana malivitica sp. nov.

Candidatus Serotana malivitica (NL. fem. n. *malivitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002719095 sp002719095*. The type genome for the species is the GenBank assembly GCA_002719095.1. The GC content of the type genome is 31.1 % and the genome length is 1.46 Mbp.

Description of *Candidatus* Serotana gen. nov.

Candidatus Serotana (NL. fem. n. *Serotana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-002719095*. The type species for the genus is *Candidatus* Serotana malivitica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GCA-002719095*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Serotanaceae.

Description of *Candidatus* Serotanaceae fam. nov.

Candidatus Serotanaceae (NL. fem. n. *Serotanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *GCA-002719095*. The type genus for the taxon is *Candidatus* Serotana .

According to the original version of GTDB R06-RS202, this family belongs to the order *SCGC-AAA003-L08*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Redaciales.

Description of *Candidatus* Serotana purulibra sp. nov.

Candidatus Serotana purulibra (NL. fem. n. *purulibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002719095 sp002705575*. The type genome for the species is the GenBank assembly GCA_002705575.1. The GC content of the type genome is 29.62 % and the genome length is 1.95 Mbp.

Description of *Candidatus* Serotaria saxopugo sp. nov.

Candidatus Serotaria saxopugo (NL. fem. n. *saxopugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HO2-43-30 sp001819985*. The type genome for the species is the GenBank assembly GCA_001819985.1. The GC content of the type genome is 42.52 % and the genome length is 0.94 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 0.2 micron filter; full assembly".

Description of *Candidatus* Serotaria gen. nov.

Candidatus Serotaria (NL. fem. n. *Serotaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *HO2-43-30*. The type species for the genus is *Candidatus* Serotaria saxopugo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *H02-43-30*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Refacidaceae.

Description of *Candidatus* Serotella semivitura sp. nov.

Candidatus Serotella semivitura (NL. fem. n. *semivitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8987 sp003531345*. The type genome for the species is the GenBank assembly GCA_003531345.1. The GC content of the type genome is 37.43 % and the genome length is 1.48 Mbp.

Description of *Candidatus* Serotella gen. nov.

Candidatus Serotella (NL. fem. n. *Serotella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA8987*. The type species for the genus is *Candidatus* Serotella semivitura .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA8987*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Serotellaceae.

Description of *Candidatus* Serotellaceae fam. nov.

Candidatus Serotellaceae (NL. fem. n. *Serotellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA8987*. The type genus for the taxon is *Candidatus* Serotella .

According to GTDB R06-RS202, this family belongs to the order *Rickettsiales*.

Description of *Candidatus* Serotia bifisastra sp. nov.

Candidatus Serotia bifisastra (NL. fem. n. *bifisastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-02-FULL-66-14 sp004298325*. The type genome for the species is the GenBank assembly GCA_004298325.1. The GC content of the type genome is 67.68 % and the genome length is 4.02 Mbp.

Description of *Candidatus* Serotia gen. nov.

Candidatus Serotia (NL. fem. n. *Serotia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *2-02-FULL-66-14*. The type species for the genus is *Candidatus* Serotia bifisastra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SG8-39*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Siminosaceae.

Description of *Candidatus* Serotia furibitia sp. nov.

Candidatus Serotia furibitia (NL. fem. n. *furibitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-02-FULL-66-14 sp001771975*. The type genome for the species is the GenBank assembly GCA_001770625.1. The GC content of the type genome is 67.12 % and the genome length is 3.67 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under low O2 conditions; 1.2 micron filter; full assembly".

Description of *Candidatus* Serotia inrededo sp. nov.

Candidatus Serotia inrededo (NL. fem. n. *inrededo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-02-FULL-66-14 sp001770475*. The type genome for the species is the GenBank assembly GCA_001770475.1. The GC content of the type genome is 66.28 % and the genome length is 2.43 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under low O2 conditions; 0.2 micron filter; full assembly".

Description of *Candidatus* Serotia negotatio sp. nov.

Candidatus Serotia negotatio (NL. fem. n. *negotatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-02-FULL-66-14 sp004298295*. The type genome for the species is the GenBank assembly GCA_004298295.1. The GC content of the type genome is 68.33 % and the genome length is 2.34 Mbp.

Description of *Candidatus* Serotia repecicula sp. nov.

Candidatus Serotia repecicula (NL. fem. n. *repecicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-02-FULL-66-14 sp002451175*. The type genome for the species is the GenBank assembly GCA_002451175.1. The GC content of the type genome is 68.98 % and the genome length is 3.12 Mbp.

Description of *Candidatus* Serotida agrimousia sp. nov.

Candidatus Serotida agrimousia (NL. fem. n. *agrimousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CACLCV01 sp902535975*. The type genome for the species is the GenBank assembly GCA_902535975.1. The GC content of the type genome is 33.8 % and the genome length is 0.82 Mbp.

Description of *Candidatus* Serotida gen. nov.

Candidatus Serotida (NL. fem. n. *Serotida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CACLCV01*. The type species for the genus is *Candidatus* Serotida agrimousia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GCA-002716945*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Verecidaceae.

Description of *Candidatus* Serotida artolastra sp. nov.

Candidatus Serotida artolastra (NL. fem. n. *artolastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CACLCV01 sp902605525*. The type genome for the species is the GenBank assembly GCA_902605525.1. The GC content of the type genome is 32.02 % and the genome length is 0.75 Mbp.

Description of *Candidatus* Serotida excamastra sp. nov.

Candidatus Serotida excamastra (NL. fem. n. *excamastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CACLCV01 sp902559355*. The type genome for the species is the GenBank assembly GCA_902559355.1. The GC content of the type genome is 31.86 % and the genome length is 1.04 Mbp.

Description of *Candidatus* Serotida hexamastra sp. nov.

Candidatus Serotida hexamastra (NL. fem. n. *hexamastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CACLCV01 sp902521725*. The type genome for the species is the GenBank assembly GCA_902521725.1. The GC content of the type genome is 34.01 % and the genome length is 0.97 Mbp.

Description of *Candidatus* Serotosa melopago sp. nov.

Candidatus Serotosa melopago (NL. fem. n. *melopago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GWA2-37-10 sp000992015*. The type genome for the species is the GenBank assembly GCA_000992015.1. The GC content of the type genome is 36.57 % and the genome length is 0.72 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "aquifer sediment".

Description of *Candidatus* Serotosa gen. nov.

Candidatus Serotosa (NL. fem. n. *Serotosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GWA2-37-10*. The type species for the genus is *Candidatus* Serotosa melopago .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Serotula caravetta sp. nov.

Candidatus Serotula caravetta (NL. fem. n. *caravetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1020 sp012270305*. The type genome for the species is the GenBank assembly GCA_012270305.1. The GC content of the type genome is 45.51 % and the genome length is 0.91 Mbp.

Description of *Candidatus* Serotula gen. nov.

Candidatus Serotula (NL. fem. n. *Serotula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1020*. The type species for the genus is *Candidatus* Serotula caravetta .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Serotula detenimonas sp. nov.

Candidatus Serotula detenimonas (NL. fem. n. *detenimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1020 sp000503915*. The type genome for the species is the GenBank assembly GCA_003537595.1. The GC content of the type genome is 50.02 % and the genome length is 0.72 Mbp.

Description of *Candidatus* Serotula divoricula sp. nov.

Candidatus Serotula divoricula (NL. fem. n. *divoricula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1020 sp002434005*. The type genome for the species is the GenBank assembly GCA_002434005.1. The GC content of the type genome is 47.95 % and the genome length is 0.92 Mbp.

Description of *Candidatus* Serotula laculitrix sp. nov.

Candidatus Serotula laculitrix (NL. fem. n. *laculitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *UBA1020 sp002348615*. The type genome for the species is the GenBank assembly GCA_002343645.1. The GC content of the type genome is 51.42 % and the genome length is 0.82 Mbp.

Description of *Candidatus* Serotula lanifago sp. nov.

Candidatus Serotula lanifago (NL. fem. n. *lanifago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1020 sp002316545*. The type genome for the species is the GenBank assembly GCA_002316545.1. The GC content of the type genome is 47.2 % and the genome length is 0.93 Mbp.

Description of *Candidatus* Serotula momorimonas sp. nov.

Candidatus Serotula momorimonas (NL. fem. n. *momorimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1020 sp002348605*. The type genome for the species is the GenBank assembly GCA_002343565.1. The GC content of the type genome is 50.66 % and the genome length is 0.81 Mbp.

Description of *Candidatus* Serotula sarabitica sp. nov.

Candidatus Serotula sarabitica (NL. fem. n. *sarabitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1020 sp002335175*. The type genome for the species is the GenBank assembly GCA_002344735.1. The GC content of the type genome is 49.9 % and the genome length is 0.82 Mbp.

Description of *Candidatus* Serotula sonabisca sp. nov.

Candidatus Serotula sonabisca (NL. fem. n. *sonabisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1020 sp002455275*. The type genome for the species is the GenBank assembly GCA_002455275.1. The GC content of the type genome is 47.12 % and the genome length is 0.93 Mbp.

Description of *Candidatus* Serpentinomonas cicilago sp. nov.

Candidatus Serpentinomonas cicilago (NL. fem. n. *cicilago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Serpentinomonas sp000696225*. The type genome for the species is the GenBank assembly RS_GCF_000696225.1. The GC content of the type genome is 66.22 % and the genome length is 2.49 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Water".

Description of *Candidatus* Serratia carecax sp. nov.

Candidatus Serratia carecax (NL. fem. n. *carecax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Serratia_A sp000633355*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_000633315.1. The GC content of the type genome is 53.83 % and the genome length is 6.12 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Carnivorous Plant Phytotelma".

Description of *Candidatus* Serratia unetvibula sp. nov.

Candidatus Serratia unetvibula (NL. fem. n. *unetvibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Serratia_A sp000496755*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_000496755.2. The GC content of the type genome is 49.16 % and the genome length is 5.27 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "gut".

Description of *Candidatus* Shewanella adsocifica sp. nov.

Candidatus Shewanella adsocifica (NL. fem. n. *adsocifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Shewanella sp014163735*. The type genome for the species is the GenBank assembly RS_GCF_014163735.1. The GC content of the type genome is 44.28 % and the genome length is 4.04 Mbp.

Description of *Candidatus* Shewanella adsuditio sp. nov.

Candidatus Shewanella adsuditio (NL. fem. n. *adsuditio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Shewanella sp013248905*. The type genome for the species is the GenBank assembly RS_GCF_013248905.1. The GC content of the type genome is 41.01 % and the genome length is 5.17 Mbp.

Description of *Candidatus* Shewanella bacifastra sp. nov.

Candidatus Shewanella bacifastra (NL. fem. n. *bacifastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Shewanella sp007197555*. The type genome for the species is the GenBank assembly RS_GCF_007197555.1. The GC content of the type genome is 45.08 % and the genome length is 6.45 Mbp.

Description of *Candidatus* Shewanella betacilenta sp. nov.

Candidatus Shewanella betacilenta (NL. fem. n. *betacilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Shewanella sp002836275*. The type genome for the species is the GenBank assembly RS_GCF_002836275.1. The GC content of the type genome is 42.28 % and the genome length is 4.55 Mbp.

Description of *Candidatus* Shewanella bicapifica sp. nov.

Candidatus Shewanella bicapifica (NL. fem. n. *bicapifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Shewanella sp000014665*. The type genome for the species is the GenBank assembly RS_GCF_000014665.1. The GC content of the type genome is 47.86 % and the genome length is 4.8 Mbp.

Description of *Candidatus* Shewanella cilotimonas sp. nov.

Candidatus Shewanella cilotimonas (NL. fem. n. *cilotimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Shewanella sp001957125*. The type genome for the species is the GenBank assembly RS_GCF_001957125.1. The GC content of the type genome is 43.21 % and the genome length is 5.69 Mbp.

Description of *Candidatus* Shewanella defetatica sp. nov.

Candidatus Shewanella defetatica (NL. fem. n. *defetatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Shewanella sp002836315*. The type genome for the species is the GenBank assembly RS_GCF_002836315.1. The GC content of the type genome is 41.76 % and the genome length is 4.94 Mbp.

Description of *Candidatus* Shewanella desepedo sp. nov.

Candidatus Shewanella desepedo (NL. fem. n. *desepedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Shewanella sp009647595*. The type genome for the species is the GenBank assembly RS_GCF_009647595.1. The GC content of the type genome is 41.42 % and the genome length is 3.99 Mbp.

Description of *Candidatus* Shewanella detoritudo sp. nov.

Candidatus Shewanella detoritudo (NL. fem. n. *detoritudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Shewanella sp002873615*. The type genome for the species is the GenBank assembly RS_GCF_002873615.1. The GC content of the type genome is 40.57 % and the genome length is 4.86 Mbp.

Description of *Candidatus* Shewanella dinupetta sp. nov.

Candidatus Shewanella dinupetta (NL. fem. n. *dinupetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Shewanella sp002873135*. The type genome for the species is the GenBank assembly RS_GCF_002873135.1. The GC content of the type genome is 41.56 % and the genome length is 4.65 Mbp.

Description of *Candidatus* Shewanella favilentia sp. nov.

Candidatus Shewanella favilentia (NL. fem. n. *favilentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Shewanella sp002783505*. The type genome for the species is the GenBank assembly GCA_002783505.1. The GC content of the type genome is 46.93 % and the genome length is 4.72 Mbp.

Description of *Candidatus* Shewanella fetutitura sp. nov.

Candidatus Shewanella fetutitura (NL. fem. n. *fetutitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Shewanella sp000203935*. The type genome for the species is the GenBank assembly RS_GCF_002196695.1. The GC content of the type genome is 47.91 % and the genome length is 5.34 Mbp.

Description of *Candidatus* Shewanella futatisca sp. nov.

Candidatus Shewanella futatisca (NL. fem. n. *futatisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Shewanella sp006494715*. The type genome for the species is the GenBank assembly RS_GCF_006494715.1. The GC content of the type genome is 45.55 % and the genome length is 4.13 Mbp.

Description of *Candidatus* Shewanella indupigena sp. nov.

Candidatus Shewanella indupigena (NL. fem. n. *indupigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Shewanella sp000217915*. The type genome for the species is the GenBank assembly RS_GCF_000217915.1. The GC content of the type genome is 46.53 % and the genome length is 4.41 Mbp.

Description of *Candidatus* Shewanella infucax sp. nov.

Candidatus Shewanella infucax (NL. fem. n. *infucax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Shewanella sp007004545*. The type genome for the species is the GenBank assembly RS_GCF_007004545.1. The GC content of the type genome is 43.57 % and the genome length is 5.91 Mbp.

Description of *Candidatus* Shewanella inmodedo sp. nov.

Candidatus Shewanella inmodedo (NL. fem. n. *inmodedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Shewanella sp012911865*. The type genome for the species is the GenBank assembly RS_GCF_012911865.1. The GC content of the type genome is 55.69 % and the genome length is 4.25 Mbp.

Description of *Candidatus* Shewanella metabugo sp. nov.

Candidatus Shewanella metabugo (NL. fem. n. *metabugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Shewanella sp002838165*. The type genome for the species is the GenBank assembly RS_GCF_002838165.1. The GC content of the type genome is 46.25 % and the genome length is 4.97 Mbp.

Description of *Candidatus* Shewanella occucitia sp. nov.

Candidatus Shewanella occucitia (NL. fem. n. *occucitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Shewanella sp014164505*. The type genome for the species is the GenBank assembly RS_GCF_014164505.1. The GC content of the type genome is 41.21 % and the genome length is 5.0 Mbp.

Description of *Candidatus* Shewanella onocrifica sp. nov.

Candidatus Shewanella onocrifica (NL. fem. n. *onocrifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Shewanella sp001957135*. The type genome for the species is the GenBank assembly RS_GCF_001957135.1. The GC content of the type genome is 41.99 % and the genome length is 4.6 Mbp.

Description of *Candidatus* Shewanella ossucifica sp. nov.

Candidatus Shewanella ossucifica (NL. fem. n. *ossucifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Shewanella sp013214165*. The type genome for the species is the GenBank assembly GCA_013214165.1. The GC content of the type genome is 46.1 % and the genome length is 4.81 Mbp.

Description of *Candidatus* Shewanella rorifibula sp. nov.

Candidatus Shewanella rorifibula (NL. fem. n. *rorifibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Shewanella sp002836205*. The type genome for the species is the GenBank assembly RS_GCF_002836205.1. The GC content of the type genome is 43.5 % and the genome length is 5.1 Mbp.

Description of *Candidatus* Shewanella rosacentia sp. nov.

Candidatus Shewanella rosacentia (NL. fem. n. *rosacentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Shewanella sp009663145*. The type genome for the species is the GenBank assembly RS_GCF_009663145.1. The GC content of the type genome is 40.47 % and the genome length is 4.99 Mbp.

Description of *Candidatus* Shewanella saxifitura sp. nov.

Candidatus Shewanella saxifitura (NL. fem. n. *saxifitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Shewanella sp002966515*. The type genome for the species is the GenBank assembly RS_GCF_003315425.1. The GC content of the type genome is 45.45 % and the genome length is 4.95 Mbp.

Description of *Candidatus* Shewanella sonabitia sp. nov.

Candidatus Shewanella sonabitia (NL. fem. n. *sonabitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Shewanella sp000832025*. The type genome for the species is the GenBank assembly RS_GCF_000832025.1. The GC content of the type genome is 53.13 % and the genome length is 4.47 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Marine".

Description of *Candidatus* Shimazuella semunentia sp. nov.

Candidatus Shimazuella semunentia (NL. fem. n. *semunentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Shimazuella sp009831235*. The type genome for the species is the GenBank assembly RS_GCF_009831235.1. The GC content of the type genome is 38.55 % and the genome length is 3.99 Mbp.

Description of *Candidatus* Shimia acropilega sp. nov.

Candidatus Shimia acropilega (NL. fem. n. *acropilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Shimia sp900537125*. The type genome for the species is the GenBank assembly RS_GCF_900537125.1. The GC content of the type genome is 56.41 % and the genome length is 4.27 Mbp.

Description of *Candidatus* Shimia adnunivita sp. nov.

Candidatus Shimia adnunivita (NL. fem. n. *adnunivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Shimia sp900143615*. The type genome for the species is the GenBank assembly RS_GCF_900143615.1. The GC content of the type genome is 54.98 % and the genome length is 4.54 Mbp.

Description of *Candidatus* Shimia exhiletta sp. nov.

Candidatus Shimia exhiletta (NL. fem. n. *exhiletta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Shimia sp001292625*. The type genome for the species is the GenBank assembly RS_GCF_001292625.1. The GC content of the type genome is 57.22 % and the genome length is 4.05 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Norwegian Sea marine sediment".

Description of *Candidatus* Shimia inmacitica sp. nov.

Candidatus Shimia inmacitica (NL. fem. n. *inmacitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Shimia sp003990645*. The type genome for the species is the GenBank assembly RS_GCF_003990645.1. The GC content of the type genome is 58.9 % and the genome length is 4.37 Mbp.

Description of *Candidatus* Shinella catabilega sp. nov.

Candidatus Shinella catabilega (NL. fem. n. *catabilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Shinella sp004514435*. The type genome for the species is the GenBank assembly RS_GCF_004514435.1. The GC content of the type genome is 63.41 % and the genome length is 5.36 Mbp.

Description of *Candidatus* Shinella conipedo sp. nov.

Candidatus Shinella conipedo (NL. fem. n. *conipedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Shinella sp003432075*. The type genome for the species is the GenBank assembly RS_GCF_003432075.1. The GC content of the type genome is 62.74

% and the genome length is 5.15 Mbp.

Description of *Candidatus* Shinella genocitura sp. nov.

Candidatus Shinella genocitura (NL. fem. n. *genocitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Shinella sp002364745*. The type genome for the species is the GenBank assembly GCA_002429505.1. The GC content of the type genome is 62.3 % and the genome length is 4.99 Mbp.

Description of *Candidatus* Shinella miracitoga sp. nov.

Candidatus Shinella miracitoga (NL. fem. n. *miracitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Shinella sp001713395*. The type genome for the species is the GenBank assembly RS_GCF_001713395.1. The GC content of the type genome is 62.42 % and the genome length is 6.63 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Chrysochromulina tobin phycosphere".

Description of *Candidatus* Shinella senipitoga sp. nov.

Candidatus Shinella senipitoga (NL. fem. n. *senipitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Shinella sp001262505*. The type genome for the species is the GenBank assembly RS_GCF_000496935.2. The GC content of the type genome is 63.39 % and the genome length is 7.68 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "gut".

Description of *Candidatus* Sicarana femelitrix sp. nov.

Candidatus Sicarana femelitrix (NL. fem. n. *femelitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *QLZD01 sp008636115*. The type genome for the species is the GenBank assembly RS_GCF_008636115.1. The GC content of the type genome is 51.59 % and the genome length is 1.97 Mbp.

Description of *Candidatus* Sicarana gen. nov.

Candidatus Sicarana (NL. fem. n. *Sicarana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *QLZD01*. The type species for the genus is *Candidatus* Sicarana femelitrix .

According to GTDB R06-RS202, this genus belongs to the family _A.

Description of *Candidatus* Sicararia holisatica sp. nov.

Candidatus Sicararia holisatica (NL. fem. n. *holisatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIXNZ01 sp903920975*. The type genome for the species is the GenBank assembly GCA_903920975.1. The GC content of the type genome is 37.09 % and the genome length is 1.07 Mbp.

Description of *Candidatus* Sicararia gen. nov.

Candidatus Sicararia (NL. fem. n. *Sicararia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIXNZ01*. The type species for the genus is *Candidatus* Sicararia holisatica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAIXNZ01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Sicarariaceae.

Description of *Candidatus* Sicarariaceae fam. nov.

Candidatus Sicarariaceae (NL. fem. n. *Sicarariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CAIXNZ01.* The type genus for the taxon is *Candidatus* Sicararia .

According to the original version of GTDB R06-RS202, this family belongs to the order *CAIXNZ01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Sicarariales.

Description of *Candidatus* Sicarariales ord. nov.

Candidatus Sicarariales (NL. fem. n. *Sicarariales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CAIXNZ01.* The type genus for the taxon is *Candidatus* Sicararia .

According to the original version of GTDB R06-RS202, this family belongs to the class *ABY1*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Defunanae.

Description of *Candidatus* Sicarella brabritio sp. nov.

Candidatus Sicarella brabritio (NL. fem. n. *brabritio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3700 sp002372775*. The type genome for the species is the GenBank assembly GCA_002372775.1. The GC content of the type genome is 32.85 % and the genome length is 1.79 Mbp.

Description of *Candidatus* Sicarella gen. nov.

Candidatus Sicarella (NL. fem. n. *Sicarella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA3700*. The type species for the genus is *Candidatus* Sicarella brabritio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA3700*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Sicarellaceae.

Description of *Candidatus* Sicarellaceae fam. nov.

Candidatus Sicarellaceae (NL. fem. n. *Sicarellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA3700.* The type genus for the taxon is *Candidatus* Sicarella .

According to GTDB R06-RS202, this family belongs to the order *Christensenellales*.

Description of *Candidatus* Sicarida cuticax sp. nov.

Candidatus Sicarida cuticax (NL. fem. n. *cuticax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SZUA-401 sp003246035*. The type genome for the species is the GenBank assembly GCA_003246035.1. The GC content of the type genome is 63.06 % and the genome length is 1.69 Mbp.

Description of *Candidatus* Sicarida gen. nov.

Candidatus Sicarida (NL. fem. n. *Sicarida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SZUA-401*. The type species for the genus is *Candidatus* Sicarida cuticax .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SZUA-401*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Sicaridaceae.

Description of *Candidatus* Sicaridaceae fam. nov.

Candidatus Sicaridaceae (NL. fem. n. *Sicaridaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SZUA-401.* The type genus for the taxon is *Candidatus* Sicarida .

According to GTDB R06-RS202, this family belongs to the order *Desulfuromonadales*.

Description of *Candidatus* Sicarida palifimonas sp. nov.

Candidatus Sicarida palifimonas (NL. fem. n. *palifimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SZUA-401 sp002869605*. The type genome for the species is the GenBank assembly GCA_002869605.1. The GC content of the type genome is 57.94 % and the genome length is 3.03 Mbp.

Description of *Candidatus* Sicarosa ascisedo sp. nov.

Candidatus Sicarosa ascisedo (NL. fem. n. *ascisedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS946 sp900547135*. The type genome for the species is the GenBank assembly GCA_900547135.1. The GC content of the type genome is 47.01 % and the genome length is 1.87 Mbp.

Description of *Candidatus* Sicarosa gen. nov.

Candidatus Sicarosa (NL. fem. n. *Sicarosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UMGS946*. The type species for the genus is *Candidatus* Sicarosa ascisedo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-138*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Selecellaceae.

Description of *Candidatus* Sicarosa desuritia sp. nov.

Candidatus Sicarosa desuritia (NL. fem. n. *desuritia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS946 sp900544965*. The type genome for the species is the GenBank assembly RS_GCF_900752465.1. The GC content of the type genome is 48.54 % and the genome length is 1.89 Mbp.

Description of *Candidatus* Sicarula hegumessa sp. nov.

Candidatus Sicarula hegumessa (NL. fem. n. *hegumessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4248 sp004554395*. The type genome for the species is the GenBank assembly RS_GCF_900766485.1. The GC content of the type genome is 52.13 % and the genome length is 3.2 Mbp.

Description of *Candidatus* Sicarula gen. nov.

Candidatus Sicarula (NL. fem. n. *Sicarula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA4248*. The type species for the genus is *Candidatus* Sicarula hegumessa .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA4248*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Sicarulaceae.

Description of *Candidatus* Sicarulaceae fam. nov.

Candidatus Sicarulaceae (NL. fem. n. *Sicarulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA4248.* The type genus for the taxon is *Candidatus* Sicarula .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA4248*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Sicarulales.

Description of *Candidatus* Sicarulales ord. nov.

Candidatus Sicarulales (NL. fem. n. *Sicarulales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA4248.* The type genus for the taxon is *Candidatus* Sicarula .

According to the GTDB R06-RS202, this order belongs to the class *Bradymonadia*.

Description of *Candidatus* Sicarula rosacitia sp. nov.

Candidatus Sicarula rosacitia (NL. fem. n. *rosacitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4248 sp002395385*. The type genome for the species is the GenBank assembly GCA_002395385.1. The GC content of the type genome is 47.33 % and the genome length is 4.61 Mbp.

Description of *Candidatus* Siccirubricoccus exorbimonia sp. nov.

Candidatus Siccirubricoccus exorbimonia (NL. fem. n. *exorbimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Siccirubricoccus sp008360935*. The type genome for the species is the GenBank assembly RS_GCF_008360935.1. The GC content of the type genome is 71.26 % and the genome length is 6.55 Mbp.

Description of *Candidatus* Sicinana hemiticula sp. nov.

Candidatus Sicinana hemiticula (NL. fem. n. *hemiticula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RKSA01 sp009844085*. The type genome for the species is the GenBank assembly GCA_009838725.1. The GC content of the type genome is 60.77 % and the genome length is 3.4 Mbp.

Description of *Candidatus* Sicinana gen. nov.

Candidatus Sicinana (NL. fem. n. *Sicinana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RKSA01*. The type species for the genus is *Candidatus* Sicinana hemiticula .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Sicinana vivififica sp. nov.

Candidatus Sicinana vivififica (NL. fem. n. *vivififica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RKSA01 sp007571115*. The type genome for the species is the GenBank assembly GCA_007571115.1. The GC content of the type genome is 63.17 % and the genome length is 1.91 Mbp.

Description of *Candidatus* Sicinaria bigemigena sp. nov.

Candidatus Sicinaria bigemigena (NL. fem. n. *bigemigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WO2-35-19 sp012514175*. The type genome for the species is the GenBank assembly GCA_012514175.1. The GC content of the type genome is 35.87 %

and the genome length is 0.64 Mbp.

Description of *Candidatus* Sicinaria gen. nov.

Candidatus Sicinaria (NL. fem. n. *Sicinaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WO2-35-19*. The type species for the genus is *Candidatus* Sicinaria bigemigena .

According to GTDB R06-RS202, this genus belongs to the family _A.

Description of *Candidatus* Sicinaria catiliforma sp. nov.

Candidatus Sicinaria catiliforma (NL. fem. n. *catiliforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WO2-35-19 sp001824275*. The type genome for the species is the GenBank assembly GCA_001825445.1. The GC content of the type genome is 38.5 % and the genome length is 0.73 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at 16ft depth; 0.1 micron filter at time point D".

Description of *Candidatus* Sicinaria cemenicella sp. nov.

Candidatus Sicinaria cemenicella (NL. fem. n. *cemenicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WO2-35-19 sp001823925*. The type genome for the species is the GenBank assembly GCA_001823925.1. The GC content of the type genome is 38.76 % and the genome length is 0.8 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under low O2 conditions; 0.1 micron filter; full assembly".

Description of *Candidatus* Sicinaria ecfacitudo sp. nov.

Candidatus Sicinaria ecfacitudo (NL. fem. n. *ecfacitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WO2-35-19 sp003233455*. The type genome for the species is the

GenBank assembly GCA_003233455.1. The GC content of the type genome is 32.66 % and the genome length is 0.74 Mbp.

Description of *Candidatus* Sicinaria munifitia sp. nov.

Candidatus Sicinaria munifitia (NL. fem. n. *munifitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WO2-35-19 sp002771075*. The type genome for the species is the GenBank assembly GCA_002771075.1. The GC content of the type genome is 34.09 % and the genome length is 0.44 Mbp.

Description of *Candidatus* Sicinaria panopitica sp. nov.

Candidatus Sicinaria panopitica (NL. fem. n. *panopitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WO2-35-19 sp001824215*. The type genome for the species is the GenBank assembly GCA_001824105.1. The GC content of the type genome is 38.45 % and the genome length is 0.59 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under low O2 conditions; 0.2 micron filter; full assembly".

Description of *Candidatus* Sicinaria semunessa sp. nov.

Candidatus Sicinaria semunessa (NL. fem. n. *semunessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WO2-35-19 sp001825335*. The type genome for the species is the GenBank assembly GCA_001825335.1. The GC content of the type genome is 35.05 % and the genome length is 0.51 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under low O2 conditions; 0.1 micron filter; full assembly".

Description of *Candidatus* Sicinella defalilenta sp. nov.

Candidatus Sicinella defalilenta (NL. fem. n. *defalilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SLAK01 sp007126855*. The type genome for the species is the

GenBank assembly GCA_007119715.1. The GC content of the type genome is 65.57 % and the genome length is 2.46 Mbp.

Description of *Candidatus* Sicinella gen. nov.

Candidatus Sicinella (NL. fem. n. *Sicinella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SLAK01*. The type species for the genus is *Candidatus* Sicinella defalilenta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2991*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Letifariaceae.

Description of *Candidatus* Sicinella relapisca sp. nov.

Candidatus Sicinella relapisca (NL. fem. n. *relapisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SLAK01 sp007118095*. The type genome for the species is the GenBank assembly GCA_007118095.1. The GC content of the type genome is 65.19 % and the genome length is 3.23 Mbp.

Description of *Candidatus* Sicinia cituvatica sp. nov.

Candidatus Sicinia cituvatica (NL. fem. n. *cituvatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIWVZ01 sp903916245*. The type genome for the species is the GenBank assembly GCA_903916245.1. The GC content of the type genome is 65.94 % and the genome length is 3.17 Mbp.

Description of *Candidatus* Sicinia gen. nov.

Candidatus Sicinia (NL. fem. n. *Sicinia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIWVZ01*. The type species for the genus is *Candidatus* Sicinia cituvatica .

According to the original version of GTDB R06-RS202, this genus belongs to the family

CAIWVZ01. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Siciniaceae.

Description of *Candidatus* Siciniaceae fam. nov.

Candidatus Siciniaceae (NL. fem. n. *Siciniaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CAIWVZ01.* The type genus for the taxon is *Candidatus* Sicinia .

According to the original version of GTDB R06-RS202, this family belongs to the order *GCA-002687715*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Catobellales.

Description of *Candidatus* Sicinida catapitia sp. nov.

Candidatus Sicinida catapitia (NL. fem. n. *catapitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAADDX01 sp013153685*. The type genome for the species is the GenBank assembly GCA_013153685.1. The GC content of the type genome is 34.26 % and the genome length is 1.3 Mbp.

Description of *Candidatus* Sicinida gen. nov.

Candidatus Sicinida (NL. fem. n. *Sicinida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAADDX01*. The type species for the genus is *Candidatus* Sicinida catapitia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JAADDX01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Sicinidaceae.

Description of *Candidatus* Sicinidaceae fam. nov.

Candidatus Sicinidaceae (NL. fem. n. *Sicinidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JAADDX01.* The type genus for the taxon is *Candidatus* Sicinida .

According to GTDB R06-RS202, this family belongs to the order *Nautiliales*.

Description of *Candidatus* Sicinosa antecugo sp. nov.

Candidatus Sicinosa antecugo (NL. fem. n. *antecugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Lenti-02 sp001603055*. The type genome for the species is the GenBank assembly GCA_001603055.1. The GC content of the type genome is 67.26 % and the genome length is 4.95 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "3 replicate cellulose-degrading anaerobic digesters sampled at day 96 and day 362".

Description of *Candidatus* Sicinosa gen. nov.

Candidatus Sicinosa (NL. fem. n. *Sicinosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Lenti-02*. The type species for the genus is *Candidatus* Sicinosa antecugo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *Lenti-02*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Sicinosaceae.

Description of *Candidatus* Sicinosaceae fam. nov.

Candidatus Sicinosaceae (NL. fem. n. *Sicinosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *Lenti-02.* The type genus for the taxon is *Candidatus* Sicinosa .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA1407*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Semilidales.

Description of *Candidatus* Sicinosa catagitia sp. nov.

Candidatus Sicinosa catagitia (NL. fem. n. *catagitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Lenti-02 sp003245525*. The type genome for the species is the GenBank assembly GCA_003245525.1. The GC content of the type genome is 65.89 % and the genome length is 6.7 Mbp.

Description of *Candidatus* Sicinula rorarimonia sp. nov.

Candidatus Sicinula rorarimonia (NL. fem. n. *rorarimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIZMI01 sp903934015*. The type genome for the species is the GenBank assembly GCA_903828055.1. The GC content of the type genome is 42.23 % and the genome length is 1.35 Mbp.

Description of *Candidatus* Sicinula gen. nov.

Candidatus Sicinula (NL. fem. n. *Sicinula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIZMI01*. The type species for the genus is *Candidatus* Sicinula rorarimonia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAIZMI01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Sicinulaceae.

Description of *Candidatus* Sicinulaceae fam. nov.

Candidatus Sicinulaceae (NL. fem. n. *Sicinulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CAIZMI01*. The type genus for the taxon is *Candidatus* Sicinula .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA10190*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Vinolidales.

Description of *Candidatus* Sicubana genocicula sp. nov.

Candidatus Sicubana genocicula (NL. fem. n. *genocicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIOAK01 sp903904005*. The type genome for the species is the GenBank assembly GCA_903932365.1. The GC content of the type genome is 71.04 % and the genome length is 4.57 Mbp.

Description of *Candidatus* Sicubana gen. nov.

Candidatus Sicubana (NL. fem. n. *Sicubana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIOAK01*. The type species for the genus is *Candidatus* Sicubana genocicula .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Sicubana pavicitoga sp. nov.

Candidatus Sicubana pavicitoga (NL. fem. n. *pavicitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIOAK01 sp903874275*. The type genome for the species is the GenBank assembly GCA_903894875.1. The GC content of the type genome is 70.9 % and the genome length is 4.77 Mbp.

Description of *Candidatus* Sicubana saburilenta sp. nov.

Candidatus Sicubana saburilenta (NL. fem. n. *saburilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIOAK01 sp903855945*. The type genome for the species is the GenBank assembly GCA_903855945.1. The GC content of the type genome is 70.82 % and the genome length is 4.07 Mbp.

Description of *Candidatus* Sicubaria depecedo sp. nov.

Candidatus Sicubaria depecedo (NL. fem. n. *depecedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIXPF01 sp903921205*. The type genome for the species is the GenBank assembly GCA_903921205.1. The GC content of the type genome is 70.94 %

and the genome length is 4.36 Mbp.

Description of *Candidatus* Sicubaria gen. nov.

Candidatus Sicubaria (NL. fem. n. *Sicubaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIXPF01*. The type species for the genus is *Candidatus* Sicubaria depecedo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAIXPF01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Sicubariaceae.

Description of *Candidatus* Sicubariaceae fam. nov.

Candidatus Sicubariaceae (NL. fem. n. *Sicubariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CAIXPF01.* The type genus for the taxon is *Candidatus* Sicubaria .

According to GTDB R06-RS202, this family belongs to the order *Acidimicrobiales*.

Description of *Candidatus* Sicubella vilipugo sp. nov.

Candidatus Sicubella vilipugo (NL. fem. n. *vilipugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *20-14-all-54-14 sp002772205*. The type genome for the species is the GenBank assembly GCA_002778565.1. The GC content of the type genome is 54.28 % and the genome length is 0.49 Mbp.

Description of *Candidatus* Sicubella gen. nov.

Candidatus Sicubella (NL. fem. n. *Sicubella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *20-14-all-54-14*. The type species for the genus is *Candidatus* Sicubella vilipugo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GWB1-50-10*. According to the renamed version of GTDB R06-RS202, this taxon

belongs to the family *Candidatus* Venefulaceae.

Description of *Candidatus* Sicubia affanugo sp. nov.

Candidatus Sicubia affanugo (NL. fem. n. *affanugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GWA2-66-18 sp903874575*. The type genome for the species is the GenBank assembly GCA_903874575.1. The GC content of the type genome is 66.17 % and the genome length is 2.65 Mbp.

Description of *Candidatus* Sicubia gen. nov.

Candidatus Sicubia (NL. fem. n. *Sicubia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GWA2-66-18*. The type species for the genus is *Candidatus* Sicubia affanugo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA9628*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Recorariaceae.

Description of *Candidatus* Sicubia recucitas sp. nov.

Candidatus Sicubia recucitas (NL. fem. n. *recucitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GWA2-66-18 sp001799675*. The type genome for the species is the GenBank assembly GCA_001799675.1. The GC content of the type genome is 65.43 % and the genome length is 2.79 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at time point 1 / A; 5m depth; 0.2 filter".

Description of *Candidatus* Sicubia rubecitrix sp. nov.

Candidatus Sicubia rubecitrix (NL. fem. n. *rubecitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *GWA2-66-18 sp013044195*. The type genome for the species is the GenBank assembly GCA_013044195.1. The GC content of the type genome is 66.63 % and the genome length is 3.36 Mbp.

Description of *Candidatus* Sicubida figilimonia sp. nov.

Candidatus Sicubida figilimonia (NL. fem. n. *figilimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DSGV01 sp011057325*. The type genome for the species is the GenBank assembly GCA_011057325.1. The GC content of the type genome is 70.29 % and the genome length is 3.94 Mbp.

Description of *Candidatus* Sicubida gen. nov.

Candidatus Sicubida (NL. fem. n. *Sicubida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DSGV01*. The type species for the genus is *Candidatus* Sicubida figilimonia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DSGV01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Sicubidaceae.

Description of *Candidatus* Sicubidaceae fam. nov.

Candidatus Sicubidaceae (NL. fem. n. *Sicubidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *DSGV01.* The type genus for the taxon is *Candidatus* Sicubida .

According to the original version of GTDB R06-RS202, this family belongs to the order *DSGV01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Sicubidales.

Description of *Candidatus* Sicubidales ord. nov.

Candidatus Sicubidales (NL. fem. n. *Sicubidales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *DSGV01.* The type genus for the taxon is *Candidatus* Sicubida .

According to the GTDB R06-RS202, this order belongs to the class *Dehalococcoidia*.

Description of *Candidatus* Sicubosa videletta sp. nov.

Candidatus Sicubosa videletta (NL. fem. n. *videletta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-1138 sp000434675*. The type genome for the species is the GenBank assembly GCA_000434675.1. The GC content of the type genome is 48.66 % and the genome length is 1.49 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "derived from human gut metagenome".

Description of *Candidatus* Sicubosa gen. nov.

Candidatus Sicubosa (NL. fem. n. *Sicubosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAG-1138*. The type species for the genus is *Candidatus* Sicubosa videletta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-917*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Dimadanaceae.

Description of *Candidatus* Sicubula catagibula sp. nov.

Candidatus Sicubula catagibula (NL. fem. n. *catagibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS1840 sp900555525*. The type genome for the species is the GenBank assembly GCA_900555525.1. The GC content of the type genome is 40.3 % and the genome length is 1.91 Mbp.

Description of *Candidatus* Sicubula gen. nov.

Candidatus Sicubula (NL. fem. n. *Sicubula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UMGS1840*. The type species for the genus is *Candidatus* Sicubula catagibula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UMGS1840*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Sicubulaceae.

Description of *Candidatus* Sicubulaceae fam. nov.

Candidatus Sicubulaceae (NL. fem. n. *Sicubulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UMGS1840.* The type genus for the taxon is *Candidatus* Sicubula .

According to the original version of GTDB R06-RS202, this family belongs to the order *UMGS1840*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Sicubulales.

Description of *Candidatus* Sicubulales ord. nov.

Candidatus Sicubulales (NL. fem. n. *Sicubulales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UMGS1840.* The type genus for the taxon is *Candidatus* Sicubula .

According to the GTDB R06-RS202, this order belongs to the class *Clostridia*.

Description of *Candidatus* Siculibacillus parocifica sp. nov.

Candidatus Siculibacillus parocifica (NL. fem. n. *parocifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Siculibacillus sp002298965*. The type genome for the species is the GenBank assembly GCA_002298965.1. The GC content of the type genome is 69.33 % and the genome length is 3.7 Mbp.

Description of *Candidatus* Siculibacillus rurigitica sp. nov.

Candidatus Siculibacillus rurigitica (NL. fem. n. *rurigitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Siculibacillus sp012517025*. The type genome for the species is the GenBank assembly GCA_012517025.1. The GC content of the type genome is 68.97 %

and the genome length is 4.55 Mbp.

Description of *Candidatus* Sicunana navifitio sp. nov.

Candidatus Sicunana navifitio (NL. fem. n. *navifitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GWA2-49-15 sp001769855*. The type genome for the species is the GenBank assembly GCA_003485645.1. The GC content of the type genome is 46.91 % and the genome length is 4.19 Mbp.

Description of *Candidatus* Sicunana gen. nov.

Candidatus Sicunana (NL. fem. n. *Sicunana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GWA2-49-15*. The type species for the genus is *Candidatus* Sicunana navifitio .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Sicunaria semifitica sp. nov.

Candidatus Sicunaria semifitica (NL. fem. n. *semifitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1412 sp002308515*. The type genome for the species is the GenBank assembly GCA_002308515.1. The GC content of the type genome is 49.88 % and the genome length is 2.21 Mbp.

Description of *Candidatus* Sicunaria gen. nov.

Candidatus Sicunaria (NL. fem. n. *Sicunaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1412*. The type species for the genus is *Candidatus* Sicunaria semifitica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1412*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Sicunariaceae.

Description of *Candidatus* Sicunariaceae fam. nov.

Candidatus Sicunariaceae (NL. fem. n. *Sicunariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA1412.* The type genus for the taxon is *Candidatus* Sicunaria .

According to GTDB R06-RS202, this family belongs to the order *Pedosphaerales*.

Description of *Candidatus* Sicunaria sicinitudo sp. nov.

Candidatus Sicunaria sicinitudo (NL. fem. n. *sicinitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1412 sp002305615*. The type genome for the species is the GenBank assembly GCA_002305615.1. The GC content of the type genome is 51.5 % and the genome length is 1.83 Mbp.

Description of *Candidatus* Sicunella pedifessa sp. nov.

Candidatus Sicunella pedifessa (NL. fem. n. *pedifessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-12-FULL-41-12 sp001790445*. The type genome for the species is the GenBank assembly GCA_001790445.1. The GC content of the type genome is 41.18 % and the genome length is 0.86 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 1.2 micron filter; full assembly".

Description of *Candidatus* Sicunella gen. nov.

Candidatus Sicunella (NL. fem. n. *Sicunella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *2-12-FULL-41-12*. The type species for the genus is *Candidatus* Sicunella pedifessa .

According to the original version of GTDB R06-RS202, this genus belongs to the family *2-12-FULL-41-12*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Sicunellaceae.

Description of *Candidatus* Sicunellaceae fam. nov.

Candidatus Sicunellaceae (NL. fem. n. *Sicunellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *2-12-FULL-41-12.* The type genus for the taxon is *Candidatus* Sicunella .

According to GTDB R06-RS202, this family belongs to the order *Saccharimonadales*.

Description of *Candidatus* Sicunia tolutiforma sp. nov.

Candidatus Sicunia tolutiforma (NL. fem. n. *tolutiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG844 sp900313875*. The type genome for the species is the GenBank assembly GCA_900313875.1. The GC content of the type genome is 62.63 % and the genome length is 1.16 Mbp.

Description of *Candidatus* Sicunia gen. nov.

Candidatus Sicunia (NL. fem. n. *Sicunia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RUG844*. The type species for the genus is *Candidatus* Sicunia tolutiforma .

According to the original version of GTDB R06-RS202, this genus belongs to the family *RUG844*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Sicuniaceae.

Description of *Candidatus* Sicuniaceae fam. nov.

Candidatus Sicuniaceae (NL. fem. n. *Sicuniaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *RUG844.* The type genus for the taxon is *Candidatus* Sicunia .

According to GTDB R06-RS202, this family belongs to the order *Coriobacteriales*.

Description of *Candidatus* Sicunida artiletta sp. nov.

Candidatus Sicunida artiletta (NL. fem. n. *artiletta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SLQM01 sp007131435*. The type genome for the species is the GenBank assembly GCA_007131435.1. The GC content of the type genome is 45.97 % and the genome length is 2.2 Mbp.

Description of *Candidatus* Sicunida gen. nov.

Candidatus Sicunida (NL. fem. n. *Sicunida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SLQM01*. The type species for the genus is *Candidatus* Sicunida artiletta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DTU022*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Depelidaceae.

Description of *Candidatus* Sicunida dececibra sp. nov.

Candidatus Sicunida dececibra (NL. fem. n. *dececibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SLQM01 sp007129055*. The type genome for the species is the GenBank assembly GCA_007119675.1. The GC content of the type genome is 45.11 % and the genome length is 1.39 Mbp.

Description of *Candidatus* Sicunosa supelivita sp. nov.

Candidatus Sicunosa supelivita (NL. fem. n. *supelivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6935 sp002722705*. The type genome for the species is the GenBank assembly GCA_002722705.1. The GC content of the type genome is 39.44 % and the genome length is 4.0 Mbp.

Description of *Candidatus* Sicunosa gen. nov.

Candidatus Sicunosa (NL. fem. n. *Sicunosa* a name created arbitrarily, while preserving

the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA6935*. The type species for the genus is *Candidatus* Sicunosa supelivita .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA6935*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Sicunosaceae.

Description of *Candidatus* Sicunosaceae fam. nov.

Candidatus Sicunosaceae (NL. fem. n. *Sicunosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA6935.* The type genus for the taxon is *Candidatus* Sicunosa .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA1018*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Desorariales.

Description of *Candidatus* Sicunula dedigitia sp. nov.

Candidatus Sicunula dedigitia (NL. fem. n. *dedigitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA693 sp903913865*. The type genome for the species is the GenBank assembly GCA_903871215.1. The GC content of the type genome is 58.92 % and the genome length is 6.11 Mbp.

Description of *Candidatus* Sicunula gen. nov.

Candidatus Sicunula (NL. fem. n. *Sicunula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA693*. The type species for the genus is *Candidatus* Sicunula dedigitia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA8199*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Tabitidaceae.

Description of *Candidatus* Sicunula dupunitia sp. nov.

Candidatus Sicunula dupunitia (NL. fem. n. *dupunitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA693 sp002298785*. The type genome for the species is the GenBank assembly GCA_002298105.1. The GC content of the type genome is 59.18 % and the genome length is 7.29 Mbp.

Description of *Candidatus* Sideroxydans abagmedo sp. nov.

Candidatus Sideroxydans abagmedo (NL. fem. n. *abagmedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sideroxydans sp002421915*. The type genome for the species is the GenBank assembly GCA_002421915.1. The GC content of the type genome is 58.23 % and the genome length is 2.06 Mbp.

Description of *Candidatus* Sideroxydans arancigena sp. nov.

Candidatus Sideroxydans arancigena (NL. fem. n. *arancigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sideroxydans sp003445795*. The type genome for the species is the GenBank assembly GCA_003445795.1. The GC content of the type genome is 59.58 % and the genome length is 2.72 Mbp.

Description of *Candidatus* Sideroxydans atlanousia sp. nov.

Candidatus Sideroxydans atlanousia (NL. fem. n. *atlanousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sideroxydans sp006218055*. The type genome for the species is the GenBank assembly GCA_006218055.1. The GC content of the type genome is 54.33 % and the genome length is 1.66 Mbp.

Description of *Candidatus* Sideroxydans carunedo sp. nov.

Candidatus Sideroxydans carunedo (NL. fem. n. *carunedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sideroxydans sp903847155*. The type genome for the species is the GenBank assembly GCA_903847155.1. The GC content of the type genome is 53.92 % and the genome length is 3.08 Mbp.

Description of *Candidatus* Sideroxydans cucurentia sp. nov.

Candidatus Sideroxydans cucurentia (NL. fem. n. *cucurentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sideroxydans sp002787455*. The type genome for the species is the GenBank assembly GCA_002781005.1. The GC content of the type genome is 60.29 % and the genome length is 0.9 Mbp.

Description of *Candidatus* Sideroxydans ignipivita sp. nov.

Candidatus Sideroxydans ignipivita (NL. fem. n. *ignipivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sideroxydans sp011620315*. The type genome for the species is the GenBank assembly GCA_011620315.1. The GC content of the type genome is 59.09 % and the genome length is 2.95 Mbp.

Description of *Candidatus* Sideroxydans letifibula sp. nov.

Candidatus Sideroxydans letifibula (NL. fem. n. *letifibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sideroxydans sp013824485*. The type genome for the species is the GenBank assembly GCA_013824485.1. The GC content of the type genome is 53.28 % and the genome length is 2.07 Mbp.

Description of *Candidatus* Sideroxydans solipibula sp. nov.

Candidatus Sideroxydans solipibula (NL. fem. n. *solipibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Sideroxydans sp013791855*. The type genome for the species is the GenBank assembly GCA_013791855.1. The GC content of the type genome is 58.47 % and the genome length is 2.55 Mbp.

Description of *Candidatus* Sideroxydans vicecetta sp. nov.

Candidatus Sideroxydans vicecetta (NL. fem. n. *vicecetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sideroxydans sp013140695*. The type genome for the species is the GenBank assembly GCA_013141275.1. The GC content of the type genome is 51.46 % and the genome length is 2.47 Mbp.

Description of *Candidatus* Sifunana bugilibula sp. nov.

Candidatus Sifunana bugilibula (NL. fem. n. *bugilibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *XYB1-FULL-42-16 sp001823055*. The type genome for the species is the GenBank assembly GCA_001823055.1. The GC content of the type genome is 41.7 % and the genome length is 0.61 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at 16ft depth; 0.1 micron filter at time point B".

Description of *Candidatus* Sifunana gen. nov.

Candidatus Sifunana (NL. fem. n. *Sifunana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *XYB1-FULL-42-16*. The type species for the genus is *Candidatus* Sifunana bugilibula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *XYD1-FULL-46-19*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Disidellaceae.

Description of *Candidatus* Sifunaria apsocimonas sp. nov.

Candidatus Sifunaria apsocimonas (NL. fem. n. *apsocimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PXBQ01 sp007695285*. The type genome for the species is the GenBank assembly GCA_007695285.1. The GC content of the type genome is 60.56 % and the genome length is 4.4 Mbp.

Description of *Candidatus* Sifunaria gen. nov.

Candidatus Sifunaria (NL. fem. n. *Sifunaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PXBQ01*. The type species for the genus is *Candidatus* Sifunaria apsocimonas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *PXBQ01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Sifunariaceae.

Description of *Candidatus* Sifunariaceae fam. nov.

Candidatus Sifunariaceae (NL. fem. n. *Sifunariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *PXBQ01.* The type genus for the taxon is *Candidatus* Sifunaria .

According to GTDB R06-RS202, this family belongs to the order *Spirochaetales_C*.

Description of *Candidatus* Sifunaria rarefibra sp. nov.

Candidatus Sifunaria rarefibra (NL. fem. n. *rarefibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PXBQ01 sp003566875*. The type genome for the species is the GenBank assembly GCA_007131775.1. The GC content of the type genome is 60.16 % and the genome length is 2.4 Mbp.

Description of *Candidatus* Sifunella manufousia sp. nov.

Candidatus Sifunella manufousia (NL. fem. n. *manufousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CG1-02-49-23 sp002791545*. The type genome for the species is the

GenBank assembly GCA_001871355.1. The GC content of the type genome is 49.46 % and the genome length is 2.75 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "groundwater filtered through a a 3.0 um filter and then through a 0.2 um filter".

Description of *Candidatus* Sifunella gen. nov.

Candidatus Sifunella (NL. fem. n. *Sifunella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CG1-02-49-23*. The type species for the genus is *Candidatus* Sifunella manufousia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Sifunia adtilago sp. nov.

Candidatus Sifunia adtilago (NL. fem. n. *adtilago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *XYB12-FULL-50-7 sp003140935*. The type genome for the species is the GenBank assembly GCA_003140935.1. The GC content of the type genome is 51.56 % and the genome length is 2.4 Mbp.

Description of *Candidatus* Sifunia gen. nov.

Candidatus Sifunia (NL. fem. n. *Sifunia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *XYB12-FULL-50-7*. The type species for the genus is *Candidatus* Sifunia adtilago .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2337*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Panopellaceae.

Description of *Candidatus* Sifunia curotatio sp. nov.

Candidatus Sifunia curotatio (NL. fem. n. *curotatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *XYB12-FULL-50-7 sp903856085*. The type genome for the species is the GenBank assembly GCA_903836045.1. The GC content of the type genome is 50.58 % and the genome length is 2.44 Mbp.

Description of *Candidatus* Sifunia inadfibula sp. nov.

Candidatus Sifunia inadfibula (NL. fem. n. *inadfibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *XYB12-FULL-50-7 sp001804345*. The type genome for the species is the GenBank assembly GCA_001804345.1. The GC content of the type genome is 50.34 % and the genome length is 2.06 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at 16ft depth; 1.2 micron filter at time point B".

Description of *Candidatus* Sifunia vinolicella sp. nov.

Candidatus Sifunia vinolicella (NL. fem. n. *vinolicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *XYB12-FULL-50-7 sp903884815*. The type genome for the species is the GenBank assembly GCA_903826415.1. The GC content of the type genome is 52.63 % and the genome length is 2.69 Mbp.

Description of *Candidatus* Sifunida foricitia sp. nov.

Candidatus Sifunida foricitia (NL. fem. n. *foricitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTJR01 sp011333785*. The type genome for the species is the GenBank assembly GCA_011333785.1. The GC content of the type genome is 39.8 % and the genome length is 0.68 Mbp.

Description of *Candidatus* Sifunida gen. nov.

Candidatus Sifunida (NL. fem. n. *Sifunida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DTJR01*. The type species for the genus is *Candidatus* Sifunida foricitia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DTJR01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Sifunidaceae.

Description of *Candidatus* Sifunidaceae fam. nov.

Candidatus Sifunidaceae (NL. fem. n. *Sifunidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *DTJR01.* The type genus for the taxon is *Candidatus* Sifunida .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA1384*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Panifidales.

Description of *Candidatus* Sifunosa funebifica sp. nov.

Candidatus Sifunosa funebifica (NL. fem. n. *funebifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-12-FULL-37-12 sp001769655*. The type genome for the species is the GenBank assembly GCA_001769355.1. The GC content of the type genome is 36.72 % and the genome length is 3.56 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under low O2 conditions; 0.2 micron filter; full assembly".

Description of *Candidatus* Sifunosa gen. nov.

Candidatus Sifunosa (NL. fem. n. *Sifunosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *2-12-FULL-37-12*. The type species for the genus is *Candidatus* Sifunosa funebifica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *2-12-FULL-37-12*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Sifunosaceae.

Description of *Candidatus* Sifunosaceae fam. nov.

Candidatus Sifunosaceae (NL. fem. n. *Sifunosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *2-12-FULL-37-12.* The type genus for the taxon is *Candidatus* Sifunosa .

According to the original version of GTDB R06-RS202, this family belongs to the order *2-12-FULL-37-12*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Sifunosales.

Description of *Candidatus* Sifunosales ord. nov.

Candidatus Sifunosales (NL. fem. n. *Sifunosales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *2-12-FULL-37-12.* The type genus for the taxon is *Candidatus* Sifunosa .

According to the GTDB R06-RS202, this order belongs to the class *Bacteroidia*.

Description of *Candidatus* Sifunula vitabilenta sp. nov.

Candidatus Sifunula vitabilenta (NL. fem. n. *vitabilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAJBEZ01 sp903952205*. The type genome for the species is the GenBank assembly GCA_903859315.1. The GC content of the type genome is 46.41 % and the genome length is 4.75 Mbp.

Description of *Candidatus* Sifunula gen. nov.

Candidatus Sifunula (NL. fem. n. *Sifunula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAJBEZ01*. The type species for the genus is *Candidatus* Sifunula vitabilenta .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Silanimonas adposago sp. nov.

Candidatus Silanimonas adposago (NL. fem. n. *adposago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Silanimonas sp003449515*. The type genome for the species is the GenBank assembly GCA_003449515.1. The GC content of the type genome is 70.07 % and the genome length is 1.95 Mbp.

Description of *Candidatus* Siligana arcatastra sp. nov.

Candidatus Siligana arcatastra (NL. fem. n. *arcatastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4951 sp002314915*. The type genome for the species is the GenBank assembly GCA_002314915.1. The GC content of the type genome is 43.15 % and the genome length is 1.69 Mbp.

Description of *Candidatus* Siligana gen. nov.

Candidatus Siligana (NL. fem. n. *Siligana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA4951*. The type species for the genus is *Candidatus* Siligana arcatastra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-826*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Pudibellaceae.

Description of *Candidatus* Siligana armipitia sp. nov.

Candidatus Siligana armipitia (NL. fem. n. *armipitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4951 sp002395465*. The type genome for the species is the GenBank assembly GCA_002395465.1. The GC content of the type genome is 43.71 % and the genome length is 1.1 Mbp.

Description of *Candidatus* Siligana biveretta sp. nov.

Candidatus Siligana biveretta (NL. fem. n. *biveretta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4951 sp900321485*. The type genome for the species is the GenBank assembly GCA_900321485.1. The GC content of the type genome is 45.06 % and the genome length is 1.62 Mbp.

Description of *Candidatus* Siligana buxanitia sp. nov.

Candidatus Siligana buxanitia (NL. fem. n. *buxanitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4951 sp002296455*. The type genome for the species is the GenBank assembly GCA_002296455.1. The GC content of the type genome is 43.02 % and the genome length is 0.81 Mbp.

Description of *Candidatus* Siligana cerimastra sp. nov.

Candidatus Siligana cerimastra (NL. fem. n. *cerimastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4951 sp902802355*. The type genome for the species is the GenBank assembly GCA_902781915.1. The GC content of the type genome is 47.55 % and the genome length is 1.07 Mbp.

Description of *Candidatus* Siligana clancousia sp. nov.

Candidatus Siligana clancousia (NL. fem. n. *clancousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4951 sp902781615*. The type genome for the species is the GenBank assembly GCA_902781615.1. The GC content of the type genome is 45.37 % and the genome length is 1.67 Mbp.

Description of *Candidatus* Siligana culigitas sp. nov.

Candidatus Siligana culigitas (NL. fem. n. *culigitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4951 sp900320745*. The type genome for the species is the GenBank assembly GCA_900320745.1. The GC content of the type genome is 44.46 % and the genome length is 1.2 Mbp.

Description of *Candidatus* Siligana derelilega sp. nov.

Candidatus Siligana derelilega (NL. fem. n. *derelilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4951 sp002449265*. The type genome for the species is the GenBank assembly GCA_002478915.1. The GC content of the type genome is 39.55 % and the genome length is 1.54 Mbp.

Description of *Candidatus* Siligana exsomatica sp. nov.

Candidatus Siligana exsomatica (NL. fem. n. *exsomatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4951 sp900542595*. The type genome for the species is the GenBank assembly GCA_900542595.1. The GC content of the type genome is 40.98 % and the genome length is 1.15 Mbp.

Description of *Candidatus* Siligana fatifugo sp. nov.

Candidatus Siligana fatifugo (NL. fem. n. *fatifugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4951 sp002297365*. The type genome for the species is the GenBank assembly GCA_002297365.1. The GC content of the type genome is 41.59 % and the genome length is 1.56 Mbp.

Description of *Candidatus* Siligana loripisca sp. nov.

Candidatus Siligana loripisca (NL. fem. n. *loripisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4951 sp002440125*. The type genome for the species is the GenBank assembly GCA_002313775.1. The GC content of the type genome is 44.29 % and the genome length is 1.51 Mbp.

Description of *Candidatus* Siligana obtunitica sp. nov.

Candidatus Siligana obtunitica (NL. fem. n. *obtunitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4951 sp902800255*. The type genome for the species is the GenBank assembly GCA_902800255.1. The GC content of the type genome is 46.99 % and the genome length is 0.95 Mbp.

Description of *Candidatus* Siligana retecatio sp. nov.

Candidatus Siligana retecatio (NL. fem. n. *retecatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4951 sp900540385*. The type genome for the species is the GenBank assembly RS_GCF_900768975.1. The GC content of the type genome is 38.69 % and the genome length is 1.64 Mbp.

Description of *Candidatus* Siligana rosarimonas sp. nov.

Candidatus Siligana rosarimonas (NL. fem. n. *rosarimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4951 sp002404865*. The type genome for the species is the GenBank assembly GCA_002404865.1. The GC content of the type genome is 40.17 % and the genome length is 1.47 Mbp.

Description of *Candidatus* Siligana sugilessa sp. nov.

Candidatus Siligana sugilessa (NL. fem. n. *sugilessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4951 sp002397465*. The type genome for the species is the GenBank assembly GCA_002483615.1. The GC content of the type genome is 48.51 % and the genome length is 1.56 Mbp.

Description of *Candidatus* Siligana verecifica sp. nov.

Candidatus Siligana verecifica (NL. fem. n. *verecifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *UBA4951 sp902791085*. The type genome for the species is the GenBank assembly GCA_902791085.1. The GC content of the type genome is 43.76 % and the genome length is 1.61 Mbp.

Description of *Candidatus* Siligana volubugo sp. nov.

Candidatus Siligana volubugo (NL. fem. n. *volubugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4951 sp902793515*. The type genome for the species is the GenBank assembly GCA_902793515.1. The GC content of the type genome is 47.8 % and the genome length is 1.05 Mbp.

Description of *Candidatus* Siligaria illunatica sp. nov.

Candidatus Siligaria illunatica (NL. fem. n. *illunatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SW-11-45-7 sp003022985*. The type genome for the species is the GenBank assembly GCA_003022985.1. The GC content of the type genome is 44.91 % and the genome length is 1.92 Mbp.

Description of *Candidatus* Siligaria gen. nov.

Candidatus Siligaria (NL. fem. n. *Siligaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SW-11-45-7*. The type species for the genus is *Candidatus* Siligaria illunatica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SW-11-45-7*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Siligariaceae.

Description of *Candidatus* Siligariaceae fam. nov.

Candidatus Siligariaceae (NL. fem. n. *Siligariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SW-11-45-7.* The type genus for the taxon is *Candidatus* Siligaria .

According to GTDB R06-RS202, this family belongs to the order *Chitinophagales*.

Description of *Candidatus* Siligella adrenisca sp. nov.

Candidatus Siligella adrenisca (NL. fem. n. *adrenisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Palsa-851 sp003162415*. The type genome for the species is the GenBank assembly GCA_003162415.1. The GC content of the type genome is 66.09 % and the genome length is 3.69 Mbp.

Description of *Candidatus* Siligella gen. nov.

Candidatus Siligella (NL. fem. n. *Siligella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Palsa-851*. The type species for the genus is *Candidatus* Siligella adrenisca .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA8260*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Visibiaceae.

Description of *Candidatus* Siligella catecitudo sp. nov.

Candidatus Siligella catecitudo (NL. fem. n. *catecitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Palsa-851 sp003132805*. The type genome for the species is the GenBank assembly GCA_003132805.1. The GC content of the type genome is 66.82 % and the genome length is 2.62 Mbp.

Description of *Candidatus* Siligella grallax sp. nov.

Candidatus Siligella grallax (NL. fem. n. *grallax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Palsa-851 sp003136295*. The type genome for the species is the GenBank assembly GCA_003136295.1. The GC content of the type genome is 66.48 % and the genome length is 2.81 Mbp.

Description of *Candidatus* Siligella hirudousia sp. nov.

Candidatus Siligella hirudousia (NL. fem. n. *hirudousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Palsa-851 sp003135895*. The type genome for the species is the GenBank assembly GCA_003135895.1. The GC content of the type genome is 66.39 % and the genome length is 3.6 Mbp.

Description of *Candidatus* Siligella impigatica sp. nov.

Candidatus Siligella impigatica (NL. fem. n. *impigatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Palsa-851 sp003131685*. The type genome for the species is the GenBank assembly GCA_003131685.1. The GC content of the type genome is 66.37 % and the genome length is 3.78 Mbp.

Description of *Candidatus* Siligella lucelilega sp. nov.

Candidatus Siligella lucelilega (NL. fem. n. *lucelilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Palsa-851 sp003153505*. The type genome for the species is the GenBank assembly GCA_003131505.1. The GC content of the type genome is 66.64 % and the genome length is 3.21 Mbp.

Description of *Candidatus* Siligella omnivitoga sp. nov.

Candidatus Siligella omnivitoga (NL. fem. n. *omnivitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Palsa-851 sp003132525*. The type genome for the species is the GenBank assembly GCA_003132525.1. The GC content of the type genome is 66.48 % and the genome length is 3.2 Mbp.

Description of *Candidatus* Siligia democilenta sp. nov.

Candidatus Siligia democilenta (NL. fem. n. *democilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2774 sp002352485*. The type genome for the species is the GenBank assembly GCA_002352485.1. The GC content of the type genome is 45.64 % and the genome length is 2.48 Mbp.

Description of *Candidatus* Siligia gen. nov.

Candidatus Siligia (NL. fem. n. *Siligia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA2774*. The type species for the genus is *Candidatus* Siligia democilenta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2774*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Siligiaceae.

Description of *Candidatus* Siligiaceae fam. nov.

Candidatus Siligiaceae (NL. fem. n. *Siligiaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA2774.* The type genus for the taxon is *Candidatus* Siligia .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA2774*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Siligiales.

Description of *Candidatus* Siligiales ord. nov.

Candidatus Siligiales (NL. fem. n. *Siligiales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA2774.* The type genus for the taxon is *Candidatus* Siligia .

According to the original version of GTDB R06-RS202, this family belongs to the class *UBA1144*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Conifellae.

Description of *Candidatus* Siligia pericifica sp. nov.

Candidatus Siligia pericifica (NL. fem. n. *pericifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2774 sp003229065*. The type genome for the species is the GenBank assembly GCA_003229065.1. The GC content of the type genome is 46.73 % and the genome length is 2.05 Mbp.

Description of *Candidatus* Siligida bicinitudo sp. nov.

Candidatus Siligida bicinitudo (NL. fem. n. *bicinitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Mf105b01 sp000509225*. The type genome for the species is the GenBank assembly GCA_003503495.1. The GC content of the type genome is 55.35 % and the genome length is 3.05 Mbp.

Description of *Candidatus* Siligida gen. nov.

Candidatus Siligida (NL. fem. n. *Siligida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Mf105b01*. The type species for the genus is *Candidatus* Siligida bicinitudo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Siligida homagicula sp. nov.

Candidatus Siligida homagicula (NL. fem. n. *homagicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Mf105b01 sp003330885*. The type genome for the species is the GenBank assembly RS_GCF_003330885.1. The GC content of the type genome is 55.13 % and the genome length is 3.86 Mbp.

Description of *Candidatus* Siligida rarefiforma sp. nov.

Candidatus Siligida rarefiforma (NL. fem. n. *rarefiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *Mf105b01 sp002715765*. The type genome for the species is the GenBank assembly GCA_002337635.1. The GC content of the type genome is 56.02 % and the genome length is 3.27 Mbp.

Description of *Candidatus* Siligida subinago sp. nov.

Candidatus Siligida subinago (NL. fem. n. *subinago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Mf105b01 sp002746275*. The type genome for the species is the GenBank assembly GCA_002746275.1. The GC content of the type genome is 55.39 % and the genome length is 3.45 Mbp.

Description of *Candidatus* Siligida valefousia sp. nov.

Candidatus Siligida valefousia (NL. fem. n. *valefousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Mf105b01 sp002695905*. The type genome for the species is the GenBank assembly GCA_002695905.1. The GC content of the type genome is 50.63 % and the genome length is 4.82 Mbp.

Description of *Candidatus* Siligosa nivomibula sp. nov.

Candidatus Siligosa nivomibula (NL. fem. n. *nivomibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA12403 sp003511125*. The type genome for the species is the GenBank assembly GCA_000995915.1. The GC content of the type genome is 44.44 % and the genome length is 1.03 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "aquifer sediment".

Description of *Candidatus* Siligosa gen. nov.

Candidatus Siligosa (NL. fem. n. *Siligosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA12403*. The type species for the genus is *Candidatus* Siligosa nivomibula .

According to the original version of GTDB R06-RS202, this genus belongs to the family

GWF2-40-263. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Fetifidaceae.

Description of *Candidatus* Siligula vinolibula sp. nov.

Candidatus Siligula vinolibula (NL. fem. n. *vinolibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PFEM01 sp002793635*. The type genome for the species is the GenBank assembly GCA_002793635.1. The GC content of the type genome is 48.43 % and the genome length is 0.57 Mbp.

Description of *Candidatus* Siligula gen. nov.

Candidatus Siligula (NL. fem. n. *Siligula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PFEM01*. The type species for the genus is *Candidatus* Siligula vinolibula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *PFEM01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Siligulaceae.

Description of *Candidatus* Siligulaceae fam. nov.

Candidatus Siligulaceae (NL. fem. n. *Siligulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *PFEM01.* The type genus for the taxon is *Candidatus* Siligula .

According to the original version of GTDB R06-RS202, this family belongs to the order *PFEM01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Siligulales.

Description of *Candidatus* Siligulales ord. nov.

Candidatus Siligulales (NL. fem. n. *Siligulales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *PFEM01.* The type genus for the taxon is *Candidatus* Siligula .

According to the GTDB R06-RS202, this order belongs to the class *Microgenomatia*.

Description of *Candidatus* Silvanigrella anxifisca sp. nov.

Candidatus Silvanigrella anxifisca (NL. fem. n. *anxifisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Silvanigrella sp009792895*. The type genome for the species is the GenBank assembly RS_GCF_009792895.1. The GC content of the type genome is 29.57 % and the genome length is 3.64 Mbp.

Description of *Candidatus* Silvibacterium argitisca sp. nov.

Candidatus Silvibacterium argitisca (NL. fem. n. *argitisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Silvibacterium sp013289875*. The type genome for the species is the GenBank assembly GCA_013289875.1. The GC content of the type genome is 58.56 % and the genome length is 5.05 Mbp.

Description of *Candidatus* Siminana advigatio sp. nov.

Candidatus Siminana advigatio (NL. fem. n. *advigatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Bact-19 sp002869385*. The type genome for the species is the GenBank assembly GCA_002869385.1. The GC content of the type genome is 32.94 % and the genome length is 4.25 Mbp.

Description of *Candidatus* Siminana gen. nov.

Candidatus Siminana (NL. fem. n. *Siminana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Bact-19*. The type species for the genus is *Candidatus* Siminana advigatio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *ML635J-15*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Carucariaceae.

Description of *Candidatus* Siminana demulitio sp. nov.

Candidatus Siminana demulitio (NL. fem. n. *demulitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Bact-19 sp902776565*. The type genome for the species is the GenBank assembly GCA_902776565.1. The GC content of the type genome is 43.47 % and the genome length is 3.36 Mbp.

Description of *Candidatus* Siminana entomicula sp. nov.

Candidatus Siminana entomicula (NL. fem. n. *entomicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Bact-19 sp902762455*. The type genome for the species is the GenBank assembly GCA_902762455.1. The GC content of the type genome is 43.46 % and the genome length is 2.86 Mbp.

Description of *Candidatus* Siminana infisessa sp. nov.

Candidatus Siminana infisessa (NL. fem. n. *infisessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Bact-19 sp902791865*. The type genome for the species is the GenBank assembly GCA_902791865.1. The GC content of the type genome is 42.39 % and the genome length is 3.39 Mbp.

Description of *Candidatus* Siminana inhosivita sp. nov.

Candidatus Siminana inhosivita (NL. fem. n. *inhosivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Bact-19 sp001603595*. The type genome for the species is the GenBank assembly GCA_001603595.1. The GC content of the type genome is 32.06 % and the genome length is 3.07 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "3 replicate cellulose-degrading anaerobic digesters sampled at day 96 and day 362".

Description of *Candidatus* Siminana insenax sp. nov.

Candidatus Siminana insenax (NL. fem. n. *insenax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Bact-19 sp902800045*. The type genome for the species is the GenBank assembly GCA_902800045.1. The GC content of the type genome is 43.7 % and the genome length is 3.2 Mbp.

Description of *Candidatus* Siminana nocenago sp. nov.

Candidatus Siminana nocenago (NL. fem. n. *nocenago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Bact-19 sp002412425*. The type genome for the species is the GenBank assembly GCA_002426565.1. The GC content of the type genome is 30.53 % and the genome length is 2.59 Mbp.

Description of *Candidatus* Siminana pragmilenta sp. nov.

Candidatus Siminana pragmilenta (NL. fem. n. *pragmilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Bact-19 sp002310235*. The type genome for the species is the GenBank assembly GCA_002310235.1. The GC content of the type genome is 42.78 % and the genome length is 2.82 Mbp.

Description of *Candidatus* Siminana purulugo sp. nov.

Candidatus Siminana purulugo (NL. fem. n. *purulugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Bact-19 sp902790405*. The type genome for the species is the GenBank assembly GCA_902790405.1. The GC content of the type genome is 43.86 % and the genome length is 2.75 Mbp.

Description of *Candidatus* Siminana sacopicella sp. nov.

Candidatus Siminana sacopicella (NL. fem. n. *sacopicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Bact-19 sp003249955*. The type genome for the species is the GenBank assembly GCA_003249955.1. The GC content of the type genome is 36.32 % and the genome length is 4.7 Mbp.

Description of *Candidatus* Siminana tabiticella sp. nov.

Candidatus Siminana tabiticella (NL. fem. n. *tabiticella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Bact-19 sp012512075*. The type genome for the species is the GenBank assembly GCA_012512075.1. The GC content of the type genome is 29.7 % and the genome length is 2.52 Mbp.

Description of *Candidatus* Siminaria caraventia sp. nov.

Candidatus Siminaria caraventia (NL. fem. n. *caraventia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Tous-C4FEB sp903938935*. The type genome for the species is the GenBank assembly GCA_903938935.1. The GC content of the type genome is 61.31 % and the genome length is 3.24 Mbp.

Description of *Candidatus* Siminaria gen. nov.

Candidatus Siminaria (NL. fem. n. *Siminaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Tous-C4FEB*. The type species for the genus is *Candidatus* Siminaria caraventia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Siminaria caselago sp. nov.

Candidatus Siminaria caselago (NL. fem. n. *caselago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Tous-C4FEB sp014376585*. The type genome for the species is the

GenBank assembly GCA_014376585.1. The GC content of the type genome is 63.63 % and the genome length is 5.24 Mbp.

Description of *Candidatus* Siminaria exsomimonia sp. nov.

Candidatus Siminaria exsomimonia (NL. fem. n. *exsomimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Tous-C4FEB sp903919985*. The type genome for the species is the GenBank assembly GCA_903919985.1. The GC content of the type genome is 61.71 % and the genome length is 2.64 Mbp.

Description of *Candidatus* Siminaria giganicula sp. nov.

Candidatus Siminaria giganicula (NL. fem. n. *giganicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Tous-C4FEB sp002304445*. The type genome for the species is the GenBank assembly GCA_002304445.1. The GC content of the type genome is 62.76 % and the genome length is 3.76 Mbp.

Description of *Candidatus* Siminaria insenitrix sp. nov.

Candidatus Siminaria insenitrix (NL. fem. n. *insenitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Tous-C4FEB sp009919985*. The type genome for the species is the GenBank assembly GCA_009919985.1. The GC content of the type genome is 58.98 % and the genome length is 2.99 Mbp.

Description of *Candidatus* Siminaria pudibimonas sp. nov.

Candidatus Siminaria pudibimonas (NL. fem. n. *pudibimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Tous-C4FEB sp002737275*. The type genome for the species is the GenBank assembly GCA_002737275.1. The GC content of the type genome is 62.84 % and the genome length is 2.65 Mbp.

Description of *Candidatus* Siminella metapessa sp. nov.

Candidatus Siminella metapessa (NL. fem. n. *metapessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA652 sp002299915*. The type genome for the species is the GenBank assembly GCA_002299915.1. The GC content of the type genome is 44.42 % and the genome length is 1.89 Mbp.

Description of *Candidatus* Siminella gen. nov.

Candidatus Siminella (NL. fem. n. *Siminella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA652*. The type species for the genus is *Candidatus* Siminella metapessa .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Siminia ignigago sp. nov.

Candidatus Siminia ignigago (NL. fem. n. *ignigago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HRBIN11 sp002898535*. The type genome for the species is the GenBank assembly GCA_002898535.1. The GC content of the type genome is 65.74 % and the genome length is 2.99 Mbp.

Description of *Candidatus* Siminia gen. nov.

Candidatus Siminia (NL. fem. n. *Siminia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *HRBIN11*. The type species for the genus is *Candidatus* Siminia ignigago .

According to the original version of GTDB R06-RS202, this genus belongs to the family *HRBIN11*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Siminiaceae.

Description of *Candidatus* Siminiaceae fam. nov.

Candidatus Siminiaceae (NL. fem. n. *Siminiaceae* a name created from the name of the

type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *HRBIN11*. The type genus for the taxon is *Candidatus* Siminia .

According to the original version of GTDB R06-RS202, this family belongs to the order *HRBIN11*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Siminiales.

Description of *Candidatus* Siminiales ord. nov.

Candidatus Siminiales (NL. fem. n. *Siminiales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *HRBIN11*. The type genus for the taxon is *Candidatus* Siminia .

According to the original version of GTDB R06-RS202, this family belongs to the class *HRBIN11*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Siminiae.

Description of *Candidatus* Siminiae class. nov.

Candidatus Siminiae (NL. fem. n. *c__Siminiae* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *HRBIN11*. The type genus for the taxon is *Candidatus* Siminia .

According to GTDB R06-RS202, this class belongs to the phylum *Acidobacteriota*.

Description of *Candidatus* Siminida linigedo sp. nov.

Candidatus Siminida linigedo (NL. fem. n. *linigedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAACFD01 sp009937555*. The type genome for the species is the GenBank assembly GCA_009937555.1. The GC content of the type genome is 37.05 % and the genome length is 2.05 Mbp.

Description of *Candidatus* Siminida gen. nov.

Candidatus Siminida (NL. fem. n. *Siminida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAACFD01*. The type species for the genus is *Candidatus* Siminida linigedo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JAACFD01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Siminidaceae.

Description of *Candidatus* Siminidaceae fam. nov.

Candidatus Siminidaceae (NL. fem. n. *Siminidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JAACFD01.* The type genus for the taxon is *Candidatus* Siminida .

According to GTDB R06-RS202, this family belongs to the order *Chlamydiales*.

Description of *Candidatus* Siminosa ablacisca sp. nov.

Candidatus Siminosa ablacisca (NL. fem. n. *ablacisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SG8-39 sp001303445*. The type genome for the species is the GenBank assembly GCA_001303445.1. The GC content of the type genome is 68.1 % and the genome length is 3.14 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Sulfate-rich zone estuary sediments 8-12 cm".

Description of *Candidatus* Siminosa gen. nov.

Candidatus Siminosa (NL. fem. n. *Siminosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SG8-39*. The type species for the genus is *Candidatus* Siminosa ablacisca .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SG8-39*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Siminosaceae.

Description of *Candidatus* Siminosaceae fam. nov.

Candidatus Siminosaceae (NL. fem. n. *Siminosaceae* a name created from the name of

the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SG8-39.* The type genus for the taxon is *Candidatus* Siminosa .

According to GTDB R06-RS202, this family belongs to the order *Burkholderiales*.

Description of *Candidatus* Siminovitchia adsulastra sp. nov.

Candidatus Siminovitchia adsulastra (NL. fem. n. *adsulastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Siminovitchia sp001989355*. The type genome for the species is the GenBank assembly RS_GCF_001989355.1. The GC content of the type genome is 42.68 % and the genome length is 4.83 Mbp.

Description of *Candidatus* Siminovitchia turibitio sp. nov.

Candidatus Siminovitchia turibitio (NL. fem. n. *turibitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Siminovitchia sp009928435*. The type genome for the species is the GenBank assembly RS_GCF_009928435.1. The GC content of the type genome is 40.89 % and the genome length is 3.82 Mbp.

Description of *Candidatus* Siminula bicapilega sp. nov.

Candidatus Siminula bicapilega (NL. fem. n. *bicapilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *VFJL01 sp013450215*. The type genome for the species is the GenBank assembly GCA_014190785.1. The GC content of the type genome is 50.06 % and the genome length is 1.45 Mbp.

Description of *Candidatus* Siminula gen. nov.

Candidatus Siminula (NL. fem. n. *Siminula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *VFJL01*. The type species for the genus is *Candidatus* Siminula

bicapilega .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Siminula cilotitas sp. nov.

Candidatus Siminula cilotitas (NL. fem. n. *cilotitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *VFJL01 sp009886095*. The type genome for the species is the GenBank assembly GCA_009886095.1. The GC content of the type genome is 51.52 % and the genome length is 2.11 Mbp.

Description of *Candidatus* Siminula saburifica sp. nov.

Candidatus Siminula saburifica (NL. fem. n. *saburifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *VFJL01 sp903957805*. The type genome for the species is the GenBank assembly GCA_903957805.1. The GC content of the type genome is 50.31 % and the genome length is 1.4 Mbp.

Description of *Candidatus* Singulisphaera antegitura sp. nov.

Candidatus Singulisphaera antegitura (NL. fem. n. *antegitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Singulisphaera sp900129635*. The type genome for the species is the GenBank assembly RS_GCF_900129635.1. The GC content of the type genome is 63.07 % and the genome length is 10.69 Mbp.

Description of *Candidatus* Sinimarinibacterium xeramimonia sp. nov.

Candidatus Sinimarinibacterium xeramimonia (NL. fem. n. *xeramimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sinimarinibacterium sp010092425*. The type genome for the species is the GenBank assembly RS_GCF_010092425.1. The GC content of the type genome is 60.84 % and the genome length is 3.2 Mbp.

Description of *Candidatus* Sinomicrobium alsulitia sp. nov.

Candidatus Sinomicrobium alsulitia (NL. fem. n. *alsulitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sinomicrobium sp014518365*. The type genome for the species is the GenBank assembly RS_GCF_014518365.1. The GC content of the type genome is 45.19 % and the genome length is 5.37 Mbp.

Description of *Candidatus* Sinomicrobium obveribra sp. nov.

Candidatus Sinomicrobium obveribra (NL. fem. n. *obveribra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sinomicrobium sp003285545*. The type genome for the species is the GenBank assembly RS_GCF_003285545.1. The GC content of the type genome is 47.7 % and the genome length is 4.61 Mbp.

Description of *Candidatus* Sinomonas arundastra sp. nov.

Candidatus Sinomonas arundastra (NL. fem. n. *arundastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sinomonas sp005876955*. The type genome for the species is the GenBank assembly RS_GCF_005876955.1. The GC content of the type genome is 67.64 % and the genome length is 4.32 Mbp.

Description of *Candidatus* Sinomonas cerificula sp. nov.

Candidatus Sinomonas cerificula (NL. fem. n. *cerificula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sinomonas sp014656475*. The type genome for the species is the GenBank assembly GCA_014656475.1. The GC content of the type genome is 69.94 % and the genome length is 3.94 Mbp.

Description of *Candidatus* Sinomonas infelousia sp. nov.

Candidatus Sinomonas infelousia (NL. fem. n. *infelousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sinomonas sp002224485*. The type genome for the species is the GenBank assembly GCA_002224485.1. The GC content of the type genome is 70.98 % and the genome length is 3.94 Mbp.

Description of *Candidatus* Sinorhizobium abascentia sp. nov.

Candidatus Sinorhizobium abascentia (NL. fem. n. *abascentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sinorhizobium sp000421085*. The type genome for the species is the GenBank assembly GCA_000421085.1. The GC content of the type genome is 61.94 % and the genome length is 6.81 Mbp.

Description of *Candidatus* Sinorhizobium alsulatio sp. nov.

Candidatus Sinorhizobium alsulatio (NL. fem. n. *alsulatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sinorhizobium sp001854885*. The type genome for the species is the GenBank assembly RS_GCF_001854885.1. The GC content of the type genome is 62.19 % and the genome length is 6.14 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "soil from surrounding area".

Description of *Candidatus* Sinorhizobium appacivita sp. nov.

Candidatus Sinorhizobium appacivita (NL. fem. n. *appacivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sinorhizobium sp000513895*. The type genome for the species is the GenBank assembly RS_GCF_000513895.1. The GC content of the type genome is 61.83 % and the genome length is 6.29 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "not provided; submitted under MIGS 2.1".

Description of *Candidatus* Sinorhizobium cosidessa sp. nov.

Candidatus Sinorhizobium cosidessa (NL. fem. n. *cosidessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sinorhizobium sp000378985*. The type genome for the species is the GenBank assembly RS_GCF_000378985.1. The GC content of the type genome is 62.28 % and the genome length is 6.95 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rio de Janeiro".

Description of *Candidatus* Sinorhizobium loraritas sp. nov.

Candidatus Sinorhizobium loraritas (NL. fem. n. *loraritas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sinorhizobium sp004827385*. The type genome for the species is the GenBank assembly RS_GCF_004827385.1. The GC content of the type genome is 61.16 % and the genome length is 7.7 Mbp.

Description of *Candidatus* Siphonobacter relenax sp. nov.

Candidatus Siphonobacter relenax (NL. fem. n. *relenax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Siphonobacter sp002838835*. The type genome for the species is the GenBank assembly RS_GCF_002838835.1. The GC content of the type genome is 44.8 % and the genome length is 5.08 Mbp.

Description of *Candidatus* Siphonobacter repudibra sp. nov.

Candidatus Siphonobacter repudibra (NL. fem. n. *repudibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Siphonobacter sp002872335*. The type genome for the species is the GenBank assembly RS_GCF_002872335.1. The GC content of the type genome is 48.6 % and the genome length is 6.49 Mbp.

Description of *Candidatus* Sitelana cilicitura sp. nov.

Candidatus Sitelana cilicitura (NL. fem. n. *cilicitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SLSQ01 sp007130355*. The type genome for the species is the

GenBank assembly GCA_003557735.1. The GC content of the type genome is 71.4 % and the genome length is 2.1 Mbp.

Description of *Candidatus* Sitelana gen. nov.

Candidatus Sitelana (NL. fem. n. *Sitelana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SLSQ01*. The type species for the genus is *Candidatus* Sitelana cilicitura .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Sitelaria famelastra sp. nov.

Candidatus Sitelaria famelastra (NL. fem. n. *famelastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTU074 sp001513075*. The type genome for the species is the GenBank assembly GCA_012523455.1. The GC content of the type genome is 43.53 % and the genome length is 2.71 Mbp.

Description of *Candidatus* Sitelaria gen. nov.

Candidatus Sitelaria (NL. fem. n. *Sitelaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DTU074*. The type species for the genus is *Candidatus* Sitelaria famelastra .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Sitelaria notabitio sp. nov.

Candidatus Sitelaria notabitio (NL. fem. n. *notabitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTU074 sp002385885*. The type genome for the species is the GenBank assembly GCA_001513065.1. The GC content of the type genome is 42.41 % and the genome length is 2.04 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "pool of bioreactors CSTR01a; CSTR02a;

and CSTR03a; thermophilic anaerobic digestion of cattle manure in continuous reactors for biogas production (methane)".

Description of *Candidatus* Sitelaria repuditica sp. nov.

Candidatus Sitelaria repuditica (NL. fem. n. *repuditica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTU074 sp001513505*. The type genome for the species is the GenBank assembly GCA_001513505.1. The GC content of the type genome is 41.7 % and the genome length is 2.09 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "pool of bioreactors CSTR01a; CSTR02a; and CSTR03a; thermophilic anaerobic digestion of cattle manure in continuous reactors for biogas production (methane)".

Description of *Candidatus* Sitelella sceptatio sp. nov.

Candidatus Sitelella sceptatio (NL. fem. n. *sceptatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RBG-13-46-9 sp001804045*. The type genome for the species is the GenBank assembly GCA_001804045.1. The GC content of the type genome is 45.15 % and the genome length is 2.05 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle background sediment; well D04 at 13ft depth".

Description of *Candidatus* Sitelella gen. nov.

Candidatus Sitelella (NL. fem. n. *Sitelella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RBG-13-46-9*. The type species for the genus is *Candidatus* Sitelella sceptatio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *RBG-13-46-9*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Sitelellaceae.

Description of *Candidatus* Sitelellaceae fam. nov.

Candidatus Sitelellaceae (NL. fem. n. *Sitelellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *RBG-13-46-9.* The type genus for the taxon is *Candidatus* Sitelella .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA1560*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Vacilellales.

Description of *Candidatus* Sitelia defetitia sp. nov.

Candidatus Sitelia defetitia (NL. fem. n. *defetitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PUPC01 sp003553185*. The type genome for the species is the GenBank assembly GCA_003553185.1. The GC content of the type genome is 63.86 % and the genome length is 3.19 Mbp.

Description of *Candidatus* Sitelia gen. nov.

Candidatus Sitelia (NL. fem. n. *Sitelia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PUPC01*. The type species for the genus is *Candidatus* Sitelia defetitia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *PUPC01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Siteliaceae.

Description of *Candidatus* Siteliaceae fam. nov.

Candidatus Siteliaceae (NL. fem. n. *Siteliaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *PUPC01.* The type genus for the taxon is *Candidatus* Sitelia .

According to the original version of GTDB R06-RS202, this family belongs to the order *PUPC01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Siteliales.

Description of *Candidatus* Siteliales ord. nov.

Candidatus Siteliales (NL. fem. n. *Siteliales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *PUPC01.* The type genus for the taxon is *Candidatus* Sitelia .

According to the original version of GTDB R06-RS202, this family belongs to the class *PUPC01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Siteliae.

Description of *Candidatus* Siteliae class. nov.

Candidatus Siteliae (NL. fem. n. *c__Siteliae* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *PUPC01.* The type genus for the taxon is *Candidatus* Sitelia .

According to GTDB R06-RS202, this class belongs to the phylum *Planctomycetota*.

Description of *Candidatus* Sitelia meridousia sp. nov.

Candidatus Sitelia meridousia (NL. fem. n. *meridousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PUPC01 sp003559755*. The type genome for the species is the GenBank assembly GCA_003559755.1. The GC content of the type genome is 65.26 % and the genome length is 2.91 Mbp.

Description of *Candidatus* Sitelosa derelitica sp. nov.

Candidatus Sitelosa derelitica (NL. fem. n. *derelitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIYWZ01 sp903930075*. The type genome for the species is the GenBank assembly GCA_903832595.1. The GC content of the type genome is 40.21 % and the genome length is 1.78 Mbp.

Description of *Candidatus* Sitelosa gen. nov.

Candidatus Sitelosa (NL. fem. n. *Sitelosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIYWZ01*. The type species for the genus is *Candidatus* Sitelosa

derelitica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAIYWZ01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Sitelosaceae.

Description of *Candidatus* Sitelosaceae fam. nov.

Candidatus Sitelosaceae (NL. fem. n. *Sitelosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CAIYWZ01.* The type genus for the taxon is *Candidatus* Sitelosa .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA6184*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Metabidales.

Description of *Candidatus* Sitelula gasomigena sp. nov.

Candidatus Sitelula gasomigena (NL. fem. n. *gasomigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SHVZ01 sp009694025*. The type genome for the species is the GenBank assembly GCA_009694025.1. The GC content of the type genome is 68.08 % and the genome length is 3.28 Mbp.

Description of *Candidatus* Sitelula gen. nov.

Candidatus Sitelula (NL. fem. n. *Sitelula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SHVZ01*. The type species for the genus is *Candidatus* Sitelula gasomigena .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SHVZ01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Sitelulaceae.

Description of *Candidatus* Sitelulaceae fam. nov.

Candidatus Sitelulaceae (NL. fem. n. *Sitelulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SHVZ01*. The type genus for the taxon is *Candidatus* Sitelula .

According to the original version of GTDB R06-RS202, this family belongs to the order *SHVZ01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Sitelulales.

Description of *Candidatus* Sitelulales ord. nov.

Candidatus Sitelulales (NL. fem. n. *Sitelulales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SHVZ01*. The type genus for the taxon is *Candidatus* Sitelula .

According to the GTDB R06-RS202, this order belongs to the class *Alphaproteobacteria*.

Description of *Candidatus* Siticana aciscentia sp. nov.

Candidatus Siticana aciscentia (NL. fem. n. *aciscentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-001735895 sp001735895*. The type genome for the species is the GenBank assembly GCA_001735895.1. The GC content of the type genome is 55.6 % and the genome length is 4.87 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "gutless worms collected in the Mediterranean Sea; off the coast of Capo di".

Description of *Candidatus* Siticana gen. nov.

Candidatus Siticana (NL. fem. n. *Siticana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-001735895*. The type species for the genus is *Candidatus* Siticana aciscentia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GCA-001735895*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Siticanaceae.

Description of *Candidatus* Siticanaceae fam. nov.

Candidatus Siticanaceae (NL. fem. n. *Siticanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *GCA-001735895.* The type genus for the taxon is *Candidatus* Siticana .

According to the original version of GTDB R06-RS202, this family belongs to the order *GCA-001735895*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Siticanales.

Description of *Candidatus* Siticanales ord. nov.

Candidatus Siticanales (NL. fem. n. *Siticanales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *GCA-001735895.* The type genus for the taxon is *Candidatus* Siticana .

According to the GTDB R06-RS202, this order belongs to the class *Gammaproteobacteria*.

Description of *Candidatus* Siticana exoscedo sp. nov.

Candidatus Siticana exoscedo (NL. fem. n. *exoscedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-001735895 sp003645435*. The type genome for the species is the GenBank assembly GCA_003645435.1. The GC content of the type genome is 50.34 % and the genome length is 3.23 Mbp.

Description of *Candidatus* Siticana risibatio sp. nov.

Candidatus Siticana risibatio (NL. fem. n. *risibatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-001735895 sp009937625*. The type genome for the species is the GenBank assembly GCA_009937625.1. The GC content of the type genome is 57.93 % and the genome length is 3.78 Mbp.

Description of *Candidatus* Siticana tolutilenta sp. nov.

Candidatus Siticana tolutilenta (NL. fem. n. *tolutilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-001735895 sp003231795*. The type genome for the species is the GenBank assembly GCA_003231795.1. The GC content of the type genome is 50.3 % and the genome length is 2.74 Mbp.

Description of *Candidatus* Siticaria mahelastra sp. nov.

Candidatus Siticaria mahelastra (NL. fem. n. *mahelastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4782 sp002403095*. The type genome for the species is the GenBank assembly GCA_002328635.1. The GC content of the type genome is 52.62 % and the genome length is 2.2 Mbp.

Description of *Candidatus* Siticaria gen. nov.

Candidatus Siticaria (NL. fem. n. *Siticaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA4782*. The type species for the genus is *Candidatus* Siticaria mahelastra .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Siticella vicecilenta sp. nov.

Candidatus Siticella vicecilenta (NL. fem. n. *vicecilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABDJB01 sp013003425*. The type genome for the species is the GenBank assembly GCA_013043785.1. The GC content of the type genome is 60.04 % and the genome length is 2.52 Mbp.

Description of *Candidatus* Siticella gen. nov.

Candidatus Siticella (NL. fem. n. *Siticella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABDJB01*. The type species for the genus is *Candidatus* Siticella vicecilenta .

According to the original version of GTDB R06-RS202, this genus belongs to the family

SZUA-146. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Solaculaceae.

Description of *Candidatus* Siticia acrotivita sp. nov.

Candidatus Siticia acrotivita (NL. fem. n. *acrotivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *J058 sp003695705*. The type genome for the species is the GenBank assembly GCA_003695705.1. The GC content of the type genome is 72.17 % and the genome length is 6.61 Mbp.

Description of *Candidatus* Siticia gen. nov.

Candidatus Siticia (NL. fem. n. *Siticia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *J058*. The type species for the genus is *Candidatus* Siticia acrotivita .

According to the original version of GTDB R06-RS202, this genus belongs to the family *J058*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Siticiaceae.

Description of *Candidatus* Siticiaceae fam. nov.

Candidatus Siticiaceae (NL. fem. n. *Siticiaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *J058.* The type genus for the taxon is *Candidatus* Siticia .

According to the original version of GTDB R06-RS202, this family belongs to the order *J058*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Siticiales.

Description of *Candidatus* Siticiales ord. nov.

Candidatus Siticiales (NL. fem. n. *Siticiales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *J058.* The type genus for the taxon is *Candidatus* Siticia .

According to the original version of GTDB R06-RS202, this family belongs to the class

J058. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Siticiae.

Description of *Candidatus* Siticiae class. nov.

Candidatus Siticiae (NL. fem. n. *c__Siticiae* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *J058.* The type genus for the taxon is *Candidatus* Siticia .

According to GTDB R06-RS202, this class belongs to the phylum *Planctomycetota*.

Description of *Candidatus* Siticida bovicifica sp. nov.

Candidatus Siticida bovicifica (NL. fem. n. *bovicifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *20CM-2-70-11 sp003220315*. The type genome for the species is the GenBank assembly GCA_001919015.1. The GC content of the type genome is 70.53 % and the genome length is 2.1 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Soil sample from Angelo meadow plot 1; 40cm depth; 4 days after first rain event (27mm)".

Description of *Candidatus* Siticida gen. nov.

Candidatus Siticida (NL. fem. n. *Siticida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *20CM-2-70-11*. The type species for the genus is *Candidatus* Siticida bovicifica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GWA2-73-35*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Fibiciaceae.

Description of *Candidatus* Siticida denicilenta sp. nov.

Candidatus Siticida denicilenta (NL. fem. n. *denicilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *20CM-2-70-11 sp003221695*. The type genome for the species is the GenBank assembly GCA_003221695.1. The GC content of the type genome is 69.3 % and the genome length is 4.6 Mbp.

Description of *Candidatus* Siticida denicimonas sp. nov.

Candidatus Siticida denicimonas (NL. fem. n. *denicimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *20CM-2-70-11 sp001914535*. The type genome for the species is the GenBank assembly GCA_003220515.1. The GC content of the type genome is 69.52 % and the genome length is 4.27 Mbp.

Description of *Candidatus* Siticida depetitrix sp. nov.

Candidatus Siticida depetitrix (NL. fem. n. *depetitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *20CM-2-70-11 sp003220675*. The type genome for the species is the GenBank assembly GCA_003220675.1. The GC content of the type genome is 68.94 % and the genome length is 4.08 Mbp.

Description of *Candidatus* Siticosa impavitica sp. nov.

Candidatus Siticosa impavitica (NL. fem. n. *impavitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTJG01 sp011333865*. The type genome for the species is the GenBank assembly GCA_011333865.1. The GC content of the type genome is 36.1 % and the genome length is 1.72 Mbp.

Description of *Candidatus* Siticosa gen. nov.

Candidatus Siticosa (NL. fem. n. *Siticosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DTJG01*. The type species for the genus is *Candidatus* Siticosa impavitica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DTJG01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to

the family *Candidatus* Siticosaceae.

Description of *Candidatus* Siticosaceae fam. nov.

Candidatus Siticosaceae (NL. fem. n. *Siticosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *DTJG01*. The type genus for the taxon is *Candidatus* Siticosa .

According to the original version of GTDB R06-RS202, this family belongs to the order *B48-G9*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Celamellales.

Description of *Candidatus* Siticosa remulilega sp. nov.

Candidatus Siticosa remulilega (NL. fem. n. *remulilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTJG01 sp002070645*. The type genome for the species is the GenBank assembly GCA_002070645.1. The GC content of the type genome is 36.13 % and the genome length is 2.03 Mbp.

Description of *Candidatus* Slackia antegetta sp. nov.

Candidatus Slackia antegetta (NL. fem. n. *antegetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Slackia_A sp900553775*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_900553775.1. The GC content of the type genome is 62.43 % and the genome length is 2.03 Mbp.

Description of *Candidatus* Slackia ranunitoga sp. nov.

Candidatus Slackia ranunitoga (NL. fem. n. *ranunitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Slackia_A sp900555495*. Although GTDB has assigned a genus name

with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_900555495.1. The GC content of the type genome is 61.77 % and the genome length is 1.56 Mbp.

Description of *Candidatus* Slackia vocifax sp. nov.

Candidatus Slackia vocifax (NL. fem. n. *vocifax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Slackia_A sp900553655*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_900553655.1. The GC content of the type genome is 57.67 % and the genome length is 1.48 Mbp.

Description of *Candidatus* Smegmana absorilenta sp. nov.

Candidatus Smegmana absorilenta (NL. fem. n. *absorilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2746565 sp002746565*. The type genome for the species is the GenBank assembly GCA_002746565.1. The GC content of the type genome is 34.59 % and the genome length is 1.14 Mbp.

Description of *Candidatus* Smegmana gen. nov.

Candidatus Smegmana (NL. fem. n. *Smegmana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2746565*. The type species for the genus is *Candidatus* Smegmana absorilenta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1877*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cosidosaceae.

Description of *Candidatus* Smegmella fumificella sp. nov.

Candidatus Smegmella fumificella (NL. fem. n. *fumificella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *P52-10 sp000516555*. The type genome for the species is the GenBank assembly RS_GCF_000516555.1. The GC content of the type genome is 63.49 % and the genome length is 5.09 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "fruit bat held in captivity in Quebec; Canada and suffering from necrosis of its wing".

Description of *Candidatus* Smegmella gen. nov.

Candidatus Smegmella (NL. fem. n. *Smegmella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *P52-10*. The type species for the genus is *Candidatus* Smegmella fumificella .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Smegmia arcebivita sp. nov.

Candidatus Smegmia arcebivita (NL. fem. n. *arcebivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACIXD01 sp013178005*. The type genome for the species is the GenBank assembly GCA_013178005.1. The GC content of the type genome is 62.99 % and the genome length is 3.61 Mbp.

Description of *Candidatus* Smegmia gen. nov.

Candidatus Smegmia (NL. fem. n. *Smegmia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACIXD01*. The type species for the genus is *Candidatus* Smegmia arcebivita .

According to the original version of GTDB R06-RS202, this genus belongs to the family *RBG-13-55-18*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Salubiaceae.

Description of *Candidatus* Smegmia subacilega sp. nov.

Candidatus Smegmia subacilega (NL. fem. n. *subacilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACIXD01 sp014360645*. The type genome for the species is the GenBank assembly GCA_014360645.1. The GC content of the type genome is 65.28 % and the genome length is 3.38 Mbp.

Description of *Candidatus* Smegmida effunitio sp. nov.

Candidatus Smegmida effunitio (NL. fem. n. *effunitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *VBDL01 sp005884255*. The type genome for the species is the GenBank assembly GCA_005884255.1. The GC content of the type genome is 68.76 % and the genome length is 4.06 Mbp.

Description of *Candidatus* Smegmida gen. nov.

Candidatus Smegmida (NL. fem. n. *Smegmida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *VBDL01*. The type species for the genus is *Candidatus* Smegmida effunitio .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Smegmosa albogatio sp. nov.

Candidatus Smegmosa albogatio (NL. fem. n. *albogatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAZHD01 sp012510895*. The type genome for the species is the GenBank assembly GCA_012510895.1. The GC content of the type genome is 40.8 % and the genome length is 2.79 Mbp.

Description of *Candidatus* Smegmosa gen. nov.

Candidatus Smegmosa (NL. fem. n. *Smegmosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAZHD01*. The type species for the genus is *Candidatus* Smegmosa

albogatio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DTU083*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Petulellaceae.

Description of *Candidatus* Smegmula inexsugo sp. nov.

Candidatus Smegmula inexsugo (NL. fem. n. *inexsugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-12-FULL-35-11 sp001803185*. The type genome for the species is the GenBank assembly GCA_001803185.1. The GC content of the type genome is 34.88 % and the genome length is 1.75 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 1.2 micron filter; full assembly".

Description of *Candidatus* Smegmula gen. nov.

Candidatus Smegmula (NL. fem. n. *Smegmula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *2-12-FULL-35-11*. The type species for the genus is *Candidatus* Smegmula inexsugo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Smithella accogimonia sp. nov.

Candidatus Smithella accogimonia (NL. fem. n. *accogimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Smithella sp003141615*. The type genome for the species is the GenBank assembly GCA_003141615.1. The GC content of the type genome is 43.67 % and the genome length is 3.54 Mbp.

Description of *Candidatus* Smithella advigimonia sp. nov.

Candidatus Smithella advigimonia (NL. fem. n. *advigimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Smithella sp002441205*. The type genome for the species is the GenBank assembly GCA_002441205.1. The GC content of the type genome is 43.49 % and the genome length is 3.19 Mbp.

Description of *Candidatus* Smithella arillitia sp. nov.

Candidatus Smithella arillitia (NL. fem. n. *arillitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Smithella sp001683985*. The type genome for the species is the GenBank assembly GCA_001683985.1. The GC content of the type genome is 42.83 % and the genome length is 2.75 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "methanogenic consortium M82 from oily sludge".

Description of *Candidatus* Smithella bifaritia sp. nov.

Candidatus Smithella bifaritia (NL. fem. n. *bifaritia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Smithella sp002327415*. The type genome for the species is the GenBank assembly GCA_003507965.1. The GC content of the type genome is 42.39 % and the genome length is 1.03 Mbp.

Description of *Candidatus* Smithella bisulibra sp. nov.

Candidatus Smithella bisulibra (NL. fem. n. *bisulibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Smithella sp000747625*. The type genome for the species is the GenBank assembly GCA_003476025.1. The GC content of the type genome is 43.17 % and the genome length is 1.63 Mbp.

Description of *Candidatus* Smithella catocessa sp. nov.

Candidatus Smithella catocessa (NL. fem. n. *catocessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Smithella sp000753945*. The type genome for the species is the

GenBank assembly GCA_002421695.1. The GC content of the type genome is 43.28 % and the genome length is 2.68 Mbp.

Description of *Candidatus* Smithella denavitas sp. nov.

Candidatus Smithella denavitas (NL. fem. n. *denavitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Smithella sp011371695*. The type genome for the species is the GenBank assembly GCA_011371695.1. The GC content of the type genome is 51.39 % and the genome length is 2.41 Mbp.

Description of *Candidatus* Smithella depasitica sp. nov.

Candidatus Smithella depasitica (NL. fem. n. *depasitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Smithella sp001412345*. The type genome for the species is the GenBank assembly GCA_001412345.1. The GC content of the type genome is 41.37 % and the genome length is 2.97 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "methanogenic consortium capable of long-chain paraffin degradation (SDB culture) enriched from contaminated sediments of San Diego Bay; California; degrades n-alkanes from C25 to C50".

Description of *Candidatus* Smithella desoritia sp. nov.

Candidatus Smithella desoritia (NL. fem. n. *desoritia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Smithella sp003139775*. The type genome for the species is the GenBank assembly GCA_003169075.1. The GC content of the type genome is 43.34 % and the genome length is 3.15 Mbp.

Description of *Candidatus* Smithella miracedo sp. nov.

Candidatus Smithella miracedo (NL. fem. n. *miracedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Smithella sp002840555*. The type genome for the species is the GenBank assembly GCA_002840555.1. The GC content of the type genome is 45.65 %

and the genome length is 3.51 Mbp.

Description of *Candidatus* Smithella semunitudo sp. nov.

Candidatus Smithella semunitudo (NL. fem. n. *semunitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Smithella sp002840505*. The type genome for the species is the GenBank assembly GCA_002840505.1. The GC content of the type genome is 42.84 % and the genome length is 3.28 Mbp.

Description of *Candidatus* Sneathiella catocitio sp. nov.

Candidatus Sneathiella catocitio (NL. fem. n. *catocitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sneathiella sp002694385*. The type genome for the species is the GenBank assembly GCA_002384365.1. The GC content of the type genome is 56.63 % and the genome length is 3.47 Mbp.

Description of *Candidatus* Sneathiella cilotitio sp. nov.

Candidatus Sneathiella cilotitio (NL. fem. n. *cilotitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sneathiella sp006226265*. The type genome for the species is the GenBank assembly GCA_006226265.1. The GC content of the type genome is 57.26 % and the genome length is 2.58 Mbp.

Description of *Candidatus* Sneathiella colubigena sp. nov.

Candidatus Sneathiella colubigena (NL. fem. n. *colubigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sneathiella sp002706985*. The type genome for the species is the GenBank assembly GCA_002706985.1. The GC content of the type genome is 54.45 % and the genome length is 3.32 Mbp.

Description of *Candidatus* Sneathiella excinivita sp. nov.

Candidatus Sneathiella excinivita (NL. fem. n. *excinivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sneathiella sp002163135*. The type genome for the species is the GenBank assembly GCA_002163135.1. The GC content of the type genome is 45.62 % and the genome length is 4.0 Mbp.

Description of *Candidatus* Sneathiella excucimonas sp. nov.

Candidatus Sneathiella excucimonas (NL. fem. n. *excucimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sneathiella sp002428885*. The type genome for the species is the GenBank assembly GCA_002428885.1. The GC content of the type genome is 51.35 % and the genome length is 4.07 Mbp.

Description of *Candidatus* Sneathiella expalicula sp. nov.

Candidatus Sneathiella expalicula (NL. fem. n. *expalicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sneathiella sp009882915*. The type genome for the species is the GenBank assembly RS_GCF_009882915.1. The GC content of the type genome is 51.81 % and the genome length is 3.74 Mbp.

Description of *Candidatus* Sneathiella utputitia sp. nov.

Candidatus Sneathiella utputitia (NL. fem. n. *utputitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sneathiella sp002732675*. The type genome for the species is the GenBank assembly GCA_002732675.1. The GC content of the type genome is 52.25 % and the genome length is 2.36 Mbp.

Description of *Candidatus* Snodgrassella arcitimonas sp. nov.

Candidatus Snodgrassella arcitimonas (NL. fem. n. *arcitimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Snodgrassella sp001590725*. The type genome for the species is the GenBank assembly RS_GCF_001590725.1. The GC content of the type genome is 47.81 % and the genome length is 2.37 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Poplar canker".

Description of *Candidatus* Snodgrassella gemebicella sp. nov.

Candidatus Snodgrassella gemebicella (NL. fem. n. *gemebicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Snodgrassella sp900094895*. The type genome for the species is the GenBank assembly RS_GCF_002777525.1. The GC content of the type genome is 42.72 % and the genome length is 2.44 Mbp.

Description of *Candidatus* Snowella fragmitio sp. nov.

Candidatus Snowella fragmitio (NL. fem. n. *fragmitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Snowella sp003249095*. The type genome for the species is the GenBank assembly GCA_003249095.1. The GC content of the type genome is 40.74 % and the genome length is 4.61 Mbp.

Description of *Candidatus* SoCistrobi crusmatio sp. nov.

Candidatus SoCistrobi crusmatio (NL. fem. n. *crusmatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *SoCistrobi sp900143145*. The type genome for the species is the GenBank assembly RS_GCF_900143145.1. The GC content of the type genome is 56.43 % and the genome length is 3.08 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "host s whole body".

Description of *Candidatus* SoEE anatratio sp. nov.

Candidatus SoEE anatratio (NL. fem. n. *anatratio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *SoEE sp009829945*. The type genome for the species is the GenBank assembly RS_GCF_009829945.1. The GC content of the type genome is 26.76 % and the genome length is 0.83 Mbp.

Description of *Candidatus* SoEE cimelibra sp. nov.

Candidatus SoEE cimelibra (NL. fem. n. *cimelibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *SoEE sp002933315*. The type genome for the species is the GenBank assembly RS_GCF_002933315.1. The GC content of the type genome is 26.87 % and the genome length is 0.85 Mbp.

Description of *Candidatus* SoEE decinitoga sp. nov.

Candidatus SoEE decinitoga (NL. fem. n. *decinitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *SoEE sp002933335*. The type genome for the species is the GenBank assembly RS_GCF_002933335.1. The GC content of the type genome is 27.79 % and the genome length is 0.84 Mbp.

Description of *Candidatus* SoEE nefaratio sp. nov.

Candidatus SoEE nefaratio (NL. fem. n. *nefaratio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *SoEE sp002933355*. The type genome for the species is the GenBank assembly RS_GCF_002933355.1. The GC content of the type genome is 27.59 % and the genome length is 0.84 Mbp.

Description of *Candidatus* SoEE nosocax sp. nov.

Candidatus SoEE nosocax (NL. fem. n. *nosocax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *SoEE sp002933345*. The type genome for the species is the GenBank assembly RS_GCF_002933345.1. The GC content of the type genome is 26.64 % and the genome length is 0.84 Mbp.

Description of *Candidatus* Socagana diludibra sp. nov.

Candidatus Socagana diludibra (NL. fem. n. *diludibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAALKI01 sp011088105*. The type genome for the species is the GenBank assembly GCA_011087855.1. The GC content of the type genome is 48.02 % and the genome length is 2.47 Mbp.

Description of *Candidatus* Socagana gen. nov.

Candidatus Socagana (NL. fem. n. *Socagana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAALKI01*. The type species for the genus is *Candidatus* Socagana diludibra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA8639*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Locelidaceae.

Description of *Candidatus* Socagaria adtacitudo sp. nov.

Candidatus Socagaria adtacitudo (NL. fem. n. *adtacitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2093 sp005788815*. The type genome for the species is the GenBank assembly GCA_005788815.1. The GC content of the type genome is 51.52 % and the genome length is 1.53 Mbp.

Description of *Candidatus* Socagaria gen. nov.

Candidatus Socagaria (NL. fem. n. *Socagaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA2093*. The type species for the genus is *Candidatus* Socagaria adtacitudo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Socagaria ammativita sp. nov.

Candidatus Socagaria ammativita (NL. fem. n. *ammativita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2093 sp009694565*. The type genome for the species is the GenBank assembly GCA_009694565.1. The GC content of the type genome is 51.21 % and the genome length is 1.42 Mbp.

Description of *Candidatus* Socagaria cacopitura sp. nov.

Candidatus Socagaria cacopitura (NL. fem. n. *cacopitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2093 sp009691255*. The type genome for the species is the GenBank assembly GCA_009691255.1. The GC content of the type genome is 51.25 % and the genome length is 1.76 Mbp.

Description of *Candidatus* Socagaria defesetta sp. nov.

Candidatus Socagaria defesetta (NL. fem. n. *defesetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2093 sp005790505*. The type genome for the species is the GenBank assembly GCA_005797745.1. The GC content of the type genome is 50.61 % and the genome length is 1.91 Mbp.

Description of *Candidatus* Socagaria dicanessa sp. nov.

Candidatus Socagaria dicanessa (NL. fem. n. *dicanessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2093 sp009705865*. The type genome for the species is the GenBank assembly GCA_009701435.1. The GC content of the type genome is 50.9 % and the genome length is 1.46 Mbp.

Description of *Candidatus* Socagaria excanastra sp. nov.

Candidatus Socagaria excanastra (NL. fem. n. *excanastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2093 sp903904615*. The type genome for the species is the GenBank assembly GCA_903904615.1. The GC content of the type genome is 53.72 % and the genome length is 1.9 Mbp.

Description of *Candidatus* Socagaria hecaticella sp. nov.

Candidatus Socagaria hecaticella (NL. fem. n. *hecaticella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2093 sp009704065*. The type genome for the species is the GenBank assembly GCA_009703725.1. The GC content of the type genome is 51.56 % and the genome length is 0.97 Mbp.

Description of *Candidatus* Socagaria inexcentia sp. nov.

Candidatus Socagaria inexcentia (NL. fem. n. *inexcentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2093 sp903934195*. The type genome for the species is the GenBank assembly GCA_903934195.1. The GC content of the type genome is 51.24 % and the genome length is 1.68 Mbp.

Description of *Candidatus* Socagaria negidatica sp. nov.

Candidatus Socagaria negidatica (NL. fem. n. *negidatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2093 sp009920715*. The type genome for the species is the GenBank assembly GCA_009921015.1. The GC content of the type genome is 67.11 % and the genome length is 2.69 Mbp.

Description of *Candidatus* Socagaria pacifitas sp. nov.

Candidatus Socagaria pacifitas (NL. fem. n. *pacifitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2093 sp005789925*. The type genome for the species is the GenBank assembly GCA_005789925.1. The GC content of the type genome is 58.53 %

and the genome length is 1.5 Mbp.

Description of *Candidatus* Socagaria penicatica sp. nov.

Candidatus Socagaria penicatica (NL. fem. n. *penicatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2093 sp009702755*. The type genome for the species is the GenBank assembly GCA_009702755.1. The GC content of the type genome is 53.44 % and the genome length is 1.84 Mbp.

Description of *Candidatus* Socagaria pinifitas sp. nov.

Candidatus Socagaria pinifitas (NL. fem. n. *pinifitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2093 sp002331255*. The type genome for the species is the GenBank assembly GCA_002451285.1. The GC content of the type genome is 57.22 % and the genome length is 1.97 Mbp.

Description of *Candidatus* Socagaria propribra sp. nov.

Candidatus Socagaria propribra (NL. fem. n. *propribra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2093 sp009703055*. The type genome for the species is the GenBank assembly GCA_009703055.1. The GC content of the type genome is 53.39 % and the genome length is 1.58 Mbp.

Description of *Candidatus* Socagaria remeditica sp. nov.

Candidatus Socagaria remeditica (NL. fem. n. *remeditica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2093 sp009703125*. The type genome for the species is the GenBank assembly GCA_009703125.1. The GC content of the type genome is 51.87 % and the genome length is 1.93 Mbp.

Description of *Candidatus* Socagaria repepitura sp. nov.

Candidatus Socagaria repepitura (NL. fem. n. *repepitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2093 sp903929185*. The type genome for the species is the GenBank assembly GCA_903869055.1. The GC content of the type genome is 51.16 % and the genome length is 2.03 Mbp.

Description of *Candidatus* Socagaria robigitia sp. nov.

Candidatus Socagaria robigitia (NL. fem. n. *robigitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2093 sp014190235*. The type genome for the species is the GenBank assembly GCA_014190235.1. The GC content of the type genome is 51.3 % and the genome length is 2.02 Mbp.

Description of *Candidatus* Socagaria sicunimonia sp. nov.

Candidatus Socagaria sicunimonia (NL. fem. n. *sicunimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2093 sp005788205*. The type genome for the species is the GenBank assembly GCA_005788205.1. The GC content of the type genome is 67.57 % and the genome length is 1.63 Mbp.

Description of *Candidatus* Socagella celamousia sp. nov.

Candidatus Socagella celamousia (NL. fem. n. *celamousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *67-14 sp903891285*. The type genome for the species is the GenBank assembly GCA_903891285.1. The GC content of the type genome is 66.8 % and the genome length is 1.75 Mbp.

Description of *Candidatus* Socagella gen. nov.

Candidatus Socagella (NL. fem. n. *Socagella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *67-14*. The type species for the genus is *Candidatus* Socagella celamousia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *70-9*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Foriciaceae.

Description of *Candidatus* Socagella depicetta sp. nov.

Candidatus Socagella depicetta (NL. fem. n. *depicetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *67-14 sp001897355*. The type genome for the species is the GenBank assembly GCA_001897355.1. The GC content of the type genome is 66.62 % and the genome length is 3.23 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Thiocyanate stock biobioreactor".

Description of *Candidatus* Socagella mutabessa sp. nov.

Candidatus Socagella mutabessa (NL. fem. n. *mutabessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *67-14 sp903939845*. The type genome for the species is the GenBank assembly GCA_903958825.1. The GC content of the type genome is 65.19 % and the genome length is 1.9 Mbp.

Description of *Candidatus* Socagella pepenentia sp. nov.

Candidatus Socagella pepenentia (NL. fem. n. *pepenentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *67-14 sp903933815*. The type genome for the species is the GenBank assembly GCA_903959545.1. The GC content of the type genome is 63.32 % and the genome length is 1.97 Mbp.

Description of *Candidatus* Socagia antepitrix sp. nov.

Candidatus Socagia antepitrix (NL. fem. n. *antepitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAADHS01 sp013151745*. The type genome for the species is the GenBank assembly GCA_013151745.1. The GC content of the type genome is 43.47 % and the genome length is 3.7 Mbp.

Description of *Candidatus* Socagia gen. nov.

Candidatus Socagia (NL. fem. n. *Socagia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAADHS01*. The type species for the genus is *Candidatus* Socagia antepitrix .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JAADHS01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Socagiaceae.

Description of *Candidatus* Socagiaceae fam. nov.

Candidatus Socagiaceae (NL. fem. n. *Socagiaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JAADHS01.* The type genus for the taxon is *Candidatus* Socagia .

According to the original version of GTDB R06-RS202, this family belongs to the order *JAADHS01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Socagiales.

Description of *Candidatus* Socagiales ord. nov.

Candidatus Socagiales (NL. fem. n. *Socagiales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JAADHS01.* The type genus for the taxon is *Candidatus* Socagia .

According to the GTDB R06-RS202, this order belongs to the class *Gammaproteobacteria*.

Description of *Candidatus* Socagida abpatitio sp. nov.

Candidatus Socagida abpatitio (NL. fem. n. *abpatitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *QALR01 sp900542425*. The type genome for the species is the GenBank assembly GCA_900542425.1. The GC content of the type genome is 44.96 % and the genome length is 1.83 Mbp.

Description of *Candidatus* Socagida gen. nov.

Candidatus Socagida (NL. fem. n. *Socagida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *QALR01*. The type species for the genus is *Candidatus* Socagida abpatitio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-272*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Colipariaceae.

Description of *Candidatus* Socagida bipatugo sp. nov.

Candidatus Socagida bipatugo (NL. fem. n. *bipatugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *QALR01 sp900552255*. The type genome for the species is the GenBank assembly RS_GCF_900760365.1. The GC content of the type genome is 51.94 % and the genome length is 2.22 Mbp.

Description of *Candidatus* Socagida immemessa sp. nov.

Candidatus Socagida immemessa (NL. fem. n. *immemessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *QALR01 sp003150035*. The type genome for the species is the GenBank assembly GCA_003150035.1. The GC content of the type genome is 48.9 % and the genome length is 1.89 Mbp.

Description of *Candidatus* Socagida tomogessa sp. nov.

Candidatus Socagida tomogessa (NL. fem. n. *tomogessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *QALR01 sp900553085*. The type genome for the species is the GenBank assembly RS_GCF_900760595.1. The GC content of the type genome is 51.8 % and the genome length is 1.68 Mbp.

Description of *Candidatus* Socagosa apercicula sp. nov.

Candidatus Socagosa apercicula (NL. fem. n. *apercicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-01-FULL-56-20 sp001818655*. The type genome for the species is the GenBank assembly GCA_001818655.1. The GC content of the type genome is 55.69 % and the genome length is 0.65 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under low O2 conditions; 0.1 micron filter; full assembly".

Description of *Candidatus* Socagosa gen. nov.

Candidatus Socagosa (NL. fem. n. *Socagosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *2-01-FULL-56-20*. The type species for the genus is *Candidatus* Socagosa apercicula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *2-01-FULL-56-20*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Socagosaceae.

Description of *Candidatus* Socagosaceae fam. nov.

Candidatus Socagosaceae (NL. fem. n. *Socagosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *2-01-FULL-56-20.* The type genus for the taxon is *Candidatus* Socagosa .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA6257*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Denomulales.

Description of *Candidatus* Socagula legifitica sp. nov.

Candidatus Socagula legifitica (NL. fem. n. *legifitica* a species epithet created arbitrarily,

while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIRTM01 sp903881505*. The type genome for the species is the GenBank assembly GCA_903838865.1. The GC content of the type genome is 58.93 % and the genome length is 2.69 Mbp.

Description of *Candidatus* Socagula gen. nov.

Candidatus Socagula (NL. fem. n. *Socagula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIRTM01*. The type species for the genus is *Candidatus* Socagula legifitica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAIRTM01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Socagulaceae.

Description of *Candidatus* Socagulaceae fam. nov.

Candidatus Socagulaceae (NL. fem. n. *Socagulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CAIRTM01.* The type genus for the taxon is *Candidatus* Socagula .

According to the original version of GTDB R06-RS202, this family belongs to the order *WTBG01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Depasidales.

Description of *Candidatus* Sodaliphilus alectimonia sp. nov.

Candidatus Sodaliphilus alectimonia (NL. fem. n. *alectimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sodaliphilus sp004559845*. The type genome for the species is the GenBank assembly GCA_004559845.1. The GC content of the type genome is 49.13 % and the genome length is 1.84 Mbp.

Description of *Candidatus* Sodaliphilus argimisca sp. nov.

Candidatus Sodaliphilus argimisca (NL. fem. n. *argimisca* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sodaliphilus sp902784675*. The type genome for the species is the GenBank assembly GCA_902784675.1. The GC content of the type genome is 52.46 % and the genome length is 2.7 Mbp.

Description of *Candidatus* Sodaliphilus butubitia sp. nov.

Candidatus Sodaliphilus butubitia (NL. fem. n. *butubitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sodaliphilus sp002314465*. The type genome for the species is the GenBank assembly GCA_002314465.1. The GC content of the type genome is 51.02 % and the genome length is 2.28 Mbp.

Description of *Candidatus* Sodaliphilus capudetta sp. nov.

Candidatus Sodaliphilus capudetta (NL. fem. n. *capudetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sodaliphilus sp902792895*. The type genome for the species is the GenBank assembly GCA_902792895.1. The GC content of the type genome is 53.81 % and the genome length is 3.2 Mbp.

Description of *Candidatus* Sodaliphilus catapilenta sp. nov.

Candidatus Sodaliphilus catapilenta (NL. fem. n. *catapilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sodaliphilus sp902787185*. The type genome for the species is the GenBank assembly GCA_902787185.1. The GC content of the type genome is 52.47 % and the genome length is 3.22 Mbp.

Description of *Candidatus* Sodaliphilus catecastra sp. nov.

Candidatus Sodaliphilus catecastra (NL. fem. n. *catecastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sodaliphilus sp900318065*. The type genome for the species is the GenBank assembly GCA_902781155.1. The GC content of the type genome is 50.68 % and the genome length is 2.84 Mbp.

Description of *Candidatus* Sodaliphilus catocitas sp. nov.

Candidatus Sodaliphilus catocitas (NL. fem. n. *catocitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sodaliphilus sp900320055*. The type genome for the species is the GenBank assembly GCA_900319295.1. The GC content of the type genome is 53.05 % and the genome length is 2.71 Mbp.

Description of *Candidatus* Sodaliphilus cepurastra sp. nov.

Candidatus Sodaliphilus cepurastra (NL. fem. n. *cepurastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sodaliphilus sp902762385*. The type genome for the species is the GenBank assembly GCA_902762385.1. The GC content of the type genome is 46.38 % and the genome length is 2.89 Mbp.

Description of *Candidatus* Sodaliphilus cerofitoga sp. nov.

Candidatus Sodaliphilus cerofitoga (NL. fem. n. *cerofitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sodaliphilus sp902777835*. The type genome for the species is the GenBank assembly GCA_902777835.1. The GC content of the type genome is 46.49 % and the genome length is 2.89 Mbp.

Description of *Candidatus* Sodaliphilus cetarifica sp. nov.

Candidatus Sodaliphilus cetarifica (NL. fem. n. *cetarifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sodaliphilus sp900318865*. The type genome for the species is the GenBank assembly GCA_002371565.1. The GC content of the type genome is 55.99 % and the genome length is 2.21 Mbp.

Description of *Candidatus* Sodaliphilus cimitifica sp. nov.

Candidatus Sodaliphilus cimitifica (NL. fem. n. *cimitifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sodaliphilus sp902760865*. The type genome for the species is the GenBank assembly GCA_902760865.1. The GC content of the type genome is 54.01 % and the genome length is 3.35 Mbp.

Description of *Candidatus* Sodaliphilus conaritudo sp. nov.

Candidatus Sodaliphilus conaritudo (NL. fem. n. *conaritudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sodaliphilus sp900318255*. The type genome for the species is the GenBank assembly GCA_902785255.1. The GC content of the type genome is 49.92 % and the genome length is 2.99 Mbp.

Description of *Candidatus* Sodaliphilus culigimonas sp. nov.

Candidatus Sodaliphilus culigimonas (NL. fem. n. *culigimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sodaliphilus sp002396125*. The type genome for the species is the GenBank assembly GCA_002396125.1. The GC content of the type genome is 50.44 % and the genome length is 2.13 Mbp.

Description of *Candidatus* Sodaliphilus curabibula sp. nov.

Candidatus Sodaliphilus curabibula (NL. fem. n. *curabibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sodaliphilus sp902792435*. The type genome for the species is the GenBank assembly GCA_902792435.1. The GC content of the type genome is 46.33 % and the genome length is 2.96 Mbp.

Description of *Candidatus* Sodaliphilus dapifilega sp. nov.

Candidatus Sodaliphilus dapifilega (NL. fem. n. *dapifilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sodaliphilus sp900322135*. The type genome for the species is the GenBank assembly GCA_900322135.1. The GC content of the type genome is 53.41 % and the genome length is 3.09 Mbp.

Description of *Candidatus* Sodaliphilus decunitio sp. nov.

Candidatus Sodaliphilus decunitio (NL. fem. n. *decunitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sodaliphilus sp900319525*. The type genome for the species is the GenBank assembly GCA_902755445.1. The GC content of the type genome is 52.7 % and the genome length is 3.28 Mbp.

Description of *Candidatus* Sodaliphilus defenigena sp. nov.

Candidatus Sodaliphilus defenigena (NL. fem. n. *defenigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sodaliphilus sp902786725*. The type genome for the species is the GenBank assembly GCA_902786725.1. The GC content of the type genome is 51.39 % and the genome length is 2.38 Mbp.

Description of *Candidatus* Sodaliphilus defosastra sp. nov.

Candidatus Sodaliphilus defosastra (NL. fem. n. *defosastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sodaliphilus sp902774055*. The type genome for the species is the GenBank assembly GCA_902774055.1. The GC content of the type genome is 51.54 % and the genome length is 3.17 Mbp.

Description of *Candidatus* Sodaliphilus defositudo sp. nov.

Candidatus Sodaliphilus defositudo (NL. fem. n. *defositudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Sodaliphilus sp002476625*. The type genome for the species is the GenBank assembly GCA_002476625.1. The GC content of the type genome is 50.92 % and the genome length is 1.99 Mbp.

Description of *Candidatus* Sodaliphilus defuletta sp. nov.

Candidatus Sodaliphilus defuletta (NL. fem. n. *defuletta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sodaliphilus sp002395965*. The type genome for the species is the GenBank assembly GCA_002395965.1. The GC content of the type genome is 51.24 % and the genome length is 2.48 Mbp.

Description of *Candidatus* Sodaliphilus delucitrix sp. nov.

Candidatus Sodaliphilus delucitrix (NL. fem. n. *delucitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sodaliphilus sp902800715*. The type genome for the species is the GenBank assembly GCA_902778615.1. The GC content of the type genome is 51.05 % and the genome length is 3.34 Mbp.

Description of *Candidatus* Sodaliphilus demadimonia sp. nov.

Candidatus Sodaliphilus demadimonia (NL. fem. n. *demadimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sodaliphilus sp902776835*. The type genome for the species is the GenBank assembly GCA_902776625.1. The GC content of the type genome is 54.2 % and the genome length is 3.08 Mbp.

Description of *Candidatus* Sodaliphilus denixentia sp. nov.

Candidatus Sodaliphilus denixentia (NL. fem. n. *denixentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sodaliphilus sp902761475*. The type genome for the species is the GenBank assembly GCA_902761475.1. The GC content of the type genome is 56.0 % and the genome length is 2.16 Mbp.

Description of *Candidatus* Sodaliphilus diponessa sp. nov.

Candidatus Sodaliphilus diponessa (NL. fem. n. *diponessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sodaliphilus sp900316835*. The type genome for the species is the GenBank assembly GCA_900318475.1. The GC content of the type genome is 47.24 % and the genome length is 2.71 Mbp.

Description of *Candidatus* Sodaliphilus disidifica sp. nov.

Candidatus Sodaliphilus disidifica (NL. fem. n. *disidifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sodaliphilus sp004557565*. The type genome for the species is the GenBank assembly GCA_004555465.1. The GC content of the type genome is 48.09 % and the genome length is 2.91 Mbp.

Description of *Candidatus* Sodaliphilus energibula sp. nov.

Candidatus Sodaliphilus energibula (NL. fem. n. *energibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sodaliphilus sp902772965*. The type genome for the species is the GenBank assembly GCA_902772965.1. The GC content of the type genome is 54.91 % and the genome length is 2.64 Mbp.

Description of *Candidatus* Sodaliphilus giganago sp. nov.

Candidatus Sodaliphilus giganago (NL. fem. n. *giganago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sodaliphilus sp900770215*. The type genome for the species is the GenBank assembly RS_GCF_900770215.1. The GC content of the type genome is 54.99 % and the genome length is 3.13 Mbp.

Description of *Candidatus* Sodaliphilus haricax sp. nov.

Candidatus Sodaliphilus haricax (NL. fem. n. *haricax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sodaliphilus sp900317835*. The type genome for the species is the GenBank assembly GCA_900317835.1. The GC content of the type genome is 50.87 % and the genome length is 3.07 Mbp.

Description of *Candidatus* Sodaliphilus illapitio sp. nov.

Candidatus Sodaliphilus illapitio (NL. fem. n. *illapitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sodaliphilus sp902772455*. The type genome for the species is the GenBank assembly GCA_902772455.1. The GC content of the type genome is 52.09 % and the genome length is 3.15 Mbp.

Description of *Candidatus* Sodaliphilus infunitoga sp. nov.

Candidatus Sodaliphilus infunitoga (NL. fem. n. *infunitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sodaliphilus sp902782545*. The type genome for the species is the GenBank assembly GCA_902782545.1. The GC content of the type genome is 53.0 % and the genome length is 2.09 Mbp.

Description of *Candidatus* Sodaliphilus inperugo sp. nov.

Candidatus Sodaliphilus inperugo (NL. fem. n. *inperugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sodaliphilus sp902782465*. The type genome for the species is the GenBank assembly GCA_902782465.1. The GC content of the type genome is 52.89 % and the genome length is 3.13 Mbp.

Description of *Candidatus* Sodaliphilus ludifisca sp. nov.

Candidatus Sodaliphilus ludifisca (NL. fem. n. *ludifisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Sodaliphilus sp902776435*. The type genome for the species is the GenBank assembly GCA_902776435.1. The GC content of the type genome is 50.47 % and the genome length is 3.45 Mbp.

Description of *Candidatus* Sodaliphilus megalilenta sp. nov.

Candidatus Sodaliphilus megalilenta (NL. fem. n. *megalilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sodaliphilus sp900318205*. The type genome for the species is the GenBank assembly GCA_902772325.1. The GC content of the type genome is 51.31 % and the genome length is 3.48 Mbp.

Description of *Candidatus* Sodaliphilus refacentia sp. nov.

Candidatus Sodaliphilus refacentia (NL. fem. n. *refacentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sodaliphilus sp902779125*. The type genome for the species is the GenBank assembly GCA_902779125.1. The GC content of the type genome is 50.97 % and the genome length is 3.35 Mbp.

Description of *Candidatus* Sodaliphilus renavitas sp. nov.

Candidatus Sodaliphilus renavitas (NL. fem. n. *renavitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sodaliphilus sp900314215*. The type genome for the species is the GenBank assembly GCA_900314215.1. The GC content of the type genome is 55.97 % and the genome length is 2.88 Mbp.

Description of *Candidatus* Sodaliphilus revecentia sp. nov.

Candidatus Sodaliphilus revecentia (NL. fem. n. *revecentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sodaliphilus sp902768435*. The type genome for the species is the GenBank assembly GCA_902768435.1. The GC content of the type genome is 50.62 % and the genome length is 2.75 Mbp.

Description of *Candidatus* Sodaliphilus rubigastra sp. nov.

Candidatus Sodaliphilus rubigastra (NL. fem. n. *rubigastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sodaliphilus sp900318335*. The type genome for the species is the GenBank assembly GCA_900320005.1. The GC content of the type genome is 51.96 % and the genome length is 3.14 Mbp.

Description of *Candidatus* Sodaliphilus rurigugo sp. nov.

Candidatus Sodaliphilus rurigugo (NL. fem. n. *rurigugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sodaliphilus sp902781045*. The type genome for the species is the GenBank assembly GCA_902782405.1. The GC content of the type genome is 54.79 % and the genome length is 3.68 Mbp.

Description of *Candidatus* Sodaliphilus semivimonia sp. nov.

Candidatus Sodaliphilus semivimonia (NL. fem. n. *semivimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sodaliphilus sp900318645*. The type genome for the species is the GenBank assembly GCA_902794195.1. The GC content of the type genome is 50.82 % and the genome length is 3.52 Mbp.

Description of *Candidatus* Sodaliphilus semoditia sp. nov.

Candidatus Sodaliphilus semoditia (NL. fem. n. *semoditia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sodaliphilus sp902793405*. The type genome for the species is the GenBank assembly GCA_902793405.1. The GC content of the type genome is 53.1 % and the genome length is 3.19 Mbp.

Description of *Candidatus* Sodaliphilus subinitia sp. nov.

Candidatus Sodaliphilus subinitia (NL. fem. n. *subinitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sodaliphilus sp900317325*. The type genome for the species is the GenBank assembly GCA_900317325.1. The GC content of the type genome is 52.51 % and the genome length is 3.47 Mbp.

Description of *Candidatus* Sodaliphilus subodimonas sp. nov.

Candidatus Sodaliphilus subodimonas (NL. fem. n. *subodimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sodaliphilus sp002353885*. The type genome for the species is the GenBank assembly GCA_902778475.1. The GC content of the type genome is 53.85 % and the genome length is 3.34 Mbp.

Description of *Candidatus* Sodaliphilus subuciforma sp. nov.

Candidatus Sodaliphilus subuciforma (NL. fem. n. *subuciforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sodaliphilus sp902776955*. The type genome for the species is the GenBank assembly GCA_902776955.1. The GC content of the type genome is 53.73 % and the genome length is 3.23 Mbp.

Description of *Candidatus* Sodaliphilus telegitoga sp. nov.

Candidatus Sodaliphilus telegitoga (NL. fem. n. *telegitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sodaliphilus sp002353285*. The type genome for the species is the GenBank assembly GCA_002353285.1. The GC content of the type genome is 49.41 % and the genome length is 2.4 Mbp.

Description of *Candidatus* Sodaliphilus turibitoga sp. nov.

Candidatus Sodaliphilus turibitoga (NL. fem. n. *turibitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Sodaliphilus sp900318535*. The type genome for the species is the GenBank assembly GCA_902755085.1. The GC content of the type genome is 53.13 % and the genome length is 2.95 Mbp.

Description of *Candidatus* Sodaliphilus turicivita sp. nov.

Candidatus Sodaliphilus turicivita (NL. fem. n. *turicivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sodaliphilus sp900318345*. The type genome for the species is the GenBank assembly GCA_902759645.1. The GC content of the type genome is 51.32 % and the genome length is 3.17 Mbp.

Description of *Candidatus* Sodaliphilus vaniditia sp. nov.

Candidatus Sodaliphilus vaniditia (NL. fem. n. *vaniditia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sodaliphilus sp900320245*. The type genome for the species is the GenBank assembly GCA_902792565.1. The GC content of the type genome is 54.91 % and the genome length is 2.68 Mbp.

Description of *Candidatus* Sodaliphilus venefitura sp. nov.

Candidatus Sodaliphilus venefitura (NL. fem. n. *venefitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sodaliphilus sp902785925*. The type genome for the species is the GenBank assembly GCA_902798995.1. The GC content of the type genome is 46.75 % and the genome length is 2.64 Mbp.

Description of *Candidatus* Sodaliphilus vitupago sp. nov.

Candidatus Sodaliphilus vitupago (NL. fem. n. *vitupago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sodaliphilus sp002396085*. The type genome for the species is the GenBank assembly GCA_902763945.1. The GC content of the type genome is 52.17 % and the genome length is 3.29 Mbp.

Description of *Candidatus* Soehngenia recumitas sp. nov.

Candidatus Soehngenia recumitas (NL. fem. n. *recumitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Soehngenia_A sp014360205*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_014360205.1. The GC content of the type genome is 31.31 % and the genome length is 1.98 Mbp.

Description of *Candidatus* Soehngenia resaciforma sp. nov.

Candidatus Soehngenia resaciforma (NL. fem. n. *resaciforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Soehngenia_A sp002417735*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_004684055.1. The GC content of the type genome is 31.86 % and the genome length is 1.92 Mbp.

Description of *Candidatus* Solacaria cululedo sp. nov.

Candidatus Solacaria cululedo (NL. fem. n. *cululedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GWA2-41-24 sp001775055*. The type genome for the species is the GenBank assembly GCA_000996905.1. The GC content of the type genome is 39.89 % and the genome length is 1.05 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "aquifer sediment".

Description of *Candidatus* Solacaria gen. nov.

Candidatus Solacaria (NL. fem. n. *Solacaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GWA2-41-24*. The type species for the genus is *Candidatus* Solacaria cululedo .

According to the original version of GTDB R06-RS202, this genus belongs to the family

GWA2-41-24. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Solacariaceae.

Description of *Candidatus* Solacariaceae fam. nov.

Candidatus Solacariaceae (NL. fem. n. *Solacariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *GWA2-41-24.* The type genus for the taxon is *Candidatus* Solacaria .

According to GTDB R06-RS202, this family belongs to the order *Curtissbacterales*.

Description of *Candidatus* Solacella abrumicella sp. nov.

Candidatus Solacella abrumicella (NL. fem. n. *abrumicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1067 sp902800055*. The type genome for the species is the GenBank assembly GCA_902800055.1. The GC content of the type genome is 64.26 % and the genome length is 2.29 Mbp.

Description of *Candidatus* Solacella gen. nov.

Candidatus Solacella (NL. fem. n. *Solacella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1067*. The type species for the genus is *Candidatus* Solacella abrumicella .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1067*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Solacellaceae.

Description of *Candidatus* Solacellaceae fam. nov.

Candidatus Solacellaceae (NL. fem. n. *Solacellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA1067.* The type genus for the taxon is *Candidatus* Solacella .

According to the original version of GTDB R06-RS202, this family belongs to the order *RFP12*. According to the renamed version of GTDB R06-RS202, this taxon belongs to

the order *Candidatus* Capudanales.

Description of *Candidatus* Solacella acrobedo sp. nov.

Candidatus Solacella acrobedo (NL. fem. n. *acrobedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1067 sp902773015*. The type genome for the species is the GenBank assembly GCA_902773015.1. The GC content of the type genome is 64.63 % and the genome length is 2.24 Mbp.

Description of *Candidatus* Solacella adfunisca sp. nov.

Candidatus Solacella adfunisca (NL. fem. n. *adfunisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1067 sp004551905*. The type genome for the species is the GenBank assembly GCA_004551905.1. The GC content of the type genome is 65.34 % and the genome length is 2.0 Mbp.

Description of *Candidatus* Solacella astipigena sp. nov.

Candidatus Solacella astipigena (NL. fem. n. *astipigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1067 sp002392765*. The type genome for the species is the GenBank assembly GCA_002392765.1. The GC content of the type genome is 58.91 % and the genome length is 3.05 Mbp.

Description of *Candidatus* Solacella catobigena sp. nov.

Candidatus Solacella catobigena (NL. fem. n. *catobigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1067 sp002321305*. The type genome for the species is the GenBank assembly GCA_002321305.1. The GC content of the type genome is 65.95 % and the genome length is 2.72 Mbp.

Description of *Candidatus* Solacella cocibisca sp. nov.

Candidatus Solacella cocibisca (NL. fem. n. *cocibisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1067 sp902788415*. The type genome for the species is the GenBank assembly GCA_902788415.1. The GC content of the type genome is 61.62 % and the genome length is 1.9 Mbp.

Description of *Candidatus* Solacella cohuredo sp. nov.

Candidatus Solacella cohuredo (NL. fem. n. *cohuredo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1067 sp002369235*. The type genome for the species is the GenBank assembly GCA_002369235.1. The GC content of the type genome is 57.69 % and the genome length is 1.64 Mbp.

Description of *Candidatus* Solacella decapessa sp. nov.

Candidatus Solacella decapessa (NL. fem. n. *decapessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1067 sp002315875*. The type genome for the species is the GenBank assembly GCA_002315875.1. The GC content of the type genome is 58.04 % and the genome length is 2.32 Mbp.

Description of *Candidatus* Solacella demulessa sp. nov.

Candidatus Solacella demulessa (NL. fem. n. *demulessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1067 sp002298665*. The type genome for the species is the GenBank assembly GCA_003507075.1. The GC content of the type genome is 62.74 % and the genome length is 1.34 Mbp.

Description of *Candidatus* Solacella desupousia sp. nov.

Candidatus Solacella desupousia (NL. fem. n. *desupousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1067 sp900767325*. The type genome for the species is the GenBank assembly RS_GCF_900767325.1. The GC content of the type genome is 62.49 % and the genome length is 1.1 Mbp.

Description of *Candidatus* Solacella detecatica sp. nov.

Candidatus Solacella detecatica (NL. fem. n. *detecatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1067 sp002351765*. The type genome for the species is the GenBank assembly GCA_002351765.1. The GC content of the type genome is 64.56 % and the genome length is 2.26 Mbp.

Description of *Candidatus* Solacella domabatio sp. nov.

Candidatus Solacella domabatio (NL. fem. n. *domabatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1067 sp902770045*. The type genome for the species is the GenBank assembly GCA_902770045.1. The GC content of the type genome is 64.73 % and the genome length is 2.27 Mbp.

Description of *Candidatus* Solacella fatifitas sp. nov.

Candidatus Solacella fatifitas (NL. fem. n. *fatifitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1067 sp902772905*. The type genome for the species is the GenBank assembly GCA_902772905.1. The GC content of the type genome is 58.22 % and the genome length is 2.36 Mbp.

Description of *Candidatus* Solacella feficitas sp. nov.

Candidatus Solacella feficitas (NL. fem. n. *feficitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1067 sp902799385*. The type genome for the species is the GenBank assembly GCA_902799385.1. The GC content of the type genome is 59.58 %

and the genome length is 2.71 Mbp.

Description of *Candidatus* Solacella illapitas sp. nov.

Candidatus Solacella illapitas (NL. fem. n. *illapitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1067 sp002371135*. The type genome for the species is the GenBank assembly GCA_002371135.1. The GC content of the type genome is 59.47 % and the genome length is 2.59 Mbp.

Description of *Candidatus* Solacella immodicula sp. nov.

Candidatus Solacella immodicula (NL. fem. n. *immodicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1067 sp902780865*. The type genome for the species is the GenBank assembly GCA_902780865.1. The GC content of the type genome is 60.48 % and the genome length is 3.36 Mbp.

Description of *Candidatus* Solacella indevatica sp. nov.

Candidatus Solacella indevatica (NL. fem. n. *indevatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1067 sp902801025*. The type genome for the species is the GenBank assembly GCA_902801025.1. The GC content of the type genome is 59.66 % and the genome length is 3.5 Mbp.

Description of *Candidatus* Solacella intecimonia sp. nov.

Candidatus Solacella intecimonia (NL. fem. n. *intecimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1067 sp002363575*. The type genome for the species is the GenBank assembly GCA_002363575.1. The GC content of the type genome is 62.2 % and the genome length is 2.15 Mbp.

Description of *Candidatus* Solacella lacinitura sp. nov.

Candidatus Solacella lacinitura (NL. fem. n. *lacinitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1067 sp900321255*. The type genome for the species is the GenBank assembly GCA_900321255.1. The GC content of the type genome is 61.06 % and the genome length is 2.78 Mbp.

Description of *Candidatus* Solacella levidugo sp. nov.

Candidatus Solacella levidugo (NL. fem. n. *levidugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1067 sp902776615*. The type genome for the species is the GenBank assembly GCA_902776615.1. The GC content of the type genome is 58.0 % and the genome length is 2.35 Mbp.

Description of *Candidatus* Solacella obrigetta sp. nov.

Candidatus Solacella obrigetta (NL. fem. n. *obrigetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1067 sp002371755*. The type genome for the species is the GenBank assembly GCA_002371755.1. The GC content of the type genome is 58.07 % and the genome length is 2.43 Mbp.

Description of *Candidatus* Solacella omnigitas sp. nov.

Candidatus Solacella omnigitas (NL. fem. n. *omnigitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1067 sp902799955*. The type genome for the species is the GenBank assembly GCA_902799955.1. The GC content of the type genome is 61.89 % and the genome length is 3.81 Mbp.

Description of *Candidatus* Solacella perexitia sp. nov.

Candidatus Solacella perexitia (NL. fem. n. *perexitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1067 sp002350535*. The type genome for the species is the GenBank assembly GCA_902775595.1. The GC content of the type genome is 61.17 % and the genome length is 3.15 Mbp.

Description of *Candidatus* Solacella reduvitio sp. nov.

Candidatus Solacella reduvitio (NL. fem. n. *reduvitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1067 sp002440145*. The type genome for the species is the GenBank assembly GCA_003531875.1. The GC content of the type genome is 63.34 % and the genome length is 1.48 Mbp.

Description of *Candidatus* Solacella salubifica sp. nov.

Candidatus Solacella salubifica (NL. fem. n. *salubifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1067 sp902761275*. The type genome for the species is the GenBank assembly GCA_902761275.1. The GC content of the type genome is 58.76 % and the genome length is 3.43 Mbp.

Description of *Candidatus* Solacella solipibra sp. nov.

Candidatus Solacella solipibra (NL. fem. n. *solipibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1067 sp002395905*. The type genome for the species is the GenBank assembly GCA_002395905.1. The GC content of the type genome is 60.89 % and the genome length is 2.37 Mbp.

Description of *Candidatus* Solacella tranvifica sp. nov.

Candidatus Solacella tranvifica (NL. fem. n. *tranvifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1067 sp002449695*. The type genome for the species is the GenBank assembly GCA_002449695.1. The GC content of the type genome is 65.16 %

and the genome length is 2.52 Mbp.

Description of *Candidatus* Solacella vinacisca sp. nov.

Candidatus Solacella vinacisca (NL. fem. n. *vinacisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1067 sp900320855*. The type genome for the species is the GenBank assembly GCA_900320855.1. The GC content of the type genome is 66.11 % and the genome length is 2.41 Mbp.

Description of *Candidatus* Solacella xenoditica sp. nov.

Candidatus Solacella xenoditica (NL. fem. n. *xenoditica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1067 sp900321575*. The type genome for the species is the GenBank assembly GCA_902760205.1. The GC content of the type genome is 58.23 % and the genome length is 1.44 Mbp.

Description of *Candidatus* Solacosa defasifica sp. nov.

Candidatus Solacosa defasifica (NL. fem. n. *defasifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *T3Sed10-241 sp003565555*. The type genome for the species is the GenBank assembly GCA_003565555.1. The GC content of the type genome is 53.45 % and the genome length is 3.72 Mbp.

Description of *Candidatus* Solacosa gen. nov.

Candidatus Solacosa (NL. fem. n. *Solacosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *T3Sed10-241*. The type species for the genus is *Candidatus* Solacosa defasifica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Solacosa velivibra sp. nov.

Candidatus Solacosa velivibra (NL. fem. n. *velivibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *T3Sed10-241 sp007125175*. The type genome for the species is the GenBank assembly GCA_007125175.1. The GC content of the type genome is 51.43 % and the genome length is 3.35 Mbp.

Description of *Candidatus* Solacula incunax sp. nov.

Candidatus Solacula incunax (NL. fem. n. *incunax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SZUA-146 sp003228965*. The type genome for the species is the GenBank assembly GCA_003228965.1. The GC content of the type genome is 51.73 % and the genome length is 3.08 Mbp.

Description of *Candidatus* Solacula gen. nov.

Candidatus Solacula (NL. fem. n. *Solacula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SZUA-146*. The type species for the genus is *Candidatus* Solacula incunax .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SZUA-146*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Solaculaceae.

Description of *Candidatus* Solaculaceae fam. nov.

Candidatus Solaculaceae (NL. fem. n. *Solaculaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SZUA-146.* The type genus for the taxon is *Candidatus* Solacula .

According to the original version of GTDB R06-RS202, this family belongs to the order *SZUA-146*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Solaculales.

Description of *Candidatus* Solaculales ord. nov.

Candidatus Solaculales (NL. fem. n. *Solaculales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SZUA-146.* The type genus for the taxon is *Candidatus* Solacula .

According to the GTDB R06-RS202, this order belongs to the class *Gammaproteobacteria*.

Description of *Candidatus* Solacula milifousia sp. nov.

Candidatus Solacula milifousia (NL. fem. n. *milifousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SZUA-146 sp013002925*. The type genome for the species is the GenBank assembly GCA_013002925.1. The GC content of the type genome is 54.11 % and the genome length is 3.3 Mbp.

Description of *Candidatus* Solibacillus desorisca sp. nov.

Candidatus Solibacillus desorisca (NL. fem. n. *desorisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Solibacillus sp003073375*. The type genome for the species is the GenBank assembly RS_GCF_003073375.1. The GC content of the type genome is 37.0 % and the genome length is 3.74 Mbp.

Description of *Candidatus* Solibacillus innoxitoga sp. nov.

Candidatus Solibacillus innoxitoga (NL. fem. n. *innoxitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Solibacillus sp002736105*. The type genome for the species is the GenBank assembly RS_GCF_002736105.1. The GC content of the type genome is 36.88 % and the genome length is 4.28 Mbp.

Description of *Candidatus* Solibacter cenacatica sp. nov.

Candidatus Solibacter cenacatica (NL. fem. n. *cenacatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Solibacter sp003136215*. The type genome for the species is the GenBank assembly GCA_003136215.1. The GC content of the type genome is 62.85 % and the genome length is 7.1 Mbp.

Description of *Candidatus* Solidesulfovibrio exsufitio sp. nov.

Candidatus Solidesulfovibrio exsufitio (NL. fem. n. *exsufitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Solidesulfovibrio sp001936595*. The type genome for the species is the GenBank assembly RS_GCF_001936595.1. The GC content of the type genome is 63.38 % and the genome length is 4.85 Mbp.

Description of *Candidatus* Solidesulfovibrio indivilenta sp. nov.

Candidatus Solidesulfovibrio indivilenta (NL. fem. n. *indivilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Solidesulfovibrio sp003525525*. The type genome for the species is the GenBank assembly GCA_003525525.1. The GC content of the type genome is 66.37 % and the genome length is 3.07 Mbp.

Description of *Candidatus* Solidesulfovibrio infiritio sp. nov.

Candidatus Solidesulfovibrio infiritio (NL. fem. n. *infiritio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Solidesulfovibrio sp000245055*. The type genome for the species is the GenBank assembly RS_GCF_000245055.1. The GC content of the type genome is 65.29 % and the genome length is 4.59 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "not provided; submitted under MIGS 2.1".

Description of *Candidatus* Solidesulfovibrio vinolousia sp. nov.

Candidatus Solidesulfovibrio vinolousia (NL. fem. n. *vinolousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Solidesulfovibrio sp000801335*. The type genome for the species is the GenBank assembly RS_GCF_000801335.2. The GC content of the type genome is 61.71 % and the genome length is 5.07 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "leachate from the gold ore mining spoils at an abandoned mining site".

Description of *Candidatus* Solifana conabetta sp. nov.

Candidatus Solifana conabetta (NL. fem. n. *conabetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACDEA01 sp013816725*. The type genome for the species is the GenBank assembly GCA_013816725.1. The GC content of the type genome is 68.73 % and the genome length is 2.82 Mbp.

Description of *Candidatus* Solifana gen. nov.

Candidatus Solifana (NL. fem. n. *Solifana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACDEA01*. The type species for the genus is *Candidatus* Solifana conabetta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JACDEA01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Solifanaceae.

Description of *Candidatus* Solifanaceae fam. nov.

Candidatus Solifanaceae (NL. fem. n. *Solifanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JACDEA01*. The type genus for the taxon is *Candidatus* Solifana .

According to GTDB R06-RS202, this family belongs to the order *Acidimicrobiales*.

Description of *Candidatus* Solifaria relecatica sp. nov.

Candidatus Solifaria relecatica (NL. fem. n. *relecatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *UBA6177 sp002422875*. The type genome for the species is the GenBank assembly GCA_002422875.1. The GC content of the type genome is 30.27 % and the genome length is 1.07 Mbp.

Description of *Candidatus* Solifaria gen. nov.

Candidatus Solifaria (NL. fem. n. *Solifaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA6177*. The type species for the genus is *Candidatus* Solifaria relecatica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA6177*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Solifariaceae.

Description of *Candidatus* Solifariaceae fam. nov.

Candidatus Solifariaceae (NL. fem. n. *Solifariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA6177.* The type genus for the taxon is *Candidatus* Solifaria .

According to GTDB R06-RS202, this family belongs to the order *Rickettsiales*.

Description of *Candidatus* Solifella binocax sp. nov.

Candidatus Solifella binocax (NL. fem. n. *binocax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIUCS01 sp903897715*. The type genome for the species is the GenBank assembly GCA_903892205.1. The GC content of the type genome is 44.5 % and the genome length is 2.82 Mbp.

Description of *Candidatus* Solifella gen. nov.

Candidatus Solifella (NL. fem. n. *Solifella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIUCS01*. The type species for the genus is *Candidatus* Solifella binocax .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAIUCS01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Solifellaceae.

Description of *Candidatus* Solifellaceae fam. nov.

Candidatus Solifellaceae (NL. fem. n. *Solifellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CAIUCS01.* The type genus for the taxon is *Candidatus* Solifella .

According to the original version of GTDB R06-RS202, this family belongs to the order *CAIUCS01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Solifellales.

Description of *Candidatus* Solifellales ord. nov.

Candidatus Solifellales (NL. fem. n. *Solifellales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CAIUCS01.* The type genus for the taxon is *Candidatus* Solifella .

According to the GTDB R06-RS202, this order belongs to the class *Cyanobacteriia*.

Description of *Candidatus* Solifia favilisca sp. nov.

Candidatus Solifia favilisca (NL. fem. n. *favilisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GWC2-70-10 sp001795345*. The type genome for the species is the GenBank assembly GCA_001797125.1. The GC content of the type genome is 71.34 % and the genome length is 1.7 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under low O2 conditions; 1.2 micron filter; full assembly".

Description of *Candidatus* Solifia gen. nov.

Candidatus Solifia (NL. fem. n. *Solifia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GWC2-70-10*. The type species for the genus is *Candidatus* Solifia

favilisca .

According to the original version of GTDB R06-RS202, this genus belongs to the family *P2-11E*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Curotosaceae.

Description of *Candidatus* Solifida bifisatica sp. nov.

Candidatus Solifida bifisatica (NL. fem. n. *bifisatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA10029 sp001767575*. The type genome for the species is the GenBank assembly GCA_003522005.1. The GC content of the type genome is 53.11 % and the genome length is 1.92 Mbp.

Description of *Candidatus* Solifida gen. nov.

Candidatus Solifida (NL. fem. n. *Solifida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA10029*. The type species for the genus is *Candidatus* Solifida bifisatica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA10029*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Solifidaceae.

Description of *Candidatus* Solifidaceae fam. nov.

Candidatus Solifidaceae (NL. fem. n. *Solifidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA10029.* The type genus for the taxon is *Candidatus* Solifida .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA10029*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Solifidales.

Description of *Candidatus* Solifidales ord. nov.

Candidatus Solifidales (NL. fem. n. *Solifidales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA10029.* The type genus for the taxon is *Candidatus* Solifida .

According to the original version of GTDB R06-RS202, this family belongs to the class *UBA9087*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Monocellae.

Description of *Candidatus* Solifosa parocessa sp. nov.

Candidatus Solifosa parocessa (NL. fem. n. *parocessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA12183 sp003530935*. The type genome for the species is the GenBank assembly GCA_014359945.1. The GC content of the type genome is 62.93 % and the genome length is 2.46 Mbp.

Description of *Candidatus* Solifosa gen. nov.

Candidatus Solifosa (NL. fem. n. *Solifosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA12183*. The type species for the genus is *Candidatus* Solifosa parocessa .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Solimicrobium cerifibula sp. nov.

Candidatus Solimicrobium cerifibula (NL. fem. n. *cerifibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Solimicrobium sp903893945*. The type genome for the species is the GenBank assembly GCA_903920545.1. The GC content of the type genome is 52.67 % and the genome length is 3.65 Mbp.

Description of *Candidatus* Solimicrobium inmemitudo sp. nov.

Candidatus Solimicrobium inmemitudo (NL. fem. n. *inmemitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Solimicrobium sp903914535*. The type genome for the species is the GenBank assembly GCA_903914535.1. The GC content of the type genome is 47.78 % and the genome length is 3.14 Mbp.

Description of *Candidatus* Solimicrobium nugacastra sp. nov.

Candidatus Solimicrobium nugacastra (NL. fem. n. *nugacastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Solimicrobium sp903862415*. The type genome for the species is the GenBank assembly GCA_903829965.1. The GC content of the type genome is 51.13 % and the genome length is 3.27 Mbp.

Description of *Candidatus* Solimonas adluventia sp. nov.

Candidatus Solimonas adluventia (NL. fem. n. *adluventia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Solimonas sp012241385*. The type genome for the species is the GenBank assembly RS_GCF_012241385.1. The GC content of the type genome is 65.37 % and the genome length is 4.7 Mbp.

Description of *Candidatus* Solimonas denoritio sp. nov.

Candidatus Solimonas denoritio (NL. fem. n. *denoritio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Solimonas_A sp003428335*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_003428335.1. The GC content of the type genome is 67.09 % and the genome length is 5.37 Mbp.

Description of *Candidatus* Solipana bicoditia sp. nov.

Candidatus Solipana bicoditia (NL. fem. n. *bicoditia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6002 sp013697705*. The type genome for the species is the GenBank assembly GCA_013697705.1. The GC content of the type genome is 39.68 %

and the genome length is 2.28 Mbp.

Description of *Candidatus* Solipana gen. nov.

Candidatus Solipana (NL. fem. n. *Solipana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA6002*. The type species for the genus is *Candidatus* Solipana bicoditia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA6002*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Solipanaceae.

Description of *Candidatus* Solipanaceae fam. nov.

Candidatus Solipanaceae (NL. fem. n. *Solipanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA6002.* The type genus for the taxon is *Candidatus* Solipana .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA6002*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Solipanales.

Description of *Candidatus* Solipanales ord. nov.

Candidatus Solipanales (NL. fem. n. *Solipanales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA6002.* The type genus for the taxon is *Candidatus* Solipana .

According to the GTDB R06-RS202, this order belongs to the class *Gammaproteobacteria*.

Description of *Candidatus* Solipana tenilitica sp. nov.

Candidatus Solipana tenilitica (NL. fem. n. *tenilitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6002 sp002429595*. The type genome for the species is the GenBank assembly GCA_002429595.1. The GC content of the type genome is 39.61 %

and the genome length is 2.84 Mbp.

Description of *Candidatus* Soliparia affanitura sp. nov.

Candidatus Soliparia affanitura (NL. fem. n. *affanitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7227 sp003598975*. The type genome for the species is the GenBank assembly GCA_003598975.1. The GC content of the type genome is 55.51 % and the genome length is 3.94 Mbp.

Description of *Candidatus* Soliparia gen. nov.

Candidatus Soliparia (NL. fem. n. *Soliparia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA7227*. The type species for the genus is *Candidatus* Soliparia affanitura .

According to the original version of GTDB R06-RS202, this genus belongs to the family *EnvOPS12*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vinoliaceae.

Description of *Candidatus* Soliparia bonifatio sp. nov.

Candidatus Soliparia bonifatio (NL. fem. n. *bonifatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7227 sp002473085*. The type genome for the species is the GenBank assembly GCA_900696585.1. The GC content of the type genome is 60.84 % and the genome length is 3.03 Mbp.

Description of *Candidatus* Soliparia exsanatio sp. nov.

Candidatus Soliparia exsanatio (NL. fem. n. *exsanatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7227 sp009885445*. The type genome for the species is the GenBank assembly GCA_009885445.1. The GC content of the type genome is 54.63 % and the genome length is 2.98 Mbp.

Description of *Candidatus* Solipella bicubatica sp. nov.

Candidatus Solipella bicubatica (NL. fem. n. *bicubatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-103 sp900317905*. The type genome for the species is the GenBank assembly GCA_900317905.1. The GC content of the type genome is 58.82 % and the genome length is 2.23 Mbp.

Description of *Candidatus* Solipella gen. nov.

Candidatus Solipella (NL. fem. n. *Solipella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAG-103*. The type species for the genus is *Candidatus* Solipella bicubatica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Solipella catobessa sp. nov.

Candidatus Solipella catobessa (NL. fem. n. *catobessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-103 sp004556965*. The type genome for the species is the GenBank assembly GCA_004553085.1. The GC content of the type genome is 60.49 % and the genome length is 1.73 Mbp.

Description of *Candidatus* Solipella ceracatica sp. nov.

Candidatus Solipella ceracatica (NL. fem. n. *ceracatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-103 sp900317855*. The type genome for the species is the GenBank assembly GCA_004551895.1. The GC content of the type genome is 62.26 % and the genome length is 1.8 Mbp.

Description of *Candidatus* Solipella dimiditudo sp. nov.

Candidatus Solipella dimiditudo (NL. fem. n. *dimiditudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-103 sp000432375*. The type genome for the species is the GenBank assembly GCA_900543135.1. The GC content of the type genome is 62.17 % and the genome length is 1.92 Mbp.

Description of *Candidatus* Solipella luculiforma sp. nov.

Candidatus Solipella luculiforma (NL. fem. n. *luculiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-103 sp900757655*. The type genome for the species is the GenBank assembly GCA_900757655.1. The GC content of the type genome is 61.98 % and the genome length is 1.86 Mbp.

Description of *Candidatus* Solipella risibessa sp. nov.

Candidatus Solipella risibessa (NL. fem. n. *risibessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-103 sp900543625*. The type genome for the species is the GenBank assembly GCA_008672835.1. The GC content of the type genome is 61.79 % and the genome length is 2.0 Mbp.

Description of *Candidatus* Solipella saxopedo sp. nov.

Candidatus Solipella saxopedo (NL. fem. n. *saxopedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-103 sp900316745*. The type genome for the species is the GenBank assembly GCA_900316745.1. The GC content of the type genome is 59.01 % and the genome length is 2.44 Mbp.

Description of *Candidatus* Solipia solivitudo sp. nov.

Candidatus Solipia solivitudo (NL. fem. n. *solivitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *CAISDR01 sp903884125*. The type genome for the species is the GenBank assembly GCA_903884125.1. The GC content of the type genome is 55.18 % and the genome length is 3.37 Mbp.

Description of *Candidatus* Solipia gen. nov.

Candidatus Solipia (NL. fem. n. *Solipia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAISDR01*. The type species for the genus is *Candidatus* Solipia solivitudo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAISDR01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Solipiaceae.

Description of *Candidatus* Solipiaceae fam. nov.

Candidatus Solipiaceae (NL. fem. n. *Solipiaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CAISDR01.* The type genus for the taxon is *Candidatus* Solipia .

According to the original version of GTDB R06-RS202, this family belongs to the order *CAISDR01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Solipiales.

Description of *Candidatus* Solipiales ord. nov.

Candidatus Solipiales (NL. fem. n. *Solipiales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CAISDR01.* The type genus for the taxon is *Candidatus* Solipia .

According to the GTDB R06-RS202, this order belongs to the class *Alphaproteobacteria*.

Description of *Candidatus* Solipida benivago sp. nov.

Candidatus Solipida benivago (NL. fem. n. *benivago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DMER64 sp002071385*. The type genome for the species is the

GenBank assembly GCA_002071385.1. The GC content of the type genome is 48.84 % and the genome length is 2.26 Mbp.

Description of *Candidatus* Solipida gen. nov.

Candidatus Solipida (NL. fem. n. *Solipida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DMER64*. The type species for the genus is *Candidatus* Solipida benivago .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA932*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cenobanaceae.

Description of *Candidatus* Solipida biveritica sp. nov.

Candidatus Solipida biveritica (NL. fem. n. *biveritica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DMER64 sp012515395*. The type genome for the species is the GenBank assembly GCA_012515395.1. The GC content of the type genome is 46.19 % and the genome length is 1.55 Mbp.

Description of *Candidatus* Solipida hexapitura sp. nov.

Candidatus Solipida hexapitura (NL. fem. n. *hexapitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DMER64 sp002408205*. The type genome for the species is the GenBank assembly GCA_002408205.1. The GC content of the type genome is 46.48 % and the genome length is 2.5 Mbp.

Description of *Candidatus* Solipida inmacentia sp. nov.

Candidatus Solipida inmacentia (NL. fem. n. *inmacentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DMER64 sp012839605*. The type genome for the species is the GenBank assembly GCA_012839605.1. The GC content of the type genome is 44.92 %

and the genome length is 1.65 Mbp.

Description of *Candidatus* Solipida malogitica sp. nov.

Candidatus Solipida malogitica (NL. fem. n. *malogitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DMER64 sp002070565*. The type genome for the species is the GenBank assembly GCA_002070565.1. The GC content of the type genome is 48.53 % and the genome length is 2.18 Mbp.

Description of *Candidatus* Solipida munimugo sp. nov.

Candidatus Solipida munimugo (NL. fem. n. *munimugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DMER64 sp002427525*. The type genome for the species is the GenBank assembly GCA_012519735.1. The GC content of the type genome is 46.2 % and the genome length is 1.68 Mbp.

Description of *Candidatus* Solipida nitelitio sp. nov.

Candidatus Solipida nitelitio (NL. fem. n. *nitelitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DMER64 sp002409325*. The type genome for the species is the GenBank assembly GCA_002409325.1. The GC content of the type genome is 48.48 % and the genome length is 2.01 Mbp.

Description of *Candidatus* Solipida oppugitica sp. nov.

Candidatus Solipida oppugitica (NL. fem. n. *oppugitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DMER64 sp002071175*. The type genome for the species is the GenBank assembly GCA_002071175.1. The GC content of the type genome is 45.92 % and the genome length is 1.4 Mbp.

Description of *Candidatus* Solipida recumugo sp. nov.

Candidatus Solipida recumugo (NL. fem. n. *recumugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DMER64 sp002305545*. The type genome for the species is the GenBank assembly GCA_012516675.1. The GC content of the type genome is 48.89 % and the genome length is 1.99 Mbp.

Description of *Candidatus* Solipida senacentia sp. nov.

Candidatus Solipida senacentia (NL. fem. n. *senacentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DMER64 sp001603455*. The type genome for the species is the GenBank assembly GCA_012839545.1. The GC content of the type genome is 45.97 % and the genome length is 2.76 Mbp.

Description of *Candidatus* Solipida subaditas sp. nov.

Candidatus Solipida subaditas (NL. fem. n. *subaditas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DMER64 sp011620605*. The type genome for the species is the GenBank assembly GCA_011620605.1. The GC content of the type genome is 46.41 % and the genome length is 2.14 Mbp.

Description of *Candidatus* Solipida utralousia sp. nov.

Candidatus Solipida utralousia (NL. fem. n. *utralousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DMER64 sp012510445*. The type genome for the species is the GenBank assembly GCA_012510445.1. The GC content of the type genome is 44.07 % and the genome length is 1.71 Mbp.

Description of *Candidatus* Solipida volunitudo sp. nov.

Candidatus Solipida volunitudo (NL. fem. n. *volunitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DMER64 sp001512865*. The type genome for the species is the GenBank assembly GCA_012522235.1. The GC content of the type genome is 49.79 % and the genome length is 1.96 Mbp.

Description of *Candidatus* Soliposa rorulitrix sp. nov.

Candidatus Soliposa rorulitrix (NL. fem. n. *rorulitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *33-17 sp001897445*. The type genome for the species is the GenBank assembly GCA_001897445.1. The GC content of the type genome is 33.09 % and the genome length is 1.88 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Thiocyanate ramp bioreactor".

Description of *Candidatus* Soliposa gen. nov.

Candidatus Soliposa (NL. fem. n. *Soliposa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *33-17*. The type species for the genus is *Candidatus* Soliposa rorulitrix .

According to the original version of GTDB R06-RS202, this genus belongs to the family *33-17*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Soliposaceae.

Description of *Candidatus* Soliposaceae fam. nov.

Candidatus Soliposaceae (NL. fem. n. *Soliposaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *33-17.* The type genus for the taxon is *Candidatus* Soliposa .

According to GTDB R06-RS202, this family belongs to the order *Rickettsiales*.

Description of *Candidatus* Solipula monocitoga sp. nov.

Candidatus Solipula monocitoga (NL. fem. n. *monocitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *CAIVVT01 sp903909435*. The type genome for the species is the GenBank assembly GCA_903909435.1. The GC content of the type genome is 61.58 % and the genome length is 7.59 Mbp.

Description of *Candidatus* Solipula gen. nov.

Candidatus Solipula (NL. fem. n. *Solipula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIVVT01*. The type species for the genus is *Candidatus* Solipula monocitoga .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Solirubrobacter offunilega sp. nov.

Candidatus Solirubrobacter offunilega (NL. fem. n. *offunilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Solirubrobacter sp000425945*. The type genome for the species is the GenBank assembly RS_GCF_000425945.1. The GC content of the type genome is 72.26 % and the genome length is 6.64 Mbp.

Description of *Candidatus* Solirubrum fatificula sp. nov.

Candidatus Solirubrum fatificula (NL. fem. n. *fatificula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Solirubrum sp009906935*. The type genome for the species is the GenBank assembly RS_GCF_008727865.1. The GC content of the type genome is 62.03 % and the genome length is 4.89 Mbp.

Description of *Candidatus* Solirubrum incesifica sp. nov.

Candidatus Solirubrum incesifica (NL. fem. n. *incesifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Solirubrum sp003258365*. The type genome for the species is the GenBank assembly RS_GCF_003258365.1. The GC content of the type genome is 65.58 % and the genome length is 6.04 Mbp.

Description of *Candidatus* Solirubrum papavibula sp. nov.

Candidatus Solirubrum papavibula (NL. fem. n. *papavibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Solirubrum sp002007105*. The type genome for the species is the GenBank assembly RS_GCF_002007105.1. The GC content of the type genome is 62.82 % and the genome length is 5.88 Mbp.

Description of *Candidatus* Solivana chalbicula sp. nov.

Candidatus Solivana chalbicula (NL. fem. n. *chalbicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *J063 sp003696125*. The type genome for the species is the GenBank assembly GCA_003696125.1. The GC content of the type genome is 58.19 % and the genome length is 4.18 Mbp.

Description of *Candidatus* Solivana gen. nov.

Candidatus Solivana (NL. fem. n. *Solivana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *J063*. The type species for the genus is *Candidatus* Solivana chalbicula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *J063*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Solivanaceae.

Description of *Candidatus* Solivanaceae fam. nov.

Candidatus Solivanaceae (NL. fem. n. *Solivanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *J063.* The type genus for the taxon is *Candidatus* Solivana .

According to the original version of GTDB R06-RS202, this family belongs to the order *J063*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Solivanales.

Description of *Candidatus* Solivanales ord. nov.

Candidatus Solivanales (NL. fem. n. *Solivanales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *J063.* The type genus for the taxon is *Candidatus* Solivana .

According to the GTDB R06-RS202, this order belongs to the class *Entotheonellia*.

Description of *Candidatus* Solivaria exurrisca sp. nov.

Candidatus Solivaria exurrisca (NL. fem. n. *exurrisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAINDR01 sp903839955*. The type genome for the species is the GenBank assembly GCA_903839955.1. The GC content of the type genome is 45.77 % and the genome length is 0.96 Mbp.

Description of *Candidatus* Solivaria gen. nov.

Candidatus Solivaria (NL. fem. n. *Solivaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAINDR01*. The type species for the genus is *Candidatus* Solivaria exurrisca .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA12465*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Manomosaceae.

Description of *Candidatus* Solivaria viragitica sp. nov.

Candidatus Solivaria viragitica (NL. fem. n. *viragitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAINDR01 sp903847415*. The type genome for the species is the GenBank assembly GCA_903847415.1. The GC content of the type genome is 35.4 % and the genome length is 0.93 Mbp.

Description of *Candidatus* Solivella tenemitoga sp. nov.

Candidatus Solivella tenemitoga (NL. fem. n. *tenemitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAADGY01 sp013152165*. The type genome for the species is the GenBank assembly GCA_013152165.1. The GC content of the type genome is 44.63 % and the genome length is 0.75 Mbp.

Description of *Candidatus* Solivella gen. nov.

Candidatus Solivella (NL. fem. n. *Solivella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAADGY01*. The type species for the genus is *Candidatus* Solivella tenemitoga .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JAADGY01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Solivellaceae.

Description of *Candidatus* Solivellaceae fam. nov.

Candidatus Solivellaceae (NL. fem. n. *Solivellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JAADGY01.* The type genus for the taxon is *Candidatus* Solivella .

According to the original version of GTDB R06-RS202, this family belongs to the order *JAADGY01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Solivellales.

Description of *Candidatus* Solivellales ord. nov.

Candidatus Solivellales (NL. fem. n. *Solivellales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JAADGY01.* The type genus for the taxon is *Candidatus* Solivella .

According to the GTDB R06-RS202, this order belongs to the class *Microgenomatia*.

Description of *Candidatus* Solivia cateciforma sp. nov.

Candidatus Solivia cateciforma (NL. fem. n. *cateciforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA11452 sp002069785*. The type genome for the species is the GenBank assembly GCA_002069785.1. The GC content of the type genome is 55.2 % and the genome length is 5.97 Mbp.

Description of *Candidatus* Solivia gen. nov.

Candidatus Solivia (NL. fem. n. *Solivia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA11452*. The type species for the genus is *Candidatus* Solivia cateciforma .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1829*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cenodidaceae.

Description of *Candidatus* Solivia filifitia sp. nov.

Candidatus Solivia filifitia (NL. fem. n. *filifitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA11452 sp003526375*. The type genome for the species is the GenBank assembly GCA_003522165.1. The GC content of the type genome is 51.66 % and the genome length is 5.21 Mbp.

Description of *Candidatus* Solivida detumimonia sp. nov.

Candidatus Solivida detumimonia (NL. fem. n. *detumimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS882 sp900546385*. The type genome for the species is the GenBank assembly GCA_900546385.1. The GC content of the type genome is 51.09 % and the genome length is 2.63 Mbp.

Description of *Candidatus* Solivida gen. nov.

Candidatus Solivida (NL. fem. n. *Solivida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UMGS882*. The type species for the genus is *Candidatus* Solivida

detumimonia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-382*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Doxolulaceae.

Description of *Candidatus* Solivida diritiforma sp. nov.

Candidatus Solivida diritiforma (NL. fem. n. *diritiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS882 sp900757905*. The type genome for the species is the GenBank assembly RS_GCF_900757905.1. The GC content of the type genome is 49.86 % and the genome length is 2.36 Mbp.

Description of *Candidatus* Solivida vivifax sp. nov.

Candidatus Solivida vivifax (NL. fem. n. *vivifax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS882 sp003343885*. The type genome for the species is the GenBank assembly GCA_003343885.1. The GC content of the type genome is 44.08 % and the genome length is 2.75 Mbp.

Description of *Candidatus* Solivosa colipitica sp. nov.

Candidatus Solivosa colipitica (NL. fem. n. *colipitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UM-FILTER-44-12 sp001873995*. The type genome for the species is the GenBank assembly GCA_002322345.1. The GC content of the type genome is 44.06 % and the genome length is 1.49 Mbp.

Description of *Candidatus* Solivosa gen. nov.

Candidatus Solivosa (NL. fem. n. *Solivosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UM-FILTER-44-12*. The type species for the genus is *Candidatus* Solivosa colipitica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1572*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Celumanaceae.

Description of *Candidatus* Solivula verecilega sp. nov.

Candidatus Solivula verecilega (NL. fem. n. *verecilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SCTJ01 sp004297805*. The type genome for the species is the GenBank assembly GCA_004297805.1. The GC content of the type genome is 48.16 % and the genome length is 1.4 Mbp.

Description of *Candidatus* Solivula gen. nov.

Candidatus Solivula (NL. fem. n. *Solivula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SCTJ01*. The type species for the genus is *Candidatus* Solivula verecilega .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SCTJ01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Solivulaceae.

Description of *Candidatus* Solivulaceae fam. nov.

Candidatus Solivulaceae (NL. fem. n. *Solivulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SCTJ01*. The type genus for the taxon is *Candidatus* Solivula .

According to GTDB R06-RS202, this family belongs to the order *Moranbacterales*.

Description of *Candidatus* Sonabana ampenitoga sp. nov.

Candidatus Sonabana ampenitoga (NL. fem. n. *ampenitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Fibro-01 sp012841225*. The type genome for the species is the

GenBank assembly GCA_012841225.1. The GC content of the type genome is 41.18 % and the genome length is 1.8 Mbp.

Description of *Candidatus* Sonabana gen. nov.

Candidatus Sonabana (NL. fem. n. *Sonabana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Fibro-01*. The type species for the genus is *Candidatus* Sonabana ampenitoga .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Sonabana bicubugo sp. nov.

Candidatus Sonabana bicubugo (NL. fem. n. *bicubugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Fibro-01 sp012515825*. The type genome for the species is the GenBank assembly GCA_012515825.1. The GC content of the type genome is 37.0 % and the genome length is 1.89 Mbp.

Description of *Candidatus* Sonabana senipitrix sp. nov.

Candidatus Sonabana senipitrix (NL. fem. n. *senipitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Fibro-01 sp001462345*. The type genome for the species is the GenBank assembly GCA_001603875.1. The GC content of the type genome is 37.37 % and the genome length is 2.83 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "3 replicate cellulose-degrading anaerobic digesters sampled at day 96 and day 362".

Description of *Candidatus* Sonabaria metabitica sp. nov.

Candidatus Sonabaria metabitica (NL. fem. n. *metabitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002701365 sp002701365*. The type genome for the species is the GenBank assembly GCA_002701365.1. The GC content of the type genome is 30.48 %

and the genome length is 1.55 Mbp.

Description of *Candidatus* Sonabaria gen. nov.

Candidatus Sonabaria (NL. fem. n. *Sonabaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-002701365*. The type species for the genus is *Candidatus* Sonabaria metabitica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *TMED113*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Fusifulaceae.

Description of *Candidatus* Sonabella peripiforma sp. nov.

Candidatus Sonabella peripiforma (NL. fem. n. *peripiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTU084 sp001512905*. The type genome for the species is the GenBank assembly GCA_012512655.1. The GC content of the type genome is 50.38 % and the genome length is 2.24 Mbp.

Description of *Candidatus* Sonabella gen. nov.

Candidatus Sonabella (NL. fem. n. *Sonabella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DTU084*. The type species for the genus is *Candidatus* Sonabella peripiforma .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DTU084*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Sonabellaceae.

Description of *Candidatus* Sonabellaceae fam. nov.

Candidatus Sonabellaceae (NL. fem. n. *Sonabellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *DTU084.* The type genus for the taxon is *Candidatus* Sonabella .

According to the original version of GTDB R06-RS202, this family belongs to the order *DTU084*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Sonabellales.

Description of *Candidatus* Sonabellales ord. nov.

Candidatus Sonabellales (NL. fem. n. *Sonabellales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *DTU084.* The type genus for the taxon is *Candidatus* Sonabella .

According to the original version of GTDB R06-RS202, this family belongs to the class *DTU084*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Sonabellae.

Description of *Candidatus* Sonabellae class. nov.

Candidatus Sonabellae (NL. fem. n. *c__Sonabellae* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *DTU084.* The type genus for the taxon is *Candidatus* Sonabella .

According to GTDB R06-RS202, this class belongs to the phylum *Firmicutes_G*.

Description of *Candidatus* Sonabia adrotibula sp. nov.

Candidatus Sonabia adrotibula (NL. fem. n. *adrotibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *20CM-2-65-7 sp003220985*. The type genome for the species is the GenBank assembly GCA_003220985.1. The GC content of the type genome is 65.88 % and the genome length is 3.23 Mbp.

Description of *Candidatus* Sonabia gen. nov.

Candidatus Sonabia (NL. fem. n. *Sonabia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *20CM-2-65-7*. The type species for the genus is *Candidatus* Sonabia adrotibula .

According to the original version of GTDB R06-RS202, this genus belongs to the family

GWC2-71-9. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Relenulaceae.

Description of *Candidatus* Sonabia argimivita sp. nov.

Candidatus Sonabia argimivita (NL. fem. n. *argimivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *20CM-2-65-7 sp003221825*. The type genome for the species is the GenBank assembly GCA_003221825.1. The GC content of the type genome is 66.54 % and the genome length is 2.86 Mbp.

Description of *Candidatus* Sonabia cunabax sp. nov.

Candidatus Sonabia cunabax (NL. fem. n. *cunabax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *20CM-2-65-7 sp003222195*. The type genome for the species is the GenBank assembly GCA_001919895.1. The GC content of the type genome is 65.9 % and the genome length is 3.1 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Soil sample from Angelo meadow plot 1; 20cm depth; 2 days after second rain event (91mm)".

Description of *Candidatus* Sonabia ensifitoga sp. nov.

Candidatus Sonabia ensifitoga (NL. fem. n. *ensifitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *20CM-2-65-7 sp003221035*. The type genome for the species is the GenBank assembly GCA_003221035.1. The GC content of the type genome is 65.71 % and the genome length is 3.36 Mbp.

Description of *Candidatus* Sonabia hiruniforma sp. nov.

Candidatus Sonabia hiruniforma (NL. fem. n. *hiruniforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *20CM-2-65-7 sp003221985*. The type genome for the species is the GenBank assembly GCA_003221985.1. The GC content of the type genome is 66.21 %

and the genome length is 3.03 Mbp.

Description of *Candidatus* Sonabia imbelago sp. nov.

Candidatus Sonabia imbelago (NL. fem. n. *imbelago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *20CM-2-65-7 sp003221895*. The type genome for the species is the GenBank assembly GCA_003221895.1. The GC content of the type genome is 65.58 % and the genome length is 3.71 Mbp.

Description of *Candidatus* Sonabia luceretta sp. nov.

Candidatus Sonabia luceretta (NL. fem. n. *luceretta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *20CM-2-65-7 sp003221075*. The type genome for the species is the GenBank assembly GCA_003221075.1. The GC content of the type genome is 65.72 % and the genome length is 3.17 Mbp.

Description of *Candidatus* Sonabia manomisca sp. nov.

Candidatus Sonabia manomisca (NL. fem. n. *manomisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *20CM-2-65-7 sp003223395*. The type genome for the species is the GenBank assembly GCA_003223395.1. The GC content of the type genome is 65.87 % and the genome length is 3.41 Mbp.

Description of *Candidatus* Sonabia onocretta sp. nov.

Candidatus Sonabia onocretta (NL. fem. n. *onocretta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *20CM-2-65-7 sp001915025*. The type genome for the species is the GenBank assembly GCA_001915025.1. The GC content of the type genome is 65.1 % and the genome length is 2.68 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Soil sample from Angelo meadow plot 2; 20cm depth; 2 days after second rain event (91mm)".

Description of *Candidatus* Sonabia triscago sp. nov.

Candidatus Sonabia triscago (NL. fem. n. *triscago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *20CM-2-65-7 sp003220955*. The type genome for the species is the GenBank assembly GCA_003220955.1. The GC content of the type genome is 65.97 % and the genome length is 2.64 Mbp.

Description of *Candidatus* Sonabida clancitica sp. nov.

Candidatus Sonabida clancitica (NL. fem. n. *clancitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RBG-16-71-46 sp001780165*. The type genome for the species is the GenBank assembly GCA_001780165.1. The GC content of the type genome is 71.02 % and the genome length is 3.72 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle background sediment; well D04 at 16ft depth".

Description of *Candidatus* Sonabida gen. nov.

Candidatus Sonabida (NL. fem. n. *Sonabida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RBG-16-71-46*. The type species for the genus is *Candidatus* Sonabida clancitica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *RBG-16-71-46*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Sonabidaceae.

Description of *Candidatus* Sonabidaceae fam. nov.

Candidatus Sonabidaceae (NL. fem. n. *Sonabidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *RBG-16-71-46.* The type genus for the taxon is *Candidatus* Sonabida .

According to the original version of GTDB R06-RS202, this family belongs to the order *RBG-16-71-46*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Sonabidales.

Description of *Candidatus* Sonabidales ord. nov.

Candidatus Sonabidales (NL. fem. n. *Sonabidales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *RBG-16-71-46.* The type genus for the taxon is *Candidatus* Sonabida .

According to the original version of GTDB R06-RS202, this family belongs to the class *RBG-16-71-46*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Sonabidae.

Description of *Candidatus* Sonabidae class. nov.

Candidatus Sonabidae (NL. fem. n. *c__Sonabidae* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *RBG-16-71-46.* The type genus for the taxon is *Candidatus* Sonabida .

According to GTDB R06-RS202, this class belongs to the phylum *Eisenbacteria*.

Description of *Candidatus* Sonabosa adtorentia sp. nov.

Candidatus Sonabosa adtorentia (NL. fem. n. *adtorentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WRMH01 sp009776905*. The type genome for the species is the GenBank assembly GCA_009776905.1. The GC content of the type genome is 52.42 % and the genome length is 2.85 Mbp.

Description of *Candidatus* Sonabosa gen. nov.

Candidatus Sonabosa (NL. fem. n. *Sonabosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WRMH01*. The type species for the genus is *Candidatus* Sonabosa adtorentia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Sonabosa amercimonia sp. nov.

Candidatus Sonabosa amercimonia (NL. fem. n. *amercimonia* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WRMH01 sp009778485*. The type genome for the species is the GenBank assembly GCA_009778485.1. The GC content of the type genome is 56.18 % and the genome length is 1.69 Mbp.

Description of *Candidatus* Sonabosa antefivita sp. nov.

Candidatus Sonabosa antefivita (NL. fem. n. *antefivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WRMH01 sp009785655*. The type genome for the species is the GenBank assembly GCA_009785655.1. The GC content of the type genome is 50.21 % and the genome length is 1.58 Mbp.

Description of *Candidatus* Sonabosa atricitia sp. nov.

Candidatus Sonabosa atricitia (NL. fem. n. *atricitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WRMH01 sp009783555*. The type genome for the species is the GenBank assembly GCA_009783555.1. The GC content of the type genome is 43.27 % and the genome length is 2.75 Mbp.

Description of *Candidatus* Sonabosa attorimonia sp. nov.

Candidatus Sonabosa attorimonia (NL. fem. n. *attorimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WRMH01 sp009776445*. The type genome for the species is the GenBank assembly GCA_009776445.1. The GC content of the type genome is 47.32 % and the genome length is 3.53 Mbp.

Description of *Candidatus* Sonabosa celamitudo sp. nov.

Candidatus Sonabosa celamitudo (NL. fem. n. *celamitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WRMH01 sp009785345*. The type genome for the species is the GenBank assembly GCA_009785345.1. The GC content of the type genome is 40.2 % and the genome length is 3.51 Mbp.

Description of *Candidatus* Sonabosa celumago sp. nov.

Candidatus Sonabosa celumago (NL. fem. n. *celumago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WRMH01 sp009777235*. The type genome for the species is the GenBank assembly GCA_009777235.1. The GC content of the type genome is 47.26 % and the genome length is 2.63 Mbp.

Description of *Candidatus* Sonabosa incorilenta sp. nov.

Candidatus Sonabosa incorilenta (NL. fem. n. *incorilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WRMH01 sp009787625*. The type genome for the species is the GenBank assembly GCA_009787625.1. The GC content of the type genome is 43.66 % and the genome length is 3.02 Mbp.

Description of *Candidatus* Sonabosa inrefedo sp. nov.

Candidatus Sonabosa inrefedo (NL. fem. n. *inrefedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WRMH01 sp009777775*. The type genome for the species is the GenBank assembly GCA_009777775.1. The GC content of the type genome is 41.24 % and the genome length is 2.8 Mbp.

Description of *Candidatus* Sonabosa insibessa sp. nov.

Candidatus Sonabosa insibessa (NL. fem. n. *insibessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WRMH01 sp009781695*. The type genome for the species is the GenBank assembly GCA_009781695.1. The GC content of the type genome is 45.49 % and the genome length is 2.2 Mbp.

Description of *Candidatus* Sonabosa metucugo sp. nov.

Candidatus Sonabosa metucugo (NL. fem. n. *metucugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WRMH01 sp009787995*. The type genome for the species is the GenBank assembly GCA_009787995.1. The GC content of the type genome is 50.06 % and the genome length is 2.42 Mbp.

Description of *Candidatus* Sonabosa monoditio sp. nov.

Candidatus Sonabosa monoditio (NL. fem. n. *monoditio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WRMH01 sp009781855*. The type genome for the species is the GenBank assembly GCA_009781855.1. The GC content of the type genome is 45.3 % and the genome length is 2.4 Mbp.

Description of *Candidatus* Sonabosa munifivita sp. nov.

Candidatus Sonabosa munifivita (NL. fem. n. *munifivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WRMH01 sp009786445*. The type genome for the species is the GenBank assembly GCA_009786445.1. The GC content of the type genome is 44.09 % and the genome length is 2.72 Mbp.

Description of *Candidatus* Sonabosa oblonimonas sp. nov.

Candidatus Sonabosa oblonimonas (NL. fem. n. *oblonimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WRMH01 sp009784725*. The type genome for the species is the GenBank assembly GCA_009784725.1. The GC content of the type genome is 41.57 % and the genome length is 2.77 Mbp.

Description of *Candidatus* Sonabosa seroticula sp. nov.

Candidatus Sonabosa seroticula (NL. fem. n. *seroticula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WRMH01 sp009785525*. The type genome for the species is the GenBank assembly GCA_009785525.1. The GC content of the type genome is 50.02 % and the genome length is 2.16 Mbp.

Description of *Candidatus* Sonabosa subacastra sp. nov.

Candidatus Sonabosa subacastra (NL. fem. n. *subacastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WRMH01 sp009786775*. The type genome for the species is the GenBank assembly GCA_009786775.1. The GC content of the type genome is 48.19 % and the genome length is 2.06 Mbp.

Description of *Candidatus* Sonabosa vagabiforma sp. nov.

Candidatus Sonabosa vagabiforma (NL. fem. n. *vagabiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WRMH01 sp009781515*. The type genome for the species is the GenBank assembly GCA_009781515.1. The GC content of the type genome is 43.67 % and the genome length is 2.3 Mbp.

Description of *Candidatus* Sonabula chernibula sp. nov.

Candidatus Sonabula chernibula (NL. fem. n. *chernibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Fen-1166 sp003142535*. The type genome for the species is the GenBank assembly GCA_003142535.1. The GC content of the type genome is 43.42 % and the genome length is 2.93 Mbp.

Description of *Candidatus* Sonabula gen. nov.

Candidatus Sonabula (NL. fem. n. *Sonabula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Fen-1166*. The type species for the genus is *Candidatus* Sonabula

chernibula .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Sonabula energimonas sp. nov.

Candidatus Sonabula energimonas (NL. fem. n. *energimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Fen-1166 sp002068015*. The type genome for the species is the GenBank assembly GCA_002068015.1. The GC content of the type genome is 45.33 % and the genome length is 3.6 Mbp.

Description of *Candidatus* Sonabula excanitas sp. nov.

Candidatus Sonabula excanitas (NL. fem. n. *excanitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Fen-1166 sp002840565*. The type genome for the species is the GenBank assembly GCA_002840565.1. The GC content of the type genome is 47.28 % and the genome length is 3.99 Mbp.

Description of *Candidatus* Sonabula metucibra sp. nov.

Candidatus Sonabula metucibra (NL. fem. n. *metucibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Fen-1166 sp903907985*. The type genome for the species is the GenBank assembly GCA_903867525.1. The GC content of the type genome is 45.43 % and the genome length is 3.45 Mbp.

Description of *Candidatus* Sonipana abrumousia sp. nov.

Candidatus Sonipana abrumousia (NL. fem. n. *abrumousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTKN01 sp011333455*. The type genome for the species is the GenBank assembly GCA_011333455.1. The GC content of the type genome is 65.34 % and the genome length is 2.97 Mbp.

Description of *Candidatus* Sonipana gen. nov.

Candidatus Sonipana (NL. fem. n. *Sonipana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DTKN01*. The type species for the genus is *Candidatus* Sonipana abrumousia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DTKN01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Sonipanaceae.

Description of *Candidatus* Sonipanaceae fam. nov.

Candidatus Sonipanaceae (NL. fem. n. *Sonipanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *DTKN01*. The type genus for the taxon is *Candidatus* Sonipana .

According to the original version of GTDB R06-RS202, this family belongs to the order *DTKN01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Sonipanales.

Description of *Candidatus* Sonipanales ord. nov.

Candidatus Sonipanales (NL. fem. n. *Sonipanales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *DTKN01*. The type genus for the taxon is *Candidatus* Sonipana .

According to the GTDB R06-RS202, this order belongs to the class *Chloroflexia*.

Description of *Candidatus* Soniparia occalitoga sp. nov.

Candidatus Soniparia occalitoga (NL. fem. n. *occalitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2712585 sp002712585*. The type genome for the species is the GenBank assembly GCA_002712585.1. The GC content of the type genome is 42.88 % and the genome length is 1.29 Mbp.

Description of *Candidatus* Soniparia gen. nov.

Candidatus Soniparia (NL. fem. n. *Soniparia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2712585*. The type species for the genus is *Candidatus* Soniparia occalitoga .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GCA-2712585*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Soniparia**ceae**.

Description of *Candidatus* Sonipariaceae **fam. nov.**

Candidatus Soniparia**ceae** (NL. fem. n. *Soniparia**ceae*** a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *GCA-2712585.* The type genus for the taxon is *Candidatus* Soniparia .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA3495*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Bicipellales.

Description of *Candidatus* Sonipella incesentia sp. nov.

Candidatus Sonipella incesentia (NL. fem. n. *incesentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SKSP01 sp007693335*. The type genome for the species is the GenBank assembly GCA_007693335.1. The GC content of the type genome is 69.23 % and the genome length is 3.53 Mbp.

Description of *Candidatus* Sonipella gen. nov.

Candidatus Sonipella (NL. fem. n. *Sonipella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SKSP01*. The type species for the genus is *Candidatus* Sonipella incesentia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Sonipella pomifedo sp. nov.

Candidatus Sonipella pomifedo (NL. fem. n. *pomifedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SKSP01 sp007122945*. The type genome for the species is the GenBank assembly GCA_007124885.1. The GC content of the type genome is 71.19 % and the genome length is 4.17 Mbp.

Description of *Candidatus* Sonipia catalitio sp. nov.

Candidatus Sonipia catalitio (NL. fem. n. *catalitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-177 sp900319455*. The type genome for the species is the GenBank assembly GCA_900319455.1. The GC content of the type genome is 45.94 % and the genome length is 2.11 Mbp.

Description of *Candidatus* Sonipia gen. nov.

Candidatus Sonipia (NL. fem. n. *Sonipia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAG-177*. The type species for the genus is *Candidatus* Sonipia catalitio .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Sonipia detotedo sp. nov.

Candidatus Sonipia detotedo (NL. fem. n. *detotedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-177 sp900771185*. The type genome for the species is the GenBank assembly RS_GCF_900771185.1. The GC content of the type genome is 49.15 % and the genome length is 1.93 Mbp.

Description of *Candidatus* Sonipia lubenitrix sp. nov.

Candidatus Sonipia lubenitrix (NL. fem. n. *lubenitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-177 sp002315935*. The type genome for the species is the GenBank assembly GCA_002315935.1. The GC content of the type genome is 42.77 % and the genome length is 2.13 Mbp.

Description of *Candidatus* Sonipia nefanetta sp. nov.

Candidatus Sonipia nefanetta (NL. fem. n. *nefanetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-177 sp000431775*. The type genome for the species is the GenBank assembly GCA_004554595.1. The GC content of the type genome is 53.68 % and the genome length is 2.06 Mbp.

Description of *Candidatus* Sonipia nitelilenta sp. nov.

Candidatus Sonipia nitelilenta (NL. fem. n. *nitelilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-177 sp002438685*. The type genome for the species is the GenBank assembly GCA_002438685.1. The GC content of the type genome is 51.66 % and the genome length is 2.0 Mbp.

Description of *Candidatus* Sonipia pimenentia sp. nov.

Candidatus Sonipia pimenentia (NL. fem. n. *pimenentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-177 sp002309055*. The type genome for the species is the GenBank assembly GCA_002309055.1. The GC content of the type genome is 49.7 % and the genome length is 1.72 Mbp.

Description of *Candidatus* Sonipia pudibitoga sp. nov.

Candidatus Sonipia pudibitoga (NL. fem. n. *pudibitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-177 sp002451755*. The type genome for the species is the GenBank assembly GCA_003517135.1. The GC content of the type genome is 52.63 %

and the genome length is 1.58 Mbp.

Description of *Candidatus* Sonipia sonipibula sp. nov.

Candidatus Sonipia sonipibula (NL. fem. n. *sonipibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-177 sp900770255*. The type genome for the species is the GenBank assembly RS_GCF_900770255.1. The GC content of the type genome is 52.13 % and the genome length is 1.88 Mbp.

Description of *Candidatus* Sonipia telefentia sp. nov.

Candidatus Sonipia telefentia (NL. fem. n. *telefentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-177 sp003538135*. The type genome for the species is the GenBank assembly GCA_008668165.1. The GC content of the type genome is 51.9 % and the genome length is 2.21 Mbp.

Description of *Candidatus* Sonipia terebifica sp. nov.

Candidatus Sonipia terebifica (NL. fem. n. *terebifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-177 sp003514385*. The type genome for the species is the GenBank assembly GCA_004552535.1. The GC content of the type genome is 53.41 % and the genome length is 1.37 Mbp.

Description of *Candidatus* Sonipida sicarisca sp. nov.

Candidatus Sonipida sicarisca (NL. fem. n. *sicarisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *QOAL01 sp003978135*. The type genome for the species is the GenBank assembly GCA_003978135.1. The GC content of the type genome is 48.45 % and the genome length is 1.28 Mbp.

Description of *Candidatus* Sonipida gen. nov.

Candidatus Sonipida (NL. fem. n. *Sonipida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *QOAL01*. The type species for the genus is *Candidatus* Sonipida sicarisca .

According to the original version of GTDB R06-RS202, this genus belongs to the family *QOAL01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Sonipidaceae.

Description of *Candidatus* Sonipidaceae fam. nov.

Candidatus Sonipidaceae (NL. fem. n. *Sonipidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *QOAL01*. The type genus for the taxon is *Candidatus* Sonipida .

According to GTDB R06-RS202, this family belongs to the order *Dissulfuribacterales*.

Description of *Candidatus* Soniposa documetta sp. nov.

Candidatus Soniposa documetta (NL. fem. n. *documetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SLCK01 sp007125845*. The type genome for the species is the GenBank assembly GCA_007125845.1. The GC content of the type genome is 66.61 % and the genome length is 3.2 Mbp.

Description of *Candidatus* Soniposa gen. nov.

Candidatus Soniposa (NL. fem. n. *Soniposa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SLCK01*. The type species for the genus is *Candidatus* Soniposa documetta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA6960*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Caravidaceae.

Description of *Candidatus* Soniposa viripitoga sp. nov.

Candidatus Soniposa viripitoga (NL. fem. n. *viripitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SLCK01 sp007124095*. The type genome for the species is the GenBank assembly GCA_007119275.1. The GC content of the type genome is 65.65 % and the genome length is 2.21 Mbp.

Description of *Candidatus* Sonipula celumessa sp. nov.

Candidatus Sonipula celumessa (NL. fem. n. *celumessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GWC1-37-10 sp001793825*. The type genome for the species is the GenBank assembly GCA_000992045.1. The GC content of the type genome is 37.41 % and the genome length is 0.57 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "aquifer sediment".

Description of *Candidatus* Sonipula gen. nov.

Candidatus Sonipula (NL. fem. n. *Sonipula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GWC1-37-10*. The type species for the genus is *Candidatus* Sonipula celumessa .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA9933*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Capilanaceae.

Description of *Candidatus* Sonivaria cisalugo sp. nov.

Candidatus Sonivaria cisalugo (NL. fem. n. *cisalugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5691 sp002420265*. The type genome for the species is the GenBank assembly GCA_002170515.2. The GC content of the type genome is 49.9 % and the genome length is 2.7 Mbp.

Description of *Candidatus* Sonivaria gen. nov.

Candidatus Sonivaria (NL. fem. n. *Sonivaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA5691*. The type species for the genus is *Candidatus* Sonivaria cisalugo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Sonivaria lavabilega sp. nov.

Candidatus Sonivaria lavabilega (NL. fem. n. *lavabilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5691 sp002420185*. The type genome for the species is the GenBank assembly GCA_002420185.1. The GC content of the type genome is 48.68 % and the genome length is 3.16 Mbp.

Description of *Candidatus* Sonivaria mirififorma sp. nov.

Candidatus Sonivaria mirififorma (NL. fem. n. *mirififorma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5691 sp002694885*. The type genome for the species is the GenBank assembly GCA_003525105.1. The GC content of the type genome is 51.45 % and the genome length is 3.68 Mbp.

Description of *Candidatus* Sonivaria nocenatica sp. nov.

Candidatus Sonivaria nocenatica (NL. fem. n. *nocenatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5691 sp002474325*. The type genome for the species is the GenBank assembly GCA_002450395.1. The GC content of the type genome is 50.42 % and the genome length is 3.12 Mbp.

Description of *Candidatus* Sonivella epogdax sp. nov.

Candidatus Sonivella epogdax (NL. fem. n. *epogdax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DUMD01 sp012840065*. The type genome for the species is the GenBank assembly GCA_012840065.1. The GC content of the type genome is 37.92 % and the genome length is 2.0 Mbp.

Description of *Candidatus* Sonivella gen. nov.

Candidatus Sonivella (NL. fem. n. *Sonivella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DUMD01*. The type species for the genus is *Candidatus* Sonivella epogdax .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DUMD01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Sonivellaceae.

Description of *Candidatus* Sonivellaceae fam. nov.

Candidatus Sonivellaceae (NL. fem. n. *Sonivellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *DUMD01.* The type genus for the taxon is *Candidatus* Sonivella .

According to the original version of GTDB R06-RS202, this family belongs to the order *DUMD01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Sonivellales.

Description of *Candidatus* Sonivellales ord. nov.

Candidatus Sonivellales (NL. fem. n. *Sonivellales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *DUMD01.* The type genus for the taxon is *Candidatus* Sonivella .

According to the original version of GTDB R06-RS202, this family belongs to the class *DUMD01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Sonivellae.

Description of *Candidatus* Sonivellae class. nov.

Candidatus Sonivellae (NL. fem. n. *c__Sonivellae* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *DUMD01*. The type genus for the taxon is *Candidatus* Sonivella .

According to GTDB R06-RS202, this class belongs to the phylum *Firmicutes_C*.

Description of *Candidatus* Sonivida solifatio sp. nov.

Candidatus Sonivida solifatio (NL. fem. n. *solifatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-12-FULL-68-19 sp001767525*. The type genome for the species is the GenBank assembly GCA_001767065.1. The GC content of the type genome is 68.11 % and the genome length is 4.41 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under low O2 conditions; 0.2 micron filter; full assembly".

Description of *Candidatus* Sonivida gen. nov.

Candidatus Sonivida (NL. fem. n. *Sonivida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *2-12-FULL-68-19*. The type species for the genus is *Candidatus* Sonivida solifatio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2999*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Lucifanaceae.

Description of *Candidatus* Sonivida vocifatio sp. nov.

Candidatus Sonivida vocifatio (NL. fem. n. *vocifatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-12-FULL-68-19 sp001767195*. The type genome for the species is the GenBank assembly GCA_001767515.1. The GC content of the type genome is 67.36 % and the genome length is 4.11 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under low O2 conditions; 1.2 micron filter; full assembly".

Description of *Candidatus* Sonivosa citivigena sp. nov.

Candidatus Sonivosa citivigena (NL. fem. n. *citivigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002789015 sp002789015*. The type genome for the species is the GenBank assembly GCA_002789015.1. The GC content of the type genome is 34.73 % and the genome length is 0.75 Mbp.

Description of *Candidatus* Sonivosa gen. nov.

Candidatus Sonivosa (NL. fem. n. *Sonivosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-002789015*. The type species for the genus is *Candidatus* Sonivosa citivigena .

According to the original version of GTDB R06-RS202, this genus belongs to the family *2-01-FULL-39-13*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Domiculaceae.

Description of *Candidatus* Sonivula hexapilenta sp. nov.

Candidatus Sonivula hexapilenta (NL. fem. n. *hexapilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-12-FULL-44-17 sp001804285*. The type genome for the species is the GenBank assembly GCA_001804245.1. The GC content of the type genome is 44.46 % and the genome length is 3.15 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under low O2 conditions; 0.2 micron filter; full assembly".

Description of *Candidatus* Sonivula gen. nov.

Candidatus Sonivula (NL. fem. n. *Sonivula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *2-12-FULL-44-17*. The type species for the genus is *Candidatus* Sonivula hexapilenta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *2-12-FULL-44-17*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Sonivulaceae.

Description of *Candidatus* Sonivulaceae fam. nov.

Candidatus Sonivulaceae (NL. fem. n. *Sonivulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *2-12-FULL-44-17.* The type genus for the taxon is *Candidatus* Sonivula .

According to GTDB R06-RS202, this family belongs to the order *Omnitrophales*.

Description of *Candidatus* Soonwooa denecivita sp. nov.

Candidatus Soonwooa denecivita (NL. fem. n. *denecivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Soonwooa sp011058315*. The type genome for the species is the GenBank assembly RS_GCF_011058315.1. The GC content of the type genome is 35.22 % and the genome length is 3.24 Mbp.

Description of *Candidatus* Sotulana murilimonia sp. nov.

Candidatus Sotulana murilimonia (NL. fem. n. *murilimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA10165 sp001816475*. The type genome for the species is the GenBank assembly GCA_003505255.1. The GC content of the type genome is 39.37 % and the genome length is 0.83 Mbp.

Description of *Candidatus* Sotulana gen. nov.

Candidatus Sotulana (NL. fem. n. *Sotulana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA10165*. The type species for the genus is *Candidatus* Sotulana murilimonia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA10165*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Sotulanaceae.

Description of *Candidatus* Sotulanaceae fam. nov.

Candidatus Sotulanaceae (NL. fem. n. *Sotulanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA10165.* The type genus for the taxon is *Candidatus* Sotulana .

According to the original version of GTDB R06-RS202, this family belongs to the order *GWA2-44-7*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Notacellales.

Description of *Candidatus* Sotulella cerebisca sp. nov.

Candidatus Sotulella cerebisca (NL. fem. n. *cerebisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2742885 sp002742885*. The type genome for the species is the GenBank assembly GCA_002742885.1. The GC content of the type genome is 36.16 % and the genome length is 2.17 Mbp.

Description of *Candidatus* Sotulella gen. nov.

Candidatus Sotulella (NL. fem. n. *Sotulella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2742885*. The type species for the genus is *Candidatus* Sotulella cerebisca .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GCA-2742885*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Sotulellaceae.

Description of *Candidatus* Sotulellaceae fam. nov.

Candidatus Sotulellaceae (NL. fem. n. *Sotulellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *GCA-2742885.* The type genus for the taxon is *Candidatus* Sotulella .

According to GTDB R06-RS202, this family belongs to the order *Cloacimonadales*.

Description of *Candidatus* Sotulia ceracedo sp. nov.

Candidatus Sotulia ceracedo (NL. fem. n. *ceracedo* a species epithet created arbitrarily,

while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PWNQ01 sp003557725*. The type genome for the species is the GenBank assembly GCA_003557725.1. The GC content of the type genome is 46.69 % and the genome length is 2.82 Mbp.

Description of *Candidatus* Sotulia gen. nov.

Candidatus Sotulia (NL. fem. n. *Sotulia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PWNQ01*. The type species for the genus is *Candidatus* Sotulia ceracedo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *PWNQ01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Sotuliaceae.

Description of *Candidatus* Sotuliaceae fam. nov.

Candidatus Sotuliaceae (NL. fem. n. *Sotuliaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *PWNQ01.* The type genus for the taxon is *Candidatus* Sotulia .

According to GTDB R06-RS202, this family belongs to the order *Bacteroidales*.

Description of *Candidatus* Sotulida cinefivita sp. nov.

Candidatus Sotulida cinefivita (NL. fem. n. *cinefivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *XYD2-FULL-39-9 sp001783215*. The type genome for the species is the GenBank assembly GCA_001783215.1. The GC content of the type genome is 39.6 % and the genome length is 1.07 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at 16ft depth; 0.1 micron filter at time point D".

Description of *Candidatus* Sotulida gen. nov.

Candidatus Sotulida (NL. fem. n. *Sotulida* a name created arbitrarily, while preserving

the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *XYD2-FULL-39-9*. The type species for the genus is *Candidatus* Sotulida cinefivita .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GWA2-37-8*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Nosocariaceae.

Description of *Candidatus* Sotulida enharivita sp. nov.

Candidatus Sotulida enharivita (NL. fem. n. *enharivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *XYD2-FULL-39-9 sp007376295*. The type genome for the species is the GenBank assembly GCA_007376295.1. The GC content of the type genome is 40.2 % and the genome length is 0.94 Mbp.

Description of *Candidatus* Sotulosa divuletta sp. nov.

Candidatus Sotulosa divuletta (NL. fem. n. *divuletta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PSRM01 sp003176045*. The type genome for the species is the GenBank assembly GCA_003176045.1. The GC content of the type genome is 56.99 % and the genome length is 7.74 Mbp.

Description of *Candidatus* Sotulosa gen. nov.

Candidatus Sotulosa (NL. fem. n. *Sotulosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PSRM01*. The type species for the genus is *Candidatus* Sotulosa divuletta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA8199*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Tabitidaceae.

Description of *Candidatus* Sotulula scombitia sp. nov.

Candidatus Sotulula scombitia (NL. fem. n. *scombitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA11136 sp002686135*. The type genome for the species is the GenBank assembly GCA_002686135.1. The GC content of the type genome is 59.77 % and the genome length is 1.57 Mbp.

Description of *Candidatus* Sotulula gen. nov.

Candidatus Sotulula (NL. fem. n. *Sotulula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA11136*. The type species for the genus is *Candidatus* Sotulula scombitia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA11136*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Sotululaceae.

Description of *Candidatus* Sotululaceae fam. nov.

Candidatus Sotululaceae (NL. fem. n. *Sotululaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA11136.* The type genus for the taxon is *Candidatus* Sotulula .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA11136*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Sotululales.

Description of *Candidatus* Sotululales ord. nov.

Candidatus Sotululales (NL. fem. n. *Sotululales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA11136.* The type genus for the taxon is *Candidatus* Sotulula .

According to the GTDB R06-RS202, this order belongs to the class *Alphaproteobacteria*.

Description of *Candidatus* Spartinivicinus accumiforma sp. nov.

Candidatus Spartinivicinus accumiforma (NL. fem. n. *accumiforma* a species epithet

created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Spartinivicinus sp013425485*. The type genome for the species is the GenBank assembly RS_GCF_013425485.1. The GC content of the type genome is 40.36 % and the genome length is 6.82 Mbp.

Description of *Candidatus* Spastaria documessa sp. nov.

Candidatus Spastaria documessa (NL. fem. n. *documessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4742 sp002403895*. The type genome for the species is the GenBank assembly GCA_002403895.1. The GC content of the type genome is 68.81 % and the genome length is 3.55 Mbp.

Description of *Candidatus* Spastaria gen. nov.

Candidatus Spastaria (NL. fem. n. *Spastaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA4742*. The type species for the genus is *Candidatus* Spastaria documessa .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA8139*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Recocellaceae.

Description of *Candidatus* Spastella indidentia sp. nov.

Candidatus Spastella indidentia (NL. fem. n. *indidentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABMPX01 sp013203625*. The type genome for the species is the GenBank assembly GCA_013203625.1. The GC content of the type genome is 33.36 % and the genome length is 0.47 Mbp.

Description of *Candidatus* Spastella gen. nov.

Candidatus Spastella (NL. fem. n. *Spastella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABMPX01*. The type species for the genus is *Candidatus* Spastella indidentia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2143*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Hecatulaceae.

Description of *Candidatus* Spastia artolitas sp. nov.

Candidatus Spastia artolitas (NL. fem. n. *artolitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA11153 sp003511885*. The type genome for the species is the GenBank assembly GCA_003511885.1. The GC content of the type genome is 41.54 % and the genome length is 6.65 Mbp.

Description of *Candidatus* Spastia gen. nov.

Candidatus Spastia (NL. fem. n. *Spastia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA11153*. The type species for the genus is *Candidatus* Spastia artolitas .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Spastula veriditura sp. nov.

Candidatus Spastula veriditura (NL. fem. n. *veriditura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WRMR01 sp009776995*. The type genome for the species is the GenBank assembly GCA_009776995.1. The GC content of the type genome is 51.8 % and the genome length is 4.66 Mbp.

Description of *Candidatus* Spastula gen. nov.

Candidatus Spastula (NL. fem. n. *Spastula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WRMR01*. The type species for the genus is *Candidatus* Spastula veriditura .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Sphaerochaeta abagmitio sp. nov.

Candidatus Sphaerochaeta abagmitio (NL. fem. n. *abagmitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphaerochaeta sp001603105*. The type genome for the species is the GenBank assembly GCA_001603105.1. The GC content of the type genome is 56.04 % and the genome length is 2.34 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "3 replicate cellulose-degrading anaerobic digesters sampled at day 96 and day 362".

Description of *Candidatus* Sphaerochaeta acraticella sp. nov.

Candidatus Sphaerochaeta acraticella (NL. fem. n. *acraticella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphaerochaeta sp012800465*. The type genome for the species is the GenBank assembly GCA_012800465.1. The GC content of the type genome is 58.49 % and the genome length is 1.44 Mbp.

Description of *Candidatus* Sphaerochaeta cetaressa sp. nov.

Candidatus Sphaerochaeta cetaressa (NL. fem. n. *cetaressa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphaerochaeta sp012838275*. The type genome for the species is the GenBank assembly GCA_012838275.1. The GC content of the type genome is 49.46 % and the genome length is 2.36 Mbp.

Description of *Candidatus* Sphaerochaeta conabilega sp. nov.

Candidatus Sphaerochaeta conabilega (NL. fem. n. *conabilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphaerochaeta sp003446545*. The type genome for the species is the GenBank assembly GCA_003446545.1. The GC content of the type genome is 48.76 % and the genome length is 2.21 Mbp.

Description of *Candidatus* Sphaerochaeta extunastra sp. nov.

Candidatus Sphaerochaeta extunastra (NL. fem. n. *extunastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphaerochaeta sp012511235*. The type genome for the species is the GenBank assembly GCA_012511235.1. The GC content of the type genome is 51.78 % and the genome length is 2.65 Mbp.

Description of *Candidatus* Sphaerochaeta facunitio sp. nov.

Candidatus Sphaerochaeta facunitio (NL. fem. n. *facunitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphaerochaeta sp001604325*. The type genome for the species is the GenBank assembly GCA_001604325.1. The GC content of the type genome is 59.3 % and the genome length is 1.75 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "3 replicate cellulose-degrading anaerobic digesters sampled at day 96 and day 362".

Description of *Candidatus* Sphaerochaeta habacibula sp. nov.

Candidatus Sphaerochaeta habacibula (NL. fem. n. *habacibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphaerochaeta sp003247345*. The type genome for the species is the GenBank assembly GCA_003247345.1. The GC content of the type genome is 43.8 % and the genome length is 2.64 Mbp.

Description of *Candidatus* Sphaerochaeta luticax sp. nov.

Candidatus Sphaerochaeta luticax (NL. fem. n. *luticax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphaerochaeta sp001603115*. The type genome for the species is the

GenBank assembly GCA_001603115.1. The GC content of the type genome is 52.28 % and the genome length is 2.32 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "3 replicate cellulose-degrading anaerobic digesters sampled at day 96 and day 362".

Description of *Candidatus* Sphaerochaeta monacitrix sp. nov.

Candidatus Sphaerochaeta monacitrix (NL. fem. n. *monacitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphaerochaeta sp012519115*. The type genome for the species is the GenBank assembly GCA_012519115.1. The GC content of the type genome is 52.3 % and the genome length is 1.7 Mbp.

Description of *Candidatus* Sphaerochaeta repecatio sp. nov.

Candidatus Sphaerochaeta repecatio (NL. fem. n. *repecatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphaerochaeta sp012514185*. The type genome for the species is the GenBank assembly GCA_012514185.1. The GC content of the type genome is 52.05 % and the genome length is 2.76 Mbp.

Description of *Candidatus* Sphaerochaeta sanabigena sp. nov.

Candidatus Sphaerochaeta sanabigena (NL. fem. n. *sanabigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphaerochaeta sp012519125*. The type genome for the species is the GenBank assembly GCA_012519125.1. The GC content of the type genome is 52.16 % and the genome length is 2.23 Mbp.

Description of *Candidatus* Sphaerochaeta tumefedo sp. nov.

Candidatus Sphaerochaeta tumefedo (NL. fem. n. *tumefedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphaerochaeta sp002432715*. The type genome for the species is the GenBank assembly GCA_001896735.1. The GC content of the type genome is 50.85 % and the genome length is 3.25 Mbp. The isolation source for the NCBI BioSample

associated with the type genome is descibed as "sludge from a mesophilic anaerobic wastewater digester enriched on phosphite and carbon dioxide".

Description of *Candidatus* Sphaerochaeta videlentia sp. nov.

Candidatus Sphaerochaeta videlentia (NL. fem. n. *videlentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphaerochaeta sp009930195*. The type genome for the species is the GenBank assembly GCA_009929675.1. The GC content of the type genome is 52.91 % and the genome length is 2.95 Mbp.

Description of *Candidatus* Sphaerochaeta visibicula sp. nov.

Candidatus Sphaerochaeta visibicula (NL. fem. n. *visibicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphaerochaeta sp004294855*. The type genome for the species is the GenBank assembly GCA_004294855.1. The GC content of the type genome is 53.71 % and the genome length is 2.2 Mbp.

Description of *Candidatus* Sphaerotilus biverentia sp. nov.

Candidatus Sphaerotilus biverentia (NL. fem. n. *biverentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphaerotilus sp013294065*. The type genome for the species is the GenBank assembly RS_GCF_013294065.1. The GC content of the type genome is 70.91 % and the genome length is 4.89 Mbp.

Description of *Candidatus* Sphaerotilus verifax sp. nov.

Candidatus Sphaerotilus verifax (NL. fem. n. *verifax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphaerotilus sp013299055*. The type genome for the species is the GenBank assembly GCA_013299055.1. The GC content of the type genome is 67.98 % and the genome length is 4.09 Mbp.

Description of *Candidatus* Sphaerotilus vitigitura sp. nov.

Candidatus Sphaerotilus vitigitura (NL. fem. n. *vitigitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphaerotilus sp013299175*. The type genome for the species is the GenBank assembly GCA_013299175.1. The GC content of the type genome is 68.09 % and the genome length is 4.0 Mbp.

Description of *Candidatus* Sphingobacterium absoritio sp. nov.

Candidatus Sphingobacterium absoritio (NL. fem. n. *absoritio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingobacterium sp002322865*. The type genome for the species is the GenBank assembly GCA_002322865.1. The GC content of the type genome is 40.36 % and the genome length is 3.72 Mbp.

Description of *Candidatus* Sphingobacterium acculilega sp. nov.

Candidatus Sphingobacterium acculilega (NL. fem. n. *acculilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingobacterium sp002420705*. The type genome for the species is the GenBank assembly GCA_002420705.1. The GC content of the type genome is 39.87 % and the genome length is 5.66 Mbp.

Description of *Candidatus* Sphingobacterium alcedigena sp. nov.

Candidatus Sphingobacterium alcedigena (NL. fem. n. *alcedigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingobacterium sp002354335*. The type genome for the species is the GenBank assembly GCA_002354335.1. The GC content of the type genome is 41.38 % and the genome length is 4.12 Mbp.

Description of *Candidatus* Sphingobacterium apogritia sp. nov.

Candidatus Sphingobacterium apogritia (NL. fem. n. *apogritia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingobacterium sp000747525*. The type genome for the species is the GenBank assembly RS_GCF_000747525.1. The GC content of the type genome is 37.03 % and the genome length is 5.33 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "wing".

Description of *Candidatus* Sphingobacterium artolimonas sp. nov.

Candidatus Sphingobacterium artolimonas (NL. fem. n. *artolimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingobacterium sp006476045*. The type genome for the species is the GenBank assembly RS_GCF_006476045.1. The GC content of the type genome is 39.22 % and the genome length is 3.14 Mbp.

Description of *Candidatus* Sphingobacterium bimotousia sp. nov.

Candidatus Sphingobacterium bimotousia (NL. fem. n. *bimotousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingobacterium sp002429765*. The type genome for the species is the GenBank assembly GCA_002429765.1. The GC content of the type genome is 39.99 % and the genome length is 5.4 Mbp.

Description of *Candidatus* Sphingobacterium catecatica sp. nov.

Candidatus Sphingobacterium catecatica (NL. fem. n. *catecatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingobacterium sp011043555*. The type genome for the species is the GenBank assembly RS_GCF_011043555.1. The GC content of the type genome is 42.12 % and the genome length is 4.61 Mbp.

Description of *Candidatus* Sphingobacterium coninisca sp. nov.

Candidatus Sphingobacterium coninisca (NL. fem. n. *coninisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingobacterium sp002500745*. The type genome for the species is

the GenBank assembly GCA_002378015.1. The GC content of the type genome is 39.82 % and the genome length is 4.86 Mbp.

Description of *Candidatus* Sphingobacterium debucicula sp. nov.

Candidatus Sphingobacterium debucicula (NL. fem. n. *debucicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingobacterium sp009557615*. The type genome for the species is the GenBank assembly RS_GCF_009557615.1. The GC content of the type genome is 38.92 % and the genome length is 4.32 Mbp.

Description of *Candidatus* Sphingobacterium defesisca sp. nov.

Candidatus Sphingobacterium defesisca (NL. fem. n. *defesisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingobacterium sp002734245*. The type genome for the species is the GenBank assembly RS_GCF_004526235.1. The GC content of the type genome is 40.68 % and the genome length is 3.93 Mbp.

Description of *Candidatus* Sphingobacterium ecfunitas sp. nov.

Candidatus Sphingobacterium ecfunitas (NL. fem. n. *ecfunitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingobacterium sp008180195*. The type genome for the species is the GenBank assembly RS_GCF_008180195.1. The GC content of the type genome is 41.75 % and the genome length is 5.2 Mbp.

Description of *Candidatus* Sphingobacterium echogatica sp. nov.

Candidatus Sphingobacterium echogatica (NL. fem. n. *echogatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingobacterium sp011043525*. The type genome for the species is the GenBank assembly RS_GCF_011043525.1. The GC content of the type genome is 43.34 % and the genome length is 4.11 Mbp.

Description of *Candidatus* Sphingobacterium forabago sp. nov.

Candidatus Sphingobacterium forabago (NL. fem. n. *forabago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingobacterium sp011316935*. The type genome for the species is the GenBank assembly RS_GCF_011316935.1. The GC content of the type genome is 42.16 % and the genome length is 3.87 Mbp.

Description of *Candidatus* Sphingobacterium hemitibula sp. nov.

Candidatus Sphingobacterium hemitibula (NL. fem. n. *hemitibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingobacterium sp002000245*. The type genome for the species is the GenBank assembly RS_GCF_002000245.1. The GC content of the type genome is 40.77 % and the genome length is 5.84 Mbp.

Description of *Candidatus* Sphingobacterium horomitoga sp. nov.

Candidatus Sphingobacterium horomitoga (NL. fem. n. *horomitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingobacterium sp004208525*. The type genome for the species is the GenBank assembly RS_GCF_004208525.1. The GC content of the type genome is 41.71 % and the genome length is 5.12 Mbp.

Description of *Candidatus* Sphingobacterium illunicula sp. nov.

Candidatus Sphingobacterium illunicula (NL. fem. n. *illunicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingobacterium sp011043515*. The type genome for the species is the GenBank assembly RS_GCF_011043515.1. The GC content of the type genome is 35.87 % and the genome length is 3.81 Mbp.

Description of *Candidatus* Sphingobacterium inhonastra sp. nov.

Candidatus Sphingobacterium inhonastra (NL. fem. n. *inhonastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingobacterium sp009733535*. The type genome for the species is the GenBank assembly RS_GCF_009733535.1. The GC content of the type genome is 36.4 % and the genome length is 4.72 Mbp.

Description of *Candidatus* Sphingobacterium innulimonas sp. nov.

Candidatus Sphingobacterium innulimonas (NL. fem. n. *innulimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingobacterium sp002454415*. The type genome for the species is the GenBank assembly GCA_002454415.1. The GC content of the type genome is 39.3 % and the genome length is 5.2 Mbp.

Description of *Candidatus* Sphingobacterium insematica sp. nov.

Candidatus Sphingobacterium insematica (NL. fem. n. *insematica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingobacterium sp002933815*. The type genome for the species is the GenBank assembly RS_GCF_002933815.1. The GC content of the type genome is 40.66 % and the genome length is 6.47 Mbp.

Description of *Candidatus* Sphingobacterium luxurifica sp. nov.

Candidatus Sphingobacterium luxurifica (NL. fem. n. *luxurifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingobacterium sp011030405*. The type genome for the species is the GenBank assembly RS_GCF_011030405.1. The GC content of the type genome is 43.42 % and the genome length is 4.27 Mbp.

Description of *Candidatus* Sphingobacterium medimugo sp. nov.

Candidatus Sphingobacterium medimugo (NL. fem. n. *medimugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingobacterium sp000783305*. The type genome for the species is the GenBank assembly RS_GCF_000783305.1. The GC content of the type genome is

41.02 % and the genome length is 5.32 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "soil".

Description of *Candidatus* Sphingobacterium miraciforma sp. nov.

Candidatus Sphingobacterium miraciforma (NL. fem. n. *miraciforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingobacterium sp002472835*. The type genome for the species is the GenBank assembly RS_GCF_013167215.1. The GC content of the type genome is 40.38 % and the genome length is 6.02 Mbp.

Description of *Candidatus* Sphingobacterium nehalicula sp. nov.

Candidatus Sphingobacterium nehalicula (NL. fem. n. *nehalicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingobacterium sp000814685*. The type genome for the species is the GenBank assembly RS_GCF_000814685.1. The GC content of the type genome is 41.25 % and the genome length is 3.04 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "soil".

Description of *Candidatus* Sphingobacterium nicotiforma sp. nov.

Candidatus Sphingobacterium nicotiforma (NL. fem. n. *nicotiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingobacterium sp000938735*. The type genome for the species is the GenBank assembly RS_GCF_000938735.2. The GC content of the type genome is 36.77 % and the genome length is 5.37 Mbp.

Description of *Candidatus* Sphingobacterium nivomitrix sp. nov.

Candidatus Sphingobacterium nivomitrix (NL. fem. n. *nivomitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingobacterium sp003076635*. The type genome for the species is the GenBank assembly RS_GCF_003076635.1. The GC content of the type genome is 41.96 % and the genome length is 3.91 Mbp.

Description of *Candidatus* Sphingobacterium obnunitura sp. nov.

Candidatus Sphingobacterium obnunitura (NL. fem. n. *obnunitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingobacterium sp900163865*. The type genome for the species is the GenBank assembly RS_GCF_900163865.1. The GC content of the type genome is 42.02 % and the genome length is 4.4 Mbp.

Description of *Candidatus* Sphingobacterium occumax sp. nov.

Candidatus Sphingobacterium occumax (NL. fem. n. *occumax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingobacterium sp002418355*. The type genome for the species is the GenBank assembly GCA_002418355.1. The GC content of the type genome is 39.3 % and the genome length is 5.03 Mbp.

Description of *Candidatus* Sphingobacterium retecitio sp. nov.

Candidatus Sphingobacterium retecitio (NL. fem. n. *retecitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingobacterium sp001586775*. The type genome for the species is the GenBank assembly RS_GCF_001586775.1. The GC content of the type genome is 41.65 % and the genome length is 3.56 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Poplar".

Description of *Candidatus* Sphingobacterium rudicibra sp. nov.

Candidatus Sphingobacterium rudicibra (NL. fem. n. *rudicibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingobacterium sp003071065*. The type genome for the species is the GenBank assembly GCA_002484085.1. The GC content of the type genome is 40.8 % and the genome length is 6.7 Mbp.

Description of *Candidatus* Sphingobacterium tenilibra sp. nov.

Candidatus Sphingobacterium tenilibra (NL. fem. n. *tenilibra* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingobacterium sp011007365*. The type genome for the species is the GenBank assembly RS_GCF_011007365.1. The GC content of the type genome is 39.71 % and the genome length is 4.4 Mbp.

Description of *Candidatus* Sphingobacterium vanidifica sp. nov.

Candidatus Sphingobacterium vanidifica (NL. fem. n. *vanidifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingobacterium sp002476975*. The type genome for the species is the GenBank assembly RS_GCF_014219045.1. The GC content of the type genome is 40.09 % and the genome length is 4.84 Mbp.

Description of *Candidatus* Sphingobium ablepitica sp. nov.

Candidatus Sphingobium ablepitica (NL. fem. n. *ablepitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingobium sp001899715*. The type genome for the species is the GenBank assembly GCA_001899715.1. The GC content of the type genome is 65.62 % and the genome length is 4.0 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Thiocyanate ramp bioreactor".

Description of *Candidatus* Sphingobium ammatastra sp. nov.

Candidatus Sphingobium ammatastra (NL. fem. n. *ammatastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingobium sp001556865*. The type genome for the species is the GenBank assembly RS_GCF_001556865.1. The GC content of the type genome is 63.96 % and the genome length is 4.62 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "hospital shower hose biofilm".

Description of *Candidatus* Sphingobium astapivita sp. nov.

Candidatus Sphingobium astapivita (NL. fem. n. *astapivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingobium sp009720145*. The type genome for the species is the GenBank assembly RS_GCF_009720145.1. The GC content of the type genome is 64.19 % and the genome length is 4.62 Mbp.

Description of *Candidatus* Sphingobium atropitoga sp. nov.

Candidatus Sphingobium atropitoga (NL. fem. n. *atropitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingobium sp013375555*. The type genome for the species is the GenBank assembly RS_GCF_013375555.1. The GC content of the type genome is 62.46 % and the genome length is 5.64 Mbp.

Description of *Candidatus* Sphingobium bipaletta sp. nov.

Candidatus Sphingobium bipaletta (NL. fem. n. *bipaletta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingobium sp001563285*. The type genome for the species is the GenBank assembly RS_GCF_001563285.1. The GC content of the type genome is 62.35 % and the genome length is 4.62 Mbp.

Description of *Candidatus* Sphingobium casabigena sp. nov.

Candidatus Sphingobium casabigena (NL. fem. n. *casabigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingobium sp012927105*. The type genome for the species is the GenBank assembly RS_GCF_012927105.1. The GC content of the type genome is 63.15 % and the genome length is 5.16 Mbp.

Description of *Candidatus* Sphingobium cenacigena sp. nov.

Candidatus Sphingobium cenacigena (NL. fem. n. *cenacigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingobium sp001650725*. The type genome for the species is the GenBank assembly GCA_003446025.1. The GC content of the type genome is 65.35 %

and the genome length is 3.47 Mbp.

Description of *Candidatus* Sphingobium dehisatica sp. nov.

Candidatus Sphingobium dehisatica (NL. fem. n. *dehisatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingobium sp000283515*. The type genome for the species is the GenBank assembly RS_GCF_000283515.1. The GC content of the type genome is 65.53 % and the genome length is 4.35 Mbp.

Description of *Candidatus* Sphingobium depelitudo sp. nov.

Candidatus Sphingobium depelitudo (NL. fem. n. *depelitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingobium sp014201265*. The type genome for the species is the GenBank assembly RS_GCF_014201265.1. The GC content of the type genome is 64.5 % and the genome length is 3.52 Mbp.

Description of *Candidatus* Sphingobium ecastigena sp. nov.

Candidatus Sphingobium ecastigena (NL. fem. n. *ecastigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingobium sp003248935*. The type genome for the species is the GenBank assembly GCA_003248935.1. The GC content of the type genome is 65.33 % and the genome length is 3.64 Mbp.

Description of *Candidatus* Sphingobium encolibra sp. nov.

Candidatus Sphingobium encolibra (NL. fem. n. *encolibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingobium sp900218065*. The type genome for the species is the GenBank assembly RS_GCF_900218065.1. The GC content of the type genome is 62.44 % and the genome length is 3.71 Mbp.

Description of *Candidatus* Sphingobium ensifedo sp. nov.

Candidatus Sphingobium ensifedo (NL. fem. n. *ensifedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingobium sp013911745*. The type genome for the species is the GenBank assembly GCA_013911745.1. The GC content of the type genome is 65.09 % and the genome length is 2.89 Mbp.

Description of *Candidatus* Sphingobium exoscitica sp. nov.

Candidatus Sphingobium exoscitica (NL. fem. n. *exoscitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingobium sp013822485*. The type genome for the species is the GenBank assembly GCA_013822485.1. The GC content of the type genome is 64.25 % and the genome length is 3.78 Mbp.

Description of *Candidatus* Sphingobium exturitas sp. nov.

Candidatus Sphingobium exturitas (NL. fem. n. *exturitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingobium sp003248505*. The type genome for the species is the GenBank assembly GCA_003248505.1. The GC content of the type genome is 63.56 % and the genome length is 4.09 Mbp.

Description of *Candidatus* Sphingobium funebilenta sp. nov.

Candidatus Sphingobium funebilenta (NL. fem. n. *funebilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingobium sp003591655*. The type genome for the species is the GenBank assembly RS_GCF_003591655.1. The GC content of the type genome is 62.78 % and the genome length is 5.04 Mbp.

Description of *Candidatus* Sphingobium hemidicella sp. nov.

Candidatus Sphingobium hemidicella (NL. fem. n. *hemidicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingobium sp009360885*. The type genome for the species is the GenBank assembly GCA_009360885.1. The GC content of the type genome is 55.74 % and the genome length is 2.93 Mbp.

Description of *Candidatus* Sphingobium inmorimonas sp. nov.

Candidatus Sphingobium inmorimonas (NL. fem. n. *inmorimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingobium sp002457415*. The type genome for the species is the GenBank assembly GCA_002457415.1. The GC content of the type genome is 66.26 % and the genome length is 3.15 Mbp.

Description of *Candidatus* Sphingobium latibastra sp. nov.

Candidatus Sphingobium latibastra (NL. fem. n. *latibastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingobium sp014203965*. The type genome for the species is the GenBank assembly RS_GCF_014203965.1. The GC content of the type genome is 63.13 % and the genome length is 5.14 Mbp.

Description of *Candidatus* Sphingobium linigibula sp. nov.

Candidatus Sphingobium linigibula (NL. fem. n. *linigibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingobium sp006226685*. The type genome for the species is the GenBank assembly GCA_006226295.1. The GC content of the type genome is 61.57 % and the genome length is 4.16 Mbp.

Description of *Candidatus* Sphingobium lutulago sp. nov.

Candidatus Sphingobium lutulago (NL. fem. n. *lutulago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingobium sp001563265*. The type genome for the species is the GenBank assembly RS_GCF_001563265.1. The GC content of the type genome is 63.07

% and the genome length is 6.23 Mbp.

Description of *Candidatus* Sphingobium milifibula sp. nov.

Candidatus Sphingobium milifibula (NL. fem. n. *milifibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingobium sp001713415*. The type genome for the species is the GenBank assembly RS_GCF_001713415.1. The GC content of the type genome is 62.9 % and the genome length is 4.37 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Chrysochromulina tobin phycosphere".

Description of *Candidatus* Sphingobium monimisca sp. nov.

Candidatus Sphingobium monimisca (NL. fem. n. *monimisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingobium sp013375535*. The type genome for the species is the GenBank assembly RS_GCF_013375535.1. The GC content of the type genome is 63.35 % and the genome length is 5.82 Mbp.

Description of *Candidatus* Sphingobium nocumicula sp. nov.

Candidatus Sphingobium nocumicula (NL. fem. n. *nocumicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingobium sp000588875*. The type genome for the species is the GenBank assembly RS_GCF_000588875.1. The GC content of the type genome is 62.41 % and the genome length is 5.24 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "oil-contaminated soil".

Description of *Candidatus* Sphingobium obmutimonas sp. nov.

Candidatus Sphingobium obmutimonas (NL. fem. n. *obmutimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingobium sp002953135*. The type genome for the species is the GenBank assembly RS_GCF_002953135.1. The GC content of the type genome is 60.64 % and the genome length is 4.51 Mbp.

Description of *Candidatus* Sphingobium octopitio sp. nov.

Candidatus Sphingobium octopitio (NL. fem. n. *octopitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingobium sp001421665*. The type genome for the species is the GenBank assembly RS_GCF_001421665.1. The GC content of the type genome is 63.49 % and the genome length is 4.82 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "leaf".

Description of *Candidatus* Sphingobium saxopitura sp. nov.

Candidatus Sphingobium saxopitura (NL. fem. n. *saxopitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingobium sp000153545*. The type genome for the species is the GenBank assembly GCA_002360735.1. The GC content of the type genome is 63.64 % and the genome length is 3.11 Mbp.

Description of *Candidatus* Sphingobium sceptastra sp. nov.

Candidatus Sphingobium sceptastra (NL. fem. n. *sceptastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingobium sp014280435*. The type genome for the species is the GenBank assembly RS_GCF_014280435.1. The GC content of the type genome is 62.63 % and the genome length is 4.43 Mbp.

Description of *Candidatus* Sphingobium senacicella sp. nov.

Candidatus Sphingobium senacicella (NL. fem. n. *senacicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingobium sp001658005*. The type genome for the species is the GenBank assembly RS_GCF_001658005.1. The GC content of the type genome is 61.91 % and the genome length is 4.26 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "soil".

Description of *Candidatus* Sphingobium senipifica sp. nov.

Candidatus Sphingobium senipifica (NL. fem. n. *senipifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingobium sp000508185*. The type genome for the species is the GenBank assembly RS_GCF_000508185.1. The GC content of the type genome is 63.9 % and the genome length is 4.78 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "surface sediment from Makarov Basin at a depth 4000 m and layer 36-38 cm".

Description of *Candidatus* Sphingobium siligitura sp. nov.

Candidatus Sphingobium siligitura (NL. fem. n. *siligitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingobium sp900109095*. The type genome for the species is the GenBank assembly RS_GCF_900109095.1. The GC content of the type genome is 62.25 % and the genome length is 6.17 Mbp.

Description of *Candidatus* Sphingobium sotulitrix sp. nov.

Candidatus Sphingobium sotulitrix (NL. fem. n. *sotulitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingobium sp900013425*. The type genome for the species is the GenBank assembly RS_GCF_900010525.1. The GC content of the type genome is 63.36 % and the genome length is 4.87 Mbp.

Description of *Candidatus* Sphingobium timefatica sp. nov.

Candidatus Sphingobium timefatica (NL. fem. n. *timefatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingobium sp000281715*. The type genome for the species is the GenBank assembly RS_GCF_000281715.1. The GC content of the type genome is 64.04 % and the genome length is 4.48 Mbp.

Description of *Candidatus* Sphingobium vacilatio sp. nov.

Candidatus Sphingobium vacilatio (NL. fem. n. *vacilatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingobium sp002312805*. The type genome for the species is the GenBank assembly GCA_001829085.1. The GC content of the type genome is 63.17 % and the genome length is 3.88 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under low O2 conditions; 1.2 micron filter; full assembly".

Description of *Candidatus* Sphingobium virecitas sp. nov.

Candidatus Sphingobium virecitas (NL. fem. n. *virecitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingobium sp900111125*. The type genome for the species is the GenBank assembly RS_GCF_900111125.1. The GC content of the type genome is 62.86 % and the genome length is 5.73 Mbp.

Description of *Candidatus* Sphingobium adessax sp. nov.

Candidatus Sphingobium adessax (NL. fem. n. *adessax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingobium_A sp003590775*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_003590775.1. The GC content of the type genome is 63.9 % and the genome length is 4.24 Mbp.

Description of *Candidatus* Sphingomicrobium admoritas sp. nov.

Candidatus Sphingomicrobium admoritas (NL. fem. n. *admoritas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingomicrobium sp902806285*. The type genome for the species is the GenBank assembly GCA_902806285.1. The GC content of the type genome is 68.71 % and the genome length is 2.52 Mbp.

Description of *Candidatus* Sphingomicrobium adsenatica sp. nov.

Candidatus Sphingomicrobium adsenatica (NL. fem. n. *adsenatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a

noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingomicrobium sp011302055*. The type genome for the species is the GenBank assembly RS_GCF_011302055.1. The GC content of the type genome is 65.45 % and the genome length is 2.07 Mbp.

Description of *Candidatus* Sphingomicrobium aglasentia sp. nov.

Candidatus Sphingomicrobium aglasentia (NL. fem. n. *aglasentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingomicrobium sp902806275*. The type genome for the species is the GenBank assembly GCA_902806275.1. The GC content of the type genome is 66.61 % and the genome length is 1.62 Mbp.

Description of *Candidatus* Sphingomicrobium benepisca sp. nov.

Candidatus Sphingomicrobium benepisca (NL. fem. n. *benepisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingomicrobium sp013816785*. The type genome for the species is the GenBank assembly GCA_013816785.1. The GC content of the type genome is 64.29 % and the genome length is 2.28 Mbp.

Description of *Candidatus* Sphingomicrobium cepuritrix sp. nov.

Candidatus Sphingomicrobium cepuritrix (NL. fem. n. *cepuritrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingomicrobium sp013816595*. The type genome for the species is the GenBank assembly GCA_013816595.1. The GC content of the type genome is 62.77 % and the genome length is 1.91 Mbp.

Description of *Candidatus* Sphingomicrobium cerarugo sp. nov.

Candidatus Sphingomicrobium cerarugo (NL. fem. n. *cerarugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Sphingomicrobium sp003097155*. The type genome for the species is the GenBank assembly RS_GCF_003097155.1. The GC content of the type genome is 65.29 % and the genome length is 2.93 Mbp.

Description of *Candidatus* Sphingomicrobium cosidatio sp. nov.

Candidatus Sphingomicrobium cosidatio (NL. fem. n. *cosidatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingomicrobium sp013361785*. The type genome for the species is the GenBank assembly GCA_013361785.1. The GC content of the type genome is 64.9 % and the genome length is 2.34 Mbp.

Description of *Candidatus* Sphingomicrobium fecuniforma sp. nov.

Candidatus Sphingomicrobium fecuniforma (NL. fem. n. *fecuniforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingomicrobium sp003499275*. The type genome for the species is the GenBank assembly RS_GCF_003499275.1. The GC content of the type genome is 67.54 % and the genome length is 2.29 Mbp.

Description of *Candidatus* Sphingomicrobium fecunigena sp. nov.

Candidatus Sphingomicrobium fecunigena (NL. fem. n. *fecunigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingomicrobium sp013812805*. The type genome for the species is the GenBank assembly GCA_013812805.1. The GC content of the type genome is 65.17 % and the genome length is 2.24 Mbp.

Description of *Candidatus* Sphingomicrobium feficiforma sp. nov.

Candidatus Sphingomicrobium feficiforma (NL. fem. n. *feficiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingomicrobium sp014352855*. The type genome for the species is the GenBank assembly RS_GCF_014352855.1. The GC content of the type genome is 65.85 % and the genome length is 2.51 Mbp.

Description of *Candidatus* Sphingomicrobium fumacousia sp. nov.

Candidatus Sphingomicrobium fumacousia (NL. fem. n. *fumacousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingomicrobium sp902806295*. The type genome for the species is the GenBank assembly GCA_902806295.1. The GC content of the type genome is 65.96 % and the genome length is 1.83 Mbp.

Description of *Candidatus* Sphingomicrobium holoventia sp. nov.

Candidatus Sphingomicrobium holoventia (NL. fem. n. *holoventia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingomicrobium sp004282935*. The type genome for the species is the GenBank assembly GCA_004282935.1. The GC content of the type genome is 61.9 % and the genome length is 1.82 Mbp.

Description of *Candidatus* Sphingomicrobium inabsitura sp. nov.

Candidatus Sphingomicrobium inabsitura (NL. fem. n. *inabsitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingomicrobium sp003970925*. The type genome for the species is the GenBank assembly RS_GCF_003970925.1. The GC content of the type genome is 68.43 % and the genome length is 3.21 Mbp.

Description of *Candidatus* Sphingomicrobium inlepisca sp. nov.

Candidatus Sphingomicrobium inlepisca (NL. fem. n. *inlepisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingomicrobium sp011301715*. The type genome for the species is the GenBank assembly RS_GCF_011301715.1. The GC content of the type genome is 62.73 % and the genome length is 2.34 Mbp.

Description of *Candidatus* Sphingomicrobium metabax sp. nov.

Candidatus Sphingomicrobium metabax (NL. fem. n. *metabax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingomicrobium sp902806265*. The type genome for the species is the GenBank assembly GCA_902806265.1. The GC content of the type genome is 67.44 % and the genome length is 2.33 Mbp.

Description of *Candidatus* Sphingomicrobium offulastra sp. nov.

Candidatus Sphingomicrobium offulastra (NL. fem. n. *offulastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingomicrobium sp011053295*. The type genome for the species is the GenBank assembly GCA_011053295.1. The GC content of the type genome is 67.09 % and the genome length is 1.64 Mbp.

Description of *Candidatus* Sphingomicrobium ossucugo sp. nov.

Candidatus Sphingomicrobium ossucugo (NL. fem. n. *ossucugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingomicrobium sp011300455*. The type genome for the species is the GenBank assembly RS_GCF_011300455.1. The GC content of the type genome is 63.28 % and the genome length is 2.72 Mbp.

Description of *Candidatus* Sphingomicrobium revulitas sp. nov.

Candidatus Sphingomicrobium revulitas (NL. fem. n. *revulitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingomicrobium sp009720245*. The type genome for the species is the GenBank assembly RS_GCF_009720245.1. The GC content of the type genome is 65.91 % and the genome length is 2.86 Mbp.

Description of *Candidatus* Sphingomicrobium rurigivita sp. nov.

Candidatus Sphingomicrobium rurigivita (NL. fem. n. *rurigivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Sphingomicrobium sp000620665*. The type genome for the species is the GenBank assembly RS_GCF_000620665.1. The GC content of the type genome is 65.2 % and the genome length is 2.79 Mbp.

Description of *Candidatus* Sphingomicrobium sugilatica sp. nov.

Candidatus Sphingomicrobium sugilatica (NL. fem. n. *sugilatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingomicrobium sp007998985*. The type genome for the species is the GenBank assembly RS_GCF_007998985.1. The GC content of the type genome is 63.66 % and the genome length is 2.23 Mbp.

Description of *Candidatus* Sphingomicrobium tibicetta sp. nov.

Candidatus Sphingomicrobium tibicetta (NL. fem. n. *tibicetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingomicrobium sp013817375*. The type genome for the species is the GenBank assembly GCA_013817375.1. The GC content of the type genome is 63.89 % and the genome length is 2.23 Mbp.

Description of *Candidatus* Sphingomicrobium vilititura sp. nov.

Candidatus Sphingomicrobium vilititura (NL. fem. n. *vilititura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingomicrobium sp013812825*. The type genome for the species is the GenBank assembly GCA_013812825.1. The GC content of the type genome is 66.25 % and the genome length is 2.45 Mbp.

Description of *Candidatus* Sphingomonas abinvifica sp. nov.

Candidatus Sphingomonas abinvifica (NL. fem. n. *abinvifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingomonas sp012927115*. The type genome for the species is the GenBank assembly RS_GCF_012927115.1. The GC content of the type genome is 65.84 % and the genome length is 4.48 Mbp.

Description of *Candidatus* Sphingomonas abmatatica sp. nov.

Candidatus Sphingomonas abmatatica (NL. fem. n. *abmatatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingomonas sp001421245*. The type genome for the species is the GenBank assembly RS_GCF_001421245.1. The GC content of the type genome is 65.8 % and the genome length is 4.14 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "leaf".

Description of *Candidatus* Sphingomonas abrelitrix sp. nov.

Candidatus Sphingomonas abrelitrix (NL. fem. n. *abrelitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingomonas sp900114095*. The type genome for the species is the GenBank assembly RS_GCF_900114095.1. The GC content of the type genome is 67.32 % and the genome length is 4.77 Mbp.

Description of *Candidatus* Sphingomonas abrumiforma sp. nov.

Candidatus Sphingomonas abrumiforma (NL. fem. n. *abrumiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingomonas sp004341085*. The type genome for the species is the GenBank assembly RS_GCF_004341085.1. The GC content of the type genome is 65.14 % and the genome length is 4.77 Mbp.

Description of *Candidatus* Sphingomonas adbelugo sp. nov.

Candidatus Sphingomonas adbelugo (NL. fem. n. *adbelugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingomonas sp004101245*. The type genome for the species is the GenBank assembly RS_GCF_004101245.1. The GC content of the type genome is 65.69 % and the genome length is 4.25 Mbp.

Description of *Candidatus* Sphingomonas adfiritas sp. nov.

Candidatus Sphingomonas adfiritas (NL. fem. n. *adfiritas* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingomonas sp012035195*. The type genome for the species is the GenBank assembly RS_GCF_012035195.1. The GC content of the type genome is 70.28 % and the genome length is 4.16 Mbp.

Description of *Candidatus* Sphingomonas adperitas sp. nov.

Candidatus Sphingomonas adperitas (NL. fem. n. *adperitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingomonas sp001422045*. The type genome for the species is the GenBank assembly RS_GCF_001422045.1. The GC content of the type genome is 65.31 % and the genome length is 4.3 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "leaf".

Description of *Candidatus* Sphingomonas adpicugo sp. nov.

Candidatus Sphingomonas adpicugo (NL. fem. n. *adpicugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingomonas sp002707985*. The type genome for the species is the GenBank assembly GCA_002707985.1. The GC content of the type genome is 63.78 % and the genome length is 3.48 Mbp.

Description of *Candidatus* Sphingomonas adporibula sp. nov.

Candidatus Sphingomonas adporibula (NL. fem. n. *adporibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingomonas sp002127225*. The type genome for the species is the GenBank assembly RS_GCF_002127225.1. The GC content of the type genome is 67.81 % and the genome length is 4.29 Mbp.

Description of *Candidatus* Sphingomonas adsicisca sp. nov.

Candidatus Sphingomonas adsicisca (NL. fem. n. *adsicisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingomonas sp001423765*. The type genome for the species is the GenBank assembly RS_GCF_001423765.1. The GC content of the type genome is 67.11 % and the genome length is 3.6 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "leaf".

Description of *Candidatus* Sphingomonas adtilax sp. nov.

Candidatus Sphingomonas adtilax (NL. fem. n. *adtilax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingomonas sp001426195*. The type genome for the species is the GenBank assembly RS_GCF_001426195.1. The GC content of the type genome is 64.67 % and the genome length is 3.91 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "leaf".

Description of *Candidatus* Sphingomonas advigessa sp. nov.

Candidatus Sphingomonas advigessa (NL. fem. n. *advigessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingomonas sp001421995*. The type genome for the species is the GenBank assembly RS_GCF_001421995.1. The GC content of the type genome is 67.02 % and the genome length is 3.73 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "leaf".

Description of *Candidatus* Sphingomonas agratedo sp. nov.

Candidatus Sphingomonas agratedo (NL. fem. n. *agratedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingomonas sp000712135*. The type genome for the species is the GenBank assembly RS_GCF_000712135.1. The GC content of the type genome is 65.9 % and the genome length is 4.24 Mbp.

Description of *Candidatus* Sphingomonas ambacilenta sp. nov.

Candidatus Sphingomonas ambacilenta (NL. fem. n. *ambacilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingomonas sp001421505*. The type genome for the species is the GenBank assembly RS_GCF_001421505.1. The GC content of the type genome is 66.84 % and the genome length is 3.2 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "leaf".

Description of *Candidatus* Sphingomonas ambaditudo sp. nov.

Candidatus Sphingomonas ambaditudo (NL. fem. n. *ambaditudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingomonas sp004795835*. The type genome for the species is the GenBank assembly RS_GCF_004795835.1. The GC content of the type genome is 65.24 % and the genome length is 4.28 Mbp.

Description of *Candidatus* Sphingomonas ambifitudo sp. nov.

Candidatus Sphingomonas ambifitudo (NL. fem. n. *ambifitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingomonas sp903642285*. The type genome for the species is the GenBank assembly RS_GCF_903642285.1. The GC content of the type genome is 66.16 % and the genome length is 3.05 Mbp.

Description of *Candidatus* Sphingomonas ammiximonas sp. nov.

Candidatus Sphingomonas ammiximonas (NL. fem. n. *ammiximonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingomonas sp013822915*. The type genome for the species is the GenBank assembly GCA_013822915.1. The GC content of the type genome is 64.38 % and the genome length is 2.3 Mbp.

Description of *Candidatus* Sphingomonas anxifitudo sp. nov.

Candidatus Sphingomonas anxifitudo (NL. fem. n. *anxifitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingomonas sp001421415*. The type genome for the species is the GenBank assembly RS_GCF_001421415.1. The GC content of the type genome is 64.4

% and the genome length is 4.7 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "leaf".

Description of *Candidatus* Sphingomonas armidivita sp. nov.

Candidatus Sphingomonas armidivita (NL. fem. n. *armidivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingomonas sp001421785*. The type genome for the species is the GenBank assembly RS_GCF_001421785.1. The GC content of the type genome is 67.44 % and the genome length is 3.23 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "leaf".

Description of *Candidatus* Sphingomonas ascenentia sp. nov.

Candidatus Sphingomonas ascenentia (NL. fem. n. *ascenentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingomonas sp003946805*. The type genome for the species is the GenBank assembly RS_GCF_003946805.1. The GC content of the type genome is 67.7 % and the genome length is 3.91 Mbp.

Description of *Candidatus* Sphingomonas attubiforma sp. nov.

Candidatus Sphingomonas attubiforma (NL. fem. n. *attubiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingomonas sp003355005*. The type genome for the species is the GenBank assembly RS_GCF_003355005.1. The GC content of the type genome is 67.56 % and the genome length is 3.76 Mbp.

Description of *Candidatus* Sphingomonas baditetta sp. nov.

Candidatus Sphingomonas baditetta (NL. fem. n. *baditetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingomonas sp001897045*. The type genome for the species is the GenBank assembly RS_GCF_013409765.1. The GC content of the type genome is 66.08 % and the genome length is 5.56 Mbp.

Description of *Candidatus* Sphingomonas binocitrix sp. nov.

Candidatus Sphingomonas binocitrix (NL. fem. n. *binocitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingomonas sp001421805*. The type genome for the species is the GenBank assembly RS_GCF_001421825.1. The GC content of the type genome is 65.85 % and the genome length is 3.99 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "leaf".

Description of *Candidatus* Sphingomonas biparibula sp. nov.

Candidatus Sphingomonas biparibula (NL. fem. n. *biparibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingomonas sp001556185*. The type genome for the species is the GenBank assembly RS_GCF_001556185.1. The GC content of the type genome is 65.12 % and the genome length is 3.64 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "hospital shower hose biofilm".

Description of *Candidatus* Sphingomonas bipenicula sp. nov.

Candidatus Sphingomonas bipenicula (NL. fem. n. *bipenicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingomonas sp004340965*. The type genome for the species is the GenBank assembly RS_GCF_004340965.1. The GC content of the type genome is 64.84 % and the genome length is 4.39 Mbp.

Description of *Candidatus* Sphingomonas bonitilega sp. nov.

Candidatus Sphingomonas bonitilega (NL. fem. n. *bonitilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingomonas sp002403415*. The type genome for the species is the GenBank assembly GCA_002403415.1. The GC content of the type genome is 63.63 % and the genome length is 2.65 Mbp.

Description of *Candidatus* Sphingomonas brasmicella sp. nov.

Candidatus Sphingomonas brasmicella (NL. fem. n. *brasmicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingomonas sp903643035*. The type genome for the species is the GenBank assembly RS_GCF_903643035.1. The GC content of the type genome is 68.8 % and the genome length is 2.85 Mbp.

Description of *Candidatus* Sphingomonas butubessa sp. nov.

Candidatus Sphingomonas butubessa (NL. fem. n. *butubessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingomonas sp001425385*. The type genome for the species is the GenBank assembly RS_GCF_001421845.1. The GC content of the type genome is 67.74 % and the genome length is 3.78 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "leaf".

Description of *Candidatus* Sphingomonas capuditia sp. nov.

Candidatus Sphingomonas capuditia (NL. fem. n. *capuditia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingomonas sp000282895*. The type genome for the species is the GenBank assembly RS_GCF_001469845.1. The GC content of the type genome is 65.89 % and the genome length is 4.04 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "sea-mud".

Description of *Candidatus* Sphingomonas categitudo sp. nov.

Candidatus Sphingomonas categitudo (NL. fem. n. *categitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingomonas sp001650735*. The type genome for the species is the GenBank assembly RS_GCF_001650735.1. The GC content of the type genome is 66.24 % and the genome length is 5.41 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "sediment".

Description of *Candidatus* Sphingomonas cicaretta sp. nov.

Candidatus Sphingomonas cicaretta (NL. fem. n. *cicaretta* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingomonas sp005773165*. The type genome for the species is the GenBank assembly GCA_005773165.1. The GC content of the type genome is 69.32 % and the genome length is 2.54 Mbp.

Description of *Candidatus* Sphingomonas cilibetta sp. nov.

Candidatus Sphingomonas cilibetta (NL. fem. n. *cilibetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingomonas sp004799495*. The type genome for the species is the GenBank assembly GCA_004799495.1. The GC content of the type genome is 66.52 % and the genome length is 3.03 Mbp.

Description of *Candidatus* Sphingomonas coninedo sp. nov.

Candidatus Sphingomonas coninedo (NL. fem. n. *coninedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingomonas sp013344685*. The type genome for the species is the GenBank assembly RS_GCF_013344685.1. The GC content of the type genome is 66.97 % and the genome length is 4.57 Mbp.

Description of *Candidatus* Sphingomonas crusmessa sp. nov.

Candidatus Sphingomonas crusmessa (NL. fem. n. *crusmessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingomonas sp002002925*. The type genome for the species is the GenBank assembly RS_GCF_002002925.1. The GC content of the type genome is 66.2 % and the genome length is 4.16 Mbp.

Description of *Candidatus* Sphingomonas crusmitrix sp. nov.

Candidatus Sphingomonas crusmitrix (NL. fem. n. *crusmitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingomonas sp900110035*. The type genome for the species is the GenBank assembly RS_GCF_900110035.1. The GC content of the type genome is 66.95 % and the genome length is 3.85 Mbp.

Description of *Candidatus* Sphingomonas defunago sp. nov.

Candidatus Sphingomonas defunago (NL. fem. n. *defunago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingomonas sp013416555*. The type genome for the species is the GenBank assembly RS_GCF_013416555.1. The GC content of the type genome is 66.65 % and the genome length is 4.34 Mbp.

Description of *Candidatus* Sphingomonas delucousia sp. nov.

Candidatus Sphingomonas delucousia (NL. fem. n. *delucousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingomonas sp003610375*. The type genome for the species is the GenBank assembly RS_GCF_004340825.1. The GC content of the type genome is 64.9 % and the genome length is 4.65 Mbp.

Description of *Candidatus* Sphingomonas derelitura sp. nov.

Candidatus Sphingomonas derelitura (NL. fem. n. *derelitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingomonas sp003951315*. The type genome for the species is the GenBank assembly RS_GCF_003951315.1. The GC content of the type genome is 67.38 % and the genome length is 4.2 Mbp.

Description of *Candidatus* Sphingomonas detumigena sp. nov.

Candidatus Sphingomonas detumigena (NL. fem. n. *detumigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingomonas sp002280565*. The type genome for the species is the GenBank assembly GCA_002280565.1. The GC content of the type genome is 66.05 % and the genome length is 2.68 Mbp.

Description of *Candidatus* Sphingomonas diluditoga sp. nov.

Candidatus Sphingomonas diluditoga (NL. fem. n. *diluditoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingomonas sp902506455*. The type genome for the species is the GenBank assembly RS_GCF_902506455.1. The GC content of the type genome is 67.39 % and the genome length is 3.77 Mbp.

Description of *Candidatus* Sphingomonas domicentia sp. nov.

Candidatus Sphingomonas domicentia (NL. fem. n. *domicentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingomonas sp014193845*. The type genome for the species is the GenBank assembly RS_GCF_014193405.1. The GC content of the type genome is 69.55 % and the genome length is 4.82 Mbp.

Description of *Candidatus* Sphingomonas duponilenta sp. nov.

Candidatus Sphingomonas duponilenta (NL. fem. n. *duponilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingomonas sp005144715*. The type genome for the species is the GenBank assembly RS_GCF_005144715.1. The GC content of the type genome is 67.81 % and the genome length is 3.27 Mbp.

Description of *Candidatus* Sphingomonas duricilenta sp. nov.

Candidatus Sphingomonas duricilenta (NL. fem. n. *duricilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingomonas sp003075315*. The type genome for the species is the GenBank assembly GCA_003963085.1. The GC content of the type genome is 67.18 % and the genome length is 3.27 Mbp.

Description of *Candidatus* Sphingomonas enuclibra sp. nov.

Candidatus Sphingomonas enuclibra (NL. fem. n. *enuclibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingomonas sp000382485*. The type genome for the species is the GenBank assembly RS_GCF_000382485.1. The GC content of the type genome is 66.53 % and the genome length is 3.19 Mbp.

Description of *Candidatus* Sphingomonas excoretta sp. nov.

Candidatus Sphingomonas excoretta (NL. fem. n. *excoretta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingomonas sp000241485*. The type genome for the species is the GenBank assembly RS_GCF_000241485.1. The GC content of the type genome is 65.93 % and the genome length is 4.8 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Arctic lichen".

Description of *Candidatus* Sphingomonas fefelentia sp. nov.

Candidatus Sphingomonas fefelentia (NL. fem. n. *fefelentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingomonas sp001421765*. The type genome for the species is the GenBank assembly RS_GCF_001421405.1. The GC content of the type genome is 66.9 % and the genome length is 3.95 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "leaf".

Description of *Candidatus* Sphingomonas fiducilenta sp. nov.

Candidatus Sphingomonas fiducilenta (NL. fem. n. *fiducilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingomonas sp900115295*. The type genome for the species is the GenBank assembly RS_GCF_900115295.1. The GC content of the type genome is 64.98 % and the genome length is 5.05 Mbp.

Description of *Candidatus* Sphingomonas forabicula sp. nov.

Candidatus Sphingomonas forabicula (NL. fem. n. *forabicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingomonas sp014334115*. The type genome for the species is the GenBank assembly RS_GCF_014334115.1. The GC content of the type genome is 67.11 % and the genome length is 3.19 Mbp.

Description of *Candidatus* Sphingomonas foricimonas sp. nov.

Candidatus Sphingomonas foricimonas (NL. fem. n. *foricimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingomonas sp001421355*. The type genome for the species is the GenBank assembly RS_GCF_001421285.1. The GC content of the type genome is 66.87 % and the genome length is 3.77 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "leaf".

Description of *Candidatus* Sphingomonas funivicula sp. nov.

Candidatus Sphingomonas funivicula (NL. fem. n. *funivicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingomonas sp001424005*. The type genome for the species is the GenBank assembly RS_GCF_001424005.1. The GC content of the type genome is 65.63 % and the genome length is 4.2 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "leaf".

Description of *Candidatus* Sphingomonas furibicula sp. nov.

Candidatus Sphingomonas furibicula (NL. fem. n. *furibicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingomonas sp003345355*. The type genome for the species is the GenBank assembly RS_GCF_003345355.1. The GC content of the type genome is 68.26 % and the genome length is 3.64 Mbp.

Description of *Candidatus* Sphingomonas hecatibra sp. nov.

Candidatus Sphingomonas hecatibra (NL. fem. n. *hecatibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Sphingomonas sp002083475*. The type genome for the species is the GenBank assembly GCA_002083475.1. The GC content of the type genome is 67.75 % and the genome length is 2.86 Mbp.

Description of *Candidatus* Sphingomonas homulentia sp. nov.

Candidatus Sphingomonas homulentia (NL. fem. n. *homulentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingomonas sp001557215*. The type genome for the species is the GenBank assembly RS_GCF_001556635.1. The GC content of the type genome is 66.08 % and the genome length is 4.29 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "hospital shower hose biofilm".

Description of *Candidatus* Sphingomonas immobitudo sp. nov.

Candidatus Sphingomonas immobitudo (NL. fem. n. *immobitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingomonas sp014358075*. The type genome for the species is the GenBank assembly RS_GCF_014358075.1. The GC content of the type genome is 65.67 % and the genome length is 4.06 Mbp.

Description of *Candidatus* Sphingomonas immobivita sp. nov.

Candidatus Sphingomonas immobivita (NL. fem. n. *immobivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingomonas sp007833215*. The type genome for the species is the GenBank assembly RS_GCF_007833215.1. The GC content of the type genome is 65.53 % and the genome length is 4.15 Mbp.

Description of *Candidatus* Sphingomonas inbecessa sp. nov.

Candidatus Sphingomonas inbecessa (NL. fem. n. *inbecessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingomonas sp011057975*. The type genome for the species is the GenBank assembly RS_GCF_011057975.1. The GC content of the type genome is 64.69 % and the genome length is 3.86 Mbp.

Description of *Candidatus* Sphingomonas infanatica sp. nov.

Candidatus Sphingomonas infanatica (NL. fem. n. *infanatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingomonas sp002083435*. The type genome for the species is the GenBank assembly GCA_002083435.1. The GC content of the type genome is 67.28 % and the genome length is 3.07 Mbp.

Description of *Candidatus* Sphingomonas inmacugo sp. nov.

Candidatus Sphingomonas inmacugo (NL. fem. n. *inmacugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingomonas sp013374115*. The type genome for the species is the GenBank assembly RS_GCF_013374115.1. The GC content of the type genome is 65.47 % and the genome length is 4.0 Mbp.

Description of *Candidatus* Sphingomonas inmenibula sp. nov.

Candidatus Sphingomonas inmenibula (NL. fem. n. *inmenibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingomonas sp012650175*. The type genome for the species is the GenBank assembly RS_GCF_012650175.1. The GC content of the type genome is 66.85 % and the genome length is 4.64 Mbp.

Description of *Candidatus* Sphingomonas inmoriforma sp. nov.

Candidatus Sphingomonas inmoriforma (NL. fem. n. *inmoriforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingomonas sp001421535*. The type genome for the species is the GenBank assembly RS_GCF_001421535.1. The GC content of the type genome is 66.09 % and the genome length is 4.31 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "leaf".

Description of *Candidatus* Sphingomonas insubivita sp. nov.

Candidatus Sphingomonas insubivita (NL. fem. n. *insubivita* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingomonas sp003050745*. The type genome for the species is the GenBank assembly RS_GCF_003050745.1. The GC content of the type genome is 65.47 % and the genome length is 4.09 Mbp.

Description of *Candidatus* Sphingomonas intacigena sp. nov.

Candidatus Sphingomonas intacigena (NL. fem. n. *intacigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingomonas sp903643065*. The type genome for the species is the GenBank assembly RS_GCF_903643065.1. The GC content of the type genome is 69.02 % and the genome length is 2.63 Mbp.

Description of *Candidatus* Sphingomonas intolilega sp. nov.

Candidatus Sphingomonas intolilega (NL. fem. n. *intolilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingomonas sp002863155*. The type genome for the species is the GenBank assembly GCA_002863155.1. The GC content of the type genome is 65.56 % and the genome length is 3.29 Mbp.

Description of *Candidatus* Sphingomonas invecilenta sp. nov.

Candidatus Sphingomonas invecilenta (NL. fem. n. *invecilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingomonas sp004345855*. The type genome for the species is the GenBank assembly RS_GCF_004345855.1. The GC content of the type genome is 70.01 % and the genome length is 4.91 Mbp.

Description of *Candidatus* Sphingomonas lacinifica sp. nov.

Candidatus Sphingomonas lacinifica (NL. fem. n. *lacinifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingomonas sp003096895*. The type genome for the species is the GenBank assembly RS_GCF_003096895.1. The GC content of the type genome is 67.21 % and the genome length is 4.53 Mbp.

Description of *Candidatus* Sphingomonas latibifica sp. nov.

Candidatus Sphingomonas latibifica (NL. fem. n. *latibifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingomonas sp002280555*. The type genome for the species is the GenBank assembly GCA_002280555.1. The GC content of the type genome is 62.29 % and the genome length is 2.98 Mbp.

Description of *Candidatus* Sphingomonas lucerugo sp. nov.

Candidatus Sphingomonas lucerugo (NL. fem. n. *lucerugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingomonas sp902498785*. The type genome for the species is the GenBank assembly RS_GCF_902498785.1. The GC content of the type genome is 66.46 % and the genome length is 3.28 Mbp.

Description of *Candidatus* Sphingomonas lupanatio sp. nov.

Candidatus Sphingomonas lupanatio (NL. fem. n. *lupanatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingomonas sp014217605*. The type genome for the species is the GenBank assembly RS_GCF_014217605.1. The GC content of the type genome is 67.24 % and the genome length is 3.39 Mbp.

Description of *Candidatus* Sphingomonas luxurilega sp. nov.

Candidatus Sphingomonas luxurilega (NL. fem. n. *luxurilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingomonas sp005503355*. The type genome for the species is the GenBank assembly RS_GCF_005503245.1. The GC content of the type genome is 66.91 % and the genome length is 5.0 Mbp.

Description of *Candidatus* Sphingomonas malogago sp. nov.

Candidatus Sphingomonas malogago (NL. fem. n. *malogago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingomonas sp001464615*. The type genome for the species is the GenBank assembly GCA_001464615.1. The GC content of the type genome is 61.89 % and the genome length is 3.57 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "dual media filters at the Ann Arbor; Michigan drinking water treatment plant".

Description of *Candidatus* Sphingomonas manomax sp. nov.

Candidatus Sphingomonas manomax (NL. fem. n. *manomax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingomonas sp903884945*. The type genome for the species is the GenBank assembly GCA_903884945.1. The GC content of the type genome is 66.01 % and the genome length is 6.48 Mbp.

Description of *Candidatus* Sphingomonas manubatio sp. nov.

Candidatus Sphingomonas manubatio (NL. fem. n. *manubatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingomonas sp002796605*. The type genome for the species is the GenBank assembly RS_GCF_002796605.1. The GC content of the type genome is 65.59 % and the genome length is 5.04 Mbp.

Description of *Candidatus* Sphingomonas melopatio sp. nov.

Candidatus Sphingomonas melopatio (NL. fem. n. *melopatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingomonas sp001421715*. The type genome for the species is the GenBank assembly RS_GCF_001421155.1. The GC content of the type genome is 66.38 % and the genome length is 4.0 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "leaf".

Description of *Candidatus* Sphingomonas mimogitura sp. nov.

Candidatus Sphingomonas mimogitura (NL. fem. n. *mimogitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingomonas sp000803065*. The type genome for the species is the GenBank assembly RS_GCF_000803065.1. The GC content of the type genome is 63.73 % and the genome length is 5.74 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Bacterial enrichment community from groundwater sediment".

Description of *Candidatus* Sphingomonas monocibula sp. nov.

Candidatus Sphingomonas monocibula (NL. fem. n. *monocibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingomonas sp000786205*. The type genome for the species is the GenBank assembly RS_GCF_000786205.1. The GC content of the type genome is 64.47 % and the genome length is 3.69 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "lake".

Description of *Candidatus* Sphingomonas noninentia sp. nov.

Candidatus Sphingomonas noninentia (NL. fem. n. *noninentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingomonas sp900109205*. The type genome for the species is the GenBank assembly RS_GCF_001557395.1. The GC content of the type genome is 65.52 % and the genome length is 4.39 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "hospital shower hose biofilm".

Description of *Candidatus* Sphingomonas noninicella sp. nov.

Candidatus Sphingomonas noninicella (NL. fem. n. *noninicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingomonas sp004173185*. The type genome for the species is the GenBank assembly GCA_004173185.1. The GC content of the type genome is 63.15 % and the genome length is 5.07 Mbp.

Description of *Candidatus* Sphingomonas nugigibra sp. nov.

Candidatus Sphingomonas nugigibra (NL. fem. n. *nugigibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingomonas sp014194975*. The type genome for the species is the GenBank assembly RS_GCF_014194975.1. The GC content of the type genome is 70.03 % and the genome length is 4.9 Mbp.

Description of *Candidatus* Sphingomonas oblocitas sp. nov.

Candidatus Sphingomonas oblocitas (NL. fem. n. *oblocitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingomonas sp001425405*. The type genome for the species is the GenBank assembly RS_GCF_001425405.1. The GC content of the type genome is 69.41 % and the genome length is 3.46 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "leaf".

Description of *Candidatus* Sphingomonas obsolibra sp. nov.

Candidatus Sphingomonas obsolibra (NL. fem. n. *obsolibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingomonas sp013374095*. The type genome for the species is the GenBank assembly RS_GCF_013374095.1. The GC content of the type genome is 64.59 % and the genome length is 3.64 Mbp.

Description of *Candidatus* Sphingomonas obsoritura sp. nov.

Candidatus Sphingomonas obsoritura (NL. fem. n. *obsoritura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingomonas sp001428865*. The type genome for the species is the GenBank assembly RS_GCF_001428865.1. The GC content of the type genome is 66.02 % and the genome length is 4.21 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "root".

Description of *Candidatus* Sphingomonas offunifica sp. nov.

Candidatus Sphingomonas offunifica (NL. fem. n. *offunifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingomonas sp902506605*. The type genome for the species is the GenBank assembly RS_GCF_902506605.1. The GC content of the type genome is 63.83 % and the genome length is 3.02 Mbp.

Description of *Candidatus* Sphingomonas omnigax sp. nov.

Candidatus Sphingomonas omnigax (NL. fem. n. *omnigax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingomonas sp005502745*. The type genome for the species is the GenBank assembly RS_GCF_005502745.1. The GC content of the type genome is 64.75 % and the genome length is 4.07 Mbp.

Description of *Candidatus* Sphingomonas optabugo sp. nov.

Candidatus Sphingomonas optabugo (NL. fem. n. *optabugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingomonas sp001423845*. The type genome for the species is the GenBank assembly RS_GCF_001423845.1. The GC content of the type genome is 65.42 % and the genome length is 3.87 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "leaf".

Description of *Candidatus* Sphingomonas ossarentia sp. nov.

Candidatus Sphingomonas ossarentia (NL. fem. n. *ossarentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingomonas sp002083655*. The type genome for the species is the GenBank assembly GCA_002083655.1. The GC content of the type genome is 61.42 % and the genome length is 3.05 Mbp.

Description of *Candidatus* Sphingomonas paralibula sp. nov.

Candidatus Sphingomonas paralibula (NL. fem. n. *paralibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingomonas sp002281535*. The type genome for the species is the GenBank assembly GCA_002281535.1. The GC content of the type genome is 63.29 % and the genome length is 3.48 Mbp.

Description of *Candidatus* Sphingomonas perabilenta sp. nov.

Candidatus Sphingomonas perabilenta (NL. fem. n. *perabilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingomonas sp007859635*. The type genome for the species is the GenBank assembly RS_GCF_007859635.1. The GC content of the type genome is 65.15 % and the genome length is 3.4 Mbp.

Description of *Candidatus* Sphingomonas peracibra sp. nov.

Candidatus Sphingomonas peracibra (NL. fem. n. *peracibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingomonas sp003688595*. The type genome for the species is the GenBank assembly RS_GCF_003688595.1. The GC content of the type genome is 65.51 % and the genome length is 4.11 Mbp.

Description of *Candidatus* Sphingomonas pomifimonia sp. nov.

Candidatus Sphingomonas pomifimonia (NL. fem. n. *pomifimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingomonas sp002281485*. The type genome for the species is the GenBank assembly GCA_002281485.1. The GC content of the type genome is 65.98 % and the genome length is 3.14 Mbp.

Description of *Candidatus* Sphingomonas refinivita sp. nov.

Candidatus Sphingomonas refinivita (NL. fem. n. *refinivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingomonas sp902826325*. The type genome for the species is the GenBank assembly GCA_902825815.1. The GC content of the type genome is 66.62 % and the genome length is 2.32 Mbp.

Description of *Candidatus* Sphingomonas saxifessa sp. nov.

Candidatus Sphingomonas saxifessa (NL. fem. n. *saxifessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingomonas sp903644135*. The type genome for the species is the GenBank assembly RS_GCF_903644135.1. The GC content of the type genome is 68.09 % and the genome length is 2.79 Mbp.

Description of *Candidatus* Sphingomonas semiditas sp. nov.

Candidatus Sphingomonas semiditas (NL. fem. n. *semiditas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingomonas sp004340945*. The type genome for the species is the GenBank assembly RS_GCF_004340945.1. The GC content of the type genome is 64.97 % and the genome length is 4.55 Mbp.

Description of *Candidatus* Sphingomonas semililega sp. nov.

Candidatus Sphingomonas semililega (NL. fem. n. *semililega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingomonas sp004341505*. The type genome for the species is the GenBank assembly RS_GCF_003950785.1. The GC content of the type genome is 67.61 % and the genome length is 4.05 Mbp.

Description of *Candidatus* Sphingomonas solivessa sp. nov.

Candidatus Sphingomonas solivessa (NL. fem. n. *solivessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingomonas sp900103265*. The type genome for the species is the GenBank assembly RS_GCF_900103265.1. The GC content of the type genome is 66.97 % and the genome length is 4.4 Mbp.

Description of *Candidatus* Sphingomonas solivimonas sp. nov.

Candidatus Sphingomonas solivimonas (NL. fem. n. *solivimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a

noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingomonas sp000251145*. The type genome for the species is the GenBank assembly RS_GCF_000242835.1. The GC content of the type genome is 65.71 % and the genome length is 4.76 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Arctic Lichen".

Description of *Candidatus* Sphingomonas subucedo sp. nov.

Candidatus Sphingomonas subucedo (NL. fem. n. *subucedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingomonas sp900109565*. The type genome for the species is the GenBank assembly RS_GCF_900109565.1. The GC content of the type genome is 67.33 % and the genome length is 3.27 Mbp.

Description of *Candidatus* Sphingomonas tabititia sp. nov.

Candidatus Sphingomonas tabititia (NL. fem. n. *tabititia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingomonas sp000797515*. The type genome for the species is the GenBank assembly RS_GCF_003985085.1. The GC content of the type genome is 64.61 % and the genome length is 4.38 Mbp.

Description of *Candidatus* Sphingomonas tametitica sp. nov.

Candidatus Sphingomonas tametitica (NL. fem. n. *tametitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingomonas sp002117915*. The type genome for the species is the GenBank assembly RS_GCF_002117915.1. The GC content of the type genome is 67.17 % and the genome length is 3.5 Mbp.

Description of *Candidatus* Sphingomonas tenilimonia sp. nov.

Candidatus Sphingomonas tenilimonia (NL. fem. n. *tenilimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingomonas sp003688625*. The type genome for the species is the GenBank assembly RS_GCF_003688625.1. The GC content of the type genome is 65.65 % and the genome length is 3.98 Mbp.

Description of *Candidatus* Sphingomonas tetenitoga sp. nov.

Candidatus Sphingomonas tetenitoga (NL. fem. n. *tetenitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingomonas sp001555965*. The type genome for the species is the GenBank assembly RS_GCF_001556095.1. The GC content of the type genome is 66.83 % and the genome length is 3.57 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "hospital shower hose biofilm".

Description of *Candidatus* Sphingomonas tomacentia sp. nov.

Candidatus Sphingomonas tomacentia (NL. fem. n. *tomacentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingomonas sp002292295*. The type genome for the species is the GenBank assembly GCA_002292295.1. The GC content of the type genome is 68.53 % and the genome length is 3.62 Mbp.

Description of *Candidatus* Sphingomonas tubicimonas sp. nov.

Candidatus Sphingomonas tubicimonas (NL. fem. n. *tubicimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingomonas sp001421965*. The type genome for the species is the GenBank assembly RS_GCF_001421965.1. The GC content of the type genome is 65.91 % and the genome length is 4.19 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "leaf".

Description of *Candidatus* Sphingomonas vanidicella sp. nov.

Candidatus Sphingomonas vanidicella (NL. fem. n. *vanidicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingomonas sp000632225*. The type genome for the species is the

GenBank assembly RS_GCF_000632225.1. The GC content of the type genome is 68.31 % and the genome length is 4.34 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Willow (Salix sp.)".

Description of *Candidatus* Sphingomonas vepalugo sp. nov.

Candidatus Sphingomonas vepalugo (NL. fem. n. *vepalugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingomonas sp014489075*. The type genome for the species is the GenBank assembly RS_GCF_014489075.1. The GC content of the type genome is 65.51 % and the genome length is 4.87 Mbp.

Description of *Candidatus* Sphingomonas vocamilega sp. nov.

Candidatus Sphingomonas vocamilega (NL. fem. n. *vocamilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingomonas sp001897375*. The type genome for the species is the GenBank assembly GCA_001897375.1. The GC content of the type genome is 67.41 % and the genome length is 4.0 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Ammonium sulfate bioreactor".

Description of *Candidatus* Sphingomonas vocifessa sp. nov.

Candidatus Sphingomonas vocifessa (NL. fem. n. *vocifessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingomonas sp001421745*. The type genome for the species is the GenBank assembly RS_GCF_001421745.1. The GC content of the type genome is 65.19 % and the genome length is 4.14 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "leaf".

Description of *Candidatus* Sphingomonas aclasiforma sp. nov.

Candidatus Sphingomonas aclasiforma (NL. fem. n. *aclasiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingomonas_B sp009913435*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-

formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_009913435.1. The GC content of the type genome is 68.27 % and the genome length is 3.01 Mbp.

Description of *Candidatus* Sphingomonas arrabitio sp. nov.

Candidatus Sphingomonas arrabitio (NL. fem. n. *arrabitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingomonas_B sp002291855*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_002291855.1. The GC content of the type genome is 68.61 % and the genome length is 2.46 Mbp.

Description of *Candidatus* Sphingomonas dicibitio sp. nov.

Candidatus Sphingomonas dicibitio (NL. fem. n. *dicibitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingomonas_B sp013044515*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_013044515.1. The GC content of the type genome is 65.68 % and the genome length is 3.64 Mbp.

Description of *Candidatus* Sphingomonas vacilitica sp. nov.

Candidatus Sphingomonas vacilitica (NL. fem. n. *vacilitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingomonas_B sp013778485*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_013778485.1. The GC content of the type genome is 67.34 % and the genome length is 3.35 Mbp.

Description of *Candidatus* Sphingomonas diluvugo sp. nov.

Candidatus Sphingomonas diluvugo (NL. fem. n. *diluvugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingomonas_E sp002151445*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_002151445.1. The GC content of the type genome is 63.69 % and the genome length is 4.12 Mbp.

Description of *Candidatus* Sphingomonas myalgigena sp. nov.

Candidatus Sphingomonas myalgigena (NL. fem. n. *myalgigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingomonas_G sp009739515*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_009739515.1. The GC content of the type genome is 69.2 % and the genome length is 4.54 Mbp.

Description of *Candidatus* Sphingomonas lavacitrix sp. nov.

Candidatus Sphingomonas lavacitrix (NL. fem. n. *lavacitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingomonas_I sp903644055*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_903644055.1. The GC content of the type genome is 67.0 % and the genome length is 2.41 Mbp.

Description of *Candidatus* Sphingomonas macilicella sp. nov.

Candidatus Sphingomonas macilicella (NL. fem. n. *macilicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingomonas_I sp003248515*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003248515.1. The GC content of the type genome is 65.51 % and the genome length is 4.57 Mbp.

Description of *Candidatus* Sphingomonas sacomitrix sp. nov.

Candidatus Sphingomonas sacomitrix (NL. fem. n. *sacomitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingomonas_I sp013113735*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_013113735.1. The GC content of the type genome is 65.76 % and the genome length is 5.27 Mbp.

Description of *Candidatus* Sphingomonas melopitia sp. nov.

Candidatus Sphingomonas melopitia (NL. fem. n. *melopitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingomonas_L sp004796535*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_004796535.1. The GC content of the type genome is 68.03 % and the genome length is 3.07 Mbp.

Description of *Candidatus* Sphingomonas allubax sp. nov.

Candidatus Sphingomonas allubax (NL. fem. n. *allubax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingomonas_N sp000383095*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_000383095.1. The GC content of the type genome is 67.36 % and the genome length is 3.91 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "termitarium".

Description of *Candidatus* Sphingomonas cimelicella sp. nov.

Candidatus Sphingomonas cimelicella (NL. fem. n. *cimelicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingomonas_N sp013778325*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_013778325.1. The GC content of the type genome is 66.2 % and the genome length is 4.37 Mbp.

Description of *Candidatus* Sphingomonas demogimonia sp. nov.

Candidatus Sphingomonas demogimonia (NL. fem. n. *demogimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingomonas_N sp903871605*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_903868005.1. The GC content of the type genome is 67.16 % and the genome length is 4.47 Mbp.

Description of *Candidatus* Sphingomonas perabugo sp. nov.

Candidatus Sphingomonas perabugo (NL. fem. n. *perabugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingomonas_N sp000333335*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_000333335.1. The GC content of the type genome is 65.93 % and the genome length is 4.88 Mbp.

Description of *Candidatus* Sphingopyxis abascitia sp. nov.

Candidatus Sphingopyxis abascitia (NL. fem. n. *abascitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingopyxis sp003609835*. The type genome for the species is the GenBank assembly RS_GCF_003609835.1. The GC content of the type genome is 65.18 % and the genome length is 3.94 Mbp.

Description of *Candidatus* Sphingopyxis adfunilega sp. nov.

Candidatus Sphingopyxis adfunilega (NL. fem. n. *adfunilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingopyxis sp001278035*. The type genome for the species is the GenBank assembly RS_GCF_001278035.1. The GC content of the type genome is 64.04 % and the genome length is 4.66 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "activated sludge".

Description of *Candidatus* Sphingopyxis adpacousia sp. nov.

Candidatus Sphingopyxis adpacousia (NL. fem. n. *adpacousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingopyxis sp012035435*. The type genome for the species is the GenBank assembly GCA_012035435.1. The GC content of the type genome is 60.69 % and the genome length is 2.82 Mbp.

Description of *Candidatus* Sphingopyxis adsesitas sp. nov.

Candidatus Sphingopyxis adsesitas (NL. fem. n. *adsesitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingopyxis sp004795895*. The type genome for the species is the GenBank assembly RS_GCF_004795895.1. The GC content of the type genome is 64.96 % and the genome length is 4.5 Mbp.

Description of *Candidatus* Sphingopyxis ambificella sp. nov.

Candidatus Sphingopyxis ambificella (NL. fem. n. *ambificella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingopyxis sp001984035*. The type genome for the species is the GenBank assembly RS_GCF_001984035.1. The GC content of the type genome is 66.48 % and the genome length is 4.29 Mbp.

Description of *Candidatus* Sphingopyxis anxifigena sp. nov.

Candidatus Sphingopyxis anxifigena (NL. fem. n. *anxifigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingopyxis sp000763945*. The type genome for the species is the GenBank assembly RS_GCF_000763945.1. The GC content of the type genome is 62.85 % and the genome length is 3.12 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "crude oil contaminated seashore".

Description of *Candidatus* Sphingopyxis asporibula sp. nov.

Candidatus Sphingopyxis asporibula (NL. fem. n. *asporibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingopyxis sp000756385*. The type genome for the species is the GenBank assembly RS_GCF_000756385.1. The GC content of the type genome is 65.21 % and the genome length is 4.21 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Cave surface layer".

Description of *Candidatus* Sphingopyxis bicodisca sp. nov.

Candidatus Sphingopyxis bicodisca (NL. fem. n. *bicodisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingopyxis sp002454115*. The type genome for the species is the GenBank assembly GCA_002453965.1. The GC content of the type genome is 63.96 % and the genome length is 3.58 Mbp.

Description of *Candidatus* Sphingopyxis bugilitudo sp. nov.

Candidatus Sphingopyxis bugilitudo (NL. fem. n. *bugilitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingopyxis sp001047015*. The type genome for the species is the GenBank assembly RS_GCF_001047015.1. The GC content of the type genome is 63.73 % and the genome length is 4.58 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "lake water".

Description of *Candidatus* Sphingopyxis cerevago sp. nov.

Candidatus Sphingopyxis cerevago (NL. fem. n. *cerevago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Sphingopyxis sp003609815*. The type genome for the species is the GenBank assembly RS_GCF_012274265.1. The GC content of the type genome is 64.83 % and the genome length is 3.46 Mbp.

Description of *Candidatus* Sphingopyxis delecicella sp. nov.

Candidatus Sphingopyxis delecicella (NL. fem. n. *delecicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingopyxis sp001468265*. The type genome for the species is the GenBank assembly RS_GCF_001468265.1. The GC content of the type genome is 65.05 % and the genome length is 4.36 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Drinking Water".

Description of *Candidatus* Sphingopyxis democimonia sp. nov.

Candidatus Sphingopyxis democimonia (NL. fem. n. *democimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingopyxis sp001468225*. The type genome for the species is the GenBank assembly RS_GCF_001467395.1. The GC content of the type genome is 64.69 % and the genome length is 5.1 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Drinking Water".

Description of *Candidatus* Sphingopyxis dicanatio sp. nov.

Candidatus Sphingopyxis dicanatio (NL. fem. n. *dicanatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingopyxis sp001830555*. The type genome for the species is the GenBank assembly GCA_001830555.1. The GC content of the type genome is 64.6 % and the genome length is 3.87 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 1.2 micron filter; full assembly".

Description of *Candidatus* Sphingopyxis disidessa sp. nov.

Candidatus Sphingopyxis disidessa (NL. fem. n. *disidessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Sphingopyxis sp002277025*. The type genome for the species is the GenBank assembly RS_GCF_002277025.1. The GC content of the type genome is 66.0 % and the genome length is 4.79 Mbp.

Description of *Candidatus* Sphingopyxis domicitio sp. nov.

Candidatus Sphingopyxis domicitio (NL. fem. n. *domicitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingopyxis sp001990265*. The type genome for the species is the GenBank assembly RS_GCF_001990265.1. The GC content of the type genome is 66.17 % and the genome length is 4.34 Mbp.

Description of *Candidatus* Sphingopyxis fefelatica sp. nov.

Candidatus Sphingopyxis fefelatica (NL. fem. n. *fefelatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingopyxis sp013410105*. The type genome for the species is the GenBank assembly GCA_902168315.1. The GC content of the type genome is 65.35 % and the genome length is 3.69 Mbp.

Description of *Candidatus* Sphingopyxis fuligimonas sp. nov.

Candidatus Sphingopyxis fuligimonas (NL. fem. n. *fuligimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingopyxis sp002841175*. The type genome for the species is the GenBank assembly GCA_002841175.1. The GC content of the type genome is 64.84 % and the genome length is 3.0 Mbp.

Description of *Candidatus* Sphingopyxis giganitio sp. nov.

Candidatus Sphingopyxis giganitio (NL. fem. n. *giganitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingopyxis sp002842935*. The type genome for the species is the GenBank assembly GCA_002842935.1. The GC content of the type genome is 65.33 % and the genome length is 3.57 Mbp.

Description of *Candidatus* Sphingopyxis infatitura sp. nov.

Candidatus Sphingopyxis infatitura (NL. fem. n. *infatitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingopyxis sp005503215*. The type genome for the species is the GenBank assembly RS_GCF_005503215.1. The GC content of the type genome is 64.92 % and the genome length is 5.06 Mbp.

Description of *Candidatus* Sphingopyxis infenessa sp. nov.

Candidatus Sphingopyxis infenessa (NL. fem. n. *infenessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingopyxis sp012979535*. The type genome for the species is the GenBank assembly RS_GCF_012979535.1. The GC content of the type genome is 61.98 % and the genome length is 2.98 Mbp.

Description of *Candidatus* Sphingopyxis ininnatio sp. nov.

Candidatus Sphingopyxis ininnatio (NL. fem. n. *ininnatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingopyxis sp013821905*. The type genome for the species is the GenBank assembly GCA_013821905.1. The GC content of the type genome is 66.63 % and the genome length is 3.35 Mbp.

Description of *Candidatus* Sphingopyxis labecousia sp. nov.

Candidatus Sphingopyxis labecousia (NL. fem. n. *labecousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingopyxis sp001468285*. The type genome for the species is the GenBank assembly RS_GCF_001468305.1. The GC content of the type genome is 66.7 % and the genome length is 4.89 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Drinking Water".

Description of *Candidatus* Sphingopyxis laxitedo sp. nov.

Candidatus Sphingopyxis laxitedo (NL. fem. n. *laxitedo* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingopyxis sp001427085*. The type genome for the species is the GenBank assembly RS_GCF_001427085.1. The GC content of the type genome is 65.83 % and the genome length is 4.8 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "root".

Description of *Candidatus* Sphingopyxis licenitura sp. nov.

Candidatus Sphingopyxis licenitura (NL. fem. n. *licenitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingopyxis sp014207235*. The type genome for the species is the GenBank assembly RS_GCF_014207235.1. The GC content of the type genome is 64.61 % and the genome length is 4.1 Mbp.

Description of *Candidatus* Sphingopyxis lugubago sp. nov.

Candidatus Sphingopyxis lugubago (NL. fem. n. *lugubago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingopyxis sp900108295*. The type genome for the species is the GenBank assembly RS_GCF_900108295.1. The GC content of the type genome is 64.0 % and the genome length is 4.31 Mbp.

Description of *Candidatus* Sphingopyxis omninitica sp. nov.

Candidatus Sphingopyxis omninitica (NL. fem. n. *omninitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingopyxis sp000756375*. The type genome for the species is the GenBank assembly RS_GCF_000756375.1. The GC content of the type genome is 64.93 % and the genome length is 4.4 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Cave surface layer".

Description of *Candidatus* Sphingopyxis omnivilenta sp. nov.

Candidatus Sphingopyxis omnivilenta (NL. fem. n. *omnivilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingopyxis sp013911715*. The type genome for the species is the GenBank assembly GCA_013911715.1. The GC content of the type genome is 62.97 % and the genome length is 1.86 Mbp.

Description of *Candidatus* Sphingopyxis opporisca sp. nov.

Candidatus Sphingopyxis opporisca (NL. fem. n. *opporisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingopyxis sp900078365*. The type genome for the species is the GenBank assembly GCA_900078365.1. The GC content of the type genome is 65.94 % and the genome length is 4.14 Mbp.

Description of *Candidatus* Sphingopyxis prospitura sp. nov.

Candidatus Sphingopyxis prospitura (NL. fem. n. *prospitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingopyxis sp005502465*. The type genome for the species is the GenBank assembly RS_GCF_005502465.1. The GC content of the type genome is 64.7 % and the genome length is 3.71 Mbp.

Description of *Candidatus* Sphingopyxis pudibilega sp. nov.

Candidatus Sphingopyxis pudibilega (NL. fem. n. *pudibilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingopyxis sp014595975*. The type genome for the species is the GenBank assembly RS_GCF_014595975.1. The GC content of the type genome is 65.37 % and the genome length is 3.22 Mbp.

Description of *Candidatus* Sphingopyxis reduvitrix sp. nov.

Candidatus Sphingopyxis reduvitrix (NL. fem. n. *reduvitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingopyxis sp001427105*. The type genome for the species is the GenBank assembly RS_GCF_001429105.1. The GC content of the type genome is 64.52

% and the genome length is 4.72 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "root".

Description of *Candidatus* Sphingopyxis resalitio sp. nov.

Candidatus Sphingopyxis resalitio (NL. fem. n. *resalitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingopyxis sp001468465*. The type genome for the species is the GenBank assembly RS_GCF_001468465.1. The GC content of the type genome is 64.33 % and the genome length is 4.49 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Drinking Water".

Description of *Candidatus* Sphingopyxis saburitrix sp. nov.

Candidatus Sphingopyxis saburitrix (NL. fem. n. *saburitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingopyxis sp001468395*. The type genome for the species is the GenBank assembly RS_GCF_001468345.1. The GC content of the type genome is 64.84 % and the genome length is 4.31 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Drinking Water".

Description of *Candidatus* Sphingopyxis subabivita sp. nov.

Candidatus Sphingopyxis subabivita (NL. fem. n. *subabivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingopyxis sp005503165*. The type genome for the species is the GenBank assembly RS_GCF_005503165.1. The GC content of the type genome is 66.31 % and the genome length is 4.51 Mbp.

Description of *Candidatus* Sphingorhabdus acertitia sp. nov.

Candidatus Sphingorhabdus acertitia (NL. fem. n. *acertitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingorhabdus_B sp002479765*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the

genus. The type genome for the species is the GenBank assembly GCA_002479765.1. The GC content of the type genome is 56.52 % and the genome length is 2.39 Mbp.

Description of *Candidatus* Sphingorhabdus catagibra sp. nov.

Candidatus Sphingorhabdus catagibra (NL. fem. n. *catagibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingorhabdus_B sp012032285*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_012032285.1. The GC content of the type genome is 53.84 % and the genome length is 2.78 Mbp.

Description of *Candidatus* Sphingorhabdus catobitia sp. nov.

Candidatus Sphingorhabdus catobitia (NL. fem. n. *catobitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingorhabdus_B sp002299195*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_002299195.1. The GC content of the type genome is 56.38 % and the genome length is 1.96 Mbp.

Description of *Candidatus* Sphingorhabdus cocolentia sp. nov.

Candidatus Sphingorhabdus cocolentia (NL. fem. n. *cocolentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingorhabdus_B sp002282385*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_002281585.1. The GC content of the type genome is 56.47 % and the genome length is 2.4 Mbp.

Description of *Candidatus* Sphingorhabdus disiditoga sp. nov.

Candidatus Sphingorhabdus disiditoga (NL. fem. n. *disiditoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingorhabdus_B sp001464315*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_001464315.1. The GC content of the type genome is 56.47 % and the genome length is 2.86 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "dual media filters at the Ann Arbor; Michigan drinking water treatment plant".

Description of *Candidatus* Sphingorhabdus inpelicula sp. nov.

Candidatus Sphingorhabdus inpelicula (NL. fem. n. *inpelicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingorhabdus_B sp003367235*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_003367235.1. The GC content of the type genome is 57.73 % and the genome length is 3.22 Mbp.

Description of *Candidatus* Sphingorhabdus invetedo sp. nov.

Candidatus Sphingorhabdus invetedo (NL. fem. n. *invetedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingorhabdus_B sp013297725*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_013297725.1. The GC content of the type genome is 54.95 % and the genome length is 3.02 Mbp.

Description of *Candidatus* Sphingorhabdus lacinilega sp. nov.

Candidatus Sphingorhabdus lacinilega (NL. fem. n. *lacinilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingorhabdus_B sp002299895*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_002299895.1.

The GC content of the type genome is 54.96 % and the genome length is 2.05 Mbp.

Description of *Candidatus* Sphingorhabdus malogatio sp. nov.

Candidatus Sphingorhabdus malogatio (NL. fem. n. *malogatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingorhabdus_B sp903868245*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_903868245.1. The GC content of the type genome is 55.01 % and the genome length is 1.97 Mbp.

Description of *Candidatus* Sphingorhabdus milififorma sp. nov.

Candidatus Sphingorhabdus milififorma (NL. fem. n. *milififorma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingorhabdus_B sp002255985*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_002255985.1. The GC content of the type genome is 55.52 % and the genome length is 3.07 Mbp.

Description of *Candidatus* Sphingorhabdus nitelax sp. nov.

Candidatus Sphingorhabdus nitelax (NL. fem. n. *nitelax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingorhabdus_B sp903821685*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_903821685.1. The GC content of the type genome is 55.0 % and the genome length is 2.12 Mbp.

Description of *Candidatus* Sphingorhabdus obsolisca sp. nov.

Candidatus Sphingorhabdus obsolisca (NL. fem. n. *obsolisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Sphingorhabdus_B sp001889025*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_001889025.1. The GC content of the type genome is 46.12 % and the genome length is 2.53 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "sea water".

Description of *Candidatus* Sphingorhabdus peraditica sp. nov.

Candidatus Sphingorhabdus peraditica (NL. fem. n. *peraditica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingorhabdus_B sp002278855*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_002257315.1. The GC content of the type genome is 55.84 % and the genome length is 1.49 Mbp.

Description of *Candidatus* Sphingorhabdus tubicilega sp. nov.

Candidatus Sphingorhabdus tubicilega (NL. fem. n. *tubicilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingorhabdus_B sp013823985*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_013823985.1. The GC content of the type genome is 57.62 % and the genome length is 3.7 Mbp.

Description of *Candidatus* Sphingorhabdus ambusitica sp. nov.

Candidatus Sphingorhabdus ambusitica (NL. fem. n. *ambusitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingorhabdus_C sp009993585*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_009993585.1. The GC content of the type genome is 65.88 % and the genome length is 2.16 Mbp.

Description of *Candidatus* Sphingosinicella advigibra sp. nov.

Candidatus Sphingosinicella advigibra (NL. fem. n. *advigibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sphingosinicella sp013911755*. The type genome for the species is the GenBank assembly GCA_013911755.1. The GC content of the type genome is 64.75 % and the genome length is 3.63 Mbp.

Description of *Candidatus* Spiribacter notabilega sp. nov.

Candidatus Spiribacter notabilega (NL. fem. n. *notabilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Spiribacter sp009676705*. The type genome for the species is the GenBank assembly RS_GCF_009676705.1. The GC content of the type genome is 64.21 % and the genome length is 1.9 Mbp.

Description of *Candidatus* Spirillospora admuligena sp. nov.

Candidatus Spirillospora admuligena (NL. fem. n. *admuligena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Spirillospora sp004348515*. The type genome for the species is the GenBank assembly RS_GCF_004348515.1. The GC content of the type genome is 71.81 % and the genome length is 8.27 Mbp.

Description of *Candidatus* Spirillospora adtoribra sp. nov.

Candidatus Spirillospora adtoribra (NL. fem. n. *adtoribra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Spirillospora sp008327685*. The type genome for the species is the GenBank assembly RS_GCF_008327685.1. The GC content of the type genome is 72.39 % and the genome length is 9.65 Mbp.

Description of *Candidatus* Spirillospora adtorimonas sp. nov.

Candidatus Spirillospora adtorimonas (NL. fem. n. *adtorimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Spirillospora sp004349245*. The type genome for the species is the GenBank assembly RS_GCF_004349245.1. The GC content of the type genome is 71.88 % and the genome length is 8.19 Mbp.

Description of *Candidatus* Spirillospora agricetta sp. nov.

Candidatus Spirillospora agricetta (NL. fem. n. *agricetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Spirillospora sp004348665*. The type genome for the species is the GenBank assembly RS_GCF_004348665.1. The GC content of the type genome is 72.15 % and the genome length is 7.09 Mbp.

Description of *Candidatus* Spirillospora argitentia sp. nov.

Candidatus Spirillospora argitentia (NL. fem. n. *argitentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Spirillospora sp001942465*. The type genome for the species is the GenBank assembly RS_GCF_001942465.1. The GC content of the type genome is 72.47 % and the genome length is 9.96 Mbp.

Description of *Candidatus* Spirillospora armidifica sp. nov.

Candidatus Spirillospora armidifica (NL. fem. n. *armidifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Spirillospora sp005889715*. The type genome for the species is the GenBank assembly RS_GCF_005889715.1. The GC content of the type genome is 71.33 % and the genome length is 9.04 Mbp.

Description of *Candidatus* Spirillospora carunitrix sp. nov.

Candidatus Spirillospora carunitrix (NL. fem. n. *carunitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Spirillospora sp008824145*. The type genome for the species is the GenBank assembly RS_GCF_008824145.1. The GC content of the type genome is 73.16 % and the genome length is 9.19 Mbp.

Description of *Candidatus* Spirillospora defacibra sp. nov.

Candidatus Spirillospora defacibra (NL. fem. n. *defacibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Spirillospora sp004348735*. The type genome for the species is the GenBank assembly RS_GCF_004348735.1. The GC content of the type genome is 71.26 % and the genome length is 9.38 Mbp.

Description of *Candidatus* Spirillospora depicentia sp. nov.

Candidatus Spirillospora depicentia (NL. fem. n. *depicentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Spirillospora sp009733595*. The type genome for the species is the GenBank assembly RS_GCF_009733595.1. The GC content of the type genome is 72.78 % and the genome length is 9.16 Mbp.

Description of *Candidatus* Spirillospora dilicetta sp. nov.

Candidatus Spirillospora dilicetta (NL. fem. n. *dilicetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Spirillospora sp004348535*. The type genome for the species is the GenBank assembly RS_GCF_004348535.1. The GC content of the type genome is 71.34 % and the genome length is 9.06 Mbp.

Description of *Candidatus* Spirillospora endiviforma sp. nov.

Candidatus Spirillospora endiviforma (NL. fem. n. *endiviforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Spirillospora sp008923205*. The type genome for the species is the GenBank assembly RS_GCF_008923205.2. The GC content of the type genome is 72.49 % and the genome length is 10.0 Mbp.

Description of *Candidatus* Spirillospora essonitas sp. nov.

Candidatus Spirillospora essonitas (NL. fem. n. *essonitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Spirillospora sp009604375*. The type genome for the species is the GenBank assembly RS_GCF_009604375.1. The GC content of the type genome is 73.14 % and the genome length is 8.54 Mbp.

Description of *Candidatus* Spirillospora excalibra sp. nov.

Candidatus Spirillospora excalibra (NL. fem. n. *excalibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Spirillospora sp003432485*. The type genome for the species is the GenBank assembly RS_GCF_003432485.1. The GC content of the type genome is 70.66 % and the genome length is 7.71 Mbp.

Description of *Candidatus* Spirillospora ficulicula sp. nov.

Candidatus Spirillospora ficulicula (NL. fem. n. *ficulicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Spirillospora sp006547145*. The type genome for the species is the GenBank assembly RS_GCF_006547145.1. The GC content of the type genome is 72.44 % and the genome length is 9.53 Mbp.

Description of *Candidatus* Spirillospora immoditudo sp. nov.

Candidatus Spirillospora immoditudo (NL. fem. n. *immoditudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Spirillospora sp013372625*. The type genome for the species is the GenBank assembly RS_GCF_013372625.1. The GC content of the type genome is 71.13 % and the genome length is 8.03 Mbp.

Description of *Candidatus* Spirillospora monogilega sp. nov.

Candidatus Spirillospora monogilega (NL. fem. n. *monogilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Spirillospora sp002911665*. The type genome for the species is the GenBank assembly RS_GCF_002911665.1. The GC content of the type genome is 73.1 % and the genome length is 6.47 Mbp.

Description of *Candidatus* Spirillospora practitica sp. nov.

Candidatus Spirillospora practitica (NL. fem. n. *practitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Spirillospora sp013364275*. The type genome for the species is the GenBank assembly RS_GCF_013364275.1. The GC content of the type genome is 72.72 % and the genome length is 9.43 Mbp.

Description of *Candidatus* Spirillospora sonivitrix sp. nov.

Candidatus Spirillospora sonivitrix (NL. fem. n. *sonivitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Spirillospora sp009793335*. The type genome for the species is the GenBank assembly RS_GCF_009793335.1. The GC content of the type genome is 73.21 % and the genome length is 10.33 Mbp.

Description of *Candidatus* Spirillospora subadago sp. nov.

Candidatus Spirillospora subadago (NL. fem. n. *subadago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Spirillospora sp004349215*. The type genome for the species is the GenBank assembly RS_GCF_004349215.1. The GC content of the type genome is 71.59 % and the genome length is 10.23 Mbp.

Description of *Candidatus* Spirillospora tenebentia sp. nov.

Candidatus Spirillospora tenebentia (NL. fem. n. *tenebentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Spirillospora sp004348425*. The type genome for the species is the GenBank assembly RS_GCF_004348425.1. The GC content of the type genome is 71.26 % and the genome length is 9.8 Mbp.

Description of *Candidatus* Spirochaeta grallicula sp. nov.

Candidatus Spirochaeta grallicula (NL. fem. n. *grallicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Spirochaeta_G sp003247135*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003247135.1. The GC content of the type genome is 32.53 % and the genome length is 2.69 Mbp.

Description of *Candidatus* Spiroplasma nocumisca sp. nov.

Candidatus Spiroplasma nocumisca (NL. fem. n. *nocumisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Spiroplasma sp001886495*. The type genome for the species is the GenBank assembly RS_GCF_001792795.1. The GC content of the type genome is 28.74 % and the genome length is 1.2 Mbp.

Description of *Candidatus* Spiroplasma direcimonia sp. nov.

Candidatus Spiroplasma direcimonia (NL. fem. n. *direcimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Spiroplasma_A sp010365805*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_010365805.1. The GC content of the type genome is 27.42 % and the genome length is 0.92 Mbp.

Description of *Candidatus* Spiroplasma nehalitas sp. nov.

Candidatus Spiroplasma nehalitas (NL. fem. n. *nehalitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Spiroplasma_A sp010365785*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_010365785.1. The GC content of the type genome is 28.24 % and the genome length is 0.81 Mbp.

Description of *Candidatus* Spiroplasma repagisca sp. nov.

Candidatus Spiroplasma repagisca (NL. fem. n. *repagisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Spiroplasma_D sp005795965*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_902809815.1. The GC content of the type genome is 23.67 % and the genome length is 1.75 Mbp.

Description of *Candidatus* Spirosoma admigilenta sp. nov.

Candidatus Spirosoma admigilenta (NL. fem. n. *admigilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Spirosoma sp014117325*. The type genome for the species is the GenBank assembly RS_GCF_014117325.1. The GC content of the type genome is 46.69 % and the genome length is 8.85 Mbp.

Description of *Candidatus* Spirosoma agnomifica sp. nov.

Candidatus Spirosoma agnomifica (NL. fem. n. *agnomifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Spirosoma sp010233585*. The type genome for the species is the GenBank assembly RS_GCF_010233585.1. The GC content of the type genome is 47.69 % and the genome length is 10.33 Mbp.

Description of *Candidatus* Spirosoma amfitifica sp. nov.

Candidatus Spirosoma amfitifica (NL. fem. n. *amfitifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Spirosoma sp012849055*. The type genome for the species is the GenBank assembly RS_GCF_012849055.1. The GC content of the type genome is 55.21 % and the genome length is 6.05 Mbp.

Description of *Candidatus* Spirosoma apercousia sp. nov.

Candidatus Spirosoma apercousia (NL. fem. n. *apercousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Spirosoma sp011604685*. The type genome for the species is the GenBank assembly RS_GCF_011604685.1. The GC content of the type genome is 47.66 % and the genome length is 8.9 Mbp.

Description of *Candidatus* Spirosoma conipatica sp. nov.

Candidatus Spirosoma conipatica (NL. fem. n. *conipatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Spirosoma sp014282275*. The type genome for the species is the GenBank assembly RS_GCF_014282255.1. The GC content of the type genome is 52.11 % and the genome length is 7.04 Mbp.

Description of *Candidatus* Spirosoma ecfacatica sp. nov.

Candidatus Spirosoma ecfacatica (NL. fem. n. *ecfacatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Spirosoma sp013127955*. The type genome for the species is the GenBank assembly RS_GCF_013127955.1. The GC content of the type genome is 52.72 % and the genome length is 5.72 Mbp.

Description of *Candidatus* Spirosoma feficatio sp. nov.

Candidatus Spirosoma feficatio (NL. fem. n. *feficatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Spirosoma sp013375035*. The type genome for the species is the GenBank assembly RS_GCF_013375035.1. The GC content of the type genome is 52.05 % and the genome length is 5.81 Mbp.

Description of *Candidatus* Spirosoma forabitia sp. nov.

Candidatus Spirosoma forabitia (NL. fem. n. *forabitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Spirosoma sp003259005*. The type genome for the species is the GenBank assembly RS_GCF_009754885.1. The GC content of the type genome is 47.24 % and the genome length is 9.09 Mbp.

Description of *Candidatus* Spirosoma gerunigena sp. nov.

Candidatus Spirosoma gerunigena (NL. fem. n. *gerunigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Spirosoma sp001898575*. The type genome for the species is the GenBank assembly GCA_001898575.1. The GC content of the type genome is 48.26 % and the genome length is 8.68 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Ammonium sulfate bioreactor".

Description of *Candidatus* Spirosoma oppugastra sp. nov.

Candidatus Spirosoma oppugastra (NL. fem. n. *oppugastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Spirosoma sp009754945*. The type genome for the species is the GenBank assembly RS_GCF_009754945.1. The GC content of the type genome is 46.44 % and the genome length is 9.77 Mbp.

Description of *Candidatus* Spirosoma tomacastra sp. nov.

Candidatus Spirosoma tomacastra (NL. fem. n. *tomacastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Spirosoma sp014377625*. The type genome for the species is the GenBank assembly GCA_014377625.1. The GC content of the type genome is 53.48 % and the genome length is 5.33 Mbp.

Description of *Candidatus* Spirosoma vecoritura sp. nov.

Candidatus Spirosoma vecoritura (NL. fem. n. *vecoritura* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Spirosoma sp006965485*. The type genome for the species is the GenBank assembly RS_GCF_006965485.1. The GC content of the type genome is 47.44 % and the genome length is 8.66 Mbp.

Description of *Candidatus* Spirulina apsolivita sp. nov.

Candidatus Spirulina apsolivita (NL. fem. n. *apsolivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Spirulina sp011390265*. The type genome for the species is the GenBank assembly GCA_011390265.1. The GC content of the type genome is 53.06 % and the genome length is 3.57 Mbp.

Description of *Candidatus* Spirulina exheriforma sp. nov.

Candidatus Spirulina exheriforma (NL. fem. n. *exheriforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Spirulina sp007693875*. The type genome for the species is the GenBank assembly GCA_007693875.1. The GC content of the type genome is 53.24 % and the genome length is 3.37 Mbp.

Description of *Candidatus* Spongiibacter hegumifica sp. nov.

Candidatus Spongiibacter hegumifica (NL. fem. n. *hegumifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Spongiibacter sp002306875*. The type genome for the species is the GenBank assembly GCA_002306875.1. The GC content of the type genome is 55.67 % and the genome length is 3.59 Mbp.

Description of *Candidatus* Spongiibacter peridugo sp. nov.

Candidatus Spongiibacter peridugo (NL. fem. n. *peridugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Spongiibacter sp012272835*. The type genome for the species is the GenBank assembly RS_GCF_012272835.1. The GC content of the type genome is 55.75 % and the genome length is 4.4 Mbp.

Description of *Candidatus* Sporichthya adrotitura sp. nov.

Candidatus Sporichthya adrotitura (NL. fem. n. *adrotitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sporichthya sp013815995*. The type genome for the species is the GenBank assembly GCA_013815995.1. The GC content of the type genome is 70.17 % and the genome length is 4.5 Mbp.

Description of *Candidatus* Sporobacter isoscitas sp. nov.

Candidatus Sporobacter isoscitas (NL. fem. n. *isoscitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sporobacter sp012718935*. The type genome for the species is the GenBank assembly GCA_012718935.1. The GC content of the type genome is 53.14 % and the genome length is 3.3 Mbp.

Description of *Candidatus* Sporobacter legifetta sp. nov.

Candidatus Sporobacter legifetta (NL. fem. n. *legifetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sporobacter sp012521555*. The type genome for the species is the GenBank assembly GCA_012521555.1. The GC content of the type genome is 60.69 % and the genome length is 2.11 Mbp.

Description of *Candidatus* Sporobacter obfusago sp. nov.

Candidatus Sporobacter obfusago (NL. fem. n. *obfusago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sporobacter sp002307055*. The type genome for the species is the GenBank assembly GCA_002307055.1. The GC content of the type genome is 48.85 % and the genome length is 3.83 Mbp.

Description of *Candidatus* Sporobacter paropibula sp. nov.

Candidatus Sporobacter paropibula (NL. fem. n. *paropibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sporobacter sp012838125*. The type genome for the species is the GenBank assembly GCA_012838125.1. The GC content of the type genome is 57.0 % and the genome length is 2.0 Mbp.

Description of *Candidatus* Sporolactobacillus adrecitrix sp. nov.

Candidatus Sporolactobacillus adrecitrix (NL. fem. n. *adrecitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sporolactobacillus sp004153165*. The type genome for the species is the GenBank assembly RS_GCF_004153165.1. The GC content of the type genome is 45.53 % and the genome length is 3.15 Mbp.

Description of *Candidatus* Sporolactobacillus catagedo sp. nov.

Candidatus Sporolactobacillus catagedo (NL. fem. n. *catagedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sporolactobacillus sp004153225*. The type genome for the species is the GenBank assembly RS_GCF_004153225.1. The GC content of the type genome is 48.33 % and the genome length is 3.04 Mbp.

Description of *Candidatus* Sporolactobacillus dilicibula sp. nov.

Candidatus Sporolactobacillus dilicibula (NL. fem. n. *dilicibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sporolactobacillus sp004153195*. The type genome for the species is the GenBank assembly RS_GCF_004153195.1. The GC content of the type genome is 46.93 % and the genome length is 3.01 Mbp.

Description of *Candidatus* Sporolactobacillus paropitica sp. nov.

Candidatus Sporolactobacillus paropitica (NL. fem. n. *paropitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a

noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sporolactobacillus sp900543345*. The type genome for the species is the GenBank assembly GCA_900543345.1. The GC content of the type genome is 50.31 % and the genome length is 2.95 Mbp.

Description of *Candidatus* Sporomusa agrimitio sp. nov.

Candidatus Sporomusa agrimitio (NL. fem. n. *agrimitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sporomusa sp007830295*. The type genome for the species is the GenBank assembly RS_GCF_007830295.1. The GC content of the type genome is 43.67 % and the genome length is 6.06 Mbp.

Description of *Candidatus* Sporosarcina admodisca sp. nov.

Candidatus Sporosarcina admodisca (NL. fem. n. *admodisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sporosarcina sp009651005*. The type genome for the species is the GenBank assembly RS_GCF_009651005.1. The GC content of the type genome is 40.88 % and the genome length is 3.58 Mbp.

Description of *Candidatus* Sporosarcina algebifica sp. nov.

Candidatus Sporosarcina algebifica (NL. fem. n. *algebifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sporosarcina sp003351785*. The type genome for the species is the GenBank assembly RS_GCF_003351785.1. The GC content of the type genome is 40.91 % and the genome length is 3.5 Mbp.

Description of *Candidatus* Sporosarcina alsisousia sp. nov.

Candidatus Sporosarcina alsisousia (NL. fem. n. *alsisousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Sporosarcina sp000586555*. The type genome for the species is the GenBank assembly RS_GCF_000586555.1. The GC content of the type genome is 41.61 % and the genome length is 3.63 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "sediment from creek".

Description of *Candidatus* Sporosarcina bifisax sp. nov.

Candidatus Sporosarcina bifisax (NL. fem. n. *bifisax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sporosarcina sp000813425*. The type genome for the species is the GenBank assembly RS_GCF_900618155.1. The GC content of the type genome is 42.14 % and the genome length is 3.6 Mbp.

Description of *Candidatus* Sporosarcina citocitica sp. nov.

Candidatus Sporosarcina citocitica (NL. fem. n. *citocitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sporosarcina sp002743375*. The type genome for the species is the GenBank assembly RS_GCF_002743375.1. The GC content of the type genome is 41.42 % and the genome length is 3.26 Mbp.

Description of *Candidatus* Sporosarcina conamatica sp. nov.

Candidatus Sporosarcina conamatica (NL. fem. n. *conamatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sporosarcina sp008369195*. The type genome for the species is the GenBank assembly RS_GCF_008369195.1. The GC content of the type genome is 39.73 % and the genome length is 4.63 Mbp.

Description of *Candidatus* Sporosarcina conigatica sp. nov.

Candidatus Sporosarcina conigatica (NL. fem. n. *conigatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sporosarcina sp002743335*. The type genome for the species is the GenBank assembly RS_GCF_002743315.1. The GC content of the type genome is 41.27 % and the genome length is 3.31 Mbp.

Description of *Candidatus* Sporosarcina defunimonas sp. nov.

Candidatus Sporosarcina defunimonas (NL. fem. n. *defunimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sporosarcina sp002077155*. The type genome for the species is the GenBank assembly RS_GCF_002077155.1. The GC content of the type genome is 44.54 % and the genome length is 3.24 Mbp.

Description of *Candidatus* Sporosarcina desuligena sp. nov.

Candidatus Sporosarcina desuligena (NL. fem. n. *desuligena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sporosarcina sp002743255*. The type genome for the species is the GenBank assembly RS_GCF_002743135.1. The GC content of the type genome is 41.45 % and the genome length is 3.22 Mbp.

Description of *Candidatus* Sporosarcina didacibula sp. nov.

Candidatus Sporosarcina didacibula (NL. fem. n. *didacibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sporosarcina sp009650995*. The type genome for the species is the GenBank assembly RS_GCF_009650995.1. The GC content of the type genome is 43.99 % and the genome length is 3.64 Mbp.

Description of *Candidatus* Sporosarcina echogatio sp. nov.

Candidatus Sporosarcina echogatio (NL. fem. n. *echogatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sporosarcina sp003384035*. The type genome for the species is the GenBank assembly RS_GCF_003384035.1. The GC content of the type genome is 42.13 % and the genome length is 3.52 Mbp.

Description of *Candidatus* Sporosarcina enimvitoga sp. nov.

Candidatus Sporosarcina enimvitoga (NL. fem. n. *enimvitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sporosarcina sp000829195*. The type genome for the species is the GenBank assembly RS_GCF_000829195.1. The GC content of the type genome is 47.85 % and the genome length is 3.59 Mbp.

Description of *Candidatus* Sporosarcina everbentia sp. nov.

Candidatus Sporosarcina everbentia (NL. fem. n. *everbentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sporosarcina sp013184495*. The type genome for the species is the GenBank assembly RS_GCF_013184495.1. The GC content of the type genome is 40.15 % and the genome length is 3.63 Mbp.

Description of *Candidatus* Sporosarcina fecunago sp. nov.

Candidatus Sporosarcina fecunago (NL. fem. n. *fecunago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sporosarcina sp002743055*. The type genome for the species is the GenBank assembly RS_GCF_002743055.1. The GC content of the type genome is 40.58 % and the genome length is 3.32 Mbp.

Description of *Candidatus* Sporosarcina indupitia sp. nov.

Candidatus Sporosarcina indupitia (NL. fem. n. *indupitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sporosarcina sp001563475*. The type genome for the species is the GenBank assembly RS_GCF_001563475.1. The GC content of the type genome is 41.75 % and the genome length is 3.05 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Concrete".

Description of *Candidatus* Sporosarcina peridentia sp. nov.

Candidatus Sporosarcina peridentia (NL. fem. n. *peridentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sporosarcina sp009740415*. The type genome for the species is the GenBank assembly RS_GCF_009740415.1. The GC content of the type genome is 46.17 % and the genome length is 2.39 Mbp.

Description of *Candidatus* Sporosarcina tabifedo sp. nov.

Candidatus Sporosarcina tabifedo (NL. fem. n. *tabifedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sporosarcina sp014282005*. The type genome for the species is the GenBank assembly RS_GCF_014282005.1. The GC content of the type genome is 40.67 % and the genome length is 4.03 Mbp.

Description of *Candidatus* Sporosarcina vacilibula sp. nov.

Candidatus Sporosarcina vacilibula (NL. fem. n. *vacilibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sporosarcina sp013408665*. The type genome for the species is the GenBank assembly RS_GCF_013408665.1. The GC content of the type genome is 42.75 % and the genome length is 3.35 Mbp.

Description of *Candidatus* Stagnimonas perabimonas sp. nov.

Candidatus Stagnimonas perabimonas (NL. fem. n. *perabimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Stagnimonas sp004297005*. The type genome for the species is the GenBank assembly GCA_004297005.1. The GC content of the type genome is 67.25 % and the genome length is 3.57 Mbp.

Description of *Candidatus* Stanieria adnuletta sp. nov.

Candidatus Stanieria adnuletta (NL. fem. n. *adnuletta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Stanieria sp002355455*. The type genome for the species is the GenBank assembly RS_GCF_002355455.1. The GC content of the type genome is 36.51 % and the genome length is 5.46 Mbp.

Description of *Candidatus* Staphylococcus delapitrix sp. nov.

Candidatus Staphylococcus delapitrix (NL. fem. n. *delapitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Staphylococcus sp001431205*. The type genome for the species is the GenBank assembly RS_GCF_001431205.1. The GC content of the type genome is 33.07 % and the genome length is 2.73 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "poultry litter".

Description of *Candidatus* Staphylococcus famelibra sp. nov.

Candidatus Staphylococcus famelibra (NL. fem. n. *famelibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Staphylococcus sp013391405*. The type genome for the species is the GenBank assembly RS_GCF_013391405.1. The GC content of the type genome is 33.05 % and the genome length is 2.65 Mbp.

Description of *Candidatus* Staphylococcus lametitas sp. nov.

Candidatus Staphylococcus lametitas (NL. fem. n. *lametitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Staphylococcus sp013463155*. The type genome for the species is the GenBank assembly RS_GCF_013463155.1. The GC content of the type genome is 36.0 % and the genome length is 1.99 Mbp.

Description of *Candidatus* Staphylococcus pocilentia sp. nov.

Candidatus Staphylococcus pocilentia (NL. fem. n. *pocilentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Staphylococcus sp010365305*. The type genome for the species is the GenBank assembly RS_GCF_010365305.1. The GC content of the type genome is 37.27 % and the genome length is 2.9 Mbp.

Description of *Candidatus* Staphylococcus volucatio sp. nov.

Candidatus Staphylococcus volucatio (NL. fem. n. *volucatio* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Staphylococcus sp003718735*. The type genome for the species is the GenBank assembly RS_GCF_003718735.1. The GC content of the type genome is 36.59 % and the genome length is 2.69 Mbp.

Description of *Candidatus* Stappia adpaciforma sp. nov.

Candidatus Stappia adpaciforma (NL. fem. n. *adpaciforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Stappia sp002709505*. The type genome for the species is the GenBank assembly GCA_002709505.1. The GC content of the type genome is 65.42 % and the genome length is 4.11 Mbp.

Description of *Candidatus* Stappia deruniforma sp. nov.

Candidatus Stappia deruniforma (NL. fem. n. *deruniforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Stappia sp900105595*. The type genome for the species is the GenBank assembly RS_GCF_900105595.1. The GC content of the type genome is 63.61 % and the genome length is 4.63 Mbp.

Description of *Candidatus* Stappia recogitudo sp. nov.

Candidatus Stappia recogitudo (NL. fem. n. *recogitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Stappia sp002722295*. The type genome for the species is the GenBank assembly GCA_002722295.1. The GC content of the type genome is 65.75 % and the genome length is 4.74 Mbp.

Description of *Candidatus* Stappia tirocivita sp. nov.

Candidatus Stappia tirocivita (NL. fem. n. *tirocivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Stappia sp003610575*. The type genome for the species is the GenBank assembly RS_GCF_014252955.1. The GC content of the type genome is 66.66 % and the genome length is 5.13 Mbp.

Description of *Candidatus* Stappia visibitia sp. nov.

Candidatus Stappia visibitia (NL. fem. n. *visibitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Stappia sp900185725*. The type genome for the species is the GenBank assembly RS_GCF_900185735.1. The GC content of the type genome is 67.15 % and the genome length is 5.49 Mbp.

Description of *Candidatus* Starkeya calipitura sp. nov.

Candidatus Starkeya calipitura (NL. fem. n. *calipitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Starkeya sp007559435*. The type genome for the species is the GenBank assembly RS_GCF_007559435.1. The GC content of the type genome is 68.19 % and the genome length is 4.18 Mbp.

Description of *Candidatus* Stella conifousia sp. nov.

Candidatus Stella conifousia (NL. fem. n. *conifousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Stella sp006738865*. The type genome for the species is the GenBank assembly GCA_006738865.1. The GC content of the type genome is 70.59 % and the genome length is 5.34 Mbp.

Description of *Candidatus* Stenomitos colopax sp. nov.

Candidatus Stenomitos colopax (NL. fem. n. *colopax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Stenomitos sp014380065*. The type genome for the species is the GenBank assembly GCA_014380065.1. The GC content of the type genome is 51.62 % and the genome length is 5.13 Mbp.

Description of *Candidatus* Stenotrophobium monoditoga sp. nov.

Candidatus Stenotrophobium monoditoga (NL. fem. n. *monoditoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Stenotrophobium sp008012115*. The type genome for the species is the GenBank assembly GCA_008012115.1. The GC content of the type genome is 65.98 % and the genome length is 3.25 Mbp.

Description of *Candidatus* Stenotrophomonas anancitudo sp. nov.

Candidatus Stenotrophomonas anancitudo (NL. fem. n. *anancitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Stenotrophomonas sp011761925*. The type genome for the species is the GenBank assembly RS_GCF_011761925.1. The GC content of the type genome is 67.3 % and the genome length is 3.64 Mbp.

Description of *Candidatus* Stenotrophomonas benevitrix sp. nov.

Candidatus Stenotrophomonas benevitrix (NL. fem. n. *benevitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Stenotrophomonas sp003086795*. The type genome for the species is the GenBank assembly GCA_002432525.1. The GC content of the type genome is 67.27 % and the genome length is 3.19 Mbp.

Description of *Candidatus* Stenotrophomonas bicinugo sp. nov.

Candidatus Stenotrophomonas bicinugo (NL. fem. n. *bicinugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Stenotrophomonas sp002345545*. The type genome for the species is the GenBank assembly GCA_002345545.1. The GC content of the type genome is 66.03 % and the genome length is 3.38 Mbp.

Description of *Candidatus* Stenotrophomonas cetaritoga sp. nov.

Candidatus Stenotrophomonas cetaritoga (NL. fem. n. *cetaritoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a

noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Stenotrophomonas sp002893095*. The type genome for the species is the GenBank assembly GCA_002429565.1. The GC content of the type genome is 66.55 % and the genome length is 3.3 Mbp.

Description of *Candidatus* Stenotrophomonas cohorisca sp. nov.

Candidatus Stenotrophomonas cohorisca (NL. fem. n. *cohorisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Stenotrophomonas sp002192255*. The type genome for the species is the GenBank assembly RS_GCF_010609185.1. The GC content of the type genome is 66.72 % and the genome length is 4.8 Mbp.

Description of *Candidatus* Stenotrophomonas cululax sp. nov.

Candidatus Stenotrophomonas cululax (NL. fem. n. *cululax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Stenotrophomonas sp002471015*. The type genome for the species is the GenBank assembly GCA_002396445.1. The GC content of the type genome is 64.84 % and the genome length is 4.06 Mbp.

Description of *Candidatus* Stenotrophomonas extinitoga sp. nov.

Candidatus Stenotrophomonas extinitoga (NL. fem. n. *extinitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Stenotrophomonas sp013364355*. The type genome for the species is the GenBank assembly RS_GCF_013364355.1. The GC content of the type genome is 66.04 % and the genome length is 4.52 Mbp.

Description of *Candidatus* Stenotrophomonas labecitudo sp. nov.

Candidatus Stenotrophomonas labecitudo (NL. fem. n. *labecitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Stenotrophomonas sp003086775*. The type genome for the species is the GenBank assembly GCA_002388155.1. The GC content of the type genome is 67.52 % and the genome length is 4.3 Mbp.

Description of *Candidatus* Stenotrophomonas licenatio sp. nov.

Candidatus Stenotrophomonas licenatio (NL. fem. n. *licenatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Stenotrophomonas sp003086895*. The type genome for the species is the GenBank assembly RS_GCF_003086895.1. The GC content of the type genome is 66.8 % and the genome length is 4.48 Mbp.

Description of *Candidatus* Stenotrophomonas milipicella sp. nov.

Candidatus Stenotrophomonas milipicella (NL. fem. n. *milipicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Stenotrophomonas sp002359895*. The type genome for the species is the GenBank assembly GCA_002359895.1. The GC content of the type genome is 63.19 % and the genome length is 3.84 Mbp.

Description of *Candidatus* Stenotrophomonas novilivita sp. nov.

Candidatus Stenotrophomonas novilivita (NL. fem. n. *novilivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Stenotrophomonas sp003028475*. The type genome for the species is the GenBank assembly GCA_900766255.1. The GC content of the type genome is 66.84 % and the genome length is 4.37 Mbp.

Description of *Candidatus* Stenotrophomonas nucifivita sp. nov.

Candidatus Stenotrophomonas nucifivita (NL. fem. n. *nucifivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Stenotrophomonas sp900078405*. The type genome for the species is the GenBank assembly GCA_900078405.1. The GC content of the type genome is 67.79 % and the genome length is 3.25 Mbp.

Description of *Candidatus* Stenotrophomonas repecitudo sp. nov.

Candidatus Stenotrophomonas repecitudo (NL. fem. n. *repecitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Stenotrophomonas sp002329155*. The type genome for the species is the GenBank assembly GCA_002329155.1. The GC content of the type genome is 65.83 % and the genome length is 3.71 Mbp.

Description of *Candidatus* Stenotrophomonas repudifica sp. nov.

Candidatus Stenotrophomonas repudifica (NL. fem. n. *repudifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Stenotrophomonas sp003504055*. The type genome for the species is the GenBank assembly GCA_003504055.1. The GC content of the type genome is 68.53 % and the genome length is 2.83 Mbp.

Description of *Candidatus* Stenotrophomonas saxopetta sp. nov.

Candidatus Stenotrophomonas saxopetta (NL. fem. n. *saxopetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Stenotrophomonas sp014621775*. The type genome for the species is the GenBank assembly RS_GCF_014621775.1. The GC content of the type genome is 65.55 % and the genome length is 4.16 Mbp.

Description of *Candidatus* Stenotrophomonas siminugo sp. nov.

Candidatus Stenotrophomonas siminugo (NL. fem. n. *siminugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Stenotrophomonas sp002836635*. The type genome for the species is the GenBank assembly RS_GCF_002836635.1. The GC content of the type genome is 66.13 % and the genome length is 4.14 Mbp.

Description of *Candidatus* Stenotrophomonas subinisca sp. nov.

Candidatus Stenotrophomonas subinisca (NL. fem. n. *subinisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Stenotrophomonas sp004348115*. The type genome for the species is the GenBank assembly RS_GCF_004348115.1. The GC content of the type genome is 67.15 % and the genome length is 4.19 Mbp.

Description of *Candidatus* Stenotrophomonas undevugo sp. nov.

Candidatus Stenotrophomonas undevugo (NL. fem. n. *undevugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Stenotrophomonas sp003248565*. The type genome for the species is the GenBank assembly GCA_003248565.1. The GC content of the type genome is 63.48 % and the genome length is 3.85 Mbp.

Description of *Candidatus* Stenotrophomonas venabastra sp. nov.

Candidatus Stenotrophomonas venabastra (NL. fem. n. *venabastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Stenotrophomonas sp003484865*. The type genome for the species is the GenBank assembly GCA_003484865.1. The GC content of the type genome is 66.87 % and the genome length is 3.49 Mbp.

Description of *Candidatus* Stenotrophomonas volucicula sp. nov.

Candidatus Stenotrophomonas volucicula (NL. fem. n. *volucicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Stenotrophomonas sp003086695*. The type genome for the species is the GenBank assembly GCA_003453935.1. The GC content of the type genome is 66.7 % and the genome length is 3.06 Mbp.

Description of *Candidatus* Stenotrophomonas selibago sp. nov.

Candidatus Stenotrophomonas selibago (NL. fem. n. *selibago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Stenotrophomonas_A sp004216795*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_004216795.1. The GC content of the type genome is 69.67 % and the genome length is 3.74 Mbp.

Description of *Candidatus* Stenotrophomonas utricitura sp. nov.

Candidatus Stenotrophomonas utricitura (NL. fem. n. *utricitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Stenotrophomonas_A sp002429615*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_002429615.1. The GC content of the type genome is 68.26 % and the genome length is 3.83 Mbp.

Description of *Candidatus* Stercaria coturimonia sp. nov.

Candidatus Stercaria coturimonia (NL. fem. n. *coturimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HGM08974 sp900766555*. The type genome for the species is the GenBank assembly RS_GCF_900766555.1. The GC content of the type genome is 37.97 % and the genome length is 1.12 Mbp.

Description of *Candidatus* Stercaria gen. nov.

Candidatus Stercaria (NL. fem. n. *Stercaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *HGM08974*. The type species for the genus is *Candidatus* Stercaria coturimonia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Stercosa lapilifica sp. nov.

Candidatus Stercosa lapilifica (NL. fem. n. *lapilifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *BM518 sp002869435*. The type genome for the species is the GenBank assembly GCA_002869435.1. The GC content of the type genome is 39.65 % and the genome length is 3.35 Mbp.

Description of *Candidatus* Stercosa gen. nov.

Candidatus Stercosa (NL. fem. n. *Stercosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *BM518*. The type species for the genus is *Candidatus* Stercosa lapilifica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DTU049*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Domipanaceae.

Description of *Candidatus* Stercula abambax sp. nov.

Candidatus Stercula abambax (NL. fem. n. *abambax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2357 sp002344405*. The type genome for the species is the GenBank assembly GCA_002344405.1. The GC content of the type genome is 64.19 % and the genome length is 1.79 Mbp.

Description of *Candidatus* Stercula gen. nov.

Candidatus Stercula (NL. fem. n. *Stercula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA2357*. The type species for the genus is *Candidatus* Stercula abambax .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Stercula repuritas sp. nov.

Candidatus Stercula repuritas (NL. fem. n. *repuritas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2357 sp002344625*. The type genome for the species is the GenBank assembly GCA_002344625.1. The GC content of the type genome is 64.25 % and the genome length is 1.75 Mbp.

Description of *Candidatus* Steroidobacter semidetta sp. nov.

Candidatus Steroidobacter semidetta (NL. fem. n. *semidetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Steroidobacter_A sp009932515*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_009932515.1. The GC content of the type genome is 62.23 % and the genome length is 8.22 Mbp.

Description of *Candidatus* Stomatobaculum canacibula sp. nov.

Candidatus Stomatobaculum canacibula (NL. fem. n. *canacibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Stomatobaculum sp902780465*. The type genome for the species is the GenBank assembly GCA_902801855.1. The GC content of the type genome is 57.02 % and the genome length is 2.45 Mbp.

Description of *Candidatus* Stomatobaculum documitoga sp. nov.

Candidatus Stomatobaculum documitoga (NL. fem. n. *documitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Stomatobaculum sp902793685*. The type genome for the species is the GenBank assembly GCA_902800735.1. The GC content of the type genome is 58.04 % and the genome length is 2.14 Mbp.

Description of *Candidatus* Stomatobaculum infanentia sp. nov.

Candidatus Stomatobaculum infanentia (NL. fem. n. *infanentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Stomatobaculum sp902766415*. The type genome for the species is the

GenBank assembly GCA_902766415.1. The GC content of the type genome is 60.46 % and the genome length is 1.99 Mbp.

Description of *Candidatus* Stomatobaculum pinigitrix sp. nov.

Candidatus Stomatobaculum pinigitrix (NL. fem. n. *pinigitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Stomatobaculum sp902766175*. The type genome for the species is the GenBank assembly GCA_902766175.1. The GC content of the type genome is 58.81 % and the genome length is 2.11 Mbp.

Description of *Candidatus* Stomatobaculum semodousia sp. nov.

Candidatus Stomatobaculum semodousia (NL. fem. n. *semodousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Stomatobaculum sp002892395*. The type genome for the species is the GenBank assembly RS_GCF_002892395.1. The GC content of the type genome is 51.35 % and the genome length is 2.17 Mbp.

Description of *Candidatus* Stoquefichus bifisousia sp. nov.

Candidatus Stoquefichus bifisousia (NL. fem. n. *bifisousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Stoquefichus sp001244545*. The type genome for the species is the GenBank assembly RS_GCF_001244545.1. The GC content of the type genome is 30.92 % and the genome length is 3.59 Mbp.

Description of *Candidatus* Streptacidiphilus abinditura sp. nov.

Candidatus Streptacidiphilus abinditura (NL. fem. n. *abinditura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptacidiphilus sp014084105*. The type genome for the species is the GenBank assembly RS_GCF_014084105.1. The GC content of the type genome is 72.06 % and the genome length is 9.33 Mbp.

Description of *Candidatus* Streptacidiphilus acrolago sp. nov.

Candidatus Streptacidiphilus acrolago (NL. fem. n. *acrolago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptacidiphilus sp003751325*. The type genome for the species is the GenBank assembly RS_GCF_003751325.1. The GC content of the type genome is 71.0 % and the genome length is 8.83 Mbp.

Description of *Candidatus* Streptacidiphilus cicilitia sp. nov.

Candidatus Streptacidiphilus cicilitia (NL. fem. n. *cicilitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptacidiphilus sp004365705*. The type genome for the species is the GenBank assembly RS_GCF_004365705.1. The GC content of the type genome is 70.84 % and the genome length is 9.03 Mbp.

Description of *Candidatus* Streptacidiphilus colipigena sp. nov.

Candidatus Streptacidiphilus colipigena (NL. fem. n. *colipigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptacidiphilus sp014284505*. The type genome for the species is the GenBank assembly GCA_014284505.1. The GC content of the type genome is 71.83 % and the genome length is 9.05 Mbp.

Description of *Candidatus* Streptacidiphilus scaccugo sp. nov.

Candidatus Streptacidiphilus scaccugo (NL. fem. n. *scaccugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptacidiphilus sp014084125*. The type genome for the species is the GenBank assembly RS_GCF_014084125.1. The GC content of the type genome is 72.64 % and the genome length is 7.67 Mbp.

Description of *Candidatus* Streptobacillus catobatica sp. nov.

Candidatus Streptobacillus catobatica (NL. fem. n. *catobatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptobacillus sp009733925*. The type genome for the species is the GenBank assembly RS_GCF_009733925.1. The GC content of the type genome is 26.6 % and the genome length is 1.6 Mbp.

Description of *Candidatus* Streptococcus addivatica sp. nov.

Candidatus Streptococcus addivatica (NL. fem. n. *addivatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptococcus sp902373455*. The type genome for the species is the GenBank assembly GCA_902373455.1. The GC content of the type genome is 43.52 % and the genome length is 1.39 Mbp.

Description of *Candidatus* Streptococcus adnepimonia sp. nov.

Candidatus Streptococcus adnepimonia (NL. fem. n. *adnepimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptococcus sp002355895*. The type genome for the species is the GenBank assembly RS_GCF_002355895.1. The GC content of the type genome is 41.09 % and the genome length is 1.92 Mbp.

Description of *Candidatus* Streptococcus adpagifica sp. nov.

Candidatus Streptococcus adpagifica (NL. fem. n. *adpagifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptococcus sp001650315*. The type genome for the species is the GenBank assembly RS_GCF_001650315.1. The GC content of the type genome is 40.14 % and the genome length is 1.93 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "sputum".

Description of *Candidatus* Streptococcus adpinitudo sp. nov.

Candidatus Streptococcus adpinitudo (NL. fem. n. *adpinitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptococcus sp004353325*. The type genome for the species is the

GenBank assembly RS_GCF_004353325.1. The GC content of the type genome is 41.13 % and the genome length is 1.92 Mbp.

Description of *Candidatus* Streptococcus advinastra sp. nov.

Candidatus Streptococcus advinastra (NL. fem. n. *advinastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptococcus sp013276505*. The type genome for the species is the GenBank assembly RS_GCF_013276505.1. The GC content of the type genome is 41.36 % and the genome length is 1.82 Mbp.

Description of *Candidatus* Streptococcus appicicella sp. nov.

Candidatus Streptococcus appicicella (NL. fem. n. *appicicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptococcus sp003428885*. The type genome for the species is the GenBank assembly RS_GCF_003428885.1. The GC content of the type genome is 39.98 % and the genome length is 1.94 Mbp.

Description of *Candidatus* Streptococcus apsimibra sp. nov.

Candidatus Streptococcus apsimibra (NL. fem. n. *apsimibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptococcus sp001578865*. The type genome for the species is the GenBank assembly RS_GCF_001578865.1. The GC content of the type genome is 47.51 % and the genome length is 2.81 Mbp.

Description of *Candidatus* Streptococcus arcifigena sp. nov.

Candidatus Streptococcus arcifigena (NL. fem. n. *arcifigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptococcus sp001814775*. The type genome for the species is the GenBank assembly RS_GCF_001814775.1. The GC content of the type genome is 39.64 % and the genome length is 2.05 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "bronchial washing".

Description of *Candidatus* Streptococcus artilicella sp. nov.

Candidatus Streptococcus artilicella (NL. fem. n. *artilicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptococcus sp902460355*. The type genome for the species is the GenBank assembly RS_GCF_902460355.1. The GC content of the type genome is 42.48 % and the genome length is 2.04 Mbp.

Description of *Candidatus* Streptococcus bicubatio sp. nov.

Candidatus Streptococcus bicubatio (NL. fem. n. *bicubatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptococcus sp900755085*. The type genome for the species is the GenBank assembly GCA_900755085.1. The GC content of the type genome is 42.17 % and the genome length is 1.85 Mbp.

Description of *Candidatus* Streptococcus bipalivita sp. nov.

Candidatus Streptococcus bipalivita (NL. fem. n. *bipalivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptococcus sp001808705*. The type genome for the species is the GenBank assembly RS_GCF_001808705.1. The GC content of the type genome is 39.08 % and the genome length is 2.13 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "sputum".

Description of *Candidatus* Streptococcus bucolitudo sp. nov.

Candidatus Streptococcus bucolitudo (NL. fem. n. *bucolitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptococcus sp000220065*. The type genome for the species is the GenBank assembly RS_GCF_000220065.1. The GC content of the type genome is 39.47 % and the genome length is 1.94 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "biological product [ENVO:02000043]".

Description of *Candidatus* Streptococcus cadurilenta sp. nov.

Candidatus Streptococcus cadurilenta (NL. fem. n. *cadurilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptococcus sp001587175*. The type genome for the species is the GenBank assembly RS_GCF_003943625.1. The GC content of the type genome is 42.16 % and the genome length is 1.86 Mbp.

Description of *Candidatus* Streptococcus casigatica sp. nov.

Candidatus Streptococcus casigatica (NL. fem. n. *casigatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptococcus sp002393675*. The type genome for the species is the GenBank assembly GCA_002393675.1. The GC content of the type genome is 36.88 % and the genome length is 1.92 Mbp.

Description of *Candidatus* Streptococcus cepulitia sp. nov.

Candidatus Streptococcus cepulitia (NL. fem. n. *cepulitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptococcus sp903645285*. The type genome for the species is the GenBank assembly RS_GCF_903645285.1. The GC content of the type genome is 40.47 % and the genome length is 2.03 Mbp.

Description of *Candidatus* Streptococcus citocimonas sp. nov.

Candidatus Streptococcus citocimonas (NL. fem. n. *citocimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptococcus sp902363395*. The type genome for the species is the GenBank assembly RS_GCF_902363395.1. The GC content of the type genome is 42.18 % and the genome length is 2.01 Mbp.

Description of *Candidatus* Streptococcus codifica sp. nov.

Candidatus Streptococcus codifica (NL. fem. n. *codifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptococcus sp900543065*. The type genome for the species is the GenBank assembly RS_GCF_014435245.1. The GC content of the type genome is 41.6 % and the genome length is 2.06 Mbp.

Description of *Candidatus* Streptococcus colapibra sp. nov.

Candidatus Streptococcus colapibra (NL. fem. n. *colapibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptococcus sp001182825*. The type genome for the species is the GenBank assembly RS_GCF_001182825.2. The GC content of the type genome is 40.72 % and the genome length is 1.55 Mbp.

Description of *Candidatus* Streptococcus conipastra sp. nov.

Candidatus Streptococcus conipastra (NL. fem. n. *conipastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptococcus sp011421455*. The type genome for the species is the GenBank assembly RS_GCF_011421425.1. The GC content of the type genome is 37.6 % and the genome length is 2.02 Mbp.

Description of *Candidatus* Streptococcus crusmimonas sp. nov.

Candidatus Streptococcus crusmimonas (NL. fem. n. *crusmimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptococcus sp013394695*. The type genome for the species is the GenBank assembly RS_GCF_013394695.1. The GC content of the type genome is 39.52 % and the genome length is 1.77 Mbp.

Description of *Candidatus* Streptococcus culigitoga sp. nov.

Candidatus Streptococcus culigitoga (NL. fem. n. *culigitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptococcus sp001553685*. The type genome for the species is the GenBank assembly RS_GCF_001553685.1. The GC content of the type genome is 39.65

% and the genome length is 2.18 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "cultured enamel chip".

Description of *Candidatus* Streptococcus defenitio sp. nov.

Candidatus Streptococcus defenitio (NL. fem. n. *defenitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptococcus sp001556435*. The type genome for the species is the GenBank assembly RS_GCF_009717225.1. The GC content of the type genome is 39.87 % and the genome length is 2.14 Mbp.

Description of *Candidatus* Streptococcus denicibra sp. nov.

Candidatus Streptococcus denicibra (NL. fem. n. *denicibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptococcus sp003086355*. The type genome for the species is the GenBank assembly RS_GCF_003429025.1. The GC content of the type genome is 41.85 % and the genome length is 2.38 Mbp.

Description of *Candidatus* Streptococcus detosousia sp. nov.

Candidatus Streptococcus detosousia (NL. fem. n. *detosousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptococcus sp004569635*. The type genome for the species is the GenBank assembly RS_GCF_004569635.1. The GC content of the type genome is 40.76 % and the genome length is 2.43 Mbp.

Description of *Candidatus* Streptococcus detumilega sp. nov.

Candidatus Streptococcus detumilega (NL. fem. n. *detumilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptococcus sp004166885*. The type genome for the species is the GenBank assembly RS_GCF_902363295.1. The GC content of the type genome is 42.09 % and the genome length is 2.02 Mbp.

Description of *Candidatus* Streptococcus dibucivita sp. nov.

Candidatus Streptococcus dibucivita (NL. fem. n. *dibucivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptococcus sp012843315*. The type genome for the species is the GenBank assembly RS_GCF_012843315.1. The GC content of the type genome is 40.85 % and the genome length is 2.08 Mbp.

Description of *Candidatus* Streptococcus effigivita sp. nov.

Candidatus Streptococcus effigivita (NL. fem. n. *effigivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptococcus sp001937065*. The type genome for the species is the GenBank assembly RS_GCF_001937065.1. The GC content of the type genome is 42.25 % and the genome length is 2.11 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "enrichment of guinea pig fecal samples".

Description of *Candidatus* Streptococcus entomifica sp. nov.

Candidatus Streptococcus entomifica (NL. fem. n. *entomifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptococcus sp003521145*. The type genome for the species is the GenBank assembly GCA_003521145.1. The GC content of the type genome is 39.65 % and the genome length is 1.68 Mbp.

Description of *Candidatus* Streptococcus expaliforma sp. nov.

Candidatus Streptococcus expaliforma (NL. fem. n. *expaliforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptococcus sp002436115*. The type genome for the species is the GenBank assembly GCA_002436115.1. The GC content of the type genome is 40.61 % and the genome length is 1.84 Mbp.

Description of *Candidatus* Streptococcus exsusisca sp. nov.

Candidatus Streptococcus exsusisca (NL. fem. n. *exsusisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptococcus sp001578805*. The type genome for the species is the GenBank assembly RS_GCF_001578805.1. The GC content of the type genome is 39.23 % and the genome length is 2.19 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "fruit residues (memencylon)".

Description of *Candidatus* Streptococcus fatiledo sp. nov.

Candidatus Streptococcus fatiledo (NL. fem. n. *fatiledo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptococcus sp013623465*. The type genome for the species is the GenBank assembly RS_GCF_013623455.1. The GC content of the type genome is 40.64 % and the genome length is 2.07 Mbp.

Description of *Candidatus* Streptococcus foricitica sp. nov.

Candidatus Streptococcus foricitica (NL. fem. n. *foricitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptococcus sp001810785*. The type genome for the species is the GenBank assembly RS_GCF_001810785.1. The GC content of the type genome is 40.4 % and the genome length is 1.88 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "sputum".

Description of *Candidatus* Streptococcus fumacago sp. nov.

Candidatus Streptococcus fumacago (NL. fem. n. *fumacago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptococcus sp013277415*. The type genome for the species is the GenBank assembly RS_GCF_013277415.1. The GC content of the type genome is 40.06 % and the genome length is 2.1 Mbp.

Description of *Candidatus* Streptococcus humecivita sp. nov.

Candidatus Streptococcus humecivita (NL. fem. n. *humecivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Streptococcus sp900766505*. The type genome for the species is the GenBank assembly RS_GCF_001837905.1. The GC content of the type genome is 41.42 % and the genome length is 2.22 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "sputum".

Description of *Candidatus* Streptococcus impinifica sp. nov.

Candidatus Streptococcus impinifica (NL. fem. n. *impinifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptococcus sp900546335*. The type genome for the species is the GenBank assembly GCA_900546335.1. The GC content of the type genome is 41.66 % and the genome length is 1.65 Mbp.

Description of *Candidatus* Streptococcus nubifibra sp. nov.

Candidatus Streptococcus nubifibra (NL. fem. n. *nubifibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptococcus sp000187745*. The type genome for the species is the GenBank assembly RS_GCF_000187745.1. The GC content of the type genome is 39.22 % and the genome length is 2.21 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "biological product [ENVO:02000043]".

Description of *Candidatus* Streptococcus obsecimonia sp. nov.

Candidatus Streptococcus obsecimonia (NL. fem. n. *obsecimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptococcus sp900104285*. The type genome for the species is the GenBank assembly RS_GCF_900104285.1. The GC content of the type genome is 40.92 % and the genome length is 1.94 Mbp.

Description of *Candidatus* Streptococcus octipicella sp. nov.

Candidatus Streptococcus octipicella (NL. fem. n. *octipicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptococcus sp000259505*. The type genome for the species is the GenBank assembly RS_GCF_000259505.1. The GC content of the type genome is 39.04

% and the genome length is 1.86 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "biological product [ENVO:02000043]".

Description of *Candidatus* Streptococcus opporigena sp. nov.

Candidatus Streptococcus opporigena (NL. fem. n. *opporigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptococcus sp000314795*. The type genome for the species is the GenBank assembly RS_GCF_000314795.2. The GC content of the type genome is 41.77 % and the genome length is 2.23 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "biological product [ENVO:02000043]".

Description of *Candidatus* Streptococcus ossifessa sp. nov.

Candidatus Streptococcus ossifessa (NL. fem. n. *ossifessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptococcus sp003686955*. The type genome for the species is the GenBank assembly RS_GCF_003686955.1. The GC content of the type genome is 39.49 % and the genome length is 2.15 Mbp.

Description of *Candidatus* Streptococcus penurilenta sp. nov.

Candidatus Streptococcus penurilenta (NL. fem. n. *penurilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptococcus sp013277515*. The type genome for the species is the GenBank assembly RS_GCF_013277495.1. The GC content of the type genome is 39.88 % and the genome length is 2.1 Mbp.

Description of *Candidatus* Streptococcus peraditrix sp. nov.

Candidatus Streptococcus peraditrix (NL. fem. n. *peraditrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptococcus sp013276795*. The type genome for the species is the GenBank assembly RS_GCF_013276565.1. The GC content of the type genome is 40.0 % and the genome length is 2.1 Mbp.

Description of *Candidatus* Streptococcus peribentia sp. nov.

Candidatus Streptococcus peribentia (NL. fem. n. *peribentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptococcus sp900555155*. The type genome for the species is the GenBank assembly RS_GCF_001071755.1. The GC content of the type genome is 41.05 % and the genome length is 2.04 Mbp.

Description of *Candidatus* Streptococcus recometta sp. nov.

Candidatus Streptococcus recometta (NL. fem. n. *recometta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptococcus sp000187445*. The type genome for the species is the GenBank assembly GCA_902167585.1. The GC content of the type genome is 39.36 % and the genome length is 2.31 Mbp.

Description of *Candidatus* Streptococcus recoritura sp. nov.

Candidatus Streptococcus recoritura (NL. fem. n. *recoritura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptococcus sp000448565*. The type genome for the species is the GenBank assembly RS_GCF_000448565.1. The GC content of the type genome is 41.45 % and the genome length is 2.33 Mbp.

Description of *Candidatus* Streptococcus redacatio sp. nov.

Candidatus Streptococcus redacatio (NL. fem. n. *redacatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptococcus sp000235485*. The type genome for the species is the GenBank assembly RS_GCF_000235485.1. The GC content of the type genome is 41.18 % and the genome length is 1.85 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "biological product [ENVO:02000043]".

Description of *Candidatus* Streptococcus roraratio sp. nov.

Candidatus Streptococcus roraratio (NL. fem. n. *roraratio* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptococcus sp000411475*. The type genome for the species is the GenBank assembly RS_GCF_902375005.1. The GC content of the type genome is 39.58 % and the genome length is 1.77 Mbp.

Description of *Candidatus* Streptococcus rubecedo sp. nov.

Candidatus Streptococcus rubecedo (NL. fem. n. *rubecedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptococcus sp001578875*. The type genome for the species is the GenBank assembly RS_GCF_001578875.1. The GC content of the type genome is 43.65 % and the genome length is 1.72 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "fruit residues (memencylon)".

Description of *Candidatus* Streptococcus rudicifica sp. nov.

Candidatus Streptococcus rudicifica (NL. fem. n. *rudicifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptococcus sp902729355*. The type genome for the species is the GenBank assembly RS_GCF_902729355.1. The GC content of the type genome is 38.53 % and the genome length is 2.45 Mbp.

Description of *Candidatus* Streptococcus rutabessa sp. nov.

Candidatus Streptococcus rutabessa (NL. fem. n. *rutabessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptococcus sp001578885*. The type genome for the species is the GenBank assembly RS_GCF_001578885.1. The GC content of the type genome is 45.24 % and the genome length is 1.68 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "fruit residues (memencylon)".

Description of *Candidatus* Streptococcus sicaritas sp. nov.

Candidatus Streptococcus sicaritas (NL. fem. n. *sicaritas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptococcus sp001811505*. The type genome for the species is the GenBank assembly RS_GCF_001811505.1. The GC content of the type genome is 39.38 % and the genome length is 2.11 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "urine".

Description of *Candidatus* Streptococcus solifisca sp. nov.

Candidatus Streptococcus solifisca (NL. fem. n. *solifisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptococcus sp007859205*. The type genome for the species is the GenBank assembly RS_GCF_007859205.1. The GC content of the type genome is 38.62 % and the genome length is 1.22 Mbp.

Description of *Candidatus* Streptococcus solipifica sp. nov.

Candidatus Streptococcus solipifica (NL. fem. n. *solipifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptococcus sp004570525*. The type genome for the species is the GenBank assembly RS_GCF_004570525.1. The GC content of the type genome is 41.48 % and the genome length is 1.82 Mbp.

Description of *Candidatus* Streptococcus sonabitoga sp. nov.

Candidatus Streptococcus sonabitoga (NL. fem. n. *sonabitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptococcus sp000831085*. The type genome for the species is the GenBank assembly RS_GCF_004127235.1. The GC content of the type genome is 41.13 % and the genome length is 2.03 Mbp.

Description of *Candidatus* Streptococcus tegimitas sp. nov.

Candidatus Streptococcus tegimitas (NL. fem. n. *tegimitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptococcus sp900550895*. The type genome for the species is the

GenBank assembly GCA_902406185.1. The GC content of the type genome is 41.24 % and the genome length is 1.8 Mbp.

Description of *Candidatus* Streptococcus venucicella sp. nov.

Candidatus Streptococcus venucicella (NL. fem. n. *venucicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptococcus sp011038795*. The type genome for the species is the GenBank assembly RS_GCF_011038795.1. The GC content of the type genome is 41.62 % and the genome length is 2.25 Mbp.

Description of *Candidatus* Streptomonospora adtesugo sp. nov.

Candidatus Streptomonospora adtesugo (NL. fem. n. *adtesugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomonospora sp004323735*. The type genome for the species is the GenBank assembly RS_GCF_004323735.1. The GC content of the type genome is 72.13 % and the genome length is 5.81 Mbp.

Description of *Candidatus* Streptomonospora anamnivita sp. nov.

Candidatus Streptomonospora anamnivita (NL. fem. n. *anamnivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomonospora sp009728995*. The type genome for the species is the GenBank assembly RS_GCF_009728995.1. The GC content of the type genome is 73.0 % and the genome length is 5.73 Mbp.

Description of *Candidatus* Streptomyces abascitura sp. nov.

Candidatus Streptomyces abascitura (NL. fem. n. *abascitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp000720185*. The type genome for the species is the GenBank assembly RS_GCF_000720185.1. The GC content of the type genome is 72.83 % and the genome length is 8.64 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "soil".

Description of *Candidatus* Streptomyces abinvisca sp. nov.

Candidatus Streptomyces abinvisca (NL. fem. n. *abinvisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp001417735*. The type genome for the species is the GenBank assembly RS_GCF_001417735.1. The GC content of the type genome is 71.55 % and the genome length is 8.92 Mbp.

Description of *Candidatus* Streptomyces abluvitrix sp. nov.

Candidatus Streptomyces abluvitrix (NL. fem. n. *abluvitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp010548275*. The type genome for the species is the GenBank assembly RS_GCF_010548275.1. The GC content of the type genome is 69.87 % and the genome length is 9.6 Mbp.

Description of *Candidatus* Streptomyces abveritoga sp. nov.

Candidatus Streptomyces abveritoga (NL. fem. n. *abveritoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).
