A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp001905385*. The type genome for the species is the GenBank assembly RS_GCF_001905385.1. The GC content of the type genome is 72.02 % and the genome length is 7.99 Mbp.

Description of *Candidatus* Streptomyces accenibra sp. nov.

Candidatus Streptomyces accenibra (NL. fem. n. *accenibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp012726235*. The type genome for the species is the GenBank assembly RS_GCF_012726235.1. The GC content of the type genome is 72.97 % and the genome length is 6.37 Mbp.

Description of *Candidatus* Streptomyces accenitura sp. nov.

Candidatus Streptomyces accenitura (NL. fem. n. *accenitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp013364195*. The type genome for the species is the GenBank assembly RS_GCF_013364195.1. The GC content of the type genome is 70.82 % and the genome length is 7.89 Mbp.

Description of *Candidatus* Streptomyces accumugo sp. nov.

Candidatus Streptomyces accumugo (NL. fem. n. *accumugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp000720145*. The type genome for the species is the GenBank assembly RS_GCF_000720145.1. The GC content of the type genome is 72.29 % and the genome length is 8.73 Mbp.

Description of *Candidatus* Streptomyces acertimonia sp. nov.

Candidatus Streptomyces acertimonia (NL. fem. n. *acertimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp006715395*. The type genome for the species is the GenBank assembly RS_GCF_006715395.1. The GC content of the type genome is 71.11 % and the genome length is 9.47 Mbp.

Description of *Candidatus* Streptomyces acricisca sp. nov.

Candidatus Streptomyces acricisca (NL. fem. n. *acricisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp001905505*. The type genome for the species is the GenBank assembly RS_GCF_001905505.1. The GC content of the type genome is 71.25 % and the genome length is 8.31 Mbp.

Description of *Candidatus* Streptomyces acrotimonia sp. nov.

Candidatus Streptomyces acrotimonia (NL. fem. n. *acrotimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Streptomyces sp004187715*. The type genome for the species is the GenBank assembly RS_GCF_004187715.1. The GC content of the type genome is 70.29 % and the genome length is 9.72 Mbp.

Description of *Candidatus* Streptomyces adcubigena sp. nov.

Candidatus Streptomyces adcubigena (NL. fem. n. *adcubigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp011044995*. The type genome for the species is the GenBank assembly RS_GCF_011044995.1. The GC content of the type genome is 70.3 % and the genome length is 8.99 Mbp.

Description of *Candidatus* Streptomyces adcucilega sp. nov.

Candidatus Streptomyces adcucilega (NL. fem. n. *adcucilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp000720115*. The type genome for the species is the GenBank assembly RS_GCF_000720115.1. The GC content of the type genome is 71.81 % and the genome length is 8.45 Mbp.

Description of *Candidatus* Streptomyces adfulousia sp. nov.

Candidatus Streptomyces adfulousia (NL. fem. n. *adfulousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp001280065*. The type genome for the species is the GenBank assembly RS_GCF_001280065.1. The GC content of the type genome is 71.35 % and the genome length is 8.21 Mbp.

Description of *Candidatus* Streptomyces adlacimonas sp. nov.

Candidatus Streptomyces adlacimonas (NL. fem. n. *adlacimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp001905005*. The type genome for the species is the GenBank assembly RS_GCF_001905005.1. The GC content of the type genome is 71.92 % and the genome length is 9.57 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "soil".

Description of *Candidatus* Streptomyces adlacivita sp. nov.

Candidatus Streptomyces adlacivita (NL. fem. n. *adlacivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp014489615*. The type genome for the species is the GenBank assembly RS_GCF_014489615.1. The GC content of the type genome is 73.43 % and the genome length is 8.19 Mbp.

Description of *Candidatus* Streptomyces adlapitia sp. nov.

Candidatus Streptomyces adlapitia (NL. fem. n. *adlapitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp009709575*. The type genome for the species is the GenBank assembly RS_GCF_009709575.1. The GC content of the type genome is 72.75 % and the genome length is 6.14 Mbp.

Description of *Candidatus* Streptomyces adlenicella sp. nov.

Candidatus Streptomyces adlenicella (NL. fem. n. *adlenicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp000424825*. The type genome for the species is the GenBank assembly RS_GCF_000424825.1. The GC content of the type genome is 72.69 % and the genome length is 6.79 Mbp.

Description of *Candidatus* Streptomyces adlubastra sp. nov.

Candidatus Streptomyces adlubastra (NL. fem. n. *adlubastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp009604455*. The type genome for the species is the GenBank assembly RS_GCF_009604455.1. The GC content of the type genome is 71.02 % and the genome length is 9.75 Mbp.

Description of *Candidatus* Streptomyces admodibula sp. nov.

Candidatus Streptomyces admodibula (NL. fem. n. *admodibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp000377965*. The type genome for the species is the GenBank assembly RS_GCF_000377965.1. The GC content of the type genome is 71.61 % and the genome length is 8.23 Mbp.

Description of *Candidatus* Streptomyces admoritia sp. nov.

Candidatus Streptomyces admoritia (NL. fem. n. *admoritia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp006715635*. The type genome for the species is the GenBank assembly RS_GCF_006715635.1. The GC content of the type genome is 69.48 % and the genome length is 7.79 Mbp.

Description of *Candidatus* Streptomyces adnariforma sp. nov.

Candidatus Streptomyces adnariforma (NL. fem. n. *adnariforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp004364245*. The type genome for the species is the GenBank assembly RS_GCF_004364245.1. The GC content of the type genome is 72.35 % and the genome length is 7.72 Mbp.

Description of *Candidatus* Streptomyces adnecifica sp. nov.

Candidatus Streptomyces adnecifica (NL. fem. n. *adnecifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp013364155*. The type genome for the species is the GenBank assembly RS_GCF_013364155.1. The GC content of the type genome is 71.05 % and the genome length is 9.77 Mbp.

Description of *Candidatus* Streptomyces adrecedo sp. nov.

Candidatus Streptomyces adrecedo (NL. fem. n. *adrecedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Streptomyces sp009184865*. The type genome for the species is the GenBank assembly RS_GCF_009184865.1. The GC content of the type genome is 70.86 % and the genome length is 10.18 Mbp.

Description of *Candidatus* Streptomyces adselitica sp. nov.

Candidatus Streptomyces adselitica (NL. fem. n. *adselitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp001905725*. The type genome for the species is the GenBank assembly RS_GCF_001905725.1. The GC content of the type genome is 71.67 % and the genome length is 8.93 Mbp.

Description of *Candidatus* Streptomyces adsesibra sp. nov.

Candidatus Streptomyces adsesibra (NL. fem. n. *adsesibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp003675325*. The type genome for the species is the GenBank assembly RS_GCF_003675325.1. The GC content of the type genome is 72.12 % and the genome length is 8.16 Mbp.

Description of *Candidatus* Streptomyces adsicousia sp. nov.

Candidatus Streptomyces adsicousia (NL. fem. n. *adsicousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp007096885*. The type genome for the species is the GenBank assembly RS_GCF_007096885.1. The GC content of the type genome is 72.38 % and the genome length is 7.14 Mbp.

Description of *Candidatus* Streptomyces adveritia sp. nov.

Candidatus Streptomyces adveritia (NL. fem. n. *adveritia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp000716605*. The type genome for the species is the GenBank assembly RS_GCF_000716605.1. The GC content of the type genome is 70.23 % and the genome length is 10.94 Mbp.

Description of *Candidatus* Streptomyces advinilega sp. nov.

Candidatus Streptomyces advinilega (NL. fem. n. *advinilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp008973465*. The type genome for the species is the GenBank assembly RS_GCF_008973465.1. The GC content of the type genome is 72.16 % and the genome length is 7.82 Mbp.

Description of *Candidatus* Streptomyces advinugo sp. nov.

Candidatus Streptomyces advinugo (NL. fem. n. *advinugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp002899455*. The type genome for the species is the GenBank assembly RS_GCF_002899455.1. The GC content of the type genome is 72.8 % and the genome length is 7.6 Mbp.

Description of *Candidatus* Streptomyces aglasatica sp. nov.

Candidatus Streptomyces aglasatica (NL. fem. n. *aglasatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp008120935*. The type genome for the species is the GenBank assembly RS_GCF_008120935.1. The GC content of the type genome is 71.82 % and the genome length is 9.71 Mbp.

Description of *Candidatus* Streptomyces agricimonas sp. nov.

Candidatus Streptomyces agricimonas (NL. fem. n. *agricimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp003143935*. The type genome for the species is the GenBank assembly RS_GCF_003143935.1. The GC content of the type genome is 71.3 % and the genome length is 9.62 Mbp.

Description of *Candidatus* Streptomyces alembiforma sp. nov.

Candidatus Streptomyces alembiforma (NL. fem. n. *alembiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a

noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp009834125*. The type genome for the species is the GenBank assembly RS_GCF_009834125.1. The GC content of the type genome is 71.59 % and the genome length is 9.07 Mbp.

Description of *Candidatus* Streptomyces amfititudo sp. nov.

Candidatus Streptomyces amfititudo (NL. fem. n. *amfititudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp002920535*. The type genome for the species is the GenBank assembly RS_GCF_002920535.1. The GC content of the type genome is 72.1 % and the genome length is 8.23 Mbp.

Description of *Candidatus* Streptomyces ammigessa sp. nov.

Candidatus Streptomyces ammigessa (NL. fem. n. *ammigessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp002551355*. The type genome for the species is the GenBank assembly GCA_002551355.1. The GC content of the type genome is 71.6 % and the genome length is 8.07 Mbp.

Description of *Candidatus* Streptomyces anactatica sp. nov.

Candidatus Streptomyces anactatica (NL. fem. n. *anactatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp011193355*. The type genome for the species is the GenBank assembly RS_GCF_011193355.1. The GC content of the type genome is 72.73 % and the genome length is 7.32 Mbp.

Description of *Candidatus* Streptomyces anactitoga sp. nov.

Candidatus Streptomyces anactitoga (NL. fem. n. *anactitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Streptomyces sp011045015*. The type genome for the species is the GenBank assembly RS_GCF_011045015.1. The GC content of the type genome is 69.83 % and the genome length is 11.16 Mbp.

Description of *Candidatus* Streptomyces anastitudo sp. nov.

Candidatus Streptomyces anastitudo (NL. fem. n. *anastitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp002941025*. The type genome for the species is the GenBank assembly RS_GCF_002941025.1. The GC content of the type genome is 70.88 % and the genome length is 8.78 Mbp.

Description of *Candidatus* Streptomyces annecicula sp. nov.

Candidatus Streptomyces annecicula (NL. fem. n. *annecicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp009709555*. The type genome for the species is the GenBank assembly RS_GCF_009709555.1. The GC content of the type genome is 70.21 % and the genome length is 8.49 Mbp.

Description of *Candidatus* Streptomyces apercicella sp. nov.

Candidatus Streptomyces apercicella (NL. fem. n. *apercicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp009498275*. The type genome for the species is the GenBank assembly RS_GCF_009498275.1. The GC content of the type genome is 71.24 % and the genome length is 8.88 Mbp.

Description of *Candidatus* Streptomyces apharitas sp. nov.

Candidatus Streptomyces apharitas (NL. fem. n. *apharitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp014451325*. The type genome for the species is the GenBank assembly RS_GCF_014451325.1. The GC content of the type genome is 71.95 % and the genome length is 5.72 Mbp.

Description of *Candidatus* Streptomyces apsenisca sp. nov.

Candidatus Streptomyces apsenisca (NL. fem. n. *apsenisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp001905445*. The type genome for the species is the GenBank assembly RS_GCF_001905445.1. The GC content of the type genome is 72.28 % and the genome length is 7.56 Mbp.

Description of *Candidatus* Streptomyces argiticella sp. nov.

Candidatus Streptomyces argiticella (NL. fem. n. *argiticella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp001636945*. The type genome for the species is the GenBank assembly RS_GCF_001636945.1. The GC content of the type genome is 71.21 % and the genome length is 9.19 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "red soil".

Description of *Candidatus* Streptomyces armipifica sp. nov.

Candidatus Streptomyces armipifica (NL. fem. n. *armipifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp003664315*. The type genome for the species is the GenBank assembly RS_GCF_003664315.1. The GC content of the type genome is 71.71 % and the genome length is 8.75 Mbp.

Description of *Candidatus* Streptomyces asbesugo sp. nov.

Candidatus Streptomyces asbesugo (NL. fem. n. *asbesugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp001083795*. The type genome for the species is the GenBank assembly RS_GCF_001083795.1. The GC content of the type genome is 72.74 % and the genome length is 8.06 Mbp.

Description of *Candidatus* Streptomyces ascisax sp. nov.

Candidatus Streptomyces ascisax (NL. fem. n. *ascisax* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp002027195*. The type genome for the species is the GenBank assembly RS_GCF_002027195.1. The GC content of the type genome is 70.73 % and the genome length is 8.3 Mbp.

Description of *Candidatus* Streptomyces assibibula sp. nov.

Candidatus Streptomyces assibibula (NL. fem. n. *assibibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp001905845*. The type genome for the species is the GenBank assembly RS_GCF_001905845.1. The GC content of the type genome is 72.11 % and the genome length is 8.74 Mbp.

Description of *Candidatus* Streptomyces assifisca sp. nov.

Candidatus Streptomyces assifisca (NL. fem. n. *assifisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp009832925*. The type genome for the species is the GenBank assembly RS_GCF_009832925.1. The GC content of the type genome is 71.04 % and the genome length is 7.62 Mbp.

Description of *Candidatus* Streptomyces attoratio sp. nov.

Candidatus Streptomyces attoratio (NL. fem. n. *attoratio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp003851625*. The type genome for the species is the GenBank assembly RS_GCF_003851625.1. The GC content of the type genome is 70.32 % and the genome length is 12.07 Mbp.

Description of *Candidatus* Streptomyces bacifisca sp. nov.

Candidatus Streptomyces bacifisca (NL. fem. n. *bacifisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp003671715*. The type genome for the species is the GenBank assembly RS_GCF_003671715.1. The GC content of the type genome is 71.57 % and the genome length is 7.91 Mbp.

Description of *Candidatus* Streptomyces badititura sp. nov.

Candidatus Streptomyces badititura (NL. fem. n. *badititura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp900091955*. The type genome for the species is the GenBank assembly RS_GCF_900091955.1. The GC content of the type genome is 69.59 % and the genome length is 9.36 Mbp.

Description of *Candidatus* Streptomyces benevitoga sp. nov.

Candidatus Streptomyces benevitoga (NL. fem. n. *benevitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp000719555*. The type genome for the species is the GenBank assembly RS_GCF_000719555.1. The GC content of the type genome is 73.19 % and the genome length is 7.95 Mbp.

Description of *Candidatus* Streptomyces bicipitas sp. nov.

Candidatus Streptomyces bicipitas (NL. fem. n. *bicipitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp000383935*. The type genome for the species is the GenBank assembly RS_GCF_000383935.1. The GC content of the type genome is 72.93 % and the genome length is 8.25 Mbp.

Description of *Candidatus* Streptomyces bicoditudo sp. nov.

Candidatus Streptomyces bicoditudo (NL. fem. n. *bicoditudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp002920615*. The type genome for the species is the GenBank assembly RS_GCF_004342785.1. The GC content of the type genome is 72.11 % and the genome length is 9.83 Mbp.

Description of *Candidatus* Streptomyces bicubibula sp. nov.

Candidatus Streptomyces bicubibula (NL. fem. n. *bicubibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp002797655*. The type genome for the species is the GenBank assembly RS_GCF_000424805.1. The GC content of the type genome is 73.59 % and the genome length is 8.61 Mbp.

Description of *Candidatus* Streptomyces bifarivita sp. nov.

Candidatus Streptomyces bifarivita (NL. fem. n. *bifarivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp014621695*. The type genome for the species is the GenBank assembly RS_GCF_014621695.1. The GC content of the type genome is 72.15 % and the genome length is 8.35 Mbp.

Description of *Candidatus* Streptomyces bifisedo sp. nov.

Candidatus Streptomyces bifisedo (NL. fem. n. *bifisedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp004337435*. The type genome for the species is the GenBank assembly RS_GCF_004337435.2. The GC content of the type genome is 70.36 % and the genome length is 10.05 Mbp.

Description of *Candidatus* Streptomyces bifisentia sp. nov.

Candidatus Streptomyces bifisentia (NL. fem. n. *bifisentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp001279725*. The type genome for the species is the GenBank assembly RS_GCF_001279725.1. The GC content of the type genome is 71.51 % and the genome length is 7.81 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "soil".

Description of *Candidatus* Streptomyces bimetedo sp. nov.

Candidatus Streptomyces bimetedo (NL. fem. n. *bimetedo* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp000213055*. The type genome for the species is the GenBank assembly RS_GCF_000213055.1. The GC content of the type genome is 73.08 % and the genome length is 7.51 Mbp.

Description of *Candidatus* Streptomyces bipalatio sp. nov.

Candidatus Streptomyces bipalatio (NL. fem. n. *bipalatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp000426325*. The type genome for the species is the GenBank assembly RS_GCF_004795255.1. The GC content of the type genome is 72.56 % and the genome length is 5.61 Mbp.

Description of *Candidatus* Streptomyces bucelicella sp. nov.

Candidatus Streptomyces bucelicella (NL. fem. n. *bucelicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp004795055*. The type genome for the species is the GenBank assembly RS_GCF_004795055.1. The GC content of the type genome is 71.54 % and the genome length is 8.05 Mbp.

Description of *Candidatus* Streptomyces bucelimonas sp. nov.

Candidatus Streptomyces bucelimonas (NL. fem. n. *bucelimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp011421595*. The type genome for the species is the GenBank assembly RS_GCF_011421595.1. The GC content of the type genome is 73.46 % and the genome length is 6.48 Mbp.

Description of *Candidatus* Streptomyces cacomitrix sp. nov.

Candidatus Streptomyces cacomitrix (NL. fem. n. *cacomitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp008042045*. The type genome for the species is the GenBank assembly RS_GCF_008042045.1. The GC content of the type genome is 72.93 % and the genome length is 8.27 Mbp.

Description of *Candidatus* Streptomyces cacomousia sp. nov.

Candidatus Streptomyces cacomousia (NL. fem. n. *cacomousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp003148825*. The type genome for the species is the GenBank assembly RS_GCF_003148825.1. The GC content of the type genome is 71.83 % and the genome length is 8.51 Mbp.

Description of *Candidatus* Streptomyces cacopitia sp. nov.

Candidatus Streptomyces cacopitia (NL. fem. n. *cacopitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp001953885*. The type genome for the species is the GenBank assembly RS_GCF_001953885.1. The GC content of the type genome is 70.69 % and the genome length is 9.99 Mbp.

Description of *Candidatus* Streptomyces capiliforma sp. nov.

Candidatus Streptomyces capiliforma (NL. fem. n. *capiliforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp014295035*. The type genome for the species is the GenBank assembly RS_GCF_013364335.1. The GC content of the type genome is 72.87 % and the genome length is 9.09 Mbp.

Description of *Candidatus* Streptomyces capucentia sp. nov.

Candidatus Streptomyces capucentia (NL. fem. n. *capucentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp002939385*. The type genome for the species is the GenBank assembly RS_GCF_001970135.1. The GC content of the type genome is 72.09 % and the genome length is 8.45 Mbp.

Description of *Candidatus* Streptomyces capucigena sp. nov.

Candidatus Streptomyces capucigena (NL. fem. n. *capucigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp003330845*. The type genome for the species is the GenBank assembly RS_GCF_003330845.1. The GC content of the type genome is 71.96 % and the genome length is 8.57 Mbp.

Description of *Candidatus* Streptomyces carucetta sp. nov.

Candidatus Streptomyces carucetta (NL. fem. n. *carucetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp001426405*. The type genome for the species is the GenBank assembly RS_GCF_001427745.1. The GC content of the type genome is 72.43 % and the genome length is 7.59 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "root".

Description of *Candidatus* Streptomyces casabimonas sp. nov.

Candidatus Streptomyces casabimonas (NL. fem. n. *casabimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp003725745*. The type genome for the species is the GenBank assembly RS_GCF_003725745.1. The GC content of the type genome is 72.47 % and the genome length is 7.05 Mbp.

Description of *Candidatus* Streptomyces catabousia sp. nov.

Candidatus Streptomyces catabousia (NL. fem. n. *catabousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp000482585*. The type genome for the species is the GenBank assembly RS_GCF_000482585.1. The GC content of the type genome is 73.09 % and the genome length is 7.19 Mbp.

Description of *Candidatus* Streptomyces categicella sp. nov.

Candidatus Streptomyces categicella (NL. fem. n. *categicella* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp900091725*. The type genome for the species is the GenBank assembly RS_GCF_900091725.1. The GC content of the type genome is 70.98 % and the genome length is 9.32 Mbp.

Description of *Candidatus* Streptomyces cenobentia sp. nov.

Candidatus Streptomyces cenobentia (NL. fem. n. *cenobentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp014489635*. The type genome for the species is the GenBank assembly RS_GCF_014489635.1. The GC content of the type genome is 71.77 % and the genome length is 9.95 Mbp.

Description of *Candidatus* Streptomyces cenodax sp. nov.

Candidatus Streptomyces cenodax (NL. fem. n. *cenodax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp001905905*. The type genome for the species is the GenBank assembly RS_GCF_001905905.1. The GC content of the type genome is 72.53 % and the genome length is 7.37 Mbp.

Description of *Candidatus* Streptomyces cenotiforma sp. nov.

Candidatus Streptomyces cenotiforma (NL. fem. n. *cenotiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp000805335*. The type genome for the species is the GenBank assembly RS_GCF_000805335.1. The GC content of the type genome is 71.39 % and the genome length is 8.07 Mbp.

Description of *Candidatus* Streptomyces ceracitudo sp. nov.

Candidatus Streptomyces ceracitudo (NL. fem. n. *ceracitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp004343515*. The type genome for the species is the GenBank assembly RS_GCF_004343515.1. The GC content of the type genome is 70.72 % and the genome length is 11.25 Mbp.

Description of *Candidatus* Streptomyces cerifilega sp. nov.

Candidatus Streptomyces cerifilega (NL. fem. n. *cerifilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp002382885*. The type genome for the species is the GenBank assembly RS_GCF_002382885.1. The GC content of the type genome is 71.19 % and the genome length is 8.12 Mbp.

Description of *Candidatus* Streptomyces ceromitio sp. nov.

Candidatus Streptomyces ceromitio (NL. fem. n. *ceromitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp000721605*. The type genome for the species is the GenBank assembly RS_GCF_000721605.1. The GC content of the type genome is 72.01 % and the genome length is 8.23 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "soil".

Description of *Candidatus* Streptomyces chalbedo sp. nov.

Candidatus Streptomyces chalbedo (NL. fem. n. *chalbedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp000718785*. The type genome for the species is the GenBank assembly RS_GCF_000718785.1. The GC content of the type genome is 71.55 % and the genome length is 7.92 Mbp.

Description of *Candidatus* Streptomyces cibarax sp. nov.

Candidatus Streptomyces cibarax (NL. fem. n. *cibarax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp000721375*. The type genome for the species is the GenBank assembly GCA_000721375.1. The GC content of the type genome is 69.91 %

and the genome length is 8.57 Mbp.

Description of *Candidatus* Streptomyces ciminigena sp. nov.

Candidatus Streptomyces ciminigena (NL. fem. n. *ciminigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp001184025*. The type genome for the species is the GenBank assembly GCA_002081495.1. The GC content of the type genome is 71.8 % and the genome length is 8.77 Mbp.

Description of *Candidatus* Streptomyces cisoritia sp. nov.

Candidatus Streptomyces cisoritia (NL. fem. n. *cisoritia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp002847285*. The type genome for the species is the GenBank assembly RS_GCF_002847285.1. The GC content of the type genome is 73.14 % and the genome length is 8.03 Mbp.

Description of *Candidatus* Streptomyces citipilega sp. nov.

Candidatus Streptomyces citipilega (NL. fem. n. *citipilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp003814525*. The type genome for the species is the GenBank assembly RS_GCF_003814525.1. The GC content of the type genome is 70.76 % and the genome length is 10.42 Mbp.

Description of *Candidatus* Streptomyces citivitica sp. nov.

Candidatus Streptomyces citivitica (NL. fem. n. *citivitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp004795035*. The type genome for the species is the GenBank assembly RS_GCF_004795035.1. The GC content of the type genome is 71.57 % and the genome length is 7.17 Mbp.

Description of *Candidatus* Streptomyces cocodicella sp. nov.

Candidatus Streptomyces cocodicella (NL. fem. n. *cocodicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp011045025*. The type genome for the species is the GenBank assembly RS_GCF_011045025.1. The GC content of the type genome is 69.58 % and the genome length is 10.48 Mbp.

Description of *Candidatus* Streptomyces colipitas sp. nov.

Candidatus Streptomyces colipitas (NL. fem. n. *colipitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp004124325*. The type genome for the species is the GenBank assembly RS_GCF_004124325.1. The GC content of the type genome is 71.69 % and the genome length is 8.07 Mbp.

Description of *Candidatus* Streptomyces colopetta sp. nov.

Candidatus Streptomyces colopetta (NL. fem. n. *colopetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp001509795*. The type genome for the species is the GenBank assembly RS_GCF_002156055.1. The GC content of the type genome is 72.12 % and the genome length is 7.33 Mbp.

Description of *Candidatus* Streptomyces conamitia sp. nov.

Candidatus Streptomyces conamitia (NL. fem. n. *conamitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp003846175*. The type genome for the species is the GenBank assembly RS_GCF_003846175.1. The GC content of the type genome is 70.63 % and the genome length is 10.03 Mbp.

Description of *Candidatus* Streptomyces conipatio sp. nov.

Candidatus Streptomyces conipatio (NL. fem. n. *conipatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp003752275*. The type genome for the species is the GenBank assembly RS_GCF_003752275.1. The GC content of the type genome is 70.54 % and the genome length is 9.06 Mbp.

Description of *Candidatus* Streptomyces corocago sp. nov.

Candidatus Streptomyces corocago (NL. fem. n. *corocago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp012927245*. The type genome for the species is the GenBank assembly RS_GCF_012927245.1. The GC content of the type genome is 72.74 % and the genome length is 7.95 Mbp.

Description of *Candidatus* Streptomyces corocax sp. nov.

Candidatus Streptomyces corocax (NL. fem. n. *corocax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp002803085*. The type genome for the species is the GenBank assembly RS_GCF_002803085.1. The GC content of the type genome is 71.16 % and the genome length is 8.76 Mbp.

Description of *Candidatus* Streptomyces cuferitia sp. nov.

Candidatus Streptomyces cuferitia (NL. fem. n. *cuferitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp003287935*. The type genome for the species is the GenBank assembly RS_GCF_003287935.1. The GC content of the type genome is 72.02 % and the genome length is 9.03 Mbp.

Description of *Candidatus* Streptomyces culibilenta sp. nov.

Candidatus Streptomyces culibilenta (NL. fem. n. *culibilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp003574445*. The type genome for the species is the GenBank assembly RS_GCF_003574445.1. The GC content of the type genome is 70.75

% and the genome length is 8.04 Mbp.

Description of *Candidatus* Streptomyces decamastra sp. nov.

Candidatus Streptomyces decamastra (NL. fem. n. *decamastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp000720845*. The type genome for the species is the GenBank assembly GCA_000720845.1. The GC content of the type genome is 72.0 % and the genome length is 8.39 Mbp.

Description of *Candidatus* Streptomyces decucicella sp. nov.

Candidatus Streptomyces decucicella (NL. fem. n. *decucicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp000373625*. The type genome for the species is the GenBank assembly RS_GCF_000373625.1. The GC content of the type genome is 71.83 % and the genome length is 6.85 Mbp.

Description of *Candidatus* Streptomyces dedigitura sp. nov.

Candidatus Streptomyces dedigitura (NL. fem. n. *dedigitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp003947455*. The type genome for the species is the GenBank assembly RS_GCF_003947455.1. The GC content of the type genome is 71.99 % and the genome length is 8.17 Mbp.

Description of *Candidatus* Streptomyces defanibula sp. nov.

Candidatus Streptomyces defanibula (NL. fem. n. *defanibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp004217285*. The type genome for the species is the GenBank assembly RS_GCF_004217285.1. The GC content of the type genome is 71.93 % and the genome length is 6.14 Mbp.

Description of *Candidatus* Streptomyces defosicula sp. nov.

Candidatus Streptomyces defosicula (NL. fem. n. *defosicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp008042155*. The type genome for the species is the GenBank assembly RS_GCF_008042155.1. The GC content of the type genome is 70.79 % and the genome length is 8.32 Mbp.

Description of *Candidatus* Streptomyces defulilega sp. nov.

Candidatus Streptomyces defulilega (NL. fem. n. *defulilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp900116325*. The type genome for the species is the GenBank assembly RS_GCF_900101975.1. The GC content of the type genome is 69.84 % and the genome length is 7.84 Mbp.

Description of *Candidatus* Streptomyces delacimonia sp. nov.

Candidatus Streptomyces delacimonia (NL. fem. n. *delacimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp004151105*. The type genome for the species is the GenBank assembly RS_GCF_004151105.1. The GC content of the type genome is 70.66 % and the genome length is 8.85 Mbp.

Description of *Candidatus* Streptomyces delapedo sp. nov.

Candidatus Streptomyces delapedo (NL. fem. n. *delapedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp001746365*. The type genome for the species is the GenBank assembly RS_GCF_001746365.1. The GC content of the type genome is 71.63 % and the genome length is 9.18 Mbp.

Description of *Candidatus* Streptomyces delapisca sp. nov.

Candidatus Streptomyces delapisca (NL. fem. n. *delapisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp003389455*. The type genome for the species is the GenBank assembly RS_GCF_003389455.1. The GC content of the type genome is 70.47 % and the genome length is 9.48 Mbp.

Description of *Candidatus* Streptomyces demogetta sp. nov.

Candidatus Streptomyces demogetta (NL. fem. n. *demogetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp000716335*. The type genome for the species is the GenBank assembly RS_GCF_000716335.1. The GC content of the type genome is 72.58 % and the genome length is 7.93 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "soil".

Description of *Candidatus* Streptomyces denixilenta sp. nov.

Candidatus Streptomyces denixilenta (NL. fem. n. *denixilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp006088715*. The type genome for the species is the GenBank assembly RS_GCF_006088715.1. The GC content of the type genome is 72.42 % and the genome length is 11.1 Mbp.

Description of *Candidatus* Streptomyces deparilega sp. nov.

Candidatus Streptomyces deparilega (NL. fem. n. *deparilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp001905825*. The type genome for the species is the GenBank assembly RS_GCF_001905825.1. The GC content of the type genome is 72.28 % and the genome length is 9.2 Mbp.

Description of *Candidatus* Streptomyces depelitura sp. nov.

Candidatus Streptomyces depelitura (NL. fem. n. *depelitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp001514305*. The type genome for the species is the

GenBank assembly RS_GCF_001514305.1. The GC content of the type genome is 70.3 % and the genome length is 10.77 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "marine sponge".

Description of *Candidatus* Streptomyces depupentia sp. nov.

Candidatus Streptomyces depupentia (NL. fem. n. *depupentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp009852415*. The type genome for the species is the GenBank assembly RS_GCF_009852415.1. The GC content of the type genome is 72.97 % and the genome length is 8.63 Mbp.

Description of *Candidatus* Streptomyces depupibra sp. nov.

Candidatus Streptomyces depupibra (NL. fem. n. *depupibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp003814935*. The type genome for the species is the GenBank assembly RS_GCF_003814935.1. The GC content of the type genome is 70.66 % and the genome length is 10.52 Mbp.

Description of *Candidatus* Streptomyces derecitoga sp. nov.

Candidatus Streptomyces derecitoga (NL. fem. n. *derecitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp002910915*. The type genome for the species is the GenBank assembly RS_GCF_002910915.1. The GC content of the type genome is 70.8 % and the genome length is 7.47 Mbp.

Description of *Candidatus* Streptomyces detesimonas sp. nov.

Candidatus Streptomyces detesimonas (NL. fem. n. *detesimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp001293595*. The type genome for the species is the GenBank assembly RS_GCF_000719815.1. The GC content of the type genome is 73.5 % and the genome length is 7.06 Mbp.

Description of *Candidatus* Streptomyces detunimonia sp. nov.

Candidatus Streptomyces detunimonia (NL. fem. n. *detunimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp000373585*. The type genome for the species is the GenBank assembly RS_GCF_000373585.1. The GC content of the type genome is 71.86 % and the genome length is 8.6 Mbp.

Description of *Candidatus* Streptomyces dibucitas sp. nov.

Candidatus Streptomyces dibucitas (NL. fem. n. *dibucitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp014495685*. The type genome for the species is the GenBank assembly RS_GCF_014495685.1. The GC content of the type genome is 70.61 % and the genome length is 9.67 Mbp.

Description of *Candidatus* Streptomyces dicabitica sp. nov.

Candidatus Streptomyces dicabitica (NL. fem. n. *dicabitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp001279775*. The type genome for the species is the GenBank assembly RS_GCF_001279775.1. The GC content of the type genome is 70.55 % and the genome length is 10.36 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "soil".

Description of *Candidatus* Streptomyces dilecimonas sp. nov.

Candidatus Streptomyces dilecimonas (NL. fem. n. *dilecimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp001514285*. The type genome for the species is the GenBank assembly RS_GCF_001514285.1. The GC content of the type genome is 71.91 % and the genome length is 9.38 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "soil".

Description of *Candidatus* Streptomyces dimacugo sp. nov.

Candidatus Streptomyces dimacugo (NL. fem. n. *dimacugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp001426585*. The type genome for the species is the GenBank assembly RS_GCF_003949845.1. The GC content of the type genome is 72.06 % and the genome length is 8.69 Mbp.

Description of *Candidatus* Streptomyces dimaditoga sp. nov.

Candidatus Streptomyces dimaditoga (NL. fem. n. *dimaditoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp003384795*. The type genome for the species is the GenBank assembly RS_GCF_003384795.1. The GC content of the type genome is 70.39 % and the genome length is 10.07 Mbp.

Description of *Candidatus* Streptomyces doxolessa sp. nov.

Candidatus Streptomyces doxolessa (NL. fem. n. *doxolessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp001746295*. The type genome for the species is the GenBank assembly RS_GCF_001746295.1. The GC content of the type genome is 70.28 % and the genome length is 11.0 Mbp.

Description of *Candidatus* Streptomyces doxolifica sp. nov.

Candidatus Streptomyces doxolifica (NL. fem. n. *doxolifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp004795105*. The type genome for the species is the GenBank assembly RS_GCF_004795105.1. The GC content of the type genome is 71.36 % and the genome length is 8.19 Mbp.

Description of *Candidatus* Streptomyces duricisca sp. nov.

Candidatus Streptomyces duricisca (NL. fem. n. *duricisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp000818195*. The type genome for the species is the GenBank assembly RS_GCF_000818195.1. The GC content of the type genome is 70.16 % and the genome length is 9.8 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "mushroom surface".

Description of *Candidatus* Streptomyces emortisca sp. nov.

Candidatus Streptomyces emortisca (NL. fem. n. *emortisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp001895105*. The type genome for the species is the GenBank assembly RS_GCF_001895105.1. The GC content of the type genome is 72.08 % and the genome length is 7.63 Mbp.

Description of *Candidatus* Streptomyces encepilega sp. nov.

Candidatus Streptomyces encepilega (NL. fem. n. *encepilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp014253015*. The type genome for the species is the GenBank assembly RS_GCF_014253015.1. The GC content of the type genome is 73.15 % and the genome length is 7.6 Mbp.

Description of *Candidatus* Streptomyces endivax sp. nov.

Candidatus Streptomyces endivax (NL. fem. n. *endivax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp007827595*. The type genome for the species is the GenBank assembly RS_GCF_007827595.1. The GC content of the type genome is 71.06 % and the genome length is 10.32 Mbp.

Description of *Candidatus* Streptomyces energitoga sp. nov.

Candidatus Streptomyces energitoga (NL. fem. n. *energitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp000424785*. The type genome for the species is the

GenBank assembly RS_GCF_000424785.1. The GC content of the type genome is 72.3 % and the genome length is 7.72 Mbp.

Description of *Candidatus* Streptomyces excetitoga sp. nov.

Candidatus Streptomyces excetitoga (NL. fem. n. *excetitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp003814875*. The type genome for the species is the GenBank assembly RS_GCF_003814875.1. The GC content of the type genome is 70.45 % and the genome length is 12.0 Mbp.

Description of *Candidatus* Streptomyces excomastra sp. nov.

Candidatus Streptomyces excomastra (NL. fem. n. *excomastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp002005565*. The type genome for the species is the GenBank assembly RS_GCF_002005565.1. The GC content of the type genome is 72.53 % and the genome length is 7.34 Mbp.

Description of *Candidatus* Streptomyces excoritica sp. nov.

Candidatus Streptomyces excoritica (NL. fem. n. *excoritica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp001905595*. The type genome for the species is the GenBank assembly RS_GCF_001905595.1. The GC content of the type genome is 71.3 % and the genome length is 7.41 Mbp.

Description of *Candidatus* Streptomyces exforax sp. nov.

Candidatus Streptomyces exforax (NL. fem. n. *exforax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp000721275*. The type genome for the species is the GenBank assembly GCA_000721275.1. The GC content of the type genome is 73.64 % and the genome length is 7.48 Mbp.

Description of *Candidatus* Streptomyces exhoretta sp. nov.

Candidatus Streptomyces exhoretta (NL. fem. n. *exhoretta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp012726265*. The type genome for the species is the GenBank assembly RS_GCF_012726265.1. The GC content of the type genome is 71.56 % and the genome length is 7.38 Mbp.

Description of *Candidatus* Streptomyces exorbago sp. nov.

Candidatus Streptomyces exorbago (NL. fem. n. *exorbago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp013044505*. The type genome for the species is the GenBank assembly RS_GCF_013044505.1. The GC content of the type genome is 70.55 % and the genome length is 10.99 Mbp.

Description of *Candidatus* Streptomyces exoscitio sp. nov.

Candidatus Streptomyces exoscitio (NL. fem. n. *exoscitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp000972385*. The type genome for the species is the GenBank assembly RS_GCF_000972385.1. The GC content of the type genome is 70.4 % and the genome length is 9.22 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "soil".

Description of *Candidatus* Streptomyces expalimonas sp. nov.

Candidatus Streptomyces expalimonas (NL. fem. n. *expalimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp000470535*. The type genome for the species is the GenBank assembly RS_GCF_000470535.1. The GC content of the type genome is 70.57 % and the genome length is 8.01 Mbp.

Description of *Candidatus* Streptomyces expanitoga sp. nov.

Candidatus Streptomyces expanitoga (NL. fem. n. *expanitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp900103585*. The type genome for the species is the GenBank assembly RS_GCF_900103585.1. The GC content of the type genome is 70.54 % and the genome length is 10.62 Mbp.

Description of *Candidatus* Streptomyces expisetta sp. nov.

Candidatus Streptomyces expisetta (NL. fem. n. *expisetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp001905125*. The type genome for the species is the GenBank assembly RS_GCF_001905125.1. The GC content of the type genome is 70.61 % and the genome length is 9.63 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "soil".

Description of *Candidatus* Streptomyces exsanax sp. nov.

Candidatus Streptomyces exsanax (NL. fem. n. *exsanax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp009796285*. The type genome for the species is the GenBank assembly RS_GCF_009796285.1. The GC content of the type genome is 70.89 % and the genome length is 9.74 Mbp.

Description of *Candidatus* Streptomyces exsufessa sp. nov.

Candidatus Streptomyces exsufessa (NL. fem. n. *exsufessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp001653515*. The type genome for the species is the GenBank assembly RS_GCF_001653515.1. The GC content of the type genome is 71.38 % and the genome length is 7.11 Mbp.

Description of *Candidatus* Streptomyces exsupibra sp. nov.

Candidatus Streptomyces exsupibra (NL. fem. n. *exsupibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp013055795*. The type genome for the species is the

GenBank assembly RS_GCF_013055795.1. The GC content of the type genome is 72.43 % and the genome length is 7.13 Mbp.

Description of *Candidatus* Streptomyces fatilastra sp. nov.

Candidatus Streptomyces fatilastra (NL. fem. n. *fatilastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp000154905*. The type genome for the species is the GenBank assembly RS_GCF_000154905.1. The GC content of the type genome is 73.0 % and the genome length is 6.97 Mbp.

Description of *Candidatus* Streptomyces fatilitrix sp. nov.

Candidatus Streptomyces fatilitrix (NL. fem. n. *fatilitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp003949805*. The type genome for the species is the GenBank assembly RS_GCF_003949805.1. The GC content of the type genome is 73.06 % and the genome length is 7.65 Mbp.

Description of *Candidatus* Streptomyces favonitudo sp. nov.

Candidatus Streptomyces favonitudo (NL. fem. n. *favonitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp003949795*. The type genome for the species is the GenBank assembly RS_GCF_003949795.1. The GC content of the type genome is 73.13 % and the genome length is 7.94 Mbp.

Description of *Candidatus* Streptomyces fetifastra sp. nov.

Candidatus Streptomyces fetifastra (NL. fem. n. *fetifastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp900187385*. The type genome for the species is the GenBank assembly RS_GCF_900102245.1. The GC content of the type genome is 71.03 % and the genome length is 8.07 Mbp.

Description of *Candidatus* Streptomyces fetutitrix sp. nov.

Candidatus Streptomyces fetutitrix (NL. fem. n. *fetutitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp002846625*. The type genome for the species is the GenBank assembly RS_GCF_002846625.1. The GC content of the type genome is 69.99 % and the genome length is 12.7 Mbp.

Description of *Candidatus* Streptomyces ficedessa sp. nov.

Candidatus Streptomyces ficedessa (NL. fem. n. *ficedessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp013778455*. The type genome for the species is the GenBank assembly RS_GCF_013912435.1. The GC content of the type genome is 69.96 % and the genome length is 9.07 Mbp.

Description of *Candidatus* Streptomyces foricitudo sp. nov.

Candidatus Streptomyces foricitudo (NL. fem. n. *foricitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp008271805*. The type genome for the species is the GenBank assembly RS_GCF_008271805.1. The GC content of the type genome is 71.47 % and the genome length is 7.49 Mbp.

Description of *Candidatus* Streptomyces fragmitura sp. nov.

Candidatus Streptomyces fragmitura (NL. fem. n. *fragmitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp013450295*. The type genome for the species is the GenBank assembly RS_GCF_013450295.1. The GC content of the type genome is 72.9 % and the genome length is 6.74 Mbp.

Description of *Candidatus* Streptomyces frigdibula sp. nov.

Candidatus Streptomyces frigdibula (NL. fem. n. *frigdibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp007280575*. The type genome for the species is the GenBank assembly RS_GCF_007280575.1. The GC content of the type genome is 72.16 % and the genome length is 7.0 Mbp.

Description of *Candidatus* Streptomyces fuligatica sp. nov.

Candidatus Streptomyces fuligatica (NL. fem. n. *fuligatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp007176755*. The type genome for the species is the GenBank assembly RS_GCF_007176755.1. The GC content of the type genome is 72.59 % and the genome length is 7.85 Mbp.

Description of *Candidatus* Streptomyces fuligibula sp. nov.

Candidatus Streptomyces fuligibula (NL. fem. n. *fuligibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp003519485*. The type genome for the species is the GenBank assembly GCA_003519485.1. The GC content of the type genome is 71.25 % and the genome length is 5.37 Mbp.

Description of *Candidatus* Streptomyces funamatio sp. nov.

Candidatus Streptomyces funamatio (NL. fem. n. *funamatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp002551245*. The type genome for the species is the GenBank assembly RS_GCF_002551245.1. The GC content of the type genome is 71.54 % and the genome length is 8.22 Mbp.

Description of *Candidatus* Streptomyces funamitrix sp. nov.

Candidatus Streptomyces funamitrix (NL. fem. n. *funamitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp002711365*. The type genome for the species is the GenBank assembly GCA_900090175.1. The GC content of the type genome is 71.57 %

and the genome length is 7.87 Mbp.

Description of *Candidatus* Streptomyces fusifibula sp. nov.

Candidatus Streptomyces fusifibula (NL. fem. n. *fusifibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp003032475*. The type genome for the species is the GenBank assembly RS_GCF_003032475.1. The GC content of the type genome is 71.37 % and the genome length is 9.85 Mbp.

Description of *Candidatus* Streptomyces gasomitrix sp. nov.

Candidatus Streptomyces gasomitrix (NL. fem. n. *gasomitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp001282115*. The type genome for the species is the GenBank assembly RS_GCF_001282115.1. The GC content of the type genome is 71.31 % and the genome length is 8.96 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "peanut".

Description of *Candidatus* Streptomyces gasomitura sp. nov.

Candidatus Streptomyces gasomitura (NL. fem. n. *gasomitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp002803155*. The type genome for the species is the GenBank assembly RS_GCF_002803155.1. The GC content of the type genome is 71.84 % and the genome length is 10.36 Mbp.

Description of *Candidatus* Streptomyces habacedo sp. nov.

Candidatus Streptomyces habacedo (NL. fem. n. *habacedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp001905365*. The type genome for the species is the GenBank assembly RS_GCF_001905365.1. The GC content of the type genome is 71.0 % and the genome length is 8.89 Mbp.

Description of *Candidatus* Streptomyces hexagifica sp. nov.

Candidatus Streptomyces hexagifica (NL. fem. n. *hexagifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp000720175*. The type genome for the species is the GenBank assembly RS_GCF_000720175.1. The GC content of the type genome is 71.5 % and the genome length is 9.06 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "soil".

Description of *Candidatus* Streptomyces hexametta sp. nov.

Candidatus Streptomyces hexametta (NL. fem. n. *hexametta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp009604385*. The type genome for the species is the GenBank assembly RS_GCF_009604385.1. The GC content of the type genome is 72.02 % and the genome length is 7.86 Mbp.

Description of *Candidatus* Streptomyces hirudicula sp. nov.

Candidatus Streptomyces hirudicula (NL. fem. n. *hirudicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp001507435*. The type genome for the species is the GenBank assembly RS_GCF_001507435.1. The GC content of the type genome is 70.01 % and the genome length is 10.16 Mbp.

Description of *Candidatus* Streptomyces holisiforma sp. nov.

Candidatus Streptomyces holisiforma (NL. fem. n. *holisiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp000717915*. The type genome for the species is the GenBank assembly RS_GCF_000717915.1. The GC content of the type genome is 72.33 % and the genome length is 7.1 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "soil from Salvador".

Description of *Candidatus* Streptomyces homiligena sp. nov.

Candidatus Streptomyces homiligena (NL. fem. n. *homiligena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp000497405*. The type genome for the species is the GenBank assembly RS_GCF_000497405.1. The GC content of the type genome is 70.93 % and the genome length is 5.96 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "sponge".

Description of *Candidatus* Streptomyces homililega sp. nov.

Candidatus Streptomyces homililega (NL. fem. n. *homililega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp009739465*. The type genome for the species is the GenBank assembly RS_GCF_009739465.1. The GC content of the type genome is 70.35 % and the genome length is 7.03 Mbp.

Description of *Candidatus* Streptomyces homogatio sp. nov.

Candidatus Streptomyces homogatio (NL. fem. n. *homogatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp000424965*. The type genome for the species is the GenBank assembly RS_GCF_000424965.1. The GC content of the type genome is 71.21 % and the genome length is 6.58 Mbp.

Description of *Candidatus* Streptomyces immaticula sp. nov.

Candidatus Streptomyces immaticula (NL. fem. n. *immaticula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp900091315*. The type genome for the species is the GenBank assembly RS_GCF_900091315.1. The GC content of the type genome is 71.27 % and the genome length is 8.87 Mbp.

Description of *Candidatus* Streptomyces immobitas sp. nov.

Candidatus Streptomyces immobitas (NL. fem. n. *immobitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp900110755*. The type genome for the species is the GenBank assembly RS_GCF_900110755.1. The GC content of the type genome is 71.23 % and the genome length is 9.07 Mbp.

Description of *Candidatus* Streptomyces inabsitia sp. nov.

Candidatus Streptomyces inabsitia (NL. fem. n. *inabsitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp001279695*. The type genome for the species is the GenBank assembly RS_GCF_001279695.1. The GC content of the type genome is 70.65 % and the genome length is 9.49 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "soil".

Description of *Candidatus* Streptomyces indirifica sp. nov.

Candidatus Streptomyces indirifica (NL. fem. n. *indirifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp003323735*. The type genome for the species is the GenBank assembly RS_GCF_003323735.1. The GC content of the type genome is 71.96 % and the genome length is 7.69 Mbp.

Description of *Candidatus* Streptomyces inforentia sp. nov.

Candidatus Streptomyces inforentia (NL. fem. n. *inforentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp007595705*. The type genome for the species is the GenBank assembly RS_GCF_007595705.1. The GC content of the type genome is 72.58 % and the genome length is 8.1 Mbp.

Description of *Candidatus* Streptomyces infunatica sp. nov.

Candidatus Streptomyces infunatica (NL. fem. n. *infunatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp001748085*. The type genome for the species is the GenBank assembly RS_GCF_001748085.1. The GC content of the type genome is 71.39

% and the genome length is 5.1 Mbp.

Description of *Candidatus* Streptomyces inheritica sp. nov.

Candidatus Streptomyces inheritica (NL. fem. n. *inheritica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp003403055*. The type genome for the species is the GenBank assembly RS_GCF_003403055.1. The GC content of the type genome is 70.39 % and the genome length is 10.57 Mbp.

Description of *Candidatus* Streptomyces inhonitia sp. nov.

Candidatus Streptomyces inhonitia (NL. fem. n. *inhonitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp000721265*. The type genome for the species is the GenBank assembly RS_GCF_000721265.1. The GC content of the type genome is 72.02 % and the genome length is 7.19 Mbp.

Description of *Candidatus* Streptomyces inlepimonia sp. nov.

Candidatus Streptomyces inlepimonia (NL. fem. n. *inlepimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp010548375*. The type genome for the species is the GenBank assembly RS_GCF_010548375.1. The GC content of the type genome is 71.01 % and the genome length is 10.94 Mbp.

Description of *Candidatus* Streptomyces inmodibra sp. nov.

Candidatus Streptomyces inmodibra (NL. fem. n. *inmodibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp004346385*. The type genome for the species is the GenBank assembly RS_GCF_004346385.1. The GC content of the type genome is 72.79 % and the genome length is 7.84 Mbp.

Description of *Candidatus* Streptomyces innulitura sp. nov.

Candidatus Streptomyces innulitura (NL. fem. n. *innulitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp000719345*. The type genome for the species is the GenBank assembly RS_GCF_000719345.1. The GC content of the type genome is 72.14 % and the genome length is 7.98 Mbp.

Description of *Candidatus* Streptomyces innumitio sp. nov.

Candidatus Streptomyces innumitio (NL. fem. n. *innumitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp004795015*. The type genome for the species is the GenBank assembly RS_GCF_004795015.1. The GC content of the type genome is 71.75 % and the genome length is 7.33 Mbp.

Description of *Candidatus* Streptomyces inordiforma sp. nov.

Candidatus Streptomyces inordiforma (NL. fem. n. *inordiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp002237655*. The type genome for the species is the GenBank assembly RS_GCF_002237655.1. The GC content of the type genome is 72.33 % and the genome length is 8.25 Mbp.

Description of *Candidatus* Streptomyces inornitura sp. nov.

Candidatus Streptomyces inornitura (NL. fem. n. *inornitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp003665095*. The type genome for the species is the GenBank assembly RS_GCF_003665095.1. The GC content of the type genome is 73.38 % and the genome length is 6.5 Mbp.

Description of *Candidatus* Streptomyces inpenetta sp. nov.

Candidatus Streptomyces inpenetta (NL. fem. n. *inpenetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp001590865*. The type genome for the species is the GenBank assembly RS_GCF_001590865.1. The GC content of the type genome is 71.12 % and the genome length is 7.9 Mbp.

Description of *Candidatus* Streptomyces inregicula sp. nov.

Candidatus Streptomyces inregicula (NL. fem. n. *inregicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp010548465*. The type genome for the species is the GenBank assembly RS_GCF_010548465.1. The GC content of the type genome is 72.74 % and the genome length is 6.84 Mbp.

Description of *Candidatus* Streptomyces inrelivita sp. nov.

Candidatus Streptomyces inrelivita (NL. fem. n. *inrelivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp008042145*. The type genome for the species is the GenBank assembly RS_GCF_008042145.1. The GC content of the type genome is 72.68 % and the genome length is 7.92 Mbp.

Description of *Candidatus* Streptomyces inresitio sp. nov.

Candidatus Streptomyces inresitio (NL. fem. n. *inresitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp004364215*. The type genome for the species is the GenBank assembly RS_GCF_004364215.1. The GC content of the type genome is 70.93 % and the genome length is 10.37 Mbp.

Description of *Candidatus* Streptomyces insubitrix sp. nov.

Candidatus Streptomyces insubitrix (NL. fem. n. *insubitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp002813405*. The type genome for the species is the GenBank assembly RS_GCF_002813405.1. The GC content of the type genome is 71.01

% and the genome length is 8.72 Mbp.

Description of *Candidatus* Streptomyces insusitia sp. nov.

Candidatus Streptomyces insusitia (NL. fem. n. *insusitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp005795905*. The type genome for the species is the GenBank assembly RS_GCF_005795905.1. The GC content of the type genome is 71.27 % and the genome length is 9.01 Mbp.

Description of *Candidatus* Streptomyces intecugo sp. nov.

Candidatus Streptomyces intecugo (NL. fem. n. *intecugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp002291145*. The type genome for the species is the GenBank assembly RS_GCF_002291145.1. The GC content of the type genome is 70.27 % and the genome length is 10.36 Mbp.

Description of *Candidatus* Streptomyces invigugo sp. nov.

Candidatus Streptomyces invigugo (NL. fem. n. *invigugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp012034205*. The type genome for the species is the GenBank assembly RS_GCF_012034205.1. The GC content of the type genome is 72.23 % and the genome length is 6.52 Mbp.

Description of *Candidatus* Streptomyces irredax sp. nov.

Candidatus Streptomyces irredax (NL. fem. n. *irredax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp000720325*. The type genome for the species is the GenBank assembly RS_GCF_000720325.1. The GC content of the type genome is 72.37 % and the genome length is 10.23 Mbp.

Description of *Candidatus* Streptomyces irremax sp. nov.

Candidatus Streptomyces irremax (NL. fem. n. *irremax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp008905045*. The type genome for the species is the GenBank assembly RS_GCF_008905045.1. The GC content of the type genome is 70.01 % and the genome length is 11.98 Mbp.

Description of *Candidatus* Streptomyces lacinicella sp. nov.

Candidatus Streptomyces lacinicella (NL. fem. n. *lacinicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp009857135*. The type genome for the species is the GenBank assembly RS_GCF_009857135.1. The GC content of the type genome is 71.98 % and the genome length is 7.76 Mbp.

Description of *Candidatus* Streptomyces lenociforma sp. nov.

Candidatus Streptomyces lenociforma (NL. fem. n. *lenociforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp000527195*. The type genome for the species is the GenBank assembly RS_GCF_007828695.1. The GC content of the type genome is 72.03 % and the genome length is 7.8 Mbp.

Description of *Candidatus* Streptomyces lenocitica sp. nov.

Candidatus Streptomyces lenocitica (NL. fem. n. *lenocitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp001280005*. The type genome for the species is the GenBank assembly RS_GCF_001280005.1. The GC content of the type genome is 70.06 % and the genome length is 9.34 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "soil".

Description of *Candidatus* Streptomyces lenunicula sp. nov.

Candidatus Streptomyces lenunicula (NL. fem. n. *lenunicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp002982015*. The type genome for the species is the GenBank assembly RS_GCF_002982015.1. The GC content of the type genome is 73.67 % and the genome length is 6.41 Mbp.

Description of *Candidatus* Streptomyces lenunigena sp. nov.

Candidatus Streptomyces lenunigena (NL. fem. n. *lenunigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp009769735*. The type genome for the species is the GenBank assembly RS_GCF_009769735.1. The GC content of the type genome is 69.92 % and the genome length is 10.04 Mbp.

Description of *Candidatus* Streptomyces lucifatio sp. nov.

Candidatus Streptomyces lucifatio (NL. fem. n. *lucifatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp008042035*. The type genome for the species is the GenBank assembly RS_GCF_008042035.1. The GC content of the type genome is 71.76 % and the genome length is 7.86 Mbp.

Description of *Candidatus* Streptomyces luculitrix sp. nov.

Candidatus Streptomyces luculitrix (NL. fem. n. *luculitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp009916105*. The type genome for the species is the GenBank assembly RS_GCF_009916105.1. The GC content of the type genome is 71.81 % and the genome length is 8.59 Mbp.

Description of *Candidatus* Streptomyces lugubastra sp. nov.

Candidatus Streptomyces lugubastra (NL. fem. n. *lugubastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp004342105*. The type genome for the species is the GenBank assembly RS_GCF_004342105.1. The GC content of the type genome is 71.75

% and the genome length is 8.9 Mbp.

Description of *Candidatus* Streptomyces malifitoga sp. nov.

Candidatus Streptomyces malifitoga (NL. fem. n. *malifitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp900114955*. The type genome for the species is the GenBank assembly RS_GCF_900114955.1. The GC content of the type genome is 71.38 % and the genome length is 10.0 Mbp.

Description of *Candidatus* Streptomyces maligifica sp. nov.

Candidatus Streptomyces maligifica (NL. fem. n. *maligifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp000514715*. The type genome for the species is the GenBank assembly RS_GCF_000514715.1. The GC content of the type genome is 73.79 % and the genome length is 8.14 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "not provided; submitted under MIGS 2.1".

Description of *Candidatus* Streptomyces manubibula sp. nov.

Candidatus Streptomyces manubibula (NL. fem. n. *manubibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp001865245*. The type genome for the species is the GenBank assembly RS_GCF_009025935.1. The GC content of the type genome is 73.51 % and the genome length is 6.9 Mbp.

Description of *Candidatus* Streptomyces melopatica sp. nov.

Candidatus Streptomyces melopatica (NL. fem. n. *melopatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp011766325*. The type genome for the species is the GenBank assembly RS_GCF_011766325.1. The GC content of the type genome is 72.32 % and the genome length is 6.71 Mbp.

Description of *Candidatus* Streptomyces menapessa sp. nov.

Candidatus Streptomyces menapessa (NL. fem. n. *menapessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp012034935*. The type genome for the species is the GenBank assembly RS_GCF_012034935.1. The GC content of the type genome is 74.25 % and the genome length is 6.49 Mbp.

Description of *Candidatus* Streptomyces metabimonia sp. nov.

Candidatus Streptomyces metabimonia (NL. fem. n. *metabimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp000829695*. The type genome for the species is the GenBank assembly RS_GCF_001469455.2. The GC content of the type genome is 71.85 % and the genome length is 7.76 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Shallow water marine harbor".

Description of *Candidatus* Streptomyces miracigena sp. nov.

Candidatus Streptomyces miracigena (NL. fem. n. *miracigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp900290235*. The type genome for the species is the GenBank assembly RS_GCF_900290235.1. The GC content of the type genome is 71.48 % and the genome length is 9.81 Mbp.

Description of *Candidatus* Streptomyces monacax sp. nov.

Candidatus Streptomyces monacax (NL. fem. n. *monacax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp009827025*. The type genome for the species is the GenBank assembly RS_GCF_009827025.1. The GC content of the type genome is 70.58 % and the genome length is 8.52 Mbp.

Description of *Candidatus* Streptomyces monacetta sp. nov.

Candidatus Streptomyces monacetta (NL. fem. n. *monacetta* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp009865385*. The type genome for the species is the GenBank assembly RS_GCF_009865385.1. The GC content of the type genome is 72.47 % and the genome length is 8.52 Mbp.

Description of *Candidatus* Streptomyces monacitica sp. nov.

Candidatus Streptomyces monacitica (NL. fem. n. *monacitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp004348315*. The type genome for the species is the GenBank assembly RS_GCF_004348315.1. The GC content of the type genome is 72.52 % and the genome length is 7.76 Mbp.

Description of *Candidatus* Streptomyces monimicula sp. nov.

Candidatus Streptomyces monimicula (NL. fem. n. *monimicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp900105415*. The type genome for the species is the GenBank assembly RS_GCF_900105415.1. The GC content of the type genome is 72.15 % and the genome length is 8.88 Mbp.

Description of *Candidatus* Streptomyces monodiforma sp. nov.

Candidatus Streptomyces monodiforma (NL. fem. n. *monodiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp003369795*. The type genome for the species is the GenBank assembly RS_GCF_003369795.1. The GC content of the type genome is 71.95 % and the genome length is 7.79 Mbp.

Description of *Candidatus* Streptomyces monopigena sp. nov.

Candidatus Streptomyces monopigena (NL. fem. n. *monopigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp900129855*. The type genome for the species is the GenBank assembly RS_GCF_900129855.1. The GC content of the type genome is 70.67 % and the genome length is 9.38 Mbp.

Description of *Candidatus* Streptomyces monopimonas sp. nov.

Candidatus Streptomyces monopimonas (NL. fem. n. *monopimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp000377145*. The type genome for the species is the GenBank assembly RS_GCF_000377145.1. The GC content of the type genome is 73.29 % and the genome length is 6.46 Mbp.

Description of *Candidatus* Streptomyces myalgatio sp. nov.

Candidatus Streptomyces myalgatio (NL. fem. n. *myalgatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp001280015*. The type genome for the species is the GenBank assembly RS_GCF_001280015.1. The GC content of the type genome is 71.25 % and the genome length is 9.45 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "soil".

Description of *Candidatus* Streptomyces navicicella sp. nov.

Candidatus Streptomyces navicicella (NL. fem. n. *navicicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp002573955*. The type genome for the species is the GenBank assembly RS_GCF_009735685.1. The GC content of the type genome is 73.07 % and the genome length is 7.65 Mbp.

Description of *Candidatus* Streptomyces navicitura sp. nov.

Candidatus Streptomyces navicitura (NL. fem. n. *navicitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp001984575*. The type genome for the species is the GenBank assembly RS_GCF_001984575.1. The GC content of the type genome is 72.42

% and the genome length is 7.96 Mbp.

Description of *Candidatus* Streptomyces navificella sp. nov.

Candidatus Streptomyces navificella (NL. fem. n. *navificella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp000719775*. The type genome for the species is the GenBank assembly RS_GCF_000719775.1. The GC content of the type genome is 71.74 % and the genome length is 8.02 Mbp.

Description of *Candidatus* Streptomyces navifitoga sp. nov.

Candidatus Streptomyces navifitoga (NL. fem. n. *navifitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp003751445*. The type genome for the species is the GenBank assembly RS_GCF_003751445.1. The GC content of the type genome is 71.27 % and the genome length is 8.84 Mbp.

Description of *Candidatus* Streptomyces navifitura sp. nov.

Candidatus Streptomyces navifitura (NL. fem. n. *navifitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp013401435*. The type genome for the species is the GenBank assembly RS_GCF_013401435.1. The GC content of the type genome is 72.64 % and the genome length is 8.16 Mbp.

Description of *Candidatus* Streptomyces nefaniforma sp. nov.

Candidatus Streptomyces nefaniforma (NL. fem. n. *nefaniforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp007097205*. The type genome for the species is the GenBank assembly RS_GCF_013618515.1. The GC content of the type genome is 72.04 % and the genome length is 5.98 Mbp.

Description of *Candidatus* Streptomyces nefaritio sp. nov.

Candidatus Streptomyces nefaritio (NL. fem. n. *nefaritio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp002920575*. The type genome for the species is the GenBank assembly RS_GCF_002920575.1. The GC content of the type genome is 72.52 % and the genome length is 8.21 Mbp.

Description of *Candidatus* Streptomyces negoticella sp. nov.

Candidatus Streptomyces negoticella (NL. fem. n. *negoticella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp002920635*. The type genome for the species is the GenBank assembly RS_GCF_002920635.1. The GC content of the type genome is 70.86 % and the genome length is 8.51 Mbp.

Description of *Candidatus* Streptomyces nicomicula sp. nov.

Candidatus Streptomyces nicomicula (NL. fem. n. *nicomicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp003626575*. The type genome for the species is the GenBank assembly RS_GCF_003626575.1. The GC content of the type genome is 73.2 % and the genome length is 7.57 Mbp.

Description of *Candidatus* Streptomyces nicotitoga sp. nov.

Candidatus Streptomyces nicotitoga (NL. fem. n. *nicotitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp003261055*. The type genome for the species is the GenBank assembly RS_GCF_001279985.1. The GC content of the type genome is 70.92 % and the genome length is 10.58 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "soil".

Description of *Candidatus* Streptomyces notabitoga sp. nov.

Candidatus Streptomyces notabitoga (NL. fem. n. *notabitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp001298555*. The type genome for the species is the GenBank assembly RS_GCF_001298555.1. The GC content of the type genome is 71.88 % and the genome length is 9.2 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Endosphere of plant Populus trichocarpa BESC137".

Description of *Candidatus* Streptomyces notaciforma sp. nov.

Candidatus Streptomyces notaciforma (NL. fem. n. *notaciforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp003846185*. The type genome for the species is the GenBank assembly RS_GCF_003846185.1. The GC content of the type genome is 72.15 % and the genome length is 6.99 Mbp.

Description of *Candidatus* Streptomyces novilitio sp. nov.

Candidatus Streptomyces novilitio (NL. fem. n. *novilitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp003634225*. The type genome for the species is the GenBank assembly RS_GCF_003634225.1. The GC content of the type genome is 70.97 % and the genome length is 10.35 Mbp.

Description of *Candidatus* Streptomyces nugacimonas sp. nov.

Candidatus Streptomyces nugacimonas (NL. fem. n. *nugacimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp003259365*. The type genome for the species is the GenBank assembly RS_GCF_003259365.1. The GC content of the type genome is 71.34 % and the genome length is 8.96 Mbp.

Description of *Candidatus* Streptomyces nugivitio sp. nov.

Candidatus Streptomyces nugivitio (NL. fem. n. *nugivitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Streptomyces sp003324565*. The type genome for the species is the GenBank assembly RS_GCF_003324565.1. The GC content of the type genome is 71.44 % and the genome length is 8.58 Mbp.

Description of *Candidatus* Streptomyces nutabifica sp. nov.

Candidatus Streptomyces nutabifica (NL. fem. n. *nutabifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp002224125*. The type genome for the species is the GenBank assembly RS_GCF_002224125.1. The GC content of the type genome is 70.85 % and the genome length is 12.15 Mbp.

Description of *Candidatus* Streptomyces nutamicella sp. nov.

Candidatus Streptomyces nutamicella (NL. fem. n. *nutamicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp014257025*. The type genome for the species is the GenBank assembly RS_GCF_014257025.1. The GC content of the type genome is 70.19 % and the genome length is 9.4 Mbp.

Description of *Candidatus* Streptomyces oblocatio sp. nov.

Candidatus Streptomyces oblocatio (NL. fem. n. *oblocatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp012034385*. The type genome for the species is the GenBank assembly RS_GCF_012034385.1. The GC content of the type genome is 73.34 % and the genome length is 5.71 Mbp.

Description of *Candidatus* Streptomyces obmutitica sp. nov.

Candidatus Streptomyces obmutitica (NL. fem. n. *obmutitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp003945545*. The type genome for the species is the GenBank assembly RS_GCF_003945545.1. The GC content of the type genome is 71.32 % and the genome length is 8.27 Mbp.

Description of *Candidatus* Streptomyces obsurousia sp. nov.

Candidatus Streptomyces obsurousia (NL. fem. n. *obsurousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp010548145*. The type genome for the species is the GenBank assembly RS_GCF_010548145.1. The GC content of the type genome is 70.72 % and the genome length is 7.77 Mbp.

Description of *Candidatus* Streptomyces occucivita sp. nov.

Candidatus Streptomyces occucivita (NL. fem. n. *occucivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp001687325*. The type genome for the species is the GenBank assembly RS_GCF_001687325.1. The GC content of the type genome is 71.5 % and the genome length is 8.16 Mbp.

Description of *Candidatus* Streptomyces onocribula sp. nov.

Candidatus Streptomyces onocribula (NL. fem. n. *onocribula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp014493765*. The type genome for the species is the GenBank assembly RS_GCF_014493765.1. The GC content of the type genome is 70.22 % and the genome length is 10.16 Mbp.

Description of *Candidatus* Streptomyces opercastra sp. nov.

Candidatus Streptomyces opercastra (NL. fem. n. *opercastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp013387495*. The type genome for the species is the GenBank assembly RS_GCF_013387495.1. The GC content of the type genome is 71.26 % and the genome length is 7.7 Mbp.

Description of *Candidatus* Streptomyces opporessa sp. nov.

Candidatus Streptomyces opporessa (NL. fem. n. *opporessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp004005495*. The type genome for the species is the GenBank assembly RS_GCF_004005495.1. The GC content of the type genome is 70.74 % and the genome length is 8.93 Mbp.

Description of *Candidatus* Streptomyces opuscetta sp. nov.

Candidatus Streptomyces opuscetta (NL. fem. n. *opuscetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp013362785*. The type genome for the species is the GenBank assembly GCA_013362785.1. The GC content of the type genome is 70.74 % and the genome length is 8.02 Mbp.

Description of *Candidatus* Streptomyces opuscitrix sp. nov.

Candidatus Streptomyces opuscitrix (NL. fem. n. *opuscitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp000426165*. The type genome for the species is the GenBank assembly RS_GCF_000426165.1. The GC content of the type genome is 70.07 % and the genome length is 7.07 Mbp.

Description of *Candidatus* Streptomyces orgetivita sp. nov.

Candidatus Streptomyces orgetivita (NL. fem. n. *orgetivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp000719335*. The type genome for the species is the GenBank assembly RS_GCF_000719335.1. The GC content of the type genome is 73.51 % and the genome length is 8.15 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "soil".

Description of *Candidatus* Streptomyces ossifastra sp. nov.

Candidatus Streptomyces ossifastra (NL. fem. n. *ossifastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp011044975*. The type genome for the species is the GenBank assembly RS_GCF_011044975.1. The GC content of the type genome is 71.49 % and the genome length is 9.03 Mbp.

Description of *Candidatus* Streptomyces papilicella sp. nov.

Candidatus Streptomyces papilicella (NL. fem. n. *papilicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp000373645*. The type genome for the species is the GenBank assembly RS_GCF_009865325.1. The GC content of the type genome is 71.73 % and the genome length is 7.95 Mbp.

Description of *Candidatus* Streptomyces paracetta sp. nov.

Candidatus Streptomyces paracetta (NL. fem. n. *paracetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp002300165*. The type genome for the species is the GenBank assembly RS_GCF_002300165.1. The GC content of the type genome is 71.65 % and the genome length is 7.96 Mbp.

Description of *Candidatus* Streptomyces parocastra sp. nov.

Candidatus Streptomyces parocastra (NL. fem. n. *parocastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp014596525*. The type genome for the species is the GenBank assembly RS_GCF_014596525.1. The GC content of the type genome is 72.31 % and the genome length is 6.92 Mbp.

Description of *Candidatus* Streptomyces parocitura sp. nov.

Candidatus Streptomyces parocitura (NL. fem. n. *parocitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp008042115*. The type genome for the species is the GenBank assembly RS_GCF_008042115.1. The GC content of the type genome is 71.66 % and the genome length is 9.85 Mbp.

Description of *Candidatus* Streptomyces paropentia sp. nov.

Candidatus Streptomyces paropentia (NL. fem. n. *paropentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp001905735*. The type genome for the species is the GenBank assembly RS_GCF_001905705.1. The GC content of the type genome is 71.85 % and the genome length is 7.41 Mbp.

Description of *Candidatus* Streptomyces pedepigena sp. nov.

Candidatus Streptomyces pedepigena (NL. fem. n. *pedepigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp000717875*. The type genome for the species is the GenBank assembly RS_GCF_000722015.1. The GC content of the type genome is 71.04 % and the genome length is 8.1 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "soil".

Description of *Candidatus* Streptomyces penicedo sp. nov.

Candidatus Streptomyces penicedo (NL. fem. n. *penicedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp002803075*. The type genome for the species is the GenBank assembly RS_GCF_002803075.1. The GC content of the type genome is 71.51 % and the genome length is 7.88 Mbp.

Description of *Candidatus* Streptomyces penicigena sp. nov.

Candidatus Streptomyces penicigena (NL. fem. n. *penicigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp009863025*. The type genome for the species is the GenBank assembly RS_GCF_009863025.1. The GC content of the type genome is 71.66 % and the genome length is 6.62 Mbp.

Description of *Candidatus* Streptomyces penurisca sp. nov.

Candidatus Streptomyces penurisca (NL. fem. n. *penurisca* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp002080455*. The type genome for the species is the GenBank assembly RS_GCF_002028385.1. The GC content of the type genome is 71.5 % and the genome length is 8.99 Mbp.

Description of *Candidatus* Streptomyces perexisca sp. nov.

Candidatus Streptomyces perexisca (NL. fem. n. *perexisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp003386135*. The type genome for the species is the GenBank assembly RS_GCF_014203895.1. The GC content of the type genome is 72.09 % and the genome length is 9.23 Mbp.

Description of *Candidatus* Streptomyces pinacastra sp. nov.

Candidatus Streptomyces pinacastra (NL. fem. n. *pinacastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp000158895*. The type genome for the species is the GenBank assembly RS_GCF_000158895.1. The GC content of the type genome is 72.61 % and the genome length is 8.46 Mbp.

Description of *Candidatus* Streptomyces pinacibra sp. nov.

Candidatus Streptomyces pinacibra (NL. fem. n. *pinacibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp002803065*. The type genome for the species is the GenBank assembly RS_GCF_002803065.1. The GC content of the type genome is 70.36 % and the genome length is 10.06 Mbp.

Description of *Candidatus* Streptomyces pocilimonia sp. nov.

Candidatus Streptomyces pocilimonia (NL. fem. n. *pocilimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp003259585*. The type genome for the species is the GenBank assembly RS_GCF_003259585.1. The GC content of the type genome is 72.44 % and the genome length is 8.03 Mbp.

Description of *Candidatus* Streptomyces proclicula sp. nov.

Candidatus Streptomyces proclicula (NL. fem. n. *proclicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp008386495*. The type genome for the species is the GenBank assembly RS_GCF_008386495.1. The GC content of the type genome is 69.97 % and the genome length is 10.01 Mbp.

Description of *Candidatus* Streptomyces proclitas sp. nov.

Candidatus Streptomyces proclitas (NL. fem. n. *proclitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp013362995*. The type genome for the species is the GenBank assembly RS_GCF_013362995.1. The GC content of the type genome is 72.31 % and the genome length is 6.91 Mbp.

Description of *Candidatus* Streptomyces propratio sp. nov.

Candidatus Streptomyces propratio (NL. fem. n. *propratio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp001428885*. The type genome for the species is the GenBank assembly RS_GCF_001428885.1. The GC content of the type genome is 71.65 % and the genome length is 9.02 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "root".

Description of *Candidatus* Streptomyces proslessa sp. nov.

Candidatus Streptomyces proslessa (NL. fem. n. *proslessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp001905665*. The type genome for the species is the GenBank assembly RS_GCF_001905665.1. The GC content of the type genome is 72.3

% and the genome length is 7.71 Mbp.

Description of *Candidatus* Streptomyces pudibicula sp. nov.

Candidatus Streptomyces pudibicula (NL. fem. n. *pudibicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp010550605*. The type genome for the species is the GenBank assembly RS_GCF_010550605.1. The GC content of the type genome is 71.89 % and the genome length is 7.66 Mbp.

Description of *Candidatus* Streptomyces rareficula sp. nov.

Candidatus Streptomyces rareficula (NL. fem. n. *rareficula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp003248315*. The type genome for the species is the GenBank assembly GCA_003248315.1. The GC content of the type genome is 73.32 % and the genome length is 7.48 Mbp.

Description of *Candidatus* Streptomyces recomivita sp. nov.

Candidatus Streptomyces recomivita (NL. fem. n. *recomivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp000719475*. The type genome for the species is the GenBank assembly RS_GCF_000719475.1. The GC content of the type genome is 72.9 % and the genome length is 7.06 Mbp.

Description of *Candidatus* Streptomyces recoribra sp. nov.

Candidatus Streptomyces recoribra (NL. fem. n. *recoribra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp001280125*. The type genome for the species is the GenBank assembly RS_GCF_001280095.1. The GC content of the type genome is 73.12 % and the genome length is 7.75 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "assoc. with Toninia coeruleonigricans".

Description of *Candidatus* Streptomyces recucax sp. nov.

Candidatus Streptomyces recucax (NL. fem. n. *recucax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp000974485*. The type genome for the species is the GenBank assembly RS_GCF_000974485.1. The GC content of the type genome is 71.74 % and the genome length is 7.74 Mbp.

Description of *Candidatus* Streptomyces reduviforma sp. nov.

Candidatus Streptomyces reduviforma (NL. fem. n. *reduviforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp000612545*. The type genome for the species is the GenBank assembly RS_GCF_000612545.1. The GC content of the type genome is 72.15 % and the genome length is 7.48 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "soil".

Description of *Candidatus* Streptomyces refacetta sp. nov.

Candidatus Streptomyces refacetta (NL. fem. n. *refacetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp003311645*. The type genome for the species is the GenBank assembly RS_GCF_003311645.1. The GC content of the type genome is 72.91 % and the genome length is 6.92 Mbp.

Description of *Candidatus* Streptomyces refunivita sp. nov.

Candidatus Streptomyces refunivita (NL. fem. n. *refunivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp008042075*. The type genome for the species is the GenBank assembly RS_GCF_008042075.1. The GC content of the type genome is 70.71 % and the genome length is 9.9 Mbp.

Description of *Candidatus* Streptomyces relecago sp. nov.

Candidatus Streptomyces relecago (NL. fem. n. *relecago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp003143855*. The type genome for the species is the GenBank assembly RS_GCF_003143855.1. The GC content of the type genome is 70.83 % and the genome length is 9.43 Mbp.

Description of *Candidatus* Streptomyces remulicella sp. nov.

Candidatus Streptomyces remulicella (NL. fem. n. *remulicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp004363835*. The type genome for the species is the GenBank assembly RS_GCF_004363835.1. The GC content of the type genome is 71.44 % and the genome length is 10.64 Mbp.

Description of *Candidatus* Streptomyces remulitura sp. nov.

Candidatus Streptomyces remulitura (NL. fem. n. *remulitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp003116725*. The type genome for the species is the GenBank assembly RS_GCF_003610995.1. The GC content of the type genome is 71.7 % and the genome length is 7.24 Mbp.

Description of *Candidatus* Streptomyces resacousia sp. nov.

Candidatus Streptomyces resacousia (NL. fem. n. *resacousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp010384365*. The type genome for the species is the GenBank assembly RS_GCF_008039505.1. The GC content of the type genome is 70.68 % and the genome length is 8.47 Mbp.

Description of *Candidatus* Streptomyces resupitoga sp. nov.

Candidatus Streptomyces resupitoga (NL. fem. n. *resupitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp001941845*. The type genome for the species is the GenBank assembly RS_GCF_000956015.1. The GC content of the type genome is 72.48

% and the genome length is 7.08 Mbp.

Description of *Candidatus* Streptomyces retunisca sp. nov.

Candidatus Streptomyces retunisca (NL. fem. n. *retunisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp000720765*. The type genome for the species is the GenBank assembly RS_GCF_000720765.1. The GC content of the type genome is 70.25 % and the genome length is 10.7 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "soil".

Description of *Candidatus* Streptomyces ridibifica sp. nov.

Candidatus Streptomyces ridibifica (NL. fem. n. *ridibifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp014534645*. The type genome for the species is the GenBank assembly RS_GCF_014534645.1. The GC content of the type genome is 72.15 % and the genome length is 8.83 Mbp.

Description of *Candidatus* Streptomyces rosaritia sp. nov.

Candidatus Streptomyces rosaritia (NL. fem. n. *rosaritia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp000720135*. The type genome for the species is the GenBank assembly RS_GCF_001279545.1. The GC content of the type genome is 72.43 % and the genome length is 8.59 Mbp.

Description of *Candidatus* Streptomyces rubicetta sp. nov.

Candidatus Streptomyces rubicetta (NL. fem. n. *rubicetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp002128305*. The type genome for the species is the GenBank assembly RS_GCF_002128305.1. The GC content of the type genome is 73.52 % and the genome length is 6.29 Mbp.

Description of *Candidatus* Streptomyces rumificella sp. nov.

Candidatus Streptomyces rumificella (NL. fem. n. *rumificella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp006540305*. The type genome for the species is the GenBank assembly RS_GCF_006540305.1. The GC content of the type genome is 71.3 % and the genome length is 8.73 Mbp.

Description of *Candidatus* Streptomyces sacomibra sp. nov.

Candidatus Streptomyces sacomibra (NL. fem. n. *sacomibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp900105245*. The type genome for the species is the GenBank assembly RS_GCF_900105245.1. The GC content of the type genome is 71.92 % and the genome length is 8.85 Mbp.

Description of *Candidatus* Streptomyces sacopimonia sp. nov.

Candidatus Streptomyces sacopimonia (NL. fem. n. *sacopimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp000718775*. The type genome for the species is the GenBank assembly RS_GCF_000718775.1. The GC content of the type genome is 72.82 % and the genome length is 8.74 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "soil".

Description of *Candidatus* Streptomyces salubentia sp. nov.

Candidatus Streptomyces salubentia (NL. fem. n. *salubentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp008369065*. The type genome for the species is the GenBank assembly RS_GCF_008369065.1. The GC content of the type genome is 72.1 % and the genome length is 8.85 Mbp.

Description of *Candidatus* Streptomyces satacedo sp. nov.

Candidatus Streptomyces satacedo (NL. fem. n. *satacedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp000818175*. The type genome for the species is the GenBank assembly RS_GCF_000818175.1. The GC content of the type genome is 70.02 % and the genome length is 9.01 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "vicinity of mycorrhizal roots of Norway spruce".

Description of *Candidatus* Streptomyces scombentia sp. nov.

Candidatus Streptomyces scombentia (NL. fem. n. *scombentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp004346005*. The type genome for the species is the GenBank assembly RS_GCF_004346005.1. The GC content of the type genome is 71.62 % and the genome length is 9.29 Mbp.

Description of *Candidatus* Streptomyces semibatica sp. nov.

Candidatus Streptomyces semibatica (NL. fem. n. *semibatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp007050945*. The type genome for the species is the GenBank assembly RS_GCF_007050945.1. The GC content of the type genome is 70.01 % and the genome length is 11.38 Mbp.

Description of *Candidatus* Streptomyces senacitica sp. nov.

Candidatus Streptomyces senacitica (NL. fem. n. *senacitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp011694815*. The type genome for the species is the GenBank assembly RS_GCF_011694815.1. The GC content of the type genome is 72.1 % and the genome length is 7.72 Mbp.

Description of *Candidatus* Streptomyces sicaretta sp. nov.

Candidatus Streptomyces sicaretta (NL. fem. n. *sicaretta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Streptomyces sp004353505*. The type genome for the species is the GenBank assembly RS_GCF_004353505.1. The GC content of the type genome is 72.73 % and the genome length is 7.14 Mbp.

Description of *Candidatus* Streptomyces siminilega sp. nov.

Candidatus Streptomyces siminilega (NL. fem. n. *siminilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp000177195*. The type genome for the species is the GenBank assembly RS_GCF_900095575.1. The GC content of the type genome is 71.8 % and the genome length is 7.35 Mbp.

Description of *Candidatus* Streptomyces solacedo sp. nov.

Candidatus Streptomyces solacedo (NL. fem. n. *solacedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp009862265*. The type genome for the species is the GenBank assembly RS_GCF_009862265.1. The GC content of the type genome is 73.9 % and the genome length is 7.78 Mbp.

Description of *Candidatus* Streptomyces sonivimonas sp. nov.

Candidatus Streptomyces sonivimonas (NL. fem. n. *sonivimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp003046555*. The type genome for the species is the GenBank assembly RS_GCF_003046555.1. The GC content of the type genome is 70.74 % and the genome length is 8.56 Mbp.

Description of *Candidatus* Streptomyces subabastra sp. nov.

Candidatus Streptomyces subabastra (NL. fem. n. *subabastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp001509485*. The type genome for the species is the GenBank assembly RS_GCF_001509485.1. The GC content of the type genome is 73.3 % and the genome length is 7.52 Mbp.

Description of *Candidatus* Streptomyces subinicella sp. nov.

Candidatus Streptomyces subinicella (NL. fem. n. *subinicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp001484565*. The type genome for the species is the GenBank assembly RS_GCF_001484565.1. The GC content of the type genome is 71.53 % and the genome length is 10.19 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "soil".

Description of *Candidatus* Streptomyces subodentia sp. nov.

Candidatus Streptomyces subodentia (NL. fem. n. *subodentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp002754715*. The type genome for the species is the GenBank assembly RS_GCF_002754715.1. The GC content of the type genome is 70.21 % and the genome length is 10.93 Mbp.

Description of *Candidatus* Streptomyces subucicula sp. nov.

Candidatus Streptomyces subucicula (NL. fem. n. *subucicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp012273515*. The type genome for the species is the GenBank assembly RS_GCF_012273515.1. The GC content of the type genome is 70.87 % and the genome length is 9.86 Mbp.

Description of *Candidatus* Streptomyces sugilicula sp. nov.

Candidatus Streptomyces sugilicula (NL. fem. n. *sugilicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp900105755*. The type genome for the species is the GenBank assembly RS_GCF_900105755.1. The GC content of the type genome is 71.47 % and the genome length is 9.46 Mbp.

Description of *Candidatus* Streptomyces supelicula sp. nov.

Candidatus Streptomyces supelicula (NL. fem. n. *supelicula* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp003248355*. The type genome for the species is the GenBank assembly RS_GCF_003248355.1. The GC content of the type genome is 71.56 % and the genome length is 7.65 Mbp.

Description of *Candidatus* Streptomyces tabifatio sp. nov.

Candidatus Streptomyces tabifatio (NL. fem. n. *tabifatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp013870515*. The type genome for the species is the GenBank assembly RS_GCF_013870515.1. The GC content of the type genome is 69.81 % and the genome length is 6.66 Mbp.

Description of *Candidatus* Streptomyces tegimetta sp. nov.

Candidatus Streptomyces tegimetta (NL. fem. n. *tegimetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp002754675*. The type genome for the species is the GenBank assembly RS_GCF_002754675.1. The GC content of the type genome is 71.15 % and the genome length is 7.97 Mbp.

Description of *Candidatus* Streptomyces terebicella sp. nov.

Candidatus Streptomyces terebicella (NL. fem. n. *terebicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp001298545*. The type genome for the species is the GenBank assembly RS_GCF_001426425.1. The GC content of the type genome is 71.51 % and the genome length is 9.54 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "root".

Description of *Candidatus* Streptomyces tomogiforma sp. nov.

Candidatus Streptomyces tomogiforma (NL. fem. n. *tomogiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp008042275*. The type genome for the species is the GenBank assembly RS_GCF_008042275.1. The GC content of the type genome is 71.0 % and the genome length is 9.11 Mbp.

Description of *Candidatus* Streptomyces tumefifica sp. nov.

Candidatus Streptomyces tumefifica (NL. fem. n. *tumefifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp001905885*. The type genome for the species is the GenBank assembly RS_GCF_002099185.1. The GC content of the type genome is 71.47 % and the genome length is 8.52 Mbp.

Description of *Candidatus* Streptomyces turilessa sp. nov.

Candidatus Streptomyces turilessa (NL. fem. n. *turilessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp001417775*. The type genome for the species is the GenBank assembly RS_GCF_001417775.1. The GC content of the type genome is 70.89 % and the genome length is 8.41 Mbp.

Description of *Candidatus* Streptomyces vanititura sp. nov.

Candidatus Streptomyces vanititura (NL. fem. n. *vanititura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp013046785*. The type genome for the species is the GenBank assembly RS_GCF_013046785.1. The GC content of the type genome is 72.45 % and the genome length is 7.82 Mbp.

Description of *Candidatus* Streptomyces vavasitudo sp. nov.

Candidatus Streptomyces vavasitudo (NL. fem. n. *vavasitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp000424765*. The type genome for the species is the GenBank assembly RS_GCF_001751375.1. The GC content of the type genome is 72.84

% and the genome length is 6.61 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "sediment".

Description of *Candidatus* Streptomyces vecoricella sp. nov.

Candidatus Streptomyces vecoricella (NL. fem. n. *vecoricella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp000411315*. The type genome for the species is the GenBank assembly RS_GCF_000411315.1. The GC content of the type genome is 70.72 % and the genome length is 9.36 Mbp.

Description of *Candidatus* Streptomyces vehicibula sp. nov.

Candidatus Streptomyces vehicibula (NL. fem. n. *vehicibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp014596915*. The type genome for the species is the GenBank assembly RS_GCF_014596915.1. The GC content of the type genome is 71.43 % and the genome length is 8.86 Mbp.

Description of *Candidatus* Streptomyces vehicivita sp. nov.

Candidatus Streptomyces vehicivita (NL. fem. n. *vehicivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp000424845*. The type genome for the species is the GenBank assembly RS_GCF_000424845.1. The GC content of the type genome is 72.52 % and the genome length is 5.31 Mbp.

Description of *Candidatus* Streptomyces velificula sp. nov.

Candidatus Streptomyces velificula (NL. fem. n. *velificula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp002910905*. The type genome for the species is the GenBank assembly RS_GCF_002910905.1. The GC content of the type genome is 71.13 % and the genome length is 8.0 Mbp.

Description of *Candidatus* Streptomyces venabago sp. nov.

Candidatus Streptomyces venabago (NL. fem. n. *venabago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp900091845*. The type genome for the species is the GenBank assembly RS_GCF_009863095.1. The GC content of the type genome is 73.0 % and the genome length is 8.99 Mbp.

Description of *Candidatus* Streptomyces venabitio sp. nov.

Candidatus Streptomyces venabitio (NL. fem. n. *venabitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp001905795*. The type genome for the species is the GenBank assembly RS_GCF_001905795.1. The GC content of the type genome is 71.22 % and the genome length is 8.49 Mbp.

Description of *Candidatus* Streptomyces viginedo sp. nov.

Candidatus Streptomyces viginedo (NL. fem. n. *viginedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp001418285*. The type genome for the species is the GenBank assembly RS_GCF_004217425.1. The GC content of the type genome is 70.56 % and the genome length is 6.75 Mbp.

Description of *Candidatus* Streptomyces vilitimonas sp. nov.

Candidatus Streptomyces vilitimonas (NL. fem. n. *vilitimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp008042125*. The type genome for the species is the GenBank assembly RS_GCF_008042125.1. The GC content of the type genome is 72.54 % and the genome length is 7.79 Mbp.

Description of *Candidatus* Streptomyces vinacicula sp. nov.

Candidatus Streptomyces vinacicula (NL. fem. n. *vinacicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp001654495*. The type genome for the species is the GenBank assembly RS_GCF_001654495.1. The GC content of the type genome is 73.15 % and the genome length is 7.47 Mbp.

Description of *Candidatus* Streptomyces viripilenta sp. nov.

Candidatus Streptomyces viripilenta (NL. fem. n. *viripilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp004193175*. The type genome for the species is the GenBank assembly RS_GCF_004193175.1. The GC content of the type genome is 73.44 % and the genome length is 6.13 Mbp.

Description of *Candidatus* Streptomyces visocibula sp. nov.

Candidatus Streptomyces visocibula (NL. fem. n. *visocibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp004684775*. The type genome for the species is the GenBank assembly RS_GCF_004684775.1. The GC content of the type genome is 70.21 % and the genome length is 9.11 Mbp.

Description of *Candidatus* Streptomyces vitabitura sp. nov.

Candidatus Streptomyces vitabitura (NL. fem. n. *vitabitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp000725625*. The type genome for the species is the GenBank assembly RS_GCF_000716615.1. The GC content of the type genome is 72.32 % and the genome length is 8.22 Mbp.

Description of *Candidatus* Streptomyces vitifetta sp. nov.

Candidatus Streptomyces vitifetta (NL. fem. n. *vitifetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp000772045*. The type genome for the species is the GenBank assembly RS_GCF_011007525.1. The GC content of the type genome is 72.11

% and the genome length is 7.87 Mbp.

Description of *Candidatus* Streptomyces vitigicella sp. nov.

Candidatus Streptomyces vitigicella (NL. fem. n. *vitigicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp014596475*. The type genome for the species is the GenBank assembly RS_GCF_014596475.1. The GC content of the type genome is 70.64 % and the genome length is 8.8 Mbp.

Description of *Candidatus* Streptomyces vitupitica sp. nov.

Candidatus Streptomyces vitupitica (NL. fem. n. *vitupitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp900105515*. The type genome for the species is the GenBank assembly RS_GCF_004345865.1. The GC content of the type genome is 71.73 % and the genome length is 7.76 Mbp.

Description of *Candidatus* Streptomyces vocamitas sp. nov.

Candidatus Streptomyces vocamitas (NL. fem. n. *vocamitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp001298575*. The type genome for the species is the GenBank assembly RS_GCF_001298575.1. The GC content of the type genome is 71.35 % and the genome length is 10.67 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Endosphere of plant Populus trichocarpa".

Description of *Candidatus* Streptomyces volubentia sp. nov.

Candidatus Streptomyces volubentia (NL. fem. n. *volubentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp000373565*. The type genome for the species is the GenBank assembly RS_GCF_000373565.1. The GC content of the type genome is 71.15 % and the genome length is 9.16 Mbp.

Description of *Candidatus* Streptomyces xeropugo sp. nov.

Candidatus Streptomyces xeropugo (NL. fem. n. *xeropugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces sp002078175*. The type genome for the species is the GenBank assembly RS_GCF_010548515.1. The GC content of the type genome is 71.32 % and the genome length is 9.28 Mbp.

Description of *Candidatus* Streptomyces advoritica sp. nov.

Candidatus Streptomyces advoritica (NL. fem. n. *advoritica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces_B sp005047355*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_005047355.1. The GC content of the type genome is 69.48 % and the genome length is 11.53 Mbp.

Description of *Candidatus* Streptomyces appicedo sp. nov.

Candidatus Streptomyces appicedo (NL. fem. n. *appicedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces_B sp000701325*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_000701325.1. The GC content of the type genome is 72.3 % and the genome length is 8.02 Mbp.

Description of *Candidatus* Streptomyces casigigena sp. nov.

Candidatus Streptomyces casigigena (NL. fem. n. *casigigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces_B sp900091855*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The

type genome for the species is the GenBank assembly RS_GCF_009863045.1. The GC content of the type genome is 71.9 % and the genome length is 8.0 Mbp.

Description of *Candidatus* Streptomyces decatessa sp. nov.

Candidatus Streptomyces decatessa (NL. fem. n. *decatessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces_B sp000721495*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_000721495.1. The GC content of the type genome is 73.24 % and the genome length is 8.8 Mbp.

Description of *Candidatus* Streptomyces deforisca sp. nov.

Candidatus Streptomyces deforisca (NL. fem. n. *deforisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces_B sp003999195*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_003999195.1. The GC content of the type genome is 69.95 % and the genome length is 9.4 Mbp.

Description of *Candidatus* Streptomyces nubifitudo sp. nov.

Candidatus Streptomyces nubifitudo (NL. fem. n. *nubifitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces_B sp012034175*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_012034175.1. The GC content of the type genome is 73.57 % and the genome length is 8.25 Mbp.

Description of *Candidatus* Streptomyces ruricibra sp. nov.

Candidatus Streptomyces ruricibra (NL. fem. n. *ruricibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces_B sp005860785*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_005860785.2. The GC content of the type genome is 70.43 % and the genome length is 9.56 Mbp.

Description of *Candidatus* Streptomyces vigenicula sp. nov.

Candidatus Streptomyces vigenicula (NL. fem. n. *vigenicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces_B sp009783685*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_009783685.1. The GC content of the type genome is 73.58 % and the genome length is 5.67 Mbp.

Description of *Candidatus* Streptomyces vitabigena sp. nov.

Candidatus Streptomyces vitabigena (NL. fem. n. *vitabigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces_B sp014596445*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_014596445.1. The GC content of the type genome is 71.35 % and the genome length is 8.48 Mbp.

Description of *Candidatus* Streptomyces viragimonas sp. nov.

Candidatus Streptomyces viragimonas (NL. fem. n. *viragimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Streptomyces_C sp003144095*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_003144095.1. The GC content of the type genome is 72.67 % and the genome length is 6.33 Mbp.

Description of *Candidatus* Subabana manomilega sp. nov.

Candidatus Subabana manomilega (NL. fem. n. *manomilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3907 sp002391545*. The type genome for the species is the GenBank assembly GCA_012842775.1. The GC content of the type genome is 45.18 % and the genome length is 1.64 Mbp.

Description of *Candidatus* Subabana gen. nov.

Candidatus Subabana (NL. fem. n. *Subabana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA3907*. The type species for the genus is *Candidatus* Subabana manomilega .

According to the original version of GTDB R06-RS202, this genus belongs to the family *D2*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vicatosaceae.

Description of *Candidatus* Subabaria exheratica sp. nov.

Candidatus Subabaria exheratica (NL. fem. n. *exheratica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *1-14-2-50-48-13 sp002783265*. The type genome for the species is the GenBank assembly GCA_002783265.1. The GC content of the type genome is 48.28 % and the genome length is 1.28 Mbp.

Description of *Candidatus* Subabaria gen. nov.

Candidatus Subabaria (NL. fem. n. *Subabaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *1-14-2-50-48-13*. The type species for the genus is *Candidatus* Subabaria exheratica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *1-14-2-50-48-13*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Subabariaceae.

Description of *Candidatus* Subabariaceae fam. nov.

Candidatus Subabariaceae (NL. fem. n. *Subabariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *1-14-2-50-48-13.* The type genus for the taxon is *Candidatus* Subabaria .

According to the original version of GTDB R06-RS202, this family belongs to the order *1-14-2-50-48-13*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Subabariales.

Description of *Candidatus* Subabariales ord. nov.

Candidatus Subabariales (NL. fem. n. *Subabariales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *1-14-2-50-48-13.* The type genus for the taxon is *Candidatus* Subabaria .

According to the GTDB R06-RS202, this order belongs to the class *Gracilibacteria*.

Description of *Candidatus* Subabella adessousia sp. nov.

Candidatus Subabella adessousia (NL. fem. n. *adessousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA12090 sp003510525*. The type genome for the species is the GenBank assembly GCA_003510525.1. The GC content of the type genome is 44.67 % and the genome length is 1.46 Mbp.

Description of *Candidatus* Subabella gen. nov.

Candidatus Subabella (NL. fem. n. *Subabella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA12090*. The type species for the genus is *Candidatus* Subabella adessousia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA12090*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Subabellaceae.

Description of *Candidatus* Subabellaceae fam. nov.

Candidatus Subabellaceae (NL. fem. n. *Subabellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA12090.* The type genus for the taxon is *Candidatus* Subabella .

According to the original version of GTDB R06-RS202, this family belongs to the order *GIF10*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Decamellales.

Description of *Candidatus* Subabia antipessa sp. nov.

Candidatus Subabia antipessa (NL. fem. n. *antipessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *J089 sp003695105*. The type genome for the species is the GenBank assembly GCA_003695105.1. The GC content of the type genome is 55.74 % and the genome length is 2.03 Mbp.

Description of *Candidatus* Subabia gen. nov.

Candidatus Subabia (NL. fem. n. *Subabia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *J089*. The type species for the genus is *Candidatus* Subabia antipessa .

According to the original version of GTDB R06-RS202, this genus belongs to the family *J089*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Subabiaceae.

Description of *Candidatus* Subabiaceae fam. nov.

Candidatus Subabiaceae (NL. fem. n. *Subabiaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *J089.* The type genus for the taxon is *Candidatus* Subabia .

According to GTDB R06-RS202, this family belongs to the order *Marinisomatales*.

Description of *Candidatus* Subabia eccisifica sp. nov.

Candidatus Subabia eccisifica (NL. fem. n. *eccisifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *J089 sp013152835*. The type genome for the species is the GenBank assembly GCA_013152835.1. The GC content of the type genome is 48.08 % and the genome length is 2.61 Mbp.

Description of *Candidatus* Subabida nicomitoga sp. nov.

Candidatus Subabida nicomitoga (NL. fem. n. *nicomitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UM-FILTER-34-12 sp002789465*. The type genome for the species is the GenBank assembly GCA_002789465.1. The GC content of the type genome is 33.62 % and the genome length is 1.15 Mbp.

Description of *Candidatus* Subabida gen. nov.

Candidatus Subabida (NL. fem. n. *Subabida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UM-FILTER-34-12*. The type species for the genus is *Candidatus* Subabida nicomitoga .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GWC2-37-13*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vigenidaceae.

Description of *Candidatus* Subabula exsusimonia sp. nov.

Candidatus Subabula exsusimonia (NL. fem. n. *exsusimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SG-bin7 sp002083485*. The type genome for the species is the GenBank assembly GCA_002083485.1. The GC content of the type genome is 41.92 % and the genome length is 3.52 Mbp.

Description of *Candidatus* Subabula gen. nov.

Candidatus Subabula (NL. fem. n. *Subabula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SG-bin7*. The type species for the genus is *Candidatus* Subabula exsusimonia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SG-bin7*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Subabulaceae.

Description of *Candidatus* Subabulaceae fam. nov.

Candidatus Subabulaceae (NL. fem. n. *Subabulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SG-bin7.* The type genus for the taxon is *Candidatus* Subabula .

According to GTDB R06-RS202, this family belongs to the order *Bdellovibrionales*.

Description of *Candidatus* Subacana abambetta sp. nov.

Candidatus Subacana abambetta (NL. fem. n. *abambetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACABE01 sp903899825*. The type genome for the species is the GenBank assembly GCA_903899825.1. The GC content of the type genome is 33.84 % and the genome length is 4.24 Mbp.

Description of *Candidatus* Subacana gen. nov.

Candidatus Subacana (NL. fem. n. *Subacana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACABE01*. The type species for the genus is *Candidatus* Subacana abambetta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JACABE01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Subacanaceae.

Description of *Candidatus* Subacanaceae fam. nov.

Candidatus Subacanaceae (NL. fem. n. *Subacanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JACABE01.* The type genus for the taxon is *Candidatus* Subacana .

According to GTDB R06-RS202, this family belongs to the order *Bacteroidales*.

Description of *Candidatus* Subacana refuletta sp. nov.

Candidatus Subacana refuletta (NL. fem. n. *refuletta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACABE01 sp903911455*. The type genome for the species is the GenBank assembly GCA_903911455.1. The GC content of the type genome is 32.06 % and the genome length is 4.44 Mbp.

Description of *Candidatus* Subacana remulitudo sp. nov.

Candidatus Subacana remulitudo (NL. fem. n. *remulitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACABE01 sp903936865*. The type genome for the species is the GenBank assembly GCA_903936865.1. The GC content of the type genome is 31.46 % and the genome length is 5.28 Mbp.

Description of *Candidatus* Subacana siticatio sp. nov.

Candidatus Subacana siticatio (NL. fem. n. *siticatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACABE01 sp013377005*. The type genome for the species is the GenBank assembly GCA_013377005.1. The GC content of the type genome is 31.75 % and the genome length is 3.69 Mbp.

Description of *Candidatus* Subacella cuferago sp. nov.

Candidatus Subacella cuferago (NL. fem. n. *cuferago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Naka2016 sp003731655*. The type genome for the species is the GenBank assembly GCA_003731655.1. The GC content of the type genome is 37.11 %

and the genome length is 2.62 Mbp.

Description of *Candidatus* Subacella gen. nov.

Candidatus Subacella (NL. fem. n. *Subacella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Naka2016*. The type species for the genus is *Candidatus* Subacella cuferago .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2268*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Linigiaceae.

Description of *Candidatus* Subacella irreciforma sp. nov.

Candidatus Subacella irreciforma (NL. fem. n. *irreciforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Naka2016 sp003731685*. The type genome for the species is the GenBank assembly GCA_003731685.1. The GC content of the type genome is 38.47 % and the genome length is 2.6 Mbp.

Description of *Candidatus* Subacia exentitas sp. nov.

Candidatus Subacia exentitas (NL. fem. n. *exentitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6094 sp002435915*. The type genome for the species is the GenBank assembly GCA_002435915.1. The GC content of the type genome is 36.84 % and the genome length is 1.91 Mbp.

Description of *Candidatus* Subacia gen. nov.

Candidatus Subacia (NL. fem. n. *Subacia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA6094*. The type species for the genus is *Candidatus* Subacia exentitas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA6094*. According to the renamed version of GTDB R06-RS202, this taxon belongs to

the family *Candidatus* Subaciaceae.

Description of *Candidatus* Subaciaceae fam. nov.

Candidatus Subaciaceae (NL. fem. n. *Subaciaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA6094.* The type genus for the taxon is *Candidatus* Subacia .

According to GTDB R06-RS202, this family belongs to the order *Christensenellales*.

Description of *Candidatus* Subacida adcelessa sp. nov.

Candidatus Subacida adcelessa (NL. fem. n. *adcelessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5018 sp014280235*. The type genome for the species is the GenBank assembly RS_GCF_014280235.1. The GC content of the type genome is 67.93 % and the genome length is 2.75 Mbp.

Description of *Candidatus* Subacida gen. nov.

Candidatus Subacida (NL. fem. n. *Subacida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA5018*. The type species for the genus is *Candidatus* Subacida adcelessa .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Subacida bifisitica sp. nov.

Candidatus Subacida bifisitica (NL. fem. n. *bifisitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5018 sp007135755*. The type genome for the species is the GenBank assembly GCA_007135755.1. The GC content of the type genome is 69.23 % and the genome length is 2.75 Mbp.

Description of *Candidatus* Subacida catagicula sp. nov.

Candidatus Subacida catagicula (NL. fem. n. *catagicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5018 sp000155635*. The type genome for the species is the GenBank assembly RS_GCF_000155635.1. The GC content of the type genome is 68.74 % and the genome length is 2.83 Mbp.

Description of *Candidatus* Subacida denigatica sp. nov.

Candidatus Subacida denigatica (NL. fem. n. *denigatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5018 sp007694915*. The type genome for the species is the GenBank assembly GCA_007694915.1. The GC content of the type genome is 69.42 % and the genome length is 2.72 Mbp.

Description of *Candidatus* Subacida peradimonia sp. nov.

Candidatus Subacida peradimonia (NL. fem. n. *peradimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5018 sp903862155*. The type genome for the species is the GenBank assembly GCA_903831835.1. The GC content of the type genome is 67.34 % and the genome length is 1.99 Mbp.

Description of *Candidatus* Subacida turifessa sp. nov.

Candidatus Subacida turifessa (NL. fem. n. *turifessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5018 sp001039265*. The type genome for the species is the GenBank assembly RS_GCF_001039265.1. The GC content of the type genome is 67.83 % and the genome length is 2.34 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Lago dos Indios".

Description of *Candidatus* Subacida vanidicula sp. nov.

Candidatus Subacida vanidicula (NL. fem. n. *vanidicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5018 sp002396505*. The type genome for the species is the GenBank assembly GCA_003508015.1. The GC content of the type genome is 61.02 % and the genome length is 3.02 Mbp.

Description of *Candidatus* Subacida venunilenta sp. nov.

Candidatus Subacida venunilenta (NL. fem. n. *venunilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5018 sp900088535*. The type genome for the species is the GenBank assembly RS_GCF_900088535.1. The GC content of the type genome is 68.62 % and the genome length is 3.02 Mbp.

Description of *Candidatus* Subacosa asbesax sp. nov.

Candidatus Subacosa asbesax (NL. fem. n. *asbesax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SLPQ01 sp007131925*. The type genome for the species is the GenBank assembly GCA_007131925.1. The GC content of the type genome is 59.86 % and the genome length is 3.03 Mbp.

Description of *Candidatus* Subacosa gen. nov.

Candidatus Subacosa (NL. fem. n. *Subacosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SLPQ01*. The type species for the genus is *Candidatus* Subacosa asbesax .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SLPQ01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Subacosaceae.

Description of *Candidatus* Subacosaceae fam. nov.

Candidatus Subacosaceae (NL. fem. n. *Subacosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this taxon is *SLPQ01*. The type genus for the taxon is *Candidatus* Subacosa .

According to the original version of GTDB R06-RS202, this family belongs to the order *SLPQ01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Subacosales.

Description of *Candidatus* Subacosales ord. nov.

Candidatus Subacosales (NL. fem. n. *Subacosales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SLPQ01*. The type genus for the taxon is *Candidatus* Subacosa .

According to the original version of GTDB R06-RS202, this family belongs to the class *DG-23*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Rorulosae.

Description of *Candidatus* Subacula cenotitas sp. nov.

Candidatus Subacula cenotitas (NL. fem. n. *cenotitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *1109 sp012521465*. The type genome for the species is the GenBank assembly GCA_012521465.1. The GC content of the type genome is 55.02 % and the genome length is 2.52 Mbp.

Description of *Candidatus* Subacula gen. nov.

Candidatus Subacula (NL. fem. n. *Subacula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *1109*. The type species for the genus is *Candidatus* Subacula cenotitas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DTU010*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Ducilidaceae.

Description of *Candidatus* Subacula supeligena sp. nov.

Candidatus Subacula supeligena (NL. fem. n. *supeligena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *1109 sp001028815*. The type genome for the species is the GenBank assembly GCA_012837505.1. The GC content of the type genome is 54.9 % and the genome length is 2.43 Mbp.

Description of *Candidatus* Subadana bicorax sp. nov.

Candidatus Subadana bicorax (NL. fem. n. *bicorax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *T1SED10-198M sp003554345*. The type genome for the species is the GenBank assembly GCA_003554345.1. The GC content of the type genome is 42.37 % and the genome length is 2.55 Mbp.

Description of *Candidatus* Subadana gen. nov.

Candidatus Subadana (NL. fem. n. *Subadana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *T1SED10-198M*. The type species for the genus is *Candidatus* Subadana bicorax .

According to the original version of GTDB R06-RS202, this genus belongs to the family *T1SED10-198M*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Subadanaceae.

Description of *Candidatus* Subadanaceae fam. nov.

Candidatus Subadanaceae (NL. fem. n. *Subadanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *T1SED10-198M.* The type genus for the taxon is *Candidatus* Subadana .

According to the original version of GTDB R06-RS202, this family belongs to the order *T1SED10-198M*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Subadanales.

Description of *Candidatus* Subadanales ord. nov.

Candidatus Subadanales (NL. fem. n. *Subadanales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this taxon is *T1SED10-198M.* The type genus for the taxon is *Candidatus* Subadana .

According to the original version of GTDB R06-RS202, this family belongs to the class *T1SED10-198M*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Subadanae.

Description of *Candidatus* Subadanae class. nov.

Candidatus Subadanae (NL. fem. n. *c__Subadanae* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *T1SED10-198M.* The type genus for the taxon is *Candidatus* Subadana .

According to the original version of GTDB R06-RS202, this family belongs to the phylum *T1SED10-198M*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the phylum *Candidatus* Subadanota.

Description of *Candidatus* Subadanota phyl. nov.

Candidatus Subadanota (NL. fem. n. *Subadanota* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *T1SED10-198M.* The type genus for the taxon is *Candidatus* Subadana .

According to GTDB R06-RS202, this phylum belongs to the domain *Bacteria* .

Description of *Candidatus* Subadaria navicicula sp. nov.

Candidatus Subadaria navicicula (NL. fem. n. *navicicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *B47-G16 sp003648815*. The type genome for the species is the GenBank assembly GCA_003648815.1. The GC content of the type genome is 44.6 % and the genome length is 1.82 Mbp.

Description of *Candidatus* Subadaria gen. nov.

Candidatus Subadaria (NL. fem. n. *Subadaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *B47-G16*. The type species for the genus is *Candidatus* Subadaria navicicula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *B47-G16*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Subadariaceae.

Description of *Candidatus* Subadariaceae fam. nov.

Candidatus Subadariaceae (NL. fem. n. *Subadariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *B47-G16.* The type genus for the taxon is *Candidatus* Subadaria .

According to GTDB R06-RS202, this family belongs to the order *Aerophobales*.

Description of *Candidatus* Subadella adlecitudo sp. nov.

Candidatus Subadella adlecitudo (NL. fem. n. *adlecitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AAA300-D14 sp902515855*. The type genome for the species is the GenBank assembly GCA_902515855.1. The GC content of the type genome is 39.1 % and the genome length is 1.32 Mbp.

Description of *Candidatus* Subadella gen. nov.

Candidatus Subadella (NL. fem. n. *Subadella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *AAA300-D14*. The type species for the genus is *Candidatus* Subadella adlecitudo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Subadella adpicibra sp. nov.

Candidatus Subadella adpicibra (NL. fem. n. *adpicibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AAA300-D14 sp000384995*. The type genome for the species is the GenBank assembly GCA_000384995.1. The GC content of the type genome is 38.37 % and the genome length is 1.46 Mbp.

Description of *Candidatus* Subadella decacicella sp. nov.

Candidatus Subadella decacicella (NL. fem. n. *decacicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AAA300-D14 sp902565775*. The type genome for the species is the GenBank assembly GCA_902535095.1. The GC content of the type genome is 38.67 % and the genome length is 1.77 Mbp.

Description of *Candidatus* Subadella diponimonas sp. nov.

Candidatus Subadella diponimonas (NL. fem. n. *diponimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AAA300-D14 sp002711285*. The type genome for the species is the GenBank assembly GCA_002711285.1. The GC content of the type genome is 38.68 % and the genome length is 0.8 Mbp.

Description of *Candidatus* Subadella exhoricula sp. nov.

Candidatus Subadella exhoricula (NL. fem. n. *exhoricula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AAA300-D14 sp002710745*. The type genome for the species is the GenBank assembly GCA_002710745.1. The GC content of the type genome is 38.75 % and the genome length is 1.41 Mbp.

Description of *Candidatus* Subadella petulago sp. nov.

Candidatus Subadella petulago (NL. fem. n. *petulago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AAA300-D14 sp902604945*. The type genome for the species is the GenBank assembly GCA_902604945.1. The GC content of the type genome is 38.94 % and the genome length is 1.41 Mbp.

Description of *Candidatus* Subadella refinicula sp. nov.

Candidatus Subadella refinicula (NL. fem. n. *refinicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AAA300-D14 sp002715065*. The type genome for the species is the GenBank assembly GCA_002728875.1. The GC content of the type genome is 38.55 % and the genome length is 1.42 Mbp.

Description of *Candidatus* Subadia alsisatio sp. nov.

Candidatus Subadia alsisatio (NL. fem. n. *alsisatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *F082 sp902802535*. The type genome for the species is the GenBank assembly GCA_902802535.1. The GC content of the type genome is 48.59 % and the genome length is 3.71 Mbp.

Description of *Candidatus* Subadia gen. nov.

Candidatus Subadia (NL. fem. n. *Subadia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *F082*. The type species for the genus is *Candidatus* Subadia alsisatio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *F082*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Subadiaceae.

Description of *Candidatus* Subadiaceae fam. nov.

Candidatus Subadiaceae (NL. fem. n. *Subadiaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *F082*. The type genus for the taxon is *Candidatus* Subadia .

According to GTDB R06-RS202, this family belongs to the order *Bacteroidales*.

Description of *Candidatus* Subadia anamnimonia sp. nov.

Candidatus Subadia anamnimonia (NL. fem. n. *anamnimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *F082 sp902783365*. The type genome for the species is the GenBank assembly GCA_902783365.1. The GC content of the type genome is 52.48 % and the genome length is 2.75 Mbp.

Description of *Candidatus* Subadia apsoretta sp. nov.

Candidatus Subadia apsoretta (NL. fem. n. *apsoretta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *F082 sp902771635*. The type genome for the species is the GenBank assembly GCA_902771635.1. The GC content of the type genome is 47.89 % and the genome length is 3.02 Mbp.

Description of *Candidatus* Subadia bicoratica sp. nov.

Candidatus Subadia bicoratica (NL. fem. n. *bicoratica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *F082 sp902801625*. The type genome for the species is the GenBank assembly GCA_902801625.1. The GC content of the type genome is 47.8 % and the genome length is 3.58 Mbp.

Description of *Candidatus* Subadia bipinimonas sp. nov.

Candidatus Subadia bipinimonas (NL. fem. n. *bipinimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *F082 sp902791165*. The type genome for the species is the GenBank assembly GCA_902786885.1. The GC content of the type genome is 49.66 % and the genome length is 2.86 Mbp.

Description of *Candidatus* Subadia bucelibra sp. nov.

Candidatus Subadia bucelibra (NL. fem. n. *bucelibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *F082 sp902770835*. The type genome for the species is the GenBank assembly GCA_902777895.1. The GC content of the type genome is 48.4 % and the genome length is 3.58 Mbp.

Description of *Candidatus* Subadia caravitio sp. nov.

Candidatus Subadia caravitio (NL. fem. n. *caravitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *F082 sp001543395*. The type genome for the species is the GenBank assembly GCA_001543395.1. The GC content of the type genome is 50.03 % and the genome length is 2.37 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rumen fluid".

Description of *Candidatus* Subadia cicilimonia sp. nov.

Candidatus Subadia cicilimonia (NL. fem. n. *cicilimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *F082 sp900317055*. The type genome for the species is the GenBank assembly GCA_902759205.1. The GC content of the type genome is 47.92 % and the genome length is 3.53 Mbp.

Description of *Candidatus* Subadia dapifisca sp. nov.

Candidatus Subadia dapifisca (NL. fem. n. *dapifisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *F082 sp002311655*. The type genome for the species is the GenBank assembly GCA_002311655.1. The GC content of the type genome is 44.46 % and the genome length is 2.4 Mbp.

Description of *Candidatus* Subadia desucitas sp. nov.

Candidatus Subadia desucitas (NL. fem. n. *desucitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *F082 sp902800965*. The type genome for the species is the GenBank assembly GCA_902768525.1. The GC content of the type genome is 48.43 % and the genome length is 2.68 Mbp.

Description of *Candidatus* Subadia dicabousia sp. nov.

Candidatus Subadia dicabousia (NL. fem. n. *dicabousia* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *F082 sp900315175*. The type genome for the species is the GenBank assembly GCA_900315175.1. The GC content of the type genome is 45.21 % and the genome length is 2.42 Mbp.

Description of *Candidatus* Subadia divulitio sp. nov.

Candidatus Subadia divulitio (NL. fem. n. *divulitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *F082 sp002633315*. The type genome for the species is the GenBank assembly GCA_002633315.1. The GC content of the type genome is 38.04 % and the genome length is 2.59 Mbp.

Description of *Candidatus* Subadia ecastetta sp. nov.

Candidatus Subadia ecastetta (NL. fem. n. *ecastetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *F082 sp902799345*. The type genome for the species is the GenBank assembly GCA_902799345.1. The GC content of the type genome is 50.64 % and the genome length is 3.13 Mbp.

Description of *Candidatus* Subadia egritibra sp. nov.

Candidatus Subadia egritibra (NL. fem. n. *egritibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *F082 sp900771045*. The type genome for the species is the GenBank assembly RS_GCF_900771045.1. The GC content of the type genome is 47.79 % and the genome length is 1.93 Mbp.

Description of *Candidatus* Subadia favililenta sp. nov.

Candidatus Subadia favililenta (NL. fem. n. *favililenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *F082 sp900542475*. The type genome for the species is the GenBank assembly GCA_900542475.1. The GC content of the type genome is 44.4 % and the genome length is 2.13 Mbp.

Description of *Candidatus* Subadia fumacatica sp. nov.

Candidatus Subadia fumacatica (NL. fem. n. *fumacatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *F082 sp902767725*. The type genome for the species is the GenBank assembly GCA_902767725.1. The GC content of the type genome is 48.87 % and the genome length is 3.06 Mbp.

Description of *Candidatus* Subadia inadfitica sp. nov.

Candidatus Subadia inadfitica (NL. fem. n. *inadfitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *F082 sp902769875*. The type genome for the species is the GenBank assembly GCA_902769875.1. The GC content of the type genome is 49.12 % and the genome length is 3.5 Mbp.

Description of *Candidatus* Subadia indipatio sp. nov.

Candidatus Subadia indipatio (NL. fem. n. *indipatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *F082 sp902774295*. The type genome for the species is the GenBank assembly GCA_902774295.1. The GC content of the type genome is 45.03 % and the genome length is 2.38 Mbp.

Description of *Candidatus* Subadia infabibra sp. nov.

Candidatus Subadia infabibra (NL. fem. n. *infabibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *F082 sp902789915*. The type genome for the species is the GenBank assembly GCA_902789915.1. The GC content of the type genome is 49.41 % and the genome length is 2.93 Mbp.

Description of *Candidatus* Subadia loripedo sp. nov.

Candidatus Subadia loripedo (NL. fem. n. *loripedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *F082 sp902786745*. The type genome for the species is the GenBank assembly GCA_902778955.1. The GC content of the type genome is 51.04 % and the genome length is 2.33 Mbp.

Description of *Candidatus* Subadia luceritas sp. nov.

Candidatus Subadia luceritas (NL. fem. n. *luceritas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *F082 sp900317155*. The type genome for the species is the GenBank assembly GCA_900317155.1. The GC content of the type genome is 47.56 % and the genome length is 3.8 Mbp.

Description of *Candidatus* Subadia lucifousia sp. nov.

Candidatus Subadia lucifousia (NL. fem. n. *lucifousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *F082 sp902769815*. The type genome for the species is the GenBank assembly GCA_902769815.1. The GC content of the type genome is 48.26 % and the genome length is 3.32 Mbp.

Description of *Candidatus* Subadia morigatio sp. nov.

Candidatus Subadia morigatio (NL. fem. n. *morigatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *F082 sp900321315*. The type genome for the species is the GenBank assembly GCA_900321315.1. The GC content of the type genome is 50.18 % and the genome length is 2.88 Mbp.

Description of *Candidatus* Subadia morigitio sp. nov.

Candidatus Subadia morigitio (NL. fem. n. *morigitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *F082 sp900318465*. The type genome for the species is the GenBank assembly GCA_902755195.1. The GC content of the type genome is 48.11 % and the genome length is 3.67 Mbp.

Description of *Candidatus* Subadia nubifitio sp. nov.

Candidatus Subadia nubifitio (NL. fem. n. *nubifitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *F082 sp902801465*. The type genome for the species is the GenBank assembly GCA_902801465.1. The GC content of the type genome is 50.38 % and the genome length is 2.46 Mbp.

Description of *Candidatus* Subadia nugigitrix sp. nov.

Candidatus Subadia nugigitrix (NL. fem. n. *nugigitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *F082 sp900318085*. The type genome for the species is the GenBank assembly GCA_902801045.1. The GC content of the type genome is 49.63 % and the genome length is 3.41 Mbp.

Description of *Candidatus* Subadia papaviforma sp. nov.

Candidatus Subadia papaviforma (NL. fem. n. *papaviforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *F082 sp902787095*. The type genome for the species is the GenBank assembly GCA_902787095.1. The GC content of the type genome is 46.48 % and the genome length is 2.18 Mbp.

Description of *Candidatus* Subadia paropitia sp. nov.

Candidatus Subadia paropitia (NL. fem. n. *paropitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *F082 sp902774365*. The type genome for the species is the GenBank assembly GCA_902774365.1. The GC content of the type genome is 50.88 % and the genome length is 2.82 Mbp.

Description of *Candidatus* Subadia rarefilega sp. nov.

Candidatus Subadia rarefilega (NL. fem. n. *rarefilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *F082 sp001603665*. The type genome for the species is the GenBank assembly GCA_001603665.1. The GC content of the type genome is 46.99 % and the genome length is 2.06 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "3 replicate cellulose-degrading anaerobic digesters sampled at day 96 and day 362".

Description of *Candidatus* Subadia redacitrix sp. nov.

Candidatus Subadia redacitrix (NL. fem. n. *redacitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *F082 sp900769945*. The type genome for the species is the GenBank assembly RS_GCF_900769945.1. The GC content of the type genome is 45.08 % and the genome length is 1.99 Mbp.

Description of *Candidatus* Subadia remuledo sp. nov.

Candidatus Subadia remuledo (NL. fem. n. *remuledo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *F082 sp900318265*. The type genome for the species is the GenBank assembly GCA_902759395.1. The GC content of the type genome is 49.83 % and the genome length is 2.98 Mbp.

Description of *Candidatus* Subadia semilifica sp. nov.

Candidatus Subadia semilifica (NL. fem. n. *semilifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *F082 sp002396205*. The type genome for the species is the GenBank assembly GCA_002396205.1. The GC content of the type genome is 51.39 % and the

genome length is 2.96 Mbp.

Description of *Candidatus* Subadia taxilimonia sp. nov.

Candidatus Subadia taxilimonia (NL. fem. n. *taxilimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *F082 sp902794155*. The type genome for the species is the GenBank assembly GCA_902794155.1. The GC content of the type genome is 48.17 % and the genome length is 3.28 Mbp.

Description of *Candidatus* Subadia tomogitudo sp. nov.

Candidatus Subadia tomogitudo (NL. fem. n. *tomogitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *F082 sp002310075*. The type genome for the species is the GenBank assembly GCA_002310075.1. The GC content of the type genome is 48.8 % and the genome length is 2.3 Mbp.

Description of *Candidatus* Subadia vilipitura sp. nov.

Candidatus Subadia vilipitura (NL. fem. n. *vilipitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *F082 sp902785755*. The type genome for the species is the GenBank assembly GCA_902786495.1. The GC content of the type genome is 48.53 % and the genome length is 3.41 Mbp.

Description of *Candidatus* Subadida conopicella sp. nov.

Candidatus Subadida conopicella (NL. fem. n. *conopicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA955 sp005788145*. The type genome for the species is the GenBank assembly GCA_009921285.1. The GC content of the type genome is 46.41 % and the genome length is 2.15 Mbp.

Description of *Candidatus* Subadida gen. nov.

Candidatus Subadida (NL. fem. n. *Subadida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA955*. The type species for the genus is *Candidatus* Subadida conopicella .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA955*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Subadidaceae.

Description of *Candidatus* Subadidaceae fam. nov.

Candidatus Subadidaceae (NL. fem. n. *Subadidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA955.* The type genus for the taxon is *Candidatus* Subadida .

According to the original version of GTDB R06-RS202, this family belongs to the order *NS11-12g*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Peropanales.

Description of *Candidatus* Subadida faticax sp. nov.

Candidatus Subadida faticax (NL. fem. n. *faticax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA955 sp005798825*. The type genome for the species is the GenBank assembly GCA_005789365.1. The GC content of the type genome is 40.1 % and the genome length is 1.81 Mbp.

Description of *Candidatus* Subadida nugacugo sp. nov.

Candidatus Subadida nugacugo (NL. fem. n. *nugacugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA955 sp903959115*. The type genome for the species is the GenBank assembly GCA_903950265.1. The GC content of the type genome is 43.57 % and the genome length is 1.97 Mbp.

Description of *Candidatus* Subadida relapicella sp. nov.

Candidatus Subadida relapicella (NL. fem. n. *relapicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA955 sp002737625*. The type genome for the species is the GenBank assembly GCA_009693525.1. The GC content of the type genome is 43.6 % and the genome length is 1.5 Mbp.

Description of *Candidatus* Subadida revulimonas sp. nov.

Candidatus Subadida revulimonas (NL. fem. n. *revulimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA955 sp002347985*. The type genome for the species is the GenBank assembly GCA_002347985.1. The GC content of the type genome is 43.18 % and the genome length is 2.19 Mbp.

Description of *Candidatus* Subadida tabifigena sp. nov.

Candidatus Subadida tabifigena (NL. fem. n. *tabifigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA955 sp002293105*. The type genome for the species is the GenBank assembly GCA_903871145.1. The GC content of the type genome is 45.63 % and the genome length is 2.04 Mbp.

Description of *Candidatus* Subadida veridessa sp. nov.

Candidatus Subadida veridessa (NL. fem. n. *veridessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA955 sp002737705*. The type genome for the species is the GenBank assembly GCA_002737705.1. The GC content of the type genome is 40.67 % and the genome length is 1.92 Mbp.

Description of *Candidatus* Subadosa eclipilega sp. nov.

Candidatus Subadosa eclipilega (NL. fem. n. *eclipilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CG2-30-32-10 sp001872995*. The type genome for the species is the GenBank assembly GCA_001872995.1. The GC content of the type genome is 31.5 % and the genome length is 2.11 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "groundwater filtered through a 3.0 um filter".

Description of *Candidatus* Subadosa gen. nov.

Candidatus Subadosa (NL. fem. n. *Subadosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CG2-30-32-10*. The type species for the genus is *Candidatus* Subadosa eclipilega .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CG2-30-32-10*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Subadosaceae.

Description of *Candidatus* Subadosaceae fam. nov.

Candidatus Subadosaceae (NL. fem. n. *Subadosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CG2-30-32-10.* The type genus for the taxon is *Candidatus* Subadosa .

According to GTDB R06-RS202, this family belongs to the order *Bacteroidales*.

Description of *Candidatus* Subadula calipitio sp. nov.

Candidatus Subadula calipitio (NL. fem. n. *calipitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS621 sp900543915*. The type genome for the species is the GenBank assembly GCA_900543915.1. The GC content of the type genome is 54.55 % and the genome length is 1.99 Mbp.

Description of *Candidatus* Subadula gen. nov.

Candidatus Subadula (NL. fem. n. *Subadula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UMGS621*. The type species for the genus is *Candidatus* Subadula calipitio .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Subinana adnumatio sp. nov.

Candidatus Subinana adnumatio (NL. fem. n. *adnumatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MED-G20 sp002457645*. The type genome for the species is the GenBank assembly GCA_002457645.1. The GC content of the type genome is 30.07 % and the genome length is 1.27 Mbp.

Description of *Candidatus* Subinana gen. nov.

Candidatus Subinana (NL. fem. n. *Subinana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *MED-G20*. The type species for the genus is *Candidatus* Subinana adnumatio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA10066*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Favonellaceae.

Description of *Candidatus* Subinana epicretta sp. nov.

Candidatus Subinana epicretta (NL. fem. n. *epicretta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MED-G20 sp002713405*. The type genome for the species is the GenBank assembly GCA_002713405.1. The GC content of the type genome is 30.28 % and the genome length is 2.01 Mbp.

Description of *Candidatus* Subinana excucigena sp. nov.

Candidatus Subinana excucigena (NL. fem. n. *excucigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MED-G20 sp902599165*. The type genome for the species is the GenBank assembly GCA_902599165.1. The GC content of the type genome is 31.26 % and the genome length is 1.38 Mbp.

Description of *Candidatus* Subinana foricicula sp. nov.

Candidatus Subinana foricicula (NL. fem. n. *foricicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MED-G20 sp002691605*. The type genome for the species is the GenBank assembly GCA_902538145.1. The GC content of the type genome is 30.07 % and the genome length is 1.47 Mbp.

Description of *Candidatus* Subinana musulax sp. nov.

Candidatus Subinana musulax (NL. fem. n. *musulax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MED-G20 sp002699745*. The type genome for the species is the GenBank assembly GCA_009886165.1. The GC content of the type genome is 31.05 % and the genome length is 1.9 Mbp.

Description of *Candidatus* Subinana tabififica sp. nov.

Candidatus Subinana tabififica (NL. fem. n. *tabififica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MED-G20 sp002686655*. The type genome for the species is the GenBank assembly GCA_002715205.1. The GC content of the type genome is 29.55 % and the genome length is 1.8 Mbp.

Description of *Candidatus* Subinaria leviditudo sp. nov.

Candidatus Subinaria leviditudo (NL. fem. n. *leviditudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2691145 sp002691145*. The type genome for the species is the GenBank assembly GCA_002691145.1. The GC content of the type genome is 31.08 % and the genome length is 2.03 Mbp.

Description of *Candidatus* Subinaria gen. nov.

Candidatus Subinaria (NL. fem. n. *Subinaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2691145*. The type species for the genus is *Candidatus* Subinaria levididudo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *TMED127*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Tubicariaceae.

Description of *Candidatus* Subinella adaggitura sp. nov.

Candidatus Subinella adaggitura (NL. fem. n. *adaggitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1268 sp003509235*. The type genome for the species is the GenBank assembly GCA_003509235.1. The GC content of the type genome is 48.28 % and the genome length is 2.88 Mbp.

Description of *Candidatus* Subinella gen. nov.

Candidatus Subinella (NL. fem. n. *Subinella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1268*. The type species for the genus is *Candidatus* Subinella adaggitura .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1268*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Subinellaceae.

Description of *Candidatus* Subinellaceae fam. nov.

Candidatus Subinellaceae (NL. fem. n. *Subinellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA1268.* The type genus for the taxon is *Candidatus* Subinella .

According to GTDB R06-RS202, this family belongs to the order *Pirellulales*.

Description of *Candidatus* Subinella adpagitio sp. nov.

Candidatus Subinella adpagitio (NL. fem. n. *adpagitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1268 sp002712395*. The type genome for the species is the GenBank assembly GCA_002712395.1. The GC content of the type genome is 49.1 % and the genome length is 1.8 Mbp.

Description of *Candidatus* Subinella ammixago sp. nov.

Candidatus Subinella ammixago (NL. fem. n. *ammixago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1268 sp009919445*. The type genome for the species is the GenBank assembly GCA_009919445.1. The GC content of the type genome is 59.9 % and the genome length is 3.0 Mbp.

Description of *Candidatus* Subinella antevago sp. nov.

Candidatus Subinella antevago (NL. fem. n. *antevago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1268 sp014238855*. The type genome for the species is the GenBank assembly GCA_014238855.1. The GC content of the type genome is 48.05 % and the genome length is 3.11 Mbp.

Description of *Candidatus* Subinella defacugo sp. nov.

Candidatus Subinella defacugo (NL. fem. n. *defacugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1268 sp002694955*. The type genome for the species is the GenBank assembly GCA_002694955.1. The GC content of the type genome is 47.84 % and the genome length is 1.39 Mbp.

Description of *Candidatus* Subinella dicanedo sp. nov.

Candidatus Subinella dicanedo (NL. fem. n. *dicanedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1268 sp002862175*. The type genome for the species is the GenBank assembly GCA_003505845.1. The GC content of the type genome is 49.26 % and the genome length is 2.45 Mbp.

Description of *Candidatus* Subinella exhonibra sp. nov.

Candidatus Subinella exhonibra (NL. fem. n. *exhonibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1268 sp011523305*. The type genome for the species is the GenBank assembly GCA_011523305.1. The GC content of the type genome is 61.46 % and the genome length is 3.49 Mbp.

Description of *Candidatus* Subinella minuratica sp. nov.

Candidatus Subinella minuratica (NL. fem. n. *minuratica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1268 sp002862165*. The type genome for the species is the GenBank assembly GCA_002862165.1. The GC content of the type genome is 47.89 % and the genome length is 2.8 Mbp.

Description of *Candidatus* Subinella pavimimonas sp. nov.

Candidatus Subinella pavimimonas (NL. fem. n. *pavimimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1268 sp009922585*. The type genome for the species is the GenBank assembly GCA_009922585.1. The GC content of the type genome is 62.37 % and the genome length is 3.38 Mbp.

Description of *Candidatus* Subinella semoditoga sp. nov.

Candidatus Subinella semoditoga (NL. fem. n. *semoditoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *UBA1268 sp002171115*. The type genome for the species is the GenBank assembly GCA_002171115.1. The GC content of the type genome is 49.2 % and the genome length is 2.01 Mbp.

Description of *Candidatus* Subinia lapilentia sp. nov.

Candidatus Subinia lapilentia (NL. fem. n. *lapilentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *D37C17 sp004124405*. The type genome for the species is the GenBank assembly RS_GCF_003709175.1. The GC content of the type genome is 37.58 % and the genome length is 1.4 Mbp.

Description of *Candidatus* Subinia gen. nov.

Candidatus Subinia (NL. fem. n. *Subinia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *D37C17*. The type species for the genus is *Candidatus* Subinia lapilentia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *D37C17*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Subiniaceae.

Description of *Candidatus* Subiniaceae fam. nov.

Candidatus Subiniaceae (NL. fem. n. *Subiniaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *D37C17*. The type genus for the taxon is *Candidatus* Subinia .

According to the original version of GTDB R06-RS202, this family belongs to the order *SCGC-AAA003-L08*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Redaciales.

Description of *Candidatus* Subinia omninetta sp. nov.

Candidatus Subinia omninetta (NL. fem. n. *omninetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *D37C17 sp014381415*. The type genome for the species is the GenBank assembly GCA_014381415.1. The GC content of the type genome is 36.93 % and the genome length is 1.9 Mbp.

Description of *Candidatus* Subinia penuritas sp. nov.

Candidatus Subinia penuritas (NL. fem. n. *penuritas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *D37C17 sp012964845*. The type genome for the species is the GenBank assembly GCA_012964845.1. The GC content of the type genome is 38.09 % and the genome length is 1.25 Mbp.

Description of *Candidatus* Subinida desulitura sp. nov.

Candidatus Subinida desulitura (NL. fem. n. *desulitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PRS1 sp003650305*. The type genome for the species is the GenBank assembly GCA_003650305.1. The GC content of the type genome is 31.46 % and the genome length is 2.84 Mbp.

Description of *Candidatus* Subinida gen. nov.

Candidatus Subinida (NL. fem. n. *Subinida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PRS1*. The type species for the genus is *Candidatus* Subinida desulitura .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Subinida oblanibra sp. nov.

Candidatus Subinida oblanibra (NL. fem. n. *oblanibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PRS1 sp003709165*. The type genome for the species is the GenBank assembly RS_GCF_003709165.1. The GC content of the type genome is 32.1 % and the genome length is 2.42 Mbp.

Description of *Candidatus* Subinida turiliforma sp. nov.

Candidatus Subinida turiliforma (NL. fem. n. *turiliforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PRS1 sp013151975*. The type genome for the species is the GenBank assembly GCA_013151975.1. The GC content of the type genome is 32.51 % and the genome length is 2.51 Mbp.

Description of *Candidatus* Subinosa adpagibra sp. nov.

Candidatus Subinosa adpagibra (NL. fem. n. *adpagibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CACIIZ01 sp014239455*. The type genome for the species is the GenBank assembly GCA_014239455.1. The GC content of the type genome is 37.34 % and the genome length is 1.0 Mbp.

Description of *Candidatus* Subinosa gen. nov.

Candidatus Subinosa (NL. fem. n. *Subinosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CACIIZ01*. The type species for the genus is *Candidatus* Subinosa adpagibra .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Subinosa bimotitia sp. nov.

Candidatus Subinosa bimotitia (NL. fem. n. *bimotitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CACIIZ01 sp902562285*. The type genome for the species is the GenBank assembly GCA_902562285.1. The GC content of the type genome is 31.28 % and the genome length is 1.74 Mbp.

Description of *Candidatus* Subinosa calipitoga sp. nov.

Candidatus Subinosa calipitoga (NL. fem. n. *calipitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CACIIZ01 sp002699695*. The type genome for the species is the GenBank assembly GCA_002699695.2. The GC content of the type genome is 37.66 % and the genome length is 2.0 Mbp.

Description of *Candidatus* Subinosa carucitoga sp. nov.

Candidatus Subinosa carucitoga (NL. fem. n. *carucitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CACIIZ01 sp002695745*. The type genome for the species is the GenBank assembly GCA_002695745.2. The GC content of the type genome is 30.93 % and the genome length is 2.5 Mbp.

Description of *Candidatus* Subinosa dececibula sp. nov.

Candidatus Subinosa dececibula (NL. fem. n. *dececibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CACIIZ01 sp902616265*. The type genome for the species is the GenBank assembly GCA_902616265.1. The GC content of the type genome is 30.98 % and the genome length is 1.59 Mbp.

Description of *Candidatus* Subinosa deforimonas sp. nov.

Candidatus Subinosa deforimonas (NL. fem. n. *deforimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CACIIZ01 sp902578545*. The type genome for the species is the GenBank assembly GCA_902542635.1. The GC content of the type genome is 30.91 % and the genome length is 1.73 Mbp.

Description of *Candidatus* Subinosa detunessa sp. nov.

Candidatus Subinosa detunessa (NL. fem. n. *detunessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *CACIIZ01 sp902567595*. The type genome for the species is the GenBank assembly GCA_902567595.1. The GC content of the type genome is 31.11 % and the genome length is 1.92 Mbp.

Description of *Candidatus* Subinosa dicibimonas sp. nov.

Candidatus Subinosa dicibimonas (NL. fem. n. *dicibimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CACIIZ01 sp902586855*. The type genome for the species is the GenBank assembly GCA_902586855.1. The GC content of the type genome is 38.47 % and the genome length is 1.79 Mbp.

Description of *Candidatus* Subinosa eclecivita sp. nov.

Candidatus Subinosa eclecivita (NL. fem. n. *eclecivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CACIIZ01 sp902625475*. The type genome for the species is the GenBank assembly GCA_902625475.1. The GC content of the type genome is 31.14 % and the genome length is 1.52 Mbp.

Description of *Candidatus* Subinosa enharessa sp. nov.

Candidatus Subinosa enharessa (NL. fem. n. *enharessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CACIIZ01 sp902541695*. The type genome for the species is the GenBank assembly GCA_902541695.1. The GC content of the type genome is 30.74 % and the genome length is 1.55 Mbp.

Description of *Candidatus* Subinosa extinifica sp. nov.

Candidatus Subinosa extinifica (NL. fem. n. *extinifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CACIIZ01 sp902570265*. The type genome for the species is the GenBank assembly GCA_902570265.1. The GC content of the type genome is 31.22 % and the genome length is 2.16 Mbp.

Description of *Candidatus* Subinosa inergitica sp. nov.

Candidatus Subinosa inergitica (NL. fem. n. *inergitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CACIIZ01 sp902538975*. The type genome for the species is the GenBank assembly GCA_902538975.1. The GC content of the type genome is 31.24 % and the genome length is 2.0 Mbp.

Description of *Candidatus* Subinosa inobrivita sp. nov.

Candidatus Subinosa inobrivita (NL. fem. n. *inobrivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CACIIZ01 sp902599445*. The type genome for the species is the GenBank assembly GCA_902599445.1. The GC content of the type genome is 38.31 % and the genome length is 1.7 Mbp.

Description of *Candidatus* Subinosa inregastra sp. nov.

Candidatus Subinosa inregastra (NL. fem. n. *inregastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CACIIZ01 sp902611605*. The type genome for the species is the GenBank assembly GCA_902611605.1. The GC content of the type genome is 31.5 % and the genome length is 1.62 Mbp.

Description of *Candidatus* Subinosa obveressa sp. nov.

Candidatus Subinosa obveressa (NL. fem. n. *obveressa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CACIIZ01 sp902573735*. The type genome for the species is the GenBank assembly GCA_902573735.1. The GC content of the type genome is 31.2 % and the genome length is 1.93 Mbp.

Description of *Candidatus* Subinosa peribago sp. nov.

Candidatus Subinosa peribago (NL. fem. n. *peribago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CACIIZ01 sp902614945*. The type genome for the species is the GenBank assembly GCA_902614945.1. The GC content of the type genome is 31.25 % and the genome length is 1.61 Mbp.

Description of *Candidatus* Subinula bulapiforma sp. nov.

Candidatus Subinula bulapiforma (NL. fem. n. *bulapiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIOSP01 sp903861005*. The type genome for the species is the GenBank assembly GCA_903861005.1. The GC content of the type genome is 70.49 % and the genome length is 5.81 Mbp.

Description of *Candidatus* Subinula gen. nov.

Candidatus Subinula (NL. fem. n. *Subinula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIOSP01*. The type species for the genus is *Candidatus* Subinula bulapiforma .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GCA-2862545*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Tolutanaceae.

Description of *Candidatus* Subodana letifetta sp. nov.

Candidatus Subodana letifetta (NL. fem. n. *letifetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9936 sp001774105*. The type genome for the species is the GenBank assembly GCA_003518965.1. The GC content of the type genome is 46.14 % and the genome length is 0.76 Mbp.

Description of *Candidatus* Subodana gen. nov.

Candidatus Subodana (NL. fem. n. *Subodana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA9936*. The type species for the genus is *Candidatus* Subodana letifetta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA9936*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Subodanaceae.

Description of *Candidatus* Subodanaceae fam. nov.

Candidatus Subodanaceae (NL. fem. n. *Subodanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA9936.* The type genus for the taxon is *Candidatus* Subodana .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA9936*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Subodanales.

Description of *Candidatus* Subodanales ord. nov.

Candidatus Subodanales (NL. fem. n. *Subodanales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA9936.* The type genus for the taxon is *Candidatus* Subodana .

According to the GTDB R06-RS202, this order belongs to the class *Paceibacteria*.

Description of *Candidatus* Subodaria dicabatio sp. nov.

Candidatus Subodaria dicabatio (NL. fem. n. *dicabatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *BM520 sp009930445*. The type genome for the species is the GenBank assembly GCA_009930445.1. The GC content of the type genome is 42.51 % and the genome length is 3.47 Mbp.

Description of *Candidatus* Subodaria gen. nov.

Candidatus Subodaria (NL. fem. n. *Subodaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this genus is *BM520*. The type species for the genus is *Candidatus* Subodaria dicabatio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *BM520*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Subodariaceae.

Description of *Candidatus* Subodariaceae fam. nov.

Candidatus Subodariaceae (NL. fem. n. *Subodariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *BM520.* The type genus for the taxon is *Candidatus* Subodaria .

According to GTDB R06-RS202, this family belongs to the order *Bacteroidales*.

Description of *Candidatus* Subodaria immatilega sp. nov.

Candidatus Subodaria immatilega (NL. fem. n. *immatilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *BM520 sp002869405*. The type genome for the species is the GenBank assembly GCA_002869405.1. The GC content of the type genome is 41.49 % and the genome length is 3.49 Mbp.

Description of *Candidatus* Subodaria ludifedo sp. nov.

Candidatus Subodaria ludifedo (NL. fem. n. *ludifedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *BM520 sp002748065*. The type genome for the species is the GenBank assembly GCA_002748065.1. The GC content of the type genome is 46.37 % and the genome length is 2.33 Mbp.

Description of *Candidatus* Subodella cinipitas sp. nov.

Candidatus Subodella cinipitas (NL. fem. n. *cinipitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JdFR-54 sp002011475*. The type genome for the species is the

GenBank assembly GCA_002011475.1. The GC content of the type genome is 59.73 % and the genome length is 1.69 Mbp.

Description of *Candidatus* Subodella gen. nov.

Candidatus Subodella (NL. fem. n. *Subodella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JdFR-54*. The type species for the genus is *Candidatus* Subodella cinipitas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JdFR-54*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Subodellaceae.

Description of *Candidatus* Subodellaceae fam. nov.

Candidatus Subodellaceae (NL. fem. n. *Subodellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JdFR-54.* The type genus for the taxon is *Candidatus* Subodella .

According to the original version of GTDB R06-RS202, this family belongs to the order *JdFR-54*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Subodellales.

Description of *Candidatus* Subodellales ord. nov.

Candidatus Subodellales (NL. fem. n. *Subodellales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JdFR-54.* The type genus for the taxon is *Candidatus* Subodella .

According to the GTDB R06-RS202, this order belongs to the class *Dehalococcoidia*.

Description of *Candidatus* Subodia effosimonas sp. nov.

Candidatus Subodia effosimonas (NL. fem. n. *effosimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5738 sp002419295*. The type genome for the species is the GenBank assembly GCA_002419295.1. The GC content of the type genome is 45.92 %

and the genome length is 0.85 Mbp.

Description of *Candidatus* Subodia gen. nov.

Candidatus Subodia (NL. fem. n. *Subodia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA5738*. The type species for the genus is *Candidatus* Subodia effosimonas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA5738*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Subodiaceae.

Description of *Candidatus* Subodiaceae fam. nov.

Candidatus Subodiaceae (NL. fem. n. *Subodiaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA5738.* The type genus for the taxon is *Candidatus* Subodia .

According to GTDB R06-RS202, this family belongs to the order *Paceibacterales*.

Description of *Candidatus* Subodia inmorugo sp. nov.

Candidatus Subodia inmorugo (NL. fem. n. *inmorugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5738 sp002423555*. The type genome for the species is the GenBank assembly GCA_002423555.1. The GC content of the type genome is 47.58 % and the genome length is 0.88 Mbp.

Description of *Candidatus* Subodida monimitudo sp. nov.

Candidatus Subodida monimitudo (NL. fem. n. *monimitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *VMEV01 sp007375725*. The type genome for the species is the GenBank assembly GCA_007376705.1. The GC content of the type genome is 44.81 % and the genome length is 1.04 Mbp.

Description of *Candidatus* Subodida gen. nov.

Candidatus Subodida (NL. fem. n. *Subodida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *VMEV01*. The type species for the genus is *Candidatus* Subodida monimitudo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *VMEV01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Subodidaceae.

Description of *Candidatus* Subodidaceae fam. nov.

Candidatus Subodidaceae (NL. fem. n. *Subodidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *VMEV01.* The type genus for the taxon is *Candidatus* Subodida .

According to the original version of GTDB R06-RS202, this family belongs to the order *VMEV01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Subodidales.

Description of *Candidatus* Subodidales ord. nov.

Candidatus Subodidales (NL. fem. n. *Subodidales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *VMEV01.* The type genus for the taxon is *Candidatus* Subodida .

According to the original version of GTDB R06-RS202, this family belongs to the class *ABY1*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Defunanae.

Description of *Candidatus* Subodosa desomicula sp. nov.

Candidatus Subodosa desomicula (NL. fem. n. *desomicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WQRX01 sp009779755*. The type genome for the species is the GenBank assembly GCA_009779755.1. The GC content of the type genome is 50.45 %

and the genome length is 3.1 Mbp.

Description of *Candidatus* Subodosa gen. nov.

Candidatus Subodosa (NL. fem. n. *Subodosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WQRX01*. The type species for the genus is *Candidatus* Subodosa desomicula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *WRBF01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Diritidaceae.

Description of *Candidatus* Subodosa protritio sp. nov.

Candidatus Subodosa protritio (NL. fem. n. *protritio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WQRX01 sp009781755*. The type genome for the species is the GenBank assembly GCA_009781755.1. The GC content of the type genome is 50.64 % and the genome length is 2.64 Mbp.

Description of *Candidatus* Subodosa rurigitudo sp. nov.

Candidatus Subodosa rurigitudo (NL. fem. n. *rurigitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WQRX01 sp009786535*. The type genome for the species is the GenBank assembly GCA_009787595.1. The GC content of the type genome is 47.8 % and the genome length is 3.1 Mbp.

Description of *Candidatus* Subodosa sanabisca sp. nov.

Candidatus Subodosa sanabisca (NL. fem. n. *sanabisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WQRX01 sp009787785*. The type genome for the species is the GenBank assembly GCA_009786545.1. The GC content of the type genome is 53.76 % and the genome length is 2.76 Mbp.

Description of *Candidatus* Subodosa siligifica sp. nov.

Candidatus Subodosa siligifica (NL. fem. n. *siligifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WQRX01 sp009780585*. The type genome for the species is the GenBank assembly GCA_009780585.1. The GC content of the type genome is 51.65 % and the genome length is 3.12 Mbp.

Description of *Candidatus* Subodula tenilugo sp. nov.

Candidatus Subodula tenilugo (NL. fem. n. *tenilugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2698665 sp002698665*. The type genome for the species is the GenBank assembly GCA_002698665.1. The GC content of the type genome is 31.34 % and the genome length is 1.19 Mbp.

Description of *Candidatus* Subodula gen. nov.

Candidatus Subodula (NL. fem. n. *Subodula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2698665*. The type species for the genus is *Candidatus* Subodula tenilugo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GCA-002716945*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Verecidaceae.

Description of *Candidatus* Subofana ciminilenta sp. nov.

Candidatus Subofana ciminilenta (NL. fem. n. *ciminilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AG-363-B04 sp003278465*. The type genome for the species is the GenBank assembly GCA_003278465.1. The GC content of the type genome is 38.3 % and the genome length is 1.5 Mbp.

Description of *Candidatus* Subofana gen. nov.

Candidatus Subofana (NL. fem. n. *Subofana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *AG-363-B04*. The type species for the genus is *Candidatus* Subofana ciminilenta .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Subofaria ducilitrix sp. nov.

Candidatus Subofaria ducilitrix (NL. fem. n. *ducilitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2786165 sp903885895*. The type genome for the species is the GenBank assembly GCA_903885895.1. The GC content of the type genome is 41.16 % and the genome length is 2.82 Mbp.

Description of *Candidatus* Subofaria gen. nov.

Candidatus Subofaria (NL. fem. n. *Subofaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2786165*. The type species for the genus is *Candidatus* Subofaria ducilitrix .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Subofaria embamiforma sp. nov.

Candidatus Subofaria embamiforma (NL. fem. n. *embamiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2786165 sp002786165*. The type genome for the species is the GenBank assembly GCA_002786165.1. The GC content of the type genome is 40.65 % and the genome length is 1.95 Mbp.

Description of *Candidatus* Subofaria pacifilenta sp. nov.

Candidatus Subofaria pacifilenta (NL. fem. n. *pacifilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2786165 sp903877115*. The type genome for the species is the GenBank assembly GCA_903931985.1. The GC content of the type genome is 42.41 % and the genome length is 1.98 Mbp.

Description of *Candidatus* Subofella relenisca sp. nov.

Candidatus Subofella relenisca (NL. fem. n. *relenisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *XYD1-37-29 sp001818495*. The type genome for the species is the GenBank assembly GCA_001818445.1. The GC content of the type genome is 36.61 % and the genome length is 0.9 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at 16ft depth; 0.1 micron filter at time point C".

Description of *Candidatus* Subofella gen. nov.

Candidatus Subofella (NL. fem. n. *Subofella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *XYD1-37-29*. The type species for the genus is *Candidatus* Subofella relenisca .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GWA2-36-10*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Mutabiaceae.

Description of *Candidatus* Subofia adhositas sp. nov.

Candidatus Subofia adhositas (NL. fem. n. *adhositas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PALSA-1396 sp003140275*. The type genome for the species is the GenBank assembly GCA_003140275.1. The GC content of the type genome is 56.04 % and the genome length is 5.86 Mbp.

Description of *Candidatus* Subofia gen. nov.

Candidatus Subofia (NL. fem. n. *Subofia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PALSA-1396*. The type species for the genus is *Candidatus* Subofia adhositas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *PALSA-1396*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Subofiaceae.

Description of *Candidatus* Subofiaceae fam. nov.

Candidatus Subofiaceae (NL. fem. n. *Subofiaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *PALSA-1396.* The type genus for the taxon is *Candidatus* Subofia .

According to GTDB R06-RS202, this family belongs to the order *Pedosphaerales*.

Description of *Candidatus* Subofida ascisigena sp. nov.

Candidatus Subofida ascisigena (NL. fem. n. *ascisigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6256 sp012516125*. The type genome for the species is the GenBank assembly GCA_012516125.1. The GC content of the type genome is 62.36 % and the genome length is 3.24 Mbp.

Description of *Candidatus* Subofida gen. nov.

Candidatus Subofida (NL. fem. n. *Subofida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA6256*. The type species for the genus is *Candidatus* Subofida ascisigena .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA4971*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Citocariaceae.

Description of *Candidatus* Subofida bacifitoga sp. nov.

Candidatus Subofida bacifitoga (NL. fem. n. *bacifitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6256 sp002452295*. The type genome for the species is the GenBank assembly GCA_002452295.1. The GC content of the type genome is 64.16 % and the genome length is 2.79 Mbp.

Description of *Candidatus* Subofida inseniforma sp. nov.

Candidatus Subofida inseniforma (NL. fem. n. *inseniforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6256 sp012842395*. The type genome for the species is the GenBank assembly GCA_012842395.1. The GC content of the type genome is 62.21 % and the genome length is 3.14 Mbp.

Description of *Candidatus* Subofida modifetta sp. nov.

Candidatus Subofida modifetta (NL. fem. n. *modifetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6256 sp014360195*. The type genome for the species is the GenBank assembly GCA_014360195.1. The GC content of the type genome is 62.02 % and the genome length is 3.38 Mbp.

Description of *Candidatus* Subofosa forinatica sp. nov.

Candidatus Subofosa forinatica (NL. fem. n. *forinatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JdFR-56 sp002011495*. The type genome for the species is the GenBank assembly GCA_002011495.1. The GC content of the type genome is 56.94 % and the genome length is 1.8 Mbp.

Description of *Candidatus* Subofosa gen. nov.

Candidatus Subofosa (NL. fem. n. *Subofosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JdFR-56*. The type species for the genus is *Candidatus* Subofosa

forinatica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *RBG-16-60-22*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Volunidaceae.

Description of *Candidatus* Subsaximicrobium homicitudo sp. nov.

Candidatus Subsaximicrobium homicitudo (NL. fem. n. *homicitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Subsaximicrobium sp000688335*. The type genome for the species is the GenBank assembly RS_GCF_000688335.1. The GC content of the type genome is 36.99 % and the genome length is 4.11 Mbp.

Description of *Candidatus* Subtercola curacax sp. nov.

Candidatus Subtercola curacax (NL. fem. n. *curacax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Subtercola sp002931235*. The type genome for the species is the GenBank assembly RS_GCF_002931235.1. The GC content of the type genome is 68.96 % and the genome length is 3.53 Mbp.

Description of *Candidatus* Subucana ascisifica sp. nov.

Candidatus Subucana ascisifica (NL. fem. n. *ascisifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2594 sp002339355*. The type genome for the species is the GenBank assembly GCA_002339355.1. The GC content of the type genome is 45.48 % and the genome length is 1.51 Mbp.

Description of *Candidatus* Subucana gen. nov.

Candidatus Subucana (NL. fem. n. *Subucana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA2594*. The type species for the genus is *Candidatus* Subucana ascisifica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2594*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Subucanaceae.

Description of *Candidatus* Subucanaceae fam. nov.

Candidatus Subucanaceae (NL. fem. n. *Subucanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA2594.* The type genus for the taxon is *Candidatus* Subucana .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA9087*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Monocellales.

Description of *Candidatus* Subucaria capilitoga sp. nov.

Candidatus Subucaria capilitoga (NL. fem. n. *capilitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9502 sp003480315*. The type genome for the species is the GenBank assembly RS_GCF_003480315.1. The GC content of the type genome is 48.71 % and the genome length is 3.22 Mbp.

Description of *Candidatus* Subucaria gen. nov.

Candidatus Subucaria (NL. fem. n. *Subucaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA9502*. The type species for the genus is *Candidatus* Subucaria capilitoga .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Subucaria defacax sp. nov.

Candidatus Subucaria defacax (NL. fem. n. *defacax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9502 sp003481825*. The type genome for the species is the

GenBank assembly RS_GCF_003477935.1. The GC content of the type genome is 46.94 % and the genome length is 3.98 Mbp.

Description of *Candidatus* Subucaria defanitio sp. nov.

Candidatus Subucaria defanitio (NL. fem. n. *defanitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9502 sp003506385*. The type genome for the species is the GenBank assembly RS_GCF_003480105.1. The GC content of the type genome is 47.98 % and the genome length is 3.65 Mbp.

Description of *Candidatus* Subucaria duponedo sp. nov.

Candidatus Subucaria duponedo (NL. fem. n. *duponedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9502 sp003669055*. The type genome for the species is the GenBank assembly RS_GCF_003669055.1. The GC content of the type genome is 50.11 % and the genome length is 4.31 Mbp.

Description of *Candidatus* Subucaria feficugo sp. nov.

Candidatus Subucaria feficugo (NL. fem. n. *feficugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9502 sp900540335*. The type genome for the species is the GenBank assembly GCA_900540335.1. The GC content of the type genome is 47.07 % and the genome length is 2.82 Mbp.

Description of *Candidatus* Subucaria hemidimonas sp. nov.

Candidatus Subucaria hemidimonas (NL. fem. n. *hemidimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9502 sp900555625*. The type genome for the species is the GenBank assembly GCA_900555625.1. The GC content of the type genome is 47.95 % and the genome length is 2.19 Mbp.

Description of *Candidatus* Subucaria immobetta sp. nov.

Candidatus Subucaria immobetta (NL. fem. n. *immobetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9502 sp004554205*. The type genome for the species is the GenBank assembly GCA_004554205.1. The GC content of the type genome is 54.96 % and the genome length is 2.32 Mbp.

Description of *Candidatus* Subucaria meridilenta sp. nov.

Candidatus Subucaria meridilenta (NL. fem. n. *meridilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9502 sp003478505*. The type genome for the species is the GenBank assembly GCA_900544695.1. The GC content of the type genome is 49.44 % and the genome length is 2.82 Mbp.

Description of *Candidatus* Subucaria metucentia sp. nov.

Candidatus Subucaria metucentia (NL. fem. n. *metucentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9502 sp900770535*. The type genome for the species is the GenBank assembly RS_GCF_900770535.1. The GC content of the type genome is 51.19 % and the genome length is 1.98 Mbp.

Description of *Candidatus* Subucaria morigicella sp. nov.

Candidatus Subucaria morigicella (NL. fem. n. *morigicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9502 sp900538475*. The type genome for the species is the GenBank assembly GCA_900538475.1. The GC content of the type genome is 46.22 % and the genome length is 3.04 Mbp.

Description of *Candidatus* Subucaria musulousia sp. nov.

Candidatus Subucaria musulousia (NL. fem. n. *musulousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9502 sp003611875*. The type genome for the species is the GenBank assembly RS_GCF_003611875.1. The GC content of the type genome is 46.24 % and the genome length is 5.54 Mbp.

Description of *Candidatus* Subucaria rubicilega sp. nov.

Candidatus Subucaria rubicilega (NL. fem. n. *rubicilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9502 sp009911065*. The type genome for the species is the GenBank assembly RS_GCF_009911065.1. The GC content of the type genome is 44.37 % and the genome length is 5.37 Mbp.

Description of *Candidatus* Subucella cisalatio sp. nov.

Candidatus Subucella cisalatio (NL. fem. n. *cisalatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *43-108 sp001915545*. The type genome for the species is the GenBank assembly GCA_001915545.1. The GC content of the type genome is 43.17 % and the genome length is 5.01 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "healthy adult 3C".

Description of *Candidatus* Subucella gen. nov.

Candidatus Subucella (NL. fem. n. *Subucella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *43-108*. The type species for the genus is *Candidatus* Subucella cisalatio .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Subucia adcogugo sp. nov.

Candidatus Subucia adcogugo (NL. fem. n. *adcogugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *Fen-1137 sp003153875*. The type genome for the species is the GenBank assembly GCA_003153875.1. The GC content of the type genome is 64.13 % and the genome length is 5.59 Mbp.

Description of *Candidatus* Subucia gen. nov.

Candidatus Subucia (NL. fem. n. *Subucia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Fen-1137*. The type species for the genus is *Candidatus* Subucia adcogugo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *Fen-1088*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Acrotanaceae.

Description of *Candidatus* Subucia diritetta sp. nov.

Candidatus Subucia diritetta (NL. fem. n. *diritetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Fen-1137 sp003157775*. The type genome for the species is the GenBank assembly GCA_003171435.1. The GC content of the type genome is 63.74 % and the genome length is 4.89 Mbp.

Description of *Candidatus* Subucia femelugo sp. nov.

Candidatus Subucia femelugo (NL. fem. n. *femelugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Fen-1137 sp003157315*. The type genome for the species is the GenBank assembly GCA_003157315.1. The GC content of the type genome is 63.72 % and the genome length is 4.55 Mbp.

Description of *Candidatus* Subucia holovisca sp. nov.

Candidatus Subucia holovisca (NL. fem. n. *holovisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Fen-1137 sp003158395*. The type genome for the species is the

GenBank assembly GCA_003161975.1. The GC content of the type genome is 64.39 % and the genome length is 4.75 Mbp.

Description of *Candidatus* Subucia inresilenta sp. nov.

Candidatus Subucia inresilenta (NL. fem. n. *inresilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Fen-1137 sp003170035*. The type genome for the species is the GenBank assembly GCA_003170035.1. The GC content of the type genome is 64.86 % and the genome length is 5.19 Mbp.

Description of *Candidatus* Subucia luculilega sp. nov.

Candidatus Subucia luculilega (NL. fem. n. *luculilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Fen-1137 sp003153015*. The type genome for the species is the GenBank assembly GCA_003153015.1. The GC content of the type genome is 64.16 % and the genome length is 5.84 Mbp.

Description of *Candidatus* Subucia lutulitrix sp. nov.

Candidatus Subucia lutulitrix (NL. fem. n. *lutulitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Fen-1137 sp003142855*. The type genome for the species is the GenBank assembly GCA_003155895.1. The GC content of the type genome is 63.97 % and the genome length is 6.0 Mbp.

Description of *Candidatus* Subucia refuligena sp. nov.

Candidatus Subucia refuligena (NL. fem. n. *refuligena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Fen-1137 sp003155465*. The type genome for the species is the GenBank assembly GCA_003155465.1. The GC content of the type genome is 64.48 % and the genome length is 5.53 Mbp.

Description of *Candidatus* Subucia solipisca sp. nov.

Candidatus Subucia solipisca (NL. fem. n. *solipisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Fen-1137 sp003158455*. The type genome for the species is the GenBank assembly GCA_003158655.1. The GC content of the type genome is 63.88 % and the genome length is 6.5 Mbp.

Description of *Candidatus* Subucia telegitia sp. nov.

Candidatus Subucia telegitia (NL. fem. n. *telegitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Fen-1137 sp003158735*. The type genome for the species is the GenBank assembly GCA_003161935.1. The GC content of the type genome is 63.74 % and the genome length is 6.21 Mbp.

Description of *Candidatus* Subucida capudibula sp. nov.

Candidatus Subucida capudibula (NL. fem. n. *capudibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GBS-2 sp001443025*. The type genome for the species is the GenBank assembly GCA_001443025.1. The GC content of the type genome is 32.93 % and the genome length is 0.66 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "hot springs".

Description of *Candidatus* Subucida gen. nov.

Candidatus Subucida (NL. fem. n. *Subucida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GBS-2*. The type species for the genus is *Candidatus* Subucida capudibula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GBS-2*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Subucidaceae.

Description of *Candidatus* Subucidaceae fam. nov.

Candidatus Subucidaceae (NL. fem. n. *Subucidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *GBS-2.* The type genus for the taxon is *Candidatus* Subucida .

According to GTDB R06-RS202, this family belongs to the order *Paceibacterales*.

Description of *Candidatus* Subucosa adpelicella sp. nov.

Candidatus Subucosa adpelicella (NL. fem. n. *adpelicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WO2-01-48-18 sp001824435*. The type genome for the species is the GenBank assembly GCA_001824435.1. The GC content of the type genome is 48.12 % and the genome length is 1.21 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under low O2 conditions; 0.1 micron filter; full assembly".

Description of *Candidatus* Subucosa gen. nov.

Candidatus Subucosa (NL. fem. n. *Subucosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WO2-01-48-18*. The type species for the genus is *Candidatus* Subucosa adpelicella .

According to the original version of GTDB R06-RS202, this genus belongs to the family *WO2-01-48-18*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Subucosaceae.

Description of *Candidatus* Subucosaceae fam. nov.

Candidatus Subucosaceae (NL. fem. n. *Subucosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *WO2-01-48-18.* The type genus for the taxon is *Candidatus* Subucosa .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA6257*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Denomulales.

Description of *Candidatus* Succiniclasticum conigitrix sp. nov.

Candidatus Succiniclasticum conigitrix (NL. fem. n. *conigitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Succiniclasticum sp900315345*. The type genome for the species is the GenBank assembly GCA_902795245.1. The GC content of the type genome is 49.44 % and the genome length is 2.04 Mbp.

Description of *Candidatus* Succiniclasticum cucuressa sp. nov.

Candidatus Succiniclasticum cucuressa (NL. fem. n. *cucuressa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Succiniclasticum sp902801365*. The type genome for the species is the GenBank assembly GCA_902779605.1. The GC content of the type genome is 50.5 % and the genome length is 2.07 Mbp.

Description of *Candidatus* Succiniclasticum desepitoga sp. nov.

Candidatus Succiniclasticum desepitoga (NL. fem. n. *desepitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Succiniclasticum sp900315925*. The type genome for the species is the GenBank assembly GCA_902758205.1. The GC content of the type genome is 49.04 % and the genome length is 2.8 Mbp.

Description of *Candidatus* Succiniclasticum irrelitudo sp. nov.

Candidatus Succiniclasticum irrelitudo (NL. fem. n. *irrelitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Succiniclasticum sp002342505*. The type genome for the species is the GenBank assembly GCA_002342505.1. The GC content of the type genome is 49.94 % and the genome length is 1.81 Mbp.

Description of *Candidatus* Succiniclasticum loripitoga sp. nov.

Candidatus Succiniclasticum loripitoga (NL. fem. n. *loripitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Succiniclasticum sp900316935*. The type genome for the species is the GenBank assembly GCA_002351665.1. The GC content of the type genome is 59.1 % and the genome length is 1.93 Mbp.

Description of *Candidatus* Succiniclasticum lucifastra sp. nov.

Candidatus Succiniclasticum lucifastra (NL. fem. n. *lucifastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Succiniclasticum sp900315805*. The type genome for the species is the GenBank assembly GCA_900315805.1. The GC content of the type genome is 59.16 % and the genome length is 2.01 Mbp.

Description of *Candidatus* Succiniclasticum sotuliforma sp. nov.

Candidatus Succiniclasticum sotuliforma (NL. fem. n. *sotuliforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Succiniclasticum sp900544275*. The type genome for the species is the GenBank assembly GCA_900761495.1. The GC content of the type genome is 47.64 % and the genome length is 1.87 Mbp.

Description of *Candidatus* Succiniclasticum tiguratica sp. nov.

Candidatus Succiniclasticum tiguratica (NL. fem. n. *tiguratica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Succiniclasticum sp003512125*. The type genome for the species is the GenBank assembly GCA_003512125.1. The GC content of the type genome is 49.31 % and the genome length is 1.49 Mbp.

Description of *Candidatus* Succiniclasticum tomogatio sp. nov.

Candidatus Succiniclasticum tomogatio (NL. fem. n. *tomogatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Succiniclasticum sp900314855*. The type genome for the species is the GenBank assembly GCA_900314855.1. The GC content of the type genome is 59.45 % and the genome length is 1.83 Mbp.

Description of *Candidatus* Succinimonas apperitudo sp. nov.

Candidatus Succinimonas apperitudo (NL. fem. n. *apperitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Succinimonas sp902776415*. The type genome for the species is the GenBank assembly GCA_902776415.1. The GC content of the type genome is 51.17 % and the genome length is 3.04 Mbp.

Description of *Candidatus* Succinimonas denicicella sp. nov.

Candidatus Succinimonas denicicella (NL. fem. n. *denicicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Succinimonas sp002372325*. The type genome for the species is the GenBank assembly GCA_002372325.1. The GC content of the type genome is 51.73 % and the genome length is 3.39 Mbp.

Description of *Candidatus* Succinivibrio buxanifica sp. nov.

Candidatus Succinivibrio buxanifica (NL. fem. n. *buxanifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Succinivibrio sp900316375*. The type genome for the species is the GenBank assembly GCA_902755545.1. The GC content of the type genome is 36.84 % and the genome length is 2.49 Mbp.

Description of *Candidatus* Succinivibrio conibitio sp. nov.

Candidatus Succinivibrio conibitio (NL. fem. n. *conibitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Succinivibrio sp002473165*. The type genome for the species is the GenBank assembly GCA_002472215.1. The GC content of the type genome is 58.75 % and the genome length is 1.92 Mbp.

Description of *Candidatus* Succinivibrio dicabivita sp. nov.

Candidatus Succinivibrio dicabivita (NL. fem. n. *dicabivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Succinivibrio sp900316175*. The type genome for the species is the GenBank assembly GCA_002308175.1. The GC content of the type genome is 40.34 % and the genome length is 1.22 Mbp.

Description of *Candidatus* Succinivibrio dilemetta sp. nov.

Candidatus Succinivibrio dilemetta (NL. fem. n. *dilemetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Succinivibrio sp902776275*. The type genome for the species is the GenBank assembly GCA_902776275.1. The GC content of the type genome is 62.17 % and the genome length is 2.54 Mbp.

Description of *Candidatus* Succinivibrio eccisitica sp. nov.

Candidatus Succinivibrio eccisitica (NL. fem. n. *eccisitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Succinivibrio sp012519775*. The type genome for the species is the GenBank assembly GCA_012519775.1. The GC content of the type genome is 38.04 % and the genome length is 1.72 Mbp.

Description of *Candidatus* Succinivibrio excarastra sp. nov.

Candidatus Succinivibrio excarastra (NL. fem. n. *excarastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Succinivibrio sp900767695*. The type genome for the species is the GenBank assembly GCA_900767695.1. The GC content of the type genome is 63.02 % and the genome length is 2.19 Mbp.

Description of *Candidatus* Succinivibrio exsolimonas sp. nov.

Candidatus Succinivibrio exsolimonas (NL. fem. n. *exsolimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Succinivibrio sp900548485*. The type genome for the species is the GenBank assembly GCA_900548485.1. The GC content of the type genome is 36.29 % and the genome length is 1.89 Mbp.

Description of *Candidatus* Succinivibrio fiducax sp. nov.

Candidatus Succinivibrio fiducax (NL. fem. n. *fiducax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Succinivibrio sp000431835*. The type genome for the species is the GenBank assembly GCA_902765685.1. The GC content of the type genome is 36.46 % and the genome length is 2.55 Mbp.

Description of *Candidatus* Succinivibrio ignicitura sp. nov.

Candidatus Succinivibrio ignicitura (NL. fem. n. *ignicitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Succinivibrio sp902772715*. The type genome for the species is the GenBank assembly GCA_902772715.1. The GC content of the type genome is 39.22 % and the genome length is 2.4 Mbp.

Description of *Candidatus* Succinivibrio lametivita sp. nov.

Candidatus Succinivibrio lametivita (NL. fem. n. *lametivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Succinivibrio sp900552905*. The type genome for the species is the GenBank assembly GCA_900766015.1. The GC content of the type genome is 42.29 % and the genome length is 1.9 Mbp.

Description of *Candidatus* Succinivibrio lenimetta sp. nov.

Candidatus Succinivibrio lenimetta (NL. fem. n. *lenimetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Succinivibrio sp900555115*. The type genome for the species is the GenBank assembly GCA_900754255.1. The GC content of the type genome is 46.99 % and the genome length is 2.03 Mbp.

Description of *Candidatus* Succinivibrio morigitas sp. nov.

Candidatus Succinivibrio morigitas (NL. fem. n. *morigitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Succinivibrio sp900770725*. The type genome for the species is the GenBank assembly GCA_900770725.1. The GC content of the type genome is 62.16 % and the genome length is 2.64 Mbp.

Description of *Candidatus* Succinivibrio nugacitrix sp. nov.

Candidatus Succinivibrio nugacitrix (NL. fem. n. *nugacitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Succinivibrio sp900315395*. The type genome for the species is the GenBank assembly GCA_900315395.1. The GC content of the type genome is 37.24 % and the genome length is 2.48 Mbp.

Description of *Candidatus* Succinivibrio odollitas sp. nov.

Candidatus Succinivibrio odollitas (NL. fem. n. *odollitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Succinivibrio sp003477345*. The type genome for the species is the GenBank assembly GCA_003477345.1. The GC content of the type genome is 43.57 % and the genome length is 1.61 Mbp.

Description of *Candidatus* Succinivibrio palifitica sp. nov.

Candidatus Succinivibrio palifitica (NL. fem. n. *palifitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Succinivibrio sp900317105*. The type genome for the species is the GenBank assembly GCA_900317105.1. The GC content of the type genome is 39.75 % and the genome length is 2.79 Mbp.

Description of *Candidatus* Succinivibrio recucatica sp. nov.

Candidatus Succinivibrio recucatica (NL. fem. n. *recucatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Succinivibrio sp003456415*. The type genome for the species is the GenBank assembly GCA_900768665.1. The GC content of the type genome is 35.62 % and the genome length is 2.04 Mbp.

Description of *Candidatus* Succinivibrio refulicula sp. nov.

Candidatus Succinivibrio refulicula (NL. fem. n. *refulicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Succinivibrio sp002449335*. The type genome for the species is the GenBank assembly GCA_002449335.1. The GC content of the type genome is 37.11 % and the genome length is 2.51 Mbp.

Description of *Candidatus* Sugilana detoricella sp. nov.

Candidatus Sugilana detoricella (NL. fem. n. *detoricella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CABIZH01 sp902363205*. The type genome for the species is the GenBank assembly RS_GCF_900754345.1. The GC content of the type genome is 35.49 % and the genome length is 3.24 Mbp.

Description of *Candidatus* Sugilana gen. nov.

Candidatus Sugilana (NL. fem. n. *Sugilana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CABIZH01*. The type species for the genus is *Candidatus* Sugilana detoricella .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Sugilaria visififorma sp. nov.

Candidatus Sugilaria visififorma (NL. fem. n. *visififorma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABFGF01 sp013112635*. The type genome for the species is the GenBank assembly GCA_013112635.1. The GC content of the type genome is 36.53 % and the genome length is 5.33 Mbp.

Description of *Candidatus* Sugilaria gen. nov.

Candidatus Sugilaria (NL. fem. n. *Sugilaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABFGF01*. The type species for the genus is *Candidatus* Sugilaria visififorma .

According to the original version of GTDB R06-RS202, this genus belongs to the family *J004*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Celumiaceae.

Description of *Candidatus* Sugilella coticessa sp. nov.

Candidatus Sugilella coticessa (NL. fem. n. *coticessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SYLG01 sp005808665*. The type genome for the species is the GenBank assembly GCA_005792915.1. The GC content of the type genome is 51.45 % and the genome length is 4.32 Mbp.

Description of *Candidatus* Sugilella gen. nov.

Candidatus Sugilella (NL. fem. n. *Sugilella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SYLG01*. The type species for the genus is *Candidatus* Sugilella coticessa .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Sugilella subadatio sp. nov.

Candidatus Sugilella subadatio (NL. fem. n. *subadatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SYLG01 sp009691815*. The type genome for the species is the GenBank assembly GCA_009691815.1. The GC content of the type genome is 52.37 % and the genome length is 2.76 Mbp.

Description of *Candidatus* Sugilia bisuliforma sp. nov.

Candidatus Sugilia bisuliforma (NL. fem. n. *bisuliforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA10151 sp001776635*. The type genome for the species is the GenBank assembly GCA_001776635.1. The GC content of the type genome is 40.16 % and the genome length is 0.96 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 0.1 micron filter; full assembly".

Description of *Candidatus* Sugilia gen. nov.

Candidatus Sugilia (NL. fem. n. *Sugilia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA10151*. The type species for the genus is *Candidatus* Sugilia bisuliforma .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA10151*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Sugiliaceae.

Description of *Candidatus* Sugiliaceae fam. nov.

Candidatus Sugiliaceae (NL. fem. n. *Sugiliaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA10151.* The type genus for the taxon is *Candidatus* Sugilia .

According to GTDB R06-RS202, this family belongs to the order *Daviesbacterales*.

Description of *Candidatus* Sugilia cisalessa sp. nov.

Candidatus Sugilia cisalessa (NL. fem. n. *cisalessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA10151 sp001776935*. The type genome for the species is the GenBank assembly GCA_000995045.1. The GC content of the type genome is 38.78 % and the genome length is 1.27 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "aquifer sediment".

Description of *Candidatus* Sugilia hecatimonas sp. nov.

Candidatus Sugilia hecatimonas (NL. fem. n. *hecatimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA10151 sp001777455*. The type genome for the species is the GenBank assembly GCA_001777455.1. The GC content of the type genome is 40.9 % and the genome length is 0.99 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under low O2 conditions; 0.2 micron filter; full assembly".

Description of *Candidatus* Sugilida manomatica sp. nov.

Candidatus Sugilida manomatica (NL. fem. n. *manomatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Bin61 sp009840635*. The type genome for the species is the GenBank assembly GCA_009839025.1. The GC content of the type genome is 69.15 % and the genome length is 3.05 Mbp.

Description of *Candidatus* Sugilida gen. nov.

Candidatus Sugilida (NL. fem. n. *Sugilida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Bin61*. The type species for the genus is *Candidatus* Sugilida manomatica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *Bin61*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Sugilidaceae.

Description of *Candidatus* Sugilidaceae fam. nov.

Candidatus Sugilidaceae (NL. fem. n. *Sugilidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *Bin61*. The type genus for the taxon is *Candidatus* Sugilida .

According to the original version of GTDB R06-RS202, this family belongs to the order *Bin61*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Sugilidales.

Description of *Candidatus* Sugilidales ord. nov.

Candidatus Sugilidales (NL. fem. n. *Sugilidales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *Bin61*. The type genus for the taxon is *Candidatus* Sugilida .

According to the GTDB R06-RS202, this order belongs to the class *Vicinamibacteria*.

Description of *Candidatus* Sugilida revecitura sp. nov.

Candidatus Sugilida revecitura (NL. fem. n. *revecitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Bin61 sp009835985*. The type genome for the species is the GenBank assembly GCA_009839885.1. The GC content of the type genome is 69.3 % and the genome length is 3.29 Mbp.

Description of *Candidatus* Sugilida rubigigena sp. nov.

Candidatus Sugilida rubigigena (NL. fem. n. *rubigigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Bin61 sp012271265*. The type genome for the species is the GenBank assembly GCA_012271265.1. The GC content of the type genome is 70.75 % and the genome length is 3.4 Mbp.

Description of *Candidatus* Sugilida semidicula sp. nov.

Candidatus Sugilida semidicula (NL. fem. n. *semidicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *Bin61 sp002238705*. The type genome for the species is the GenBank assembly GCA_002238705.1. The GC content of the type genome is 67.65 % and the genome length is 2.88 Mbp.

Description of *Candidatus* Sugilosa milifitoga sp. nov.

Candidatus Sugilosa milifitoga (NL. fem. n. *milifitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-12-FULL-40-28 sp001798135*. The type genome for the species is the GenBank assembly GCA_001798135.1. The GC content of the type genome is 39.27 % and the genome length is 2.16 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 0.2 micron filter; full assembly".

Description of *Candidatus* Sugilosa gen. nov.

Candidatus Sugilosa (NL. fem. n. *Sugilosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *2-12-FULL-40-28*. The type species for the genus is *Candidatus* Sugilosa milifitoga .

According to the original version of GTDB R06-RS202, this genus belongs to the family *2-12-FULL-40-28*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Sugilosaceae.

Description of *Candidatus* Sugilosaceae fam. nov.

Candidatus Sugilosaceae (NL. fem. n. *Sugilosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *2-12-FULL-40-28.* The type genus for the taxon is *Candidatus* Sugilosa .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA10199*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Domigosales.

Description of *Candidatus* Sugilula adpagitoga sp. nov.

Candidatus Sugilula adpagitoga (NL. fem. n. *adpagitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AR31 sp003220535*. The type genome for the species is the GenBank assembly GCA_003220535.1. The GC content of the type genome is 68.0 % and the genome length is 7.18 Mbp.

Description of *Candidatus* Sugilula gen. nov.

Candidatus Sugilula (NL. fem. n. *Sugilula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *AR31*. The type species for the genus is *Candidatus* Sugilula adpagitoga .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GWA2-73-35*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Fibiciaceae.

Description of *Candidatus* Sugilula adtoratica sp. nov.

Candidatus Sugilula adtoratica (NL. fem. n. *adtoratica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AR31 sp003221635*. The type genome for the species is the GenBank assembly GCA_003221635.1. The GC content of the type genome is 68.11 % and the genome length is 5.17 Mbp.

Description of *Candidatus* Sugilula dedigago sp. nov.

Candidatus Sugilula dedigago (NL. fem. n. *dedigago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AR31 sp003221615*. The type genome for the species is the GenBank assembly GCA_003221615.1. The GC content of the type genome is 67.75 % and the genome length is 7.24 Mbp.

Description of *Candidatus* Sugilula effunitia sp. nov.

Candidatus Sugilula effunitia (NL. fem. n. *effunitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AR31 sp003220495*. The type genome for the species is the GenBank assembly GCA_003220495.1. The GC content of the type genome is 68.49 % and the genome length is 5.98 Mbp.

Description of *Candidatus* Sugilula exsusilenta sp. nov.

Candidatus Sugilula exsusilenta (NL. fem. n. *exsusilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AR31 sp003221655*. The type genome for the species is the GenBank assembly GCA_003221655.1. The GC content of the type genome is 68.06 % and the genome length is 4.48 Mbp.

Description of *Candidatus* Sugilula fetuledo sp. nov.

Candidatus Sugilula fetuledo (NL. fem. n. *fetuledo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AR31 sp003221595*. The type genome for the species is the GenBank assembly GCA_003221595.1. The GC content of the type genome is 69.49 % and the genome length is 4.34 Mbp.

Description of *Candidatus* Sugilula inretitrix sp. nov.

Candidatus Sugilula inretitrix (NL. fem. n. *inretitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AR31 sp003220685*. The type genome for the species is the GenBank assembly GCA_003220685.1. The GC content of the type genome is 68.71 % and the genome length is 6.09 Mbp.

Description of *Candidatus* Sugilula niteletta sp. nov.

Candidatus Sugilula niteletta (NL. fem. n. *niteletta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AR31 sp003220435*. The type genome for the species is the GenBank assembly GCA_003220435.1. The GC content of the type genome is 68.95 % and the genome length is 5.44 Mbp.

Description of *Candidatus* Sugilula vitupicula sp. nov.

Candidatus Sugilula vitupicula (NL. fem. n. *vitupicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AR31 sp003221515*. The type genome for the species is the GenBank assembly GCA_003220525.1. The GC content of the type genome is 69.0 % and the genome length is 5.59 Mbp.

Description of *Candidatus* Sulfitobacter adcogentia sp. nov.

Candidatus Sulfitobacter adcogentia (NL. fem. n. *adcogentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sulfitobacter sp001650875*. The type genome for the species is the GenBank assembly RS_GCF_001650875.1. The GC content of the type genome is 61.28 % and the genome length is 4.85 Mbp.

Description of *Candidatus* Sulfitobacter adsusisca sp. nov.

Candidatus Sulfitobacter adsusisca (NL. fem. n. *adsusisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sulfitobacter sp013346665*. The type genome for the species is the GenBank assembly RS_GCF_013346665.1. The GC content of the type genome is 59.79 % and the genome length is 3.79 Mbp.

Description of *Candidatus* Sulfitobacter antiricula sp. nov.

Candidatus Sulfitobacter antiricula (NL. fem. n. *antiricula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sulfitobacter sp003335585*. The type genome for the species is the GenBank assembly RS_GCF_003335585.1. The GC content of the type genome is 61.73 % and the genome length is 5.7 Mbp.

Description of *Candidatus* Sulfitobacter assicivita sp. nov.

Candidatus Sulfitobacter assicivita (NL. fem. n. *assicivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sulfitobacter sp006064855*. The type genome for the species is the GenBank assembly RS_GCF_006064855.1. The GC content of the type genome is 58.46 % and the genome length is 3.24 Mbp.

Description of *Candidatus* Sulfitobacter bicoriforma sp. nov.

Candidatus Sulfitobacter bicoriforma (NL. fem. n. *bicoriforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sulfitobacter sp002703405*. The type genome for the species is the GenBank assembly GCA_003525825.1. The GC content of the type genome is 61.79 % and the genome length is 3.45 Mbp.

Description of *Candidatus* Sulfitobacter demuletta sp. nov.

Candidatus Sulfitobacter demuletta (NL. fem. n. *demuletta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sulfitobacter sp001634885*. The type genome for the species is the GenBank assembly GCA_002725105.1. The GC content of the type genome is 63.32 % and the genome length is 2.71 Mbp.

Description of *Candidatus* Sulfitobacter dimacigena sp. nov.

Candidatus Sulfitobacter dimacigena (NL. fem. n. *dimacigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sulfitobacter sp009363555*. The type genome for the species is the GenBank assembly RS_GCF_009363555.1. The GC content of the type genome is 63.31 % and the genome length is 4.26 Mbp.

Description of *Candidatus* Sulfitobacter evangicula sp. nov.

Candidatus Sulfitobacter evangicula (NL. fem. n. *evangicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Sulfitobacter sp003352085*. The type genome for the species is the GenBank assembly RS_GCF_003352085.1. The GC content of the type genome is 54.89 % and the genome length is 5.18 Mbp.

Description of *Candidatus* Sulfitobacter favonitio sp. nov.

Candidatus Sulfitobacter favonitio (NL. fem. n. *favonitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sulfitobacter sp013002405*. The type genome for the species is the GenBank assembly GCA_013002405.1. The GC content of the type genome is 62.02 % and the genome length is 3.62 Mbp.

Description of *Candidatus* Sulfitobacter holovibula sp. nov.

Candidatus Sulfitobacter holovibula (NL. fem. n. *holovibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sulfitobacter sp001635605*. The type genome for the species is the GenBank assembly RS_GCF_005068605.1. The GC content of the type genome is 62.46 % and the genome length is 3.67 Mbp.

Description of *Candidatus* Sulfitobacter nefarentia sp. nov.

Candidatus Sulfitobacter nefarentia (NL. fem. n. *nefarentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sulfitobacter sp001634775*. The type genome for the species is the GenBank assembly RS_GCF_001634775.1. The GC content of the type genome is 60.75 % and the genome length is 4.44 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "sea water".

Description of *Candidatus* Sulfitobacter pabilago sp. nov.

Candidatus Sulfitobacter pabilago (NL. fem. n. *pabilago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sulfitobacter sp002731875*. The type genome for the species is the GenBank assembly GCA_002708965.1. The GC content of the type genome is 56.8 % and the genome length is 3.62 Mbp.

Description of *Candidatus* Sulfitobacter pimenifica sp. nov.

Candidatus Sulfitobacter pimenifica (NL. fem. n. *pimenifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sulfitobacter sp011050655*. The type genome for the species is the GenBank assembly GCA_011050655.1. The GC content of the type genome is 54.8 % and the genome length is 4.1 Mbp.

Description of *Candidatus* Sulfitobacter pocililenta sp. nov.

Candidatus Sulfitobacter pocililenta (NL. fem. n. *pocililenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sulfitobacter sp013139555*. The type genome for the species is the GenBank assembly GCA_013139555.1. The GC content of the type genome is 57.19 % and the genome length is 3.61 Mbp.

Description of *Candidatus* Sulfitobacter podagitrix sp. nov.

Candidatus Sulfitobacter podagitrix (NL. fem. n. *podagitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sulfitobacter sp003352065*. The type genome for the species is the GenBank assembly RS_GCF_003352065.1. The GC content of the type genome is 56.59 % and the genome length is 4.19 Mbp.

Description of *Candidatus* Sulfitobacter refocifica sp. nov.

Candidatus Sulfitobacter refocifica (NL. fem. n. *refocifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sulfitobacter sp013282155*. The type genome for the species is the GenBank assembly RS_GCF_013282155.1. The GC content of the type genome is 57.9 % and the genome length is 3.82 Mbp.

Description of *Candidatus* Sulfitobacter resacentia sp. nov.

Candidatus Sulfitobacter resacentia (NL. fem. n. *resacentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sulfitobacter sp000156335*. The type genome for the species is the GenBank assembly RS_GCF_000156335.1. The GC content of the type genome is 58.74 % and the genome length is 4.53 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "seawater off the coast of Georgia".

Description of *Candidatus* Sulfitobacter tametatica sp. nov.

Candidatus Sulfitobacter tametatica (NL. fem. n. *tametatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sulfitobacter sp001886735*. The type genome for the species is the GenBank assembly RS_GCF_001886735.1. The GC content of the type genome is 64.52 % and the genome length is 4.69 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "cell culture of Alexandrium minutum 1089".

Description of *Candidatus* Sulfitobacter utillicula sp. nov.

Candidatus Sulfitobacter utillicula (NL. fem. n. *utillicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sulfitobacter sp010667575*. The type genome for the species is the GenBank assembly RS_GCF_010667575.1. The GC content of the type genome is 57.83 % and the genome length is 4.86 Mbp.

Description of *Candidatus* Sulfitobacter adsucitoga sp. nov.

Candidatus Sulfitobacter adsucitoga (NL. fem. n. *adsucitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sulfitobacter_C sp000620505*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_000620505.1. The GC content of the type genome is 61.72 % and the genome length is 4.74 Mbp.

Description of *Candidatus* Sulfitobacter vanidibra sp. nov.

Candidatus Sulfitobacter vanidibra (NL. fem. n. *vanidibra* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sulfitobacter_C sp003335545*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_003335545.1. The GC content of the type genome is 60.87 % and the genome length is 5.08 Mbp.

Description of *Candidatus* Sulfobacillus fidenilega sp. nov.

Candidatus Sulfobacillus fidenilega (NL. fem. n. *fidenilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sulfobacillus_B sp012933365*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_012933365.1. The GC content of the type genome is 58.2 % and the genome length is 4.4 Mbp.

Description of *Candidatus* Sulfopaludibacter assifilega sp. nov.

Candidatus Sulfopaludibacter assifilega (NL. fem. n. *assifilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sulfopaludibacter sp900290315*. The type genome for the species is the GenBank assembly RS_GCF_900290315.1. The GC content of the type genome is 61.74 % and the genome length is 8.52 Mbp.

Description of *Candidatus* Sulfotelmatobacter betacedo sp. nov.

Candidatus Sulfotelmatobacter betacedo (NL. fem. n. *betacedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sulfotelmatobacter sp003134995*. The type genome for the species is the GenBank assembly GCA_003161455.1. The GC content of the type genome is 56.84 % and the genome length is 5.59 Mbp.

Description of *Candidatus* Sulfotelmatobacter cerevastra sp. nov.

Candidatus Sulfotelmatobacter cerevastra (NL. fem. n. *cerevastra* a species epithet

created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sulfotelmatobacter sp003168355*. The type genome for the species is the GenBank assembly GCA_003167095.1. The GC content of the type genome is 57.68 % and the genome length is 5.15 Mbp.

Description of *Candidatus* Sulfotelmatobacter conibatica sp. nov.

Candidatus Sulfotelmatobacter conibatica (NL. fem. n. *conibatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sulfotelmatobacter sp003134655*. The type genome for the species is the GenBank assembly GCA_003151355.1. The GC content of the type genome is 58.11 % and the genome length is 6.65 Mbp.

Description of *Candidatus* Sulfotelmatobacter delapivita sp. nov.

Candidatus Sulfotelmatobacter delapivita (NL. fem. n. *delapivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sulfotelmatobacter sp003131585*. The type genome for the species is the GenBank assembly GCA_003131585.1. The GC content of the type genome is 59.24 % and the genome length is 3.93 Mbp.

Description of *Candidatus* Sulfotelmatobacter diritastra sp. nov.

Candidatus Sulfotelmatobacter diritastra (NL. fem. n. *diritastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sulfotelmatobacter sp013289765*. The type genome for the species is the GenBank assembly GCA_013289765.1. The GC content of the type genome is 56.12 % and the genome length is 4.81 Mbp.

Description of *Candidatus* Sulfotelmatobacter encolimonia sp. nov.

Candidatus Sulfotelmatobacter encolimonia (NL. fem. n. *encolimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sulfotelmatobacter sp003165855*. The type genome for the species is the GenBank assembly GCA_003165855.1. The GC content of the type genome is 58.32 % and the genome length is 4.87 Mbp.

Description of *Candidatus* Sulfotelmatobacter feditito ga sp. nov.

Candidatus Sulfotelmatobacter feditito ga (NL. fem. n. *feditito ga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sulfotelmatobacter sp003164855*. The type genome for the species is the GenBank assembly GCA_003164855.1. The GC content of the type genome is 57.26 % and the genome length is 5.23 Mbp.

Description of *Candidatus* Sulfotelmatobacter ficulago sp. nov.

Candidatus Sulfotelmatobacter ficulago (NL. fem. n. *ficulago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sulfotelmatobacter sp003156805*. The type genome for the species is the GenBank assembly GCA_003133595.1. The GC content of the type genome is 58.6 % and the genome length is 4.89 Mbp.

Description of *Candidatus* Sulfotelmatobacter inargago sp. nov.

Candidatus Sulfotelmatobacter inargago (NL. fem. n. *inargago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sulfotelmatobacter sp013289685*. The type genome for the species is the GenBank assembly GCA_013289685.1. The GC content of the type genome is 58.5 % and the genome length is 6.85 Mbp.

Description of *Candidatus* Sulfotelmatobacter incomedo sp. nov.

Candidatus Sulfotelmatobacter incomedo (NL. fem. n. *incomedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sulfotelmatobacter sp003136335*. The type genome for the species is the GenBank assembly GCA_003136335.1. The GC content of the type genome is 57.83 % and the genome length is 5.07 Mbp.

Description of *Candidatus* Sulfotelmatobacter maxumitudo sp. nov.

Candidatus Sulfotelmatobacter maxumitudo (NL. fem. n. *maxumitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sulfotelmatobacter sp003140075*. The type genome for the species is the GenBank assembly GCA_003140075.1. The GC content of the type genome is 57.95 % and the genome length is 5.77 Mbp.

Description of *Candidatus* Sulfotelmatobacter menapigena sp. nov.

Candidatus Sulfotelmatobacter menapigena (NL. fem. n. *menapigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sulfotelmatobacter sp003138975*. The type genome for the species is the GenBank assembly GCA_003138975.1. The GC content of the type genome is 57.15 % and the genome length is 5.45 Mbp.

Description of *Candidatus* Sulfotelmatobacter nugivicella sp. nov.

Candidatus Sulfotelmatobacter nugivicella (NL. fem. n. *nugivicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sulfotelmatobacter sp003166855*. The type genome for the species is the GenBank assembly GCA_003140725.1. The GC content of the type genome is 58.13 % and the genome length is 7.41 Mbp.

Description of *Candidatus* Sulfotelmatobacter odontivita sp. nov.

Candidatus Sulfotelmatobacter odontivita (NL. fem. n. *odontivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sulfotelmatobacter sp003132445*. The type genome for the species is the GenBank assembly GCA_003132445.1. The GC content of the type genome is 56.23 % and the genome length is 5.12 Mbp.

Description of *Candidatus* Sulfotelmatobacter rorulatica sp. nov.

Candidatus Sulfotelmatobacter rorulatica (NL. fem. n. *rorulatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a

noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sulfotelmatobacter sp003225555*. The type genome for the species is the GenBank assembly GCA_003225555.1. The GC content of the type genome is 57.97 % and the genome length is 4.42 Mbp.

Description of *Candidatus* Sulfotelmatobacter sicinimonas sp. nov.

Candidatus Sulfotelmatobacter sicinimonas (NL. fem. n. *sicinimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sulfotelmatobacter sp003165455*. The type genome for the species is the GenBank assembly GCA_003165455.1. The GC content of the type genome is 55.52 % and the genome length is 4.1 Mbp.

Description of *Candidatus* Sulfotelmatobacter sicinitica sp. nov.

Candidatus Sulfotelmatobacter sicinitica (NL. fem. n. *sicinitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sulfotelmatobacter sp003223595*. The type genome for the species is the GenBank assembly GCA_003223595.1. The GC content of the type genome is 57.61 % and the genome length is 4.38 Mbp.

Description of *Candidatus* Sulfotelmatobacter tolutitia sp. nov.

Candidatus Sulfotelmatobacter tolutitia (NL. fem. n. *tolutitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sulfotelmatobacter sp003225005*. The type genome for the species is the GenBank assembly GCA_003225005.1. The GC content of the type genome is 56.63 % and the genome length is 7.9 Mbp.

Description of *Candidatus* Sulfotelmatobacter vinacetta sp. nov.

Candidatus Sulfotelmatobacter vinacetta (NL. fem. n. *vinacetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Sulfotelmatobacter sp003131635*. The type genome for the species is the GenBank assembly GCA_003167075.1. The GC content of the type genome is 57.25 % and the genome length is 5.19 Mbp.

Description of *Candidatus* Sulfuricaulis visifitia sp. nov.

Candidatus Sulfuricaulis visifitia (NL. fem. n. *visifitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sulfuricaulis sp001785195*. The type genome for the species is the GenBank assembly GCA_001785155.1. The GC content of the type genome is 60.47 % and the genome length is 1.7 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 0.2 micron filter; full assembly".

Description of *Candidatus* Sulfuricella nubecimonas sp. nov.

Candidatus Sulfuricella nubecimonas (NL. fem. n. *nubecimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sulfuricella sp002784065*. The type genome for the species is the GenBank assembly GCA_002790295.1. The GC content of the type genome is 58.51 % and the genome length is 2.59 Mbp.

Description of *Candidatus* Sulfuricella obambatica sp. nov.

Candidatus Sulfuricella obambatica (NL. fem. n. *obambatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sulfuricella sp000971475*. The type genome for the species is the GenBank assembly RS_GCF_000971475.1. The GC content of the type genome is 56.91 % and the genome length is 3.42 Mbp.

Description of *Candidatus* Sulfuricella abrelitio sp. nov.

Candidatus Sulfuricella abrelitio (NL. fem. n. *abrelitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sulfuricella_A sp003104895*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-

formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003104895.1. The GC content of the type genome is 60.56 % and the genome length is 2.55 Mbp.

Description of *Candidatus* Sulfuricurvum caravax sp. nov.

Candidatus Sulfuricurvum caravax (NL. fem. n. *caravax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sulfuricurvum sp002633015*. The type genome for the species is the GenBank assembly GCA_002633015.1. The GC content of the type genome is 42.23 % and the genome length is 2.26 Mbp.

Description of *Candidatus* Sulfuricurvum homolitia sp. nov.

Candidatus Sulfuricurvum homolitia (NL. fem. n. *homolitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sulfuricurvum sp903844635*. The type genome for the species is the GenBank assembly GCA_903844635.1. The GC content of the type genome is 39.76 % and the genome length is 2.67 Mbp.

Description of *Candidatus* Sulfuricurvum miracilega sp. nov.

Candidatus Sulfuricurvum miracilega (NL. fem. n. *miracilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sulfuricurvum sp011391735*. The type genome for the species is the GenBank assembly GCA_011391735.1. The GC content of the type genome is 41.14 % and the genome length is 2.14 Mbp.

Description of *Candidatus* Sulfuricurvum paralitia sp. nov.

Candidatus Sulfuricurvum paralitia (NL. fem. n. *paralitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sulfuricurvum sp002282015*. The type genome for the species is the GenBank assembly GCA_002282015.1. The GC content of the type genome is 40.02 % and the genome length is 2.32 Mbp.

Description of *Candidatus* Sulfuricurvum sicunessa sp. nov.

Candidatus Sulfuricurvum sicunessa (NL. fem. n. *sicunessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sulfuricurvum sp000747095*. The type genome for the species is the GenBank assembly GCA_000747095.1. The GC content of the type genome is 49.11 % and the genome length is 2.11 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "mature fine tailings from oil sands tailings pond".

Description of *Candidatus* Sulfuricurvum timefitudo sp. nov.

Candidatus Sulfuricurvum timefitudo (NL. fem. n. *timefitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sulfuricurvum sp000310245*. The type genome for the species is the GenBank assembly GCA_001829605.1. The GC content of the type genome is 43.42 % and the genome length is 2.31 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under low O2 conditions; 1.2 micron filter; full assembly".

Description of *Candidatus* Sulfuricurvum tirunugo sp. nov.

Candidatus Sulfuricurvum tirunugo (NL. fem. n. *tirunugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sulfuricurvum sp002327465*. The type genome for the species is the GenBank assembly RS_GCF_004347735.1. The GC content of the type genome is 52.62 % and the genome length is 2.34 Mbp.

Description of *Candidatus* Sulfuriferula demogitia sp. nov.

Candidatus Sulfuriferula demogitia (NL. fem. n. *demogitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sulfuriferula sp003455595*. The type genome for the species is the GenBank assembly GCA_003455595.1. The GC content of the type genome is 58.01 % and the genome length is 2.58 Mbp.

Description of *Candidatus* Sulfuriferula atricitudo sp. nov.

Candidatus Sulfuriferula atricitudo (NL. fem. n. *atricitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sulfuriferula_A sp013140765*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_013140765.1. The GC content of the type genome is 48.58 % and the genome length is 2.18 Mbp.

Description of *Candidatus* Sulfuriferula lanigatio sp. nov.

Candidatus Sulfuriferula lanigatio (NL. fem. n. *lanigatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sulfuriferula_A sp002162035*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_002162035.1. The GC content of the type genome is 54.99 % and the genome length is 2.92 Mbp.

Description of *Candidatus* Sulfurihydrogenibium muriliforma sp. nov.

Candidatus Sulfurihydrogenibium muriliforma (NL. fem. n. *muriliforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sulfurihydrogenibium sp000020325*. The type genome for the species is the GenBank assembly GCA_003510745.1. The GC content of the type genome is 31.95 % and the genome length is 1.58 Mbp.

Description of *Candidatus* Sulfurihydrogenibium taxiligena sp. nov.

Candidatus Sulfurihydrogenibium taxiligena (NL. fem. n. *taxiligena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sulfurihydrogenibium sp002878035*. The type genome for the species is the GenBank assembly GCA_002878035.1. The GC content of the type genome is 34.41 % and the genome length is 1.28 Mbp.

Description of *Candidatus* Sulfurimonas adpugastra sp. nov.

Candidatus Sulfurimonas adpugastra (NL. fem. n. *adpugastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sulfurimonas sp009258225*. The type genome for the species is the GenBank assembly RS_GCF_009258225.1. The GC content of the type genome is 33.29 % and the genome length is 2.42 Mbp.

Description of *Candidatus* Sulfurimonas adtoritica sp. nov.

Candidatus Sulfurimonas adtoritica (NL. fem. n. *adtoritica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sulfurimonas sp003978465*. The type genome for the species is the GenBank assembly GCA_003978465.1. The GC content of the type genome is 34.15 % and the genome length is 1.43 Mbp.

Description of *Candidatus* Sulfurimonas aggubicella sp. nov.

Candidatus Sulfurimonas aggubicella (NL. fem. n. *aggubicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sulfurimonas sp013607635*. The type genome for the species is the GenBank assembly GCA_013607635.1. The GC content of the type genome is 40.04 % and the genome length is 1.41 Mbp.

Description of *Candidatus* Sulfurimonas anatritoga sp. nov.

Candidatus Sulfurimonas anatritoga (NL. fem. n. *anatritoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sulfurimonas sp002899765*. The type genome for the species is the GenBank assembly GCA_002899765.1. The GC content of the type genome is 36.69 % and the genome length is 2.39 Mbp.

Description of *Candidatus* Sulfurimonas benepedo sp. nov.

Candidatus Sulfurimonas benepedo (NL. fem. n. *benepedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sulfurimonas sp002732645*. The type genome for the species is the GenBank assembly GCA_002732645.1. The GC content of the type genome is 33.58 % and the genome length is 1.74 Mbp.

Description of *Candidatus* Sulfurimonas bicubessa sp. nov.

Candidatus Sulfurimonas bicubessa (NL. fem. n. *bicubessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sulfurimonas sp903903705*. The type genome for the species is the GenBank assembly GCA_903903705.1. The GC content of the type genome is 36.96 % and the genome length is 1.76 Mbp.

Description of *Candidatus* Sulfurimonas decamilega sp. nov.

Candidatus Sulfurimonas decamilega (NL. fem. n. *decamilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sulfurimonas sp002781365*. The type genome for the species is the GenBank assembly GCA_002781365.1. The GC content of the type genome is 35.86 % and the genome length is 2.43 Mbp.

Description of *Candidatus* Sulfurimonas decinicella sp. nov.

Candidatus Sulfurimonas decinicella (NL. fem. n. *decinicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sulfurimonas sp001829785*. The type genome for the species is the GenBank assembly GCA_001830805.1. The GC content of the type genome is 34.49 % and the genome length is 2.36 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at 16ft depth; 0.2 micron filter at time point D".

Description of *Candidatus* Sulfurimonas exadvibra sp. nov.

Candidatus Sulfurimonas exadvibra (NL. fem. n. *exadvibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sulfurimonas sp001829715*. The type genome for the species is the GenBank assembly GCA_001829715.1. The GC content of the type genome is 35.72 % and the genome length is 2.5 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at 16ft depth; 1.2 micron filter at time point B".

Description of *Candidatus* Sulfurimonas extoratica sp. nov.

Candidatus Sulfurimonas extoratica (NL. fem. n. *extoratica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sulfurimonas sp002428085*. The type genome for the species is the GenBank assembly GCA_002428085.1. The GC content of the type genome is 37.56 % and the genome length is 2.19 Mbp.

Description of *Candidatus* Sulfurimonas fumacisca sp. nov.

Candidatus Sulfurimonas fumacisca (NL. fem. n. *fumacisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sulfurimonas sp001829675*. The type genome for the species is the GenBank assembly GCA_001830775.1. The GC content of the type genome is 36.18 % and the genome length is 1.82 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 1.2 micron filter; full assembly".

Description of *Candidatus* Sulfurimonas gabinitoga sp. nov.

Candidatus Sulfurimonas gabinitoga (NL. fem. n. *gabinitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sulfurimonas sp011391635*. The type genome for the species is the GenBank assembly GCA_011391635.1. The GC content of the type genome is 35.8 % and the genome length is 2.35 Mbp.

Description of *Candidatus* Sulfurimonas holisibula sp. nov.

Candidatus Sulfurimonas holisibula (NL. fem. n. *holisibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sulfurimonas sp013791885*. The type genome for the species is the GenBank assembly GCA_013791885.1. The GC content of the type genome is 37.24 % and the genome length is 2.52 Mbp.

Description of *Candidatus* Sulfurimonas impinitudo sp. nov.

Candidatus Sulfurimonas impinitudo (NL. fem. n. *impinitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sulfurimonas sp013153755*. The type genome for the species is the GenBank assembly GCA_013153755.1. The GC content of the type genome is 31.99 % and the genome length is 1.71 Mbp.

Description of *Candidatus* Sulfurimonas impuditica sp. nov.

Candidatus Sulfurimonas impuditica (NL. fem. n. *impuditica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sulfurimonas sp001873135*. The type genome for the species is the GenBank assembly GCA_001873135.1. The GC content of the type genome is 35.97 % and the genome length is 1.99 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "groundwater filtered through a 3.0 um filter".

Description of *Candidatus* Sulfurimonas locupedo sp. nov.

Candidatus Sulfurimonas locupedo (NL. fem. n. *locupedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sulfurimonas sp002335055*. The type genome for the species is the GenBank assembly GCA_002335055.1. The GC content of the type genome is 34.24 % and the genome length is 1.6 Mbp.

Description of *Candidatus* Sulfurimonas ludimitas sp. nov.

Candidatus Sulfurimonas ludimitas (NL. fem. n. *ludimitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Sulfurimonas sp009068765*. The type genome for the species is the GenBank assembly RS_GCF_009068765.1. The GC content of the type genome is 37.3 % and the genome length is 2.34 Mbp.

Description of *Candidatus* Sulfurimonas nitelimonia sp. nov.

Candidatus Sulfurimonas nitelimonia (NL. fem. n. *nitelimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sulfurimonas sp002452425*. The type genome for the species is the GenBank assembly GCA_002422695.1. The GC content of the type genome is 40.01 % and the genome length is 0.99 Mbp.

Description of *Candidatus* Sulfurimonas ratificula sp. nov.

Candidatus Sulfurimonas ratificula (NL. fem. n. *ratificula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sulfurimonas sp001829625*. The type genome for the species is the GenBank assembly GCA_001829625.1. The GC content of the type genome is 36.86 % and the genome length is 1.91 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at time point 6 / F; 5m depth; 0.2 filter".

Description of *Candidatus* Sulfurimonas recucilenta sp. nov.

Candidatus Sulfurimonas recucilenta (NL. fem. n. *recucilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sulfurimonas sp002452895*. The type genome for the species is the GenBank assembly GCA_002869525.1. The GC content of the type genome is 34.37 % and the genome length is 1.89 Mbp.

Description of *Candidatus* Sulfurimonas revulicella sp. nov.

Candidatus Sulfurimonas revulicella (NL. fem. n. *revulicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sulfurimonas sp013607665*. The type genome for the species is the GenBank assembly GCA_013607665.1. The GC content of the type genome is 38.78 %

and the genome length is 1.53 Mbp.

Description of *Candidatus* Sulfurimonas tegimicula sp. nov.

Candidatus Sulfurimonas tegimicula (NL. fem. n. *tegimicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sulfurimonas sp002733945*. The type genome for the species is the GenBank assembly GCA_002733945.1. The GC content of the type genome is 33.86 % and the genome length is 2.49 Mbp.

Description of *Candidatus* Sulfurimonas viripibra sp. nov.

Candidatus Sulfurimonas viripibra (NL. fem. n. *viripibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sulfurimonas sp014381585*. The type genome for the species is the GenBank assembly GCA_014381585.1. The GC content of the type genome is 35.65 % and the genome length is 2.14 Mbp.

Description of *Candidatus* Sulfurimonas visibilenta sp. nov.

Candidatus Sulfurimonas visibilenta (NL. fem. n. *visibilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sulfurimonas sp002733155*. The type genome for the species is the GenBank assembly GCA_002733155.1. The GC content of the type genome is 29.92 % and the genome length is 2.29 Mbp.

Description of *Candidatus* Sulfurimonas volucicella sp. nov.

Candidatus Sulfurimonas volucicella (NL. fem. n. *volucicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sulfurimonas sp009192995*. The type genome for the species is the GenBank assembly RS_GCF_009192995.1. The GC content of the type genome is 36.78 % and the genome length is 2.09 Mbp.

Description of *Candidatus* Sulfuritalea capucousia sp. nov.

Candidatus Sulfuritalea capucousia (NL. fem. n. *capucousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sulfuritalea sp903908065*. The type genome for the species is the GenBank assembly GCA_903859645.1. The GC content of the type genome is 63.95 % and the genome length is 3.93 Mbp.

Description of *Candidatus* Sulfuritalea depacigena sp. nov.

Candidatus Sulfuritalea depacigena (NL. fem. n. *depacigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sulfuritalea sp903932755*. The type genome for the species is the GenBank assembly GCA_903953285.1. The GC content of the type genome is 64.03 % and the genome length is 3.04 Mbp.

Description of *Candidatus* Sulfuritalea detenitica sp. nov.

Candidatus Sulfuritalea detenitica (NL. fem. n. *detenitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sulfuritalea sp903959855*. The type genome for the species is the GenBank assembly GCA_903952035.1. The GC content of the type genome is 63.07 % and the genome length is 4.08 Mbp.

Description of *Candidatus* Sulfuritalea detotago sp. nov.

Candidatus Sulfuritalea detotago (NL. fem. n. *detotago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sulfuritalea sp006218025*. The type genome for the species is the GenBank assembly GCA_009773275.1. The GC content of the type genome is 63.08 % and the genome length is 4.41 Mbp.

Description of *Candidatus* Sulfuritalea occaledo sp. nov.

Candidatus Sulfuritalea occaledo (NL. fem. n. *occaledo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sulfuritalea sp001828935*. The type genome for the species is the GenBank assembly GCA_001828935.1. The GC content of the type genome is 63.28 % and the genome length is 4.32 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under low O2 conditions; 0.2 micron filter; full assembly".

Description of *Candidatus* Sulfuritalea pabilitoga sp. nov.

Candidatus Sulfuritalea pabilitoga (NL. fem. n. *pabilitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sulfuritalea sp903933395*. The type genome for the species is the GenBank assembly GCA_903961235.1. The GC content of the type genome is 64.53 % and the genome length is 2.27 Mbp.

Description of *Candidatus* Sulfuritalea resulivita sp. nov.

Candidatus Sulfuritalea resulivita (NL. fem. n. *resulivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sulfuritalea sp012026675*. The type genome for the species is the GenBank assembly GCA_012026675.1. The GC content of the type genome is 62.69 % and the genome length is 3.58 Mbp.

Description of *Candidatus* Sulfuritalea vigenastra sp. nov.

Candidatus Sulfuritalea vigenastra (NL. fem. n. *vigenastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sulfuritalea sp903848955*. The type genome for the species is the GenBank assembly GCA_903825995.1. The GC content of the type genome is 62.91 % and the genome length is 4.02 Mbp.

Description of *Candidatus* Sulfuritortus adtolitica sp. nov.

Candidatus Sulfuritortus adtolitica (NL. fem. n. *adtolitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Sulfuritortus sp013389055*. The type genome for the species is the GenBank assembly GCA_013389055.1. The GC content of the type genome is 64.55 % and the genome length is 2.28 Mbp.

Description of *Candidatus* Sulfuritortus denicifica sp. nov.

Candidatus Sulfuritortus denicifica (NL. fem. n. *denicifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sulfuritortus sp002339725*. The type genome for the species is the GenBank assembly GCA_002339725.1. The GC content of the type genome is 66.08 % and the genome length is 2.42 Mbp.

Description of *Candidatus* Sulfurivermis malogimonas sp. nov.

Candidatus Sulfurivermis malogimonas (NL. fem. n. *malogimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sulfurivermis sp002376325*. The type genome for the species is the GenBank assembly GCA_002376325.1. The GC content of the type genome is 63.0 % and the genome length is 2.81 Mbp.

Description of *Candidatus* Sulfurivermis semipitoga sp. nov.

Candidatus Sulfurivermis semipitoga (NL. fem. n. *semipitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sulfurivermis sp002840095*. The type genome for the species is the GenBank assembly GCA_002840095.1. The GC content of the type genome is 63.52 % and the genome length is 4.23 Mbp.

Description of *Candidatus* Sulfurospirillum cacaledo sp. nov.

Candidatus Sulfurospirillum cacaledo (NL. fem. n. *cacaledo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sulfurospirillum sp001548035*. The type genome for the species is the GenBank assembly RS_GCF_001548035.1. The GC content of the type genome is 37.56 % and the genome length is 2.61 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "chloroethene-contaminated

groundwater".

Description of *Candidatus* Sulfurospirillum capucifica sp. nov.

Candidatus Sulfurospirillum capucifica (NL. fem. n. *capucifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sulfurospirillum sp000743525*. The type genome for the species is the GenBank assembly GCA_002383505.1. The GC content of the type genome is 41.67 % and the genome length is 2.59 Mbp.

Description of *Candidatus* Sulfurospirillum cemenimonas sp. nov.

Candidatus Sulfurospirillum cemenimonas (NL. fem. n. *cemenimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sulfurospirillum sp002328495*. The type genome for the species is the GenBank assembly GCA_002328495.1. The GC content of the type genome is 39.46 % and the genome length is 2.42 Mbp.

Description of *Candidatus* Sulfurospirillum decamitudo sp. nov.

Candidatus Sulfurospirillum decamitudo (NL. fem. n. *decamitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sulfurospirillum sp002309535*. The type genome for the species is the GenBank assembly RS_GCF_002309535.1. The GC content of the type genome is 38.84 % and the genome length is 2.81 Mbp.

Description of *Candidatus* Sulfurospirillum encomedo sp. nov.

Candidatus Sulfurospirillum encomedo (NL. fem. n. *encomedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sulfurospirillum sp002307095*. The type genome for the species is the GenBank assembly GCA_002307095.1. The GC content of the type genome is 41.45 % and the genome length is 2.74 Mbp.

Description of *Candidatus* Sulfurospirillum funebiforma sp. nov.

Candidatus Sulfurospirillum funebiforma (NL. fem. n. *funebiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sulfurospirillum sp002452855*. The type genome for the species is the GenBank assembly GCA_002452855.1. The GC content of the type genome is 38.73 % and the genome length is 1.34 Mbp.

Description of *Candidatus* Sulfurospirillum homunimonia sp. nov.

Candidatus Sulfurospirillum homunimonia (NL. fem. n. *homunimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sulfurospirillum sp002382085*. The type genome for the species is the GenBank assembly GCA_002382085.1. The GC content of the type genome is 43.76 % and the genome length is 2.6 Mbp.

Description of *Candidatus* Sulfurospirillum maxilatio sp. nov.

Candidatus Sulfurospirillum maxilatio (NL. fem. n. *maxilatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sulfurospirillum sp002162315*. The type genome for the species is the GenBank assembly RS_GCF_002162315.1. The GC content of the type genome is 38.69 % and the genome length is 2.88 Mbp.

Description of *Candidatus* Sulfurospirillum repecicella sp. nov.

Candidatus Sulfurospirillum repecicella (NL. fem. n. *repecicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sulfurospirillum sp009930355*. The type genome for the species is the GenBank assembly GCA_009930355.1. The GC content of the type genome is 38.01 % and the genome length is 2.5 Mbp.

Description of *Candidatus* Sulfurospirillum apogrifica sp. nov.

Candidatus Sulfurospirillum apogrifica (NL. fem. n. *apogrifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sulfurospirillum_A sp002469305*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_002469305.1. The GC content of the type genome is 33.96 % and the genome length is 2.5 Mbp.

Description of *Candidatus* Sulfurospirillum horomigena sp. nov.

Candidatus Sulfurospirillum horomigena (NL. fem. n. *horomigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sulfurospirillum_A sp002742765*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_002742765.1. The GC content of the type genome is 33.76 % and the genome length is 2.25 Mbp.

Description of *Candidatus* Sulfurovum abascicella sp. nov.

Candidatus Sulfurovum abascicella (NL. fem. n. *abascicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sulfurovum sp902727855*. The type genome for the species is the GenBank assembly GCA_902727855.1. The GC content of the type genome is 34.83 % and the genome length is 3.12 Mbp.

Description of *Candidatus* Sulfurovum denecifica sp. nov.

Candidatus Sulfurovum denecifica (NL. fem. n. *denecifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sulfurovum sp003934925*. The type genome for the species is the GenBank assembly GCA_003934925.1. The GC content of the type genome is 39.73 % and the genome length is 2.0 Mbp.

Description of *Candidatus* Sulfurovum denupicula sp. nov.

Candidatus Sulfurovum denupicula (NL. fem. n. *denupicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sulfurovum sp004377245*. The type genome for the species is the GenBank assembly GCA_004377245.1. The GC content of the type genome is 37.84 % and the genome length is 1.19 Mbp.

Description of *Candidatus* Sulfurovum dicanitrix sp. nov.

Candidatus Sulfurovum dicanitrix (NL. fem. n. *dicanitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sulfurovum sp003978375*. The type genome for the species is the GenBank assembly GCA_003978375.1. The GC content of the type genome is 34.8 % and the genome length is 1.58 Mbp.

Description of *Candidatus* Sulfurovum diludivita sp. nov.

Candidatus Sulfurovum diludivita (NL. fem. n. *diludivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sulfurovum sp002281755*. The type genome for the species is the GenBank assembly GCA_002256845.1. The GC content of the type genome is 41.68 % and the genome length is 1.96 Mbp.

Description of *Candidatus* Sulfurovum effinatio sp. nov.

Candidatus Sulfurovum effinatio (NL. fem. n. *effinatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sulfurovum sp013607775*. The type genome for the species is the GenBank assembly GCA_013607775.1. The GC content of the type genome is 37.36 % and the genome length is 2.26 Mbp.

Description of *Candidatus* Sulfurovum excamicella sp. nov.

Candidatus Sulfurovum excamicella (NL. fem. n. *excamicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sulfurovum sp002085305*. The type genome for the species is the GenBank assembly GCA_002085305.1. The GC content of the type genome is 38.02 %

and the genome length is 1.13 Mbp.

Description of *Candidatus* Sulfurovum fatilatio sp. nov.

Candidatus Sulfurovum fatilatio (NL. fem. n. *fatilatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sulfurovum sp002403155*. The type genome for the species is the GenBank assembly GCA_002403155.1. The GC content of the type genome is 41.68 % and the genome length is 1.86 Mbp.

Description of *Candidatus* Sulfurovum fetifitudo sp. nov.

Candidatus Sulfurovum fetifitudo (NL. fem. n. *fetifitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sulfurovum sp011048515*. The type genome for the species is the GenBank assembly GCA_011048515.1. The GC content of the type genome is 45.87 % and the genome length is 2.08 Mbp.

Description of *Candidatus* Sulfurovum imbecitia sp. nov.

Candidatus Sulfurovum imbecitia (NL. fem. n. *imbecitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sulfurovum sp000296775*. The type genome for the species is the GenBank assembly RS_GCF_000296775.1. The GC content of the type genome is 39.24 % and the genome length is 2.13 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "marine sediment".

Description of *Candidatus* Sulfurovum impacatica sp. nov.

Candidatus Sulfurovum impacatica (NL. fem. n. *impacatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sulfurovum sp000010345*. The type genome for the species is the GenBank assembly RS_GCF_000010345.1. The GC content of the type genome is 43.87 % and the genome length is 2.56 Mbp.

Description of *Candidatus* Sulfurovum inmorilega sp. nov.

Candidatus Sulfurovum inmorilega (NL. fem. n. *inmorilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sulfurovum sp002733355*. The type genome for the species is the GenBank assembly GCA_002733355.1. The GC content of the type genome is 35.77 % and the genome length is 1.94 Mbp.

Description of *Candidatus* Sulfurovum innabedo sp. nov.

Candidatus Sulfurovum innabedo (NL. fem. n. *innabedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sulfurovum sp011391015*. The type genome for the species is the GenBank assembly GCA_011391015.1. The GC content of the type genome is 41.61 % and the genome length is 1.74 Mbp.

Description of *Candidatus* Sulfurovum metapiforma sp. nov.

Candidatus Sulfurovum metapiforma (NL. fem. n. *metapiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sulfurovum sp003646505*. The type genome for the species is the GenBank assembly GCA_003646505.1. The GC content of the type genome is 37.09 % and the genome length is 1.46 Mbp.

Description of *Candidatus* Sulfurovum recogimonas sp. nov.

Candidatus Sulfurovum recogimonas (NL. fem. n. *recogimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sulfurovum sp002742845*. The type genome for the species is the GenBank assembly GCA_002402935.1. The GC content of the type genome is 40.48 % and the genome length is 1.78 Mbp.

Description of *Candidatus* Sulfurovum recucisca sp. nov.

Candidatus Sulfurovum recucisca (NL. fem. n. *recucisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sulfurovum sp013139765*. The type genome for the species is the GenBank assembly GCA_013139765.1. The GC content of the type genome is 37.31 % and the genome length is 2.2 Mbp.

Description of *Candidatus* Sulfurovum robigilenta sp. nov.

Candidatus Sulfurovum robigilenta (NL. fem. n. *robigilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sulfurovum sp002733215*. The type genome for the species is the GenBank assembly GCA_002733215.1. The GC content of the type genome is 38.47 % and the genome length is 2.65 Mbp.

Description of *Candidatus* Sulfurovum visibitoga sp. nov.

Candidatus Sulfurovum visibitoga (NL. fem. n. *visibitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sulfurovum sp011330645*. The type genome for the species is the GenBank assembly GCA_011330645.1. The GC content of the type genome is 37.13 % and the genome length is 1.83 Mbp.

Description of *Candidatus* Sunxiuqinia insepimonia sp. nov.

Candidatus Sunxiuqinia insepimonia (NL. fem. n. *insepimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sunxiuqinia sp009847015*. The type genome for the species is the GenBank assembly RS_GCF_009847015.1. The GC content of the type genome is 40.52 % and the genome length is 5.25 Mbp.

Description of *Candidatus* Supelaria sonipigena sp. nov.

Candidatus Supelaria sonipigena (NL. fem. n. *sonipigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *BIGb0383 sp003751845*. The type genome for the species is the GenBank assembly RS_GCF_003751845.1. The GC content of the type genome is 55.99

% and the genome length is 5.07 Mbp.

Description of *Candidatus* Supelaria gen. nov.

Candidatus Supelaria (NL. fem. n. *Supelaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *BIGb0383*. The type species for the genus is *Candidatus* Supelaria sonipigena .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Supelella cataledo sp. nov.

Candidatus Supelella cataledo (NL. fem. n. *cataledo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8901 sp002403115*. The type genome for the species is the GenBank assembly GCA_003501845.1. The GC content of the type genome is 64.14 % and the genome length is 1.85 Mbp.

Description of *Candidatus* Supelella gen. nov.

Candidatus Supelella (NL. fem. n. *Supelella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA8901*. The type species for the genus is *Candidatus* Supelella cataledo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA8901*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Supelellaceae.

Description of *Candidatus* Supelellaceae fam. nov.

Candidatus Supelellaceae (NL. fem. n. *Supelellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA8901.* The type genus for the taxon is *Candidatus* Supelella .

According to the original version of GTDB R06-RS202, this family belongs to the order *AC1*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the

order *Candidatus* Colutosales.

Description of *Candidatus* Supelia repurifica sp. nov.

Candidatus Supelia repurifica (NL. fem. n. *repurifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GWB2-47-37 sp001803635*. The type genome for the species is the GenBank assembly GCA_003538695.1. The GC content of the type genome is 46.74 % and the genome length is 2.19 Mbp.

Description of *Candidatus* Supelia gen. nov.

Candidatus Supelia (NL. fem. n. *Supelia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GWB2-47-37*. The type species for the genus is *Candidatus* Supelia repurifica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA9935*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Xeramosaceae.

Description of *Candidatus* Supelida assucibra sp. nov.

Candidatus Supelida assucibra (NL. fem. n. *assucibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AP-15 sp005884825*. The type genome for the species is the GenBank assembly GCA_005884825.1. The GC content of the type genome is 63.63 % and the genome length is 4.09 Mbp.

Description of *Candidatus* Supelida gen. nov.

Candidatus Supelida (NL. fem. n. *Supelida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *AP-15*. The type species for the genus is *Candidatus* Supelida assucibra .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Supelida rudecessa sp. nov.

Candidatus Supelida rudecessa (NL. fem. n. *rudecessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AP-15 sp005888425*. The type genome for the species is the GenBank assembly GCA_005888555.1. The GC content of the type genome is 65.44 % and the genome length is 2.93 Mbp.

Description of *Candidatus* Supelida triscitia sp. nov.

Candidatus Supelida triscitia (NL. fem. n. *triscitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AP-15 sp005888515*. The type genome for the species is the GenBank assembly GCA_005888515.1. The GC content of the type genome is 65.38 % and the genome length is 2.76 Mbp.

Description of *Candidatus* Supelosa adlacastra sp. nov.

Candidatus Supelosa adlacastra (NL. fem. n. *adlacastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1217 sp902784465*. The type genome for the species is the GenBank assembly GCA_902784465.1. The GC content of the type genome is 50.72 % and the genome length is 2.53 Mbp.

Description of *Candidatus* Supelosa gen. nov.

Candidatus Supelosa (NL. fem. n. *Supelosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1217*. The type species for the genus is *Candidatus* Supelosa adlacastra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *P3*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Halucosaceae.

Description of *Candidatus* Supelosa dehisitrix sp. nov.

Candidatus Supelosa dehisitrix (NL. fem. n. *dehisitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1217 sp900316965*. The type genome for the species is the GenBank assembly GCA_900316965.1. The GC content of the type genome is 46.91 % and the genome length is 2.39 Mbp.

Description of *Candidatus* Supelosa ecligiforma sp. nov.

Candidatus Supelosa ecligiforma (NL. fem. n. *ecligiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1217 sp002309155*. The type genome for the species is the GenBank assembly GCA_002309155.1. The GC content of the type genome is 48.3 % and the genome length is 1.93 Mbp.

Description of *Candidatus* Supelosa homagentia sp. nov.

Candidatus Supelosa homagentia (NL. fem. n. *homagentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1217 sp902796265*. The type genome for the species is the GenBank assembly GCA_902796265.1. The GC content of the type genome is 46.52 % and the genome length is 2.29 Mbp.

Description of *Candidatus* Supelosa indubibula sp. nov.

Candidatus Supelosa indubibula (NL. fem. n. *indubibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1217 sp902793295*. The type genome for the species is the GenBank assembly GCA_902793295.1. The GC content of the type genome is 52.41 % and the genome length is 2.66 Mbp.

Description of *Candidatus* Supelosa irrelifica sp. nov.

Candidatus Supelosa irrelifica (NL. fem. n. *irrelifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1217 sp002371315*. The type genome for the species is the GenBank assembly GCA_002371315.1. The GC content of the type genome is 54.02 % and the genome length is 2.43 Mbp.

Description of *Candidatus* Supelosa opuscitica sp. nov.

Candidatus Supelosa opuscitica (NL. fem. n. *opuscitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1217 sp002309335*. The type genome for the species is the GenBank assembly GCA_002309335.1. The GC content of the type genome is 47.84 % and the genome length is 2.06 Mbp.

Description of *Candidatus* Supelosa parocitia sp. nov.

Candidatus Supelosa parocitia (NL. fem. n. *parocitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1217 sp902788805*. The type genome for the species is the GenBank assembly GCA_902764795.1. The GC content of the type genome is 51.09 % and the genome length is 2.46 Mbp.

Description of *Candidatus* Supelula tomacisca sp. nov.

Candidatus Supelula tomacisca (NL. fem. n. *tomacisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *LNNU-3342 sp008711135*. The type genome for the species is the GenBank assembly RS_GCF_008711135.1. The GC content of the type genome is 64.56 % and the genome length is 3.78 Mbp.

Description of *Candidatus* Supelula gen. nov.

Candidatus Supelula (NL. fem. n. *Supelula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *LNNU-3342*. The type species for the genus is *Candidatus* Supelula tomacisca .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Superficieibacter nutabitica sp. nov.

Candidatus Superficieibacter nutabitica (NL. fem. n. *nutabitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Superficieibacter sp001187865*. The type genome for the species is the GenBank assembly GCA_002435565.1. The GC content of the type genome is 52.44 % and the genome length is 4.02 Mbp.

Description of *Candidatus* Superficieibacter seposax sp. nov.

Candidatus Superficieibacter seposax (NL. fem. n. *seposax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Superficieibacter sp002421005*. The type genome for the species is the GenBank assembly GCA_002421005.1. The GC content of the type genome is 54.93 % and the genome length is 4.55 Mbp.

Description of *Candidatus* Superficieibacter timefax sp. nov.

Candidatus Superficieibacter timefax (NL. fem. n. *timefax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Superficieibacter sp900766525*. The type genome for the species is the GenBank assembly RS_GCF_900766525.1. The GC content of the type genome is 53.81 % and the genome length is 5.08 Mbp.

Description of *Candidatus* Susicana cilicousia sp. nov.

Candidatus Susicana cilicousia (NL. fem. n. *cilicousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *QNBT01 sp013349435*. The type genome for the species is the GenBank assembly GCA_013349435.1. The GC content of the type genome is 48.44 % and the genome length is 3.14 Mbp.

Description of *Candidatus* Susicana gen. nov.

Candidatus Susicana (NL. fem. n. *Susicana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *QNBT01*. The type species for the genus is *Candidatus* Susicana cilicousia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Susicana cohurisca sp. nov.

Candidatus Susicana cohurisca (NL. fem. n. *cohurisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *QNBT01 sp003644205*. The type genome for the species is the GenBank assembly GCA_003644205.1. The GC content of the type genome is 48.7 % and the genome length is 2.64 Mbp.

Description of *Candidatus* Susicaria cerebimonia sp. nov.

Candidatus Susicaria cerebimonia (NL. fem. n. *cerebimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *O2-02-FULL-48-8 sp001777575*. The type genome for the species is the GenBank assembly GCA_001777815.1. The GC content of the type genome is 48.22 % and the genome length is 0.65 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under low O2 conditions; 0.2 micron filter; full assembly".

Description of *Candidatus* Susicaria gen. nov.

Candidatus Susicaria (NL. fem. n. *Susicaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *O2-02-FULL-48-8*. The type species for the genus is *Candidatus* Susicaria cerebimonia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *O2-02-FULL-48-8*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Susicariaceae.

Description of *Candidatus* Susicariaceae fam. nov.

Candidatus Susicariaceae (NL. fem. n. *Susicariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *O2-02-FULL-48-8.* The type genus for the taxon is *Candidatus* Susicaria .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA920*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Denicosales.

Description of *Candidatus* Susicella insicicella sp. nov.

Candidatus Susicella insicicella (NL. fem. n. *insicicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5829 sp002431715*. The type genome for the species is the GenBank assembly GCA_002431715.1. The GC content of the type genome is 49.08 % and the genome length is 3.29 Mbp.

Description of *Candidatus* Susicella gen. nov.

Candidatus Susicella (NL. fem. n. *Susicella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA5829*. The type species for the genus is *Candidatus* Susicella insicicella .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA5829*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Susicellaceae.

Description of *Candidatus* Susicellaceae fam. nov.

Candidatus Susicellaceae (NL. fem. n. *Susicellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA5829.* The type genus for the taxon is *Candidatus* Susicella .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA5829*. According to the renamed version of GTDB R06-RS202, this taxon belongs to

the order *Candidatus* Susicellales.

Description of *Candidatus* Susicellales ord. nov.

Candidatus Susicellales (NL. fem. n. *Susicellales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA5829.* The type genus for the taxon is *Candidatus* Susicella .

According to the original version of GTDB R06-RS202, this family belongs to the class *UBA5829*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Susicellae.

Description of *Candidatus* Susicellae class. nov.

Candidatus Susicellae (NL. fem. n. *c__Susicellae* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA5829.* The type genus for the taxon is *Candidatus* Susicella .

According to GTDB R06-RS202, this class belongs to the phylum *Armatimonadota*.

Description of *Candidatus* Susicia reforedo sp. nov.

Candidatus Susicia reforedo (NL. fem. n. *reforedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *QFOP01 sp003248785*. The type genome for the species is the GenBank assembly GCA_003248785.1. The GC content of the type genome is 65.72 % and the genome length is 2.76 Mbp.

Description of *Candidatus* Susicia gen. nov.

Candidatus Susicia (NL. fem. n. *Susicia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *QFOP01*. The type species for the genus is *Candidatus* Susicia reforedo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Susicida agratitrix sp. nov.

Candidatus Susicida agratitrix (NL. fem. n. *agratitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RGZB01 sp010031735*. The type genome for the species is the GenBank assembly GCA_010031735.1. The GC content of the type genome is 53.07 % and the genome length is 2.38 Mbp.

Description of *Candidatus* Susicida gen. nov.

Candidatus Susicida (NL. fem. n. *Susicida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RGZB01*. The type species for the genus is *Candidatus* Susicida agratitrix .

According to the original version of GTDB R06-RS202, this genus belongs to the family *RGZB01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Susicidaceae.

Description of *Candidatus* Susicidaceae fam. nov.

Candidatus Susicidaceae (NL. fem. n. *Susicidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *RGZB01.* The type genus for the taxon is *Candidatus* Susicida .

According to GTDB R06-RS202, this family belongs to the order *Rickettsiales*.

Description of *Candidatus* Susicosa troclatica sp. nov.

Candidatus Susicosa troclatica (NL. fem. n. *troclatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CADEER01 sp902826395*. The type genome for the species is the GenBank assembly GCA_902826395.1. The GC content of the type genome is 66.22 % and the genome length is 6.09 Mbp.

Description of *Candidatus* Susicosa gen. nov.

Candidatus Susicosa (NL. fem. n. *Susicosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CADEER01*. The type species for the genus is *Candidatus* Susicosa troclatica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CADEER01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Susicosaceae.

Description of *Candidatus* Susicosaceae fam. nov.

Candidatus Susicosaceae (NL. fem. n. *Susicosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CADEER01*. The type genus for the taxon is *Candidatus* Susicosa .

According to the original version of GTDB R06-RS202, this family belongs to the order *HRBIN30*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Repecosales.

Description of *Candidatus* Susicula conubifica sp. nov.

Candidatus Susicula conubifica (NL. fem. n. *conubifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-12-FULL-67-15 sp001830475*. The type genome for the species is the GenBank assembly GCA_001830475.1. The GC content of the type genome is 66.65 % and the genome length is 2.15 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under low O2 conditions; 1.2 micron filter; full assembly".

Description of *Candidatus* Susicula gen. nov.

Candidatus Susicula (NL. fem. n. *Susicula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *2-12-FULL-67-15*. The type species for the genus is *Candidatus* Susicula conubifica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *2-12-FULL-67-15*. According to the renamed version of GTDB R06-RS202, this taxon

belongs to the family *Candidatus* Susiculaceae.

Description of *Candidatus* Susiculaceae fam. nov.

Candidatus Susiculaceae (NL. fem. n. *Susiculaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *2-12-FULL-67-15.* The type genus for the taxon is *Candidatus* Susicula .

According to GTDB R06-RS202, this family belongs to the order *Rhodospirillales*.

Description of *Candidatus* Susicula nutabitura sp. nov.

Candidatus Susicula nutabitura (NL. fem. n. *nutabitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-12-FULL-67-15 sp009693905*. The type genome for the species is the GenBank assembly GCA_009691085.1. The GC content of the type genome is 66.57 % and the genome length is 1.65 Mbp.

Description of *Candidatus* Sutcliffiella cenodessa sp. nov.

Candidatus Sutcliffiella cenodessa (NL. fem. n. *cenodessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sutcliffiella sp001293645*. The type genome for the species is the GenBank assembly RS_GCF_001293645.1. The GC content of the type genome is 39.94 % and the genome length is 3.97 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "sea water".

Description of *Candidatus* Sutcliffiella innuliforma sp. nov.

Candidatus Sutcliffiella innuliforma (NL. fem. n. *innuliforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sutcliffiella sp012524115*. The type genome for the species is the GenBank assembly RS_GCF_012524115.1. The GC content of the type genome is 40.31 % and the genome length is 4.22 Mbp.

Description of *Candidatus* Sutcliffiella oblonitura sp. nov.

Candidatus Sutcliffiella oblonitura (NL. fem. n. *oblonitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sutcliffiella sp012911845*. The type genome for the species is the GenBank assembly RS_GCF_012911845.1. The GC content of the type genome is 40.23 % and the genome length is 4.15 Mbp.

Description of *Candidatus* Sutcliffiella oratrastra sp. nov.

Candidatus Sutcliffiella oratrastra (NL. fem. n. *oratrastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sutcliffiella sp009363695*. The type genome for the species is the GenBank assembly RS_GCF_009363695.1. The GC content of the type genome is 39.75 % and the genome length is 4.09 Mbp.

Description of *Candidatus* Sutcliffiella semigibra sp. nov.

Candidatus Sutcliffiella semigibra (NL. fem. n. *semigibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sutcliffiella sp002335755*. The type genome for the species is the GenBank assembly RS_GCF_002335755.1. The GC content of the type genome is 36.14 % and the genome length is 3.9 Mbp.

Description of *Candidatus* Sutterella absorousia sp. nov.

Candidatus Sutterella absorousia (NL. fem. n. *absorousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sutterella sp900764215*. The type genome for the species is the GenBank assembly GCA_900764215.1. The GC content of the type genome is 61.0 % and the genome length is 2.73 Mbp.

Description of *Candidatus* Sutterella acertedo sp. nov.

Candidatus Sutterella acertedo (NL. fem. n. *acertedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sutterella sp900754475*. The type genome for the species is the GenBank assembly GCA_900754475.1. The GC content of the type genome is 63.36 % and the genome length is 2.41 Mbp.

Description of *Candidatus* Sutterella annicigena sp. nov.

Candidatus Sutterella annicigena (NL. fem. n. *annicigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sutterella sp900757865*. The type genome for the species is the GenBank assembly GCA_900757865.1. The GC content of the type genome is 50.66 % and the genome length is 2.06 Mbp.

Description of *Candidatus* Sutterella artopugo sp. nov.

Candidatus Sutterella artopugo (NL. fem. n. *artopugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sutterella sp900545275*. The type genome for the species is the GenBank assembly GCA_900545275.1. The GC content of the type genome is 61.28 % and the genome length is 2.49 Mbp.

Description of *Candidatus* Sutterella exsurigena sp. nov.

Candidatus Sutterella exsurigena (NL. fem. n. *exsurigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sutterella sp900762445*. The type genome for the species is the GenBank assembly GCA_900762445.1. The GC content of the type genome is 49.5 % and the genome length is 2.16 Mbp.

Description of *Candidatus* Sutterella feculitica sp. nov.

Candidatus Sutterella feculitica (NL. fem. n. *feculitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Sutterella sp900770335*. The type genome for the species is the GenBank assembly GCA_900770335.1. The GC content of the type genome is 67.64 % and the genome length is 2.17 Mbp.

Description of *Candidatus* Sutterella retecitas sp. nov.

Candidatus Sutterella retecitas (NL. fem. n. *retecitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Sutterella sp900543805*. The type genome for the species is the GenBank assembly GCA_900754925.1. The GC content of the type genome is 61.81 % and the genome length is 2.18 Mbp.

Description of *Candidatus* Symbiobacterium monopitia sp. nov.

Candidatus Symbiobacterium monopitia (NL. fem. n. *monopitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Symbiobacterium sp003242675*. The type genome for the species is the GenBank assembly GCA_003242675.1. The GC content of the type genome is 69.99 % and the genome length is 2.89 Mbp.

Description of *Candidatus* Synechococcus demadisca sp. nov.

Candidatus Synechococcus demadisca (NL. fem. n. *demadisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Synechococcus_B sp007571085*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_007571085.1. The GC content of the type genome is 57.28 % and the genome length is 1.68 Mbp.

Description of *Candidatus* Synechococcus pedepitrix sp. nov.

Candidatus Synechococcus pedepitrix (NL. fem. n. *pedepitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Synechococcus_B sp009840445*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into

a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_009844725.1. The GC content of the type genome is 62.23 % and the genome length is 1.81 Mbp.

Description of *Candidatus* Synechococcus tomacatica sp. nov.

Candidatus Synechococcus tomacatica (NL. fem. n. *tomacatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Synechococcus_B sp009836025*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_009843455.1. The GC content of the type genome is 61.67 % and the genome length is 2.24 Mbp.

Description of *Candidatus* Synechococcus adsifastra sp. nov.

Candidatus Synechococcus adsifastra (NL. fem. n. *adsifastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Synechococcus_C sp900474295*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_900474295.1. The GC content of the type genome is 57.8 % and the genome length is 2.7 Mbp.

Description of *Candidatus* Synechococcus aminnimonia sp. nov.

Candidatus Synechococcus aminnimonia (NL. fem. n. *aminnimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Synechococcus_C sp011523835*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_011523835.1. The GC content of the type genome is 58.71 % and the genome length is 2.14 Mbp.

Description of *Candidatus* Synechococcus bigematica sp. nov.

Candidatus Synechococcus bigematica (NL. fem. n. *bigematica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Synechococcus_C sp001632165*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003210935.1. The GC content of the type genome is 56.4 % and the genome length is 1.6 Mbp.

Description of *Candidatus* Synechococcus bonitiforma sp. nov.

Candidatus Synechococcus bonitiforma (NL. fem. n. *bonitiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Synechococcus_C sp002687115*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_002687115.1. The GC content of the type genome is 55.49 % and the genome length is 2.19 Mbp.

Description of *Candidatus* Synechococcus catiligena sp. nov.

Candidatus Synechococcus catiligena (NL. fem. n. *catiligena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Synechococcus_C sp003210315*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003210315.1. The GC content of the type genome is 52.21 % and the genome length is 1.58 Mbp.

Description of *Candidatus* Synechococcus daducitica sp. nov.

Candidatus Synechococcus daducitica (NL. fem. n. *daducitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Synechococcus_C sp002171995*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_002698505.1. The GC content of the type genome is 58.87 % and the genome length is 2.21 Mbp.

Description of *Candidatus* Synechococcus defunatica sp. nov.

Candidatus Synechococcus defunatica (NL. fem. n. *defunatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Synechococcus_C sp014279795*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_014279795.1. The GC content of the type genome is 59.27 % and the genome length is 2.57 Mbp.

Description of *Candidatus* Synechococcus detosibula sp. nov.

Candidatus Synechococcus detosibula (NL. fem. n. *detosibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Synechococcus_C sp002500205*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003208775.1. The GC content of the type genome is 52.91 % and the genome length is 1.56 Mbp.

Description of *Candidatus* Synechococcus domipitio sp. nov.

Candidatus Synechococcus domipitio (NL. fem. n. *domipitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Synechococcus_C sp002172935*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_002172935.1. The GC content of the type genome is 59.8 % and the genome length is 1.78 Mbp.

Description of *Candidatus* Synechococcus eviscastra sp. nov.

Candidatus Synechococcus eviscastra (NL. fem. n. *eviscastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Synechococcus_C sp000153825*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_000153825.1. The GC content of the type genome is 59.81 % and the genome length is 2.66 Mbp.

Description of *Candidatus* Synechococcus genufivita sp. nov.

Candidatus Synechococcus genufivita (NL. fem. n. *genufivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Synechococcus_C sp000014585*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_000014585.1. The GC content of the type genome is 52.45 % and the genome length is 2.61 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "edge of California current after nitrate enrichment and low light incubation".

Description of *Candidatus* Synechococcus haricimonia sp. nov.

Candidatus Synechococcus haricimonia (NL. fem. n. *haricimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Synechococcus_C sp001631935*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_001631935.1. The GC content of the type genome is 55.42 % and the genome length is 3.09 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "ocean water".

Description of *Candidatus* Synechococcus ignipitrix sp. nov.

Candidatus Synechococcus ignipitrix (NL. fem. n. *ignipitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Synechococcus_C sp001040845*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into

a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_001040845.1. The GC content of the type genome is 53.14 % and the genome length is 2.66 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "water sample".

Description of *Candidatus* Synechococcus infisitia sp. nov.

Candidatus Synechococcus infisitia (NL. fem. n. *infisitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Synechococcus_C sp003211205*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003211205.1. The GC content of the type genome is 55.94 % and the genome length is 2.0 Mbp.

Description of *Candidatus* Synechococcus levidax sp. nov.

Candidatus Synechococcus levidax (NL. fem. n. *levidax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Synechococcus_C sp000230675*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_014279655.1. The GC content of the type genome is 53.96 % and the genome length is 2.88 Mbp.

Description of *Candidatus* Synechococcus levifitudo sp. nov.

Candidatus Synechococcus levifitudo (NL. fem. n. *levifitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Synechococcus_C sp000153065*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_000153065.1. The GC content of the type genome is 64.46 % and the genome length is 2.58 Mbp.

Description of *Candidatus* Synechococcus lucelisca sp. nov.

Candidatus Synechococcus lucelisca (NL. fem. n. *lucelisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Synechococcus_C sp014279815*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_014279815.1. The GC content of the type genome is 58.82 % and the genome length is 2.55 Mbp.

Description of *Candidatus* Synechococcus malagisca sp. nov.

Candidatus Synechococcus malagisca (NL. fem. n. *malagisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Synechococcus_C sp003209155*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003209155.1. The GC content of the type genome is 56.36 % and the genome length is 1.97 Mbp.

Description of *Candidatus* Synechococcus nutabitas sp. nov.

Candidatus Synechococcus nutabitas (NL. fem. n. *nutabitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Synechococcus_C sp014279835*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_009937125.1. The GC content of the type genome is 54.86 % and the genome length is 1.87 Mbp.

Description of *Candidatus* Synechococcus octopiforma sp. nov.

Candidatus Synechococcus octopiforma (NL. fem. n. *octopiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Synechococcus_C sp003210555*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003210555.1. The GC content of the type genome is 52.7 % and the genome length is 1.54 Mbp.

Description of *Candidatus* Synechococcus podagastra sp. nov.

Candidatus Synechococcus podagastra (NL. fem. n. *podagastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Synechococcus_C sp000063505*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_014279955.1. The GC content of the type genome is 60.36 % and the genome length is 2.6 Mbp.

Description of *Candidatus* Synechococcus refocitoga sp. nov.

Candidatus Synechococcus refocitoga (NL. fem. n. *refocitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Synechococcus_C sp000153285*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_000153285.1. The GC content of the type genome is 57.63 % and the genome length is 2.63 Mbp.

Description of *Candidatus* Synechococcus refulimonia sp. nov.

Candidatus Synechococcus refulimonia (NL. fem. n. *refulimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Synechococcus_C sp014279975*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_014279975.1. The GC content of the type genome is 54.98 % and the genome length is 2.71 Mbp.

Description of *Candidatus* Synechococcus regigilenta sp. nov.

Candidatus Synechococcus regigilenta (NL. fem. n. *regigilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Synechococcus_C sp002693285*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_014280095.1. The GC content of the type genome is 58.22 % and the genome length is 2.54 Mbp.

Description of *Candidatus* Synechococcus resuretta sp. nov.

Candidatus Synechococcus resuretta (NL. fem. n. *resuretta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Synechococcus_C sp900473965*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_900473965.1. The GC content of the type genome is 54.5 % and the genome length is 3.06 Mbp.

Description of *Candidatus* Synechococcus rubigimonas sp. nov.

Candidatus Synechococcus rubigimonas (NL. fem. n. *rubigimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Synechococcus_C sp011523155*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_011523155.1. The GC content of the type genome is 62.43 % and the genome length is 1.67 Mbp.

Description of *Candidatus* Synechococcus rutabentia sp. nov.

Candidatus Synechococcus rutabentia (NL. fem. n. *rutabentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Synechococcus_C sp011525445*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_011525445.1. The GC content of the type genome is 52.42 % and the genome length is 2.77 Mbp.

Description of *Candidatus* Synechococcus satacigena sp. nov.

Candidatus Synechococcus satacigena (NL. fem. n. *satacigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Synechococcus_C sp004209775*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_014304795.1. The GC content of the type genome is 63.35 % and the genome length is 2.62 Mbp.

Description of *Candidatus* Synechococcus semibago sp. nov.

Candidatus Synechococcus semibago (NL. fem. n. *semibago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Synechococcus_C sp003210755*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_002702445.1. The GC content of the type genome is 52.33 % and the genome length is 1.61 Mbp.

Description of *Candidatus* Synechococcus semivibra sp. nov.

Candidatus Synechococcus semivibra (NL. fem. n. *semivibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Synechococcus_C sp004332415*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_004332415.1. The GC content of the type genome is 61.61 % and the genome length is 2.24 Mbp.

Description of *Candidatus* Synechococcus sotulitio sp. nov.

Candidatus Synechococcus sotulitio (NL. fem. n. *sotulitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Synechococcus_C sp003210775*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003210775.1. The GC content of the type genome is 54.62 % and the genome length is 2.28 Mbp.

Description of *Candidatus* Synechococcus holisatio sp. nov.

Candidatus Synechococcus holisatio (NL. fem. n. *holisatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Synechococcus_D sp009914645*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_009914645.1. The GC content of the type genome is 49.85 % and the genome length is 1.47 Mbp.

Description of *Candidatus* Synechococcus acrifatica sp. nov.

Candidatus Synechococcus acrifatica (NL. fem. n. *acrifatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Synechococcus_E sp003211535*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003211535.1. The GC content of the type genome is 57.39 % and the genome length is 2.01 Mbp.

Description of *Candidatus* Synechococcus adperilenta sp. nov.

Candidatus Synechococcus adperilenta (NL. fem. n. *adperilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Synechococcus_E sp002690325*. Although GTDB has assigned a

genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_002690325.1. The GC content of the type genome is 55.94 % and the genome length is 2.26 Mbp.

Description of *Candidatus* Synechococcus adrecatio sp. nov.

Candidatus Synechococcus adrecatio (NL. fem. n. *adrecatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Synechococcus_E sp014280195*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_014280195.1. The GC content of the type genome is 59.64 % and the genome length is 2.31 Mbp.

Description of *Candidatus* Synechococcus adrenitura sp. nov.

Candidatus Synechococcus adrenitura (NL. fem. n. *adrenitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Synechococcus_E sp003211235*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003211235.1. The GC content of the type genome is 55.65 % and the genome length is 1.4 Mbp.

Description of *Candidatus* Synechococcus agripiforma sp. nov.

Candidatus Synechococcus agripiforma (NL. fem. n. *agripiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Synechococcus_E sp003209165*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003209165.1. The GC content of the type genome is 56.91 % and the genome length is 2.27 Mbp.

Description of *Candidatus* Synechococcus bonitibula sp. nov.

Candidatus Synechococcus bonitibula (NL. fem. n. *bonitibula* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Synechococcus_E sp002724845*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_001628325.1. The GC content of the type genome is 62.76 % and the genome length is 1.78 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Red Sea water column Station 12 - depth 25m".

Description of *Candidatus* Synechococcus calipifica sp. nov.

Candidatus Synechococcus calipifica (NL. fem. n. *calipifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Synechococcus_E sp002700765*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_002169615.1. The GC content of the type genome is 57.7 % and the genome length is 1.35 Mbp.

Description of *Candidatus* Synechococcus capilago sp. nov.

Candidatus Synechococcus capilago (NL. fem. n. *capilago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Synechococcus_E sp000195975*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003712085.1. The GC content of the type genome is 59.31 % and the genome length is 2.46 Mbp.

Description of *Candidatus* Synechococcus catapitas sp. nov.

Candidatus Synechococcus catapitas (NL. fem. n. *catapitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Synechococcus_E sp000515235*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into

a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_002167425.2. The GC content of the type genome is 56.52 % and the genome length is 2.6 Mbp.

Description of *Candidatus* Synechococcus cibarilega sp. nov.

Candidatus Synechococcus cibarilega (NL. fem. n. *cibarilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Synechococcus_E sp000737575*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_002470335.1. The GC content of the type genome is 64.05 % and the genome length is 1.14 Mbp.

Description of *Candidatus* Synechococcus cohonetta sp. nov.

Candidatus Synechococcus cohonetta (NL. fem. n. *cohonetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Synechococcus_E sp000012625*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_000012625.1. The GC content of the type genome is 59.22 % and the genome length is 2.51 Mbp.

Description of *Candidatus* Synechococcus depupicella sp. nov.

Candidatus Synechococcus depupicella (NL. fem. n. *depupicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Synechococcus_E sp002170825*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_002170825.1. The GC content of the type genome is 60.52 % and the genome length is 1.35 Mbp.

Description of *Candidatus* Synechococcus desacitura sp. nov.

Candidatus Synechococcus desacitura (NL. fem. n. *desacitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Synechococcus_E sp000737595*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_000737595.1. The GC content of the type genome is 59.09 % and the genome length is 2.57 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "seawater".

Description of *Candidatus* Synechococcus desurimonas sp. nov.

Candidatus Synechococcus desurimonas (NL. fem. n. *desurimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Synechococcus_E sp000153805*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_000153805.1. The GC content of the type genome is 54.24 % and the genome length is 2.29 Mbp.

Description of *Candidatus* Synechococcus detenisca sp. nov.

Candidatus Synechococcus detenisca (NL. fem. n. *detenisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Synechococcus_E sp002701375*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_002701375.1. The GC content of the type genome is 51.2 % and the genome length is 3.0 Mbp.

Description of *Candidatus* Synechococcus dupunago sp. nov.

Candidatus Synechococcus dupunago (NL. fem. n. *dupunago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Synechococcus_E sp003211515*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into

a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003211515.1. The GC content of the type genome is 52.72 % and the genome length is 2.25 Mbp.

Description of *Candidatus* Synechococcus epicribula sp. nov.

Candidatus Synechococcus epicribula (NL. fem. n. *epicribula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Synechococcus_E sp003210795*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003210795.1. The GC content of the type genome is 56.23 % and the genome length is 1.88 Mbp.

Description of *Candidatus* Synechococcus exaggicula sp. nov.

Candidatus Synechococcus exaggicula (NL. fem. n. *exaggicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Synechococcus_E sp002684175*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_002684175.1. The GC content of the type genome is 55.62 % and the genome length is 1.63 Mbp.

Description of *Candidatus* Synechococcus feculousia sp. nov.

Candidatus Synechococcus feculousia (NL. fem. n. *feculousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Synechococcus_E sp003210735*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003210735.1. The GC content of the type genome is 56.06 % and the genome length is 2.06 Mbp.

Description of *Candidatus* Synechococcus laxitibula sp. nov.

Candidatus Synechococcus laxitibula (NL. fem. n. *laxitibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Synechococcus_E sp004212765*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_004212765.1. The GC content of the type genome is 61.87 % and the genome length is 0.99 Mbp.

Description of *Candidatus* Synechococcus manomicella sp. nov.

Candidatus Synechococcus manomicella (NL. fem. n. *manomicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Synechococcus_E sp000012505*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_000012505.1. The GC content of the type genome is 54.16 % and the genome length is 2.23 Mbp.

Description of *Candidatus* Synechococcus nefaritoga sp. nov.

Candidatus Synechococcus nefaritoga (NL. fem. n. *nefaritoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Synechococcus_E sp014279755*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_014279755.1. The GC content of the type genome is 58.38 % and the genome length is 2.58 Mbp.

Description of *Candidatus* Synechococcus nucifastra sp. nov.

Candidatus Synechococcus nucifastra (NL. fem. n. *nucifastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Synechococcus_E sp002691345*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_002172015.1.

The GC content of the type genome is 59.41 % and the genome length is 1.35 Mbp.

Description of *Candidatus* Synechococcus pedifentia sp. nov.

Candidatus Synechococcus pedifentia (NL. fem. n. *pedifentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Synechococcus_E sp003208835*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003208835.1. The GC content of the type genome is 52.93 % and the genome length is 1.91 Mbp.

Description of *Candidatus* Synechococcus rinocigena sp. nov.

Candidatus Synechococcus rinocigena (NL. fem. n. *rinocigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Synechococcus_E sp000737535*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_000737535.1. The GC content of the type genome is 57.5 % and the genome length is 2.79 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "seawater".

Description of *Candidatus* Synechococcus rosacitudo sp. nov.

Candidatus Synechococcus rosacitudo (NL. fem. n. *rosacitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Synechococcus_E sp900474185*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_011365345.1. The GC content of the type genome is 58.24 % and the genome length is 2.38 Mbp.

Description of *Candidatus* Synechococcus semunilega sp. nov.

Candidatus Synechococcus semunilega (NL. fem. n. *semunilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Synechococcus_E sp013911515*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_013911515.1. The GC content of the type genome is 61.4 % and the genome length is 1.72 Mbp.

Description of *Candidatus* Synechococcus utrinimonas sp. nov.

Candidatus Synechococcus utrinimonas (NL. fem. n. *utrinimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Synechococcus_E sp000161795*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_000161795.2. The GC content of the type genome is 60.09 % and the genome length is 2.11 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Sargasso Sea".

Description of *Candidatus* Synechocystis butubifica sp. nov.

Candidatus Synechocystis butubifica (NL. fem. n. *butubifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Synechocystis sp000284455*. The type genome for the species is the GenBank assembly RS_GCF_000284215.1. The GC content of the type genome is 47.74 % and the genome length is 3.57 Mbp.

Description of *Candidatus* Synechocystis sanabilega sp. nov.

Candidatus Synechocystis sanabilega (NL. fem. n. *sanabilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Synechocystis sp000478825*. The type genome for the species is the GenBank assembly RS_GCF_000478825.2. The GC content of the type genome is 47.55 % and the genome length is 3.74 Mbp.

Description of *Candidatus* Syntrophaceticus algebitura sp. nov.

Candidatus Syntrophaceticus algebitura (NL. fem. n. *algebitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Syntrophaceticus sp002397275*. The type genome for the species is the GenBank assembly GCA_002397275.1. The GC content of the type genome is 50.71 % and the genome length is 2.85 Mbp.

Description of *Candidatus* Syntrophaceticus anactousia sp. nov.

Candidatus Syntrophaceticus anactousia (NL. fem. n. *anactousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Syntrophaceticus sp002426495*. The type genome for the species is the GenBank assembly GCA_002426495.1. The GC content of the type genome is 45.38 % and the genome length is 2.3 Mbp.

Description of *Candidatus* Syntrophaceticus loripousia sp. nov.

Candidatus Syntrophaceticus loripousia (NL. fem. n. *loripousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Syntrophaceticus sp012839645*. The type genome for the species is the GenBank assembly GCA_012839645.1. The GC content of the type genome is 46.2 % and the genome length is 2.19 Mbp.

Description of *Candidatus* Syntrophomonas inlepilenta sp. nov.

Candidatus Syntrophomonas inlepilenta (NL. fem. n. *inlepilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Syntrophomonas_A sp012729835*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_012729835.1. The GC content of the type genome is 47.6 % and the genome length is 3.13 Mbp.

Description of *Candidatus* Syntrophomonas epitricella sp. nov.

Candidatus Syntrophomonas epitricella (NL. fem. n. *epitricella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Syntrophomonas_B sp012729495*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_012729495.1. The GC content of the type genome is 45.53 % and the genome length is 2.94 Mbp.

Description of *Candidatus* Syntrophorhabdus conarousia sp. nov.

Candidatus Syntrophorhabdus conarousia (NL. fem. n. *conarousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Syntrophorhabdus sp002067475*. The type genome for the species is the GenBank assembly GCA_002067475.1. The GC content of the type genome is 50.97 % and the genome length is 3.91 Mbp.

Description of *Candidatus* Syntrophorhabdus pinacitas sp. nov.

Candidatus Syntrophorhabdus pinacitas (NL. fem. n. *pinacitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Syntrophorhabdus sp002067585*. The type genome for the species is the GenBank assembly GCA_002070575.1. The GC content of the type genome is 43.94 % and the genome length is 4.21 Mbp.

Description of *Candidatus* Syntrophorhabdus vigenigena sp. nov.

Candidatus Syntrophorhabdus vigenigena (NL. fem. n. *vigenigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Syntrophorhabdus sp002067165*. The type genome for the species is the GenBank assembly GCA_002067415.1. The GC content of the type genome is 50.47 % and the genome length is 3.23 Mbp.

Description of *Candidatus* Syntrophosphaera admulisca sp. nov.

Candidatus Syntrophosphaera admulisca (NL. fem. n. *admulisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Syntrophosphaera sp012522635*. The type genome for the species is the GenBank assembly GCA_012522635.1. The GC content of the type genome is 49.78 % and the genome length is 1.84 Mbp.

Description of *Candidatus* Syntrophosphaera carucentia sp. nov.

Candidatus Syntrophosphaera carucentia (NL. fem. n. *carucentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Syntrophosphaera sp002376725*. The type genome for the species is the GenBank assembly GCA_002376725.1. The GC content of the type genome is 36.03 % and the genome length is 1.86 Mbp.

Description of *Candidatus* Syntrophosphaera holovilenta sp. nov.

Candidatus Syntrophosphaera holovilenta (NL. fem. n. *holovilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Syntrophosphaera sp012516855*. The type genome for the species is the GenBank assembly GCA_012516855.1. The GC content of the type genome is 54.01 % and the genome length is 2.25 Mbp.

Description of *Candidatus* Syntrophosphaera nocenimonia sp. nov.

Candidatus Syntrophosphaera nocenimonia (NL. fem. n. *nocenimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Syntrophosphaera sp012728875*. The type genome for the species is the GenBank assembly GCA_012728875.1. The GC content of the type genome is 50.51 % and the genome length is 2.17 Mbp.

Description of *Candidatus* Syntrophosphaera nubecousia sp. nov.

Candidatus Syntrophosphaera nubecousia (NL. fem. n. *nubecousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Syntrophosphaera sp002070045*. The type genome for the species is the GenBank assembly GCA_002070045.1. The GC content of the type genome is 36.3

% and the genome length is 1.4 Mbp.

Description of *Candidatus* Syntrophotalea adcucilenta sp. nov.

Candidatus Syntrophotalea adcucilenta (NL. fem. n. *adcucilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Syntrophotalea sp002435955*. The type genome for the species is the GenBank assembly GCA_002435955.1. The GC content of the type genome is 56.15 % and the genome length is 3.39 Mbp.

Description of *Candidatus* Syntrophotalea bicoritura sp. nov.

Candidatus Syntrophotalea bicoritura (NL. fem. n. *bicoritura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Syntrophotalea sp002452265*. The type genome for the species is the GenBank assembly GCA_002452265.1. The GC content of the type genome is 52.83 % and the genome length is 3.02 Mbp.

Description of *Candidatus* Syntrophotalea tomogilega sp. nov.

Candidatus Syntrophotalea tomogilega (NL. fem. n. *tomogilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Syntrophotalea sp002424645*. The type genome for the species is the GenBank assembly GCA_002424645.1. The GC content of the type genome is 53.45 % and the genome length is 2.7 Mbp.

Description of *Candidatus* Syntrophus casabivita sp. nov.

Candidatus Syntrophus casabivita (NL. fem. n. *casabivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Syntrophus sp002067745*. The type genome for the species is the GenBank assembly GCA_002067745.1. The GC content of the type genome is 55.11 % and the genome length is 2.9 Mbp.

Description of *Candidatus* Syntrophus vehicitura sp. nov.

Candidatus Syntrophus vehicitura (NL. fem. n. *vehicitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Syntrophus sp002067815*. The type genome for the species is the GenBank assembly GCA_002067815.1. The GC content of the type genome is 48.91 % and the genome length is 2.84 Mbp.

Description of *Candidatus* TOLSYN celumitio sp. nov.

Candidatus TOLSYN celumitio (NL. fem. n. *celumitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *TOLSYN sp903851035*. The type genome for the species is the GenBank assembly GCA_903912655.1. The GC content of the type genome is 61.2 % and the genome length is 3.26 Mbp.

Description of *Candidatus* TOLSYN ignifousia sp. nov.

Candidatus TOLSYN ignifousia (NL. fem. n. *ignifousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *TOLSYN sp003010405*. The type genome for the species is the GenBank assembly GCA_003010405.1. The GC content of the type genome is 55.46 % and the genome length is 3.64 Mbp.

Description of *Candidatus* TOLSYN nidifitudo sp. nov.

Candidatus TOLSYN nidifitudo (NL. fem. n. *nidifitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *TOLSYN sp903832295*. The type genome for the species is the GenBank assembly GCA_903832295.1. The GC content of the type genome is 59.29 % and the genome length is 4.87 Mbp.

Description of *Candidatus* Tabifana pedepitio sp. nov.

Candidatus Tabifana pedepitio (NL. fem. n. *pedepitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACMQI01 sp014377045*. The type genome for the species is the GenBank assembly GCA_014377045.1. The GC content of the type genome is 32.05 % and the genome length is 1.04 Mbp.

Description of *Candidatus* Tabifana gen. nov.

Candidatus Tabifana (NL. fem. n. *Tabifana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACMQI01*. The type species for the genus is *Candidatus* Tabifana pedepitio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JACMRA01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Ficedosaceae.

Description of *Candidatus* Tabifaria cibicitrix sp. nov.

Candidatus Tabifaria cibicitrix (NL. fem. n. *cibicitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *J111 sp003694775*. The type genome for the species is the GenBank assembly GCA_003694775.1. The GC content of the type genome is 60.34 % and the genome length is 4.06 Mbp.

Description of *Candidatus* Tabifaria gen. nov.

Candidatus Tabifaria (NL. fem. n. *Tabifaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *J111*. The type species for the genus is *Candidatus* Tabifaria cibicitrix .

According to the original version of GTDB R06-RS202, this genus belongs to the family *J111*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Tabifariaceae.

Description of *Candidatus* Tabifariaceae fam. nov.

Candidatus Tabifariaceae (NL. fem. n. *Tabifariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *J111*. The type genus for the taxon is *Candidatus* Tabifaria .

According to the original version of GTDB R06-RS202, this family belongs to the order *4572-78*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Bovicidales.

Description of *Candidatus* Tabifella peridicella sp. nov.

Candidatus Tabifella peridicella (NL. fem. n. *peridicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GWC2-55-46 sp001595385*. The type genome for the species is the GenBank assembly GCA_001798425.1. The GC content of the type genome is 55.4 % and the genome length is 2.71 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under low O2 conditions; 0.2 micron filter; full assembly".

Description of *Candidatus* Tabifella gen. nov.

Candidatus Tabifella (NL. fem. n. *Tabifella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GWC2-55-46*. The type species for the genus is *Candidatus* Tabifella peridicella .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GWC2-55-46*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Tabifellaceae.

Description of *Candidatus* Tabifellaceae fam. nov.

Candidatus Tabifellaceae (NL. fem. n. *Tabifellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *GWC2-55-46.* The type genus for the taxon is *Candidatus* Tabifella .

According to the original version of GTDB R06-RS202, this family belongs to the order *GWC2-55-46*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Tabifellales.

Description of *Candidatus* Tabifellales ord. nov.

Candidatus Tabifellales (NL. fem. n. *Tabifellales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *GWC2-55-46.* The type genus for the taxon is *Candidatus* Tabifella .

According to the original version of GTDB R06-RS202, this family belongs to the class *GWC2-55-46*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Tabifellae.

Description of *Candidatus* Tabifellae class. nov.

Candidatus Tabifellae (NL. fem. n. *c__Tabifellae* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *GWC2-55-46.* The type genus for the taxon is *Candidatus* Tabifella .

According to GTDB R06-RS202, this class belongs to the phylum *Desulfobacterota_F*.

Description of *Candidatus* Tabifia capabitio sp. nov.

Candidatus Tabifia capabitio (NL. fem. n. *capabitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2135 sp002327685*. The type genome for the species is the GenBank assembly GCA_002688065.1. The GC content of the type genome is 40.48 % and the genome length is 0.78 Mbp.

Description of *Candidatus* Tabifia gen. nov.

Candidatus Tabifia (NL. fem. n. *Tabifia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA2135*. The type species for the genus is *Candidatus* Tabifia capabitio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2135*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Tabifiaceae.

Description of *Candidatus* Tabifiaceae fam. nov.

Candidatus Tabifiaceae (NL. fem. n. *Tabifiaceae* a name created from the name of the

type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA2135.* The type genus for the taxon is *Candidatus* Tabifia .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA9983_A*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Ficedanales.

Description of *Candidatus* Tabifida hemitigena sp. nov.

Candidatus Tabifida hemitigena (NL. fem. n. *hemitigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CADDZV01 sp902812875*. The type genome for the species is the GenBank assembly RS_GCF_902812875.1. The GC content of the type genome is 62.24 % and the genome length is 1.85 Mbp.

Description of *Candidatus* Tabifida gen. nov.

Candidatus Tabifida (NL. fem. n. *Tabifida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CADDZV01*. The type species for the genus is *Candidatus* Tabifida hemitigena .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CADDZV01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Tabifidaceae.

Description of *Candidatus* Tabifidaceae fam. nov.

Candidatus Tabifidaceae (NL. fem. n. *Tabifidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CADDZV01.* The type genus for the taxon is *Candidatus* Tabifida .

According to the original version of GTDB R06-RS202, this family belongs to the order *CADDZV01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Tabifidales.

Description of *Candidatus* Tabifidales ord. nov.

Candidatus Tabifidales (NL. fem. n. *Tabifidales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CADDZV01*. The type genus for the taxon is *Candidatus* Tabifida .

According to the original version of GTDB R06-RS202, this family belongs to the class *DTU015*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Cetariae.

Description of *Candidatus* Tabifosa benifibula sp. nov.

Candidatus Tabifosa benifibula (NL. fem. n. *benifibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACEFB01 sp013694095*. The type genome for the species is the GenBank assembly GCA_011048125.1. The GC content of the type genome is 60.33 % and the genome length is 4.47 Mbp.

Description of *Candidatus* Tabifosa gen. nov.

Candidatus Tabifosa (NL. fem. n. *Tabifosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACEFB01*. The type species for the genus is *Candidatus* Tabifosa benifibula .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Tabifula fefeliforma sp. nov.

Candidatus Tabifula fefeliforma (NL. fem. n. *fefeliforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *XYB2-FULL-38-15 sp001778095*. The type genome for the species is the GenBank assembly GCA_001780335.1. The GC content of the type genome is 38.41 % and the genome length is 0.91 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at 16ft depth; 0.2 micron filter at time point D".

Description of *Candidatus* Tabifula gen. nov.

Candidatus Tabifula (NL. fem. n. *Tabifula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *XYB2-FULL-38-15*. The type species for the genus is *Candidatus* Tabifula fefeliforma .

According to the original version of GTDB R06-RS202, this genus belongs to the family *XYB2-FULL-38-15*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Tabifulaceae.

Description of *Candidatus* Tabifulaceae fam. nov.

Candidatus Tabifulaceae (NL. fem. n. *Tabifulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *XYB2-FULL-38-15.* The type genus for the taxon is *Candidatus* Tabifula .

According to the original version of GTDB R06-RS202, this family belongs to the order *XYB2-FULL-38-15*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Tabifulales.

Description of *Candidatus* Tabifulales ord. nov.

Candidatus Tabifulales (NL. fem. n. *Tabifulales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *XYB2-FULL-38-15.* The type genus for the taxon is *Candidatus* Tabifula .

According to the original version of GTDB R06-RS202, this family belongs to the class *ABY1*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Defunanae.

Description of *Candidatus* Tabitana oppanitica sp. nov.

Candidatus Tabitana oppanitica (NL. fem. n. *oppanitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABWAT01 sp013360915*. The type genome for the species is the GenBank assembly GCA_013360915.1. The GC content of the type genome is 49.91 %

and the genome length is 3.66 Mbp.

Description of *Candidatus* Tabitana gen. nov.

Candidatus Tabitana (NL. fem. n. *Tabitana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABWAT01*. The type species for the genus is *Candidatus* Tabitana oppanitica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JABWAT01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Tabitanaceae.

Description of *Candidatus* Tabitanaceae fam. nov.

Candidatus Tabitanaceae (NL. fem. n. *Tabitanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JABWAT01.* The type genus for the taxon is *Candidatus* Tabitana .

According to the original version of GTDB R06-RS202, this family belongs to the order *JABWAT01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Tabitanales.

Description of *Candidatus* Tabitanales ord. nov.

Candidatus Tabitanales (NL. fem. n. *Tabitanales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JABWAT01.* The type genus for the taxon is *Candidatus* Tabitana .

According to the original version of GTDB R06-RS202, this family belongs to the class *JABWAT01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Tabitanae.

Description of *Candidatus* Tabitanae class. nov.

Candidatus Tabitanae (NL. fem. n. *c__Tabitanae* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JABWAT01.* The type genus for the taxon is *Candidatus* Tabitana .

According to GTDB R06-RS202, this class belongs to the phylum *Bacteroidota*.

Description of *Candidatus* Tabitaria rubigisca sp. nov.

Candidatus Tabitaria rubigisca (NL. fem. n. *rubigisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GWA1-44-25 sp001778635*. The type genome for the species is the GenBank assembly GCA_001778635.1. The GC content of the type genome is 44.32 % and the genome length is 0.83 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 0.2 micron filter; full assembly".

Description of *Candidatus* Tabitaria gen. nov.

Candidatus Tabitaria (NL. fem. n. *Tabitaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GWA1-44-25*. The type species for the genus is *Candidatus* Tabitaria rubigisca .

According to the original version of GTDB R06-RS202, this genus belongs to the family *2-01-FULL-45-33*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Tametellaceae.

Description of *Candidatus* Tabitaria vocamago sp. nov.

Candidatus Tabitaria vocamago (NL. fem. n. *vocamago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GWA1-44-25 sp001780725*. The type genome for the species is the GenBank assembly GCA_001778935.1. The GC content of the type genome is 44.31 % and the genome length is 0.81 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under low O2 conditions; 1.2 micron filter; full assembly".

Description of *Candidatus* Tabitella anamniforma sp. nov.

Candidatus Tabitella anamniforma (NL. fem. n. *anamniforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002050365 sp013696385*. The type genome for the species is the GenBank assembly GCA_013696385.1. The GC content of the type genome is 43.74 % and the genome length is 2.26 Mbp.

Description of *Candidatus* Tabitella gen. nov.

Candidatus Tabitella (NL. fem. n. *Tabitella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-002050365*. The type species for the genus is *Candidatus* Tabitella anamniforma .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Tabitella cicatigena sp. nov.

Candidatus Tabitella cicatigena (NL. fem. n. *cicatigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002050365 sp902805935*. The type genome for the species is the GenBank assembly GCA_902805935.1. The GC content of the type genome is 50.52 % and the genome length is 3.87 Mbp.

Description of *Candidatus* Tabitella denigastra sp. nov.

Candidatus Tabitella denigastra (NL. fem. n. *denigastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002050365 sp002050455*. The type genome for the species is the GenBank assembly GCA_013816965.1. The GC content of the type genome is 44.3 % and the genome length is 3.72 Mbp.

Description of *Candidatus* Tabitella ephemastra sp. nov.

Candidatus Tabitella ephemastra (NL. fem. n. *ephemastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002050365 sp013813755*. The type genome for the species is the

GenBank assembly GCA_013813755.1. The GC content of the type genome is 44.86 % and the genome length is 2.0 Mbp.

Description of *Candidatus* Tabitella epicritia sp. nov.

Candidatus Tabitella epicritia (NL. fem. n. *epicritia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002050365 sp002050355*. The type genome for the species is the GenBank assembly GCA_002050355.1. The GC content of the type genome is 45.7 % and the genome length is 3.65 Mbp.

Description of *Candidatus* Tabitella petuledo sp. nov.

Candidatus Tabitella petuledo (NL. fem. n. *petuledo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002050365 sp002050365*. The type genome for the species is the GenBank assembly GCA_002050365.1. The GC content of the type genome is 45.41 % and the genome length is 4.15 Mbp.

Description of *Candidatus* Tabitia bifarigena sp. nov.

Candidatus Tabitia bifarigena (NL. fem. n. *bifarigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8921 sp003535395*. The type genome for the species is the GenBank assembly GCA_003535395.1. The GC content of the type genome is 52.64 % and the genome length is 1.93 Mbp.

Description of *Candidatus* Tabitia gen. nov.

Candidatus Tabitia (NL. fem. n. *Tabitia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA8921*. The type species for the genus is *Candidatus* Tabitia bifarigena .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA8921*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Tabitiaceae.

Description of *Candidatus* Tabitiaceae fam. nov.

Candidatus Tabitiaceae (NL. fem. n. *Tabitiaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA8921.* The type genus for the taxon is *Candidatus* Tabitia .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA8921*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Tabitiales.

Description of *Candidatus* Tabitiales ord. nov.

Candidatus Tabitiales (NL. fem. n. *Tabitiales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA8921.* The type genus for the taxon is *Candidatus* Tabitia .

According to the GTDB R06-RS202, this order belongs to the class *Clostridia*.

Description of *Candidatus* Tabitida favililega sp. nov.

Candidatus Tabitida favililega (NL. fem. n. *favililega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8199 sp003527065*. The type genome for the species is the GenBank assembly GCA_002071015.1. The GC content of the type genome is 63.74 % and the genome length is 3.85 Mbp.

Description of *Candidatus* Tabitida gen. nov.

Candidatus Tabitida (NL. fem. n. *Tabitida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA8199*. The type species for the genus is *Candidatus* Tabitida favililega .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA8199*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Tabitidaceae.

Description of *Candidatus* Tabitidaceae fam. nov.

Candidatus Tabitidaceae (NL. fem. n. *Tabitidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA8199.* The type genus for the taxon is *Candidatus* Tabitida .

According to GTDB R06-RS202, this family belongs to the order *Pedosphaerales*.

Description of *Candidatus* Tabitosa domabitas sp. nov.

Candidatus Tabitosa domabitas (NL. fem. n. *domabitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA12463 sp011355115*. The type genome for the species is the GenBank assembly GCA_011355115.1. The GC content of the type genome is 37.78 % and the genome length is 0.84 Mbp.

Description of *Candidatus* Tabitosa gen. nov.

Candidatus Tabitosa (NL. fem. n. *Tabitosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA12463*. The type species for the genus is *Candidatus* Tabitosa domabitas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA12463*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Tabitosaceae.

Description of *Candidatus* Tabitosaceae fam. nov.

Candidatus Tabitosaceae (NL. fem. n. *Tabitosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA12463.* The type genus for the taxon is *Candidatus* Tabitosa .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA1369*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Malogiales.

Description of *Candidatus* Tabitosa ludifago sp. nov.

Candidatus Tabitosa ludifago (NL. fem. n. *ludifago* a species epithet created arbitrarily,

while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA12463 sp000993595*. The type genome for the species is the GenBank assembly GCA_000993595.1. The GC content of the type genome is 38.47 % and the genome length is 1.32 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "aquifer sediment".

Description of *Candidatus* Tabitosa ludifessa sp. nov.

Candidatus Tabitosa ludifessa (NL. fem. n. *ludifessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA12463 sp000992695*. The type genome for the species is the GenBank assembly GCA_003488815.1. The GC content of the type genome is 37.94 % and the genome length is 1.21 Mbp.

Description of *Candidatus* Tabitula adsocibula sp. nov.

Candidatus Tabitula adsocibula (NL. fem. n. *adsocibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3796 sp902773295*. The type genome for the species is the GenBank assembly GCA_902773295.1. The GC content of the type genome is 53.33 % and the genome length is 2.46 Mbp.

Description of *Candidatus* Tabitula gen. nov.

Candidatus Tabitula (NL. fem. n. *Tabitula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA3796*. The type species for the genus is *Candidatus* Tabitula adsocibula .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Tabitula detenatica sp. nov.

Candidatus Tabitula detenatica (NL. fem. n. *detenatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3796 sp002369175*. The type genome for the species is the GenBank assembly GCA_002369175.1. The GC content of the type genome is 52.57 % and the genome length is 2.2 Mbp.

Description of *Candidatus* Tabitula medimastra sp. nov.

Candidatus Tabitula medimastra (NL. fem. n. *medimastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3796 sp902801565*. The type genome for the species is the GenBank assembly GCA_902801565.1. The GC content of the type genome is 53.47 % and the genome length is 2.71 Mbp.

Description of *Candidatus* Tabrizicola aggesitica sp. nov.

Candidatus Tabrizicola aggesitica (NL. fem. n. *aggesitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Tabrizicola sp012032275*. The type genome for the species is the GenBank assembly GCA_012032275.1. The GC content of the type genome is 64.22 % and the genome length is 3.95 Mbp.

Description of *Candidatus* Tabrizicola apercigena sp. nov.

Candidatus Tabrizicola apercigena (NL. fem. n. *apercigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Tabrizicola sp011174775*. The type genome for the species is the GenBank assembly RS_GCF_011174775.1. The GC content of the type genome is 67.46 % and the genome length is 3.63 Mbp.

Description of *Candidatus* Tabrizicola aplesousia sp. nov.

Candidatus Tabrizicola aplesousia (NL. fem. n. *aplesousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Tabrizicola sp009773055*. The type genome for the species is the GenBank assembly GCA_009773055.1. The GC content of the type genome is 64.14 %

and the genome length is 2.26 Mbp.

Description of *Candidatus* Tabrizicola capilatio sp. nov.

Candidatus Tabrizicola capilatio (NL. fem. n. *capilatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Tabrizicola sp004762095*. The type genome for the species is the GenBank assembly RS_GCF_004762095.1. The GC content of the type genome is 65.69 % and the genome length is 3.48 Mbp.

Description of *Candidatus* Tabrizicola carecessa sp. nov.

Candidatus Tabrizicola carecessa (NL. fem. n. *carecessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Tabrizicola sp005222785*. The type genome for the species is the GenBank assembly RS_GCF_005222785.1. The GC content of the type genome is 65.27 % and the genome length is 4.28 Mbp.

Description of *Candidatus* Tabrizicola cepulimonas sp. nov.

Candidatus Tabrizicola cepulimonas (NL. fem. n. *cepulimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Tabrizicola sp002280315*. The type genome for the species is the GenBank assembly GCA_002279895.1. The GC content of the type genome is 65.46 % and the genome length is 2.82 Mbp.

Description of *Candidatus* Tabrizicola desomatica sp. nov.

Candidatus Tabrizicola desomatica (NL. fem. n. *desomatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Tabrizicola sp002280405*. The type genome for the species is the GenBank assembly GCA_002280405.1. The GC content of the type genome is 66.37 % and the genome length is 2.92 Mbp.

Description of *Candidatus* Tabrizicola infanisca sp. nov.

Candidatus Tabrizicola infanisca (NL. fem. n. *infanisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Tabrizicola sp012036325*. The type genome for the species is the GenBank assembly GCA_012036325.1. The GC content of the type genome is 63.89 % and the genome length is 3.43 Mbp.

Description of *Candidatus* Tabrizicola nocenax sp. nov.

Candidatus Tabrizicola nocenax (NL. fem. n. *nocenax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Tabrizicola sp903917595*. The type genome for the species is the GenBank assembly GCA_903917595.1. The GC content of the type genome is 62.73 % and the genome length is 4.42 Mbp.

Description of *Candidatus* Tabrizicola rinocatica sp. nov.

Candidatus Tabrizicola rinocatica (NL. fem. n. *rinocatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Tabrizicola sp013824055*. The type genome for the species is the GenBank assembly GCA_013824055.1. The GC content of the type genome is 67.14 % and the genome length is 3.05 Mbp.

Description of *Candidatus* Tabrizicola visibatica sp. nov.

Candidatus Tabrizicola visibatica (NL. fem. n. *visibatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Tabrizicola sp013821825*. The type genome for the species is the GenBank assembly GCA_013821825.1. The GC content of the type genome is 64.22 % and the genome length is 4.02 Mbp.

Description of *Candidatus* Tagaea octodiforma sp. nov.

Candidatus Tagaea octodiforma (NL. fem. n. *octodiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Tagaea sp014444615*. The type genome for the species is the GenBank assembly GCA_014444615.1. The GC content of the type genome is 64.99 % and the genome length is 4.39 Mbp.

Description of *Candidatus* Tahibacter anxifedo sp. nov.

Candidatus Tahibacter anxifedo (NL. fem. n. *anxifedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Tahibacter sp013298265*. The type genome for the species is the GenBank assembly GCA_013298265.1. The GC content of the type genome is 66.05 % and the genome length is 4.65 Mbp.

Description of *Candidatus* Tahibacter vivifibra sp. nov.

Candidatus Tahibacter vivifibra (NL. fem. n. *vivifibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Tahibacter sp001725155*. The type genome for the species is the GenBank assembly GCA_001725155.1. The GC content of the type genome is 68.63 % and the genome length is 5.71 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Cyanide and thiocyanate bioreactor".

Description of *Candidatus* Tamaricihabitans inremitas sp. nov.

Candidatus Tamaricihabitans inremitas (NL. fem. n. *inremitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Tamaricihabitans sp009379845*. The type genome for the species is the GenBank assembly GCA_009379845.1. The GC content of the type genome is 67.94 % and the genome length is 6.1 Mbp.

Description of *Candidatus* Tametana domipitudo sp. nov.

Candidatus Tametana domipitudo (NL. fem. n. *domipitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CG2-30-54-11 sp001873755*. The type genome for the species is the

GenBank assembly GCA_001873755.1. The GC content of the type genome is 54.08 % and the genome length is 1.44 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "groundwater filtered through a 3.0 um filter".

Description of *Candidatus* Tametana gen. nov.

Candidatus Tametana (NL. fem. n. *Tametana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CG2-30-54-11*. The type species for the genus is *Candidatus* Tametana domipitudo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CG2-30-54-11*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Tametanaceae.

Description of *Candidatus* Tametanaceae fam. nov.

Candidatus Tametanaceae (NL. fem. n. *Tametanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CG2-30-54-11.* The type genus for the taxon is *Candidatus* Tametana .

According to the original version of GTDB R06-RS202, this family belongs to the order *CG2-30-54-11*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Tametanales.

Description of *Candidatus* Tametanales ord. nov.

Candidatus Tametanales (NL. fem. n. *Tametanales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CG2-30-54-11.* The type genus for the taxon is *Candidatus* Tametana .

According to the original version of GTDB R06-RS202, this family belongs to the class *CG2-30-54-11*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Tametanae.

Description of *Candidatus* Tametanae class. nov.

Candidatus Tametanae (NL. fem. n. *c__Tametanae* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CG2-30-54-11.* The type genus for the taxon is *Candidatus* Tametana .

According to GTDB R06-RS202, this class belongs to the phylum *Patescibacteria*.

Description of *Candidatus* Tametaria extipastra sp. nov.

Candidatus Tametaria extipastra (NL. fem. n. *extipastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5342 sp002408065*. The type genome for the species is the GenBank assembly GCA_002408065.1. The GC content of the type genome is 40.27 % and the genome length is 4.46 Mbp.

Description of *Candidatus* Tametaria gen. nov.

Candidatus Tametaria (NL. fem. n. *Tametaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA5342*. The type species for the genus is *Candidatus* Tametaria extipastra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA5342*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Tametariaceae.

Description of *Candidatus* Tametariaceae fam. nov.

Candidatus Tametariaceae (NL. fem. n. *Tametariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA5342.* The type genus for the taxon is *Candidatus* Tametaria .

According to GTDB R06-RS202, this family belongs to the order *Bacteroidales*.

Description of *Candidatus* Tametella cinefimonia sp. nov.

Candidatus Tametella cinefimonia (NL. fem. n. *cinefimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-01-FULL-45-33 sp001778875*. The type genome for the species is

the GenBank assembly GCA_001780565.1. The GC content of the type genome is 43.6 % and the genome length is 0.78 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 1.2 micron filter; full assembly".

Description of *Candidatus* Tametella gen. nov.

Candidatus Tametella (NL. fem. n. *Tametella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *2-01-FULL-45-33*. The type species for the genus is *Candidatus* Tametella cinefimonia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *2-01-FULL-45-33*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Tametellaceae.

Description of *Candidatus* Tametellaceae fam. nov.

Candidatus Tametellaceae (NL. fem. n. *Tametellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *2-01-FULL-45-33.* The type genus for the taxon is *Candidatus* Tametella .

According to the original version of GTDB R06-RS202, this family belongs to the order *WO2-41-13*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Refulariales.

Description of *Candidatus* Tametella redaciforma sp. nov.

Candidatus Tametella redaciforma (NL. fem. n. *redaciforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-01-FULL-45-33 sp001778595*. The type genome for the species is the GenBank assembly GCA_001778595.1. The GC content of the type genome is 44.31 % and the genome length is 0.85 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 0.2 micron filter; full assembly".

Description of *Candidatus* Tametia accogicula sp. nov.

Candidatus Tametia accogicula (NL. fem. n. *accogicula* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SAR86A sp902632555*. The type genome for the species is the GenBank assembly GCA_902632555.1. The GC content of the type genome is 32.97 % and the genome length is 1.04 Mbp.

Description of *Candidatus* Tametia gen. nov.

Candidatus Tametia (NL. fem. n. *Tametia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SAR86A*. The type species for the genus is *Candidatus* Tametia accogicula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *D2472*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Bisulosaceae.

Description of *Candidatus* Tametia adrotifica sp. nov.

Candidatus Tametia adrotifica (NL. fem. n. *adrotifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SAR86A sp902528875*. The type genome for the species is the GenBank assembly GCA_902528875.1. The GC content of the type genome is 31.91 % and the genome length is 1.03 Mbp.

Description of *Candidatus* Tametia alsisax sp. nov.

Candidatus Tametia alsisax (NL. fem. n. *alsisax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SAR86A sp902517425*. The type genome for the species is the GenBank assembly GCA_902517425.1. The GC content of the type genome is 32.58 % and the genome length is 0.93 Mbp.

Description of *Candidatus* Tametia apoplitica sp. nov.

Candidatus Tametia apoplitica (NL. fem. n. *apoplitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SAR86A sp902559345*. The type genome for the species is the GenBank assembly GCA_902559345.1. The GC content of the type genome is 32.2 % and the genome length is 0.92 Mbp.

Description of *Candidatus* Tametia argititas sp. nov.

Candidatus Tametia argititas (NL. fem. n. *argititas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SAR86A sp002710265*. The type genome for the species is the GenBank assembly GCA_002710265.1. The GC content of the type genome is 32.76 % and the genome length is 1.17 Mbp.

Description of *Candidatus* Tametia benivibra sp. nov.

Candidatus Tametia benivibra (NL. fem. n. *benivibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SAR86A sp902586925*. The type genome for the species is the GenBank assembly GCA_902517325.1. The GC content of the type genome is 31.85 % and the genome length is 0.98 Mbp.

Description of *Candidatus* Tametia bovicitudo sp. nov.

Candidatus Tametia bovicitudo (NL. fem. n. *bovicitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SAR86A sp902582355*. The type genome for the species is the GenBank assembly GCA_902586865.1. The GC content of the type genome is 31.35 % and the genome length is 0.99 Mbp.

Description of *Candidatus* Tametia colutivita sp. nov.

Candidatus Tametia colutivita (NL. fem. n. *colutivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *SAR86A sp902583575*. The type genome for the species is the GenBank assembly GCA_902583575.1. The GC content of the type genome is 31.84 % and the genome length is 1.14 Mbp.

Description of *Candidatus* Tametia decucigena sp. nov.

Candidatus Tametia decucigena (NL. fem. n. *decucigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SAR86A sp902563835*. The type genome for the species is the GenBank assembly GCA_902563835.1. The GC content of the type genome is 31.85 % and the genome length is 0.99 Mbp.

Description of *Candidatus* Tametia denunilenta sp. nov.

Candidatus Tametia denunilenta (NL. fem. n. *denunilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SAR86A sp002169625*. The type genome for the species is the GenBank assembly GCA_902602285.1. The GC content of the type genome is 31.29 % and the genome length is 1.16 Mbp.

Description of *Candidatus* Tametia desorivita sp. nov.

Candidatus Tametia desorivita (NL. fem. n. *desorivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SAR86A sp902556105*. The type genome for the species is the GenBank assembly GCA_902556105.1. The GC content of the type genome is 32.67 % and the genome length is 1.01 Mbp.

Description of *Candidatus* Tametia detoredo sp. nov.

Candidatus Tametia detoredo (NL. fem. n. *detoredo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SAR86A sp002721465*. The type genome for the species is the GenBank assembly GCA_002721465.1. The GC content of the type genome is 31.59 % and the genome length is 0.99 Mbp.

Description of *Candidatus* Tametia dupunitio sp. nov.

Candidatus Tametia dupunitio (NL. fem. n. *dupunitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SAR86A sp902520725*. The type genome for the species is the GenBank assembly GCA_902517195.1. The GC content of the type genome is 32.49 % and the genome length is 0.71 Mbp.

Description of *Candidatus* Tametia entomimonas sp. nov.

Candidatus Tametia entomimonas (NL. fem. n. *entomimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SAR86A sp902558095*. The type genome for the species is the GenBank assembly GCA_902558095.1. The GC content of the type genome is 32.17 % and the genome length is 1.09 Mbp.

Description of *Candidatus* Tametia facunitas sp. nov.

Candidatus Tametia facunitas (NL. fem. n. *facunitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SAR86A sp003213495*. The type genome for the species is the GenBank assembly GCA_902574745.1. The GC content of the type genome is 32.39 % and the genome length is 1.28 Mbp.

Description of *Candidatus* Tametia fiducatica sp. nov.

Candidatus Tametia fiducatica (NL. fem. n. *fiducatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SAR86A sp902626385*. The type genome for the species is the GenBank assembly GCA_902626385.1. The GC content of the type genome is 33.16 % and the genome length is 1.09 Mbp.

Description of *Candidatus* Tametia fusifitudo sp. nov.

Candidatus Tametia fusifitudo (NL. fem. n. *fusifitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SAR86A sp000252525*. The type genome for the species is the GenBank assembly GCA_902524435.1. The GC content of the type genome is 32.46 % and the genome length is 0.96 Mbp.

Description of *Candidatus* Tametia hexapigena sp. nov.

Candidatus Tametia hexapigena (NL. fem. n. *hexapigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SAR86A sp902551185*. The type genome for the species is the GenBank assembly GCA_902581765.1. The GC content of the type genome is 31.75 % and the genome length is 1.04 Mbp.

Description of *Candidatus* Tametia innoximonas sp. nov.

Candidatus Tametia innoximonas (NL. fem. n. *innoximonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SAR86A sp902630885*. The type genome for the species is the GenBank assembly GCA_902630885.1. The GC content of the type genome is 32.44 % and the genome length is 1.06 Mbp.

Description of *Candidatus* Tametia laxitisca sp. nov.

Candidatus Tametia laxitisca (NL. fem. n. *laxitisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SAR86A sp902541175*. The type genome for the species is the GenBank assembly GCA_902541175.1. The GC content of the type genome is 32.14 % and the genome length is 1.16 Mbp.

Description of *Candidatus* Tametia lenocicella sp. nov.

Candidatus Tametia lenocicella (NL. fem. n. *lenocicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *SAR86A sp902516285*. The type genome for the species is the GenBank assembly GCA_902617815.1. The GC content of the type genome is 31.81 % and the genome length is 1.25 Mbp.

Description of *Candidatus* Tametia lugubatica sp. nov.

Candidatus Tametia lugubatica (NL. fem. n. *lugubatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SAR86A sp902612915*. The type genome for the species is the GenBank assembly GCA_902563165.1. The GC content of the type genome is 32.28 % and the genome length is 1.11 Mbp.

Description of *Candidatus* Tametia mimogitas sp. nov.

Candidatus Tametia mimogitas (NL. fem. n. *mimogitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SAR86A sp902591925*. The type genome for the species is the GenBank assembly GCA_902562385.1. The GC content of the type genome is 32.18 % and the genome length is 1.04 Mbp.

Description of *Candidatus* Tametia nefarastra sp. nov.

Candidatus Tametia nefarastra (NL. fem. n. *nefarastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SAR86A sp902557965*. The type genome for the species is the GenBank assembly GCA_902557965.1. The GC content of the type genome is 32.82 % and the genome length is 1.05 Mbp.

Description of *Candidatus* Tametia nugigigena sp. nov.

Candidatus Tametia nugigigena (NL. fem. n. *nugigigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SAR86A sp004212975*. The type genome for the species is the GenBank assembly GCA_902579895.1. The GC content of the type genome is 32.14 % and the genome length is 1.13 Mbp.

Description of *Candidatus* Tametia nutabedo sp. nov.

Candidatus Tametia nutabedo (NL. fem. n. *nutabedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SAR86A sp002690725*. The type genome for the species is the GenBank assembly GCA_002690725.1. The GC content of the type genome is 31.81 % and the genome length is 0.92 Mbp.

Description of *Candidatus* Tametia odontimonia sp. nov.

Candidatus Tametia odontimonia (NL. fem. n. *odontimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SAR86A sp002721385*. The type genome for the species is the GenBank assembly GCA_002721385.1. The GC content of the type genome is 31.96 % and the genome length is 0.78 Mbp.

Description of *Candidatus* Tametia recucitica sp. nov.

Candidatus Tametia recucitica (NL. fem. n. *recucitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SAR86A sp902560315*. The type genome for the species is the GenBank assembly GCA_902560315.1. The GC content of the type genome is 31.89 % and the genome length is 1.08 Mbp.

Description of *Candidatus* Tametia remedentia sp. nov.

Candidatus Tametia remedentia (NL. fem. n. *remedentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SAR86A sp902520495*. The type genome for the species is the GenBank assembly GCA_902520495.1. The GC content of the type genome is 32.07 % and the genome length is 1.09 Mbp.

Description of *Candidatus* Tametia saburilega sp. nov.

Candidatus Tametia saburilega (NL. fem. n. *saburilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SAR86A sp902547295*. The type genome for the species is the GenBank assembly GCA_902547295.1. The GC content of the type genome is 32.16 % and the genome length is 1.05 Mbp.

Description of *Candidatus* Tametia semimatica sp. nov.

Candidatus Tametia semimatica (NL. fem. n. *semimatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SAR86A sp902617045*. The type genome for the species is the GenBank assembly GCA_902617045.1. The GC content of the type genome is 32.26 % and the genome length is 1.16 Mbp.

Description of *Candidatus* Tametia solacitudo sp. nov.

Candidatus Tametia solacitudo (NL. fem. n. *solacitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SAR86A sp902631785*. The type genome for the species is the GenBank assembly GCA_902631785.1. The GC content of the type genome is 32.45 % and the genome length is 1.03 Mbp.

Description of *Candidatus* Tametia solivatica sp. nov.

Candidatus Tametia solivatica (NL. fem. n. *solivatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SAR86A sp002169105*. The type genome for the species is the GenBank assembly GCA_002169105.1. The GC content of the type genome is 32.88 % and the genome length is 0.78 Mbp.

Description of *Candidatus* Tametia tetenibula sp. nov.

Candidatus Tametia tetenibula (NL. fem. n. *tetenibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *SAR86A sp902517505*. The type genome for the species is the GenBank assembly GCA_902516215.1. The GC content of the type genome is 31.81 % and the genome length is 1.15 Mbp.

Description of *Candidatus* Tametia uberritoga sp. nov.

Candidatus Tametia uberritoga (NL. fem. n. *uberritoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SAR86A sp902579825*. The type genome for the species is the GenBank assembly GCA_902579825.1. The GC content of the type genome is 32.24 % and the genome length is 1.09 Mbp.

Description of *Candidatus* Tametida desonifica sp. nov.

Candidatus Tametida desonifica (NL. fem. n. *desonifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GWA2-47-26 sp001001705*. The type genome for the species is the GenBank assembly GCA_001001705.1. The GC content of the type genome is 46.48 % and the genome length is 0.84 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "aquifer sediment".

Description of *Candidatus* Tametida gen. nov.

Candidatus Tametida (NL. fem. n. *Tametida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GWA2-47-26*. The type species for the genus is *Candidatus* Tametida desonifica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GWA2-47-26*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Tametidaceae.

Description of *Candidatus* Tametidaceae fam. nov.

Candidatus Tametidaceae (NL. fem. n. *Tametidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *GWA2-47-26.* The type genus for the taxon is *Candidatus* Tametida .

According to the original version of GTDB R06-RS202, this family belongs to the order *SG8-24*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Labecellales.

Description of *Candidatus* Tametida desurax sp. nov.

Candidatus Tametida desurax (NL. fem. n. *desurax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GWA2-47-26 sp001790815*. The type genome for the species is the GenBank assembly GCA_001791195.1. The GC content of the type genome is 46.67 % and the genome length is 1.07 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 1.2 micron filter; full assembly".

Description of *Candidatus* Tametosa documilega sp. nov.

Candidatus Tametosa documilega (NL. fem. n. *documilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1046 sp012519085*. The type genome for the species is the GenBank assembly GCA_012519085.1. The GC content of the type genome is 47.31 % and the genome length is 1.58 Mbp.

Description of *Candidatus* Tametosa gen. nov.

Candidatus Tametosa (NL. fem. n. *Tametosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1046*. The type species for the genus is *Candidatus* Tametosa documilega .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DTU023*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Decunariaceae.

Description of *Candidatus* Tametosa ectenitica sp. nov.

Candidatus Tametosa ectenitica (NL. fem. n. *ectenitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1046 sp012838475*. The type genome for the species is the GenBank assembly GCA_012838475.1. The GC content of the type genome is 45.35 % and the genome length is 1.88 Mbp.

Description of *Candidatus* Tametosa inlusatio sp. nov.

Candidatus Tametosa inlusatio (NL. fem. n. *inlusatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1046 sp002316595*. The type genome for the species is the GenBank assembly GCA_002316595.1. The GC content of the type genome is 46.27 % and the genome length is 1.65 Mbp.

Description of *Candidatus* Tametosa inretiforma sp. nov.

Candidatus Tametosa inretiforma (NL. fem. n. *inretiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1046 sp012511325*. The type genome for the species is the GenBank assembly GCA_012511325.1. The GC content of the type genome is 47.99 % and the genome length is 1.43 Mbp.

Description of *Candidatus* Tametosa peropilenta sp. nov.

Candidatus Tametosa peropilenta (NL. fem. n. *peropilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1046 sp012839385*. The type genome for the species is the GenBank assembly GCA_012839385.1. The GC content of the type genome is 43.87 % and the genome length is 1.96 Mbp.

Description of *Candidatus* Tametula nutamatica sp. nov.

Candidatus Tametula nutamatica (NL. fem. n. *nutamatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTU078 sp002385415*. The type genome for the species is the GenBank assembly GCA_002385415.1. The GC content of the type genome is 52.62 %

and the genome length is 2.01 Mbp.

Description of *Candidatus* Tametula gen. nov.

Candidatus Tametula (NL. fem. n. *Tametula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DTU078*. The type species for the genus is *Candidatus* Tametula nutamatica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-272*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Colipariaceae.

Description of *Candidatus* Tametula proprimonia sp. nov.

Candidatus Tametula proprimonia (NL. fem. n. *proprimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTU078 sp002397345*. The type genome for the species is the GenBank assembly GCA_002397345.1. The GC content of the type genome is 51.52 % and the genome length is 2.07 Mbp.

Description of *Candidatus* Tametula sicinitia sp. nov.

Candidatus Tametula sicinitia (NL. fem. n. *sicinitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTU078 sp012840355*. The type genome for the species is the GenBank assembly GCA_012840355.1. The GC content of the type genome is 53.94 % and the genome length is 2.16 Mbp.

Description of *Candidatus* Tamlana encolitio sp. nov.

Candidatus Tamlana encolitio (NL. fem. n. *encolitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Tamlana_A sp002893765*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The

type genome for the species is the GenBank assembly RS_GCF_002893765.1. The GC content of the type genome is 35.25 % and the genome length is 4.12 Mbp.

Description of *Candidatus* Tamlana extipitio sp. nov.

Candidatus Tamlana extipitio (NL. fem. n. *extipitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Tamlana_A sp008806375*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_008806375.1. The GC content of the type genome is 34.88 % and the genome length is 3.35 Mbp.

Description of *Candidatus* Tamlana venefitas sp. nov.

Candidatus Tamlana venefitas (NL. fem. n. *venefitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Tamlana_A sp004804355*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_004804355.1. The GC content of the type genome is 34.89 % and the genome length is 3.42 Mbp.

Description of *Candidatus* Tannerella cobalilega sp. nov.

Candidatus Tannerella cobalilega (NL. fem. n. *cobalilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Tannerella sp002890585*. The type genome for the species is the GenBank assembly GCA_002890575.1. The GC content of the type genome is 57.52 % and the genome length is 2.78 Mbp.

Description of *Candidatus* Tannerella vilititudo sp. nov.

Candidatus Tannerella vilititudo (NL. fem. n. *vilititudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Tannerella sp003033925*. The type genome for the species is the

GenBank assembly GCA_000510505.1. The GC content of the type genome is 55.85 % and the genome length is 3.21 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "subgingival plaque".

Description of *Candidatus* Taraxaria acrifugo sp. nov.

Candidatus Taraxaria acrifugo (NL. fem. n. *acrifugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *XYB2-FULL-45-11 sp001791715*. The type genome for the species is the GenBank assembly GCA_001791715.1. The GC content of the type genome is 45.03 % and the genome length is 0.88 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at 16ft depth; 0.2 micron filter at time point B".

Description of *Candidatus* Taraxaria gen. nov.

Candidatus Taraxaria (NL. fem. n. *Taraxaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *XYB2-FULL-45-11*. The type species for the genus is *Candidatus* Taraxaria acrifugo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GWF2-40-263*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Fetifidaceae.

Description of *Candidatus* Taraxaria malifimonas sp. nov.

Candidatus Taraxaria malifimonas (NL. fem. n. *malifimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *XYB2-FULL-45-11 sp903831335*. The type genome for the species is the GenBank assembly GCA_903831335.1. The GC content of the type genome is 43.24 % and the genome length is 0.85 Mbp.

Description of *Candidatus* Taraxaria regifessa sp. nov.

Candidatus Taraxaria regifessa (NL. fem. n. *regifessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *XYB2-FULL-45-11 sp001791305*. The type genome for the species is the GenBank assembly GCA_001790985.1. The GC content of the type genome is 47.21 % and the genome length is 1.01 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 0.1 micron filter; full assembly".

Description of *Candidatus* Taraxida pedepitudo sp. nov.

Candidatus Taraxida pedepitudo (NL. fem. n. *pedepitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTU073 sp001512665*. The type genome for the species is the GenBank assembly GCA_001512665.1. The GC content of the type genome is 38.49 % and the genome length is 1.67 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "pool of bioreactors CSTR01a; CSTR02a; and CSTR03a; thermophilic anaerobic digestion of cattle manure in continuous reactors for biogas production (methane)".

Description of *Candidatus* Taraxida gen. nov.

Candidatus Taraxida (NL. fem. n. *Taraxida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DTU073*. The type species for the genus is *Candidatus* Taraxida pedepitudo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DTU073*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Taraxidaceae.

Description of *Candidatus* Taraxidaceae fam. nov.

Candidatus Taraxidaceae (NL. fem. n. *Taraxidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *DTU073.* The type genus for the taxon is *Candidatus* Taraxida .

According to the original version of GTDB R06-RS202, this family belongs to the order *DRI-13*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Latibellales.

Description of *Candidatus* Taraxosa podagetta sp. nov.

Candidatus Taraxosa podagetta (NL. fem. n. *podagetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *TMED167 sp002170915*. The type genome for the species is the GenBank assembly GCA_002691065.1. The GC content of the type genome is 53.44 % and the genome length is 2.54 Mbp.

Description of *Candidatus* Taraxosa gen. nov.

Candidatus Taraxosa (NL. fem. n. *Taraxosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *TMED167*. The type species for the genus is *Candidatus* Taraxosa podagetta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2165*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Colubanaceae.

Description of *Candidatus* Taraxosa refulousia sp. nov.

Candidatus Taraxosa refulousia (NL. fem. n. *refulousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *TMED167 sp002723345*. The type genome for the species is the GenBank assembly GCA_002723345.1. The GC content of the type genome is 50.84 % and the genome length is 2.78 Mbp.

Description of *Candidatus* Taraxula telegugo sp. nov.

Candidatus Taraxula telegugo (NL. fem. n. *telegugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *NSJ-32 sp014384895*. The type genome for the species is the GenBank assembly GCA_014384895.1. The GC content of the type genome is 49.87 % and the genome length is 3.94 Mbp.

Description of *Candidatus* Taraxula gen. nov.

Candidatus Taraxula (NL. fem. n. *Taraxula* a name created arbitrarily, while preserving

the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *NSJ-32*. The type species for the genus is *Candidatus* Taraxula telegugo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1390*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Dicibiaceae.

Description of *Candidatus* Tardiphaga chancentia sp. nov.

Candidatus Tardiphaga chancentia (NL. fem. n. *chancentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Tardiphaga sp004173095*. The type genome for the species is the GenBank assembly GCA_004173095.1. The GC content of the type genome is 62.64 % and the genome length is 4.6 Mbp.

Description of *Candidatus* Tardiphaga colimimonas sp. nov.

Candidatus Tardiphaga colimimonas (NL. fem. n. *colimimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Tardiphaga sp900114605*. The type genome for the species is the GenBank assembly RS_GCF_003353545.1. The GC content of the type genome is 61.52 % and the genome length is 6.22 Mbp.

Description of *Candidatus* Tardiphaga detenilenta sp. nov.

Candidatus Tardiphaga detenilenta (NL. fem. n. *detenilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Tardiphaga sp008329525*. The type genome for the species is the GenBank assembly RS_GCF_008329525.1. The GC content of the type genome is 61.23 % and the genome length is 6.16 Mbp.

Description of *Candidatus* Tardiphaga direcedo sp. nov.

Candidatus Tardiphaga direcedo (NL. fem. n. *direcedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Tardiphaga sp007018905*. The type genome for the species is the GenBank assembly RS_GCF_007018645.1. The GC content of the type genome is 63.6 % and the genome length is 5.61 Mbp.

Description of *Candidatus* Tardiphaga peropitia sp. nov.

Candidatus Tardiphaga peropitia (NL. fem. n. *peropitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Tardiphaga sp002256345*. The type genome for the species is the GenBank assembly GCA_002256345.1. The GC content of the type genome is 62.01 % and the genome length is 6.95 Mbp.

Description of *Candidatus* Tardiphaga pluscatica sp. nov.

Candidatus Tardiphaga pluscatica (NL. fem. n. *pluscatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Tardiphaga sp003096755*. The type genome for the species is the GenBank assembly RS_GCF_003096755.1. The GC content of the type genome is 61.4 % and the genome length is 6.48 Mbp.

Description of *Candidatus* Tardiphaga vepalimonia sp. nov.

Candidatus Tardiphaga vepalimonia (NL. fem. n. *vepalimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Tardiphaga sp014377915*. The type genome for the species is the GenBank assembly GCA_014377915.1. The GC content of the type genome is 63.6 % and the genome length is 5.56 Mbp.

Description of *Candidatus* Tateyamaria admuressa sp. nov.

Candidatus Tateyamaria admuressa (NL. fem. n. *admuressa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Tateyamaria sp900143535*. The type genome for the species is the GenBank assembly RS_GCF_900143535.1. The GC content of the type genome is 57.4 % and the genome length is 4.51 Mbp.

Description of *Candidatus* Tateyamaria aphoritura sp. nov.

Candidatus Tateyamaria aphoritura (NL. fem. n. *aphoritura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Tateyamaria sp003445215*. The type genome for the species is the GenBank assembly GCA_003445215.1. The GC content of the type genome is 44.27 % and the genome length is 3.91 Mbp.

Description of *Candidatus* Tateyamaria nucifatica sp. nov.

Candidatus Tateyamaria nucifatica (NL. fem. n. *nucifatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Tateyamaria sp000814025*. The type genome for the species is the GenBank assembly RS_GCF_000814025.1. The GC content of the type genome is 60.61 % and the genome length is 4.43 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "accessory nidamental gland".

Description of *Candidatus* Tateyamaria siminitudo sp. nov.

Candidatus Tateyamaria siminitudo (NL. fem. n. *siminitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Tateyamaria sp007995245*. The type genome for the species is the GenBank assembly RS_GCF_007995245.1. The GC content of the type genome is 61.27 % and the genome length is 4.57 Mbp.

Description of *Candidatus* Tatlockia adcesousia sp. nov.

Candidatus Tatlockia adcesousia (NL. fem. n. *adcesousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Tatlockia sp013697645*. The type genome for the species is the GenBank assembly GCA_013697645.1. The GC content of the type genome is 38.75 % and the genome length is 3.14 Mbp.

Description of *Candidatus* Tatlockia adessibra sp. nov.

Candidatus Tatlockia adessibra (NL. fem. n. *adessibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Tatlockia sp013697725*. The type genome for the species is the GenBank assembly GCA_013697725.1. The GC content of the type genome is 37.85 % and the genome length is 3.01 Mbp.

Description of *Candidatus* Tatlockia denavifica sp. nov.

Candidatus Tatlockia denavifica (NL. fem. n. *denavifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Tatlockia sp013697955*. The type genome for the species is the GenBank assembly GCA_013697955.1. The GC content of the type genome is 37.79 % and the genome length is 3.33 Mbp.

Description of *Candidatus* Tatlockia mutabicella sp. nov.

Candidatus Tatlockia mutabicella (NL. fem. n. *mutabicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Tatlockia sp900640175*. The type genome for the species is the GenBank assembly RS_GCF_900640175.1. The GC content of the type genome is 41.8 % and the genome length is 2.71 Mbp.

Description of *Candidatus* Tatlockia podagifica sp. nov.

Candidatus Tatlockia podagifica (NL. fem. n. *podagifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Tatlockia sp013812775*. The type genome for the species is the GenBank assembly GCA_013812775.1. The GC content of the type genome is 38.8 % and the genome length is 3.29 Mbp.

Description of *Candidatus* Tautonia effosilenta sp. nov.

Candidatus Tautonia effosilenta (NL. fem. n. *effosilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Tautonia sp009177065*. The type genome for the species is the GenBank assembly RS_GCF_009177065.1. The GC content of the type genome is 63.94 % and the genome length is 7.07 Mbp.

Description of *Candidatus* Tautonia filififica sp. nov.

Candidatus Tautonia filififica (NL. fem. n. *filififica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Tautonia sp014154995*. The type genome for the species is the GenBank assembly RS_GCF_012958305.1. The GC content of the type genome is 62.74 % and the genome length is 6.97 Mbp.

Description of *Candidatus* Tautonia holovitudo sp. nov.

Candidatus Tautonia holovitudo (NL. fem. n. *holovitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Tautonia sp007752535*. The type genome for the species is the GenBank assembly RS_GCF_007752535.1. The GC content of the type genome is 71.07 % and the genome length is 9.4 Mbp.

Description of *Candidatus* Taxilaria subiniforma sp. nov.

Candidatus Taxilaria subiniforma (NL. fem. n. *subiniforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DULL01 sp012840395*. The type genome for the species is the GenBank assembly GCA_012840395.1. The GC content of the type genome is 36.15 % and the genome length is 2.84 Mbp.

Description of *Candidatus* Taxilaria gen. nov.

Candidatus Taxilaria (NL. fem. n. *Taxilaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DULL01*. The type species for the genus is *Candidatus* Taxilaria

subiniforma .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DULL01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Taxilariaceae.

Description of *Candidatus* Taxilariaceae fam. nov.

Candidatus Taxilariaceae (NL. fem. n. *Taxilariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *DULL01.* The type genus for the taxon is *Candidatus* Taxilaria .

According to GTDB R06-RS202, this family belongs to the order *Acetivibrionales*.

Description of *Candidatus* Taxilia detoratio sp. nov.

Candidatus Taxilia detoratio (NL. fem. n. *detoratio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3534 sp002376875*. The type genome for the species is the GenBank assembly GCA_002376875.1. The GC content of the type genome is 46.24 % and the genome length is 1.85 Mbp.

Description of *Candidatus* Taxilia gen. nov.

Candidatus Taxilia (NL. fem. n. *Taxilia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA3534*. The type species for the genus is *Candidatus* Taxilia detoratio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA3534*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Taxiliaceae.

Description of *Candidatus* Taxiliaceae fam. nov.

Candidatus Taxiliaceae (NL. fem. n. *Taxiliaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA3534.* The type genus for the taxon is *Candidatus* Taxilia .

According to GTDB R06-RS202, this family belongs to the order *Opitutales*.

Description of *Candidatus* Taxilosa acricitoga sp. nov.

Candidatus Taxilosa acricitoga (NL. fem. n. *acricitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *3-1-20CM-4-69-9 sp013816245*. The type genome for the species is the GenBank assembly GCA_013816245.1. The GC content of the type genome is 66.47 % and the genome length is 3.16 Mbp.

Description of *Candidatus* Taxilosa gen. nov.

Candidatus Taxilosa (NL. fem. n. *Taxilosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *3-1-20CM-4-69-9*. The type species for the genus is *Candidatus* Taxilosa acricitoga .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Taxilosa adverilenta sp. nov.

Candidatus Taxilosa adverilenta (NL. fem. n. *adverilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *3-1-20CM-4-69-9 sp005885245*. The type genome for the species is the GenBank assembly GCA_005885245.1. The GC content of the type genome is 67.52 % and the genome length is 3.21 Mbp.

Description of *Candidatus* Taxilosa asporatica sp. nov.

Candidatus Taxilosa asporatica (NL. fem. n. *asporatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *3-1-20CM-4-69-9 sp001920085*. The type genome for the species is the GenBank assembly GCA_001920085.1. The GC content of the type genome is 69.56 % and the genome length is 1.86 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Soil sample from Angelo meadow plot 1;

20cm depth; 2 days after second rain event (91mm)".

Description of *Candidatus* Taxilosa cuticilega sp. nov.

Candidatus Taxilosa cuticilega (NL. fem. n. *cuticilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *3-1-20CM-4-69-9 sp005888435*. The type genome for the species is the GenBank assembly GCA_005888435.1. The GC content of the type genome is 68.89 % and the genome length is 2.45 Mbp.

Description of *Candidatus* Taxilosa didacibra sp. nov.

Candidatus Taxilosa didacibra (NL. fem. n. *didacibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *3-1-20CM-4-69-9 sp005883355*. The type genome for the species is the GenBank assembly GCA_005883355.1. The GC content of the type genome is 66.98 % and the genome length is 3.19 Mbp.

Description of *Candidatus* Taxilosa oratrisca sp. nov.

Candidatus Taxilosa oratrisca (NL. fem. n. *oratrisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *3-1-20CM-4-69-9 sp005885085*. The type genome for the species is the GenBank assembly GCA_005885085.1. The GC content of the type genome is 68.75 % and the genome length is 2.63 Mbp.

Description of *Candidatus* Taxilula bonifax sp. nov.

Candidatus Taxilula bonifax (NL. fem. n. *bonifax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA11883 sp002714565*. The type genome for the species is the GenBank assembly GCA_002714565.1. The GC content of the type genome is 48.43 % and the genome length is 4.54 Mbp.

Description of *Candidatus* Taxilula gen. nov.

Candidatus Taxilula (NL. fem. n. *Taxilula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA11883*. The type species for the genus is *Candidatus* Taxilula bonifax .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Tegimana derecitudo sp. nov.

Candidatus Tegimana derecitudo (NL. fem. n. *derecitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Fen-1245 sp003157095*. The type genome for the species is the GenBank assembly GCA_003157095.1. The GC content of the type genome is 69.78 % and the genome length is 2.62 Mbp.

Description of *Candidatus* Tegimana gen. nov.

Candidatus Tegimana (NL. fem. n. *Tegimana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Fen-1245*. The type species for the genus is *Candidatus* Tegimana derecitudo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GWC2-71-9*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Relenulaceae.

Description of *Candidatus* Tegimaria roraritio sp. nov.

Candidatus Tegimaria roraritio (NL. fem. n. *roraritio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS755 sp900545185*. The type genome for the species is the GenBank assembly GCA_900545185.1. The GC content of the type genome is 47.75 % and the genome length is 2.27 Mbp.

Description of *Candidatus* Tegimaria gen. nov.

Candidatus Tegimaria (NL. fem. n. *Tegimaria* a name created arbitrarily, while

preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UMGS755*. The type species for the genus is *Candidatus* Tegimaria roraritio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA9506*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Coturellaceae.

Description of *Candidatus* Tegimella decatatica sp. nov.

Candidatus Tegimella decatatica (NL. fem. n. *decatatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIYTD01 sp903928955*. The type genome for the species is the GenBank assembly GCA_903928955.1. The GC content of the type genome is 40.72 % and the genome length is 2.81 Mbp.

Description of *Candidatus* Tegimella gen. nov.

Candidatus Tegimella (NL. fem. n. *Tegimella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIYTD01*. The type species for the genus is *Candidatus* Tegimella decatatica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1018*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Desorariaceae.

Description of *Candidatus* Tegimia conigimonia sp. nov.

Candidatus Tegimia conigimonia (NL. fem. n. *conigimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIPAT01 sp903863035*. The type genome for the species is the GenBank assembly GCA_903863035.1. The GC content of the type genome is 47.1 % and the genome length is 6.71 Mbp.

Description of *Candidatus* Tegimia gen. nov.

Candidatus Tegimia (NL. fem. n. *Tegimia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIPAT01*. The type species for the genus is *Candidatus* Tegimia conigimonia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Tegimia xeropax sp. nov.

Candidatus Tegimia xeropax (NL. fem. n. *xeropax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIPAT01 sp903831825*. The type genome for the species is the GenBank assembly GCA_903932215.1. The GC content of the type genome is 47.69 % and the genome length is 5.69 Mbp.

Description of *Candidatus* Tegimida alticessa sp. nov.

Candidatus Tegimida alticessa (NL. fem. n. *alticessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9148 sp003450655*. The type genome for the species is the GenBank assembly GCA_003450655.1. The GC content of the type genome is 41.93 % and the genome length is 1.16 Mbp.

Description of *Candidatus* Tegimida gen. nov.

Candidatus Tegimida (NL. fem. n. *Tegimida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA9148*. The type species for the genus is *Candidatus* Tegimida alticessa .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Tegimida atricicella sp. nov.

Candidatus Tegimida atricicella (NL. fem. n. *atricicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9148 sp014238445*. The type genome for the species is the GenBank assembly GCA_014238445.1. The GC content of the type genome is 43.86 % and the genome length is 1.51 Mbp.

Description of *Candidatus* Tegimida fiducatio sp. nov.

Candidatus Tegimida fiducatio (NL. fem. n. *fiducatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9148 sp011523685*. The type genome for the species is the GenBank assembly GCA_011523685.1. The GC content of the type genome is 40.75 % and the genome length is 2.04 Mbp.

Description of *Candidatus* Tegimida vacilax sp. nov.

Candidatus Tegimida vacilax (NL. fem. n. *vacilax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9148 sp902623005*. The type genome for the species is the GenBank assembly GCA_902623005.1. The GC content of the type genome is 42.15 % and the genome length is 1.58 Mbp.

Description of *Candidatus* Tegimida vinulilega sp. nov.

Candidatus Tegimida vinulilega (NL. fem. n. *vinulilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9148 sp002323325*. The type genome for the species is the GenBank assembly GCA_002731975.1. The GC content of the type genome is 41.13 % and the genome length is 1.93 Mbp.

Description of *Candidatus* Tegimosa rurigitrix sp. nov.

Candidatus Tegimosa rurigitrix (NL. fem. n. *rurigitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7966 sp002299125*. The type genome for the species is the GenBank assembly GCA_002299125.1. The GC content of the type genome is 66.87 %

and the genome length is 2.37 Mbp.

Description of *Candidatus* Tegimosa gen. nov.

Candidatus Tegimosa (NL. fem. n. *Tegimosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA7966*. The type species for the genus is *Candidatus* Tegimosa rurigitrix .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA7966*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Tegimosaceae.

Description of *Candidatus* Tegimosaceae fam. nov.

Candidatus Tegimosaceae (NL. fem. n. *Tegimosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA7966.* The type genus for the taxon is *Candidatus* Tegimosa .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA7966*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Tegimosales.

Description of *Candidatus* Tegimosales ord. nov.

Candidatus Tegimosales (NL. fem. n. *Tegimosales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA7966.* The type genus for the taxon is *Candidatus* Tegimosa .

According to the GTDB R06-RS202, this order belongs to the class *Gammaproteobacteria*.

Description of *Candidatus* Tegimosa sotulousia sp. nov.

Candidatus Tegimosa sotulousia (NL. fem. n. *sotulousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7966 sp003485715*. The type genome for the species is the GenBank assembly GCA_003485715.1. The GC content of the type genome is 66.64 %

and the genome length is 2.14 Mbp.

Description of *Candidatus* Tegimula adsenibra sp. nov.

Candidatus Tegimula adsenibra (NL. fem. n. *adsenibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTIE01 sp011334565*. The type genome for the species is the GenBank assembly GCA_011334565.1. The GC content of the type genome is 61.36 % and the genome length is 4.29 Mbp.

Description of *Candidatus* Tegimula gen. nov.

Candidatus Tegimula (NL. fem. n. *Tegimula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DTIE01*. The type species for the genus is *Candidatus* Tegimula adsenibra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DTIE01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Tegimulaceae.

Description of *Candidatus* Tegimulaceae fam. nov.

Candidatus Tegimulaceae (NL. fem. n. *Tegimulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *DTIE01.* The type genus for the taxon is *Candidatus* Tegimula .

According to the original version of GTDB R06-RS202, this family belongs to the order *FW602-bin22*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Colipulales.

Description of *Candidatus* Tegumana divolugo sp. nov.

Candidatus Tegumana divolugo (NL. fem. n. *divolugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA10014 sp000996355*. The type genome for the species is the GenBank assembly GCA_003523645.1. The GC content of the type genome is 41.24 %

and the genome length is 1.04 Mbp.

Description of *Candidatus* Tegumana gen. nov.

Candidatus Tegumana (NL. fem. n. *Tegumana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA10014*. The type species for the genus is *Candidatus* Tegumana divolugo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GWF2-40-263*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Fetifidaceae.

Description of *Candidatus* Tegumaria viragicella sp. nov.

Candidatus Tegumaria viragicella (NL. fem. n. *viragicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AAA071-K20 sp003265975*. The type genome for the species is the GenBank assembly GCA_003265975.1. The GC content of the type genome is 35.94 % and the genome length is 1.73 Mbp.

Description of *Candidatus* Tegumaria gen. nov.

Candidatus Tegumaria (NL. fem. n. *Tegumaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *AAA071-K20*. The type species for the genus is *Candidatus* Tegumaria viragicella .

According to the original version of GTDB R06-RS202, this genus belongs to the family *AAA071-K20*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Tegumariaceae.

Description of *Candidatus* Tegumariaceae fam. nov.

Candidatus Tegumariaceae (NL. fem. n. *Tegumariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *AAA071-K20.* The type genus for the taxon is *Candidatus* Tegumaria .

According to the original version of GTDB R06-RS202, this family belongs to the order *GCA-2716485*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Resurulales.

Description of *Candidatus* Tegumella immurugo sp. nov.

Candidatus Tegumella immurugo (NL. fem. n. *immurugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2401785 sp002401785*. The type genome for the species is the GenBank assembly GCA_002401785.1. The GC content of the type genome is 35.09 % and the genome length is 1.11 Mbp.

Description of *Candidatus* Tegumella gen. nov.

Candidatus Tegumella (NL. fem. n. *Tegumella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2401785*. The type species for the genus is *Candidatus* Tegumella immurugo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GCA-2401785*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Tegumellaceae.

Description of *Candidatus* Tegumellaceae fam. nov.

Candidatus Tegumellaceae (NL. fem. n. *Tegumellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *GCA-2401785.* The type genus for the taxon is *Candidatus* Tegumella .

According to GTDB R06-RS202, this family belongs to the order *Babeliales*.

Description of *Candidatus* Tegumida appagibula sp. nov.

Candidatus Tegumida appagibula (NL. fem. n. *appagibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7359 sp002470825*. The type genome for the species is the

GenBank assembly GCA_002470825.1. The GC content of the type genome is 37.22 % and the genome length is 1.82 Mbp.

Description of *Candidatus* Tegumida gen. nov.

Candidatus Tegumida (NL. fem. n. *Tegumida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA7359*. The type species for the genus is *Candidatus* Tegumida appagibula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA4486*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Facunulaceae.

Description of *Candidatus* Tegumida bimetentia sp. nov.

Candidatus Tegumida bimetentia (NL. fem. n. *bimetentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7359 sp002292815*. The type genome for the species is the GenBank assembly GCA_002292815.1. The GC content of the type genome is 40.74 % and the genome length is 2.45 Mbp.

Description of *Candidatus* Tegumula pluscitas sp. nov.

Candidatus Tegumula pluscitas (NL. fem. n. *pluscitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYBP01 sp012730075*. The type genome for the species is the GenBank assembly GCA_012730075.1. The GC content of the type genome is 73.97 % and the genome length is 3.32 Mbp.

Description of *Candidatus* Tegumula gen. nov.

Candidatus Tegumula (NL. fem. n. *Tegumula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAYBP01*. The type species for the genus is *Candidatus* Tegumula pluscitas .

According to the original version of GTDB R06-RS202, this genus belongs to the family

JAAYBP01. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Tegumulaceae.

Description of *Candidatus* Tegumulaceae fam. nov.

Candidatus Tegumulaceae (NL. fem. n. *Tegumulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JAAYBP01.* The type genus for the taxon is *Candidatus* Tegumula .

According to GTDB R06-RS202, this family belongs to the order *Acidimicrobiales*.

Description of *Candidatus* Telefana ulcisibra sp. nov.

Candidatus Telefana ulcisibra (NL. fem. n. *ulcisibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GWA2-38-13b sp000992445*. The type genome for the species is the GenBank assembly GCA_000992445.2. The GC content of the type genome is 37.83 % and the genome length is 0.87 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "aquifer sediment".

Description of *Candidatus* Telefana gen. nov.

Candidatus Telefana (NL. fem. n. *Telefana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GWA2-38-13b*. The type species for the genus is *Candidatus* Telefana ulcisibra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GWA2-38-13b*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Telefanaceae.

Description of *Candidatus* Telefanaceae fam. nov.

Candidatus Telefanaceae (NL. fem. n. *Telefanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *GWA2-38-13b.* The type genus for the taxon is *Candidatus* Telefana .

According to the original version of GTDB R06-RS202, this family belongs to the order

GWA2-38-13b. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Telefanales.

Description of *Candidatus* Telefanales ord. nov.

Candidatus Telefanales (NL. fem. n. *Telefanales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *GWA2-38-13b.* The type genus for the taxon is *Candidatus* Telefana .

According to the GTDB R06-RS202, this order belongs to the class *Paceibacteria*.

Description of *Candidatus* Telefaria sacomitia sp. nov.

Candidatus Telefaria sacomitia (NL. fem. n. *sacomitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA11490 sp003524095*. The type genome for the species is the GenBank assembly GCA_003524095.1. The GC content of the type genome is 32.42 % and the genome length is 1.19 Mbp.

Description of *Candidatus* Telefaria gen. nov.

Candidatus Telefaria (NL. fem. n. *Telefaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA11490*. The type species for the genus is *Candidatus* Telefaria sacomitia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1242*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Macilulaceae.

Description of *Candidatus* Telefella cuferimonia sp. nov.

Candidatus Telefella cuferimonia (NL. fem. n. *cuferimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7701 sp002482545*. The type genome for the species is the GenBank assembly GCA_002482545.1. The GC content of the type genome is 55.99 %

and the genome length is 3.58 Mbp.

Description of *Candidatus* Telefella gen. nov.

Candidatus Telefella (NL. fem. n. *Telefella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA7701*. The type species for the genus is *Candidatus* Telefella cuferimonia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA7701*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Telefellaceae.

Description of *Candidatus* Telefellaceae fam. nov.

Candidatus Telefellaceae (NL. fem. n. *Telefellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA7701*. The type genus for the taxon is *Candidatus* Telefella .

According to GTDB R06-RS202, this family belongs to the order *Sporomusales*.

Description of *Candidatus* Telefia colubitas sp. nov.

Candidatus Telefia colubitas (NL. fem. n. *colubitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-01-FULL-49-22 sp001788565*. The type genome for the species is the GenBank assembly GCA_001788565.1. The GC content of the type genome is 49.17 % and the genome length is 0.69 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 1.2 micron filter; full assembly".

Description of *Candidatus* Telefia gen. nov.

Candidatus Telefia (NL. fem. n. *Telefia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *2-01-FULL-49-22*. The type species for the genus is *Candidatus* Telefia colubitas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA10212*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Categiaceae.

Description of *Candidatus* Telefida turifisca sp. nov.

Candidatus Telefida turifisca (NL. fem. n. *turifisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SLDV01 sp007125165*. The type genome for the species is the GenBank assembly GCA_007133475.1. The GC content of the type genome is 52.22 % and the genome length is 2.59 Mbp.

Description of *Candidatus* Telefida gen. nov.

Candidatus Telefida (NL. fem. n. *Telefida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SLDV01*. The type species for the genus is *Candidatus* Telefida turifisca .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Telefosa tametimonas sp. nov.

Candidatus Telefosa tametimonas (NL. fem. n. *tametimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Palsa-883 sp003151425*. The type genome for the species is the GenBank assembly GCA_003151425.1. The GC content of the type genome is 66.34 % and the genome length is 7.75 Mbp.

Description of *Candidatus* Telefosa gen. nov.

Candidatus Telefosa (NL. fem. n. *Telefosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Palsa-883*. The type species for the genus is *Candidatus* Telefosa tametimonas .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Telefula catafitrix sp. nov.

Candidatus Telefula catafitrix (NL. fem. n. *catafitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *B3-Chlor sp005223035*. The type genome for the species is the GenBank assembly GCA_005223035.1. The GC content of the type genome is 58.19 % and the genome length is 2.82 Mbp.

Description of *Candidatus* Telefula gen. nov.

Candidatus Telefula (NL. fem. n. *Telefula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *B3-Chlor*. The type species for the genus is *Candidatus* Telefula catafitrix .

According to the original version of GTDB R06-RS202, this genus belongs to the family *B3-Chlor*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Telefulaceae.

Description of *Candidatus* Telefulaceae fam. nov.

Candidatus Telefulaceae (NL. fem. n. *Telefulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *B3-Chlor.* The type genus for the taxon is *Candidatus* Telefula .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA7937*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Releniales.

Description of *Candidatus* Telegana buxanousia sp. nov.

Candidatus Telegana buxanousia (NL. fem. n. *buxanousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7185 sp002491065*. The type genome for the species is the GenBank assembly GCA_002361105.1. The GC content of the type genome is 44.24 % and the genome length is 2.15 Mbp.

Description of *Candidatus* Telegana gen. nov.

Candidatus Telegana (NL. fem. n. *Telegana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA7185*. The type species for the genus is *Candidatus* Telegana buxanousia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Telegana cerififica sp. nov.

Candidatus Telegana cerififica (NL. fem. n. *cerififica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7185 sp900556545*. The type genome for the species is the GenBank assembly GCA_900556545.1. The GC content of the type genome is 42.84 % and the genome length is 2.25 Mbp.

Description of *Candidatus* Telegana indupastra sp. nov.

Candidatus Telegana indupastra (NL. fem. n. *indupastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7185 sp900756555*. The type genome for the species is the GenBank assembly RS_GCF_900756555.1. The GC content of the type genome is 45.34 % and the genome length is 2.48 Mbp.

Description of *Candidatus* Telegaria fefelibra sp. nov.

Candidatus Telegaria fefelibra (NL. fem. n. *fefelibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GWA2-43-13 sp000999025*. The type genome for the species is the GenBank assembly GCA_001818135.1. The GC content of the type genome is 43.32 % and the genome length is 0.8 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under low O2 conditions; 0.2 micron filter; full assembly".

Description of *Candidatus* Telegaria gen. nov.

Candidatus Telegaria (NL. fem. n. *Telegaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GWA2-43-13*. The type species for the genus is *Candidatus* Telegaria fefelibra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GWA2-43-13*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Telegariaceae.

Description of *Candidatus* Telegariaceae fam. nov.

Candidatus Telegariaceae (NL. fem. n. *Telegariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *GWA2-43-13.* The type genus for the taxon is *Candidatus* Telegaria .

According to the original version of GTDB R06-RS202, this family belongs to the order *GWA2-43-13*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Telegariales.

Description of *Candidatus* Telegariales ord. nov.

Candidatus Telegariales (NL. fem. n. *Telegariales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *GWA2-43-13.* The type genus for the taxon is *Candidatus* Telegaria .

According to the original version of GTDB R06-RS202, this family belongs to the class *ABY1*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Defunanae.

Description of *Candidatus* Telegella semodetta sp. nov.

Candidatus Telegella semodetta (NL. fem. n. *semodetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACIZP01 sp014359355*. The type genome for the species is the GenBank assembly GCA_014359355.1. The GC content of the type genome is 61.34 % and the genome length is 3.79 Mbp.

Description of *Candidatus* Telegella gen. nov.

Candidatus Telegella (NL. fem. n. *Telegella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACIZP01*. The type species for the genus is *Candidatus* Telegella semodetta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JACIZP01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Telegellaceae.

Description of *Candidatus* Telegellaceae fam. nov.

Candidatus Telegellaceae (NL. fem. n. *Telegellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JACIZP01.* The type genus for the taxon is *Candidatus* Telegella .

According to the original version of GTDB R06-RS202, this family belongs to the order *JACIZP01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Telegellales.

Description of *Candidatus* Telegellales ord. nov.

Candidatus Telegellales (NL. fem. n. *Telegellales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JACIZP01.* The type genus for the taxon is *Candidatus* Telegella .

According to the original version of GTDB R06-RS202, this family belongs to the class *UBA2214*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Renavosae.

Description of *Candidatus* Telegida monopifica sp. nov.

Candidatus Telegida monopifica (NL. fem. n. *monopifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *D16-34 sp003612515*. The type genome for the species is the GenBank assembly RS_GCF_003612515.1. The GC content of the type genome is 48.79 % and the

genome length is 2.17 Mbp.

Description of *Candidatus* Telegida gen. nov.

Candidatus Telegida (NL. fem. n. *Telegida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *D16-34*. The type species for the genus is *Candidatus* Telegida monopifica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Telegida penicilega sp. nov.

Candidatus Telegida penicilega (NL. fem. n. *penicilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *D16-34 sp009911635*. The type genome for the species is the GenBank assembly RS_GCF_009911635.1. The GC content of the type genome is 64.42 % and the genome length is 2.7 Mbp.

Description of *Candidatus* Telegida socagimonas sp. nov.

Candidatus Telegida socagimonas (NL. fem. n. *socagimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *D16-34 sp011039175*. The type genome for the species is the GenBank assembly RS_GCF_011039215.1. The GC content of the type genome is 63.23 % and the genome length is 2.84 Mbp.

Description of *Candidatus* Telegida terebisca sp. nov.

Candidatus Telegida terebisca (NL. fem. n. *terebisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *D16-34 sp011392455*. The type genome for the species is the GenBank assembly RS_GCF_011040415.1. The GC content of the type genome is 63.17 % and the genome length is 2.73 Mbp.

Description of *Candidatus* Telegosa obnunitoga sp. nov.

Candidatus Telegosa obnunitoga (NL. fem. n. *obnunitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8190 sp003453695*. The type genome for the species is the GenBank assembly GCA_003453695.1. The GC content of the type genome is 70.49 % and the genome length is 3.11 Mbp.

Description of *Candidatus* Telegosa gen. nov.

Candidatus Telegosa (NL. fem. n. *Telegosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA8190*. The type species for the genus is *Candidatus* Telegosa obnunitoga .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA8190*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Telegosaceae.

Description of *Candidatus* Telegosaceae fam. nov.

Candidatus Telegosaceae (NL. fem. n. *Telegosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA8190.* The type genus for the taxon is *Candidatus* Telegosa .

According to GTDB R06-RS202, this family belongs to the order *Acidimicrobiales*.

Description of *Candidatus* Telegula invicentia sp. nov.

Candidatus Telegula invicentia (NL. fem. n. *invicentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SLHB01 sp007136375*. The type genome for the species is the GenBank assembly GCA_007136375.1. The GC content of the type genome is 64.69 % and the genome length is 3.58 Mbp.

Description of *Candidatus* Telegula gen. nov.

Candidatus Telegula (NL. fem. n. *Telegula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SLHB01*. The type species for the genus is *Candidatus* Telegula invicentia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SLHB01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Telegulaceae.

Description of *Candidatus* Telegulaceae fam. nov.

Candidatus Telegulaceae (NL. fem. n. *Telegulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SLHB01*. The type genus for the taxon is *Candidatus* Telegula .

According to GTDB R06-RS202, this family belongs to the order *Hydrogenedentiales*.

Description of *Candidatus* Televana selecibra sp. nov.

Candidatus Televana selecibra (NL. fem. n. *selecibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-02-FULL-52-16 sp001787535*. The type genome for the species is the GenBank assembly GCA_001787535.1. The GC content of the type genome is 51.57 % and the genome length is 1.2 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 0.1 micron filter; full assembly".

Description of *Candidatus* Televana gen. nov.

Candidatus Televana (NL. fem. n. *Televana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *2-02-FULL-52-16*. The type species for the genus is *Candidatus* Televana selecibra .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Televaria fetulatica sp. nov.

Candidatus Televaria fetulatica (NL. fem. n. *fetulatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SpSt-956 sp011343225*. The type genome for the species is the GenBank assembly GCA_011343225.1. The GC content of the type genome is 34.54 % and the genome length is 2.25 Mbp.

Description of *Candidatus* Televaria gen. nov.

Candidatus Televaria (NL. fem. n. *Televaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SpSt-956*. The type species for the genus is *Candidatus* Televaria fetulatica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SpSt-956*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Televariaceae.

Description of *Candidatus* Televariaceae fam. nov.

Candidatus Televariaceae (NL. fem. n. *Televariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SpSt-956.* The type genus for the taxon is *Candidatus* Televaria .

According to the original version of GTDB R06-RS202, this family belongs to the order *SpSt-956*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Televariales.

Description of *Candidatus* Televariales ord. nov.

Candidatus Televariales (NL. fem. n. *Televariales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SpSt-956.* The type genus for the taxon is *Candidatus* Televaria .

According to the original version of GTDB R06-RS202, this family belongs to the class *SpSt-956*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Televariae.

Description of *Candidatus* Televariae class. nov.

Candidatus Televariae (NL. fem. n. *c__Televariae* a name created from the name of the

type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SpSt-956.* The type genus for the taxon is *Candidatus* Televaria .

According to the original version of GTDB R06-RS202, this family belongs to the phylum *SpSt-956*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the phylum *Candidatus* Televariota.

Description of *Candidatus* Televariota phyl. nov.

Candidatus Televariota (NL. fem. n. *Televariota* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SpSt-956.* The type genus for the taxon is *Candidatus* Televaria .

According to GTDB R06-RS202, this phylum belongs to the domain *Bacteria* .

Description of *Candidatus* Televella deforitura sp. nov.

Candidatus Televella deforitura (NL. fem. n. *deforitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SLLG01 sp007123395*. The type genome for the species is the GenBank assembly GCA_007123395.1. The GC content of the type genome is 62.77 % and the genome length is 4.08 Mbp.

Description of *Candidatus* Televella gen. nov.

Candidatus Televella (NL. fem. n. *Televella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SLLG01*. The type species for the genus is *Candidatus* Televella deforitura .

According to the original version of GTDB R06-RS202, this genus belongs to the family *Verruco-01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vitigidaceae.

Description of *Candidatus* Televella extunitia sp. nov.

Candidatus Televella extunitia (NL. fem. n. *extunitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SLLG01 sp007134215*. The type genome for the species is the GenBank assembly GCA_007134215.1. The GC content of the type genome is 63.75 % and the genome length is 4.44 Mbp.

Description of *Candidatus* Televia adlecitoga sp. nov.

Candidatus Televia adlecitoga (NL. fem. n. *adlecitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-465 sp000433335*. The type genome for the species is the GenBank assembly GCA_000433335.1. The GC content of the type genome is 28.11 % and the genome length is 1.07 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "derived from human gut metagenome".

Description of *Candidatus* Televia gen. nov.

Candidatus Televia (NL. fem. n. *Televia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAG-465*. The type species for the genus is *Candidatus* Televia adlecitoga .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-465*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Televiaceae.

Description of *Candidatus* Televiaceae fam. nov.

Candidatus Televiaceae (NL. fem. n. *Televiaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CAG-465.* The type genus for the taxon is *Candidatus* Televia .

According to the original version of GTDB R06-RS202, this family belongs to the order *TANB77*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Dupuniales.

Description of *Candidatus* Televia fibicimonas sp. nov.

Candidatus Televia fibicimonas (NL. fem. n. *fibicimonas* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-465 sp900772475*. The type genome for the species is the GenBank assembly RS_GCF_900772475.1. The GC content of the type genome is 26.98 % and the genome length is 1.62 Mbp.

Description of *Candidatus* Televia hegumedo sp. nov.

Candidatus Televia hegumedo (NL. fem. n. *hegumedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-465 sp000433755*. The type genome for the species is the GenBank assembly GCA_000433755.1. The GC content of the type genome is 26.75 % and the genome length is 1.18 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "derived from human gut metagenome".

Description of *Candidatus* Televia horomastra sp. nov.

Candidatus Televia horomastra (NL. fem. n. *horomastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-465 sp000433135*. The type genome for the species is the GenBank assembly GCA_000433135.1. The GC content of the type genome is 27.32 % and the genome length is 1.47 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "derived from human gut metagenome".

Description of *Candidatus* Televia visibousia sp. nov.

Candidatus Televia visibousia (NL. fem. n. *visibousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-465 sp900554875*. The type genome for the species is the GenBank assembly GCA_900554875.1. The GC content of the type genome is 27.69 % and the genome length is 1.16 Mbp.

Description of *Candidatus* Televosa repepilenta sp. nov.

Candidatus Televosa repepilenta (NL. fem. n. *repepilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *J113 sp003694425*. The type genome for the species is the GenBank assembly GCA_003694425.1. The GC content of the type genome is 67.29 % and the genome length is 2.08 Mbp.

Description of *Candidatus* Televosa gen. nov.

Candidatus Televosa (NL. fem. n. *Televosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *J113*. The type species for the genus is *Candidatus* Televosa repepilenta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *J113*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Televosaceae.

Description of *Candidatus* Televosaceae fam. nov.

Candidatus Televosaceae (NL. fem. n. *Televosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *J113.* The type genus for the taxon is *Candidatus* Televosa .

According to the original version of GTDB R06-RS202, this family belongs to the order *J113*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Televosales.

Description of *Candidatus* Televosales ord. nov.

Candidatus Televosales (NL. fem. n. *Televosales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *J113.* The type genus for the taxon is *Candidatus* Televosa .

According to the GTDB R06-RS202, this order belongs to the class *Gammaproteobacteria*.

Description of *Candidatus* Televula exhoritura sp. nov.

Candidatus Televula exhoritura (NL. fem. n. *exhoritura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTMN01 sp011332965*. The type genome for the species is the GenBank assembly GCA_011332965.1. The GC content of the type genome is 55.97 % and the genome length is 2.14 Mbp.

Description of *Candidatus* Televula gen. nov.

Candidatus Televula (NL. fem. n. *Televula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DTMN01*. The type species for the genus is *Candidatus* Televula exhoritura .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DTMN01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Televulaceae.

Description of *Candidatus* Televulaceae fam. nov.

Candidatus Televulaceae (NL. fem. n. *Televulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *DTMN01.* The type genus for the taxon is *Candidatus* Televula .

According to the original version of GTDB R06-RS202, this family belongs to the order *LBFQ01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Bigemellales.

Description of *Candidatus* Telmatospirillum crusmitio sp. nov.

Candidatus Telmatospirillum crusmitio (NL. fem. n. *crusmitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Telmatospirillum sp009712185*. The type genome for the species is the GenBank assembly GCA_009712185.1. The GC content of the type genome is 64.53 % and the genome length is 6.11 Mbp.

Description of *Candidatus* Telmatospirillum horomilenta sp. nov.

Candidatus Telmatospirillum horomilenta (NL. fem. n. *horomilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Telmatospirillum sp013349735*. The type genome for the species is the GenBank assembly GCA_013349735.1. The GC content of the type genome is 57.51 % and the genome length is 2.09 Mbp.

Description of *Candidatus* Telmatospirillum legifousia sp. nov.

Candidatus Telmatospirillum legifousia (NL. fem. n. *legifousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Telmatospirillum sp013349665*. The type genome for the species is the GenBank assembly GCA_013349665.1. The GC content of the type genome is 64.25 % and the genome length is 3.19 Mbp.

Description of *Candidatus* Telmatospirillum xeramax sp. nov.

Candidatus Telmatospirillum xeramax (NL. fem. n. *xeramax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Telmatospirillum sp903858635*. The type genome for the species is the GenBank assembly GCA_903858635.1. The GC content of the type genome is 64.68 % and the genome length is 6.13 Mbp.

Description of *Candidatus* Tenacibaculum anaclugo sp. nov.

Candidatus Tenacibaculum anaclugo (NL. fem. n. *anaclugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Tenacibaculum sp002836595*. The type genome for the species is the GenBank assembly RS_GCF_002836595.1. The GC content of the type genome is 29.77 % and the genome length is 4.54 Mbp.

Description of *Candidatus* Tenacibaculum aspiledo sp. nov.

Candidatus Tenacibaculum aspiledo (NL. fem. n. *aspiledo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Tenacibaculum sp900239505*. The type genome for the species is the GenBank assembly RS_GCF_900239505.1. The GC content of the type genome is 30.71

% and the genome length is 2.45 Mbp.

Description of *Candidatus* Tenacibaculum attoritoga sp. nov.

Candidatus Tenacibaculum attoritoga (NL. fem. n. *attoritoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Tenacibaculum sp002813915*. The type genome for the species is the GenBank assembly RS_GCF_002813915.1. The GC content of the type genome is 31.14 % and the genome length is 4.02 Mbp.

Description of *Candidatus* Tenacibaculum bicoditio sp. nov.

Candidatus Tenacibaculum bicoditio (NL. fem. n. *bicoditio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Tenacibaculum sp014062345*. The type genome for the species is the GenBank assembly RS_GCF_014062345.1. The GC content of the type genome is 30.86 % and the genome length is 2.62 Mbp.

Description of *Candidatus* Tenacibaculum depupousia sp. nov.

Candidatus Tenacibaculum depupousia (NL. fem. n. *depupousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Tenacibaculum sp004337695*. The type genome for the species is the GenBank assembly RS_GCF_004337695.1. The GC content of the type genome is 30.09 % and the genome length is 5.12 Mbp.

Description of *Candidatus* Tenacibaculum epicrimonas sp. nov.

Candidatus Tenacibaculum epicrimonas (NL. fem. n. *epicrimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Tenacibaculum sp004762155*. The type genome for the species is the GenBank assembly RS_GCF_004762155.1. The GC content of the type genome is 29.33 % and the genome length is 4.69 Mbp.

Description of *Candidatus* Tenacibaculum ignifitoga sp. nov.

Candidatus Tenacibaculum ignifitoga (NL. fem. n. *ignifitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Tenacibaculum sp900105455*. The type genome for the species is the GenBank assembly RS_GCF_900105455.1. The GC content of the type genome is 32.4 % and the genome length is 5.52 Mbp.

Description of *Candidatus* Tenacibaculum malivugo sp. nov.

Candidatus Tenacibaculum malivugo (NL. fem. n. *malivugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Tenacibaculum sp900105985*. The type genome for the species is the GenBank assembly RS_GCF_900105985.1. The GC content of the type genome is 29.32 % and the genome length is 4.17 Mbp.

Description of *Candidatus* Tenacibaculum xenodax sp. nov.

Candidatus Tenacibaculum xenodax (NL. fem. n. *xenodax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Tenacibaculum sp002954385*. The type genome for the species is the GenBank assembly RS_GCF_002954385.1. The GC content of the type genome is 34.37 % and the genome length is 2.8 Mbp.

Description of *Candidatus* Tenebana acricicella sp. nov.

Candidatus Tenebana acricicella (NL. fem. n. *acricicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9475 sp900554075*. The type genome for the species is the GenBank assembly GCA_900554075.1. The GC content of the type genome is 60.84 % and the genome length is 1.47 Mbp.

Description of *Candidatus* Tenebana gen. nov.

Candidatus Tenebana (NL. fem. n. *Tenebana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA9475*. The type species for the genus is *Candidatus* Tenebana acricicella .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Tenebana adculessa sp. nov.

Candidatus Tenebana adculessa (NL. fem. n. *adculessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9475 sp002161235*. The type genome for the species is the GenBank assembly RS_GCF_002161235.1. The GC content of the type genome is 56.19 % and the genome length is 2.98 Mbp.

Description of *Candidatus* Tenebana angipitia sp. nov.

Candidatus Tenebana angipitia (NL. fem. n. *angipitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9475 sp004560375*. The type genome for the species is the GenBank assembly GCA_004560375.1. The GC content of the type genome is 63.86 % and the genome length is 2.38 Mbp.

Description of *Candidatus* Tenebana dicimilega sp. nov.

Candidatus Tenebana dicimilega (NL. fem. n. *dicimilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9475 sp900549885*. The type genome for the species is the GenBank assembly GCA_900549885.1. The GC content of the type genome is 58.22 % and the genome length is 2.7 Mbp.

Description of *Candidatus* Tenebana direpatio sp. nov.

Candidatus Tenebana direpatio (NL. fem. n. *direpatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9475 sp002161675*. The type genome for the species is the

GenBank assembly RS_GCF_012027765.1. The GC content of the type genome is 58.09 % and the genome length is 2.63 Mbp.

Description of *Candidatus* Tenebana sepositica sp. nov.

Candidatus Tenebana sepositica (NL. fem. n. *sepositica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9475 sp003534045*. The type genome for the species is the GenBank assembly GCA_003534045.1. The GC content of the type genome is 61.38 % and the genome length is 1.45 Mbp.

Description of *Candidatus* Tenebaria aglasimonia sp. nov.

Candidatus Tenebaria aglasimonia (NL. fem. n. *aglasimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIVHB01 sp903905585*. The type genome for the species is the GenBank assembly GCA_903905585.1. The GC content of the type genome is 48.54 % and the genome length is 2.29 Mbp.

Description of *Candidatus* Tenebaria gen. nov.

Candidatus Tenebaria (NL. fem. n. *Tenebaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIVHB01*. The type species for the genus is *Candidatus* Tenebaria aglasimonia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Tenebaria cocibitudo sp. nov.

Candidatus Tenebaria cocibitudo (NL. fem. n. *cocibitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIVHB01 sp903863375*. The type genome for the species is the GenBank assembly GCA_903926265.1. The GC content of the type genome is 65.24 % and the genome length is 3.22 Mbp.

Description of *Candidatus* Tenebaria enuclilega sp. nov.

Candidatus Tenebaria enuclilega (NL. fem. n. *enuclilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIVHB01 sp903867885*. The type genome for the species is the GenBank assembly GCA_903867885.1. The GC content of the type genome is 48.58 % and the genome length is 2.19 Mbp.

Description of *Candidatus* Tenebaria secunitrix sp. nov.

Candidatus Tenebaria secunitrix (NL. fem. n. *secunitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIVHB01 sp903893215*. The type genome for the species is the GenBank assembly GCA_903893215.1. The GC content of the type genome is 63.73 % and the genome length is 3.27 Mbp.

Description of *Candidatus* Tenebella calipilega sp. nov.

Candidatus Tenebella calipilega (NL. fem. n. *calipilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3839 sp900319385*. The type genome for the species is the GenBank assembly GCA_902795915.1. The GC content of the type genome is 55.71 % and the genome length is 2.1 Mbp.

Description of *Candidatus* Tenebella gen. nov.

Candidatus Tenebella (NL. fem. n. *Tenebella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA3839*. The type species for the genus is *Candidatus* Tenebella calipilega .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Tenebella canacitoga sp. nov.

Candidatus Tenebella canacitoga (NL. fem. n. *canacitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3839 sp002393575*. The type genome for the species is the GenBank assembly GCA_002393575.1. The GC content of the type genome is 47.34 % and the genome length is 3.57 Mbp.

Description of *Candidatus* Tenebella cinipastra sp. nov.

Candidatus Tenebella cinipastra (NL. fem. n. *cinipastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3839 sp900321835*. The type genome for the species is the GenBank assembly GCA_902756015.1. The GC content of the type genome is 55.49 % and the genome length is 2.38 Mbp.

Description of *Candidatus* Tenebella deforicella sp. nov.

Candidatus Tenebella deforicella (NL. fem. n. *deforicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3839 sp900313845*. The type genome for the species is the GenBank assembly GCA_002391305.1. The GC content of the type genome is 46.4 % and the genome length is 3.28 Mbp.

Description of *Candidatus* Tenebella deneciforma sp. nov.

Candidatus Tenebella deneciforma (NL. fem. n. *deneciforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3839 sp002350855*. The type genome for the species is the GenBank assembly GCA_002350855.1. The GC content of the type genome is 45.81 % and the genome length is 2.23 Mbp.

Description of *Candidatus* Tenebella detecitia sp. nov.

Candidatus Tenebella detecitia (NL. fem. n. *detecitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *UBA3839 sp902798705*. The type genome for the species is the GenBank assembly GCA_902798705.1. The GC content of the type genome is 47.18 % and the genome length is 3.31 Mbp.

Description of *Candidatus* Tenebella homulitudo sp. nov.

Candidatus Tenebella homulitudo (NL. fem. n. *homulitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3839 sp002305265*. The type genome for the species is the GenBank assembly GCA_002305265.1. The GC content of the type genome is 60.12 % and the genome length is 1.57 Mbp.

Description of *Candidatus* Tenebella mirifigena sp. nov.

Candidatus Tenebella mirifigena (NL. fem. n. *mirifigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3839 sp900314125*. The type genome for the species is the GenBank assembly GCA_902762005.1. The GC content of the type genome is 48.4 % and the genome length is 2.74 Mbp.

Description of *Candidatus* Tenebia depelugo sp. nov.

Candidatus Tenebia depelugo (NL. fem. n. *depelugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GBS-DC sp011054145*. The type genome for the species is the GenBank assembly GCA_011048035.1. The GC content of the type genome is 63.95 % and the genome length is 3.04 Mbp.

Description of *Candidatus* Tenebia gen. nov.

Candidatus Tenebia (NL. fem. n. *Tenebia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GBS-DC*. The type species for the genus is *Candidatus* Tenebia depelugo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GBS-DC*. According to the renamed version of GTDB R06-RS202, this taxon belongs to

the family *Candidatus* Tenebiaceae.

Description of *Candidatus* Tenebiaceae fam. nov.

Candidatus Tenebiaceae (NL. fem. n. *Tenebiaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *GBS-DC.* The type genus for the taxon is *Candidatus* Tenebia .

According to GTDB R06-RS202, this family belongs to the order *Fimbriimonadales*.

Description of *Candidatus* Tenebia domigifica sp. nov.

Candidatus Tenebia domigifica (NL. fem. n. *domigifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GBS-DC sp002254605*. The type genome for the species is the GenBank assembly GCA_003695875.1. The GC content of the type genome is 59.23 % and the genome length is 2.5 Mbp.

Description of *Candidatus* Tenebia eccililega sp. nov.

Candidatus Tenebia eccililega (NL. fem. n. *eccililega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GBS-DC sp011380455*. The type genome for the species is the GenBank assembly GCA_011380455.1. The GC content of the type genome is 59.35 % and the genome length is 2.38 Mbp.

Description of *Candidatus* Tenebia fumifivita sp. nov.

Candidatus Tenebia fumifivita (NL. fem. n. *fumifivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GBS-DC sp011373295*. The type genome for the species is the GenBank assembly GCA_011373295.1. The GC content of the type genome is 61.26 % and the genome length is 2.31 Mbp.

Description of *Candidatus* Tenebida cacalisca sp. nov.

Candidatus Tenebida cacalisca (NL. fem. n. *cacalisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WREN01 sp009779295*. The type genome for the species is the GenBank assembly GCA_009779295.1. The GC content of the type genome is 43.68 % and the genome length is 2.45 Mbp.

Description of *Candidatus* Tenebida gen. nov.

Candidatus Tenebida (NL. fem. n. *Tenebida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WREN01*. The type species for the genus is *Candidatus* Tenebida cacalisca .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-272*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Colipariaceae.

Description of *Candidatus* Tenebosa funamitura sp. nov.

Candidatus Tenebosa funamitura (NL. fem. n. *funamitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5066 sp002414905*. The type genome for the species is the GenBank assembly GCA_002414905.1. The GC content of the type genome is 69.02 % and the genome length is 4.27 Mbp.

Description of *Candidatus* Tenebosa gen. nov.

Candidatus Tenebosa (NL. fem. n. *Tenebosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA5066*. The type species for the genus is *Candidatus* Tenebosa funamitura .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA5066*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Tenebosaceae.

Description of *Candidatus* Tenebosaceae fam. nov.

Candidatus Tenebosaceae (NL. fem. n. *Tenebosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA5066.* The type genus for the taxon is *Candidatus* Tenebosa .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA5066*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Tenebosales.

Description of *Candidatus* Tenebosales ord. nov.

Candidatus Tenebosales (NL. fem. n. *Tenebosales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA5066.* The type genus for the taxon is *Candidatus* Tenebosa .

According to the GTDB R06-RS202, this order belongs to the class *Thermoanaerobaculia*.

Description of *Candidatus* Tenebula figilifica sp. nov.

Candidatus Tenebula figilifica (NL. fem. n. *figilifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CFH-75059 sp004331795*. The type genome for the species is the GenBank assembly RS_GCF_004153605.1. The GC content of the type genome is 68.51 % and the genome length is 2.26 Mbp.

Description of *Candidatus* Tenebula gen. nov.

Candidatus Tenebula (NL. fem. n. *Tenebula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CFH-75059*. The type species for the genus is *Candidatus* Tenebula figilifica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Tenemana refulugo sp. nov.

Candidatus Tenemana refulugo (NL. fem. n. *refulugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GWE2-31-10 sp001829315*. The type genome for the species is the GenBank assembly GCA_003497525.1. The GC content of the type genome is 31.37 % and the genome length is 4.46 Mbp.

Description of *Candidatus* Tenemana gen. nov.

Candidatus Tenemana (NL. fem. n. *Tenemana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GWE2-31-10*. The type species for the genus is *Candidatus* Tenemana refulugo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GWE2-31-10*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Tenemanaceae.

Description of *Candidatus* Tenemanaceae fam. nov.

Candidatus Tenemanaceae (NL. fem. n. *Tenemanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *GWE2-31-10.* The type genus for the taxon is *Candidatus* Tenemana .

According to the original version of GTDB R06-RS202, this family belongs to the order *GWE2-31-10*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Tenemanales.

Description of *Candidatus* Tenemanales ord. nov.

Candidatus Tenemanales (NL. fem. n. *Tenemanales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *GWE2-31-10.* The type genus for the taxon is *Candidatus* Tenemana .

According to the original version of GTDB R06-RS202, this family belongs to the class *GWE2-31-10*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Tenemanae.

Description of *Candidatus* Tenemanae class. nov.

Candidatus Tenemanae (NL. fem. n. *c__Tenemanae* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *GWE2-31-10.* The type genus for the taxon is *Candidatus* Tenemana .

According to GTDB R06-RS202, this class belongs to the phylum *Spirochaetota*.

Description of *Candidatus* Tenemaria abambentia sp. nov.

Candidatus Tenemaria abambentia (NL. fem. n. *abambentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2645 sp903879805*. The type genome for the species is the GenBank assembly GCA_903879805.1. The GC content of the type genome is 41.09 % and the genome length is 1.88 Mbp.

Description of *Candidatus* Tenemaria gen. nov.

Candidatus Tenemaria (NL. fem. n. *Tenemaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA2645*. The type species for the genus is *Candidatus* Tenemaria abambentia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1997*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Decapiaceae.

Description of *Candidatus* Tenemaria catapimonia sp. nov.

Candidatus Tenemaria catapimonia (NL. fem. n. *catapimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2645 sp903870105*. The type genome for the species is the GenBank assembly GCA_903917585.1. The GC content of the type genome is 40.19 % and the genome length is 1.45 Mbp.

Description of *Candidatus* Tenemaria conipilenta sp. nov.

Candidatus Tenemaria conipilenta (NL. fem. n. *conipilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2645 sp002359655*. The type genome for the species is the GenBank assembly GCA_002342325.1. The GC content of the type genome is 36.2 % and the genome length is 1.67 Mbp.

Description of *Candidatus* Tenemaria conopessa sp. nov.

Candidatus Tenemaria conopessa (NL. fem. n. *conopessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2645 sp903898475*. The type genome for the species is the GenBank assembly GCA_903831915.1. The GC content of the type genome is 40.82 % and the genome length is 1.76 Mbp.

Description of *Candidatus* Tenemaria funivilenta sp. nov.

Candidatus Tenemaria funivilenta (NL. fem. n. *funivilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2645 sp903849835*. The type genome for the species is the GenBank assembly GCA_903849835.1. The GC content of the type genome is 41.71 % and the genome length is 1.45 Mbp.

Description of *Candidatus* Tenemaria nutabessa sp. nov.

Candidatus Tenemaria nutabessa (NL. fem. n. *nutabessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2645 sp009693885*. The type genome for the species is the GenBank assembly GCA_009693885.1. The GC content of the type genome is 36.84 % and the genome length is 0.85 Mbp.

Description of *Candidatus* Tenemaria serotedo sp. nov.

Candidatus Tenemaria serotedo (NL. fem. n. *serotedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2645 sp001767955*. The type genome for the species is the GenBank assembly GCA_001768805.1. The GC content of the type genome is 39.93 % and the genome length is 1.06 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 0.1 micron filter; full assembly".

Description of *Candidatus* Tenemaria tametifica sp. nov.

Candidatus Tenemaria tametifica (NL. fem. n. *tametifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2645 sp903937405*. The type genome for the species is the GenBank assembly GCA_903906295.1. The GC content of the type genome is 36.47 % and the genome length is 1.6 Mbp.

Description of *Candidatus* Tenemaria ulcisitio sp. nov.

Candidatus Tenemaria ulcisitio (NL. fem. n. *ulcisitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2645 sp903927415*. The type genome for the species is the GenBank assembly GCA_903927415.1. The GC content of the type genome is 41.27 % and the genome length is 1.55 Mbp.

Description of *Candidatus* Tenemella absuricula sp. nov.

Candidatus Tenemella absuricula (NL. fem. n. *absuricula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *J027 sp010092845*. The type genome for the species is the GenBank assembly GCA_010092845.1. The GC content of the type genome is 55.72 % and the genome length is 3.86 Mbp.

Description of *Candidatus* Tenemella gen. nov.

Candidatus Tenemella (NL. fem. n. *Tenemella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *J027*. The type species for the genus is *Candidatus* Tenemella

absuricula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *J027*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Tenemellaceae.

Description of *Candidatus* Tenemellaceae fam. nov.

Candidatus Tenemellaceae (NL. fem. n. *Tenemellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *J027.* The type genus for the taxon is *Candidatus* Tenemella .

According to the original version of GTDB R06-RS202, this family belongs to the order *SBR1031*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Nocumellales.

Description of *Candidatus* Tenemella impudousia sp. nov.

Candidatus Tenemella impudousia (NL. fem. n. *impudousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *J027 sp003697365*. The type genome for the species is the GenBank assembly GCA_003697365.1. The GC content of the type genome is 43.45 % and the genome length is 3.12 Mbp.

Description of *Candidatus* Tenemia inlusitrix sp. nov.

Candidatus Tenemia inlusitrix (NL. fem. n. *inlusitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *QZLD01 sp004796385*. The type genome for the species is the GenBank assembly GCA_004796385.1. The GC content of the type genome is 39.7 % and the genome length is 2.77 Mbp.

Description of *Candidatus* Tenemia gen. nov.

Candidatus Tenemia (NL. fem. n. *Tenemia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *QZLD01*. The type species for the genus is *Candidatus* Tenemia

inlusitrix .

According to the original version of GTDB R06-RS202, this genus belongs to the family *QZLD01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Tenemiaceae.

Description of *Candidatus* Tenemiaceae fam. nov.

Candidatus Tenemiaceae (NL. fem. n. *Tenemiaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *QZLD01.* The type genus for the taxon is *Candidatus* Tenemia .

According to the original version of GTDB R06-RS202, this family belongs to the order *QZLD01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Tenemiales.

Description of *Candidatus* Tenemiales ord. nov.

Candidatus Tenemiales (NL. fem. n. *Tenemiales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *QZLD01.* The type genus for the taxon is *Candidatus* Tenemia .

According to the GTDB R06-RS202, this order belongs to the class *Gammaproteobacteria*.

Description of *Candidatus* Tenemida mutabibula sp. nov.

Candidatus Tenemida mutabibula (NL. fem. n. *mutabibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *TCS60 sp001577135*. The type genome for the species is the GenBank assembly GCA_001577135.1. The GC content of the type genome is 35.55 % and the genome length is 0.68 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "biofilm from deap sea brine pool".

Description of *Candidatus* Tenemida gen. nov.

Candidatus Tenemida (NL. fem. n. *Tenemida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this genus is *TCS60*. The type species for the genus is *Candidatus* Tenemida mutabibula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *TCS60*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Tenemidaceae.

Description of *Candidatus* Tenemidaceae fam. nov.

Candidatus Tenemidaceae (NL. fem. n. *Tenemidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *TCS60.* The type genus for the taxon is *Candidatus* Tenemida .

According to the original version of GTDB R06-RS202, this family belongs to the order *JGIOTU-2*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Bimetanales.

Description of *Candidatus* Tenemosa bipaticella sp. nov.

Candidatus Tenemosa bipaticella (NL. fem. n. *bipaticella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Fen-1087 sp003161855*. The type genome for the species is the GenBank assembly GCA_003153715.1. The GC content of the type genome is 50.41 % and the genome length is 2.47 Mbp.

Description of *Candidatus* Tenemosa gen. nov.

Candidatus Tenemosa (NL. fem. n. *Tenemosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Fen-1087*. The type species for the genus is *Candidatus* Tenemosa bipaticella .

According to the original version of GTDB R06-RS202, this genus belongs to the family *Fen-1087*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Tenemosaceae.

Description of *Candidatus* Tenemosaceae fam. nov.

Candidatus Tenemosaceae (NL. fem. n. *Tenemosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *Fen-1087.* The type genus for the taxon is *Candidatus* Tenemosa .

According to GTDB R06-RS202, this family belongs to the order *Syntrophales*.

Description of *Candidatus* Tenemula cosigivita sp. nov.

Candidatus Tenemula cosigivita (NL. fem. n. *cosigivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA12077 sp013138975*. The type genome for the species is the GenBank assembly GCA_013138975.1. The GC content of the type genome is 30.83 % and the genome length is 6.81 Mbp.

Description of *Candidatus* Tenemula gen. nov.

Candidatus Tenemula (NL. fem. n. *Tenemula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA12077*. The type species for the genus is *Candidatus* Tenemula cosigivita .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA12077*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Tenemulaceae.

Description of *Candidatus* Tenemulaceae fam. nov.

Candidatus Tenemulaceae (NL. fem. n. *Tenemulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA12077.* The type genus for the taxon is *Candidatus* Tenemula .

According to GTDB R06-RS202, this family belongs to the order *Bacteroidales*.

Description of *Candidatus* Tenemula fiducousia sp. nov.

Candidatus Tenemula fiducousia (NL. fem. n. *fiducousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *UBA12077 sp002869305*. The type genome for the species is the GenBank assembly GCA_002869305.1. The GC content of the type genome is 32.46 % and the genome length is 3.57 Mbp.

Description of *Candidatus* Tenemula illibitura sp. nov.

Candidatus Tenemula illibitura (NL. fem. n. *illibitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA12077 sp001769005*. The type genome for the species is the GenBank assembly GCA_001769005.1. The GC content of the type genome is 30.97 % and the genome length is 3.35 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at time point 1 / A; 5m depth; 0.2 filter".

Description of *Candidatus* Tenemula mutabatio sp. nov.

Candidatus Tenemula mutabatio (NL. fem. n. *mutabatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA12077 sp003446015*. The type genome for the species is the GenBank assembly GCA_003446015.1. The GC content of the type genome is 32.34 % and the genome length is 4.64 Mbp.

Description of *Candidatus* Tenemula peracitio sp. nov.

Candidatus Tenemula peracitio (NL. fem. n. *peracitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA12077 sp001768235*. The type genome for the species is the GenBank assembly GCA_001769045.1. The GC content of the type genome is 33.5 % and the genome length is 3.67 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at time point 1 / A; 5m depth; 0.2 filter".

Description of *Candidatus* Tenemula sicunitoga sp. nov.

Candidatus Tenemula sicunitoga (NL. fem. n. *sicunitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *UBA12077 sp001768565*. The type genome for the species is the GenBank assembly GCA_001768565.1. The GC content of the type genome is 32.48 % and the genome length is 4.33 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at time point 6 / F; 5m depth; 0.2 filter".

Description of *Candidatus* Tenilana semililenta sp. nov.

Candidatus Tenilana semililenta (NL. fem. n. *semililenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HO2-43-120 sp001821295*. The type genome for the species is the GenBank assembly GCA_001820825.1. The GC content of the type genome is 43.15 % and the genome length is 0.79 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 0.1 micron filter; full assembly".

Description of *Candidatus* Tenilana gen. nov.

Candidatus Tenilana (NL. fem. n. *Tenilana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *HO2-43-120*. The type species for the genus is *Candidatus* Tenilana semililenta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA11359_C*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Mavorellaceae.

Description of *Candidatus* Tenilaria bisulatica sp. nov.

Candidatus Tenilaria bisulatica (NL. fem. n. *bisulatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1611 sp012964275*. The type genome for the species is the GenBank assembly GCA_012965175.1. The GC content of the type genome is 42.07 % and the genome length is 2.2 Mbp.

Description of *Candidatus* Tenilaria gen. nov.

Candidatus Tenilaria (NL. fem. n. *Tenilaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1611*. The type species for the genus is *Candidatus* Tenilaria bisulatica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1611*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Tenilariaceae.

Description of *Candidatus* Tenilariaceae fam. nov.

Candidatus Tenilariaceae (NL. fem. n. *Tenilariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA1611*. The type genus for the taxon is *Candidatus* Tenilaria .

According to GTDB R06-RS202, this family belongs to the order *Marinisomatales*.

Description of *Candidatus* Tenilaria offunessa sp. nov.

Candidatus Tenilaria offunessa (NL. fem. n. *offunessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1611 sp002321855*. The type genome for the species is the GenBank assembly GCA_002321855.1. The GC content of the type genome is 39.77 % and the genome length is 1.9 Mbp.

Description of *Candidatus* Tenilella tomacatio sp. nov.

Candidatus Tenilella tomacatio (NL. fem. n. *tomacatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAADHN01 sp013151865*. The type genome for the species is the GenBank assembly GCA_013151865.1. The GC content of the type genome is 63.45 % and the genome length is 6.21 Mbp.

Description of *Candidatus* Tenilella gen. nov.

Candidatus Tenilella (NL. fem. n. *Tenilella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this genus is *JAADHN01*. The type species for the genus is *Candidatus* Tenilella tomacatio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JAADHN01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Tenilellaceae.

Description of *Candidatus* Tenilellaceae fam. nov.

Candidatus Tenilellaceae (NL. fem. n. *Tenilellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JAADHN01*. The type genus for the taxon is *Candidatus* Tenilella .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA1407*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Semilidales.

Description of *Candidatus* Tenilia cosidedo sp. nov.

Candidatus Tenilia cosidedo (NL. fem. n. *cosidedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RGXB01 sp010029555*. The type genome for the species is the GenBank assembly GCA_010029555.1. The GC content of the type genome is 42.47 % and the genome length is 1.41 Mbp.

Description of *Candidatus* Tenilia gen. nov.

Candidatus Tenilia (NL. fem. n. *Tenilia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RGXB01*. The type species for the genus is *Candidatus* Tenilia cosidedo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *RGXB01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Teniliaceae.

Description of *Candidatus* Teniliaceae fam. nov.

Candidatus Teniliaceae (NL. fem. n. *Teniliaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *RGXB01.* The type genus for the taxon is *Candidatus* Tenilia .

According to the original version of GTDB R06-RS202, this family belongs to the order *2-12-FULL-49-11*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Categanales.

Description of *Candidatus* Tenilia detoribula sp. nov.

Candidatus Tenilia detoribula (NL. fem. n. *detoribula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RGXB01 sp010031885*. The type genome for the species is the GenBank assembly GCA_010031885.1. The GC content of the type genome is 40.37 % and the genome length is 1.48 Mbp.

Description of *Candidatus* Tenilida pinifousia sp. nov.

Candidatus Tenilida pinifousia (NL. fem. n. *pinifousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-01-FULL-50-11 sp001777585*. The type genome for the species is the GenBank assembly GCA_001777585.1. The GC content of the type genome is 50.18 % and the genome length is 0.88 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 0.1 micron filter; full assembly".

Description of *Candidatus* Tenilida gen. nov.

Candidatus Tenilida (NL. fem. n. *Tenilida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *2-01-FULL-50-11*. The type species for the genus is *Candidatus* Tenilida pinifousia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *2-01-FULL-50-11*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Tenilidaceae.

Description of *Candidatus* Tenilidaceae fam. nov.

Candidatus Tenilidaceae (NL. fem. n. *Tenilidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *2-01-FULL-50-11.* The type genus for the taxon is *Candidatus* Tenilida .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA920*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Denicosales.

Description of *Candidatus* Tenilosa colimitoga sp. nov.

Candidatus Tenilosa colimitoga (NL. fem. n. *colimitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *QQUJ01 sp008501635*. The type genome for the species is the GenBank assembly GCA_011526005.1. The GC content of the type genome is 60.01 % and the genome length is 3.61 Mbp.

Description of *Candidatus* Tenilosa gen. nov.

Candidatus Tenilosa (NL. fem. n. *Tenilosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *QQUJ01*. The type species for the genus is *Candidatus* Tenilosa colimitoga .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DSM-100275*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Dicabellaceae.

Description of *Candidatus* Tenilula cerevilega sp. nov.

Candidatus Tenilula cerevilega (NL. fem. n. *cerevilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GWC1-42-9 sp000995185*. The type genome for the species is the GenBank assembly GCA_000995185.1. The GC content of the type genome is 41.39 % and the genome length is 0.89 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "aquifer sediment".

Description of *Candidatus* Tenilula gen. nov.

Candidatus Tenilula (NL. fem. n. *Tenilula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GWC1-42-9*. The type species for the genus is *Candidatus* Tenilula cerevilega .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA8517*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Xenoposaceae.

Description of *Candidatus* Tenuifilum admulimonia sp. nov.

Candidatus Tenuifilum admulimonia (NL. fem. n. *admulimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Tenuifilum sp011045955*. The type genome for the species is the GenBank assembly GCA_011045955.1. The GC content of the type genome is 42.25 % and the genome length is 2.77 Mbp.

Description of *Candidatus* Tenuifilum apogricella sp. nov.

Candidatus Tenuifilum apogricella (NL. fem. n. *apogricella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Tenuifilum sp011367975*. The type genome for the species is the GenBank assembly GCA_011367975.1. The GC content of the type genome is 42.13 % and the genome length is 3.19 Mbp.

Description of *Candidatus* Tenuifilum legifax sp. nov.

Candidatus Tenuifilum legifax (NL. fem. n. *legifax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Tenuifilum sp001603415*. The type genome for the species is the GenBank assembly GCA_001603415.1. The GC content of the type genome is 42.35 % and the genome length is 2.45 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "3 replicate cellulose-degrading anaerobic digesters sampled at day 96 and day 362".

Description of *Candidatus* Tenuifilum peribitrix sp. nov.

Candidatus Tenuifilum peribitrix (NL. fem. n. *peribitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Tenuifilum sp002383425*. The type genome for the species is the GenBank assembly GCA_002383425.1. The GC content of the type genome is 40.6 % and the genome length is 2.64 Mbp.

Description of *Candidatus* Tepidanaerobacter papilatio sp. nov.

Candidatus Tepidanaerobacter papilatio (NL. fem. n. *papilatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Tepidanaerobacter sp001896545*. The type genome for the species is the GenBank assembly GCA_001896545.1. The GC content of the type genome is 37.65 % and the genome length is 2.39 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "sludge from a mesophilic anaerobic wastewater digester enriched on phosphite and carbon dioxide".

Description of *Candidatus* Tepidicaulis oblivitura sp. nov.

Candidatus Tepidicaulis oblivitura (NL. fem. n. *oblivitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Tepidicaulis sp002389665*. The type genome for the species is the GenBank assembly GCA_002389665.1. The GC content of the type genome is 60.89 % and the genome length is 3.45 Mbp.

Description of *Candidatus* Tepidiforma culibetta sp. nov.

Candidatus Tepidiforma culibetta (NL. fem. n. *culibetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Tepidiforma sp002563855*. The type genome for the species is the GenBank assembly RS_GCF_002563855.1. The GC content of the type genome is 69.37 % and the genome length is 2.74 Mbp.

Description of *Candidatus* Tepidimicrobium resurousia sp. nov.

Candidatus Tepidimicrobium resurousia (NL. fem. n. *resurousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Tepidimicrobium sp012728595*. The type genome for the species is the GenBank assembly GCA_012728595.1. The GC content of the type genome is 35.65 % and the genome length is 2.19 Mbp.

Description of *Candidatus* Tepidiphilus bonitousia sp. nov.

Candidatus Tepidiphilus bonitousia (NL. fem. n. *bonitousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Tepidiphilus sp006980785*. The type genome for the species is the GenBank assembly RS_GCF_006980705.1. The GC content of the type genome is 64.39 % and the genome length is 2.32 Mbp.

Description of *Candidatus* Terasakiella desulibula sp. nov.

Candidatus Terasakiella desulibula (NL. fem. n. *desulibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Terasakiella sp004564135*. The type genome for the species is the GenBank assembly RS_GCF_004564135.1. The GC content of the type genome is 47.53 % and the genome length is 3.83 Mbp.

Description of *Candidatus* Terasakiella levifigena sp. nov.

Candidatus Terasakiella levifigena (NL. fem. n. *levifigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Terasakiella sp013373265*. The type genome for the species is the GenBank assembly GCA_013373265.1. The GC content of the type genome is 46.0 % and the genome length is 3.97 Mbp.

Description of *Candidatus* Terasakiella omniventia sp. nov.

Candidatus Terasakiella omniventia (NL. fem. n. *omniventia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Terasakiella sp013373205*. The type genome for the species is the GenBank assembly GCA_013373205.1. The GC content of the type genome is 47.65 % and the genome length is 4.09 Mbp.

Description of *Candidatus* Terebana papaventia sp. nov.

Candidatus Terebana papaventia (NL. fem. n. *papaventia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2985 sp002717805*. The type genome for the species is the GenBank assembly GCA_002346715.1. The GC content of the type genome is 41.51 % and the genome length is 1.34 Mbp.

Description of *Candidatus* Terebana gen. nov.

Candidatus Terebana (NL. fem. n. *Terebana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA2985*. The type species for the genus is *Candidatus* Terebana papaventia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2985*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Terebanaceae.

Description of *Candidatus* Terebanaceae fam. nov.

Candidatus Terebanaceae (NL. fem. n. *Terebanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA2985.* The type genus for the taxon is *Candidatus* Terebana .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA2985*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Terebanales.

Description of *Candidatus* Terebanales ord. nov.

Candidatus Terebanales (NL. fem. n. *Terebanales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA2985.* The type genus for the taxon is *Candidatus* Terebana .

According to the GTDB R06-RS202, this order belongs to the class *Dehalococcoidia*.

Description of *Candidatus* Terebaria arrabibra sp. nov.

Candidatus Terebaria arrabibra (NL. fem. n. *arrabibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3015 sp010024525*. The type genome for the species is the GenBank assembly GCA_010024525.1. The GC content of the type genome is 56.58 % and the genome length is 1.98 Mbp.

Description of *Candidatus* Terebaria gen. nov.

Candidatus Terebaria (NL. fem. n. *Terebaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA3015*. The type species for the genus is *Candidatus* Terebaria arrabibra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA3015*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Terebariaceae.

Description of *Candidatus* Terebariaceae fam. nov.

Candidatus Terebariaceae (NL. fem. n. *Terebariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA3015.* The type genus for the taxon is *Candidatus* Terebaria .

According to GTDB R06-RS202, this family belongs to the order *Methylacidiphilales*.

Description of *Candidatus* Terebaria bonititas sp. nov.

Candidatus Terebaria bonititas (NL. fem. n. *bonititas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3015 sp010025475*. The type genome for the species is the

GenBank assembly GCA_010027545.1. The GC content of the type genome is 58.81 % and the genome length is 1.54 Mbp.

Description of *Candidatus* Terebaria cetaritas sp. nov.

Candidatus Terebaria cetaritas (NL. fem. n. *cetaritas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3015 sp903956835*. The type genome for the species is the GenBank assembly GCA_903877425.1. The GC content of the type genome is 54.32 % and the genome length is 1.62 Mbp.

Description of *Candidatus* Terebaria cimititudo sp. nov.

Candidatus Terebaria cimititudo (NL. fem. n. *cimititudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3015 sp002342345*. The type genome for the species is the GenBank assembly GCA_002342345.1. The GC content of the type genome is 61.83 % and the genome length is 1.28 Mbp.

Description of *Candidatus* Terebaria decucugo sp. nov.

Candidatus Terebaria decucugo (NL. fem. n. *decucugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3015 sp001438005*. The type genome for the species is the GenBank assembly GCA_002346355.1. The GC content of the type genome is 56.01 % and the genome length is 1.26 Mbp.

Description of *Candidatus* Terebaria decupetta sp. nov.

Candidatus Terebaria decupetta (NL. fem. n. *decupetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3015 sp002367435*. The type genome for the species is the GenBank assembly GCA_009921055.1. The GC content of the type genome is 57.35 % and the genome length is 2.04 Mbp.

Description of *Candidatus* Terebaria ludifibula sp. nov.

Candidatus Terebaria ludifibula (NL. fem. n. *ludifibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3015 sp009921985*. The type genome for the species is the GenBank assembly GCA_009921985.1. The GC content of the type genome is 57.94 % and the genome length is 1.43 Mbp.

Description of *Candidatus* Terebaria patibitoga sp. nov.

Candidatus Terebaria patibitoga (NL. fem. n. *patibitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3015 sp903905395*. The type genome for the species is the GenBank assembly GCA_903905395.1. The GC content of the type genome is 57.07 % and the genome length is 1.93 Mbp.

Description of *Candidatus* Terebaria progratio sp. nov.

Candidatus Terebaria progratio (NL. fem. n. *progratio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3015 sp010028775*. The type genome for the species is the GenBank assembly GCA_010028775.1. The GC content of the type genome is 59.05 % and the genome length is 1.36 Mbp.

Description of *Candidatus* Terebaria subacitica sp. nov.

Candidatus Terebaria subacitica (NL. fem. n. *subacitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3015 sp002366885*. The type genome for the species is the GenBank assembly GCA_002366885.1. The GC content of the type genome is 61.47 % and the genome length is 1.81 Mbp.

Description of *Candidatus* Terebaria vocifitura sp. nov.

Candidatus Terebaria vocifitura (NL. fem. n. *vocifitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3015 sp010031845*. The type genome for the species is the GenBank assembly GCA_010031845.1. The GC content of the type genome is 57.46 % and the genome length is 1.42 Mbp.

Description of *Candidatus* Terebida peraciforma sp. nov.

Candidatus Terebida peraciforma (NL. fem. n. *peraciforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CADAUA01 sp900315375*. The type genome for the species is the GenBank assembly GCA_902791035.1. The GC content of the type genome is 66.29 % and the genome length is 2.69 Mbp.

Description of *Candidatus* Terebida gen. nov.

Candidatus Terebida (NL. fem. n. *Terebida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CADAUA01*. The type species for the genus is *Candidatus* Terebida peraciforma .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Terebosa pimenicella sp. nov.

Candidatus Terebosa pimenicella (NL. fem. n. *pimenicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-02-FULL-55-14 sp001802945*. The type genome for the species is the GenBank assembly GCA_001802945.1. The GC content of the type genome is 55.75 % and the genome length is 3.36 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under low O2 conditions; 1.2 micron filter; full assembly".

Description of *Candidatus* Terebosa gen. nov.

Candidatus Terebosa (NL. fem. n. *Terebosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this genus is *2-02-FULL-55-14*. The type species for the genus is *Candidatus* Terebosa pimenicella .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA10030*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vagabanaceae.

Description of *Candidatus* Terebula diluvousia sp. nov.

Candidatus Terebula diluvousia (NL. fem. n. *diluvousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1941 sp003165135*. The type genome for the species is the GenBank assembly GCA_003165135.1. The GC content of the type genome is 44.36 % and the genome length is 2.9 Mbp.

Description of *Candidatus* Terebula gen. nov.

Candidatus Terebula (NL. fem. n. *Terebula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1941*. The type species for the genus is *Candidatus* Terebula diluvousia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *LD1*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vepalidaceae.

Description of *Candidatus* Terebula gasifatica sp. nov.

Candidatus Terebula gasifatica (NL. fem. n. *gasifatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1941 sp903917755*. The type genome for the species is the GenBank assembly GCA_903888635.1. The GC content of the type genome is 43.99 % and the genome length is 3.26 Mbp.

Description of *Candidatus* Terebula papilitoga sp. nov.

Candidatus Terebula papilitoga (NL. fem. n. *papilitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1941 sp002336805*. The type genome for the species is the GenBank assembly GCA_002389745.1. The GC content of the type genome is 50.67 % and the genome length is 4.44 Mbp.

Description of *Candidatus* Teredinibacter bisacigena sp. nov.

Candidatus Teredinibacter bisacigena (NL. fem. n. *bisacigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Teredinibacter sp000966245*. The type genome for the species is the GenBank assembly GCA_014217335.1. The GC content of the type genome is 45.71 % and the genome length is 4.89 Mbp.

Description of *Candidatus* Teredinibacter chancetta sp. nov.

Candidatus Teredinibacter chancetta (NL. fem. n. *chancetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Teredinibacter sp003634075*. The type genome for the species is the GenBank assembly RS_GCF_003634075.1. The GC content of the type genome is 54.8 % and the genome length is 5.64 Mbp.

Description of *Candidatus* Teredinibacter fibicatio sp. nov.

Candidatus Teredinibacter fibicatio (NL. fem. n. *fibicatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Teredinibacter sp001922955*. The type genome for the species is the GenBank assembly RS_GCF_014211975.1. The GC content of the type genome is 47.18 % and the genome length is 4.92 Mbp.

Description of *Candidatus* Teredinibacter lenocatio sp. nov.

Candidatus Teredinibacter lenocatio (NL. fem. n. *lenocatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Teredinibacter sp900177435*. The type genome for the species is the GenBank assembly RS_GCF_900177435.1. The GC content of the type genome is 47.69

% and the genome length is 5.02 Mbp.

Description of *Candidatus* Teredinibacter tribrimonia sp. nov.

Candidatus Teredinibacter tribrimonia (NL. fem. n. *tribrimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Teredinibacter sp007827375*. The type genome for the species is the GenBank assembly RS_GCF_007827375.1. The GC content of the type genome is 47.96 % and the genome length is 6.06 Mbp.

Description of *Candidatus* Terrabacter adgesitio sp. nov.

Candidatus Terrabacter adgesitio (NL. fem. n. *adgesitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Terrabacter sp000383675*. The type genome for the species is the GenBank assembly RS_GCF_000383675.1. The GC content of the type genome is 71.5 % and the genome length is 4.94 Mbp.

Description of *Candidatus* Terrabacter alsisugo sp. nov.

Candidatus Terrabacter alsisugo (NL. fem. n. *alsisugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Terrabacter sp014518425*. The type genome for the species is the GenBank assembly RS_GCF_014518425.1. The GC content of the type genome is 70.86 % and the genome length is 5.16 Mbp.

Description of *Candidatus* Terrabacter buxanitudo sp. nov.

Candidatus Terrabacter buxanitudo (NL. fem. n. *buxanitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Terrabacter sp013361975*. The type genome for the species is the GenBank assembly GCA_013361975.1. The GC content of the type genome is 71.89 % and the genome length is 3.26 Mbp.

Description of *Candidatus* Terrabacter conipicula sp. nov.

Candidatus Terrabacter conipicula (NL. fem. n. *conipicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Terrabacter sp000955875*. The type genome for the species is the GenBank assembly GCA_000955875.1. The GC content of the type genome is 71.39 % and the genome length is 4.88 Mbp.

Description of *Candidatus* Terrabacter depupivita sp. nov.

Candidatus Terrabacter depupivita (NL. fem. n. *depupivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Terrabacter sp000620545*. The type genome for the species is the GenBank assembly RS_GCF_000620545.1. The GC content of the type genome is 70.87 % and the genome length is 4.57 Mbp.

Description of *Candidatus* Terrabacter dicimatica sp. nov.

Candidatus Terrabacter dicimatica (NL. fem. n. *dicimatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Terrabacter sp006716915*. The type genome for the species is the GenBank assembly RS_GCF_006716915.1. The GC content of the type genome is 71.24 % and the genome length is 4.79 Mbp.

Description of *Candidatus* Terrabacter diminitura sp. nov.

Candidatus Terrabacter diminitura (NL. fem. n. *diminitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Terrabacter sp006715875*. The type genome for the species is the GenBank assembly RS_GCF_006715875.1. The GC content of the type genome is 71.41 % and the genome length is 4.69 Mbp.

Description of *Candidatus* Terrabacter funamimonia sp. nov.

Candidatus Terrabacter funamimonia (NL. fem. n. *funamimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Terrabacter sp001428505*. The type genome for the species is the GenBank assembly RS_GCF_001429645.1. The GC content of the type genome is 71.46 % and the genome length is 4.89 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "soil".

Description of *Candidatus* Terrabacter funamitudo sp. nov.

Candidatus Terrabacter funamitudo (NL. fem. n. *funamitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Terrabacter sp001429185*. The type genome for the species is the GenBank assembly RS_GCF_001429655.1. The GC content of the type genome is 71.52 % and the genome length is 4.9 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "soil".

Description of *Candidatus* Terracidiphilus adcesago sp. nov.

Candidatus Terracidiphilus adcesago (NL. fem. n. *adcesago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Terracidiphilus sp903911925*. The type genome for the species is the GenBank assembly GCA_903911925.1. The GC content of the type genome is 59.2 % and the genome length is 5.79 Mbp.

Description of *Candidatus* Terracidiphilus adpinitrix sp. nov.

Candidatus Terracidiphilus adpinitrix (NL. fem. n. *adpinitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Terracidiphilus sp003140705*. The type genome for the species is the GenBank assembly GCA_003140705.1. The GC content of the type genome is 57.85 % and the genome length is 5.24 Mbp.

Description of *Candidatus* Terracidiphilus adsucitas sp. nov.

Candidatus Terracidiphilus adsucitas (NL. fem. n. *adsucitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Terracidiphilus sp003171315*. The type genome for the species is the GenBank assembly GCA_003171315.1. The GC content of the type genome is 61.46 % and the genome length is 3.29 Mbp.

Description of *Candidatus* Terracidiphilus advigitio sp. nov.

Candidatus Terracidiphilus advigitio (NL. fem. n. *advigitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Terracidiphilus sp003165095*. The type genome for the species is the GenBank assembly GCA_003165095.1. The GC content of the type genome is 60.25 % and the genome length is 4.61 Mbp.

Description of *Candidatus* Terracidiphilus ampenatica sp. nov.

Candidatus Terracidiphilus ampenatica (NL. fem. n. *ampenatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Terracidiphilus sp002307235*. The type genome for the species is the GenBank assembly GCA_002307235.1. The GC content of the type genome is 60.99 % and the genome length is 3.31 Mbp.

Description of *Candidatus* Terracidiphilus atrusilega sp. nov.

Candidatus Terracidiphilus atrusilega (NL. fem. n. *atrusilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Terracidiphilus sp003164635*. The type genome for the species is the GenBank assembly GCA_003164635.1. The GC content of the type genome is 58.97 % and the genome length is 4.82 Mbp.

Description of *Candidatus* Terracidiphilus bonifitas sp. nov.

Candidatus Terracidiphilus bonifitas (NL. fem. n. *bonifitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Terracidiphilus sp003142015*. The type genome for the species is the GenBank assembly GCA_003142015.1. The GC content of the type genome is 59.56 % and the genome length is 3.42 Mbp.

Description of *Candidatus* Terracidiphilus bucolimonas sp. nov.

Candidatus Terracidiphilus bucolimonas (NL. fem. n. *bucolimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Terracidiphilus sp003156495*. The type genome for the species is the GenBank assembly GCA_003156495.1. The GC content of the type genome is 59.39 % and the genome length is 2.83 Mbp.

Description of *Candidatus* Terracidiphilus cereviforma sp. nov.

Candidatus Terracidiphilus cereviforma (NL. fem. n. *cereviforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Terracidiphilus sp003134855*. The type genome for the species is the GenBank assembly GCA_003134855.1. The GC content of the type genome is 59.94 % and the genome length is 3.94 Mbp.

Description of *Candidatus* Terracidiphilus denavatica sp. nov.

Candidatus Terracidiphilus denavatica (NL. fem. n. *denavatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Terracidiphilus sp003133425*. The type genome for the species is the GenBank assembly GCA_003132365.1. The GC content of the type genome is 57.71 % and the genome length is 6.73 Mbp.

Description of *Candidatus* Terracidiphilus denavibula sp. nov.

Candidatus Terracidiphilus denavibula (NL. fem. n. *denavibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Terracidiphilus sp903842065*. The type genome for the species is the GenBank assembly GCA_903842065.1. The GC content of the type genome is 60.36 % and the genome length is 4.09 Mbp.

Description of *Candidatus* Terracidiphilus detecimonas sp. nov.

Candidatus Terracidiphilus detecimonas (NL. fem. n. *detecimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a

noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Terracidiphilus sp000620725*. The type genome for the species is the GenBank assembly RS_GCF_000620725.1. The GC content of the type genome is 60.25 % and the genome length is 6.68 Mbp.

Description of *Candidatus* Terracidiphilus didacatio sp. nov.

Candidatus Terracidiphilus didacatio (NL. fem. n. *didacatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Terracidiphilus sp903849645*. The type genome for the species is the GenBank assembly GCA_903834995.1. The GC content of the type genome is 63.54 % and the genome length is 4.31 Mbp.

Description of *Candidatus* Terracidiphilus documitudo sp. nov.

Candidatus Terracidiphilus documitudo (NL. fem. n. *documitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Terracidiphilus sp003140785*. The type genome for the species is the GenBank assembly GCA_003166975.1. The GC content of the type genome is 57.93 % and the genome length is 5.19 Mbp.

Description of *Candidatus* Terracidiphilus fuligibra sp. nov.

Candidatus Terracidiphilus fuligibra (NL. fem. n. *fuligibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Terracidiphilus sp003170825*. The type genome for the species is the GenBank assembly GCA_003160025.1. The GC content of the type genome is 61.25 % and the genome length is 3.49 Mbp.

Description of *Candidatus* Terracidiphilus herinetta sp. nov.

Candidatus Terracidiphilus herinetta (NL. fem. n. *herinetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Terracidiphilus sp003159355*. The type genome for the species is the GenBank assembly GCA_003159355.1. The GC content of the type genome is 59.93 % and the genome length is 3.58 Mbp.

Description of *Candidatus* Terracidiphilus hexamimonas sp. nov.

Candidatus Terracidiphilus hexamimonas (NL. fem. n. *hexamimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Terracidiphilus sp003162495*. The type genome for the species is the GenBank assembly GCA_003162495.1. The GC content of the type genome is 60.56 % and the genome length is 2.82 Mbp.

Description of *Candidatus* Terracidiphilus horomimonas sp. nov.

Candidatus Terracidiphilus horomimonas (NL. fem. n. *horomimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Terracidiphilus sp003151435*. The type genome for the species is the GenBank assembly GCA_003151435.1. The GC content of the type genome is 59.1 % and the genome length is 5.96 Mbp.

Description of *Candidatus* Terracidiphilus inergifica sp. nov.

Candidatus Terracidiphilus inergifica (NL. fem. n. *inergifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Terracidiphilus sp008682415*. The type genome for the species is the GenBank assembly RS_GCF_008682415.1. The GC content of the type genome is 61.86 % and the genome length is 6.65 Mbp.

Description of *Candidatus* Terracidiphilus lacinivita sp. nov.

Candidatus Terracidiphilus lacinivita (NL. fem. n. *lacinivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Terracidiphilus sp003165075*. The type genome for the species is the GenBank assembly GCA_003165075.1. The GC content of the type genome is 58.77 % and the genome length is 5.68 Mbp.

Description of *Candidatus* Terracidiphilus macilicula sp. nov.

Candidatus Terracidiphilus macilicula (NL. fem. n. *macilicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Terracidiphilus sp903828675*. The type genome for the species is the GenBank assembly GCA_903828675.1. The GC content of the type genome is 58.41 % and the genome length is 6.39 Mbp.

Description of *Candidatus* Terracidiphilus malifitura sp. nov.

Candidatus Terracidiphilus malifitura (NL. fem. n. *malifitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Terracidiphilus sp003156235*. The type genome for the species is the GenBank assembly GCA_003156235.1. The GC content of the type genome is 58.14 % and the genome length is 4.38 Mbp.

Description of *Candidatus* Terracidiphilus metabedo sp. nov.

Candidatus Terracidiphilus metabedo (NL. fem. n. *metabedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Terracidiphilus sp003151985*. The type genome for the species is the GenBank assembly GCA_003135875.1. The GC content of the type genome is 57.46 % and the genome length is 6.04 Mbp.

Description of *Candidatus* Terracidiphilus nosocentia sp. nov.

Candidatus Terracidiphilus nosocentia (NL. fem. n. *nosocentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Terracidiphilus sp002314435*. The type genome for the species is the GenBank assembly GCA_002314435.1. The GC content of the type genome is 61.56 % and the genome length is 3.95 Mbp.

Description of *Candidatus* Terracidiphilus parocimonia sp. nov.

Candidatus Terracidiphilus parocimonia (NL. fem. n. *parocimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a

noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Terracidiphilus sp003165935*. The type genome for the species is the GenBank assembly GCA_003165935.1. The GC content of the type genome is 59.64 % and the genome length is 4.76 Mbp.

Description of *Candidatus* Terracidiphilus peripago sp. nov.

Candidatus Terracidiphilus peripago (NL. fem. n. *peripago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Terracidiphilus sp003167305*. The type genome for the species is the GenBank assembly GCA_003167305.1. The GC content of the type genome is 60.63 % and the genome length is 2.48 Mbp.

Description of *Candidatus* Terracidiphilus rinocifica sp. nov.

Candidatus Terracidiphilus rinocifica (NL. fem. n. *rinocifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Terracidiphilus sp003165005*. The type genome for the species is the GenBank assembly GCA_003165005.1. The GC content of the type genome is 61.56 % and the genome length is 3.9 Mbp.

Description of *Candidatus* Terracidiphilus risibimonas sp. nov.

Candidatus Terracidiphilus risibimonas (NL. fem. n. *risibimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Terracidiphilus sp003161045*. The type genome for the species is the GenBank assembly GCA_003139755.1. The GC content of the type genome is 61.99 % and the genome length is 2.83 Mbp.

Description of *Candidatus* Terracidiphilus rubefax sp. nov.

Candidatus Terracidiphilus rubefax (NL. fem. n. *rubefax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Terracidiphilus sp003134815*. The type genome for the species is the GenBank assembly GCA_003134815.1. The GC content of the type genome is 59.13 % and the genome length is 4.18 Mbp.

Description of *Candidatus* Terracidiphilus sacopitio sp. nov.

Candidatus Terracidiphilus sacopitio (NL. fem. n. *sacopitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Terracidiphilus sp003138365*. The type genome for the species is the GenBank assembly GCA_003156155.1. The GC content of the type genome is 59.92 % and the genome length is 4.45 Mbp.

Description of *Candidatus* Terracidiphilus selibessa sp. nov.

Candidatus Terracidiphilus selibessa (NL. fem. n. *selibessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Terracidiphilus sp003166055*. The type genome for the species is the GenBank assembly GCA_003166055.1. The GC content of the type genome is 59.21 % and the genome length is 5.33 Mbp.

Description of *Candidatus* Terracidiphilus telefibula sp. nov.

Candidatus Terracidiphilus telefibula (NL. fem. n. *telefibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Terracidiphilus sp003142935*. The type genome for the species is the GenBank assembly GCA_003142935.1. The GC content of the type genome is 58.75 % and the genome length is 5.2 Mbp.

Description of *Candidatus* Terracidiphilus tenemitudo sp. nov.

Candidatus Terracidiphilus tenemitudo (NL. fem. n. *tenemitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Terracidiphilus sp003138515*. The type genome for the species is the GenBank assembly GCA_003166415.1. The GC content of the type genome is 60.14 % and the genome length is 4.19 Mbp.

Description of *Candidatus* Terracidiphilus vicatitica sp. nov.

Candidatus Terracidiphilus vicatitica (NL. fem. n. *vicatitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Terracidiphilus sp003139795*. The type genome for the species is the GenBank assembly GCA_003138215.1. The GC content of the type genome is 61.15 % and the genome length is 5.28 Mbp.

Description of *Candidatus* Terracoccus onocratica sp. nov.

Candidatus Terracoccus onocratica (NL. fem. n. *onocratica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Terracoccus sp001758225*. The type genome for the species is the GenBank assembly RS_GCF_001758225.1. The GC content of the type genome is 69.33 % and the genome length is 5.02 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "soil".

Description of *Candidatus* Terribacillus baropedo sp. nov.

Candidatus Terribacillus baropedo (NL. fem. n. *baropedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Terribacillus sp002272135*. The type genome for the species is the GenBank assembly RS_GCF_002272135.1. The GC content of the type genome is 43.9 % and the genome length is 3.66 Mbp.

Description of *Candidatus* Terribacillus selecisca sp. nov.

Candidatus Terribacillus selecisca (NL. fem. n. *selecisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Terribacillus sp002271665*. The type genome for the species is the GenBank assembly RS_GCF_002271665.1. The GC content of the type genome is 46.46 % and the genome length is 3.32 Mbp.

Description of *Candidatus* Terricaulis biparicula sp. nov.

Candidatus Terricaulis biparicula (NL. fem. n. *biparicula* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Terricaulis sp004634425*. The type genome for the species is the GenBank assembly RS_GCF_004634425.1. The GC content of the type genome is 62.91 % and the genome length is 3.92 Mbp.

Description of *Candidatus* Terricaulis conabifica sp. nov.

Candidatus Terricaulis conabifica (NL. fem. n. *conabifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Terricaulis sp002083515*. The type genome for the species is the GenBank assembly GCA_002083515.1. The GC content of the type genome is 64.5 % and the genome length is 2.75 Mbp.

Description of *Candidatus* Terricaulis conaricula sp. nov.

Candidatus Terricaulis conaricula (NL. fem. n. *conaricula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Terricaulis sp003242075*. The type genome for the species is the GenBank assembly GCA_003242075.1. The GC content of the type genome is 63.32 % and the genome length is 3.61 Mbp.

Description of *Candidatus* Terricaulis crabritoga sp. nov.

Candidatus Terricaulis crabritoga (NL. fem. n. *crabritoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Terricaulis sp001464425*. The type genome for the species is the GenBank assembly GCA_001464425.1. The GC content of the type genome is 62.78 % and the genome length is 3.96 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "dual media filters at the Ann Arbor; Michigan drinking water treatment plant".

Description of *Candidatus* Terricaulis depecimonas sp. nov.

Candidatus Terricaulis depecimonas (NL. fem. n. *depecimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Terricaulis sp900696695*. The type genome for the species is the GenBank assembly GCA_900696695.1. The GC content of the type genome is 67.42 % and the genome length is 3.42 Mbp.

Description of *Candidatus* Terricaulis ecligitica sp. nov.

Candidatus Terricaulis ecligitica (NL. fem. n. *ecligitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Terricaulis sp902826145*. The type genome for the species is the GenBank assembly GCA_902826145.1. The GC content of the type genome is 62.92 % and the genome length is 3.62 Mbp.

Description of *Candidatus* Terricaulis esculicula sp. nov.

Candidatus Terricaulis esculicula (NL. fem. n. *esculicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Terricaulis sp902826245*. The type genome for the species is the GenBank assembly GCA_902826245.1. The GC content of the type genome is 63.37 % and the genome length is 3.23 Mbp.

Description of *Candidatus* Terricaulis immatousia sp. nov.

Candidatus Terricaulis immatousia (NL. fem. n. *immatousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Terricaulis sp902826035*. The type genome for the species is the GenBank assembly GCA_902826035.1. The GC content of the type genome is 63.18 % and the genome length is 3.14 Mbp.

Description of *Candidatus* Terricaulis inoffiforma sp. nov.

Candidatus Terricaulis inoffiforma (NL. fem. n. *inoffiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Terricaulis sp001679665*. The type genome for the species is the GenBank assembly RS_GCF_001679665.1. The GC content of the type genome is 61.5

% and the genome length is 3.73 Mbp.

Description of *Candidatus* Terricaulis luceritio sp. nov.

Candidatus Terricaulis luceritio (NL. fem. n. *luceritio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Terricaulis sp002343395*. The type genome for the species is the GenBank assembly GCA_002343395.1. The GC content of the type genome is 64.03 % and the genome length is 2.85 Mbp.

Description of *Candidatus* Terricaulis oblocax sp. nov.

Candidatus Terricaulis oblocax (NL. fem. n. *oblocax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Terricaulis sp003526465*. The type genome for the species is the GenBank assembly GCA_003526465.1. The GC content of the type genome is 63.79 % and the genome length is 2.29 Mbp.

Description of *Candidatus* Terricaulis octipugo sp. nov.

Candidatus Terricaulis octipugo (NL. fem. n. *octipugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Terricaulis sp000974665*. The type genome for the species is the GenBank assembly RS_GCF_000974665.1. The GC content of the type genome is 63.31 % and the genome length is 4.05 Mbp.

Description of *Candidatus* Terricaulis podagimonia sp. nov.

Candidatus Terricaulis podagimonia (NL. fem. n. *podagimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Terricaulis sp011332235*. The type genome for the species is the GenBank assembly GCA_011332235.1. The GC content of the type genome is 64.92 % and the genome length is 1.78 Mbp.

Description of *Candidatus* Terricaulis rubecigena sp. nov.

Candidatus Terricaulis rubecigena (NL. fem. n. *rubecigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Terricaulis sp014378995*. The type genome for the species is the GenBank assembly GCA_014378995.1. The GC content of the type genome is 63.93 % and the genome length is 3.51 Mbp.

Description of *Candidatus* Terriglobus betacetta sp. nov.

Candidatus Terriglobus betacetta (NL. fem. n. *betacetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Terriglobus sp903642225*. The type genome for the species is the GenBank assembly RS_GCF_903642225.1. The GC content of the type genome is 60.42 % and the genome length is 3.66 Mbp.

Description of *Candidatus* Terriglobus duricivita sp. nov.

Candidatus Terriglobus duricivita (NL. fem. n. *duricivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Terriglobus sp000800015*. The type genome for the species is the GenBank assembly RS_GCF_000800015.1. The GC content of the type genome is 56.69 % and the genome length is 4.95 Mbp.

Description of *Candidatus* Terriglobus uberrentia sp. nov.

Candidatus Terriglobus uberrentia (NL. fem. n. *uberrentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Terriglobus_A sp013361705*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_013361705.1. The GC content of the type genome is 58.29 % and the genome length is 5.17 Mbp.

Description of *Candidatus* Terrilactibacillus niteliforma sp. nov.

Candidatus Terrilactibacillus niteliforma (NL. fem. n. *niteliforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a

noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Terrilactibacillus sp009718825*. The type genome for the species is the GenBank assembly RS_GCF_009718825.1. The GC content of the type genome is 37.09 % and the genome length is 3.25 Mbp.

Description of *Candidatus* Terrimicrobium asporimonas sp. nov.

Candidatus Terrimicrobium asporimonas (NL. fem. n. *asporimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Terrimicrobium sp001897195*. The type genome for the species is the GenBank assembly GCA_001897195.1. The GC content of the type genome is 60.76 % and the genome length is 5.06 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Ammonium sulfate bioreactor".

Description of *Candidatus* Terrimicrobium venefilega sp. nov.

Candidatus Terrimicrobium venefilega (NL. fem. n. *venefilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Terrimicrobium sp003054655*. The type genome for the species is the GenBank assembly RS_GCF_003054655.1. The GC content of the type genome is 60.74 % and the genome length is 4.75 Mbp.

Description of *Candidatus* Terrimonas dinupitica sp. nov.

Candidatus Terrimonas dinupitica (NL. fem. n. *dinupitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Terrimonas sp002399735*. The type genome for the species is the GenBank assembly GCA_002399735.1. The GC content of the type genome is 37.96 % and the genome length is 4.82 Mbp.

Description of *Candidatus* Terrisporobacter abnoritoga sp. nov.

Candidatus Terrisporobacter abnoritoga (NL. fem. n. *abnoritoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Terrisporobacter sp900557165*. The type genome for the species is the GenBank assembly GCA_900557165.1. The GC content of the type genome is 27.45 % and the genome length is 2.33 Mbp.

Description of *Candidatus* Terrisporobacter intacatio sp. nov.

Candidatus Terrisporobacter intacatio (NL. fem. n. *intacatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Terrisporobacter sp902363255*. The type genome for the species is the GenBank assembly RS_GCF_902363255.1. The GC content of the type genome is 28.37 % and the genome length is 3.84 Mbp.

Description of *Candidatus* Tersicoccus annifivita sp. nov.

Candidatus Tersicoccus annifivita (NL. fem. n. *annifivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Tersicoccus sp001968825*. The type genome for the species is the GenBank assembly RS_GCF_001968825.1. The GC content of the type genome is 71.79 % and the genome length is 3.48 Mbp.

Description of *Candidatus* Tetenana lenocitoga sp. nov.

Candidatus Tetenana lenocitoga (NL. fem. n. *lenocitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SCRT01 sp004298465*. The type genome for the species is the GenBank assembly GCA_004323705.1. The GC content of the type genome is 64.7 % and the genome length is 3.24 Mbp.

Description of *Candidatus* Tetenana gen. nov.

Candidatus Tetenana (NL. fem. n. *Tetenana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SCRT01*. The type species for the genus is *Candidatus* Tetenana lenocitoga .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Tetenaria chancedo sp. nov.

Candidatus Tetenaria chancedo (NL. fem. n. *chancedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RBG-16-68-14 sp001796995*. The type genome for the species is the GenBank assembly GCA_001796995.1. The GC content of the type genome is 68.1 % and the genome length is 2.47 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle background sediment; well D04 at 16ft depth".

Description of *Candidatus* Tetenaria gen. nov.

Candidatus Tetenaria (NL. fem. n. *Tetenaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RBG-16-68-14*. The type species for the genus is *Candidatus* Tetenaria chancedo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *RBG-16-68-14*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Tetenariaceae.

Description of *Candidatus* Tetenariaceae fam. nov.

Candidatus Tetenariaceae (NL. fem. n. *Tetenariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *RBG-16-68-14.* The type genus for the taxon is *Candidatus* Tetenaria .

According to the original version of GTDB R06-RS202, this family belongs to the order *DSTF01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Cinefiales.

Description of *Candidatus* Tetenella foricibula sp. nov.

Candidatus Tetenella foricibula (NL. fem. n. *foricibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6163 sp003506095*. The type genome for the species is the GenBank assembly GCA_003506095.1. The GC content of the type genome is 54.24 %

and the genome length is 7.27 Mbp.

Description of *Candidatus* Tetenella gen. nov.

Candidatus Tetenella (NL. fem. n. *Tetenella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA6163*. The type species for the genus is *Candidatus* Tetenella foricibula .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Tetenella ignomicula sp. nov.

Candidatus Tetenella ignomicula (NL. fem. n. *ignomicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6163 sp007694185*. The type genome for the species is the GenBank assembly GCA_007694185.1. The GC content of the type genome is 62.28 % and the genome length is 5.78 Mbp.

Description of *Candidatus* Tetenella lanigousia sp. nov.

Candidatus Tetenella lanigousia (NL. fem. n. *lanigousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6163 sp007127095*. The type genome for the species is the GenBank assembly GCA_007127095.1. The GC content of the type genome is 60.97 % and the genome length is 5.16 Mbp.

Description of *Candidatus* Tetenella lucerigena sp. nov.

Candidatus Tetenella lucerigena (NL. fem. n. *lucerigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6163 sp002428205*. The type genome for the species is the GenBank assembly GCA_002428205.1. The GC content of the type genome is 55.12 % and the genome length is 5.41 Mbp.

Description of *Candidatus* Tetenella xenodilega sp. nov.

Candidatus Tetenella xenodilega (NL. fem. n. *xenodilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6163 sp002422955*. The type genome for the species is the GenBank assembly GCA_002422955.1. The GC content of the type genome is 62.43 % and the genome length is 5.2 Mbp.

Description of *Candidatus* Tetenia cotenentia sp. nov.

Candidatus Tetenia cotenentia (NL. fem. n. *cotenentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIZES01 sp903932045*. The type genome for the species is the GenBank assembly GCA_903875115.1. The GC content of the type genome is 45.87 % and the genome length is 4.02 Mbp.

Description of *Candidatus* Tetenia gen. nov.

Candidatus Tetenia (NL. fem. n. *Tetenia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIZES01*. The type species for the genus is *Candidatus* Tetenia cotenentia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Tetenida ancepousia sp. nov.

Candidatus Tetenida ancepousia (NL. fem. n. *ancepousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABWBV01 sp013359445*. The type genome for the species is the GenBank assembly GCA_013359445.1. The GC content of the type genome is 55.38 % and the genome length is 7.04 Mbp.

Description of *Candidatus* Tetenida gen. nov.

Candidatus Tetenida (NL. fem. n. *Tetenida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABWBV01*. The type species for the genus is *Candidatus* Tetenida ancepousia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JABWBV01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Tetenidaceae.

Description of *Candidatus* Tetenidaceae fam. nov.

Candidatus Tetenidaceae (NL. fem. n. *Tetenidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JABWBV01*. The type genus for the taxon is *Candidatus* Tetenida .

According to GTDB R06-RS202, this family belongs to the order *Anaerolineales*.

Description of *Candidatus* Tetenosa coturimonas sp. nov.

Candidatus Tetenosa coturimonas (NL. fem. n. *coturimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Bog-159 sp003166475*. The type genome for the species is the GenBank assembly GCA_003166195.1. The GC content of the type genome is 62.59 % and the genome length is 7.11 Mbp.

Description of *Candidatus* Tetenosa gen. nov.

Candidatus Tetenosa (NL. fem. n. *Tetenosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Bog-159*. The type species for the genus is *Candidatus* Tetenosa coturimonas .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Tetenula duricedo sp. nov.

Candidatus Tetenula duricedo (NL. fem. n. *duricedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *SMWT01 sp003650125*. The type genome for the species is the GenBank assembly GCA_003650085.1. The GC content of the type genome is 38.37 % and the genome length is 3.05 Mbp.

Description of *Candidatus* Tetenula gen. nov.

Candidatus Tetenula (NL. fem. n. *Tetenula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SMWT01*. The type species for the genus is *Candidatus* Tetenula duricedo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Tetenula semivessa sp. nov.

Candidatus Tetenula semivessa (NL. fem. n. *semivessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SMWT01 sp004356615*. The type genome for the species is the GenBank assembly GCA_004356615.1. The GC content of the type genome is 39.23 % and the genome length is 1.86 Mbp.

Description of *Candidatus* Thalassobaculum armicentia sp. nov.

Candidatus Thalassobaculum armicentia (NL. fem. n. *armicentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Thalassobaculum_A sp000171835*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_000171835.1. The GC content of the type genome is 65.02 % and the genome length is 6.1 Mbp.

Description of *Candidatus* Thalassobius camilastra sp. nov.

Candidatus Thalassobius camilastra (NL. fem. n. *camilastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Thalassobius sp009857745*. The type genome for the species is the GenBank assembly RS_GCF_009857745.1. The GC content of the type genome is 63.77 % and the genome length is 4.16 Mbp.

Description of *Candidatus* Thalassobius decatousia sp. nov.

Candidatus Thalassobius decatousia (NL. fem. n. *decatousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Thalassobius sp002708925*. The type genome for the species is the GenBank assembly GCA_002729995.1. The GC content of the type genome is 59.99 % and the genome length is 2.72 Mbp.

Description of *Candidatus* Thalassospira casabilenta sp. nov.

Candidatus Thalassospira casabilenta (NL. fem. n. *casabilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Thalassospira sp011806525*. The type genome for the species is the GenBank assembly RS_GCF_011806525.1. The GC content of the type genome is 54.49 % and the genome length is 4.29 Mbp.

Description of *Candidatus* Thalassospira gasomicella sp. nov.

Candidatus Thalassospira gasomicella (NL. fem. n. *gasomicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Thalassospira sp001613795*. The type genome for the species is the GenBank assembly RS_GCF_001613795.1. The GC content of the type genome is 54.67 % and the genome length is 4.31 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "deep sea sediment".

Description of *Candidatus* Thalassospira inlocastra sp. nov.

Candidatus Thalassospira inlocastra (NL. fem. n. *inlocastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Thalassospira sp001907695*. The type genome for the species is the GenBank assembly RS_GCF_001907695.1. The GC content of the type genome is 54.0 % and the genome length is 4.98 Mbp. The isolation source for the NCBI BioSample

associated with the type genome is descibed as "oil-polluted soil".

Description of *Candidatus* Thalassospira inornimonas sp. nov.

Candidatus Thalassospira inornimonas (NL. fem. n. *inornimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Thalassospira sp000948415*. The type genome for the species is the GenBank assembly RS_GCF_000948415.1. The GC content of the type genome is 54.91 % and the genome length is 4.27 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "tidal marine sediment".

Description of *Candidatus* Thalassospira linigitia sp. nov.

Candidatus Thalassospira linigitia (NL. fem. n. *linigitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Thalassospira sp002115785*. The type genome for the species is the GenBank assembly RS_GCF_002115785.1. The GC content of the type genome is 54.68 % and the genome length is 4.57 Mbp.

Description of *Candidatus* Thalassospira semodessa sp. nov.

Candidatus Thalassospira semodessa (NL. fem. n. *semodessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Thalassospira sp002115825*. The type genome for the species is the GenBank assembly RS_GCF_002115825.1. The GC content of the type genome is 53.08 % and the genome length is 5.78 Mbp.

Description of *Candidatus* Thalassospira vitabastra sp. nov.

Candidatus Thalassospira vitabastra (NL. fem. n. *vitabastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Thalassospira sp002709775*. The type genome for the species is the GenBank assembly GCA_002709775.1. The GC content of the type genome is 55.46 % and the genome length is 4.24 Mbp.

Description of *Candidatus* Thalassotalea manubitio sp. nov.

Candidatus Thalassotalea manubitio (NL. fem. n. *manubitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Thalassotalea sp012932965*. The type genome for the species is the GenBank assembly RS_GCF_012932965.1. The GC content of the type genome is 39.15 % and the genome length is 4.06 Mbp.

Description of *Candidatus* Thalassotalea acricimonas sp. nov.

Candidatus Thalassotalea acricimonas (NL. fem. n. *acricimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Thalassotalea_A sp007197775*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_007197775.1. The GC content of the type genome is 44.23 % and the genome length is 3.8 Mbp.

Description of *Candidatus* Thalassotalea betacimonas sp. nov.

Candidatus Thalassotalea betacimonas (NL. fem. n. *betacimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Thalassotalea_A sp004752005*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_012932945.1. The GC content of the type genome is 42.66 % and the genome length is 3.74 Mbp.

Description of *Candidatus* Thalassotalea figilentia sp. nov.

Candidatus Thalassotalea figilentia (NL. fem. n. *figilentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Thalassotalea_A sp000764205*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_000764205.1. The GC content of the type genome is 42.23 % and the genome length is 4.58 Mbp. The isolation

source for the NCBI BioSample associated with the type genome is descibed as "Eastern Mediterranean water".

Description of *Candidatus* Thalassotalea mavoricella sp. nov.

Candidatus Thalassotalea mavoricella (NL. fem. n. *mavoricella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Thalassotalea_A sp002162925*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_002162925.1. The GC content of the type genome is 41.62 % and the genome length is 3.62 Mbp.

Description of *Candidatus* Thalassotalea vicecimonas sp. nov.

Candidatus Thalassotalea vicecimonas (NL. fem. n. *vicecimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Thalassotalea_A sp007097525*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_007097525.1. The GC content of the type genome is 37.68 % and the genome length is 3.68 Mbp.

Description of *Candidatus* Thalassotalea adtesivita sp. nov.

Candidatus Thalassotalea adtesivita (NL. fem. n. *adtesivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Thalassotalea_C sp001913705*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_001913705.1. The GC content of the type genome is 38.29 % and the genome length is 4.08 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "calm larvae in shellfish hatchery".

Description of *Candidatus* Thapsana cepuredo sp. nov.

Candidatus Thapsana cepuredo (NL. fem. n. *cepuredo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DUSN01 sp012842605*. The type genome for the species is the GenBank assembly GCA_012842605.1. The GC content of the type genome is 42.14 % and the genome length is 3.28 Mbp.

Description of *Candidatus* Thapsana gen. nov.

Candidatus Thapsana (NL. fem. n. *Thapsana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DUSN01*. The type species for the genus is *Candidatus* Thapsana cepuredo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DTU083*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Petulellaceae.

Description of *Candidatus* Thapsaria exsufiforma sp. nov.

Candidatus Thapsaria exsufiforma (NL. fem. n. *exsufiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WRAB01 sp009779845*. The type genome for the species is the GenBank assembly GCA_009779845.1. The GC content of the type genome is 51.79 % and the genome length is 2.42 Mbp.

Description of *Candidatus* Thapsaria gen. nov.

Candidatus Thapsaria (NL. fem. n. *Thapsaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WRAB01*. The type species for the genus is *Candidatus* Thapsaria exsufiforma .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Thapsaria homagimonia sp. nov.

Candidatus Thapsaria homagimonia (NL. fem. n. *homagimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WRAB01 sp009780435*. The type genome for the species is the GenBank assembly GCA_009780435.1. The GC content of the type genome is 53.67 % and the genome length is 2.16 Mbp.

Description of *Candidatus* Thapsaria homilibula sp. nov.

Candidatus Thapsaria homilibula (NL. fem. n. *homilibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WRAB01 sp009780175*. The type genome for the species is the GenBank assembly GCA_009780175.1. The GC content of the type genome is 54.57 % and the genome length is 1.88 Mbp.

Description of *Candidatus* Thapsaria oblonitio sp. nov.

Candidatus Thapsaria oblonitio (NL. fem. n. *oblonitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WRAB01 sp009780235*. The type genome for the species is the GenBank assembly GCA_009780235.1. The GC content of the type genome is 55.17 % and the genome length is 1.94 Mbp.

Description of *Candidatus* Thapsella inmitibula sp. nov.

Candidatus Thapsella inmitibula (NL. fem. n. *inmitibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABDKH01 sp013002345*. The type genome for the species is the GenBank assembly GCA_013002345.1. The GC content of the type genome is 58.5 % and the genome length is 4.1 Mbp.

Description of *Candidatus* Thapsella gen. nov.

Candidatus Thapsella (NL. fem. n. *Thapsella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABDKH01*. The type species for the genus is *Candidatus* Thapsella inmitibula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA10348*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Divorosaceae.

Description of *Candidatus* Thapsida brasmitura sp. nov.

Candidatus Thapsida brasmitura (NL. fem. n. *brasmitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABDEJ01 sp013288555*. The type genome for the species is the GenBank assembly GCA_013288555.1. The GC content of the type genome is 39.71 % and the genome length is 2.84 Mbp.

Description of *Candidatus* Thapsida gen. nov.

Candidatus Thapsida (NL. fem. n. *Thapsida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABDEJ01*. The type species for the genus is *Candidatus* Thapsida brasmitura .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAILMK01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Dicimosaceae.

Description of *Candidatus* Thapsida demigetta sp. nov.

Candidatus Thapsida demigetta (NL. fem. n. *demigetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABDEJ01 sp013287095*. The type genome for the species is the GenBank assembly GCA_013287095.1. The GC content of the type genome is 40.89 % and the genome length is 2.17 Mbp.

Description of *Candidatus* Thapsula scombitrix sp. nov.

Candidatus Thapsula scombitrix (NL. fem. n. *scombitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *MWCO01 sp002070115*. The type genome for the species is the GenBank assembly GCA_002070115.1. The GC content of the type genome is 57.26 % and the genome length is 6.55 Mbp.

Description of *Candidatus* Thapsula gen. nov.

Candidatus Thapsula (NL. fem. n. *Thapsula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *MWCO01*. The type species for the genus is *Candidatus* Thapsula scombitrix .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Thauera aggesitoga sp. nov.

Candidatus Thauera aggesitoga (NL. fem. n. *aggesitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Thauera sp002354895*. The type genome for the species is the GenBank assembly RS_GCF_002354895.1. The GC content of the type genome is 67.67 % and the genome length is 5.29 Mbp.

Description of *Candidatus* Thauera allibitica sp. nov.

Candidatus Thauera allibitica (NL. fem. n. *allibitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Thauera sp002422685*. The type genome for the species is the GenBank assembly GCA_002422685.1. The GC content of the type genome is 67.92 % and the genome length is 3.22 Mbp.

Description of *Candidatus* Thauera democifica sp. nov.

Candidatus Thauera democifica (NL. fem. n. *democifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Thauera sp003446655*. The type genome for the species is the GenBank assembly GCA_012840655.1. The GC content of the type genome is 67.25 % and the genome length is 3.85 Mbp.

Description of *Candidatus* Thauera funebentia sp. nov.

Candidatus Thauera funebentia (NL. fem. n. *funebentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Thauera sp000310145*. The type genome for the species is the GenBank assembly RS_GCF_000310125.2. The GC content of the type genome is 65.79 % and the genome length is 4.7 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "wastewater treatment reactor".

Description of *Candidatus* Thauera ludibigena sp. nov.

Candidatus Thauera ludibigena (NL. fem. n. *ludibigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Thauera sp009469595*. The type genome for the species is the GenBank assembly RS_GCF_009469595.1. The GC content of the type genome is 65.54 % and the genome length is 4.88 Mbp.

Description of *Candidatus* Thauera redunimonia sp. nov.

Candidatus Thauera redunimonia (NL. fem. n. *redunimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Thauera sp003963015*. The type genome for the species is the GenBank assembly GCA_003963015.1. The GC content of the type genome is 68.41 % and the genome length is 5.0 Mbp.

Description of *Candidatus* Thauera repecimonas sp. nov.

Candidatus Thauera repecimonas (NL. fem. n. *repecimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Thauera sp004295105*. The type genome for the species is the GenBank assembly GCA_004295105.1. The GC content of the type genome is 67.21 % and the genome length is 3.87 Mbp.

Description of *Candidatus* Thauera antipilenta sp. nov.

Candidatus Thauera antipilenta (NL. fem. n. *antipilenta* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Thauera_A sp004801295*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_004801295.1. The GC content of the type genome is 67.51 % and the genome length is 4.72 Mbp.

Description of *Candidatus* Thauera cepuritoga sp. nov.

Candidatus Thauera cepuritoga (NL. fem. n. *cepuritoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Thauera_A sp003034845*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_003034845.1. The GC content of the type genome is 67.19 % and the genome length is 3.66 Mbp.

Description of *Candidatus* Thauera invigitura sp. nov.

Candidatus Thauera invigitura (NL. fem. n. *invigitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Thauera_A sp014489115*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_014489115.1. The GC content of the type genome is 68.0 % and the genome length is 3.96 Mbp.

Description of *Candidatus* Thauera seposastra sp. nov.

Candidatus Thauera seposastra (NL. fem. n. *seposastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Thauera_A sp004801305*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_004801305.1. The GC

content of the type genome is 68.3 % and the genome length is 4.6 Mbp.

Description of *Candidatus* Thermaerobacter arrugetta sp. nov.

Candidatus Thermaerobacter arrugetta (NL. fem. n. *arrugetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Thermaerobacter sp004634385*. The type genome for the species is the GenBank assembly RS_GCF_004634385.1. The GC content of the type genome is 73.26 % and the genome length is 3.04 Mbp.

Description of *Candidatus* Thermaerobacter inoccilega sp. nov.

Candidatus Thermaerobacter inoccilega (NL. fem. n. *inoccilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Thermaerobacter sp003242195*. The type genome for the species is the GenBank assembly GCA_003242195.1. The GC content of the type genome is 69.99 % and the genome length is 2.56 Mbp.

Description of *Candidatus* Thermoactinomyces tenebicula sp. nov.

Candidatus Thermoactinomyces tenebicula (NL. fem. n. *tenebicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Thermoactinomyces sp013868055*. The type genome for the species is the GenBank assembly RS_GCF_013868055.1. The GC content of the type genome is 44.69 % and the genome length is 3.4 Mbp.

Description of *Candidatus* Thermoanaerobacter cadavitrix sp. nov.

Candidatus Thermoanaerobacter cadavitrix (NL. fem. n. *cadavitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Thermoanaerobacter sp012840485*. The type genome for the species is the GenBank assembly GCA_012840485.1. The GC content of the type genome is 33.81 % and the genome length is 2.65 Mbp.

Description of *Candidatus* Thermoanaerobacter maxumicula sp. nov.

Candidatus Thermoanaerobacter maxumicula (NL. fem. n. *maxumicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Thermoanaerobacter sp000445185*. The type genome for the species is the GenBank assembly GCA_000445185.1. The GC content of the type genome is 34.01 % and the genome length is 2.61 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "formation water extracted 1960m underground from a high temperature (102C) petroleum reservoir at Gippsland Basin; Australia".

Description of *Candidatus* Thermoanaerobacterium octipimonas sp. nov.

Candidatus Thermoanaerobacterium octipimonas (NL. fem. n. *octipimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Thermoanaerobacterium sp900205865*. The type genome for the species is the GenBank assembly RS_GCF_900205865.1. The GC content of the type genome is 32.48 % and the genome length is 3.4 Mbp.

Description of *Candidatus* Thermoanaerobacterium pecunax sp. nov.

Candidatus Thermoanaerobacterium pecunax (NL. fem. n. *pecunax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Thermoanaerobacterium sp002102475*. The type genome for the species is the GenBank assembly GCA_012839995.1. The GC content of the type genome is 35.92 % and the genome length is 2.74 Mbp.

Description of *Candidatus* Thermobacillus acertimonas sp. nov.

Candidatus Thermobacillus acertimonas (NL. fem. n. *acertimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Thermobacillus sp002159085*. The type genome for the species is the GenBank assembly GCA_002159085.1. The GC content of the type genome is 64.34 % and the genome length is 3.37 Mbp.

Description of *Candidatus* Thermochlorobacter nicomedo sp. nov.

Candidatus Thermochlorobacter nicomedo (NL. fem. n. *nicomedo* a species epithet

created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Thermochlorobacter sp002763895*. The type genome for the species is the GenBank assembly GCA_002763895.1. The GC content of the type genome is 47.28 % and the genome length is 2.81 Mbp.

Description of *Candidatus* Thermoclostridium abinvastra sp. nov.

Candidatus Thermoclostridium abinvastra (NL. fem. n. *abinvastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Thermoclostridium sp012519655*. The type genome for the species is the GenBank assembly GCA_012519655.1. The GC content of the type genome is 35.83 % and the genome length is 2.63 Mbp.

Description of *Candidatus* Thermoclostridium cucuribra sp. nov.

Candidatus Thermoclostridium cucuribra (NL. fem. n. *cucuribra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Thermoclostridium sp001513105*. The type genome for the species is the GenBank assembly GCA_012728495.1. The GC content of the type genome is 43.67 % and the genome length is 2.91 Mbp.

Description of *Candidatus* Thermoclostridium recomago sp. nov.

Candidatus Thermoclostridium recomago (NL. fem. n. *recomago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Thermoclostridium sp012521105*. The type genome for the species is the GenBank assembly GCA_012521105.1. The GC content of the type genome is 38.28 % and the genome length is 3.38 Mbp.

Description of *Candidatus* Thermoclostridium adfirisca sp. nov.

Candidatus Thermoclostridium adfirisca (NL. fem. n. *adfirisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Thermoclostridium_A sp012719645*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_012719645.1. The GC content of the type genome is 50.36 % and the genome length is 2.61 Mbp.

Description of *Candidatus* Thermoclostridium demogilenta sp. nov.

Candidatus Thermoclostridium demogilenta (NL. fem. n. *demogilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Thermoclostridium_A sp001512555*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_001512555.1. The GC content of the type genome is 46.94 % and the genome length is 2.15 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "pool of bioreactors CSTR01a; CSTR02a; and CSTR03a; thermophilic anaerobic digestion of cattle manure in continuous reactors for biogas production (methane)".

Description of *Candidatus* Thermoclostridium derecastra sp. nov.

Candidatus Thermoclostridium derecastra (NL. fem. n. *derecastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Thermoclostridium_A sp012518025*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_012518025.1. The GC content of the type genome is 46.98 % and the genome length is 2.02 Mbp.

Description of *Candidatus* Thermoclostridium obvolitia sp. nov.

Candidatus Thermoclostridium obvolitia (NL. fem. n. *obvolitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Thermoclostridium_A sp012728015*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_012728015.1.

The GC content of the type genome is 50.29 % and the genome length is 2.19 Mbp.

Description of *Candidatus* Thermocrinis appicitica sp. nov.

Candidatus Thermocrinis appicitica (NL. fem. n. *appicitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Thermocrinis sp000702425*. The type genome for the species is the GenBank assembly RS_GCF_000702425.1. The GC content of the type genome is 41.32 % and the genome length is 1.32 Mbp.

Description of *Candidatus* Thermocrinis famelugo sp. nov.

Candidatus Thermocrinis famelugo (NL. fem. n. *famelugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Thermocrinis sp009903855*. The type genome for the species is the GenBank assembly GCA_009903855.1. The GC content of the type genome is 45.25 % and the genome length is 1.11 Mbp.

Description of *Candidatus* Thermodesulfatator disidimonia sp. nov.

Candidatus Thermodesulfatator disidimonia (NL. fem. n. *disidimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Thermodesulfatator_A sp013153725*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_013153725.1. The GC content of the type genome is 55.4 % and the genome length is 1.6 Mbp.

Description of *Candidatus* Thermodesulfobacterium algifetta sp. nov.

Candidatus Thermodesulfobacterium algifetta (NL. fem. n. *algifetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Thermodesulfobacterium sp003641645*. The type genome for the species is the GenBank assembly GCA_003641645.1. The GC content of the type genome is 29.79 % and the genome length is 1.05 Mbp.

Description of *Candidatus* Thermodesulfobacterium impacigena sp. nov.

Candidatus Thermodesulfobacterium impacigena (NL. fem. n. *impacigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Thermodesulfobacterium sp013153525*. The type genome for the species is the GenBank assembly GCA_013153525.1. The GC content of the type genome is 36.29 % and the genome length is 1.86 Mbp.

Description of *Candidatus* Thermodesulfobacterium pluscitoga sp. nov.

Candidatus Thermodesulfobacterium pluscitoga (NL. fem. n. *pluscitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Thermodesulfobacterium sp008630935*. The type genome for the species is the GenBank assembly RS_GCF_008630935.1. The GC content of the type genome is 36.42 % and the genome length is 1.83 Mbp.

Description of *Candidatus* Thermodesulfovibrio pomificula sp. nov.

Candidatus Thermodesulfovibrio pomificula (NL. fem. n. *pomificula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Thermodesulfovibrio sp001707915*. The type genome for the species is the GenBank assembly RS_GCF_001707915.1. The GC content of the type genome is 32.99 % and the genome length is 1.92 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "borehole".

Description of *Candidatus* Thermodesulfovibrio vocifitoga sp. nov.

Candidatus Thermodesulfovibrio vocifitoga (NL. fem. n. *vocifitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Thermodesulfovibrio sp002339325*. The type genome for the species is the GenBank assembly GCA_002339325.1. The GC content of the type genome is 36.78 % and the genome length is 1.9 Mbp.

Description of *Candidatus* Thermoflavimicrobium lavacibra sp. nov.

Candidatus Thermoflavimicrobium lavacibra (NL. fem. n. *lavacibra* a species epithet

created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Thermoflavimicrobium sp003313465*. The type genome for the species is the GenBank assembly RS_GCF_003313465.1. The GC content of the type genome is 37.82 % and the genome length is 3.87 Mbp.

Description of *Candidatus* Thermoflexibacter cenodiforma sp. nov.

Candidatus Thermoflexibacter cenodiforma (NL. fem. n. *cenodiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Thermoflexibacter sp013298985*. The type genome for the species is the GenBank assembly GCA_013298985.1. The GC content of the type genome is 39.13 % and the genome length is 6.06 Mbp.

Description of *Candidatus* Thermoflexibacter invorago sp. nov.

Candidatus Thermoflexibacter invorago (NL. fem. n. *invorago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Thermoflexibacter sp004294445*. The type genome for the species is the GenBank assembly GCA_004294445.1. The GC content of the type genome is 38.5 % and the genome length is 3.44 Mbp.

Description of *Candidatus* Thermoflexus deculago sp. nov.

Candidatus Thermoflexus deculago (NL. fem. n. *deculago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Thermoflexus sp011373175*. The type genome for the species is the GenBank assembly GCA_011369885.1. The GC content of the type genome is 63.42 % and the genome length is 2.6 Mbp.

Description of *Candidatus* Thermoflexus nehalago sp. nov.

Candidatus Thermoflexus nehalago (NL. fem. n. *nehalago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Thermoflexus sp002898735*. The type genome for the species is the GenBank assembly GCA_002898735.1. The GC content of the type genome is 66.05 % and the genome length is 2.93 Mbp.

Description of *Candidatus* Thermoflexus secunicula sp. nov.

Candidatus Thermoflexus secunicula (NL. fem. n. *secunicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Thermoflexus sp011048055*. The type genome for the species is the GenBank assembly GCA_011055825.1. The GC content of the type genome is 65.06 % and the genome length is 3.23 Mbp.

Description of *Candidatus* Thermogutta occenatica sp. nov.

Candidatus Thermogutta occenatica (NL. fem. n. *occenatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Thermogutta sp012798155*. The type genome for the species is the GenBank assembly GCA_012798155.1. The GC content of the type genome is 63.85 % and the genome length is 4.29 Mbp.

Description of *Candidatus* Thermoleophilum lenocastra sp. nov.

Candidatus Thermoleophilum lenocastra (NL. fem. n. *lenocastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Thermoleophilum sp002898855*. The type genome for the species is the GenBank assembly GCA_002898855.1. The GC content of the type genome is 70.47 % and the genome length is 1.61 Mbp.

Description of *Candidatus* Thermomicrobium nucifitio sp. nov.

Candidatus Thermomicrobium nucifitio (NL. fem. n. *nucifitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Thermomicrobium sp002898255*. The type genome for the species is the GenBank assembly GCA_011047935.1. The GC content of the type genome is 61.53 % and the genome length is 3.05 Mbp.

Description of *Candidatus* Thermomicrobium vinacitrix sp. nov.

Candidatus Thermomicrobium vinacitrix (NL. fem. n. *vinacitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Thermomicrobium sp002898975*. The type genome for the species is the GenBank assembly GCA_002898975.1. The GC content of the type genome is 65.35 % and the genome length is 2.07 Mbp.

Description of *Candidatus* Thermomonas defositica sp. nov.

Candidatus Thermomonas defositica (NL. fem. n. *defositica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Thermomonas sp006337105*. The type genome for the species is the GenBank assembly RS_GCF_006337105.1. The GC content of the type genome is 67.95 % and the genome length is 3.01 Mbp.

Description of *Candidatus* Thermomonas detecigena sp. nov.

Candidatus Thermomonas detecigena (NL. fem. n. *detecigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Thermomonas sp011302915*. The type genome for the species is the GenBank assembly RS_GCF_011302915.1. The GC content of the type genome is 64.93 % and the genome length is 2.8 Mbp.

Description of *Candidatus* Thermopetrobacter adlapigena sp. nov.

Candidatus Thermopetrobacter adlapigena (NL. fem. n. *adlapigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Thermopetrobacter sp000746275*. The type genome for the species is the GenBank assembly RS_GCF_000746275.1. The GC content of the type genome is 62.02 % and the genome length is 2.61 Mbp.

Description of *Candidatus* Thermopetrobacter retunatica sp. nov.

Candidatus Thermopetrobacter retunatica (NL. fem. n. *retunatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a

noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Thermopetrobacter sp011374735*. The type genome for the species is the GenBank assembly GCA_011374735.1. The GC content of the type genome is 67.6 % and the genome length is 1.84 Mbp.

Description of *Candidatus* Thermopolyspora excogentia sp. nov.

Candidatus Thermopolyspora excogentia (NL. fem. n. *excogentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Thermopolyspora sp003242605*. The type genome for the species is the GenBank assembly GCA_003242605.1. The GC content of the type genome is 73.51 % and the genome length is 5.57 Mbp.

Description of *Candidatus* Thermosulfurimonas nicomitudo sp. nov.

Candidatus Thermosulfurimonas nicomitudo (NL. fem. n. *nicomitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Thermosulfurimonas_A sp003978075*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003978075.1. The GC content of the type genome is 57.72 % and the genome length is 1.39 Mbp.

Description of *Candidatus* Thermosynechococcus adgenilega sp. nov.

Candidatus Thermosynechococcus adgenilega (NL. fem. n. *adgenilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Thermosynechococcus sp008386235*. The type genome for the species is the GenBank assembly RS_GCF_008386235.1. The GC content of the type genome is 53.48 % and the genome length is 2.65 Mbp.

Description of *Candidatus* Thermosynechococcus vacililenta sp. nov.

Candidatus Thermosynechococcus vacililenta (NL. fem. n. *vacililenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Thermosynechococcus sp000505665*. The type genome for the species is the GenBank assembly GCA_003696925.1. The GC content of the type genome is 53.83 % and the genome length is 2.31 Mbp.

Description of *Candidatus* Thermotoga amnenatica sp. nov.

Candidatus Thermotoga amnenatica (NL. fem. n. *amnenatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Thermotoga sp002865985*. The type genome for the species is the GenBank assembly RS_GCF_002865985.1. The GC content of the type genome is 45.94 % and the genome length is 1.84 Mbp.

Description of *Candidatus* Thermotoga colopastra sp. nov.

Candidatus Thermotoga colopastra (NL. fem. n. *colopastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Thermotoga sp002866025*. The type genome for the species is the GenBank assembly RS_GCF_002866025.1. The GC content of the type genome is 41.44 % and the genome length is 1.71 Mbp.

Description of *Candidatus* Thermotoga xenopicula sp. nov.

Candidatus Thermotoga xenopicula (NL. fem. n. *xenopicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Thermotoga sp000784835*. The type genome for the species is the GenBank assembly RS_GCF_000784835.1. The GC content of the type genome is 45.96 % and the genome length is 1.82 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "marine hydrothermal vent".

Description of *Candidatus* Thermus adlocitio sp. nov.

Candidatus Thermus adlocitio (NL. fem. n. *adlocitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Thermus sp001311585*. The type genome for the species is the

GenBank assembly GCA_001311585.1. The GC content of the type genome is 67.97 % and the genome length is 2.22 Mbp.

Description of *Candidatus* Thermus dapifilenta sp. nov.

Candidatus Thermus dapifilenta (NL. fem. n. *dapifilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Thermus sp000794385*. The type genome for the species is the GenBank assembly RS_GCF_000794385.1. The GC content of the type genome is 67.3 % and the genome length is 2.4 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "hot water spring".

Description of *Candidatus* Thermus supelitica sp. nov.

Candidatus Thermus supelitica (NL. fem. n. *supelitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Thermus sp000236585*. The type genome for the species is the GenBank assembly RS_GCF_000236585.1. The GC content of the type genome is 68.58 % and the genome length is 2.26 Mbp.

Description of *Candidatus* Thessana xenopicella sp. nov.

Candidatus Thessana xenopicella (NL. fem. n. *xenopicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACCZT01 sp013695785*. The type genome for the species is the GenBank assembly GCA_013695785.1. The GC content of the type genome is 68.92 % and the genome length is 2.08 Mbp.

Description of *Candidatus* Thessana gen. nov.

Candidatus Thessana (NL. fem. n. *Thessana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACCZT01*. The type species for the genus is *Candidatus* Thessana xenopicella .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Thessella adfiretta sp. nov.

Candidatus Thessella adfiretta (NL. fem. n. *adfiretta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2402025 sp002402025*. The type genome for the species is the GenBank assembly GCA_002402025.1. The GC content of the type genome is 38.55 % and the genome length is 1.73 Mbp.

Description of *Candidatus* Thessella gen. nov.

Candidatus Thessella (NL. fem. n. *Thessella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2402025*. The type species for the genus is *Candidatus* Thessella adfiretta .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Thessida desacilenta sp. nov.

Candidatus Thessida desacilenta (NL. fem. n. *desacilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2713145 sp002713145*. The type genome for the species is the GenBank assembly GCA_002713145.1. The GC content of the type genome is 37.34 % and the genome length is 3.75 Mbp.

Description of *Candidatus* Thessida gen. nov.

Candidatus Thessida (NL. fem. n. *Thessida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2713145*. The type species for the genus is *Candidatus* Thessida desacilenta .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Thessosa ciminitura sp. nov.

Candidatus Thessosa ciminitura (NL. fem. n. *ciminitura* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYFL01 sp012728235*. The type genome for the species is the GenBank assembly GCA_012728235.1. The GC content of the type genome is 39.06 % and the genome length is 1.57 Mbp.

Description of *Candidatus* Thessosa gen. nov.

Candidatus Thessosa (NL. fem. n. *Thessosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAYFL01*. The type species for the genus is *Candidatus* Thessosa ciminitura .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Thessosa cohonigena sp. nov.

Candidatus Thessosa cohonigena (NL. fem. n. *cohonigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYFL01 sp012728165*. The type genome for the species is the GenBank assembly GCA_012728165.1. The GC content of the type genome is 38.51 % and the genome length is 1.56 Mbp.

Description of *Candidatus* Thessula decamigena sp. nov.

Candidatus Thessula decamigena (NL. fem. n. *decamigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DSTR01 sp011329245*. The type genome for the species is the GenBank assembly GCA_011329245.1. The GC content of the type genome is 61.1 % and the genome length is 2.25 Mbp.

Description of *Candidatus* Thessula gen. nov.

Candidatus Thessula (NL. fem. n. *Thessula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this genus is *DSTR01*. The type species for the genus is *Candidatus* Thessula decamigena .

According to the original version of GTDB R06-RS202, this genus belongs to the family *B48-G9*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Celamellaceae.

Description of *Candidatus* Thioalkalivibrio acontilenta sp. nov.

Candidatus Thioalkalivibrio acontilenta (NL. fem. n. *acontilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Thioalkalivibrio sp000381945*. The type genome for the species is the GenBank assembly RS_GCF_000381945.1. The GC content of the type genome is 67.56 % and the genome length is 2.93 Mbp.

Description of *Candidatus* Thioalkalivibrio adpicetta sp. nov.

Candidatus Thioalkalivibrio adpicetta (NL. fem. n. *adpicetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Thioalkalivibrio sp000381825*. The type genome for the species is the GenBank assembly RS_GCF_000381825.1. The GC content of the type genome is 65.79 % and the genome length is 2.66 Mbp.

Description of *Candidatus* Thioalkalivibrio bicipitudo sp. nov.

Candidatus Thioalkalivibrio bicipitudo (NL. fem. n. *bicipitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Thioalkalivibrio sp000377205*. The type genome for the species is the GenBank assembly RS_GCF_000377205.1. The GC content of the type genome is 65.3 % and the genome length is 2.63 Mbp.

Description of *Candidatus* Thioalkalivibrio ceromastra sp. nov.

Candidatus Thioalkalivibrio ceromastra (NL. fem. n. *ceromastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Thioalkalivibrio sp000025545*. The type genome for the species is the GenBank assembly RS_GCF_000025545.1. The GC content of the type genome is 65.54 % and the genome length is 2.99 Mbp.

Description of *Candidatus* Thioalkalivibrio defenetta sp. nov.

Candidatus Thioalkalivibrio defenetta (NL. fem. n. *defenetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Thioalkalivibrio sp007120575*. The type genome for the species is the GenBank assembly GCA_007133245.1. The GC content of the type genome is 65.91 % and the genome length is 2.14 Mbp.

Description of *Candidatus* Thioalkalivibrio denixibra sp. nov.

Candidatus Thioalkalivibrio denixibra (NL. fem. n. *denixibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Thioalkalivibrio sp000420165*. The type genome for the species is the GenBank assembly RS_GCF_000420165.1. The GC content of the type genome is 66.8 % and the genome length is 2.88 Mbp.

Description of *Candidatus* Thioalkalivibrio fidenentia sp. nov.

Candidatus Thioalkalivibrio fidenentia (NL. fem. n. *fidenentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Thioalkalivibrio sp000378305*. The type genome for the species is the GenBank assembly RS_GCF_000377245.1. The GC content of the type genome is 65.68 % and the genome length is 2.98 Mbp.

Description of *Candidatus* Thioalkalivibrio luticitio sp. nov.

Candidatus Thioalkalivibrio luticitio (NL. fem. n. *luticitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Thioalkalivibrio sp000376845*. The type genome for the species is the GenBank assembly RS_GCF_000364565.1. The GC content of the type genome is 66.76 % and the genome length is 2.96 Mbp.

Description of *Candidatus* Thioalkalivibrio monogitica sp. nov.

Candidatus Thioalkalivibrio monogitica (NL. fem. n. *monogitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Thioalkalivibrio sp000377345*. The type genome for the species is the GenBank assembly RS_GCF_000377345.1. The GC content of the type genome is 66.99 % and the genome length is 2.76 Mbp.

Description of *Candidatus* Thioalkalivibrio nubifitura sp. nov.

Candidatus Thioalkalivibrio nubifitura (NL. fem. n. *nubifitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Thioalkalivibrio sp000376865*. The type genome for the species is the GenBank assembly RS_GCF_000377365.1. The GC content of the type genome is 64.28 % and the genome length is 2.85 Mbp.

Description of *Candidatus* Thioalkalivibrio proclicella sp. nov.

Candidatus Thioalkalivibrio proclicella (NL. fem. n. *proclicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Thioalkalivibrio sp000377905*. The type genome for the species is the GenBank assembly RS_GCF_000377905.1. The GC content of the type genome is 65.98 % and the genome length is 3.04 Mbp.

Description of *Candidatus* Thioalkalivibrio revulibra sp. nov.

Candidatus Thioalkalivibrio revulibra (NL. fem. n. *revulibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Thioalkalivibrio sp000378605*. The type genome for the species is the GenBank assembly RS_GCF_000378605.1. The GC content of the type genome is 65.38 % and the genome length is 2.96 Mbp.

Description of *Candidatus* Thioalkalivibrio sanabivita sp. nov.

Candidatus Thioalkalivibrio sanabivita (NL. fem. n. *sanabivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Thioalkalivibrio sp000377405*. The type genome for the species is the GenBank assembly RS_GCF_000377285.1. The GC content of the type genome is 67.16 % and the genome length is 2.86 Mbp.

Description of *Candidatus* Thioalkalivibrio uberrax sp. nov.

Candidatus Thioalkalivibrio uberrax (NL. fem. n. *uberrax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Thioalkalivibrio sp000377785*. The type genome for the species is the GenBank assembly RS_GCF_000377785.1. The GC content of the type genome is 67.55 % and the genome length is 2.81 Mbp.

Description of *Candidatus* Thioalkalivibrio vocifivita sp. nov.

Candidatus Thioalkalivibrio vocifivita (NL. fem. n. *vocifivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Thioalkalivibrio sp000377845*. The type genome for the species is the GenBank assembly RS_GCF_000377845.1. The GC content of the type genome is 64.91 % and the genome length is 3.0 Mbp.

Description of *Candidatus* Thioalkalivibrio pimenibula sp. nov.

Candidatus Thioalkalivibrio pimenibula (NL. fem. n. *pimenibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Thioalkalivibrio_A sp007120155*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_007120155.1. The GC content of the type genome is 63.19 % and the genome length is 3.56 Mbp.

Description of *Candidatus* Thioalkalivibrio adcelilenta sp. nov.

Candidatus Thioalkalivibrio adcelilenta (NL. fem. n. *adcelilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Thioalkalivibrio_B sp007133115*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_007133115.1. The GC content of the type genome is 64.6 % and the genome length is 1.61 Mbp.

Description of *Candidatus* Thioalkalivibrio aneclibra sp. nov.

Candidatus Thioalkalivibrio aneclibra (NL. fem. n. *aneclibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Thioalkalivibrio_B sp003553165*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003553165.1. The GC content of the type genome is 65.78 % and the genome length is 2.07 Mbp.

Description of *Candidatus* Thioalkalivibrio assucitoga sp. nov.

Candidatus Thioalkalivibrio assucitoga (NL. fem. n. *assucitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Thioalkalivibrio_B sp007692435*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_007692435.1. The GC content of the type genome is 67.97 % and the genome length is 2.71 Mbp.

Description of *Candidatus* Thioalkalivibrio catalitura sp. nov.

Candidatus Thioalkalivibrio catalitura (NL. fem. n. *catalitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Thioalkalivibrio_B sp007136145*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_007124975.1. The GC content of the type genome is 62.32 % and the genome length is 2.21 Mbp.

Description of *Candidatus* Thioalkalivibrio colutedo sp. nov.

Candidatus Thioalkalivibrio colutedo (NL. fem. n. *colutedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Thioalkalivibrio_B sp011389655*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_011389655.1. The GC content of the type genome is 67.1 % and the genome length is 3.46 Mbp.

Description of *Candidatus* Thioalkalivibrio diminibula sp. nov.

Candidatus Thioalkalivibrio diminibula (NL. fem. n. *diminibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Thioalkalivibrio_B sp003555285*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003555285.1. The GC content of the type genome is 66.03 % and the genome length is 3.19 Mbp.

Description of *Candidatus* Thioalkalivibrio disiditica sp. nov.

Candidatus Thioalkalivibrio disiditica (NL. fem. n. *disiditica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Thioalkalivibrio_B sp007116035*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_007116035.1. The GC content of the type genome is 65.58 % and the genome length is 3.03 Mbp.

Description of *Candidatus* Thioalkalivibrio documugo sp. nov.

Candidatus Thioalkalivibrio documugo (NL. fem. n. *documugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Thioalkalivibrio_B sp007119005*. Although GTDB has assigned a

genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_007119005.1. The GC content of the type genome is 66.95 % and the genome length is 1.56 Mbp.

Description of *Candidatus* Thioalkalivibrio lucifivita sp. nov.

Candidatus Thioalkalivibrio lucifivita (NL. fem. n. *lucifivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Thioalkalivibrio_B sp003550945*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003550945.1. The GC content of the type genome is 66.13 % and the genome length is 1.98 Mbp.

Description of *Candidatus* Thioalkalivibrio purulibula sp. nov.

Candidatus Thioalkalivibrio purulibula (NL. fem. n. *purulibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Thioalkalivibrio_B sp007692535*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_007692535.1. The GC content of the type genome is 65.64 % and the genome length is 3.13 Mbp.

Description of *Candidatus* Thioalkalivibrio tabifilega sp. nov.

Candidatus Thioalkalivibrio tabifilega (NL. fem. n. *tabifilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Thioalkalivibrio_B sp003563455*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003563455.1. The GC content of the type genome is 66.38 % and the genome length is 2.21 Mbp.

Description of *Candidatus* Thiobacillus acropicula sp. nov.

Candidatus Thiobacillus acropicula (NL. fem. n. *acropicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Thiobacillus sp001899775*. The type genome for the species is the GenBank assembly GCA_001899775.1. The GC content of the type genome is 65.46 % and the genome length is 2.9 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Thiocyanate ramp bioreactor".

Description of *Candidatus* Thiobacillus bicorifica sp. nov.

Candidatus Thiobacillus bicorifica (NL. fem. n. *bicorifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Thiobacillus sp001899765*. The type genome for the species is the GenBank assembly GCA_001725535.1. The GC content of the type genome is 63.7 % and the genome length is 2.63 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Thiocyanate bioreactor".

Description of *Candidatus* Thiobacillus ceraredo sp. nov.

Candidatus Thiobacillus ceraredo (NL. fem. n. *ceraredo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Thiobacillus sp001897705*. The type genome for the species is the GenBank assembly GCA_001725525.1. The GC content of the type genome is 64.77 % and the genome length is 3.05 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Thiocyanate bioreactor".

Description of *Candidatus* Thiobacillus conubatio sp. nov.

Candidatus Thiobacillus conubatio (NL. fem. n. *conubatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Thiobacillus sp001897675*. The type genome for the species is the GenBank assembly GCA_002281975.1. The GC content of the type genome is 64.48 % and the genome length is 3.05 Mbp.

Description of *Candidatus* Thiobacillus dilecitura sp. nov.

Candidatus Thiobacillus dilecitura (NL. fem. n. *dilecitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Thiobacillus sp002279795*. The type genome for the species is the GenBank assembly GCA_002279795.1. The GC content of the type genome is 61.42 % and the genome length is 3.02 Mbp.

Description of *Candidatus* Thiobacillus diluvago sp. nov.

Candidatus Thiobacillus diluvago (NL. fem. n. *diluvago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Thiobacillus sp011391655*. The type genome for the species is the GenBank assembly GCA_011391655.1. The GC content of the type genome is 61.31 % and the genome length is 1.64 Mbp.

Description of *Candidatus* Thiobacillus divuligena sp. nov.

Candidatus Thiobacillus divuligena (NL. fem. n. *divuligena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Thiobacillus sp002257045*. The type genome for the species is the GenBank assembly GCA_002281435.1. The GC content of the type genome is 61.47 % and the genome length is 2.89 Mbp.

Description of *Candidatus* Thiobacillus exsurilega sp. nov.

Candidatus Thiobacillus exsurilega (NL. fem. n. *exsurilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Thiobacillus sp002256785*. The type genome for the species is the GenBank assembly GCA_002256785.1. The GC content of the type genome is 61.11 % and the genome length is 2.58 Mbp.

Description of *Candidatus* Thiobacillus impolitudo sp. nov.

Candidatus Thiobacillus impolitudo (NL. fem. n. *impolitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Thiobacillus sp012274165*. The type genome for the species is the GenBank assembly GCA_012274165.1. The GC content of the type genome is 61.36 %

and the genome length is 3.16 Mbp.

Description of *Candidatus* Thiobacillus insinago sp. nov.

Candidatus Thiobacillus insinago (NL. fem. n. *insinago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Thiobacillus sp001802655*. The type genome for the species is the GenBank assembly GCA_001802655.1. The GC content of the type genome is 60.96 % and the genome length is 3.6 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at 16ft depth; 0.1 micron filter at time point D".

Description of *Candidatus* Thiobacillus maledisca sp. nov.

Candidatus Thiobacillus maledisca (NL. fem. n. *maledisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Thiobacillus sp003510325*. The type genome for the species is the GenBank assembly GCA_001831015.1. The GC content of the type genome is 63.84 % and the genome length is 2.55 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at time point 5 / E; 5m depth; 0.1 filter".

Description of *Candidatus* Thiobacillus momoratio sp. nov.

Candidatus Thiobacillus momoratio (NL. fem. n. *momoratio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Thiobacillus sp011391285*. The type genome for the species is the GenBank assembly GCA_011391285.1. The GC content of the type genome is 63.94 % and the genome length is 3.35 Mbp.

Description of *Candidatus* Thiobacillus monacicella sp. nov.

Candidatus Thiobacillus monacicella (NL. fem. n. *monacicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Thiobacillus sp001899305*. The type genome for the species is the GenBank assembly GCA_013693775.1. The GC content of the type genome is 62.52 %

and the genome length is 3.55 Mbp.

Description of *Candidatus* Thiobacillus siligicella sp. nov.

Candidatus Thiobacillus siligicella (NL. fem. n. *siligicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Thiobacillus sp002281775*. The type genome for the species is the GenBank assembly GCA_002256885.1. The GC content of the type genome is 64.32 % and the genome length is 2.88 Mbp.

Description of *Candidatus* Thiobacillus solivetta sp. nov.

Candidatus Thiobacillus solivetta (NL. fem. n. *solivetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Thiobacillus sp002256995*. The type genome for the species is the GenBank assembly GCA_002282115.1. The GC content of the type genome is 63.66 % and the genome length is 3.14 Mbp.

Description of *Candidatus* Thiobacillus tribrigena sp. nov.

Candidatus Thiobacillus tribrigena (NL. fem. n. *tribrigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Thiobacillus sp010365175*. The type genome for the species is the GenBank assembly GCA_010365175.1. The GC content of the type genome is 56.87 % and the genome length is 2.68 Mbp.

Description of *Candidatus* Thiocapsa adsocatio sp. nov.

Candidatus Thiocapsa adsocatio (NL. fem. n. *adsocatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Thiocapsa sp002423035*. The type genome for the species is the GenBank assembly GCA_002423035.1. The GC content of the type genome is 64.45 % and the genome length is 4.25 Mbp.

Description of *Candidatus* Thiocapsa capuditrix sp. nov.

Candidatus Thiocapsa capuditrix (NL. fem. n. *capuditrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Thiocapsa sp009929855*. The type genome for the species is the GenBank assembly GCA_009929855.1. The GC content of the type genome is 63.9 % and the genome length is 4.81 Mbp.

Description of *Candidatus* Thiocapsa indililega sp. nov.

Candidatus Thiocapsa indililega (NL. fem. n. *indililega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Thiocapsa sp011390875*. The type genome for the species is the GenBank assembly GCA_011390875.1. The GC content of the type genome is 64.31 % and the genome length is 3.98 Mbp.

Description of *Candidatus* Thiocapsa mahemago sp. nov.

Candidatus Thiocapsa mahemago (NL. fem. n. *mahemago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Thiocapsa sp001499735*. The type genome for the species is the GenBank assembly RS_GCF_001499735.1. The GC content of the type genome is 64.31 % and the genome length is 10.38 Mbp.

Description of *Candidatus* Thioclava cicaticella sp. nov.

Candidatus Thioclava cicaticella (NL. fem. n. *cicaticella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Thioclava sp001705665*. The type genome for the species is the GenBank assembly RS_GCF_001705665.1. The GC content of the type genome is 57.23 % and the genome length is 4.29 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Sea surface microlayer".

Description of *Candidatus* Thioclava conigibra sp. nov.

Candidatus Thioclava conigibra (NL. fem. n. *conigibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Thioclava sp004153385*. The type genome for the species is the GenBank assembly RS_GCF_004153385.1. The GC content of the type genome is 59.64 % and the genome length is 3.77 Mbp.

Description of *Candidatus* Thioclava sonabibra sp. nov.

Candidatus Thioclava sonabibra (NL. fem. n. *sonabibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Thioclava sp002563775*. The type genome for the species is the GenBank assembly RS_GCF_002563775.1. The GC content of the type genome is 64.21 % and the genome length is 4.02 Mbp.

Description of *Candidatus* Thiocystis cuferugo sp. nov.

Candidatus Thiocystis cuferugo (NL. fem. n. *cuferugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Thiocystis sp903866365*. The type genome for the species is the GenBank assembly GCA_903866365.1. The GC content of the type genome is 62.41 % and the genome length is 5.52 Mbp.

Description of *Candidatus* Thiodiazotropha miracitura sp. nov.

Candidatus Thiodiazotropha miracitura (NL. fem. n. *miracitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Thiodiazotropha sp003058525*. The type genome for the species is the GenBank assembly GCA_003058525.1. The GC content of the type genome is 52.33 % and the genome length is 4.74 Mbp.

Description of *Candidatus* Thiodiazotropha papavitura sp. nov.

Candidatus Thiodiazotropha papavitura (NL. fem. n. *papavitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Thiodiazotropha sp003676145*. The type genome for the species is the GenBank assembly GCA_003676175.1. The GC content of the type genome is 53.25 %

and the genome length is 4.18 Mbp.

Description of *Candidatus* Thiodiazotropha rudicugo sp. nov.

Candidatus Thiodiazotropha rudicugo (NL. fem. n. *rudicugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Thiodiazotropha sp003058495*. The type genome for the species is the GenBank assembly GCA_003058495.1. The GC content of the type genome is 57.49 % and the genome length is 4.53 Mbp.

Description of *Candidatus* Thiodiazotropha saburivita sp. nov.

Candidatus Thiodiazotropha saburivita (NL. fem. n. *saburivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Thiodiazotropha sp003094535*. The type genome for the species is the GenBank assembly GCA_003094535.1. The GC content of the type genome is 55.88 % and the genome length is 4.29 Mbp.

Description of *Candidatus* Thiodiazotropha vitigitio sp. nov.

Candidatus Thiodiazotropha vitigitio (NL. fem. n. *vitigitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Thiodiazotropha sp003094555*. The type genome for the species is the GenBank assembly GCA_003094515.1. The GC content of the type genome is 53.52 % and the genome length is 4.02 Mbp.

Description of *Candidatus* Thiodictyon cerarastra sp. nov.

Candidatus Thiodictyon cerarastra (NL. fem. n. *cerarastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Thiodictyon sp903837595*. The type genome for the species is the GenBank assembly GCA_903837595.1. The GC content of the type genome is 64.48 % and the genome length is 7.79 Mbp.

Description of *Candidatus* Thiodictyon indepessa sp. nov.

Candidatus Thiodictyon indepessa (NL. fem. n. *indepessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Thiodictyon sp903828115*. The type genome for the species is the GenBank assembly GCA_903828115.1. The GC content of the type genome is 65.97 % and the genome length is 7.51 Mbp.

Description of *Candidatus* Thiodictyon visibimonas sp. nov.

Candidatus Thiodictyon visibimonas (NL. fem. n. *visibimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Thiodictyon sp903946935*. The type genome for the species is the GenBank assembly GCA_903946935.1. The GC content of the type genome is 64.86 % and the genome length is 6.0 Mbp.

Description of *Candidatus* Thiodubiliella demogago sp. nov.

Candidatus Thiodubiliella demogago (NL. fem. n. *demogago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Thiodubiliella sp001875585*. The type genome for the species is the GenBank assembly RS_GCF_001875585.1. The GC content of the type genome is 37.74 % and the genome length is 3.09 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "gill tissue".

Description of *Candidatus* Thiodubiliella desacigena sp. nov.

Candidatus Thiodubiliella desacigena (NL. fem. n. *desacigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Thiodubiliella sp900180345*. The type genome for the species is the GenBank assembly RS_GCF_900180345.1. The GC content of the type genome is 38.82 % and the genome length is 1.44 Mbp.

Description of *Candidatus* Thiodubiliella dirititas sp. nov.

Candidatus Thiodubiliella dirititas (NL. fem. n. *dirititas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Thiodubiliella sp001547755*. The type genome for the species is the GenBank assembly GCA_003973615.1. The GC content of the type genome is 38.85 % and the genome length is 1.52 Mbp.

Description of *Candidatus* Thiodubiliella dirititura sp. nov.

Candidatus Thiodubiliella dirititura (NL. fem. n. *dirititura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Thiodubiliella sp008364125*. The type genome for the species is the GenBank assembly GCA_008364125.1. The GC content of the type genome is 41.37 % and the genome length is 1.18 Mbp.

Description of *Candidatus* Thiodubiliella lapicax sp. nov.

Candidatus Thiodubiliella lapicax (NL. fem. n. *lapicax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Thiodubiliella sp900128405*. The type genome for the species is the GenBank assembly RS_GCF_900128405.1. The GC content of the type genome is 36.64 % and the genome length is 2.27 Mbp.

Description of *Candidatus* Thiodubiliella podagugo sp. nov.

Candidatus Thiodubiliella podagugo (NL. fem. n. *podagugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Thiodubiliella sp900128535*. The type genome for the species is the GenBank assembly RS_GCF_900128535.1. The GC content of the type genome is 37.81 % and the genome length is 2.43 Mbp.

Description of *Candidatus* Thiodubiliella vehematio sp. nov.

Candidatus Thiodubiliella vehematio (NL. fem. n. *vehematio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Thiodubiliella sp001298715*. The type genome for the species is the GenBank assembly RS_GCF_001298715.1. The GC content of the type genome is 37.58

% and the genome length is 1.86 Mbp.

Description of *Candidatus* Thioglobus bicapatio sp. nov.

Candidatus Thioglobus bicapatio (NL. fem. n. *bicapatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Thioglobus sp002169705*. The type genome for the species is the GenBank assembly GCA_902556205.1. The GC content of the type genome is 37.89 % and the genome length is 1.65 Mbp.

Description of *Candidatus* Thioglobus curotago sp. nov.

Candidatus Thioglobus curotago (NL. fem. n. *curotago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Thioglobus sp902512485*. The type genome for the species is the GenBank assembly GCA_902512485.1. The GC content of the type genome is 37.95 % and the genome length is 1.0 Mbp.

Description of *Candidatus* Thioglobus dedigetta sp. nov.

Candidatus Thioglobus dedigetta (NL. fem. n. *dedigetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Thioglobus sp902511025*. The type genome for the species is the GenBank assembly GCA_902511025.1. The GC content of the type genome is 37.78 % and the genome length is 0.85 Mbp.

Description of *Candidatus* Thioglobus desurastra sp. nov.

Candidatus Thioglobus desurastra (NL. fem. n. *desurastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Thioglobus sp014384565*. The type genome for the species is the GenBank assembly GCA_014384565.1. The GC content of the type genome is 37.17 % and the genome length is 1.47 Mbp.

Description of *Candidatus* Thioglobus dilicitudo sp. nov.

Candidatus Thioglobus dilicitudo (NL. fem. n. *dilicitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Thioglobus sp902512305*. The type genome for the species is the GenBank assembly GCA_902512035.1. The GC content of the type genome is 36.36 % and the genome length is 1.36 Mbp.

Description of *Candidatus* Thioglobus emorticula sp. nov.

Candidatus Thioglobus emorticula (NL. fem. n. *emorticula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Thioglobus sp002711905*. The type genome for the species is the GenBank assembly GCA_002711905.1. The GC content of the type genome is 37.26 % and the genome length is 0.85 Mbp.

Description of *Candidatus* Thioglobus homagitio sp. nov.

Candidatus Thioglobus homagitio (NL. fem. n. *homagitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Thioglobus sp000372785*. The type genome for the species is the GenBank assembly GCA_000372785.1. The GC content of the type genome is 38.87 % and the genome length is 1.42 Mbp.

Description of *Candidatus* Thioglobus immusibra sp. nov.

Candidatus Thioglobus immusibra (NL. fem. n. *immusibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Thioglobus sp902513495*. The type genome for the species is the GenBank assembly GCA_902513495.1. The GC content of the type genome is 37.87 % and the genome length is 1.22 Mbp.

Description of *Candidatus* Thioglobus insorago sp. nov.

Candidatus Thioglobus insorago (NL. fem. n. *insorago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Thioglobus sp902514405*. The type genome for the species is the GenBank assembly GCA_902514405.1. The GC content of the type genome is 37.96 % and the genome length is 1.14 Mbp.

Description of *Candidatus* Thioglobus malivitoga sp. nov.

Candidatus Thioglobus malivitoga (NL. fem. n. *malivitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Thioglobus sp902509905*. The type genome for the species is the GenBank assembly GCA_902509905.1. The GC content of the type genome is 37.96 % and the genome length is 1.52 Mbp.

Description of *Candidatus* Thioglobus pedifitica sp. nov.

Candidatus Thioglobus pedifitica (NL. fem. n. *pedifitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Thioglobus sp001628405*. The type genome for the species is the GenBank assembly GCA_001628345.1. The GC content of the type genome is 38.39 % and the genome length is 1.58 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Red Sea water column Station 12 - depth 47m".

Description of *Candidatus* Thioglobus pomifitudo sp. nov.

Candidatus Thioglobus pomifitudo (NL. fem. n. *pomifitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Thioglobus sp002729805*. The type genome for the species is the GenBank assembly GCA_002729805.1. The GC content of the type genome is 38.7 % and the genome length is 0.74 Mbp.

Description of *Candidatus* Thioglobus refocibra sp. nov.

Candidatus Thioglobus refocibra (NL. fem. n. *refocibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Thioglobus sp000213395*. The type genome for the species is the GenBank assembly GCA_000213395.2. The GC content of the type genome is 38.1 % and the genome length is 1.03 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "South Atlantic sub-tropical gyre (station KN192-5-11)".

Description of *Candidatus* Thioglobus resulitia sp. nov.

Candidatus Thioglobus resulitia (NL. fem. n. *resulitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Thioglobus sp002698045*. The type genome for the species is the GenBank assembly GCA_902512375.1. The GC content of the type genome is 37.02 % and the genome length is 1.15 Mbp.

Description of *Candidatus* Thioglobus sitelilenta sp. nov.

Candidatus Thioglobus sitelilenta (NL. fem. n. *sitelilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Thioglobus sp902510115*. The type genome for the species is the GenBank assembly GCA_902510115.1. The GC content of the type genome is 38.4 % and the genome length is 0.95 Mbp.

Description of *Candidatus* Thioglobus tirunimonia sp. nov.

Candidatus Thioglobus tirunimonia (NL. fem. n. *tirunimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Thioglobus sp902606745*. The type genome for the species is the GenBank assembly GCA_902606745.1. The GC content of the type genome is 37.31 % and the genome length is 1.36 Mbp.

Description of *Candidatus* Thioglobus almucatio sp. nov.

Candidatus Thioglobus almucatio (NL. fem. n. *almucatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Thioglobus_A sp014384345*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-

formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_014384345.1. The GC content of the type genome is 39.88 % and the genome length is 1.25 Mbp.

Description of *Candidatus* Thioglobus culilousia sp. nov.

Candidatus Thioglobus culilousia (NL. fem. n. *culilousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Thioglobus_A sp012963715*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_012959215.1. The GC content of the type genome is 38.16 % and the genome length is 1.4 Mbp.

Description of *Candidatus* Thioglobus didacetta sp. nov.

Candidatus Thioglobus didacetta (NL. fem. n. *didacetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Thioglobus_A sp900128515*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_900128515.1. The GC content of the type genome is 37.4 % and the genome length is 1.92 Mbp.

Description of *Candidatus* Thioglobus funamibra sp. nov.

Candidatus Thioglobus funamibra (NL. fem. n. *funamibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Thioglobus_A sp900180385*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_900180385.1. The GC content of the type genome is 36.91 % and the genome length is 2.19 Mbp.

Description of *Candidatus* Thiogranum adambessa sp. nov.

Candidatus Thiogranum adambessa (NL. fem. n. *adambessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Thiogranum sp011321775*. The type genome for the species is the GenBank assembly GCA_011321775.1. The GC content of the type genome is 64.7 % and the genome length is 3.08 Mbp.

Description of *Candidatus* Thiogranum inergibula sp. nov.

Candidatus Thiogranum inergibula (NL. fem. n. *inergibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Thiogranum sp011374975*. The type genome for the species is the GenBank assembly GCA_011374975.1. The GC content of the type genome is 59.44 % and the genome length is 3.33 Mbp.

Description of *Candidatus* Thiogranum melopigena sp. nov.

Candidatus Thiogranum melopigena (NL. fem. n. *melopigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Thiogranum sp011371465*. The type genome for the species is the GenBank assembly GCA_011371465.1. The GC content of the type genome is 60.88 % and the genome length is 2.93 Mbp.

Description of *Candidatus* Thiohalobacter hexamentia sp. nov.

Candidatus Thiohalobacter hexamentia (NL. fem. n. *hexamentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Thiohalobacter sp002699185*. The type genome for the species is the GenBank assembly GCA_002699185.1. The GC content of the type genome is 64.87 % and the genome length is 2.9 Mbp.

Description of *Candidatus* Thiohalocapsa cerimicula sp. nov.

Candidatus Thiohalocapsa cerimicula (NL. fem. n. *cerimicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Thiohalocapsa sp003525925*. The type genome for the species is the GenBank assembly GCA_003499475.1. The GC content of the type genome is 57.94 %

and the genome length is 3.86 Mbp.

Description of *Candidatus* Thiohalocapsa immodetta sp. nov.

Candidatus Thiohalocapsa immodetta (NL. fem. n. *immodetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Thiohalocapsa sp001469165*. The type genome for the species is the GenBank assembly RS_GCF_001469165.1. The GC content of the type genome is 68.31 % and the genome length is 6.31 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "water".

Description of *Candidatus* Thiohalocapsa irradugo sp. nov.

Candidatus Thiohalocapsa irradugo (NL. fem. n. *irradugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Thiohalocapsa sp009908515*. The type genome for the species is the GenBank assembly GCA_009908515.1. The GC content of the type genome is 68.63 % and the genome length is 4.28 Mbp.

Description of *Candidatus* Thiolapillus colutessa sp. nov.

Candidatus Thiolapillus colutessa (NL. fem. n. *colutessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Thiolapillus sp003972985*. The type genome for the species is the GenBank assembly GCA_003973075.1. The GC content of the type genome is 63.32 % and the genome length is 2.28 Mbp.

Description of *Candidatus* Thiolapillus lugubitas sp. nov.

Candidatus Thiolapillus lugubitas (NL. fem. n. *lugubitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Thiolapillus sp012962365*. The type genome for the species is the GenBank assembly GCA_012962365.1. The GC content of the type genome is 55.31 % and the genome length is 2.87 Mbp.

Description of *Candidatus* Thiolinea admurousia sp. nov.

Candidatus Thiolinea admurousia (NL. fem. n. *admurousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Thiolinea sp902727945*. The type genome for the species is the GenBank assembly GCA_902727945.1. The GC content of the type genome is 47.63 % and the genome length is 2.09 Mbp.

Description of *Candidatus* Thiolinea desulitoga sp. nov.

Candidatus Thiolinea desulitoga (NL. fem. n. *desulitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Thiolinea sp002747435*. The type genome for the species is the GenBank assembly GCA_002747435.1. The GC content of the type genome is 45.32 % and the genome length is 2.53 Mbp.

Description of *Candidatus* Thiolinea inardetta sp. nov.

Candidatus Thiolinea inardetta (NL. fem. n. *inardetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Thiolinea sp008015155*. The type genome for the species is the GenBank assembly GCA_008015155.1. The GC content of the type genome is 44.76 % and the genome length is 4.16 Mbp.

Description of *Candidatus* Thiomicrorhabdus acistetta sp. nov.

Candidatus Thiomicrorhabdus acistetta (NL. fem. n. *acistetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Thiomicrorhabdus sp005885815*. The type genome for the species is the GenBank assembly RS_GCF_005885815.1. The GC content of the type genome is 45.19 % and the genome length is 2.37 Mbp.

Description of *Candidatus* Thiomicrorhabdus anxifimonia sp. nov.

Candidatus Thiomicrorhabdus anxifimonia (NL. fem. n. *anxifimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Thiomicrorhabdus sp013282625*. The type genome for the species is the GenBank assembly RS_GCF_013282625.1. The GC content of the type genome is 48.36 % and the genome length is 2.59 Mbp.

Description of *Candidatus* Thiomicrorhabdus arcelitura sp. nov.

Candidatus Thiomicrorhabdus arcelitura (NL. fem. n. *arcelitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Thiomicrorhabdus sp013153955*. The type genome for the species is the GenBank assembly GCA_013153955.1. The GC content of the type genome is 44.31 % and the genome length is 2.04 Mbp.

Description of *Candidatus* Thiomicrorhabdus catagifica sp. nov.

Candidatus Thiomicrorhabdus catagifica (NL. fem. n. *catagifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Thiomicrorhabdus sp006222135*. The type genome for the species is the GenBank assembly GCA_006222135.1. The GC content of the type genome is 42.29 % and the genome length is 2.31 Mbp.

Description of *Candidatus* Thiomicrorhabdus desepigena sp. nov.

Candidatus Thiomicrorhabdus desepigena (NL. fem. n. *desepigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Thiomicrorhabdus sp011398355*. The type genome for the species is the GenBank assembly RS_GCF_011398355.1. The GC content of the type genome is 45.49 % and the genome length is 2.72 Mbp.

Description of *Candidatus* Thiomicrorhabdus expecentia sp. nov.

Candidatus Thiomicrorhabdus expecentia (NL. fem. n. *expecentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Thiomicrorhabdus sp000478585*. The type genome for the species is the GenBank assembly RS_GCF_000478585.1. The GC content of the type genome is

39.88 % and the genome length is 2.73 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "not provided; submitted under MIGS 2.1".

Description of *Candidatus* Thiomicrorhabdus favilessa sp. nov.

Candidatus Thiomicrorhabdus favilessa (NL. fem. n. *favilessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Thiomicrorhabdus sp000702325*. The type genome for the species is the GenBank assembly RS_GCF_000702325.1. The GC content of the type genome is 38.21 % and the genome length is 2.66 Mbp.

Description of *Candidatus* Thiomicrorhabdus inresitrix sp. nov.

Candidatus Thiomicrorhabdus inresitrix (NL. fem. n. *inresitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Thiomicrorhabdus sp013391695*. The type genome for the species is the GenBank assembly RS_GCF_013391695.1. The GC content of the type genome is 52.37 % and the genome length is 2.49 Mbp.

Description of *Candidatus* Thiomicrorhabdus timefitas sp. nov.

Candidatus Thiomicrorhabdus timefitas (NL. fem. n. *timefitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Thiomicrorhabdus sp002299245*. The type genome for the species is the GenBank assembly GCA_002299245.1. The GC content of the type genome is 41.99 % and the genome length is 2.07 Mbp.

Description of *Candidatus* Thiomicrospira andabugo sp. nov.

Candidatus Thiomicrospira andabugo (NL. fem. n. *andabugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Thiomicrospira sp002421475*. The type genome for the species is the GenBank assembly GCA_002421475.1. The GC content of the type genome is 44.58 % and the genome length is 2.01 Mbp.

Description of *Candidatus* Thiomicrospira offulitudo sp. nov.

Candidatus Thiomicrospira offulitudo (NL. fem. n. *offulitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Thiomicrospira sp900112445*. The type genome for the species is the GenBank assembly RS_GCF_900112445.1. The GC content of the type genome is 45.69 % and the genome length is 2.06 Mbp.

Description of *Candidatus* Thiomonas alembugo sp. nov.

Candidatus Thiomonas alembugo (NL. fem. n. *alembugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Thiomonas sp013044035*. The type genome for the species is the GenBank assembly GCA_013044035.1. The GC content of the type genome is 64.41 % and the genome length is 3.7 Mbp.

Description of *Candidatus* Thiomonas ignosilenta sp. nov.

Candidatus Thiomonas ignosilenta (NL. fem. n. *ignosilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Thiomonas sp000733775*. The type genome for the species is the GenBank assembly RS_GCF_000733775.1. The GC content of the type genome is 62.51 % and the genome length is 4.39 Mbp.

Description of *Candidatus* Thiomonas inexcibula sp. nov.

Candidatus Thiomonas inexcibula (NL. fem. n. *inexcibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Thiomonas sp900089495*. The type genome for the species is the GenBank assembly RS_GCF_900089495.1. The GC content of the type genome is 64.51 % and the genome length is 4.67 Mbp.

Description of *Candidatus* Thiomonas ludibitrix sp. nov.

Candidatus Thiomonas ludibitrix (NL. fem. n. *ludibitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Thiomonas sp000377645*. The type genome for the species is the GenBank assembly RS_GCF_000377645.1. The GC content of the type genome is 69.97 % and the genome length is 4.2 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Sediment".

Description of *Candidatus* Thiomonas smegmitia sp. nov.

Candidatus Thiomonas smegmitia (NL. fem. n. *smegmitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Thiomonas sp011334805*. The type genome for the species is the GenBank assembly GCA_011334805.1. The GC content of the type genome is 63.71 % and the genome length is 1.95 Mbp.

Description of *Candidatus* Thioploca reforicella sp. nov.

Candidatus Thioploca reforicella (NL. fem. n. *reforicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Thioploca sp012032555*. The type genome for the species is the GenBank assembly GCA_012032555.1. The GC content of the type genome is 39.64 % and the genome length is 5.56 Mbp.

Description of *Candidatus* Thiopseudomonas ensifimonia sp. nov.

Candidatus Thiopseudomonas ensifimonia (NL. fem. n. *ensifimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Thiopseudomonas sp012728415*. The type genome for the species is the GenBank assembly GCA_012728415.1. The GC content of the type genome is 56.31 % and the genome length is 2.81 Mbp.

Description of *Candidatus* Thiopseudomonas valefax sp. nov.

Candidatus Thiopseudomonas valefax (NL. fem. n. *valefax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Thiopseudomonas sp001513435*. The type genome for the species is the GenBank assembly GCA_001513435.1. The GC content of the type genome is 48.91 % and the genome length is 2.2 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "pool of bioreactors CSTR01a; CSTR02a; and CSTR03a; thermophilic anaerobic digestion of cattle manure in continuous reactors for biogas production (methane)".

Description of *Candidatus* Thiorhodovibrio holovifica sp. nov.

Candidatus Thiorhodovibrio holovifica (NL. fem. n. *holovifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Thiorhodovibrio_A sp000228725*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_000228725.2. The GC content of the type genome is 60.22 % and the genome length is 5.34 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "marine microbial mat from the North Sea island of Mellum".

Description of *Candidatus* Thiorhodovibrio mahementia sp. nov.

Candidatus Thiorhodovibrio mahementia (NL. fem. n. *mahementia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Thiorhodovibrio_B sp007128075*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_007123245.1. The GC content of the type genome is 54.68 % and the genome length is 2.09 Mbp.

Description of *Candidatus* Thiothrix casabiforma sp. nov.

Candidatus Thiothrix casabiforma (NL. fem. n. *casabiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Thiothrix sp002425225*. The type genome for the species is the GenBank assembly GCA_002344905.1. The GC content of the type genome is 53.68 % and the genome length is 3.43 Mbp.

Description of *Candidatus* Thiothrix idipsifica sp. nov.

Candidatus Thiothrix idipsifica (NL. fem. n. *idipsifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Thiothrix sp013693955*. The type genome for the species is the GenBank assembly GCA_013693955.1. The GC content of the type genome is 55.56 % and the genome length is 4.54 Mbp.

Description of *Candidatus* Thiovulum agrimessa sp. nov.

Candidatus Thiovulum agrimessa (NL. fem. n. *agrimessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Thiovulum sp000276965*. The type genome for the species is the GenBank assembly GCA_000276965.1. The GC content of the type genome is 33.01 % and the genome length is 2.08 Mbp.

Description of *Candidatus* Tianweitania algifibula sp. nov.

Candidatus Tianweitania algifibula (NL. fem. n. *algifibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Tianweitania sp014534685*. The type genome for the species is the GenBank assembly RS_GCF_014534685.1. The GC content of the type genome is 61.51 % and the genome length is 4.89 Mbp.

Description of *Candidatus* Tibeticola fidenilenta sp. nov.

Candidatus Tibeticola fidenilenta (NL. fem. n. *fidenilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Tibeticola sp013693755*. The type genome for the species is the GenBank assembly GCA_013693755.1. The GC content of the type genome is 68.87 % and the genome length is 3.28 Mbp.

Description of *Candidatus* Tibicana depeledo sp. nov.

Candidatus Tibicana depeledo (NL. fem. n. *depeledo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1162 sp002311135*. The type genome for the species is the GenBank assembly GCA_002311135.1. The GC content of the type genome is 50.85 % and the genome length is 2.23 Mbp.

Description of *Candidatus* Tibicana gen. nov.

Candidatus Tibicana (NL. fem. n. *Tibicana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1162*. The type species for the genus is *Candidatus* Tibicana depeledo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA5629*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Deneciaceae.

Description of *Candidatus* Tibicana homulitia sp. nov.

Candidatus Tibicana homulitia (NL. fem. n. *homulitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1162 sp003142375*. The type genome for the species is the GenBank assembly GCA_003171355.1. The GC content of the type genome is 52.48 % and the genome length is 1.8 Mbp.

Description of *Candidatus* Tibicaria acrifitudo sp. nov.

Candidatus Tibicaria acrifitudo (NL. fem. n. *acrifitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *COE1 sp002492295*. The type genome for the species is the GenBank assembly GCA_002492295.1. The GC content of the type genome is 45.49 % and the genome length is 3.28 Mbp.

Description of *Candidatus* Tibicaria gen. nov.

Candidatus Tibicaria (NL. fem. n. *Tibicaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *COE1*. The type species for the genus is *Candidatus* Tibicaria acrifitudo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Tibicaria bicapitoga sp. nov.

Candidatus Tibicaria bicapitoga (NL. fem. n. *bicapitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *COE1 sp011959805*. The type genome for the species is the GenBank assembly RS_GCF_011959805.1. The GC content of the type genome is 37.93 % and the genome length is 4.25 Mbp.

Description of *Candidatus* Tibicaria cinipetta sp. nov.

Candidatus Tibicaria cinipetta (NL. fem. n. *cinipetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *COE1 sp000403335*. The type genome for the species is the GenBank assembly RS_GCF_000403335.2. The GC content of the type genome is 44.08 % and the genome length is 4.97 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Ceca".

Description of *Candidatus* Tibicaria culigicella sp. nov.

Candidatus Tibicaria culigicella (NL. fem. n. *culigicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *COE1 sp002490665*. The type genome for the species is the GenBank assembly GCA_002490665.1. The GC content of the type genome is 47.19 % and the genome length is 4.12 Mbp.

Description of *Candidatus* Tibicaria detecitas sp. nov.

Candidatus Tibicaria detecitas (NL. fem. n. *detecitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *COE1 sp001916965*. The type genome for the species is the GenBank assembly GCA_003150445.1. The GC content of the type genome is 41.09 % and the genome length is 2.57 Mbp.

Description of *Candidatus* Tibicaria femeledo sp. nov.

Candidatus Tibicaria femeledo (NL. fem. n. *femeledo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *COE1 sp003513705*. The type genome for the species is the GenBank assembly GCA_003513705.1. The GC content of the type genome is 37.83 % and the genome length is 4.23 Mbp.

Description of *Candidatus* Tibicaria insopessa sp. nov.

Candidatus Tibicaria insopessa (NL. fem. n. *insopessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *COE1 sp009774395*. The type genome for the species is the GenBank assembly GCA_009774395.1. The GC content of the type genome is 39.58 % and the genome length is 4.78 Mbp.

Description of *Candidatus* Tibicaria lanugousia sp. nov.

Candidatus Tibicaria lanugousia (NL. fem. n. *lanugousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *COE1 sp002491195*. The type genome for the species is the GenBank assembly GCA_002491195.1. The GC content of the type genome is 45.73 % and the genome length is 4.54 Mbp.

Description of *Candidatus* Tibicaria manubago sp. nov.

Candidatus Tibicaria manubago (NL. fem. n. *manubago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *COE1 sp009774375*. The type genome for the species is the GenBank assembly GCA_009774375.1. The GC content of the type genome is 50.52 % and the genome length is 4.45 Mbp.

Description of *Candidatus* Tibicaria milipetta sp. nov.

Candidatus Tibicaria milipetta (NL. fem. n. *milipetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *COE1 sp000403215*. The type genome for the species is the GenBank assembly RS_GCF_000403215.1. The GC content of the type genome is 44.46 % and the genome length is 6.96 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Ceca".

Description of *Candidatus* Tibicaria monodousia sp. nov.

Candidatus Tibicaria monodousia (NL. fem. n. *monodousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *COE1 sp009774245*. The type genome for the species is the GenBank assembly GCA_009774245.1. The GC content of the type genome is 46.63 % and the genome length is 6.09 Mbp.

Description of *Candidatus* Tibicaria obverivita sp. nov.

Candidatus Tibicaria obverivita (NL. fem. n. *obverivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *COE1 sp009774345*. The type genome for the species is the GenBank assembly GCA_009774345.1. The GC content of the type genome is 46.06 % and the genome length is 4.8 Mbp.

Description of *Candidatus* Tibicaria serotivita sp. nov.

Candidatus Tibicaria serotivita (NL. fem. n. *serotivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *COE1 sp002358575*. The type genome for the species is the GenBank assembly GCA_002358575.1. The GC content of the type genome is 40.27 % and the genome length is 4.23 Mbp.

Description of *Candidatus* Tibicaria subucousia sp. nov.

Candidatus Tibicaria subucousia (NL. fem. n. *subucousia* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *COE1 sp014239155*. The type genome for the species is the GenBank assembly GCA_014239155.1. The GC content of the type genome is 38.91 % and the genome length is 4.57 Mbp.

Description of *Candidatus* Tibicaria tetenitudo sp. nov.

Candidatus Tibicaria tetenitudo (NL. fem. n. *tetenitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *COE1 sp900753305*. The type genome for the species is the GenBank assembly RS_GCF_900753305.1. The GC content of the type genome is 40.52 % and the genome length is 3.4 Mbp.

Description of *Candidatus* Tibicella bicodicella sp. nov.

Candidatus Tibicella bicodicella (NL. fem. n. *bicodicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SURF-27 sp903844845*. The type genome for the species is the GenBank assembly GCA_903844845.1. The GC content of the type genome is 52.42 % and the genome length is 1.91 Mbp.

Description of *Candidatus* Tibicella gen. nov.

Candidatus Tibicella (NL. fem. n. *Tibicella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SURF-27*. The type species for the genus is *Candidatus* Tibicella bicodicella .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1222*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Resacidaceae.

Description of *Candidatus* Tibicella mavorentia sp. nov.

Candidatus Tibicella mavorentia (NL. fem. n. *mavorentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SURF-27 sp003597995*. The type genome for the species is the GenBank assembly GCA_003597995.1. The GC content of the type genome is 53.85 % and the genome length is 1.8 Mbp.

Description of *Candidatus* Tibicia devecilenta sp. nov.

Candidatus Tibicia devecilenta (NL. fem. n. *devecilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA12420 sp001795385*. The type genome for the species is the GenBank assembly GCA_001795385.1. The GC content of the type genome is 31.51 % and the genome length is 1.97 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at time point 4 / D; 5m depth; 0.2 filter".

Description of *Candidatus* Tibicia gen. nov.

Candidatus Tibicia (NL. fem. n. *Tibicia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA12420*. The type species for the genus is *Candidatus* Tibicia devecilenta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA12420*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Tibiciaceae.

Description of *Candidatus* Tibiciaceae fam. nov.

Candidatus Tibiciaceae (NL. fem. n. *Tibiciaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA12420.* The type genus for the taxon is *Candidatus* Tibicia .

According to GTDB R06-RS202, this family belongs to the order *Lachnospirales*.

Description of *Candidatus* Tibicia hecatedo sp. nov.

Candidatus Tibicia hecatedo (NL. fem. n. *hecatedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA12420 sp003452395*. The type genome for the species is the GenBank assembly GCA_003452395.1. The GC content of the type genome is 31.97 % and the genome length is 2.04 Mbp.

Description of *Candidatus* Tibicia mutabigena sp. nov.

Candidatus Tibicia mutabigena (NL. fem. n. *mutabigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA12420 sp001797255*. The type genome for the species is the GenBank assembly GCA_003513965.1. The GC content of the type genome is 31.37 % and the genome length is 2.25 Mbp.

Description of *Candidatus* Tibicida benepousia sp. nov.

Candidatus Tibicida benepousia (NL. fem. n. *benepousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SKLC01 sp007123425*. The type genome for the species is the GenBank assembly GCA_007123425.1. The GC content of the type genome is 73.2 % and the genome length is 2.68 Mbp.

Description of *Candidatus* Tibicida gen. nov.

Candidatus Tibicida (NL. fem. n. *Tibicida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SKLC01*. The type species for the genus is *Candidatus* Tibicida benepousia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Tibicida mavoriforma sp. nov.

Candidatus Tibicida mavoriforma (NL. fem. n. *mavoriforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *SKLC01 sp007130695*. The type genome for the species is the GenBank assembly GCA_007120835.1. The GC content of the type genome is 72.05 % and the genome length is 2.62 Mbp.

Description of *Candidatus* Tibicosa favilicula sp. nov.

Candidatus Tibicosa favilicula (NL. fem. n. *favilicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *FW602-bin16 sp004297765*. The type genome for the species is the GenBank assembly GCA_004297765.1. The GC content of the type genome is 60.75 % and the genome length is 5.64 Mbp.

Description of *Candidatus* Tibicosa gen. nov.

Candidatus Tibicosa (NL. fem. n. *Tibicosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *FW602-bin16*. The type species for the genus is *Candidatus* Tibicosa favilicula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *FW602-bin16*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Tibicosaceae.

Description of *Candidatus* Tibicosaceae fam. nov.

Candidatus Tibicosaceae (NL. fem. n. *Tibicosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *FW602-bin16.* The type genus for the taxon is *Candidatus* Tibicosa .

According to the original version of GTDB R06-RS202, this family belongs to the order *FW602-bin16*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Tibicosales.

Description of *Candidatus* Tibicosales ord. nov.

Candidatus Tibicosales (NL. fem. n. *Tibicosales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *FW602-bin16.* The type genus for the taxon is *Candidatus* Tibicosa .

According to the GTDB R06-RS202, this order belongs to the class *Dehalococcoidia*.

Description of *Candidatus* Tibicula curacitia sp. nov.

Candidatus Tibicula curacitia (NL. fem. n. *curacitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AqS2 sp001750625*. The type genome for the species is the GenBank assembly GCA_001750625.1. The GC content of the type genome is 68.83 % and the genome length is 1.61 Mbp.

Description of *Candidatus* Tibicula gen. nov.

Candidatus Tibicula (NL. fem. n. *Tibicula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *AqS2*. The type species for the genus is *Candidatus* Tibicula curacitia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *AqS2*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Tibiculaceae.

Description of *Candidatus* Tibiculaceae fam. nov.

Candidatus Tibiculaceae (NL. fem. n. *Tibiculaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *AqS2*. The type genus for the taxon is *Candidatus* Tibicula .

According to the original version of GTDB R06-RS202, this family belongs to the order *AqS2*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Tibiculales.

Description of *Candidatus* Tibiculales ord. nov.

Candidatus Tibiculales (NL. fem. n. *Tibiculales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *AqS2*. The type genus for the taxon is *Candidatus* Tibicula .

According to the GTDB R06-RS202, this order belongs to the class *Gammaproteobacteria*.

Description of *Candidatus* Tidjanibacter semipilenta sp. nov.

Candidatus Tidjanibacter semipilenta (NL. fem. n. *semipilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Tidjanibacter sp009783565*. The type genome for the species is the GenBank assembly GCA_009783565.1. The GC content of the type genome is 53.69 % and the genome length is 2.03 Mbp.

Description of *Candidatus* Tigurana cilicitas sp. nov.

Candidatus Tigurana cilicitas (NL. fem. n. *cilicitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5216 sp902825845*. The type genome for the species is the GenBank assembly GCA_902825845.1. The GC content of the type genome is 62.12 % and the genome length is 6.04 Mbp.

Description of *Candidatus* Tigurana gen. nov.

Candidatus Tigurana (NL. fem. n. *Tigurana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA5216*. The type species for the genus is *Candidatus* Tigurana cilicitas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SG8-41*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Diludanaceae.

Description of *Candidatus* Tigurana colutilega sp. nov.

Candidatus Tigurana colutilega (NL. fem. n. *colutilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5216 sp009885185*. The type genome for the species is the GenBank assembly GCA_009885185.1. The GC content of the type genome is 59.9 % and the genome length is 4.69 Mbp.

Description of *Candidatus* Tigurana levifitia sp. nov.

Candidatus Tigurana levifitia (NL. fem. n. *levifitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5216 sp005800795*. The type genome for the species is the GenBank assembly GCA_005800795.1. The GC content of the type genome is 59.23 % and the genome length is 4.27 Mbp.

Description of *Candidatus* Tigurana maheligena sp. nov.

Candidatus Tigurana maheligena (NL. fem. n. *maheligena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5216 sp002412495*. The type genome for the species is the GenBank assembly GCA_002412495.1. The GC content of the type genome is 59.78 % and the genome length is 6.07 Mbp.

Description of *Candidatus* Tigurana nocumetta sp. nov.

Candidatus Tigurana nocumetta (NL. fem. n. *nocumetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5216 sp900299145*. The type genome for the species is the GenBank assembly GCA_900299145.1. The GC content of the type genome is 59.76 % and the genome length is 5.51 Mbp.

Description of *Candidatus* Tigurana sitelimonas sp. nov.

Candidatus Tigurana sitelimonas (NL. fem. n. *sitelimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5216 sp903893565*. The type genome for the species is the GenBank assembly GCA_903825485.1. The GC content of the type genome is 47.56 % and the genome length is 4.17 Mbp.

Description of *Candidatus* Tigurella abmaticella sp. nov.

Candidatus Tigurella abmaticella (NL. fem. n. *abmaticella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002684695 sp002684695*. The type genome for the species is the GenBank assembly GCA_002684695.1. The GC content of the type genome is 31.92 % and the genome length is 1.93 Mbp.

Description of *Candidatus* Tigurella gen. nov.

Candidatus Tigurella (NL. fem. n. *Tigurella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-002684695*. The type species for the genus is *Candidatus* Tigurella abmaticella .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GCA-002684695*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Tigurellaceae.

Description of *Candidatus* Tigurellaceae fam. nov.

Candidatus Tigurellaceae (NL. fem. n. *Tigurellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *GCA-002684695.* The type genus for the taxon is *Candidatus* Tigurella .

According to GTDB R06-RS202, this family belongs to the order *Puniceispirillales*.

Description of *Candidatus* Tigurella agnomitoga sp. nov.

Candidatus Tigurella agnomitoga (NL. fem. n. *agnomitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002684695 sp902539295*. The type genome for the species is the GenBank assembly GCA_902539295.1. The GC content of the type genome is 31.86 % and the genome length is 2.16 Mbp.

Description of *Candidatus* Tigurella baropatio sp. nov.

Candidatus Tigurella baropatio (NL. fem. n. *baropatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *GCA-002684695 sp902612965*. The type genome for the species is the GenBank assembly GCA_902612965.1. The GC content of the type genome is 31.55 % and the genome length is 2.14 Mbp.

Description of *Candidatus* Tigurella terebitoga sp. nov.

Candidatus Tigurella terebitoga (NL. fem. n. *terebitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002684695 sp902522415*. The type genome for the species is the GenBank assembly GCA_902522415.1. The GC content of the type genome is 31.68 % and the genome length is 1.21 Mbp.

Description of *Candidatus* Tigurella vitigago sp. nov.

Candidatus Tigurella vitigago (NL. fem. n. *vitigago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002684695 sp902532475*. The type genome for the species is the GenBank assembly GCA_902532475.1. The GC content of the type genome is 33.58 % and the genome length is 1.94 Mbp.

Description of *Candidatus* Tiguria bipalitrix sp. nov.

Candidatus Tiguria bipalitrix (NL. fem. n. *bipalitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAILNN01 sp903864375*. The type genome for the species is the GenBank assembly GCA_903864375.1. The GC content of the type genome is 59.82 % and the genome length is 4.16 Mbp.

Description of *Candidatus* Tiguria gen. nov.

Candidatus Tiguria (NL. fem. n. *Tiguria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAILNN01*. The type species for the genus is *Candidatus* Tiguria bipalitrix .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA9464*. According to the renamed version of GTDB R06-RS202, this taxon belongs to

the family *Candidatus* Vatilariaceae.

Description of *Candidatus* Tiguria bisaciforma sp. nov.

Candidatus Tiguria bisaciforma (NL. fem. n. *bisaciforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAILNN01 sp903896505*. The type genome for the species is the GenBank assembly GCA_903896505.1. The GC content of the type genome is 57.97 % and the genome length is 5.36 Mbp.

Description of *Candidatus* Tiguria seleciforma sp. nov.

Candidatus Tiguria seleciforma (NL. fem. n. *seleciforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAILNN01 sp903835555*. The type genome for the species is the GenBank assembly GCA_903845535.1. The GC content of the type genome is 56.0 % and the genome length is 5.2 Mbp.

Description of *Candidatus* Tigurida turibax sp. nov.

Candidatus Tigurida turibax (NL. fem. n. *turibax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SLJK01 sp007135125*. The type genome for the species is the GenBank assembly GCA_007126665.1. The GC content of the type genome is 45.81 % and the genome length is 2.01 Mbp.

Description of *Candidatus* Tigurida gen. nov.

Candidatus Tigurida (NL. fem. n. *Tigurida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SLJK01*. The type species for the genus is *Candidatus* Tigurida turibax .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA8154*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Depubiaceae.

Description of *Candidatus* Tigurosa benepigena sp. nov.

Candidatus Tigurosa benepigena (NL. fem. n. *benepigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *1-14-0-10-47-16 sp002773395*. The type genome for the species is the GenBank assembly GCA_009991995.1. The GC content of the type genome is 47.21 % and the genome length is 0.62 Mbp.

Description of *Candidatus* Tigurosa gen. nov.

Candidatus Tigurosa (NL. fem. n. *Tigurosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *1-14-0-10-47-16*. The type species for the genus is *Candidatus* Tigurosa benepigena .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2163*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Legifariaceae.

Description of *Candidatus* Tigurula coticitica sp. nov.

Candidatus Tigurula coticitica (NL. fem. n. *coticitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2693335 sp002724895*. The type genome for the species is the GenBank assembly GCA_002717005.1. The GC content of the type genome is 27.82 % and the genome length is 1.48 Mbp.

Description of *Candidatus* Tigurula gen. nov.

Candidatus Tigurula (NL. fem. n. *Tigurula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2693335*. The type species for the genus is *Candidatus* Tigurula coticitica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *BACL11*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Duricidaceae.

Description of *Candidatus* Timefana apoplentia sp. nov.

Candidatus Timefana apoplentia (NL. fem. n. *apoplentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2595 sp002339745*. The type genome for the species is the GenBank assembly GCA_002339745.1. The GC content of the type genome is 48.58 % and the genome length is 1.72 Mbp.

Description of *Candidatus* Timefana gen. nov.

Candidatus Timefana (NL. fem. n. *Timefana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA2595*. The type species for the genus is *Candidatus* Timefana apoplentia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2595*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Timefanaceae.

Description of *Candidatus* Timefanaceae fam. nov.

Candidatus Timefanaceae (NL. fem. n. *Timefanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA2595.* The type genus for the taxon is *Candidatus* Timefana .

According to GTDB R06-RS202, this family belongs to the order *Thermincolales*.

Description of *Candidatus* Timefaria peribessa sp. nov.

Candidatus Timefaria peribessa (NL. fem. n. *peribessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIOJG01 sp903858555*. The type genome for the species is the GenBank assembly GCA_903841295.1. The GC content of the type genome is 39.56 % and the genome length is 1.04 Mbp.

Description of *Candidatus* Timefaria gen. nov.

Candidatus Timefaria (NL. fem. n. *Timefaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIOJG01*. The type species for the genus is *Candidatus* Timefaria peribessa .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GWA2-37-8*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Nosocariaceae.

Description of *Candidatus* Timefaria sanabousia sp. nov.

Candidatus Timefaria sanabousia (NL. fem. n. *sanabousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIOJG01 sp903853785*. The type genome for the species is the GenBank assembly GCA_903853785.1. The GC content of the type genome is 36.29 % and the genome length is 1.0 Mbp.

Description of *Candidatus* Timefella fetifetta sp. nov.

Candidatus Timefella fetifetta (NL. fem. n. *fetifetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *TCS61 sp001577185*. The type genome for the species is the GenBank assembly GCA_001577125.1. The GC content of the type genome is 33.2 % and the genome length is 1.09 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "biofilm from deap sea brine pool".

Description of *Candidatus* Timefella gen. nov.

Candidatus Timefella (NL. fem. n. *Timefella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *TCS61*. The type species for the genus is *Candidatus* Timefella fetifetta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *TCS61*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Timefellaceae.

Description of *Candidatus* Timefellaceae fam. nov.

Candidatus Timefellaceae (NL. fem. n. *Timefellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *TCS61*. The type genus for the taxon is *Candidatus* Timefella .

According to GTDB R06-RS202, this family belongs to the order *Cloacimonadales*.

Description of *Candidatus* Timefia colipitudo sp. nov.

Candidatus Timefia colipitudo (NL. fem. n. *colipitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9732 sp003456855*. The type genome for the species is the GenBank assembly GCA_003456855.1. The GC content of the type genome is 50.66 % and the genome length is 1.89 Mbp.

Description of *Candidatus* Timefia gen. nov.

Candidatus Timefia (NL. fem. n. *Timefia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA9732*. The type species for the genus is *Candidatus* Timefia colipitudo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Timefia galacicella sp. nov.

Candidatus Timefia galacicella (NL. fem. n. *galacicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9732 sp900321635*. The type genome for the species is the GenBank assembly GCA_900321635.1. The GC content of the type genome is 48.05 % and the genome length is 1.83 Mbp.

Description of *Candidatus* Timefia infatilega sp. nov.

Candidatus Timefia infatilega (NL. fem. n. *infatilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9732 sp902781545*. The type genome for the species is the GenBank assembly GCA_902781545.1. The GC content of the type genome is 51.83 % and the genome length is 2.22 Mbp.

Description of *Candidatus* Timefia inlusimonas sp. nov.

Candidatus Timefia inlusimonas (NL. fem. n. *inlusimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9732 sp902796335*. The type genome for the species is the GenBank assembly GCA_902796335.1. The GC content of the type genome is 51.85 % and the genome length is 1.63 Mbp.

Description of *Candidatus* Timefia masocatica sp. nov.

Candidatus Timefia masocatica (NL. fem. n. *masocatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9732 sp001940825*. The type genome for the species is the GenBank assembly GCA_001940825.1. The GC content of the type genome is 48.12 % and the genome length is 2.36 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "feces from Phil the wombat".

Description of *Candidatus* Timefida decenago sp. nov.

Candidatus Timefida decenago (NL. fem. n. *decenago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RZYY01 sp012516825*. The type genome for the species is the GenBank assembly GCA_012516825.1. The GC content of the type genome is 38.14 % and the genome length is 2.63 Mbp.

Description of *Candidatus* Timefida gen. nov.

Candidatus Timefida (NL. fem. n. *Timefida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this genus is *RZYY01*. The type species for the genus is *Candidatus* Timefida decenago .

According to the original version of GTDB R06-RS202, this genus belongs to the family *4484-276*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Bicubosaceae.

Description of *Candidatus* Timefida impugimonia sp. nov.

Candidatus Timefida impugimonia (NL. fem. n. *impugimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RZYY01 sp009930115*. The type genome for the species is the GenBank assembly GCA_009930115.1. The GC content of the type genome is 40.6 % and the genome length is 3.78 Mbp.

Description of *Candidatus* Timefosa decinitio sp. nov.

Candidatus Timefosa decinitio (NL. fem. n. *decinitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-02-FULL-39-13 sp002782365*. The type genome for the species is the GenBank assembly GCA_009993695.1. The GC content of the type genome is 39.07 % and the genome length is 0.6 Mbp.

Description of *Candidatus* Timefosa gen. nov.

Candidatus Timefosa (NL. fem. n. *Timefosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *2-02-FULL-39-13*. The type species for the genus is *Candidatus* Timefosa decinitio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GWA2-42-15*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Monodidaceae.

Description of *Candidatus* Timefosa purulivita sp. nov.

Candidatus Timefosa purulivita (NL. fem. n. *purulivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-02-FULL-39-13 sp001783595*. The type genome for the species is the GenBank assembly GCA_001783595.1. The GC content of the type genome is 38.95 % and the genome length is 0.72 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 0.2 micron filter; full assembly".

Description of *Candidatus* Timefula avuncitas sp. nov.

Candidatus Timefula avuncitas (NL. fem. n. *avuncitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1414 sp003486795*. The type genome for the species is the GenBank assembly GCA_003486795.1. The GC content of the type genome is 34.36 % and the genome length is 1.58 Mbp.

Description of *Candidatus* Timefula gen. nov.

Candidatus Timefula (NL. fem. n. *Timefula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1414*. The type species for the genus is *Candidatus* Timefula avuncitas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1414*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Timefulaceae.

Description of *Candidatus* Timefulaceae fam. nov.

Candidatus Timefulaceae (NL. fem. n. *Timefulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA1414.* The type genus for the taxon is *Candidatus* Timefula .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA1414*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Timefulales.

Description of *Candidatus* Timefulales ord. nov.

Candidatus Timefulales (NL. fem. n. *Timefulales* a name created from the name of the

type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA1414.* The type genus for the taxon is *Candidatus* Timefula .

According to the original version of GTDB R06-RS202, this family belongs to the class *UBA1414*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Timefulae.

Description of *Candidatus* Timefulae class. nov.

Candidatus Timefulae (NL. fem. n. *c__Timefulae* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA1414.* The type genus for the taxon is *Candidatus* Timefula .

According to GTDB R06-RS202, this class belongs to the phylum *Actinobacteriota*.

Description of *Candidatus* Timefula depubilenta sp. nov.

Candidatus Timefula depubilenta (NL. fem. n. *depubilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1414 sp002304935*. The type genome for the species is the GenBank assembly GCA_002304935.1. The GC content of the type genome is 34.82 % and the genome length is 1.71 Mbp.

Description of *Candidatus* Timefula obnunicella sp. nov.

Candidatus Timefula obnunicella (NL. fem. n. *obnunicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1414 sp012837825*. The type genome for the species is the GenBank assembly GCA_012837825.1. The GC content of the type genome is 36.02 % and the genome length is 1.56 Mbp.

Description of *Candidatus* Timonella cepurentia sp. nov.

Candidatus Timonella cepurentia (NL. fem. n. *cepurentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Timonella sp002376595*. The type genome for the species is the GenBank assembly GCA_002376595.1. The GC content of the type genome is 55.62 % and the genome length is 2.39 Mbp.

Description of *Candidatus* Tindallia adtumivita sp. nov.

Candidatus Tindallia adtumivita (NL. fem. n. *adtumivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Tindallia sp003838145*. The type genome for the species is the GenBank assembly GCA_003838145.1. The GC content of the type genome is 42.28 % and the genome length is 2.48 Mbp.

Description of *Candidatus* Tindallia relecilenta sp. nov.

Candidatus Tindallia relecilenta (NL. fem. n. *relecilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Tindallia sp007134225*. The type genome for the species is the GenBank assembly GCA_007126525.1. The GC content of the type genome is 43.73 % and the genome length is 1.9 Mbp.

Description of *Candidatus* Tirocana milifivita sp. nov.

Candidatus Tirocana milifivita (NL. fem. n. *milifivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-02-FULL-39-32 sp001800135*. The type genome for the species is the GenBank assembly GCA_001800165.1. The GC content of the type genome is 38.3 % and the genome length is 2.52 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under low O2 conditions; 1.2 micron filter; full assembly".

Description of *Candidatus* Tirocana gen. nov.

Candidatus Tirocana (NL. fem. n. *Tirocana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *2-02-FULL-39-32*. The type species for the genus is *Candidatus*

Tirocana milifivita .

According to the original version of GTDB R06-RS202, this genus belongs to the family *2-02-FULL-39-32*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Tirocanaceae.

Description of *Candidatus* Tirocanaceae fam. nov.

Candidatus Tirocanaceae (NL. fem. n. *Tirocanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *2-02-FULL-39-32.* The type genus for the taxon is *Candidatus* Tirocana .

According to the original version of GTDB R06-RS202, this family belongs to the order *2-02-FULL-39-32*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Tirocanales.

Description of *Candidatus* Tirocanales ord. nov.

Candidatus Tirocanales (NL. fem. n. *Tirocanales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *2-02-FULL-39-32.* The type genus for the taxon is *Candidatus* Tirocana .

According to the GTDB R06-RS202, this order belongs to the class *Elusimicrobia*.

Description of *Candidatus* Tirocaria semimetta sp. nov.

Candidatus Tirocaria semimetta (NL. fem. n. *semimetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *B26-G9 sp003645745*. The type genome for the species is the GenBank assembly GCA_003645745.1. The GC content of the type genome is 35.26 % and the genome length is 1.63 Mbp.

Description of *Candidatus* Tirocaria gen. nov.

Candidatus Tirocaria (NL. fem. n. *Tirocaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this genus is *B26-G9*. The type species for the genus is *Candidatus* Tirocaria semimetta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *B26-G9*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Tirocariaceae.

Description of *Candidatus* Tirocariaceae fam. nov.

Candidatus Tirocariaceae (NL. fem. n. *Tirocariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *B26-G9.* The type genus for the taxon is *Candidatus* Tirocaria .

According to the original version of GTDB R06-RS202, this family belongs to the order *B26-G9*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Tirocariales.

Description of *Candidatus* Tirocariales ord. nov.

Candidatus Tirocariales (NL. fem. n. *Tirocariales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *B26-G9.* The type genus for the taxon is *Candidatus* Tirocaria .

According to the original version of GTDB R06-RS202, this family belongs to the class *Koll11*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Resalellae.

Description of *Candidatus* Tirocella culilicula sp. nov.

Candidatus Tirocella culilicula (NL. fem. n. *culilicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *BM003 sp002868855*. The type genome for the species is the GenBank assembly GCA_002868855.1. The GC content of the type genome is 60.59 % and the genome length is 3.62 Mbp.

Description of *Candidatus* Tirocella gen. nov.

Candidatus Tirocella (NL. fem. n. *Tirocella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *BM003*. The type species for the genus is *Candidatus* Tirocella culilicula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *BM003*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Tirocellaceae.

Description of *Candidatus* Tirocellaceae fam. nov.

Candidatus Tirocellaceae (NL. fem. n. *Tirocellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *BM003.* The type genus for the taxon is *Candidatus* Tirocella .

According to the original version of GTDB R06-RS202, this family belongs to the order *BM003*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Tirocellales.

Description of *Candidatus* Tirocellales ord. nov.

Candidatus Tirocellales (NL. fem. n. *Tirocellales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *BM003.* The type genus for the taxon is *Candidatus* Tirocella .

According to the GTDB R06-RS202, this order belongs to the class *Gammaproteobacteria*.

Description of *Candidatus* Tirocia cicilitura sp. nov.

Candidatus Tirocia cicilitura (NL. fem. n. *cicilitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA10002 sp001004005*. The type genome for the species is the GenBank assembly GCA_001004005.1. The GC content of the type genome is 49.01 % and the genome length is 0.91 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "aquifer sediment".

Description of *Candidatus* Tirocia gen. nov.

Candidatus Tirocia (NL. fem. n. *Tirocia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA10002*. The type species for the genus is *Candidatus* Tirocia cicilitura .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA11359_A*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Noviliaceae.

Description of *Candidatus* Tirocia immadicella sp. nov.

Candidatus Tirocia immadicella (NL. fem. n. *immadicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA10002 sp009694955*. The type genome for the species is the GenBank assembly GCA_009694955.1. The GC content of the type genome is 49.77 % and the genome length is 0.87 Mbp.

Description of *Candidatus* Tirocia inordastra sp. nov.

Candidatus Tirocia inordastra (NL. fem. n. *inordastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA10002 sp001820935*. The type genome for the species is the GenBank assembly GCA_001820935.1. The GC content of the type genome is 50.83 % and the genome length is 0.85 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 0.1 micron filter; full assembly".

Description of *Candidatus* Tirocia pocilastra sp. nov.

Candidatus Tirocia pocilastra (NL. fem. n. *pocilastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA10002 sp001003605*. The type genome for the species is the GenBank assembly GCA_003514705.1. The GC content of the type genome is 48.07 % and the genome length is 1.0 Mbp.

Description of *Candidatus* Tirocia refociforma sp. nov.

Candidatus Tirocia refociforma (NL. fem. n. *refociforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA10002 sp001821155*. The type genome for the species is the GenBank assembly GCA_003519245.1. The GC content of the type genome is 49.93 % and the genome length is 0.84 Mbp.

Description of *Candidatus* Tirocida defesitudo sp. nov.

Candidatus Tirocida defesitudo (NL. fem. n. *defesitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9337 sp003056165*. The type genome for the species is the GenBank assembly GCA_003056105.1. The GC content of the type genome is 31.79 % and the genome length is 0.74 Mbp.

Description of *Candidatus* Tirocida gen. nov.

Candidatus Tirocida (NL. fem. n. *Tirocida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA9337*. The type species for the genus is *Candidatus* Tirocida defesitudo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA9337*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Tirocidaceae.

Description of *Candidatus* Tirocidaceae fam. nov.

Candidatus Tirocidaceae (NL. fem. n. *Tirocidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA9337.* The type genus for the taxon is *Candidatus* Tirocida .

According to GTDB R06-RS202, this family belongs to the order *Moranbacterales*.

Description of *Candidatus* Tirocida dimadatica sp. nov.

Candidatus Tirocida dimadatica (NL. fem. n. *dimadatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9337 sp000990945*. The type genome for the species is the GenBank assembly GCA_000990945.1. The GC content of the type genome is 35.18 % and the genome length is 1.22 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "aquifer sediment".

Description of *Candidatus* Tirocida gerunatio sp. nov.

Candidatus Tirocida gerunatio (NL. fem. n. *gerunatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9337 sp003510795*. The type genome for the species is the GenBank assembly GCA_003510795.1. The GC content of the type genome is 34.69 % and the genome length is 1.28 Mbp.

Description of *Candidatus* Tirocida monocatio sp. nov.

Candidatus Tirocida monocatio (NL. fem. n. *monocatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9337 sp003507475*. The type genome for the species is the GenBank assembly GCA_000990175.1. The GC content of the type genome is 34.04 % and the genome length is 1.27 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "aquifer sediment".

Description of *Candidatus* Tirocosa intoritoga sp. nov.

Candidatus Tirocosa intoritoga (NL. fem. n. *intoritoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACDHS01 sp013820875*. The type genome for the species is the GenBank assembly GCA_013820875.1. The GC content of the type genome is 52.67 % and the genome length is 5.7 Mbp.

Description of *Candidatus* Tirocosa gen. nov.

Candidatus Tirocosa (NL. fem. n. *Tirocosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACDHS01*. The type species for the genus is *Candidatus* Tirocosa

intoritoga .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JACDHS01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Tirocosaceae.

Description of *Candidatus* Tirocosaceae fam. nov.

Candidatus Tirocosaceae (NL. fem. n. *Tirocosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JACDHS01.* The type genus for the taxon is *Candidatus* Tirocosa .

According to GTDB R06-RS202, this family belongs to the order *Pedosphaerales*.

Description of *Candidatus* Tirocula inlecimonia sp. nov.

Candidatus Tirocula inlecimonia (NL. fem. n. *inlecimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *QHCF01 sp003244275*. The type genome for the species is the GenBank assembly GCA_003244275.1. The GC content of the type genome is 68.26 % and the genome length is 2.27 Mbp.

Description of *Candidatus* Tirocula gen. nov.

Candidatus Tirocula (NL. fem. n. *Tirocula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *QHCF01*. The type species for the genus is *Candidatus* Tirocula inlecimonia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *QHCF01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Tiroculaceae.

Description of *Candidatus* Tiroculaceae fam. nov.

Candidatus Tiroculaceae (NL. fem. n. *Tiroculaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *QHCF01.* The type genus for the taxon is *Candidatus* Tirocula .

According to GTDB R06-RS202, this family belongs to the order *Acidimicrobiales*.

Description of *Candidatus* Tirunana nugigugo sp. nov.

Candidatus Tirunana nugigugo (NL. fem. n. *nugigugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RBC074 sp902825875*. The type genome for the species is the GenBank assembly GCA_902825875.1. The GC content of the type genome is 53.45 % and the genome length is 7.32 Mbp.

Description of *Candidatus* Tirunana gen. nov.

Candidatus Tirunana (NL. fem. n. *Tirunana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RBC074*. The type species for the genus is *Candidatus* Tirunana nugigugo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *RBC074*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Tirunanaceae.

Description of *Candidatus* Tirunanaceae fam. nov.

Candidatus Tirunanaceae (NL. fem. n. *Tirunanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *RBC074.* The type genus for the taxon is *Candidatus* Tirunana .

According to the original version of GTDB R06-RS202, this family belongs to the order *RBC074*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Tirunanales.

Description of *Candidatus* Tirunanales ord. nov.

Candidatus Tirunanales (NL. fem. n. *Tirunanales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *RBC074.* The type genus for the taxon is *Candidatus* Tirunana .

According to the GTDB R06-RS202, this order belongs to the class *Blastocatellia*.

Description of *Candidatus* Tirunaria lucififorma sp. nov.

Candidatus Tirunaria lucififorma (NL. fem. n. *lucififorma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CADBOM01 sp902796325*. The type genome for the species is the GenBank assembly GCA_902796325.1. The GC content of the type genome is 54.41 % and the genome length is 2.42 Mbp.

Description of *Candidatus* Tirunaria gen. nov.

Candidatus Tirunaria (NL. fem. n. *Tirunaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CADBOM01*. The type species for the genus is *Candidatus* Tirunaria lucififorma .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CADBOM01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Tirunariaceae.

Description of *Candidatus* Tirunariaceae fam. nov.

Candidatus Tirunariaceae (NL. fem. n. *Tirunariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CADBOM01*. The type genus for the taxon is *Candidatus* Tirunaria .

According to GTDB R06-RS202, this family belongs to the order *Coriobacteriales*.

Description of *Candidatus* Tirunella relenibra sp. nov.

Candidatus Tirunella relenibra (NL. fem. n. *relenibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GWA2-45-9 sp001779535*. The type genome for the species is the GenBank assembly GCA_001779555.1. The GC content of the type genome is 45.08 % and the genome length is 0.61 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under low O2 conditions; 0.2 micron filter; full assembly".

Description of *Candidatus* Tirunella gen. nov.

Candidatus Tirunella (NL. fem. n. *Tirunella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GWA2-45-9*. The type species for the genus is *Candidatus* Tirunella relenibra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GWB1-50-10*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Venefulaceae.

Description of *Candidatus* Tirunia malagitudo sp. nov.

Candidatus Tirunia malagitudo (NL. fem. n. *malagitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SpSt-205 sp011058435*. The type genome for the species is the GenBank assembly GCA_011058435.1. The GC content of the type genome is 58.08 % and the genome length is 2.21 Mbp.

Description of *Candidatus* Tirunia gen. nov.

Candidatus Tirunia (NL. fem. n. *Tirunia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SpSt-205*. The type species for the genus is *Candidatus* Tirunia malagitudo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SpSt-205*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Tiruniaceae.

Description of *Candidatus* Tiruniaceae fam. nov.

Candidatus Tiruniaceae (NL. fem. n. *Tiruniaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SpSt-205.* The type genus for the taxon is *Candidatus* Tirunia .

According to the original version of GTDB R06-RS202, this family belongs to the order *SpSt-205*. According to the renamed version of GTDB R06-RS202, this taxon belongs to

the order *Candidatus* Tiruniales.

Description of *Candidatus* Tiruniales ord. nov.

Candidatus Tiruniales (NL. fem. n. *Tiruniales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SpSt-205.* The type genus for the taxon is *Candidatus* Tirunia .

According to the GTDB R06-RS202, this order belongs to the class *Bacteroidia*.

Description of *Candidatus* Tirunia obmutitura sp. nov.

Candidatus Tirunia obmutitura (NL. fem. n. *obmutitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SpSt-205 sp011373465*. The type genome for the species is the GenBank assembly GCA_011373465.1. The GC content of the type genome is 53.66 % and the genome length is 1.49 Mbp.

Description of *Candidatus* Tirunosa ludibatio sp. nov.

Candidatus Tirunosa ludibatio (NL. fem. n. *ludibatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *VYFG01 sp009842505*. The type genome for the species is the GenBank assembly GCA_009842505.1. The GC content of the type genome is 62.41 % and the genome length is 3.73 Mbp.

Description of *Candidatus* Tirunosa gen. nov.

Candidatus Tirunosa (NL. fem. n. *Tirunosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *VYFG01*. The type species for the genus is *Candidatus* Tirunosa ludibatio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *LS-SOB*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Repeciaceae.

Description of *Candidatus* Tirunula tenemetta sp. nov.

Candidatus Tirunula tenemetta (NL. fem. n. *tenemetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *B32-G16 sp003645645*. The type genome for the species is the GenBank assembly GCA_003645645.1. The GC content of the type genome is 43.82 % and the genome length is 3.98 Mbp.

Description of *Candidatus* Tirunula gen. nov.

Candidatus Tirunula (NL. fem. n. *Tirunula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *B32-G16*. The type species for the genus is *Candidatus* Tirunula tenemetta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *B32-G16*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Tirunulaceae.

Description of *Candidatus* Tirunulaceae fam. nov.

Candidatus Tirunulaceae (NL. fem. n. *Tirunulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *B32-G16.* The type genus for the taxon is *Candidatus* Tirunula .

According to the original version of GTDB R06-RS202, this family belongs to the order *SPDA01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Semimellales.

Description of *Candidatus* Tissierella cosiditoga sp. nov.

Candidatus Tissierella cosiditoga (NL. fem. n. *cosiditoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Tissierella sp002266425*. The type genome for the species is the GenBank assembly RS_GCF_002266425.1. The GC content of the type genome is 31.34 % and the genome length is 4.39 Mbp.

Description of *Candidatus* Tokpelaia adnumitoga sp. nov.

Candidatus Tokpelaia adnumitoga (NL. fem. n. *adnumitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Tokpelaia_A sp003331005*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003331005.1. The GC content of the type genome is 42.88 % and the genome length is 1.08 Mbp.

Description of *Candidatus* Tokpelaia genufisca sp. nov.

Candidatus Tokpelaia genufisca (NL. fem. n. *genufisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Tokpelaia_A sp003331105*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003331105.1. The GC content of the type genome is 38.55 % and the genome length is 0.96 Mbp.

Description of *Candidatus* Tokpelaia nehalilega sp. nov.

Candidatus Tokpelaia nehalilega (NL. fem. n. *nehalilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Tokpelaia_A sp003331065*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003331065.1. The GC content of the type genome is 39.97 % and the genome length is 1.3 Mbp.

Description of *Candidatus* Tokpelaia peribisca sp. nov.

Candidatus Tokpelaia peribisca (NL. fem. n. *peribisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Tokpelaia_A sp003331045*. Although GTDB has assigned a genus

name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003331045.1. The GC content of the type genome is 43.54 % and the genome length is 1.53 Mbp.

Description of *Candidatus* Tolumonas adsicicella sp. nov.

Candidatus Tolumonas adsicicella (NL. fem. n. *adsicicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Tolumonas sp008015085*. The type genome for the species is the GenBank assembly GCA_008015085.1. The GC content of the type genome is 47.93 % and the genome length is 1.83 Mbp.

Description of *Candidatus* Tolumonas obmurimonas sp. nov.

Candidatus Tolumonas obmurimonas (NL. fem. n. *obmurimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Tolumonas sp003251455*. The type genome for the species is the GenBank assembly GCA_003251455.1. The GC content of the type genome is 45.36 % and the genome length is 2.72 Mbp.

Description of *Candidatus* Tolumonas obtenousia sp. nov.

Candidatus Tolumonas obtenousia (NL. fem. n. *obtenousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Tolumonas sp903931645*. The type genome for the species is the GenBank assembly GCA_903931645.1. The GC content of the type genome is 47.36 % and the genome length is 3.1 Mbp.

Description of *Candidatus* Tolutana genufiforma sp. nov.

Candidatus Tolutana genufiforma (NL. fem. n. *genufiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2862545 sp002862545*. The type genome for the species is the GenBank assembly GCA_002862545.1. The GC content of the type genome is 68.19 % and the genome length is 6.19 Mbp.

Description of *Candidatus* Tolutana gen. nov.

Candidatus Tolutana (NL. fem. n. *Tolutana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2862545*. The type species for the genus is *Candidatus* Tolutana genufiforma .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GCA-2862545*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Tolutanaceae.

Description of *Candidatus* Tolutanaceae fam. nov.

Candidatus Tolutanaceae (NL. fem. n. *Tolutanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *GCA-2862545.* The type genus for the taxon is *Candidatus* Tolutana .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA796*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Melilanales.

Description of *Candidatus* Tolutaria cadavigena sp. nov.

Candidatus Tolutaria cadavigena (NL. fem. n. *cadavigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *TMED211 sp002169685*. The type genome for the species is the GenBank assembly GCA_002169685.1. The GC content of the type genome is 31.1 % and the genome length is 0.91 Mbp.

Description of *Candidatus* Tolutaria gen. nov.

Candidatus Tolutaria (NL. fem. n. *Tolutaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *TMED211*. The type species for the genus is *Candidatus* Tolutaria cadavigena .

According to the original version of GTDB R06-RS202, this genus belongs to the family *TMED127*. According to the renamed version of GTDB R06-RS202, this taxon belongs

to the family *Candidatus* Tubicariaceae.

Description of *Candidatus* Tolutia homulibula sp. nov.

Candidatus Tolutia homulibula (NL. fem. n. *homulibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *BRHc4a sp000802095*. The type genome for the species is the GenBank assembly GCA_003514655.1. The GC content of the type genome is 49.46 % and the genome length is 4.49 Mbp.

Description of *Candidatus* Tolutia gen. nov.

Candidatus Tolutia (NL. fem. n. *Tolutia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *BRHc4a*. The type species for the genus is *Candidatus* Tolutia homulibula .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Tolutia impuditoga sp. nov.

Candidatus Tolutia impuditoga (NL. fem. n. *impuditoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *BRHc4a sp000961585*. The type genome for the species is the GenBank assembly GCA_000961585.1. The GC content of the type genome is 49.87 % and the genome length is 3.49 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Opalinus Clay rock porewater BRC-3 borehole".

Description of *Candidatus* Tolutida bimoticula sp. nov.

Candidatus Tolutida bimoticula (NL. fem. n. *bimoticula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS2069 sp900557695*. The type genome for the species is the GenBank assembly GCA_900557695.1. The GC content of the type genome is 35.31 %

and the genome length is 0.94 Mbp.

Description of *Candidatus* Tolutida gen. nov.

Candidatus Tolutida (NL. fem. n. *Tolutida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UMGS2069*. The type species for the genus is *Candidatus* Tolutida bimoticula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1242*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Macilulaceae.

Description of *Candidatus* Tolutida capabifica sp. nov.

Candidatus Tolutida capabifica (NL. fem. n. *capabifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS2069 sp900554955*. The type genome for the species is the GenBank assembly RS_GCF_900767535.1. The GC content of the type genome is 33.69 % and the genome length is 1.12 Mbp.

Description of *Candidatus* Tolutida inoffedo sp. nov.

Candidatus Tolutida inoffedo (NL. fem. n. *inoffedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS2069 sp900557585*. The type genome for the species is the GenBank assembly GCA_900557585.1. The GC content of the type genome is 35.45 % and the genome length is 0.89 Mbp.

Description of *Candidatus* Tolutosa acrotitrix sp. nov.

Candidatus Tolutosa acrotitrix (NL. fem. n. *acrotitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MED-G14 sp902546095*. The type genome for the species is the GenBank assembly GCA_902546095.1. The GC content of the type genome is 29.86 % and the genome length is 1.07 Mbp.

Description of *Candidatus* Tolutosa gen. nov.

Candidatus Tolutosa (NL. fem. n. *Tolutosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *MED-G14*. The type species for the genus is *Candidatus* Tolutosa acrotitrix .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Tolutosa bifaricella sp. nov.

Candidatus Tolutosa bifaricella (NL. fem. n. *bifaricella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MED-G14 sp902597545*. The type genome for the species is the GenBank assembly GCA_902614725.1. The GC content of the type genome is 29.74 % and the genome length is 0.96 Mbp.

Description of *Candidatus* Tolutosa capucitura sp. nov.

Candidatus Tolutosa capucitura (NL. fem. n. *capucitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MED-G14 sp902595555*. The type genome for the species is the GenBank assembly GCA_902581505.1. The GC content of the type genome is 30.14 % and the genome length is 1.29 Mbp.

Description of *Candidatus* Tolutosa cosidimonas sp. nov.

Candidatus Tolutosa cosidimonas (NL. fem. n. *cosidimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MED-G14 sp003331885*. The type genome for the species is the GenBank assembly GCA_003331885.1. The GC content of the type genome is 28.37 % and the genome length is 0.87 Mbp.

Description of *Candidatus* Tolutosa delubitura sp. nov.

Candidatus Tolutosa delubitura (NL. fem. n. *delubitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MED-G14 sp902544085*. The type genome for the species is the GenBank assembly GCA_902544085.1. The GC content of the type genome is 31.26 % and the genome length is 1.35 Mbp.

Description of *Candidatus* Tolutosa denigatio sp. nov.

Candidatus Tolutosa denigatio (NL. fem. n. *denigatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MED-G14 sp902586095*. The type genome for the species is the GenBank assembly GCA_902586095.1. The GC content of the type genome is 31.03 % and the genome length is 1.13 Mbp.

Description of *Candidatus* Tolutosa desonessa sp. nov.

Candidatus Tolutosa desonessa (NL. fem. n. *desonessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MED-G14 sp003331875*. The type genome for the species is the GenBank assembly GCA_003331875.1. The GC content of the type genome is 30.26 % and the genome length is 1.08 Mbp.

Description of *Candidatus* Tolutosa ectenigena sp. nov.

Candidatus Tolutosa ectenigena (NL. fem. n. *ectenigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MED-G14 sp002702385*. The type genome for the species is the GenBank assembly GCA_002702385.1. The GC content of the type genome is 28.7 % and the genome length is 1.19 Mbp.

Description of *Candidatus* Tolutosa forinitio sp. nov.

Candidatus Tolutosa forinitio (NL. fem. n. *forinitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *MED-G14 sp002693085*. The type genome for the species is the GenBank assembly GCA_002693085.1. The GC content of the type genome is 28.67 % and the genome length is 1.18 Mbp.

Description of *Candidatus* Tolutosa galacimonas sp. nov.

Candidatus Tolutosa galacimonas (NL. fem. n. *galacimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MED-G14 sp004321735*. The type genome for the species is the GenBank assembly GCA_004321735.1. The GC content of the type genome is 29.46 % and the genome length is 1.15 Mbp.

Description of *Candidatus* Tolutosa gasifatio sp. nov.

Candidatus Tolutosa gasifatio (NL. fem. n. *gasifatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MED-G14 sp002691165*. The type genome for the species is the GenBank assembly GCA_902528705.1. The GC content of the type genome is 30.79 % and the genome length is 1.23 Mbp.

Description of *Candidatus* Tolutosa immusivita sp. nov.

Candidatus Tolutosa immusivita (NL. fem. n. *immusivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MED-G14 sp902609185*. The type genome for the species is the GenBank assembly GCA_902609185.1. The GC content of the type genome is 30.68 % and the genome length is 0.93 Mbp.

Description of *Candidatus* Tolutosa impudax sp. nov.

Candidatus Tolutosa impudax (NL. fem. n. *impudax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MED-G14 sp002703065*. The type genome for the species is the GenBank assembly GCA_002703065.1. The GC content of the type genome is 29.64 % and the genome length is 0.99 Mbp.

Description of *Candidatus* Tolutosa infunousia sp. nov.

Candidatus Tolutosa infunousia (NL. fem. n. *infunousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MED-G14 sp902550325*. The type genome for the species is the GenBank assembly GCA_902550325.1. The GC content of the type genome is 30.99 % and the genome length is 0.98 Mbp.

Description of *Candidatus* Tolutosa inpinilega sp. nov.

Candidatus Tolutosa inpinilega (NL. fem. n. *inpinilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MED-G14 sp902574335*. The type genome for the species is the GenBank assembly GCA_902574335.1. The GC content of the type genome is 29.91 % and the genome length is 0.92 Mbp.

Description of *Candidatus* Tolutosa luculedo sp. nov.

Candidatus Tolutosa luculedo (NL. fem. n. *luculedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MED-G14 sp902598295*. The type genome for the species is the GenBank assembly GCA_902598295.1. The GC content of the type genome is 30.95 % and the genome length is 1.24 Mbp.

Description of *Candidatus* Tolutosa lugubitica sp. nov.

Candidatus Tolutosa lugubitica (NL. fem. n. *lugubitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MED-G14 sp002697465*. The type genome for the species is the GenBank assembly GCA_002728635.1. The GC content of the type genome is 31.03 % and the genome length is 1.51 Mbp.

Description of *Candidatus* Tolutosa lupanimonas sp. nov.

Candidatus Tolutosa lupanimonas (NL. fem. n. *lupanimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MED-G14 sp902616635*. The type genome for the species is the GenBank assembly GCA_902616635.1. The GC content of the type genome is 28.82 % and the genome length is 1.0 Mbp.

Description of *Candidatus* Tolutosa lupanitas sp. nov.

Candidatus Tolutosa lupanitas (NL. fem. n. *lupanitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MED-G14 sp902610105*. The type genome for the species is the GenBank assembly GCA_902610105.1. The GC content of the type genome is 30.11 % and the genome length is 0.8 Mbp.

Description of *Candidatus* Tolutosa monimetta sp. nov.

Candidatus Tolutosa monimetta (NL. fem. n. *monimetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MED-G14 sp902526165*. The type genome for the species is the GenBank assembly GCA_902609165.1. The GC content of the type genome is 30.88 % and the genome length is 0.84 Mbp.

Description of *Candidatus* Tolutosa obtoritia sp. nov.

Candidatus Tolutosa obtoritia (NL. fem. n. *obtoritia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MED-G14 sp902606555*. The type genome for the species is the GenBank assembly GCA_902606555.1. The GC content of the type genome is 30.24 % and the genome length is 0.95 Mbp.

Description of *Candidatus* Tolutosa peripedo sp. nov.

Candidatus Tolutosa peripedo (NL. fem. n. *peripedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *MED-G14 sp902587325*. The type genome for the species is the GenBank assembly GCA_902541795.1. The GC content of the type genome is 28.93 % and the genome length is 1.06 Mbp.

Description of *Candidatus* Tolutosa resacitrix sp. nov.

Candidatus Tolutosa resacitrix (NL. fem. n. *resacitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MED-G14 sp902520835*. The type genome for the species is the GenBank assembly GCA_902520835.1. The GC content of the type genome is 29.0 % and the genome length is 1.41 Mbp.

Description of *Candidatus* Tolutosa rubefivita sp. nov.

Candidatus Tolutosa rubefivita (NL. fem. n. *rubefivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MED-G14 sp902622575*. The type genome for the species is the GenBank assembly GCA_902622575.1. The GC content of the type genome is 30.94 % and the genome length is 1.27 Mbp.

Description of *Candidatus* Tolutosa sacomago sp. nov.

Candidatus Tolutosa sacomago (NL. fem. n. *sacomago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MED-G14 sp902535165*. The type genome for the species is the GenBank assembly GCA_902535165.1. The GC content of the type genome is 29.75 % and the genome length is 1.32 Mbp.

Description of *Candidatus* Tolutosa siticetta sp. nov.

Candidatus Tolutosa siticetta (NL. fem. n. *siticetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MED-G14 sp002457715*. The type genome for the species is the GenBank assembly GCA_002457715.1. The GC content of the type genome is 28.55 % and the genome length is 1.06 Mbp.

Description of *Candidatus* Tolutosa siticifica sp. nov.

Candidatus Tolutosa siticifica (NL. fem. n. *siticifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MED-G14 sp902515405*. The type genome for the species is the GenBank assembly GCA_902515405.1. The GC content of the type genome is 28.41 % and the genome length is 1.12 Mbp.

Description of *Candidatus* Tolutosa visocitudo sp. nov.

Candidatus Tolutosa visocitudo (NL. fem. n. *visocitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MED-G14 sp902554655*. The type genome for the species is the GenBank assembly GCA_902554655.1. The GC content of the type genome is 29.1 % and the genome length is 1.1 Mbp.

Description of *Candidatus* Tolutula abrepedo sp. nov.

Candidatus Tolutula abrepedo (NL. fem. n. *abrepedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Palsa-1392 sp013815325*. The type genome for the species is the GenBank assembly GCA_013815325.1. The GC content of the type genome is 59.34 % and the genome length is 4.15 Mbp.

Description of *Candidatus* Tolutula gen. nov.

Candidatus Tolutula (NL. fem. n. *Tolutula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Palsa-1392*. The type species for the genus is *Candidatus* Tolutula abrepedo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA10450*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cuticariaceae.

Description of *Candidatus* Tolutula faticitas sp. nov.

Candidatus Tolutula faticitas (NL. fem. n. *faticitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Palsa-1392 sp013821455*. The type genome for the species is the GenBank assembly GCA_013821455.1. The GC content of the type genome is 58.27 % and the genome length is 4.3 Mbp.

Description of *Candidatus* Tolutula inrevigena sp. nov.

Candidatus Tolutula inrevigena (NL. fem. n. *inrevigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Palsa-1392 sp013695925*. The type genome for the species is the GenBank assembly GCA_013695925.1. The GC content of the type genome is 60.31 % and the genome length is 3.29 Mbp.

Description of *Candidatus* Tolutula maxumimonas sp. nov.

Candidatus Tolutula maxumimonas (NL. fem. n. *maxumimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Palsa-1392 sp003169975*. The type genome for the species is the GenBank assembly GCA_003169975.1. The GC content of the type genome is 59.91 % and the genome length is 4.47 Mbp.

Description of *Candidatus* Tolypothrix nehalicella sp. nov.

Candidatus Tolypothrix nehalicella (NL. fem. n. *nehalicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Tolypothrix_A sp009725235*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_009725235.1. The GC content of the type genome is 41.56 % and the genome length is 14.05 Mbp.

Description of *Candidatus* Tolypothrix cetarugo sp. nov.

Candidatus Tolypothrix cetarugo (NL. fem. n. *cetarugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Tolypothrix_B sp002368435*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_002368435.1. The GC content of the type genome is 43.43 % and the genome length is 9.85 Mbp.

Description of *Candidatus* Tolypothrix tubicivita sp. nov.

Candidatus Tolypothrix tubicivita (NL. fem. n. *tubicivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Tolypothrix_B sp002368235*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_001904675.1. The GC content of the type genome is 43.71 % and the genome length is 9.56 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "soil".

Description of *Candidatus* Tomacana armipilenta sp. nov.

Candidatus Tomacana armipilenta (NL. fem. n. *armipilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3663 sp902776605*. The type genome for the species is the GenBank assembly GCA_902776605.1. The GC content of the type genome is 50.34 % and the genome length is 2.87 Mbp.

Description of *Candidatus* Tomacana gen. nov.

Candidatus Tomacana (NL. fem. n. *Tomacana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA3663*. The type species for the genus is *Candidatus* Tomacana armipilenta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA3663*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Tomacanaceae.

Description of *Candidatus* Tomacanaceae fam. nov.

Candidatus Tomacanaceae (NL. fem. n. *Tomacanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA3663.* The type genus for the taxon is *Candidatus* Tomacana .

According to GTDB R06-RS202, this family belongs to the order *Bacteroidales*.

Description of *Candidatus* Tomacana depelousia sp. nov.

Candidatus Tomacana depelousia (NL. fem. n. *depelousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3663 sp902779265*. The type genome for the species is the GenBank assembly GCA_902779265.1. The GC content of the type genome is 54.62 % and the genome length is 2.8 Mbp.

Description of *Candidatus* Tomacana innupigena sp. nov.

Candidatus Tomacana innupigena (NL. fem. n. *innupigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3663 sp002315795*. The type genome for the species is the GenBank assembly GCA_002315795.1. The GC content of the type genome is 47.58 % and the genome length is 2.11 Mbp.

Description of *Candidatus* Tomacana penecitica sp. nov.

Candidatus Tomacana penecitica (NL. fem. n. *penecitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3663 sp900319235*. The type genome for the species is the GenBank assembly GCA_900319235.1. The GC content of the type genome is 51.19 % and the genome length is 3.72 Mbp.

Description of *Candidatus* Tomacana semilastra sp. nov.

Candidatus Tomacana semilastra (NL. fem. n. *semilastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3663 sp004557315*. The type genome for the species is the GenBank assembly GCA_004557315.1. The GC content of the type genome is 48.81 % and the genome length is 2.52 Mbp.

Description of *Candidatus* Tomacana unetvimonia sp. nov.

Candidatus Tomacana unetvimonia (NL. fem. n. *unetvimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3663 sp002373755*. The type genome for the species is the GenBank assembly GCA_002373755.1. The GC content of the type genome is 54.08 % and the genome length is 2.84 Mbp.

Description of *Candidatus* Tomacella monimatio sp. nov.

Candidatus Tomacella monimatio (NL. fem. n. *monimatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4085 sp002383325*. The type genome for the species is the GenBank assembly GCA_002383325.1. The GC content of the type genome is 65.29 % and the genome length is 3.49 Mbp.

Description of *Candidatus* Tomacella gen. nov.

Candidatus Tomacella (NL. fem. n. *Tomacella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA4085*. The type species for the genus is *Candidatus* Tomacella monimatio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA4085*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Tomacellaceae.

Description of *Candidatus* Tomacellaceae fam. nov.

Candidatus Tomacellaceae (NL. fem. n. *Tomacellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this taxon is *UBA4085*. The type genus for the taxon is *Candidatus* Tomacella .

According to GTDB R06-RS202, this family belongs to the order *Aminicenantales*.

Description of *Candidatus* Tomacella salubitica sp. nov.

Candidatus Tomacella salubitica (NL. fem. n. *salubitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4085 sp003154255*. The type genome for the species is the GenBank assembly GCA_003154255.1. The GC content of the type genome is 61.49 % and the genome length is 3.48 Mbp.

Description of *Candidatus* Tomacia sitelousia sp. nov.

Candidatus Tomacia sitelousia (NL. fem. n. *sitelousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SZUA-336 sp003247575*. The type genome for the species is the GenBank assembly GCA_003247575.1. The GC content of the type genome is 64.74 % and the genome length is 5.83 Mbp.

Description of *Candidatus* Tomacia gen. nov.

Candidatus Tomacia (NL. fem. n. *Tomacia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SZUA-336*. The type species for the genus is *Candidatus* Tomacia sitelousia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SZUA-336*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Tomaciaceae.

Description of *Candidatus* Tomaciaceae fam. nov.

Candidatus Tomaciaceae (NL. fem. n. *Tomaciaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SZUA-336.* The type genus for the taxon is *Candidatus* Tomacia .

According to the original version of GTDB R06-RS202, this family belongs to the order *SZUA-336*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Tomaciales.

Description of *Candidatus* Tomaciales ord. nov.

Candidatus Tomaciales (NL. fem. n. *Tomaciales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SZUA-336.* The type genus for the taxon is *Candidatus* Tomacia .

According to the original version of GTDB R06-RS202, this family belongs to the class *UBA9160*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Buxifiae.

Description of *Candidatus* Tomacida cocibicella sp. nov.

Candidatus Tomacida cocibicella (NL. fem. n. *cocibicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Casp-actino5 sp002501485*. The type genome for the species is the GenBank assembly GCA_002714225.1. The GC content of the type genome is 56.63 % and the genome length is 1.34 Mbp.

Description of *Candidatus* Tomacida gen. nov.

Candidatus Tomacida (NL. fem. n. *Tomacida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Casp-actino5*. The type species for the genus is *Candidatus* Tomacida cocibicella .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Tomacida defacessa sp. nov.

Candidatus Tomacida defacessa (NL. fem. n. *defacessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Casp-actino5 sp002727235*. The type genome for the species is the

GenBank assembly GCA_002693375.1. The GC content of the type genome is 56.53 % and the genome length is 2.15 Mbp.

Description of *Candidatus* Tomacida depocessa sp. nov.

Candidatus Tomacida depocessa (NL. fem. n. *depocessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Casp-actino5 sp009923855*. The type genome for the species is the GenBank assembly GCA_009923855.1. The GC content of the type genome is 64.15 % and the genome length is 2.14 Mbp.

Description of *Candidatus* Tomacida dibapitrix sp. nov.

Candidatus Tomacida dibapitrix (NL. fem. n. *dibapitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Casp-actino5 sp012269985*. The type genome for the species is the GenBank assembly GCA_012269985.1. The GC content of the type genome is 56.82 % and the genome length is 2.15 Mbp.

Description of *Candidatus* Tomacida nubifax sp. nov.

Candidatus Tomacida nubifax (NL. fem. n. *nubifax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Casp-actino5 sp010024485*. The type genome for the species is the GenBank assembly GCA_010024485.1. The GC content of the type genome is 68.61 % and the genome length is 1.6 Mbp.

Description of *Candidatus* Tomacida occenibra sp. nov.

Candidatus Tomacida occenibra (NL. fem. n. *occenibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Casp-actino5 sp001510385*. The type genome for the species is the GenBank assembly GCA_001510385.1. The GC content of the type genome is 55.86 % and the genome length is 1.9 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Capian Sea".

Description of *Candidatus* Tomacida panopousia sp. nov.

Candidatus Tomacida panopousia (NL. fem. n. *panopousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Casp-actino5 sp009924875*. The type genome for the species is the GenBank assembly GCA_009924875.1. The GC content of the type genome is 66.65 % and the genome length is 0.99 Mbp.

Description of *Candidatus* Tomacosa obmutitudo sp. nov.

Candidatus Tomacosa obmutitudo (NL. fem. n. *obmutitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SLSL01 sp003552825*. The type genome for the species is the GenBank assembly GCA_003552825.1. The GC content of the type genome is 36.24 % and the genome length is 2.68 Mbp.

Description of *Candidatus* Tomacosa gen. nov.

Candidatus Tomacosa (NL. fem. n. *Tomacosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SLSL01*. The type species for the genus is *Candidatus* Tomacosa obmutitudo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Tomacosa velifitudo sp. nov.

Candidatus Tomacosa velifitudo (NL. fem. n. *velifitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SLSL01 sp007130465*. The type genome for the species is the GenBank assembly GCA_003551095.1. The GC content of the type genome is 35.41 % and the genome length is 2.09 Mbp.

Description of *Candidatus* Tomitella manomilenta sp. nov.

Candidatus Tomitella manomilenta (NL. fem. n. *manomilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Tomitella sp007559025*. The type genome for the species is the GenBank assembly RS_GCF_007559025.1. The GC content of the type genome is 70.9 % and the genome length is 4.01 Mbp.

Description of *Candidatus* Tomitella podagilenta sp. nov.

Candidatus Tomitella podagilenta (NL. fem. n. *podagilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Tomitella sp014126825*. The type genome for the species is the GenBank assembly RS_GCF_014126825.1. The GC content of the type genome is 70.94 % and the genome length is 4.35 Mbp.

Description of *Candidatus* Tomogana bicipitoga sp. nov.

Candidatus Tomogana bicipitoga (NL. fem. n. *bicipitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA11549 sp002440235*. The type genome for the species is the GenBank assembly GCA_002297115.1. The GC content of the type genome is 57.01 % and the genome length is 1.74 Mbp.

Description of *Candidatus* Tomogana gen. nov.

Candidatus Tomogana (NL. fem. n. *Tomogana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA11549*. The type species for the genus is *Candidatus* Tomogana bicipitoga .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-977*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Benemariaceae.

Description of *Candidatus* Tomogana cisalitas sp. nov.

Candidatus Tomogana cisalitas (NL. fem. n. *cisalitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA11549 sp002439085*. The type genome for the species is the GenBank assembly GCA_002405015.1. The GC content of the type genome is 55.27 % and the genome length is 1.8 Mbp.

Description of *Candidatus* Tomogana egregitura sp. nov.

Candidatus Tomogana egregitura (NL. fem. n. *egregitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA11549 sp902777205*. The type genome for the species is the GenBank assembly GCA_902777205.1. The GC content of the type genome is 55.85 % and the genome length is 1.94 Mbp.

Description of *Candidatus* Tomogana sicinugo sp. nov.

Candidatus Tomogana sicinugo (NL. fem. n. *sicinugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA11549 sp900768185*. The type genome for the species is the GenBank assembly RS_GCF_900768185.1. The GC content of the type genome is 53.4 % and the genome length is 1.92 Mbp.

Description of *Candidatus* Tomogana volubatio sp. nov.

Candidatus Tomogana volubatio (NL. fem. n. *volubatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA11549 sp900550445*. The type genome for the species is the GenBank assembly GCA_900550445.1. The GC content of the type genome is 48.15 % and the genome length is 2.16 Mbp.

Description of *Candidatus* Tomogaria cocibentia sp. nov.

Candidatus Tomogaria cocibentia (NL. fem. n. *cocibentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SZUA-534 sp003250355*. The type genome for the species is the GenBank assembly GCA_003250355.1. The GC content of the type genome is 35.35 %

and the genome length is 3.7 Mbp.

Description of *Candidatus* Tomogaria gen. nov.

Candidatus Tomogaria (NL. fem. n. *Tomogaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SZUA-534*. The type species for the genus is *Candidatus* Tomogaria cocibentia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SZUA-534*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Tomogariaceae.

Description of *Candidatus* Tomogariaceae fam. nov.

Candidatus Tomogariaceae (NL. fem. n. *Tomogariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SZUA-534.* The type genus for the taxon is *Candidatus* Tomogaria .

According to GTDB R06-RS202, this family belongs to the order *Bacteroidales*.

Description of *Candidatus* Tomogella semodimonas sp. nov.

Candidatus Tomogella semodimonas (NL. fem. n. *semodimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *QEVD01 sp013359425*. The type genome for the species is the GenBank assembly GCA_013359425.1. The GC content of the type genome is 59.33 % and the genome length is 7.05 Mbp.

Description of *Candidatus* Tomogella gen. nov.

Candidatus Tomogella (NL. fem. n. *Tomogella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *QEVD01*. The type species for the genus is *Candidatus* Tomogella semodimonas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *QEVD01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to

the family *Candidatus* Tomogellaceae.

Description of *Candidatus* Tomogellaceae fam. nov.

Candidatus Tomogellaceae (NL. fem. n. *Tomogellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *QEVD01*. The type genus for the taxon is *Candidatus* Tomogella .

According to the original version of GTDB R06-RS202, this family belongs to the order *DRLW01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Forinellales.

Description of *Candidatus* Tomogella tolutitas sp. nov.

Candidatus Tomogella tolutitas (NL. fem. n. *tolutitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *QEVD01 sp003576975*. The type genome for the species is the GenBank assembly GCA_003576975.1. The GC content of the type genome is 52.87 % and the genome length is 7.25 Mbp.

Description of *Candidatus* Tomogosa pudibicella sp. nov.

Candidatus Tomogosa pudibicella (NL. fem. n. *pudibicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3072 sp002215665*. The type genome for the species is the GenBank assembly GCA_002215665.1. The GC content of the type genome is 38.18 % and the genome length is 1.62 Mbp.

Description of *Candidatus* Tomogosa gen. nov.

Candidatus Tomogosa (NL. fem. n. *Tomogosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA3072*. The type species for the genus is *Candidatus* Tomogosa pudibicella .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA3072*. According to the renamed version of GTDB R06-RS202, this taxon belongs to

the family *Candidatus* Tomogosaceae.

Description of *Candidatus* Tomogosaceae fam. nov.

Candidatus Tomogosaceae (NL. fem. n. *Tomogosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA3072.* The type genus for the taxon is *Candidatus* Tomogosa .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA3072*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Tomogosales.

Description of *Candidatus* Tomogosales ord. nov.

Candidatus Tomogosales (NL. fem. n. *Tomogosales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA3072.* The type genus for the taxon is *Candidatus* Tomogosa .

According to the original version of GTDB R06-RS202, this family belongs to the class *UBA3072*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Tomogosae.

Description of *Candidatus* Tomogosae class. nov.

Candidatus Tomogosae (NL. fem. n. *c__Tomogosae* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA3072.* The type genus for the taxon is *Candidatus* Tomogosa .

According to the original version of GTDB R06-RS202, this family belongs to the phylum *WOR-3*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the phylum *Candidatus* Tigurariota.

Description of *Candidatus* Tomogula absocentia sp. nov.

Candidatus Tomogula absocentia (NL. fem. n. *absocentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-533 sp900551105*. The type genome for the species is the

GenBank assembly GCA_900551105.1. The GC content of the type genome is 28.4 % and the genome length is 1.2 Mbp.

Description of *Candidatus* Tomogula gen. nov.

Candidatus Tomogula (NL. fem. n. *Tomogula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAG-533*. The type species for the genus is *Candidatus* Tomogula absocentia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA660*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vitigellaceae.

Description of *Candidatus* Tomogula demuliforma sp. nov.

Candidatus Tomogula demuliforma (NL. fem. n. *demuliforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-533 sp902783555*. The type genome for the species is the GenBank assembly GCA_902783555.1. The GC content of the type genome is 25.47 % and the genome length is 1.17 Mbp.

Description of *Candidatus* Tomogula desucessa sp. nov.

Candidatus Tomogula desucessa (NL. fem. n. *desucessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-533 sp902767375*. The type genome for the species is the GenBank assembly GCA_902767375.1. The GC content of the type genome is 27.66 % and the genome length is 1.05 Mbp.

Description of *Candidatus* Tomogula futatimonas sp. nov.

Candidatus Tomogula futatimonas (NL. fem. n. *futatimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-533 sp902783345*. The type genome for the species is the GenBank assembly GCA_902783345.1. The GC content of the type genome is 25.75 %

and the genome length is 0.97 Mbp.

Description of *Candidatus* Tomogula loripatica sp. nov.

Candidatus Tomogula loripatica (NL. fem. n. *loripatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-533 sp900553855*. The type genome for the species is the GenBank assembly RS_GCF_900770155.1. The GC content of the type genome is 25.15 % and the genome length is 1.19 Mbp.

Description of *Candidatus* Tomogula lugubilenta sp. nov.

Candidatus Tomogula lugubilenta (NL. fem. n. *lugubilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-533 sp902766545*. The type genome for the species is the GenBank assembly GCA_902766545.1. The GC content of the type genome is 26.48 % and the genome length is 0.91 Mbp.

Description of *Candidatus* Tomogula malivitio sp. nov.

Candidatus Tomogula malivitio (NL. fem. n. *malivitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-533 sp000434495*. The type genome for the species is the GenBank assembly GCA_902766065.1. The GC content of the type genome is 29.62 % and the genome length is 0.82 Mbp.

Description of *Candidatus* Tomogula oblanimonas sp. nov.

Candidatus Tomogula oblanimonas (NL. fem. n. *oblanimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-533 sp003150195*. The type genome for the species is the GenBank assembly GCA_003150195.1. The GC content of the type genome is 38.07 % and the genome length is 1.43 Mbp.

Description of *Candidatus* Tomogula vitabetta sp. nov.

Candidatus Tomogula vitabetta (NL. fem. n. *vitabetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-533 sp004563275*. The type genome for the species is the GenBank assembly GCA_004563275.1. The GC content of the type genome is 26.56 % and the genome length is 1.24 Mbp.

Description of *Candidatus* Tomogula xenoditura sp. nov.

Candidatus Tomogula xenoditura (NL. fem. n. *xenoditura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-533 sp002438065*. The type genome for the species is the GenBank assembly GCA_002438065.1. The GC content of the type genome is 24.98 % and the genome length is 1.57 Mbp.

Description of *Candidatus* Totidana appagax sp. nov.

Candidatus Totidana appagax (NL. fem. n. *appagax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SLLR01 sp003561875*. The type genome for the species is the GenBank assembly GCA_003561875.1. The GC content of the type genome is 58.23 % and the genome length is 2.22 Mbp.

Description of *Candidatus* Totidana gen. nov.

Candidatus Totidana (NL. fem. n. *Totidana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SLLR01*. The type species for the genus is *Candidatus* Totidana appagax .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Totidana robigilega sp. nov.

Candidatus Totidana robigilega (NL. fem. n. *robigilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SLLR01 sp007134025*. The type genome for the species is the GenBank assembly GCA_007134025.1. The GC content of the type genome is 58.5 % and the genome length is 2.25 Mbp.

Description of *Candidatus* Totidaria immacax sp. nov.

Candidatus Totidaria immacax (NL. fem. n. *immacax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CACEW01 sp902563055*. The type genome for the species is the GenBank assembly GCA_902563055.1. The GC content of the type genome is 39.17 % and the genome length is 1.74 Mbp.

Description of *Candidatus* Totidaria gen. nov.

Candidatus Totidaria (NL. fem. n. *Totidaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CACEW01*. The type species for the genus is *Candidatus* Totidaria immacax .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CACEW01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Totidariaceae.

Description of *Candidatus* Totidariaceae fam. nov.

Candidatus Totidariaceae (NL. fem. n. *Totidariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CACEW01.* The type genus for the taxon is *Candidatus* Totidaria .

According to the original version of GTDB R06-RS202, this family belongs to the order *CACEW01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Totidariales.

Description of *Candidatus* Totidariales ord. nov.

Candidatus Totidariales (NL. fem. n. *Totidariales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CACEW01*. The type genus for the taxon is *Candidatus* Totidaria .

According to the GTDB R06-RS202, this order belongs to the class *Gammaproteobacteria*.

Description of *Candidatus* Totidella tametitia sp. nov.

Candidatus Totidella tametitia (NL. fem. n. *tametitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABDKJ01 sp013002285*. The type genome for the species is the GenBank assembly GCA_013002285.1. The GC content of the type genome is 39.95 % and the genome length is 1.9 Mbp.

Description of *Candidatus* Totidella gen. nov.

Candidatus Totidella (NL. fem. n. *Totidella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABDKJ01*. The type species for the genus is *Candidatus* Totidella tametitia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JABDKJ01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Totidellaceae.

Description of *Candidatus* Totidellaceae fam. nov.

Candidatus Totidellaceae (NL. fem. n. *Totidellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JABDKJ01*. The type genus for the taxon is *Candidatus* Totidella .

According to GTDB R06-RS202, this family belongs to the order *Flavobacteriales*.

Description of *Candidatus* Totidia solacentia sp. nov.

Candidatus Totidia solacentia (NL. fem. n. *solacentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *PWKZ01 sp003559575*. The type genome for the species is the GenBank assembly GCA_007127155.1. The GC content of the type genome is 64.45 % and the genome length is 3.32 Mbp.

Description of *Candidatus* Totidia gen. nov.

Candidatus Totidia (NL. fem. n. *Totidia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PWKZ01*. The type species for the genus is *Candidatus* Totidia solacentia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *PWKZ01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Totidiaceae.

Description of *Candidatus* Totidiaceae fam. nov.

Candidatus Totidiaceae (NL. fem. n. *Totidiaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *PWKZ01.* The type genus for the taxon is *Candidatus* Totidia .

According to the original version of GTDB R06-RS202, this family belongs to the order *PWKZ01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Totidiales.

Description of *Candidatus* Totidiales ord. nov.

Candidatus Totidiales (NL. fem. n. *Totidiales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *PWKZ01.* The type genus for the taxon is *Candidatus* Totidia .

According to the original version of GTDB R06-RS202, this family belongs to the class *UBA9042*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Rubigariae.

Description of *Candidatus* Totidida bucelisca sp. nov.

Candidatus Totidida bucelisca (NL. fem. n. *bucelisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Palsa-872 sp003139695*. The type genome for the species is the GenBank assembly GCA_003131745.1. The GC content of the type genome is 64.53 % and the genome length is 3.18 Mbp.

Description of *Candidatus* Totidida gen. nov.

Candidatus Totidida (NL. fem. n. *Totidida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Palsa-872*. The type species for the genus is *Candidatus* Totidida bucelisca .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Totidida salubilenta sp. nov.

Candidatus Totidida salubilenta (NL. fem. n. *salubilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Palsa-872 sp005880945*. The type genome for the species is the GenBank assembly GCA_005880205.1. The GC content of the type genome is 65.84 % and the genome length is 2.58 Mbp.

Description of *Candidatus* Totidida secunimonas sp. nov.

Candidatus Totidida secunimonas (NL. fem. n. *secunimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Palsa-872 sp003151665*. The type genome for the species is the GenBank assembly GCA_003151665.1. The GC content of the type genome is 64.49 % and the genome length is 3.32 Mbp.

Description of *Candidatus* Totidosa ablacugo sp. nov.

Candidatus Totidosa ablacugo (NL. fem. n. *ablacugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *ZC4RG35 sp003242515*. The type genome for the species is the GenBank assembly GCA_003242515.1. The GC content of the type genome is 70.06 %

and the genome length is 2.06 Mbp.

Description of *Candidatus* Totidosa gen. nov.

Candidatus Totidosa (NL. fem. n. *Totidosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *ZC4RG35*. The type species for the genus is *Candidatus* Totidosa ablacugo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *ZC4RG35*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Totidosaceae.

Description of *Candidatus* Totidosaceae fam. nov.

Candidatus Totidosaceae (NL. fem. n. *Totidosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *ZC4RG35.* The type genus for the taxon is *Candidatus* Totidosa .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA5794*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Rudicellales.

Description of *Candidatus* Totidula demigessa sp. nov.

Candidatus Totidula demigessa (NL. fem. n. *demigessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2196 sp002328025*. The type genome for the species is the GenBank assembly GCA_002328025.1. The GC content of the type genome is 36.04 % and the genome length is 0.75 Mbp.

Description of *Candidatus* Totidula gen. nov.

Candidatus Totidula (NL. fem. n. *Totidula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA2196*. The type species for the genus is *Candidatus* Totidula demigessa .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2196*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Totidulaceae.

Description of *Candidatus* Totidulaceae fam. nov.

Candidatus Totidulaceae (NL. fem. n. *Totidulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA2196.* The type genus for the taxon is *Candidatus* Totidula .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA2196*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Totidulales.

Description of *Candidatus* Totidulales ord. nov.

Candidatus Totidulales (NL. fem. n. *Totidulales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA2196.* The type genus for the taxon is *Candidatus* Totidula .

According to the original version of GTDB R06-RS202, this family belongs to the class *ABY1*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Defunanae.

Description of *Candidatus* Tranquillimonas oblucago sp. nov.

Candidatus Tranquillimonas oblucago (NL. fem. n. *oblucago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Tranquillimonas sp004011175*. The type genome for the species is the GenBank assembly RS_GCF_004011175.1. The GC content of the type genome is 68.13 % and the genome length is 3.97 Mbp.

Description of *Candidatus* Tranvaria ammuretta sp. nov.

Candidatus Tranvaria ammuretta (NL. fem. n. *ammuretta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *AC-50 sp005883235*. The type genome for the species is the GenBank assembly GCA_005883235.1. The GC content of the type genome is 70.88 % and the genome length is 1.86 Mbp.

Description of *Candidatus* Tranvaria gen. nov.

Candidatus Tranvaria (NL. fem. n. *Tranvaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *AC-50*. The type species for the genus is *Candidatus* Tranvaria ammuretta .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Tranvaria documibra sp. nov.

Candidatus Tranvaria documibra (NL. fem. n. *documibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AC-50 sp005885565*. The type genome for the species is the GenBank assembly GCA_005885565.1. The GC content of the type genome is 71.47 % and the genome length is 3.15 Mbp.

Description of *Candidatus* Tranvella ablepitoga sp. nov.

Candidatus Tranvella ablepitoga (NL. fem. n. *ablepitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002787175 sp002787175*. The type genome for the species is the GenBank assembly GCA_002787175.1. The GC content of the type genome is 39.47 % and the genome length is 0.88 Mbp.

Description of *Candidatus* Tranvella gen. nov.

Candidatus Tranvella (NL. fem. n. *Tranvella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-002787175*. The type species for the genus is *Candidatus* Tranvella ablepitoga .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA11359_A*. According to the renamed version of GTDB R06-RS202, this taxon

belongs to the family *Candidatus* Noviliaceae.

Description of *Candidatus* Tranvida horomousia sp. nov.

Candidatus Tranvida horomousia (NL. fem. n. *horomousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DSNW01 sp011047095*. The type genome for the species is the GenBank assembly GCA_011047095.1. The GC content of the type genome is 55.85 % and the genome length is 4.64 Mbp.

Description of *Candidatus* Tranvida gen. nov.

Candidatus Tranvida (NL. fem. n. *Tranvida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DSNW01*. The type species for the genus is *Candidatus* Tranvida horomousia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA6663*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Hibisosaceae.

Description of *Candidatus* Tranvula serotimonia sp. nov.

Candidatus Tranvula serotimonia (NL. fem. n. *serotimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAILKP01 sp903834785*. The type genome for the species is the GenBank assembly GCA_903834785.1. The GC content of the type genome is 65.92 % and the genome length is 4.32 Mbp.

Description of *Candidatus* Tranvula gen. nov.

Candidatus Tranvula (NL. fem. n. *Tranvula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAILKP01*. The type species for the genus is *Candidatus* Tranvula serotimonia .

According to the original version of GTDB R06-RS202, this genus belongs to the family

SM1A02. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cenaciaceae.

Description of *Candidatus* Trebonia gasifilenta sp. nov.

Candidatus Trebonia gasifilenta (NL. fem. n. *gasifilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Trebonia sp009784565*. The type genome for the species is the GenBank assembly GCA_009784565.1. The GC content of the type genome is 70.79 % and the genome length is 6.2 Mbp.

Description of *Candidatus* Treponema papilentia sp. nov.

Candidatus Treponema papilentia (NL. fem. n. *papilentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Treponema sp010365865*. The type genome for the species is the GenBank assembly RS_GCF_010365865.1. The GC content of the type genome is 44.32 % and the genome length is 2.98 Mbp.

Description of *Candidatus* Treponema vatilitura sp. nov.

Candidatus Treponema vatilitura (NL. fem. n. *vatilitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Treponema sp000775995*. The type genome for the species is the GenBank assembly RS_GCF_000775995.1. The GC content of the type genome is 44.58 % and the genome length is 2.71 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "acute necrotizing ulcerative gingivitis lesion".

Description of *Candidatus* Treponema aciscatio sp. nov.

Candidatus Treponema aciscatio (NL. fem. n. *aciscatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Treponema_D sp902773215*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-

formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902773215.1. The GC content of the type genome is 56.77 % and the genome length is 2.69 Mbp.

Description of *Candidatus* Treponema ammixatio sp. nov.

Candidatus Treponema ammixatio (NL. fem. n. *ammixatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Treponema_D sp002394465*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_002394465.1. The GC content of the type genome is 43.5 % and the genome length is 1.92 Mbp.

Description of *Candidatus* Treponema anarrivita sp. nov.

Candidatus Treponema anarrivita (NL. fem. n. *anarrivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Treponema_D sp902772605*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902772605.1. The GC content of the type genome is 45.97 % and the genome length is 2.2 Mbp.

Description of *Candidatus* Treponema ascalimonia sp. nov.

Candidatus Treponema ascalimonia (NL. fem. n. *ascalimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Treponema_D sp900770075*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_900770075.1. The GC content of the type genome is 44.91 % and the genome length is 2.35 Mbp.

Description of *Candidatus* Treponema assubetta sp. nov.

Candidatus Treponema assubetta (NL. fem. n. *assubetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Treponema_D sp002392275*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_002392275.1. The GC content of the type genome is 45.41 % and the genome length is 2.26 Mbp.

Description of *Candidatus* Treponema betacicella sp. nov.

Candidatus Treponema betacicella (NL. fem. n. *betacicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Treponema_D sp902785455*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902785455.1. The GC content of the type genome is 43.07 % and the genome length is 3.03 Mbp.

Description of *Candidatus* Treponema bonifimonas sp. nov.

Candidatus Treponema bonifimonas (NL. fem. n. *bonifimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Treponema_D sp000619925*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_000619925.1. The GC content of the type genome is 40.7 % and the genome length is 2.87 Mbp.

Description of *Candidatus* Treponema calipitudo sp. nov.

Candidatus Treponema calipitudo (NL. fem. n. *calipitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Treponema_D sp002315375*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_002315375.1. The GC content of the type genome is 39.99 % and the genome length is 2.65 Mbp.

Description of *Candidatus* Treponema catalifica sp. nov.

Candidatus Treponema catalifica (NL. fem. n. *catalifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Treponema_D sp002391235*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_002391235.1. The GC content of the type genome is 49.02 % and the genome length is 2.67 Mbp.

Description of *Candidatus* Treponema cataligena sp. nov.

Candidatus Treponema cataligena (NL. fem. n. *cataligena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Treponema_D sp002392405*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_002392405.1. The GC content of the type genome is 40.23 % and the genome length is 1.59 Mbp.

Description of *Candidatus* Treponema categastra sp. nov.

Candidatus Treponema categastra (NL. fem. n. *categastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Treponema_D sp003455655*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003455655.1. The GC content of the type genome is 40.08 % and the genome length is 1.72 Mbp.

Description of *Candidatus* Treponema cenacifica sp. nov.

Candidatus Treponema cenacifica (NL. fem. n. *cenacifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Treponema_D sp002314445*. Although GTDB has assigned a genus

name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_002314445.1. The GC content of the type genome is 45.35 % and the genome length is 4.0 Mbp.

Description of *Candidatus* Treponema ciminetta sp. nov.

Candidatus Treponema ciminetta (NL. fem. n. *ciminetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Treponema_D sp002350445*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_002350445.1. The GC content of the type genome is 38.64 % and the genome length is 2.28 Mbp.

Description of *Candidatus* Treponema citivitrix sp. nov.

Candidatus Treponema citivitrix (NL. fem. n. *citivitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Treponema_D sp900319625*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902793765.1. The GC content of the type genome is 42.36 % and the genome length is 2.15 Mbp.

Description of *Candidatus* Treponema colubedo sp. nov.

Candidatus Treponema colubedo (NL. fem. n. *colubedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Treponema_D sp902766125*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902766125.1. The GC content of the type genome is 44.19 % and the genome length is 2.23 Mbp.

Description of *Candidatus* Treponema cosigilega sp. nov.

Candidatus Treponema cosigilega (NL. fem. n. *cosigilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Treponema_D sp002393865*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_002393865.1. The GC content of the type genome is 57.29 % and the genome length is 2.76 Mbp.

Description of *Candidatus* Treponema dapifitudo sp. nov.

Candidatus Treponema dapifitudo (NL. fem. n. *dapifitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Treponema_D sp002449305*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003543735.1. The GC content of the type genome is 38.85 % and the genome length is 2.15 Mbp.

Description of *Candidatus* Treponema decinimonas sp. nov.

Candidatus Treponema decinimonas (NL. fem. n. *decinimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Treponema_D sp900769985*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_900769985.1. The GC content of the type genome is 37.0 % and the genome length is 3.19 Mbp.

Description of *Candidatus* Treponema dedigitica sp. nov.

Candidatus Treponema dedigitica (NL. fem. n. *dedigitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Treponema_D sp002373325*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_002373325.1. The GC content of the type genome is 46.65 % and the genome length is 3.03 Mbp.

Description of *Candidatus* Treponema dehonisca sp. nov.

Candidatus Treponema dehonisca (NL. fem. n. *dehonisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Treponema_D sp002477955*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_002476655.1. The GC content of the type genome is 39.72 % and the genome length is 2.22 Mbp.

Description of *Candidatus* Treponema denaviforma sp. nov.

Candidatus Treponema denaviforma (NL. fem. n. *denaviforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Treponema_D sp902783155*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902783155.1. The GC content of the type genome is 45.96 % and the genome length is 3.1 Mbp.

Description of *Candidatus* Treponema denupitudo sp. nov.

Candidatus Treponema denupitudo (NL. fem. n. *denupitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Treponema_D sp902799665*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902764405.1. The GC content of the type genome is 49.85 % and the genome length is 2.4 Mbp.

Description of *Candidatus* Treponema depubivita sp. nov.

Candidatus Treponema depubivita (NL. fem. n. *depubivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Treponema_D sp900541945*. Although GTDB has assigned a genus

name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_900541945.1. The GC content of the type genome is 41.02 % and the genome length is 2.58 Mbp.

Description of *Candidatus* Treponema derunugo sp. nov.

Candidatus Treponema derunugo (NL. fem. n. *derunugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Treponema_D sp900316905*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902792365.1. The GC content of the type genome is 50.07 % and the genome length is 2.49 Mbp.

Description of *Candidatus* Treponema feficicella sp. nov.

Candidatus Treponema feficicella (NL. fem. n. *feficicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Treponema_D sp004554075*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_004554075.1. The GC content of the type genome is 40.07 % and the genome length is 3.71 Mbp.

Description of *Candidatus* Treponema fibicitio sp. nov.

Candidatus Treponema fibicitio (NL. fem. n. *fibicitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Treponema_D sp902783245*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902783245.1. The GC content of the type genome is 51.38 % and the genome length is 2.69 Mbp.

Description of *Candidatus* Treponema fiducisca sp. nov.

Candidatus Treponema fiducisca (NL. fem. n. *fiducisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Treponema_D sp902796985*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902796985.1. The GC content of the type genome is 56.61 % and the genome length is 2.28 Mbp.

Description of *Candidatus* Treponema genocivita sp. nov.

Candidatus Treponema genocivita (NL. fem. n. *genocivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Treponema_D sp002309195*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_002309195.1. The GC content of the type genome is 38.0 % and the genome length is 1.44 Mbp.

Description of *Candidatus* Treponema hiruditrix sp. nov.

Candidatus Treponema hiruditrix (NL. fem. n. *hiruditrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Treponema_D sp002437725*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_002435505.1. The GC content of the type genome is 36.8 % and the genome length is 2.49 Mbp.

Description of *Candidatus* Treponema inargitudo sp. nov.

Candidatus Treponema inargitudo (NL. fem. n. *inargitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Treponema_D sp014334335*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_014334335.1. The GC content of the type genome is 38.23 % and the genome length is 2.51 Mbp.

Description of *Candidatus* Treponema ineffetta sp. nov.

Candidatus Treponema ineffetta (NL. fem. n. *ineffetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Treponema_D sp014334325*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_014334325.1. The GC content of the type genome is 49.23 % and the genome length is 2.79 Mbp.

Description of *Candidatus* Treponema inmodivita sp. nov.

Candidatus Treponema inmodivita (NL. fem. n. *inmodivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Treponema_D sp902766345*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902766345.1. The GC content of the type genome is 37.67 % and the genome length is 2.07 Mbp.

Description of *Candidatus* Treponema insicisca sp. nov.

Candidatus Treponema insicisca (NL. fem. n. *insicisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Treponema_D sp902802305*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902802305.1. The GC content of the type genome is 36.92 % and the genome length is 3.51 Mbp.

Description of *Candidatus* Treponema inurbibula sp. nov.

Candidatus Treponema inurbibula (NL. fem. n. *inurbibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Treponema_D sp002393835*. Although GTDB has assigned a genus

name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_002393835.1. The GC content of the type genome is 44.17 % and the genome length is 2.98 Mbp.

Description of *Candidatus* Treponema lapilitoga sp. nov.

Candidatus Treponema lapilitoga (NL. fem. n. *lapilitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Treponema_D sp002396325*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003520435.1. The GC content of the type genome is 47.06 % and the genome length is 1.92 Mbp.

Description of *Candidatus* Treponema loripimonas sp. nov.

Candidatus Treponema loripimonas (NL. fem. n. *loripimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Treponema_D sp002399405*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_002399405.1. The GC content of the type genome is 49.43 % and the genome length is 4.02 Mbp.

Description of *Candidatus* Treponema loripugo sp. nov.

Candidatus Treponema loripugo (NL. fem. n. *loripugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Treponema_D sp002309305*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_002309305.1. The GC content of the type genome is 43.28 % and the genome length is 3.11 Mbp.

Description of *Candidatus* Treponema manubifica sp. nov.

Candidatus Treponema manubifica (NL. fem. n. *manubifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Treponema_D sp002448445*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003453665.1. The GC content of the type genome is 46.4 % and the genome length is 1.76 Mbp.

Description of *Candidatus* Treponema monopessa sp. nov.

Candidatus Treponema monopessa (NL. fem. n. *monopessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Treponema_D sp002395155*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_002395445.1. The GC content of the type genome is 35.75 % and the genome length is 2.81 Mbp.

Description of *Candidatus* Treponema murilicella sp. nov.

Candidatus Treponema murilicella (NL. fem. n. *murilicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Treponema_D sp902792795*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902792795.1. The GC content of the type genome is 50.17 % and the genome length is 2.77 Mbp.

Description of *Candidatus* Treponema nidifetta sp. nov.

Candidatus Treponema nidifetta (NL. fem. n. *nidifetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Treponema_D sp900767955*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_900767955.1. The GC content of the type genome is 31.4 % and the genome length is 2.58 Mbp.

Description of *Candidatus* Treponema nimiritura sp. nov.

Candidatus Treponema nimiritura (NL. fem. n. *nimiritura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Treponema_D sp902778325*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902778325.1. The GC content of the type genome is 43.57 % and the genome length is 3.35 Mbp.

Description of *Candidatus* Treponema nugigilega sp. nov.

Candidatus Treponema nugigilega (NL. fem. n. *nugigilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Treponema_D sp002373205*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_002369335.1. The GC content of the type genome is 44.64 % and the genome length is 3.24 Mbp.

Description of *Candidatus* Treponema oblanitia sp. nov.

Candidatus Treponema oblanitia (NL. fem. n. *oblanitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Treponema_D sp002368605*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_002368605.1. The GC content of the type genome is 43.86 % and the genome length is 2.6 Mbp.

Description of *Candidatus* Treponema orgetitrix sp. nov.

Candidatus Treponema orgetitrix (NL. fem. n. *orgetitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Treponema_D sp000260795*. Although GTDB has assigned a genus

name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_000260795.1. The GC content of the type genome is 40.34 % and the genome length is 3.03 Mbp.

Description of *Candidatus* Treponema pabilessa sp. nov.

Candidatus Treponema pabilessa (NL. fem. n. *pabilessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Treponema_D sp902799965*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902799965.1. The GC content of the type genome is 50.56 % and the genome length is 2.55 Mbp.

Description of *Candidatus* Treponema paralax sp. nov.

Candidatus Treponema paralax (NL. fem. n. *paralax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Treponema_D sp900317625*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_002350235.1. The GC content of the type genome is 38.38 % and the genome length is 2.49 Mbp.

Description of *Candidatus* Treponema pericivita sp. nov.

Candidatus Treponema pericivita (NL. fem. n. *pericivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Treponema_D sp902803415*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902803415.1. The GC content of the type genome is 54.73 % and the genome length is 2.42 Mbp.

Description of *Candidatus* Treponema petulitas sp. nov.

Candidatus Treponema petulitas (NL. fem. n. *petulitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Treponema_D sp902803735*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902803735.1. The GC content of the type genome is 41.4 % and the genome length is 2.94 Mbp.

Description of *Candidatus* Treponema recogilega sp. nov.

Candidatus Treponema recogilega (NL. fem. n. *recogilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Treponema_D sp003447785*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003447785.1. The GC content of the type genome is 43.3 % and the genome length is 2.03 Mbp.

Description of *Candidatus* Treponema relenivita sp. nov.

Candidatus Treponema relenivita (NL. fem. n. *relenivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Treponema_D sp002394685*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_002372885.1. The GC content of the type genome is 37.69 % and the genome length is 3.05 Mbp.

Description of *Candidatus* Treponema repepilega sp. nov.

Candidatus Treponema repepilega (NL. fem. n. *repepilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Treponema_D sp902772975*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902772975.1. The GC content of the type genome is 42.71 % and the genome length is 2.47 Mbp.

Description of *Candidatus* Treponema rutabitas sp. nov.

Candidatus Treponema rutabitas (NL. fem. n. *rutabitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Treponema_D sp900769325*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_900769325.1. The GC content of the type genome is 35.69 % and the genome length is 2.56 Mbp.

Description of *Candidatus* Treponema senipousia sp. nov.

Candidatus Treponema senipousia (NL. fem. n. *senipousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Treponema_D sp900541995*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_900541995.1. The GC content of the type genome is 41.96 % and the genome length is 2.15 Mbp.

Description of *Candidatus* Treponema sicarigena sp. nov.

Candidatus Treponema sicarigena (NL. fem. n. *sicarigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Treponema_D sp002369025*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902797365.1. The GC content of the type genome is 46.2 % and the genome length is 2.05 Mbp.

Description of *Candidatus* Treponema sonipitio sp. nov.

Candidatus Treponema sonipitio (NL. fem. n. *sonipitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Treponema_D sp902789325*. Although GTDB has assigned a genus

name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902789325.1. The GC content of the type genome is 38.71 % and the genome length is 3.15 Mbp.

Description of *Candidatus* Treponema terebitica sp. nov.

Candidatus Treponema terebitica (NL. fem. n. *terebitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Treponema_D sp902797305*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902797305.1. The GC content of the type genome is 36.0 % and the genome length is 2.53 Mbp.

Description of *Candidatus* Treponema tirocibula sp. nov.

Candidatus Treponema tirocibula (NL. fem. n. *tirocibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Treponema_D sp002404895*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_002404895.1. The GC content of the type genome is 43.97 % and the genome length is 2.25 Mbp.

Description of *Candidatus* Treponema utraritia sp. nov.

Candidatus Treponema utraritia (NL. fem. n. *utraritia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Treponema_D sp902797055*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_902797055.1. The GC content of the type genome is 47.7 % and the genome length is 2.52 Mbp.

Description of *Candidatus* Treponema utrolastra sp. nov.

Candidatus Treponema utrolastra (NL. fem. n. *utrolastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Treponema_D sp012513125*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_012513125.1. The GC content of the type genome is 31.56 % and the genome length is 2.27 Mbp.

Description of *Candidatus* Treponema venunimonas sp. nov.

Candidatus Treponema venunimonas (NL. fem. n. *venunimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Treponema_D sp002296965*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_002296965.1. The GC content of the type genome is 50.75 % and the genome length is 1.9 Mbp.

Description of *Candidatus* Treponema viripitrix sp. nov.

Candidatus Treponema viripitrix (NL. fem. n. *viripitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Treponema_D sp900769975*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_900769975.1. The GC content of the type genome is 36.1 % and the genome length is 3.08 Mbp.

Description of *Candidatus* Treponema vocamatica sp. nov.

Candidatus Treponema vocamatica (NL. fem. n. *vocamatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Treponema_D sp002319875*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_002319875.1. The GC content of the type genome is 44.22 % and the genome length is 3.6 Mbp.

Description of *Candidatus* Treponema xeropitio sp. nov.

Candidatus Treponema xeropitio (NL. fem. n. *xeropitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Treponema_D sp002478955*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_002478955.1. The GC content of the type genome is 39.54 % and the genome length is 2.46 Mbp.

Description of *Candidatus* Treponema lutulibra sp. nov.

Candidatus Treponema lutulibra (NL. fem. n. *lutulibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Treponema_G sp012517385*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_012517385.1. The GC content of the type genome is 48.98 % and the genome length is 2.97 Mbp.

Description of *Candidatus* Treponema cerimessa sp. nov.

Candidatus Treponema cerimessa (NL. fem. n. *cerimessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Treponema_H sp009777335*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_009777335.1. The GC content of the type genome is 54.49 % and the genome length is 2.16 Mbp.

Description of *Candidatus* Treponema excaletta sp. nov.

Candidatus Treponema excaletta (NL. fem. n. *excaletta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Treponema_H sp009780855*. Although GTDB has assigned a genus

name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_009780855.1. The GC content of the type genome is 46.41 % and the genome length is 3.97 Mbp.

Description of *Candidatus* Treponema expopitrix sp. nov.

Candidatus Treponema expopitrix (NL. fem. n. *expopitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Treponema_H sp009780595*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_009780595.1. The GC content of the type genome is 52.44 % and the genome length is 1.73 Mbp.

Description of *Candidatus* Treponema halucitio sp. nov.

Candidatus Treponema halucitio (NL. fem. n. *halucitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Treponema_H sp009777995*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_009777995.1. The GC content of the type genome is 43.97 % and the genome length is 2.63 Mbp.

Description of *Candidatus* Treponema indipedo sp. nov.

Candidatus Treponema indipedo (NL. fem. n. *indipedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Treponema_H sp009786615*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_009786615.1. The GC content of the type genome is 48.53 % and the genome length is 1.6 Mbp.

Description of *Candidatus* Treponema manibivita sp. nov.

Candidatus Treponema manibivita (NL. fem. n. *manibivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Treponema_H sp009781915*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_009781915.1. The GC content of the type genome is 53.16 % and the genome length is 2.82 Mbp.

Description of *Candidatus* Tresvaria idipsousia sp. nov.

Candidatus Tresvaria idipsousia (NL. fem. n. *idipsousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PLA3 sp003576875*. The type genome for the species is the GenBank assembly GCA_003576875.1. The GC content of the type genome is 63.47 % and the genome length is 3.36 Mbp.

Description of *Candidatus* Tresvaria gen. nov.

Candidatus Tresvaria (NL. fem. n. *Tresvaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PLA3*. The type species for the genus is *Candidatus* Tresvaria idipsousia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UTPLA1*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Maxumidaceae.

Description of *Candidatus* Tresvaria ossifitio sp. nov.

Candidatus Tresvaria ossifitio (NL. fem. n. *ossifitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PLA3 sp007753915*. The type genome for the species is the GenBank assembly RS_GCF_007753915.1. The GC content of the type genome is 62.59 % and the genome length is 4.32 Mbp.

Description of *Candidatus* Tresvella exsufatio sp. nov.

Candidatus Tresvella exsufatio (NL. fem. n. *exsufatio* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3775 sp002369525*. The type genome for the species is the GenBank assembly GCA_002369525.1. The GC content of the type genome is 45.1 % and the genome length is 2.32 Mbp.

Description of *Candidatus* Tresvella gen. nov.

Candidatus Tresvella (NL. fem. n. *Tresvella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA3775*. The type species for the genus is *Candidatus* Tresvella exsufatio .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Tresvella sifunicula sp. nov.

Candidatus Tresvella sifunicula (NL. fem. n. *sifunicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3775 sp902772565*. The type genome for the species is the GenBank assembly GCA_902772565.1. The GC content of the type genome is 44.64 % and the genome length is 1.78 Mbp.

Description of *Candidatus* Tresvia acrolatio sp. nov.

Candidatus Tresvia acrolatio (NL. fem. n. *acrolatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DUOA01 sp012839095*. The type genome for the species is the GenBank assembly GCA_012839095.1. The GC content of the type genome is 45.16 % and the genome length is 2.74 Mbp.

Description of *Candidatus* Tresvia gen. nov.

Candidatus Tresvia (NL. fem. n. *Tresvia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this genus is *DUOA01*. The type species for the genus is *Candidatus* Tresvia acrolatio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DTU083*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Petulellaceae.

Description of *Candidatus* Tresvida velivilega sp. nov.

Candidatus Tresvida velivilega (NL. fem. n. *velivilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYFZ01 sp012727965*. The type genome for the species is the GenBank assembly GCA_012727965.1. The GC content of the type genome is 44.91 % and the genome length is 2.61 Mbp.

Description of *Candidatus* Tresvida gen. nov.

Candidatus Tresvida (NL. fem. n. *Tresvida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAYFZ01*. The type species for the genus is *Candidatus* Tresvida velivilega .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA5734*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Xeropulaceae.

Description of *Candidatus* Tresvosa allibitas sp. nov.

Candidatus Tresvosa allibitas (NL. fem. n. *allibitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *G11 sp900103495*. The type genome for the species is the GenBank assembly RS_GCF_900103495.1. The GC content of the type genome is 43.45 % and the genome length is 3.04 Mbp.

Description of *Candidatus* Tresvosa gen. nov.

Candidatus Tresvosa (NL. fem. n. *Tresvosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *G11*. The type species for the genus is *Candidatus* Tresvosa allibitas .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Tresvula indotitia sp. nov.

Candidatus Tresvula indotitia (NL. fem. n. *indotitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACCYN01 sp013696465*. The type genome for the species is the GenBank assembly GCA_013696465.1. The GC content of the type genome is 56.57 % and the genome length is 3.29 Mbp.

Description of *Candidatus* Tresvula gen. nov.

Candidatus Tresvula (NL. fem. n. *Tresvula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACCYN01*. The type species for the genus is *Candidatus* Tresvula indotitia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Tresvula inturitrix sp. nov.

Candidatus Tresvula inturitrix (NL. fem. n. *inturitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACCYN01 sp013695245*. The type genome for the species is the GenBank assembly GCA_013695245.1. The GC content of the type genome is 55.02 % and the genome length is 3.2 Mbp.

Description of *Candidatus* Tribrana camilatio sp. nov.

Candidatus Tribrana camilatio (NL. fem. n. *camilatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *VFJN01 sp009886035*. The type genome for the species is the GenBank assembly GCA_009886035.1. The GC content of the type genome is 66.23 %

and the genome length is 2.7 Mbp.

Description of *Candidatus* Tribrana gen. nov.

Candidatus Tribrana (NL. fem. n. *Tribrana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *VFJN01*. The type species for the genus is *Candidatus* Tribrana camilatio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JACDCH01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Gerunulaceae.

Description of *Candidatus* Tribrana depecentia sp. nov.

Candidatus Tribrana depecentia (NL. fem. n. *depecentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *VFJN01 sp009694375*. The type genome for the species is the GenBank assembly GCA_009694375.1. The GC content of the type genome is 66.11 % and the genome length is 2.58 Mbp.

Description of *Candidatus* Tribraria chernimonas sp. nov.

Candidatus Tribraria chernimonas (NL. fem. n. *chernimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SLJN01 sp007131535*. The type genome for the species is the GenBank assembly GCA_007131535.1. The GC content of the type genome is 47.14 % and the genome length is 3.61 Mbp.

Description of *Candidatus* Tribraria gen. nov.

Candidatus Tribraria (NL. fem. n. *Tribraria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SLJN01*. The type species for the genus is *Candidatus* Tribraria chernimonas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SKNL01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to

the family *Candidatus* Dehinulaceae.

Description of *Candidatus* Tribraria conibastra sp. nov.

Candidatus Tribraria conibastra (NL. fem. n. *conibastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SLJN01 sp007135115*. The type genome for the species is the GenBank assembly GCA_007135115.1. The GC content of the type genome is 46.52 % and the genome length is 3.78 Mbp.

Description of *Candidatus* Tribria lavacatio sp. nov.

Candidatus Tribria lavacatio (NL. fem. n. *lavacatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RDZE01 sp004293905*. The type genome for the species is the GenBank assembly GCA_004293905.1. The GC content of the type genome is 37.74 % and the genome length is 3.29 Mbp.

Description of *Candidatus* Tribria gen. nov.

Candidatus Tribria (NL. fem. n. *Tribria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RDZE01*. The type species for the genus is *Candidatus* Tribria lavacatio .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Tribrida tenilitura sp. nov.

Candidatus Tribrida tenilitura (NL. fem. n. *tenilitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SKGZ01 sp007117175*. The type genome for the species is the GenBank assembly GCA_007117175.1. The GC content of the type genome is 39.66 % and the genome length is 1.86 Mbp.

Description of *Candidatus* Tribrida gen. nov.

Candidatus Tribrida (NL. fem. n. *Tribrida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SKGZ01*. The type species for the genus is *Candidatus* Tribrida tenilitura .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Tribrosa lanigigena sp. nov.

Candidatus Tribrosa lanigigena (NL. fem. n. *lanigigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *KBS-96 sp000381625*. The type genome for the species is the GenBank assembly RS_GCF_000381625.1. The GC content of the type genome is 57.17 % and the genome length is 6.69 Mbp.

Description of *Candidatus* Tribrosa gen. nov.

Candidatus Tribrosa (NL. fem. n. *Tribrosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *KBS-96*. The type species for the genus is *Candidatus* Tribrosa lanigigena .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Trichlorobacter absurifica sp. nov.

Candidatus Trichlorobacter absurifica (NL. fem. n. *absurifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Trichlorobacter sp002383415*. The type genome for the species is the GenBank assembly GCA_002383415.1. The GC content of the type genome is 59.03 % and the genome length is 2.51 Mbp.

Description of *Candidatus* Trichlorobacter cerebitia sp. nov.

Candidatus Trichlorobacter cerebitia (NL. fem. n. *cerebitia* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Trichlorobacter sp002422265*. The type genome for the species is the GenBank assembly GCA_012027095.1. The GC content of the type genome is 55.72 % and the genome length is 3.52 Mbp.

Description of *Candidatus* Trichlorobacter dehonessa sp. nov.

Candidatus Trichlorobacter dehonessa (NL. fem. n. *dehonessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Trichlorobacter sp002423105*. The type genome for the species is the GenBank assembly GCA_002423105.1. The GC content of the type genome is 54.59 % and the genome length is 3.55 Mbp.

Description of *Candidatus* Trichlorobacter feculilenta sp. nov.

Candidatus Trichlorobacter feculilenta (NL. fem. n. *feculilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Trichlorobacter sp002419465*. The type genome for the species is the GenBank assembly GCA_002422585.1. The GC content of the type genome is 57.02 % and the genome length is 2.55 Mbp.

Description of *Candidatus* Trichlorobacter hirudentia sp. nov.

Candidatus Trichlorobacter hirudentia (NL. fem. n. *hirudentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Trichlorobacter sp002424705*. The type genome for the species is the GenBank assembly GCA_002424705.1. The GC content of the type genome is 60.01 % and the genome length is 1.52 Mbp.

Description of *Candidatus* Trichlorobacter lugubimonas sp. nov.

Candidatus Trichlorobacter lugubimonas (NL. fem. n. *lugubimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Trichlorobacter sp002452325*. The type genome for the species is the GenBank assembly GCA_002452325.1. The GC content of the type genome is 54.85 % and the genome length is 3.34 Mbp.

Description of *Candidatus* Trichlorobacter ornitedo sp. nov.

Candidatus Trichlorobacter ornitedo (NL. fem. n. *ornitedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Trichlorobacter sp002328035*. The type genome for the species is the GenBank assembly GCA_002328035.1. The GC content of the type genome is 46.95 % and the genome length is 3.16 Mbp.

Description of *Candidatus* Trichloromonas affamastra sp. nov.

Candidatus Trichloromonas affamastra (NL. fem. n. *affamastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Trichloromonas sp001825565*. The type genome for the species is the GenBank assembly GCA_001825565.1. The GC content of the type genome is 58.03 % and the genome length is 3.16 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at time point 3 / C; 5m depth; 0.2 filter".

Description of *Candidatus* Trichloromonas viragitura sp. nov.

Candidatus Trichloromonas viragitura (NL. fem. n. *viragitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Trichloromonas sp002423365*. The type genome for the species is the GenBank assembly GCA_002423365.1. The GC content of the type genome is 61.42 % and the genome length is 3.37 Mbp.

Description of *Candidatus* Trichococcus diminetta sp. nov.

Candidatus Trichococcus diminetta (NL. fem. n. *diminetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Trichococcus sp002155105*. The type genome for the species is the

GenBank assembly RS_GCF_002155105.1. The GC content of the type genome is 46.8 % and the genome length is 3.13 Mbp.

Description of *Candidatus* Trichodesmium refinedo sp. nov.

Candidatus Trichodesmium refinedo (NL. fem. n. *refinedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Trichodesmium sp010672085*. The type genome for the species is the GenBank assembly GCA_010672085.1. The GC content of the type genome is 36.22 % and the genome length is 10.55 Mbp.

Description of *Candidatus* Trichormus andabibula sp. nov.

Candidatus Trichormus andabibula (NL. fem. n. *andabibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Trichormus sp002896875*. The type genome for the species is the GenBank assembly RS_GCF_002896875.1. The GC content of the type genome is 40.84 % and the genome length is 7.21 Mbp.

Description of *Candidatus* Trichormus cohoritica sp. nov.

Candidatus Trichormus cohoritica (NL. fem. n. *cohoritica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Trichormus sp001597745*. The type genome for the species is the GenBank assembly RS_GCF_001597745.1. The GC content of the type genome is 41.41 % and the genome length is 5.6 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Estuarial environment".

Description of *Candidatus* Trichormus desulitio sp. nov.

Candidatus Trichormus desulitio (NL. fem. n. *desulitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Trichormus sp000009705*. The type genome for the species is the GenBank assembly RS_GCF_000009705.1. The GC content of the type genome is 41.27 % and the genome length is 7.21 Mbp.

Description of *Candidatus* Trichormus episcimonia sp. nov.

Candidatus Trichormus episcimonia (NL. fem. n. *episcimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Trichormus sp000316645*. The type genome for the species is the GenBank assembly RS_GCF_000316645.1. The GC content of the type genome is 41.53 % and the genome length is 6.72 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "moderate hot spring".

Description of *Candidatus* Trichormus gerunilenta sp. nov.

Candidatus Trichormus gerunilenta (NL. fem. n. *gerunilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Trichormus sp011332035*. The type genome for the species is the GenBank assembly GCA_011332035.1. The GC content of the type genome is 40.87 % and the genome length is 7.19 Mbp.

Description of *Candidatus* Trichormus inlacousia sp. nov.

Candidatus Trichormus inlacousia (NL. fem. n. *inlacousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Trichormus sp013393945*. The type genome for the species is the GenBank assembly RS_GCF_013393945.1. The GC content of the type genome is 41.06 % and the genome length is 7.39 Mbp.

Description of *Candidatus* Trichormus retunitio sp. nov.

Candidatus Trichormus retunitio (NL. fem. n. *retunitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Trichormus sp001548375*. The type genome for the species is the GenBank assembly RS_GCF_002368215.1. The GC content of the type genome is 40.57 % and the genome length is 7.88 Mbp.

Description of *Candidatus* Triclana cilibousia sp. nov.

Candidatus Triclana cilibousia (NL. fem. n. *cilibousia* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA11957 sp003542935*. The type genome for the species is the GenBank assembly GCA_003542935.1. The GC content of the type genome is 51.55 % and the genome length is 3.59 Mbp.

Description of *Candidatus* Triclana gen. nov.

Candidatus Triclana (NL. fem. n. *Triclana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA11957*. The type species for the genus is *Candidatus* Triclana cilibousia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Triclia insibimonas sp. nov.

Candidatus Triclia insibimonas (NL. fem. n. *insibimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *LCPA01 sp001003385*. The type genome for the species is the GenBank assembly GCA_001003385.1. The GC content of the type genome is 47.04 % and the genome length is 0.71 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "aquifer sediment".

Description of *Candidatus* Triclia gen. nov.

Candidatus Triclia (NL. fem. n. *Triclia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *LCPA01*. The type species for the genus is *Candidatus* Triclia insibimonas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA12108*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Ranunidaceae.

Description of *Candidatus* Triclosa calipitas sp. nov.

Candidatus Triclosa calipitas (NL. fem. n. *calipitas* a species epithet created arbitrarily,

while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2753565 sp002753565*. The type genome for the species is the GenBank assembly GCA_002753565.1. The GC content of the type genome is 52.3 % and the genome length is 3.87 Mbp.

Description of *Candidatus* Triclosa gen. nov.

Candidatus Triclosa (NL. fem. n. *Triclosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2753565*. The type species for the genus is *Candidatus* Triclosa calipitas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA8363*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Conopidaceae.

Description of *Candidatus* Triclula veridentia sp. nov.

Candidatus Triclula veridentia (NL. fem. n. *veridentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIPUJ01 sp903868205*. The type genome for the species is the GenBank assembly GCA_903868205.1. The GC content of the type genome is 34.43 % and the genome length is 0.74 Mbp.

Description of *Candidatus* Triclula gen. nov.

Candidatus Triclula (NL. fem. n. *Triclula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIPUJ01*. The type species for the genus is *Candidatus* Triclula veridentia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GWA1-40-21*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Carunariaceae.

Description of *Candidatus* Trinickia absegibula sp. nov.

Candidatus Trinickia absegibula (NL. fem. n. *absegibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Trinickia sp005144415*. The type genome for the species is the GenBank assembly RS_GCF_005144415.1. The GC content of the type genome is 64.59 % and the genome length is 7.24 Mbp.

Description of *Candidatus* Trinickia betacessa sp. nov.

Candidatus Trinickia betacessa (NL. fem. n. *betacessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Trinickia sp003390925*. The type genome for the species is the GenBank assembly RS_GCF_003390925.1. The GC content of the type genome is 63.32 % and the genome length is 6.7 Mbp.

Description of *Candidatus* Trinickia bicinisca sp. nov.

Candidatus Trinickia bicinisca (NL. fem. n. *bicinisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Trinickia sp004322045*. The type genome for the species is the GenBank assembly GCA_004322045.1. The GC content of the type genome is 62.91 % and the genome length is 5.99 Mbp.

Description of *Candidatus* Trinickia depacitudo sp. nov.

Candidatus Trinickia depacitudo (NL. fem. n. *depacitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Trinickia sp013282575*. The type genome for the species is the GenBank assembly RS_GCF_013282575.1. The GC content of the type genome is 62.86 % and the genome length is 6.28 Mbp.

Description of *Candidatus* Trinickia epiclatica sp. nov.

Candidatus Trinickia epiclatica (NL. fem. n. *epiclatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Trinickia sp003367175*. The type genome for the species is the GenBank assembly RS_GCF_003367175.1. The GC content of the type genome is 63.24 % and the genome length is 7.37 Mbp.

Description of *Candidatus* Trinickia expenicula sp. nov.

Candidatus Trinickia expenicula (NL. fem. n. *expenicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Trinickia sp005280735*. The type genome for the species is the GenBank assembly RS_GCF_005280735.1. The GC content of the type genome is 63.08 % and the genome length is 8.58 Mbp.

Description of *Candidatus* Trinickia inmematica sp. nov.

Candidatus Trinickia inmematica (NL. fem. n. *inmematica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Trinickia sp003628145*. The type genome for the species is the GenBank assembly RS_GCF_003628145.1. The GC content of the type genome is 63.47 % and the genome length is 6.1 Mbp.

Description of *Candidatus* Triscella prognigena sp. nov.

Candidatus Triscella prognigena (NL. fem. n. *prognigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *62-47 sp001899255*. The type genome for the species is the GenBank assembly GCA_001899255.1. The GC content of the type genome is 61.94 % and the genome length is 4.92 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Ammonium sulfate bioreactor".

Description of *Candidatus* Triscella gen. nov.

Candidatus Triscella (NL. fem. n. *Triscella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *62-47*. The type species for the genus is *Candidatus* Triscella prognigena .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Triscia ignigatio sp. nov.

Candidatus Triscia ignigatio (NL. fem. n. *ignigatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABDAD01 sp013289335*. The type genome for the species is the GenBank assembly GCA_013289335.1. The GC content of the type genome is 33.04 % and the genome length is 0.83 Mbp.

Description of *Candidatus* Triscia gen. nov.

Candidatus Triscia (NL. fem. n. *Triscia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABDAD01*. The type species for the genus is *Candidatus* Triscia ignigatio .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Triscida affamitia sp. nov.

Candidatus Triscida affamitia (NL. fem. n. *affamitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACAED01 sp013389025*. The type genome for the species is the GenBank assembly GCA_013389025.1. The GC content of the type genome is 57.58 % and the genome length is 1.84 Mbp.

Description of *Candidatus* Triscida gen. nov.

Candidatus Triscida (NL. fem. n. *Triscida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACAED01*. The type species for the genus is *Candidatus* Triscida affamitia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Triscula assucimonia sp. nov.

Candidatus Triscula assucimonia (NL. fem. n. *assucimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYUK01 sp009773415*. The type genome for the species is the GenBank assembly GCA_009773415.1. The GC content of the type genome is 53.35 % and the genome length is 2.46 Mbp.

Description of *Candidatus* Triscula gen. nov.

Candidatus Triscula (NL. fem. n. *Triscula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAYUK01*. The type species for the genus is *Candidatus* Triscula assucimonia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA9935*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Xeramosaceae.

Description of *Candidatus* Triscula manibicella sp. nov.

Candidatus Triscula manibicella (NL. fem. n. *manibicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYUK01 sp012517735*. The type genome for the species is the GenBank assembly GCA_012517735.1. The GC content of the type genome is 55.42 % and the genome length is 2.71 Mbp.

Description of *Candidatus* Troclana oblucatica sp. nov.

Candidatus Troclana oblucatica (NL. fem. n. *oblucatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *VEXF01 sp009391275*. The type genome for the species is the GenBank assembly GCA_009391275.1. The GC content of the type genome is 46.46 % and the genome length is 1.77 Mbp.

Description of *Candidatus* Troclana gen. nov.

Candidatus Troclana (NL. fem. n. *Troclana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *VEXF01*. The type species for the genus is *Candidatus* Troclana oblucatica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GCA-2712585*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Soniparaceae.

Description of *Candidatus* Troclaria indiditoga sp. nov.

Candidatus Troclaria indiditoga (NL. fem. n. *indiditoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SKPY01 sp007119305*. The type genome for the species is the GenBank assembly GCA_007119305.1. The GC content of the type genome is 72.58 % and the genome length is 3.4 Mbp.

Description of *Candidatus* Troclaria gen. nov.

Candidatus Troclaria (NL. fem. n. *Troclaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SKPY01*. The type species for the genus is *Candidatus* Troclaria indiditoga .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Troclella tresvivita sp. nov.

Candidatus Troclella tresvivita (NL. fem. n. *tresvivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *NS-11 sp005877525*. The type genome for the species is the GenBank assembly GCA_005877525.1. The GC content of the type genome is 57.73 % and the genome length is 1.82 Mbp.

Description of *Candidatus* Troclella gen. nov.

Candidatus Troclella (NL. fem. n. *Troclella* a name created arbitrarily, while preserving

the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *NS-11*. The type species for the genus is *Candidatus* Troclella tresvivita .

According to the original version of GTDB R06-RS202, this genus belongs to the family *NS-4*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cadavulaceae.

Description of *Candidatus* Troclia expenugo sp. nov.

Candidatus Troclia expenugo (NL. fem. n. *expenugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HGM11616 sp900761075*. The type genome for the species is the GenBank assembly RS_GCF_900761075.1. The GC content of the type genome is 41.99 % and the genome length is 2.1 Mbp.

Description of *Candidatus* Troclia gen. nov.

Candidatus Troclia (NL. fem. n. *Troclia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *HGM11616*. The type species for the genus is *Candidatus* Troclia expenugo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Troclida revecastra sp. nov.

Candidatus Troclida revecastra (NL. fem. n. *revecastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DSXZ01 sp011367735*. The type genome for the species is the GenBank assembly GCA_011367735.1. The GC content of the type genome is 55.54 % and the genome length is 4.68 Mbp.

Description of *Candidatus* Troclida gen. nov.

Candidatus Troclida (NL. fem. n. *Troclida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DSXZ01*. The type species for the genus is *Candidatus* Troclida revecastra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *HGW-15*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Dapifulaceae.

Description of *Candidatus* Troclula pericicula sp. nov.

Candidatus Troclula pericicula (NL. fem. n. *pericicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABMNI01 sp013204605*. The type genome for the species is the GenBank assembly GCA_013204605.1. The GC content of the type genome is 46.12 % and the genome length is 2.69 Mbp.

Description of *Candidatus* Troclula gen. nov.

Candidatus Troclula (NL. fem. n. *Troclula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABMNI01*. The type species for the genus is *Candidatus* Troclula pericicula .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Tropicibacter imbelilenta sp. nov.

Candidatus Tropicibacter imbelilenta (NL. fem. n. *imbelilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Tropicibacter sp003667315*. The type genome for the species is the GenBank assembly RS_GCF_003667315.2. The GC content of the type genome is 64.07 % and the genome length is 5.04 Mbp.

Description of *Candidatus* Tropicimonas regififorma sp. nov.

Candidatus Tropicimonas regififorma (NL. fem. n. *regififorma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Tropicimonas sp004146235*. The type genome for the species is the GenBank assembly RS_GCF_004146235.1. The GC content of the type genome is 64.83 % and the genome length is 5.46 Mbp.

Description of *Candidatus* Tropicimonas revecitrix sp. nov.

Candidatus Tropicimonas revecitrix (NL. fem. n. *revecitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Tropicimonas sp003390845*. The type genome for the species is the GenBank assembly RS_GCF_003390845.1. The GC content of the type genome is 65.55 % and the genome length is 4.61 Mbp.

Description of *Candidatus* Truepera benevago sp. nov.

Candidatus Truepera benevago (NL. fem. n. *benevago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Truepera sp902806425*. The type genome for the species is the GenBank assembly GCA_902806425.1. The GC content of the type genome is 62.04 % and the genome length is 3.84 Mbp.

Description of *Candidatus* Trueperella innulastra sp. nov.

Candidatus Trueperella innulastra (NL. fem. n. *innulastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Trueperella sp012727825*. The type genome for the species is the GenBank assembly GCA_012727825.1. The GC content of the type genome is 58.96 % and the genome length is 1.73 Mbp.

Description of *Candidatus* Tsukamurella anatrigena sp. nov.

Candidatus Tsukamurella anatrigena (NL. fem. n. *anatrigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Tsukamurella sp000312385*. The type genome for the species is the GenBank assembly RS_GCF_000312385.1. The GC content of the type genome is 71.12

% and the genome length is 4.5 Mbp.

Description of *Candidatus* Tsukamurella femelilenta sp. nov.

Candidatus Tsukamurella femelilenta (NL. fem. n. *femelilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Tsukamurella sp903970215*. The type genome for the species is the GenBank assembly GCA_903970215.1. The GC content of the type genome is 68.29 % and the genome length is 4.99 Mbp.

Description of *Candidatus* Tsuneonella adtagisca sp. nov.

Candidatus Tsuneonella adtagisca (NL. fem. n. *adtagisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Tsuneonella sp003626915*. The type genome for the species is the GenBank assembly RS_GCF_003626915.1. The GC content of the type genome is 67.01 % and the genome length is 2.79 Mbp.

Description of *Candidatus* Tsuneonella inobsitica sp. nov.

Candidatus Tsuneonella inobsitica (NL. fem. n. *inobsitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Tsuneonella sp007065885*. The type genome for the species is the GenBank assembly RS_GCF_007065885.1. The GC content of the type genome is 65.63 % and the genome length is 2.61 Mbp.

Description of *Candidatus* Tsuneonella intenatica sp. nov.

Candidatus Tsuneonella intenatica (NL. fem. n. *intenatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Tsuneonella sp003605755*. The type genome for the species is the GenBank assembly RS_GCF_003605755.1. The GC content of the type genome is 60.87 % and the genome length is 3.3 Mbp.

Description of *Candidatus* Tubicana inmoredo sp. nov.

Candidatus Tubicana inmoredo (NL. fem. n. *inmoredo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *BR149 sp011812965*. The type genome for the species is the GenBank assembly RS_GCF_011812965.1. The GC content of the type genome is 40.39 % and the genome length is 1.79 Mbp.

Description of *Candidatus* Tubicana gen. nov.

Candidatus Tubicana (NL. fem. n. *Tubicana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *BR149*. The type species for the genus is *Candidatus* Tubicana inmoredo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *WRBN01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Repurellaceae.

Description of *Candidatus* Tubicana notabifica sp. nov.

Candidatus Tubicana notabifica (NL. fem. n. *notabifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *BR149 sp011813005*. The type genome for the species is the GenBank assembly RS_GCF_011813005.1. The GC content of the type genome is 45.77 % and the genome length is 1.77 Mbp.

Description of *Candidatus* Tubicana siticibra sp. nov.

Candidatus Tubicana siticibra (NL. fem. n. *siticibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *BR149 sp011812995*. The type genome for the species is the GenBank assembly RS_GCF_011812995.1. The GC content of the type genome is 38.52 % and the genome length is 1.68 Mbp.

Description of *Candidatus* Tubicella bicapivita sp. nov.

Candidatus Tubicella bicapivita (NL. fem. n. *bicapivita* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIQEU01 sp903870905*. The type genome for the species is the GenBank assembly GCA_903870375.1. The GC content of the type genome is 64.26 % and the genome length is 1.98 Mbp.

Description of *Candidatus* Tubicella gen. nov.

Candidatus Tubicella (NL. fem. n. *Tubicella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIQEU01*. The type species for the genus is *Candidatus* Tubicella bicapivita .

According to the original version of GTDB R06-RS202, this genus belongs to the family *RAAP-2*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Buxifanaceae.

Description of *Candidatus* Tubicella bicodivita sp. nov.

Candidatus Tubicella bicodivita (NL. fem. n. *bicodivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIQEU01 sp903918025*. The type genome for the species is the GenBank assembly GCA_903834385.1. The GC content of the type genome is 57.82 % and the genome length is 1.86 Mbp.

Description of *Candidatus* Tubicella inaspitia sp. nov.

Candidatus Tubicella inaspitia (NL. fem. n. *inaspitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIQEU01 sp903874965*. The type genome for the species is the GenBank assembly GCA_903874965.1. The GC content of the type genome is 57.56 % and the genome length is 2.03 Mbp.

Description of *Candidatus* Tubicia mirifentia sp. nov.

Candidatus Tubicia mirifentia (NL. fem. n. *mirifentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-194 sp000432915*. The type genome for the species is the GenBank assembly GCA_003539645.1. The GC content of the type genome is 44.09 % and the genome length is 2.62 Mbp.

Description of *Candidatus* Tubicia gen. nov.

Candidatus Tubicia (NL. fem. n. *Tubicia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAG-194*. The type species for the genus is *Candidatus* Tubicia mirifentia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Tubicia remuletta sp. nov.

Candidatus Tubicia remuletta (NL. fem. n. *remuletta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-194 sp002441865*. The type genome for the species is the GenBank assembly GCA_002441865.1. The GC content of the type genome is 44.79 % and the genome length is 2.5 Mbp.

Description of *Candidatus* Tubicida curabilenta sp. nov.

Candidatus Tubicida curabilenta (NL. fem. n. *curabilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1875 sp002338125*. The type genome for the species is the GenBank assembly GCA_002338125.1. The GC content of the type genome is 37.78 % and the genome length is 0.62 Mbp.

Description of *Candidatus* Tubicida gen. nov.

Candidatus Tubicida (NL. fem. n. *Tubicida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1875*. The type species for the genus is *Candidatus* Tubicida

curabilenta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1875*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Tubicidaceae.

Description of *Candidatus* Tubicidaceae fam. nov.

Candidatus Tubicidaceae (NL. fem. n. *Tubicidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA1875.* The type genus for the taxon is *Candidatus* Tubicida .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA1875*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Tubicidales.

Description of *Candidatus* Tubicidales ord. nov.

Candidatus Tubicidales (NL. fem. n. *Tubicidales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA1875.* The type genus for the taxon is *Candidatus* Tubicida .

According to the original version of GTDB R06-RS202, this family belongs to the class *CPR2*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Defanosae.

Description of *Candidatus* Tubicosa cohonivita sp. nov.

Candidatus Tubicosa cohonivita (NL. fem. n. *cohonivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8317 sp002469865*. The type genome for the species is the GenBank assembly GCA_003332025.1. The GC content of the type genome is 51.17 % and the genome length is 1.61 Mbp.

Description of *Candidatus* Tubicosa gen. nov.

Candidatus Tubicosa (NL. fem. n. *Tubicosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this genus is *UBA8317*. The type species for the genus is *Candidatus* Tubicosa cohonivita .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA8317*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Tubicosaceae.

Description of *Candidatus* Tubicosaceae fam. nov.

Candidatus Tubicosaceae (NL. fem. n. *Tubicosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA8317.* The type genus for the taxon is *Candidatus* Tubicosa .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA8317*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Tubicosales.

Description of *Candidatus* Tubicosales ord. nov.

Candidatus Tubicosales (NL. fem. n. *Tubicosales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA8317.* The type genus for the taxon is *Candidatus* Tubicosa .

According to the GTDB R06-RS202, this order belongs to the class *Alphaproteobacteria*.

Description of *Candidatus* Tubicula conamivita sp. nov.

Candidatus Tubicula conamivita (NL. fem. n. *conamivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SKPH01 sp007119615*. The type genome for the species is the GenBank assembly GCA_007124665.1. The GC content of the type genome is 49.27 % and the genome length is 2.67 Mbp.

Description of *Candidatus* Tubicula gen. nov.

Candidatus Tubicula (NL. fem. n. *Tubicula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SKPH01*. The type species for the genus is *Candidatus* Tubicula

conamivita .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DTU022*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Depelidaceae.

Description of *Candidatus* Tubicula evangedo sp. nov.

Candidatus Tubicula evangedo (NL. fem. n. *evangedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SKPH01 sp003562605*. The type genome for the species is the GenBank assembly GCA_003562605.1. The GC content of the type genome is 46.6 % and the genome length is 2.73 Mbp.

Description of *Candidatus* Tumebacillus cerifugo sp. nov.

Candidatus Tumebacillus cerifugo (NL. fem. n. *cerifugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Tumebacillus_A sp004340785*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_004340785.1. The GC content of the type genome is 57.95 % and the genome length is 4.65 Mbp.

Description of *Candidatus* Tumefana immatiforma sp. nov.

Candidatus Tumefana immatiforma (NL. fem. n. *immatiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DUEN01 sp011176545*. The type genome for the species is the GenBank assembly GCA_011176545.1. The GC content of the type genome is 61.78 % and the genome length is 4.43 Mbp.

Description of *Candidatus* Tumefana gen. nov.

Candidatus Tumefana (NL. fem. n. *Tumefana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this genus is *DUEN01*. The type species for the genus is *Candidatus* Tumefana immatiforma .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DUEN01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Tumefanaceae.

Description of *Candidatus* Tumefanaceae fam. nov.

Candidatus Tumefanaceae (NL. fem. n. *Tumefanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *DUEN01*. The type genus for the taxon is *Candidatus* Tumefana .

According to the original version of GTDB R06-RS202, this family belongs to the order *DUEN01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Tumefanales.

Description of *Candidatus* Tumefanales ord. nov.

Candidatus Tumefanales (NL. fem. n. *Tumefanales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *DUEN01*. The type genus for the taxon is *Candidatus* Tumefana .

According to the GTDB R06-RS202, this order belongs to the class *Anaerolineae*.

Description of *Candidatus* Tumefana penecitura sp. nov.

Candidatus Tumefana penecitura (NL. fem. n. *penecitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DUEN01 sp013152435*. The type genome for the species is the GenBank assembly GCA_013152435.1. The GC content of the type genome is 64.26 % and the genome length is 4.97 Mbp.

Description of *Candidatus* Tumefella curotibra sp. nov.

Candidatus Tumefella curotibra (NL. fem. n. *curotibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *GWA1-39-11 sp001782675*. The type genome for the species is the GenBank assembly GCA_001782255.1. The GC content of the type genome is 38.95 % and the genome length is 0.75 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 0.2 micron filter; full assembly".

Description of *Candidatus* Tumefella gen. nov.

Candidatus Tumefella (NL. fem. n. *Tumefella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GWA1-39-11*. The type species for the genus is *Candidatus* Tumefella curotibra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GWA1-39-11*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Tumefellaceae.

Description of *Candidatus* Tumefellaceae fam. nov.

Candidatus Tumefellaceae (NL. fem. n. *Tumefellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *GWA1-39-11.* The type genus for the taxon is *Candidatus* Tumefella .

According to GTDB R06-RS202, this family belongs to the order *Levybacterales*.

Description of *Candidatus* Tumefella genufitrix sp. nov.

Candidatus Tumefella genufitrix (NL. fem. n. *genufitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GWA1-39-11 sp001782235*. The type genome for the species is the GenBank assembly GCA_001782345.1. The GC content of the type genome is 39.96 % and the genome length is 1.0 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 1.2 micron filter; full assembly".

Description of *Candidatus* Tumefida hexagitia sp. nov.

Candidatus Tumefida hexagitia (NL. fem. n. *hexagitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA890 sp002731215*. The type genome for the species is the GenBank assembly GCA_002731215.1. The GC content of the type genome is 54.48 % and the genome length is 1.22 Mbp.

Description of *Candidatus* Tumefida gen. nov.

Candidatus Tumefida (NL. fem. n. *Tumefida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA890*. The type species for the genus is *Candidatus* Tumefida hexagitia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA890*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Tumefidaceae.

Description of *Candidatus* Tumefidaceae fam. nov.

Candidatus Tumefidaceae (NL. fem. n. *Tumefidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA890.* The type genus for the taxon is *Candidatus* Tumefida .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA890*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Tumefidales.

Description of *Candidatus* Tumefidales ord. nov.

Candidatus Tumefidales (NL. fem. n. *Tumefidales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA890.* The type genus for the taxon is *Candidatus* Tumefida .

According to the original version of GTDB R06-RS202, this family belongs to the class *UBA890*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Tumefidae.

Description of *Candidatus* Tumefidae class. nov.

Candidatus Tumefidae (NL. fem. n. *c__Tumefidae* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA890.* The type genus for the taxon is *Candidatus* Tumefida .

According to GTDB R06-RS202, this class belongs to the phylum *Acidobacteriota*.

Description of *Candidatus* Tumefida levifivita sp. nov.

Candidatus Tumefida levifivita (NL. fem. n. *levifivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA890 sp002722645*. The type genome for the species is the GenBank assembly GCA_002722645.1. The GC content of the type genome is 55.76 % and the genome length is 2.48 Mbp.

Description of *Candidatus* Tumefosa accomedo sp. nov.

Candidatus Tumefosa accomedo (NL. fem. n. *accomedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *34-128 sp011056645*. The type genome for the species is the GenBank assembly GCA_011056645.1. The GC content of the type genome is 35.13 % and the genome length is 2.25 Mbp.

Description of *Candidatus* Tumefosa gen. nov.

Candidatus Tumefosa (NL. fem. n. *Tumefosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *34-128*. The type species for the genus is *Candidatus* Tumefosa accomedo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *34-128*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Tumefosaceae.

Description of *Candidatus* Tumefosaceae fam. nov.

Candidatus Tumefosaceae (NL. fem. n. *Tumefosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this taxon is *34-128.* The type genus for the taxon is *Candidatus* Tumefosa .

According to the original version of GTDB R06-RS202, this family belongs to the order *SB-45*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Nidifidales.

Description of *Candidatus* Tumefosa adoscigena sp. nov.

Candidatus Tumefosa adoscigena (NL. fem. n. *adoscigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *34-128 sp003451675*. The type genome for the species is the GenBank assembly GCA_003451675.1. The GC content of the type genome is 34.25 % and the genome length is 2.57 Mbp.

Description of *Candidatus* Tumefosa decenugo sp. nov.

Candidatus Tumefosa decenugo (NL. fem. n. *decenugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *34-128 sp003527405*. The type genome for the species is the GenBank assembly GCA_003527405.1. The GC content of the type genome is 34.81 % and the genome length is 1.47 Mbp.

Description of *Candidatus* Tumefosa femelitura sp. nov.

Candidatus Tumefosa femelitura (NL. fem. n. *femelitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *34-128 sp002849045*. The type genome for the species is the GenBank assembly GCA_002849045.2. The GC content of the type genome is 34.83 % and the genome length is 2.23 Mbp.

Description of *Candidatus* Tumefosa inmemimonas sp. nov.

Candidatus Tumefosa inmemimonas (NL. fem. n. *inmemimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *34-128 sp000405345*. The type genome for the species is the GenBank

assembly GCA_000405345.1. The GC content of the type genome is 34.95 % and the genome length is 1.42 Mbp.

Description of *Candidatus* Tumefosa letifedo sp. nov.

Candidatus Tumefosa letifedo (NL. fem. n. *letifedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *34-128 sp001773955*. The type genome for the species is the GenBank assembly GCA_001773955.1. The GC content of the type genome is 35.36 % and the genome length is 1.95 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle background sediment; well D04 at 19ft depth".

Description of *Candidatus* Tumefosa regigessa sp. nov.

Candidatus Tumefosa regigessa (NL. fem. n. *regigessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *34-128 sp002084865*. The type genome for the species is the GenBank assembly GCA_002084865.1. The GC content of the type genome is 35.12 % and the genome length is 1.07 Mbp.

Description of *Candidatus* Tumefosa smegmitoga sp. nov.

Candidatus Tumefosa smegmitoga (NL. fem. n. *smegmitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *34-128 sp000405605*. The type genome for the species is the GenBank assembly GCA_000405605.1. The GC content of the type genome is 34.58 % and the genome length is 1.65 Mbp.

Description of *Candidatus* Tumefosa vatilatio sp. nov.

Candidatus Tumefosa vatilatio (NL. fem. n. *vatilatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *34-128 sp003575245*. The type genome for the species is the GenBank assembly GCA_003575245.1. The GC content of the type genome is 35.2 % and the genome length is 4.06 Mbp.

Description of *Candidatus* Tumefula cotenimonia sp. nov.

Candidatus Tumefula cotenimonia (NL. fem. n. *cotenimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA966 sp002737585*. The type genome for the species is the GenBank assembly GCA_002737585.1. The GC content of the type genome is 59.81 % and the genome length is 1.47 Mbp.

Description of *Candidatus* Tumefula gen. nov.

Candidatus Tumefula (NL. fem. n. *Tumefula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA966*. The type species for the genus is *Candidatus* Tumefula cotenimonia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SM1A02*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cenaciaceae.

Description of *Candidatus* Tumefula luceritica sp. nov.

Candidatus Tumefula luceritica (NL. fem. n. *luceritica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA966 sp002292895*. The type genome for the species is the GenBank assembly GCA_003669765.1. The GC content of the type genome is 60.15 % and the genome length is 1.14 Mbp.

Description of *Candidatus* Turibaria carecitia sp. nov.

Candidatus Turibaria carecitia (NL. fem. n. *carecitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG410 sp002361365*. The type genome for the species is the GenBank assembly GCA_002361365.1. The GC content of the type genome is 39.7 % and the genome length is 1.52 Mbp.

Description of *Candidatus* Turibaria gen. nov.

Candidatus Turibaria (NL. fem. n. *Turibaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RUG410*. The type species for the genus is *Candidatus* Turibaria carecitia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-239*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Catobosaceae.

Description of *Candidatus* Turibaria casigibula sp. nov.

Candidatus Turibaria casigibula (NL. fem. n. *casigibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG410 sp900313155*. The type genome for the species is the GenBank assembly GCA_900313155.1. The GC content of the type genome is 41.14 % and the genome length is 1.15 Mbp.

Description of *Candidatus* Turibaria depopitica sp. nov.

Candidatus Turibaria depopitica (NL. fem. n. *depopitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG410 sp902763905*. The type genome for the species is the GenBank assembly GCA_902803525.1. The GC content of the type genome is 40.88 % and the genome length is 1.46 Mbp.

Description of *Candidatus* Turibaria domigitoga sp. nov.

Candidatus Turibaria domigitoga (NL. fem. n. *domigitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG410 sp902796625*. The type genome for the species is the GenBank assembly GCA_902796625.1. The GC content of the type genome is 39.4 % and the genome length is 1.22 Mbp.

Description of *Candidatus* Turibaria hegumitio sp. nov.

Candidatus Turibaria hegumitio (NL. fem. n. *hegumitio* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG410 sp900320035*. The type genome for the species is the GenBank assembly GCA_902796765.1. The GC content of the type genome is 40.23 % and the genome length is 1.17 Mbp.

Description of *Candidatus* Turibaria loripitas sp. nov.

Candidatus Turibaria loripitas (NL. fem. n. *loripitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG410 sp900769705*. The type genome for the species is the GenBank assembly RS_GCF_900769705.1. The GC content of the type genome is 40.38 % and the genome length is 1.48 Mbp.

Description of *Candidatus* Turibaria mahemitoga sp. nov.

Candidatus Turibaria mahemitoga (NL. fem. n. *mahemitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG410 sp902763155*. The type genome for the species is the GenBank assembly GCA_902763155.1. The GC content of the type genome is 40.01 % and the genome length is 1.47 Mbp.

Description of *Candidatus* Turibaria navifibra sp. nov.

Candidatus Turibaria navifibra (NL. fem. n. *navifibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG410 sp900318605*. The type genome for the species is the GenBank assembly GCA_900318605.1. The GC content of the type genome is 39.46 % and the genome length is 1.23 Mbp.

Description of *Candidatus* Turibaria omnifimonia sp. nov.

Candidatus Turibaria omnifimonia (NL. fem. n. *omnifimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG410 sp902793695*. The type genome for the species is the GenBank assembly GCA_902793695.1. The GC content of the type genome is 42.74 % and the genome length is 1.55 Mbp.

Description of *Candidatus* Turibaria recogiforma sp. nov.

Candidatus Turibaria recogiforma (NL. fem. n. *recogiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG410 sp902788365*. The type genome for the species is the GenBank assembly GCA_902777665.1. The GC content of the type genome is 42.53 % and the genome length is 1.42 Mbp.

Description of *Candidatus* Turibaria reforitica sp. nov.

Candidatus Turibaria reforitica (NL. fem. n. *reforitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG410 sp900313185*. The type genome for the species is the GenBank assembly GCA_900313185.1. The GC content of the type genome is 38.33 % and the genome length is 1.3 Mbp.

Description of *Candidatus* Turibaria salubitura sp. nov.

Candidatus Turibaria salubitura (NL. fem. n. *salubitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG410 sp900553115*. The type genome for the species is the GenBank assembly GCA_900553115.1. The GC content of the type genome is 40.65 % and the genome length is 1.17 Mbp.

Description of *Candidatus* Turibaria vocametta sp. nov.

Candidatus Turibaria vocametta (NL. fem. n. *vocametta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG410 sp902795745*. The type genome for the species is the GenBank assembly GCA_902795745.1. The GC content of the type genome is 38.8 % and the genome length is 1.19 Mbp.

Description of *Candidatus* Turibella cosigetta sp. nov.

Candidatus Turibella cosigetta (NL. fem. n. *cosigetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA12472 sp003487265*. The type genome for the species is the GenBank assembly GCA_001788675.1. The GC content of the type genome is 43.27 % and the genome length is 0.85 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at 16ft depth; 0.1 micron filter at time point B".

Description of *Candidatus* Turibella gen. nov.

Candidatus Turibella (NL. fem. n. *Turibella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA12472*. The type species for the genus is *Candidatus* Turibella cosigetta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA12028*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Semimidaceae.

Description of *Candidatus* Turibia capabousia sp. nov.

Candidatus Turibia capabousia (NL. fem. n. *capabousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-115 sp004555855*. The type genome for the species is the GenBank assembly GCA_004555855.1. The GC content of the type genome is 49.85 % and the genome length is 1.88 Mbp.

Description of *Candidatus* Turibia gen. nov.

Candidatus Turibia (NL. fem. n. *Turibia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAG-115*. The type species for the genus is *Candidatus* Turibia capabousia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Turibia divoritio sp. nov.

Candidatus Turibia divoritio (NL. fem. n. *divoritio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-115 sp900768705*. The type genome for the species is the GenBank assembly RS_GCF_900768705.1. The GC content of the type genome is 46.39 % and the genome length is 2.24 Mbp.

Description of *Candidatus* Turibia excoritura sp. nov.

Candidatus Turibia excoritura (NL. fem. n. *excoritura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-115 sp900766795*. The type genome for the species is the GenBank assembly RS_GCF_900766795.1. The GC content of the type genome is 51.92 % and the genome length is 2.99 Mbp.

Description of *Candidatus* Turibia infucedo sp. nov.

Candidatus Turibia infucedo (NL. fem. n. *infucedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-115 sp900768125*. The type genome for the species is the GenBank assembly RS_GCF_900768125.1. The GC content of the type genome is 53.37 % and the genome length is 2.6 Mbp.

Description of *Candidatus* Turibia innoxivita sp. nov.

Candidatus Turibia innoxivita (NL. fem. n. *innoxivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-115 sp004555635*. The type genome for the species is the GenBank assembly GCA_004555635.1. The GC content of the type genome is 53.23 % and the genome length is 1.7 Mbp.

Description of *Candidatus* Turibia inredilega sp. nov.

Candidatus Turibia inredilega (NL. fem. n. *inredilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-115 sp002304735*. The type genome for the species is the GenBank assembly GCA_002304735.1. The GC content of the type genome is 49.26 % and the genome length is 1.87 Mbp.

Description of *Candidatus* Turibia loripitrix sp. nov.

Candidatus Turibia loripitrix (NL. fem. n. *loripitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-115 sp000432175*. The type genome for the species is the GenBank assembly GCA_000432175.1. The GC content of the type genome is 52.16 % and the genome length is 2.67 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "derived from human gut metagenome".

Description of *Candidatus* Turibia nosocedo sp. nov.

Candidatus Turibia nosocedo (NL. fem. n. *nosocedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-115 sp002425305*. The type genome for the species is the GenBank assembly GCA_002425305.1. The GC content of the type genome is 48.93 % and the genome length is 2.34 Mbp.

Description of *Candidatus* Turibia subucibula sp. nov.

Candidatus Turibia subucibula (NL. fem. n. *subucibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-115 sp002492075*. The type genome for the species is the GenBank assembly GCA_002492075.1. The GC content of the type genome is 49.16 % and the genome length is 2.29 Mbp.

Description of *Candidatus* Turibia tegimiforma sp. nov.

Candidatus Turibia tegimiforma (NL. fem. n. *tegimiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-115 sp004554555*. The type genome for the species is the GenBank assembly GCA_004554555.1. The GC content of the type genome is 50.73 % and the genome length is 2.02 Mbp.

Description of *Candidatus* Turibia venucessa sp. nov.

Candidatus Turibia venucessa (NL. fem. n. *venucessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-115 sp003516865*. The type genome for the species is the GenBank assembly RS_GCF_900754575.1. The GC content of the type genome is 48.72 % and the genome length is 2.08 Mbp.

Description of *Candidatus* Turibia videlugo sp. nov.

Candidatus Turibia videlugo (NL. fem. n. *videlugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-115 sp003507295*. The type genome for the species is the GenBank assembly GCA_003507295.1. The GC content of the type genome is 54.62 % and the genome length is 1.86 Mbp.

Description of *Candidatus* Turibia viginentia sp. nov.

Candidatus Turibia viginentia (NL. fem. n. *viginentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-115 sp003531585*. The type genome for the species is the GenBank assembly GCA_900539355.1. The GC content of the type genome is 52.78 % and the genome length is 2.8 Mbp.

Description of *Candidatus* Turibida detoribra sp. nov.

Candidatus Turibida detoribra (NL. fem. n. *detoribra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABWBH01 sp013360585*. The type genome for the species is the GenBank assembly GCA_013360585.1. The GC content of the type genome is 65.5 % and the genome length is 4.24 Mbp.

Description of *Candidatus* Turibida gen. nov.

Candidatus Turibida (NL. fem. n. *Turibida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABWBH01*. The type species for the genus is *Candidatus* Turibida detoribra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1845*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cacomariaceae.

Description of *Candidatus* Turicana resuletta sp. nov.

Candidatus Turicana resuletta (NL. fem. n. *resuletta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACDDA01 sp013817245*. The type genome for the species is the GenBank assembly GCA_013817245.1. The GC content of the type genome is 43.86 % and the genome length is 2.27 Mbp.

Description of *Candidatus* Turicana gen. nov.

Candidatus Turicana (NL. fem. n. *Turicana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACDDA01*. The type species for the genus is *Candidatus* Turicana resuletta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *HTCC5015*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Semiganaceae.

Description of *Candidatus* Turicaria didacedo sp. nov.

Candidatus Turicaria didacedo (NL. fem. n. *didacedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GWC2-36-17 sp000992345*. The type genome for the species is the GenBank assembly GCA_000991445.1. The GC content of the type genome is 37.31 % and the genome length is 0.68 Mbp. The isolation source for the NCBI BioSample

associated with the type genome is descibed as "aquifer sediment".

Description of *Candidatus* Turicaria gen. nov.

Candidatus Turicaria (NL. fem. n. *Turicaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GWC2-36-17*. The type species for the genus is *Candidatus* Turicaria didacedo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GWC2-36-17*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Turicariaceae.

Description of *Candidatus* Turicariaceae fam. nov.

Candidatus Turicariaceae (NL. fem. n. *Turicariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *GWC2-36-17.* The type genus for the taxon is *Candidatus* Turicaria .

According to the original version of GTDB R06-RS202, this family belongs to the order *GWC2-36-17*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Turicariales.

Description of *Candidatus* Turicariales ord. nov.

Candidatus Turicariales (NL. fem. n. *Turicariales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *GWC2-36-17.* The type genus for the taxon is *Candidatus* Turicaria .

According to the GTDB R06-RS202, this order belongs to the class *Paceibacteria*.

Description of *Candidatus* Turicia armifastra sp. nov.

Candidatus Turicia armifastra (NL. fem. n. *armifastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *TCS56 sp001577055*. The type genome for the species is the GenBank assembly GCA_001577055.1. The GC content of the type genome is 50.55 % and the genome length is 1.94 Mbp. The isolation source for the NCBI BioSample associated

with the type genome is descibed as "biofilm from deap sea brine pool".

Description of *Candidatus* Turicia gen. nov.

Candidatus Turicia (NL. fem. n. *Turicia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *TCS56*. The type species for the genus is *Candidatus* Turicia armifastra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *TCS56*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Turiciaceae.

Description of *Candidatus* Turiciaceae fam. nov.

Candidatus Turiciaceae (NL. fem. n. *Turiciaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *TCS56.* The type genus for the taxon is *Candidatus* Turicia .

According to GTDB R06-RS202, this family belongs to the order *Marinisomatales*.

Description of *Candidatus* Turicibacter derelilenta sp. nov.

Candidatus Turicibacter derelilenta (NL. fem. n. *derelilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Turicibacter sp001543345*. The type genome for the species is the GenBank assembly RS_GCF_001405075.1. The GC content of the type genome is 34.23 % and the genome length is 2.73 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "faeces".

Description of *Candidatus* Turicibacter dicimastra sp. nov.

Candidatus Turicibacter dicimastra (NL. fem. n. *dicimastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Turicibacter sp003486705*. The type genome for the species is the GenBank assembly GCA_003486705.1. The GC content of the type genome is 34.79 % and the genome length is 2.47 Mbp.

Description of *Candidatus* Turicibacter malivicella sp. nov.

Candidatus Turicibacter malivicella (NL. fem. n. *malivicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Turicibacter sp002493395*. The type genome for the species is the GenBank assembly GCA_002493395.1. The GC content of the type genome is 36.4 % and the genome length is 1.79 Mbp.

Description of *Candidatus* Turicibacter nubecentia sp. nov.

Candidatus Turicibacter nubecentia (NL. fem. n. *nubecentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Turicibacter sp002311155*. The type genome for the species is the GenBank assembly RS_GCF_009935875.1. The GC content of the type genome is 36.85 % and the genome length is 2.3 Mbp.

Description of *Candidatus* Turicida denigessa sp. nov.

Candidatus Turicida denigessa (NL. fem. n. *denigessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002772895 sp002772895*. The type genome for the species is the GenBank assembly GCA_002772895.1. The GC content of the type genome is 35.8 % and the genome length is 0.93 Mbp.

Description of *Candidatus* Turicida gen. nov.

Candidatus Turicida (NL. fem. n. *Turicida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-002772895*. The type species for the genus is *Candidatus* Turicida denigessa .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GCA-002772895*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Turicidaceae.

Description of *Candidatus* Turicidaceae fam. nov.

Candidatus Turicidaceae (NL. fem. n. *Turicidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *GCA-002772895.* The type genus for the taxon is *Candidatus* Turicida .

According to the original version of GTDB R06-RS202, this family belongs to the order *SG8-24*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Labecellales.

Description of *Candidatus* Turicimonas mahelugo sp. nov.

Candidatus Turicimonas mahelugo (NL. fem. n. *mahelugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Turicimonas sp900542195*. The type genome for the species is the GenBank assembly GCA_900542195.1. The GC content of the type genome is 44.35 % and the genome length is 2.69 Mbp.

Description of *Candidatus* Turicosa bipinentia sp. nov.

Candidatus Turicosa bipinentia (NL. fem. n. *bipinentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AC-51 sp005885035*. The type genome for the species is the GenBank assembly GCA_005883145.1. The GC content of the type genome is 68.57 % and the genome length is 2.44 Mbp.

Description of *Candidatus* Turicosa gen. nov.

Candidatus Turicosa (NL. fem. n. *Turicosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *AC-51*. The type species for the genus is *Candidatus* Turicosa bipinentia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *HRBIN12*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Navifellaceae.

Description of *Candidatus* Turicosa nubigitas sp. nov.

Candidatus Turicosa nubigitas (NL. fem. n. *nubigitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AC-51 sp005884925*. The type genome for the species is the GenBank assembly GCA_005884925.1. The GC content of the type genome is 68.58 % and the genome length is 2.7 Mbp.

Description of *Candidatus* Turicosa vepalifica sp. nov.

Candidatus Turicosa vepalifica (NL. fem. n. *vepalifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AC-51 sp005883885*. The type genome for the species is the GenBank assembly GCA_005883885.1. The GC content of the type genome is 68.97 % and the genome length is 2.26 Mbp.

Description of *Candidatus* Turicula adessimonas sp. nov.

Candidatus Turicula adessimonas (NL. fem. n. *adessimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-267 sp900551865*. The type genome for the species is the GenBank assembly GCA_900551865.1. The GC content of the type genome is 46.16 % and the genome length is 1.31 Mbp.

Description of *Candidatus* Turicula gen. nov.

Candidatus Turicula (NL. fem. n. *Turicula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAG-267*. The type species for the genus is *Candidatus* Turicula adessimonas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-239*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Catobosaceae.

Description of *Candidatus* Turicula figilitura sp. nov.

Candidatus Turicula figilitura (NL. fem. n. *figilitura* a species epithet created arbitrarily,

while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-267 sp001917135*. The type genome for the species is the GenBank assembly GCA_000434135.1. The GC content of the type genome is 46.91 % and the genome length is 1.72 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "derived from human gut metagenome".

Description of *Candidatus* Turicula inambilenta sp. nov.

Candidatus Turicula inambilenta (NL. fem. n. *inambilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-267 sp002353835*. The type genome for the species is the GenBank assembly GCA_002353835.1. The GC content of the type genome is 39.16 % and the genome length is 1.61 Mbp.

Description of *Candidatus* Turicula solipimonia sp. nov.

Candidatus Turicula solipimonia (NL. fem. n. *solipimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-267 sp902763185*. The type genome for the species is the GenBank assembly GCA_902763185.1. The GC content of the type genome is 39.6 % and the genome length is 1.58 Mbp.

Description of *Candidatus* Turifana vocifitio sp. nov.

Candidatus Turifana vocifitio (NL. fem. n. *vocifitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HyVt-337 sp011050235*. The type genome for the species is the GenBank assembly GCA_011050225.1. The GC content of the type genome is 63.71 % and the genome length is 3.76 Mbp.

Description of *Candidatus* Turifana gen. nov.

Candidatus Turifana (NL. fem. n. *Turifana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *HyVt-337*. The type species for the genus is *Candidatus* Turifana vocifitio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SM23-33*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Megalanaceae.

Description of *Candidatus* Turifaria cimitousia sp. nov.

Candidatus Turifaria cimitousia (NL. fem. n. *cimitousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *E44-bin89 sp013202615*. The type genome for the species is the GenBank assembly GCA_013202615.1. The GC content of the type genome is 53.74 % and the genome length is 1.34 Mbp.

Description of *Candidatus* Turifaria gen. nov.

Candidatus Turifaria (NL. fem. n. *Turifaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *E44-bin89*. The type species for the genus is *Candidatus* Turifaria cimitousia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *RBG-16-60-22*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Volunidaceae.

Description of *Candidatus* Turifaria cosigimonia sp. nov.

Candidatus Turifaria cosigimonia (NL. fem. n. *cosigimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *E44-bin89 sp004375725*. The type genome for the species is the GenBank assembly GCA_004375725.1. The GC content of the type genome is 53.92 % and the genome length is 1.22 Mbp.

Description of *Candidatus* Turifaria revulatio sp. nov.

Candidatus Turifaria revulatio (NL. fem. n. *revulatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *E44-bin89 sp011174815*. The type genome for the species is the GenBank assembly GCA_011174815.1. The GC content of the type genome is 53.95 % and the genome length is 1.57 Mbp.

Description of *Candidatus* Turifella fetifivita sp. nov.

Candidatus Turifella fetifivita (NL. fem. n. *fetifivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIUUT01 sp903902445*. The type genome for the species is the GenBank assembly GCA_903835355.1. The GC content of the type genome is 37.8 % and the genome length is 2.15 Mbp.

Description of *Candidatus* Turifella gen. nov.

Candidatus Turifella (NL. fem. n. *Turifella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIUUT01*. The type species for the genus is *Candidatus* Turifella fetifivita .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GWF2-35-9*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Refuliaceae.

Description of *Candidatus* Turifia tribrousia sp. nov.

Candidatus Turifia tribrousia (NL. fem. n. *tribrousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Ga0077523 sp001464695*. The type genome for the species is the GenBank assembly GCA_001464695.1. The GC content of the type genome is 65.88 % and the genome length is 4.7 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "dual media filters at the Ann Arbor; Michigan drinking water treatment plant".

Description of *Candidatus* Turifia gen. nov.

Candidatus Turifia (NL. fem. n. *Turifia* a name created arbitrarily, while preserving the

phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Ga0077523*. The type species for the genus is *Candidatus* Turifia tribrousia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *Ga0077523*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Turifiaceae.

Description of *Candidatus* Turifiaceae fam. nov.

Candidatus Turifiaceae (NL. fem. n. *Turifiaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *Ga0077523.* The type genus for the taxon is *Candidatus* Turifia .

According to GTDB R06-RS202, this family belongs to the order *Burkholderiales*.

Description of *Candidatus* Turifida artilentia sp. nov.

Candidatus Turifida artilentia (NL. fem. n. *artilentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8515 sp903821415*. The type genome for the species is the GenBank assembly GCA_903821415.1. The GC content of the type genome is 34.57 % and the genome length is 0.71 Mbp.

Description of *Candidatus* Turifida gen. nov.

Candidatus Turifida (NL. fem. n. *Turifida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA8515*. The type species for the genus is *Candidatus* Turifida artilentia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA9973*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Relaposaceae.

Description of *Candidatus* Turifida bimotitas sp. nov.

Candidatus Turifida bimotitas (NL. fem. n. *bimotitas* a species epithet created arbitrarily,

while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8515 sp903929735*. The type genome for the species is the GenBank assembly GCA_903929735.1. The GC content of the type genome is 31.57 % and the genome length is 0.76 Mbp.

Description of *Candidatus* Turifida coticitudo sp. nov.

Candidatus Turifida coticitudo (NL. fem. n. *coticitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8515 sp000505065*. The type genome for the species is the GenBank assembly GCA_003543255.1. The GC content of the type genome is 31.17 % and the genome length is 0.69 Mbp.

Description of *Candidatus* Turifida decatatio sp. nov.

Candidatus Turifida decatatio (NL. fem. n. *decatatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8515 sp003155695*. The type genome for the species is the GenBank assembly GCA_003155695.1. The GC content of the type genome is 37.48 % and the genome length is 0.77 Mbp.

Description of *Candidatus* Turifida demulicula sp. nov.

Candidatus Turifida demulicula (NL. fem. n. *demulicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8515 sp903834665*. The type genome for the species is the GenBank assembly GCA_903834665.1. The GC content of the type genome is 31.17 % and the genome length is 0.69 Mbp.

Description of *Candidatus* Turifida detotitica sp. nov.

Candidatus Turifida detotitica (NL. fem. n. *detotitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8515 sp903854645*. The type genome for the species is the GenBank assembly GCA_903854645.1. The GC content of the type genome is 35.1 % and the genome length is 0.66 Mbp.

Description of *Candidatus* Turifida detunax sp. nov.

Candidatus Turifida detunax (NL. fem. n. *detunax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8515 sp903862375*. The type genome for the species is the GenBank assembly GCA_903820225.1. The GC content of the type genome is 31.38 % and the genome length is 0.86 Mbp.

Description of *Candidatus* Turifida dupunifica sp. nov.

Candidatus Turifida dupunifica (NL. fem. n. *dupunifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8515 sp000990325*. The type genome for the species is the GenBank assembly GCA_003542455.1. The GC content of the type genome is 34.1 % and the genome length is 0.83 Mbp.

Description of *Candidatus* Turifida offirimonia sp. nov.

Candidatus Turifida offirimonia (NL. fem. n. *offirimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8515 sp903891365*. The type genome for the species is the GenBank assembly GCA_903891365.1. The GC content of the type genome is 37.82 % and the genome length is 0.53 Mbp.

Description of *Candidatus* Turifida regifatica sp. nov.

Candidatus Turifida regifatica (NL. fem. n. *regifatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8515 sp000991405*. The type genome for the species is the GenBank assembly GCA_000991405.1. The GC content of the type genome is 36.19 % and the genome length is 0.8 Mbp. The isolation source for the NCBI BioSample

associated with the type genome is descibed as "aquifer sediment".

Description of *Candidatus* Turifida saxifigena sp. nov.

Candidatus Turifida saxifigena (NL. fem. n. *saxifigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8515 sp903825265*. The type genome for the species is the GenBank assembly GCA_903825265.1. The GC content of the type genome is 31.15 % and the genome length is 0.52 Mbp.

Description of *Candidatus* Turifosa hemidago sp. nov.

Candidatus Turifosa hemidago (NL. fem. n. *hemidago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8248 sp002685755*. The type genome for the species is the GenBank assembly GCA_002685755.1. The GC content of the type genome is 60.1 % and the genome length is 2.43 Mbp.

Description of *Candidatus* Turifosa gen. nov.

Candidatus Turifosa (NL. fem. n. *Turifosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA8248*. The type species for the genus is *Candidatus* Turifosa hemidago .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA8248*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Turifosaceae.

Description of *Candidatus* Turifosaceae fam. nov.

Candidatus Turifosaceae (NL. fem. n. *Turifosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA8248.* The type genus for the taxon is *Candidatus* Turifosa .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA8248*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Turifosales.

Description of *Candidatus* Turifosales ord. nov.

Candidatus Turifosales (NL. fem. n. *Turifosales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA8248.* The type genus for the taxon is *Candidatus* Turifosa .

According to the original version of GTDB R06-RS202, this family belongs to the class *UBA8248*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Turifosae.

Description of *Candidatus* Turifosae class. nov.

Candidatus Turifosae (NL. fem. n. *c__Turifosae* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA8248.* The type genus for the taxon is *Candidatus* Turifosa .

According to GTDB R06-RS202, this class belongs to the phylum *Nitrospinota_A*.

Description of *Candidatus* Turifula cilotedo sp. nov.

Candidatus Turifula cilotedo (NL. fem. n. *cilotedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIPFQ01 sp903864395*. The type genome for the species is the GenBank assembly GCA_903864395.1. The GC content of the type genome is 45.4 % and the genome length is 1.33 Mbp.

Description of *Candidatus* Turifula gen. nov.

Candidatus Turifula (NL. fem. n. *Turifula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIPFQ01*. The type species for the genus is *Candidatus* Turifula cilotedo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SM23-39*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Levifiaceae.

Description of *Candidatus* Turifula omnimousia sp. nov.

Candidatus Turifula omnimousia (NL. fem. n. *omnimousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIPFQ01 sp013285585*. The type genome for the species is the GenBank assembly GCA_013285585.1. The GC content of the type genome is 48.18 % and the genome length is 1.14 Mbp.

Description of *Candidatus* Turilana aclasitio sp. nov.

Candidatus Turilana aclasitio (NL. fem. n. *aclasitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1100 sp002718935*. The type genome for the species is the GenBank assembly GCA_002718935.1. The GC content of the type genome is 57.62 % and the genome length is 1.92 Mbp.

Description of *Candidatus* Turilana gen. nov.

Candidatus Turilana (NL. fem. n. *Turilana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1100*. The type species for the genus is *Candidatus* Turilana aclasitio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1100*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Turilanaceae.

Description of *Candidatus* Turilanaceae fam. nov.

Candidatus Turilanaceae (NL. fem. n. *Turilanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA1100.* The type genus for the taxon is *Candidatus* Turilana .

According to GTDB R06-RS202, this family belongs to the order *Pedosphaerales*.

Description of *Candidatus* Turilana acrolibula sp. nov.

Candidatus Turilana acrolibula (NL. fem. n. *acrolibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1100 sp002719595*. The type genome for the species is the GenBank assembly GCA_002719595.1. The GC content of the type genome is 46.15 % and the genome length is 1.96 Mbp.

Description of *Candidatus* Turilana citipatio sp. nov.

Candidatus Turilana citipatio (NL. fem. n. *citipatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1100 sp003509725*. The type genome for the species is the GenBank assembly GCA_002313555.1. The GC content of the type genome is 46.94 % and the genome length is 2.81 Mbp.

Description of *Candidatus* Turilana dececatio sp. nov.

Candidatus Turilana dececatio (NL. fem. n. *dececatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1100 sp002710335*. The type genome for the species is the GenBank assembly GCA_002710335.1. The GC content of the type genome is 45.55 % and the genome length is 1.67 Mbp.

Description of *Candidatus* Turilana demogitrix sp. nov.

Candidatus Turilana demogitrix (NL. fem. n. *demogitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1100 sp011523245*. The type genome for the species is the GenBank assembly GCA_011523245.1. The GC content of the type genome is 55.93 % and the genome length is 2.65 Mbp.

Description of *Candidatus* Turilana telegigena sp. nov.

Candidatus Turilana telegigena (NL. fem. n. *telegigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *UBA1100 sp902551155*. The type genome for the species is the GenBank assembly GCA_902551155.1. The GC content of the type genome is 46.24 % and the genome length is 1.71 Mbp.

Description of *Candidatus* Turilana uberretta sp. nov.

Candidatus Turilana uberretta (NL. fem. n. *uberretta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1100 sp003517285*. The type genome for the species is the GenBank assembly GCA_003517285.1. The GC content of the type genome is 55.85 % and the genome length is 2.36 Mbp.

Description of *Candidatus* Turilaria ecfunicula sp. nov.

Candidatus Turilaria ecfunicula (NL. fem. n. *ecfunicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8349 sp003501375*. The type genome for the species is the GenBank assembly GCA_003501375.1. The GC content of the type genome is 51.99 % and the genome length is 2.99 Mbp.

Description of *Candidatus* Turilaria gen. nov.

Candidatus Turilaria (NL. fem. n. *Turilaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA8349*. The type species for the genus is *Candidatus* Turilaria ecfunicula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA8349*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Turilariaceae.

Description of *Candidatus* Turilariaceae fam. nov.

Candidatus Turilariaceae (NL. fem. n. *Turilariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA8349.* The type genus for the taxon is *Candidatus* Turilaria .

According to the original version of GTDB R06-RS202, this family belongs to the order

UBA8349. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Turilariales.

Description of *Candidatus* Turilariales ord. nov.

Candidatus Turilariales (NL. fem. n. *Turilariales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA8349.* The type genus for the taxon is *Candidatus* Turilaria .

According to the GTDB R06-RS202, this order belongs to the class *Sumerlaeia*.

Description of *Candidatus* Turilella insurisca sp. nov.

Candidatus Turilella insurisca (NL. fem. n. *insurisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *YA12-FULL-48-11 sp001804885*. The type genome for the species is the GenBank assembly GCA_001804885.1. The GC content of the type genome is 48.01 % and the genome length is 5.68 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at 16ft depth; 1.2 micron filter at time point A".

Description of *Candidatus* Turilella gen. nov.

Candidatus Turilella (NL. fem. n. *Turilella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *YA12-FULL-48-11*. The type species for the genus is *Candidatus* Turilella insurisca .

According to the original version of GTDB R06-RS202, this genus belongs to the family *YA12-FULL-48-11*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Turilellaceae.

Description of *Candidatus* Turilellaceae fam. nov.

Candidatus Turilellaceae (NL. fem. n. *Turilellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *YA12-FULL-48-11.* The type genus for the taxon is *Candidatus* Turilella

.

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA8416*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Depupellales.

Description of *Candidatus* Turilia biparitica sp. nov.

Candidatus Turilia biparitica (NL. fem. n. *biparitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA668 sp009702045*. The type genome for the species is the GenBank assembly GCA_009702045.1. The GC content of the type genome is 65.86 % and the genome length is 3.65 Mbp.

Description of *Candidatus* Turilia gen. nov.

Candidatus Turilia (NL. fem. n. *Turilia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA668*. The type species for the genus is *Candidatus* Turilia biparitica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Turilia fatifitica sp. nov.

Candidatus Turilia fatifitica (NL. fem. n. *fatifitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA668 sp005778215*. The type genome for the species is the GenBank assembly GCA_005778215.1. The GC content of the type genome is 69.41 % and the genome length is 3.5 Mbp.

Description of *Candidatus* Turilia maxumugo sp. nov.

Candidatus Turilia maxumugo (NL. fem. n. *maxumugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA668 sp903919215*. The type genome for the species is the

GenBank assembly GCA_903919215.1. The GC content of the type genome is 66.08 % and the genome length is 3.59 Mbp.

Description of *Candidatus* Turilia oblanilenta sp. nov.

Candidatus Turilia oblanilenta (NL. fem. n. *oblanilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA668 sp002299395*. The type genome for the species is the GenBank assembly GCA_002299395.1. The GC content of the type genome is 68.51 % and the genome length is 3.35 Mbp.

Description of *Candidatus* Turilia pomifitrix sp. nov.

Candidatus Turilia pomifitrix (NL. fem. n. *pomifitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA668 sp003154135*. The type genome for the species is the GenBank assembly GCA_003154135.1. The GC content of the type genome is 69.46 % and the genome length is 3.52 Mbp.

Description of *Candidatus* Turilia semiventia sp. nov.

Candidatus Turilia semiventia (NL. fem. n. *semiventia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA668 sp903919455*. The type genome for the species is the GenBank assembly GCA_903919455.1. The GC content of the type genome is 65.88 % and the genome length is 3.55 Mbp.

Description of *Candidatus* Turilida rubecitia sp. nov.

Candidatus Turilida rubecitia (NL. fem. n. *rubecitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SCAELEC01 sp004282745*. The type genome for the species is the GenBank assembly GCA_004282745.1. The GC content of the type genome is 41.07 % and the genome length is 4.59 Mbp.

Description of *Candidatus* Turilida gen. nov.

Candidatus Turilida (NL. fem. n. *Turilida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SCAELEC01*. The type species for the genus is *Candidatus* Turilida rubecitia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Turilosa depeticella sp. nov.

Candidatus Turilosa depeticella (NL. fem. n. *depeticella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *XYD2-FULL-41-8 sp001771545*. The type genome for the species is the GenBank assembly GCA_001771545.1. The GC content of the type genome is 41.59 % and the genome length is 1.79 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at 16ft depth; 0.2 micron filter at time point B".

Description of *Candidatus* Turilosa gen. nov.

Candidatus Turilosa (NL. fem. n. *Turilosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *XYD2-FULL-41-8*. The type species for the genus is *Candidatus* Turilosa depeticella .

According to the original version of GTDB R06-RS202, this genus belongs to the family *O2-12-FULL-45-9*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Fuligariaceae.

Description of *Candidatus* Turilula cicaticula sp. nov.

Candidatus Turilula cicaticula (NL. fem. n. *cicaticula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIJLM01 sp900299305*. The type genome for the species is the GenBank assembly GCA_900299305.1. The GC content of the type genome is 52.57 % and the genome length is 4.47 Mbp.

Description of *Candidatus* Turilula gen. nov.

Candidatus Turilula (NL. fem. n. *Turilula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIJLM01*. The type species for the genus is *Candidatus* Turilula cicaticula .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Turilula maxililenta sp. nov.

Candidatus Turilula maxililenta (NL. fem. n. *maxililenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIJLM01 sp903821495*. The type genome for the species is the GenBank assembly GCA_903821495.1. The GC content of the type genome is 55.24 % and the genome length is 5.37 Mbp.

Description of *Candidatus* Uberrana actaritrix sp. nov.

Candidatus Uberrana actaritrix (NL. fem. n. *actaritrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABDBV01 sp013288395*. The type genome for the species is the GenBank assembly GCA_013288395.1. The GC content of the type genome is 41.44 % and the genome length is 1.33 Mbp.

Description of *Candidatus* Uberrana gen. nov.

Candidatus Uberrana (NL. fem. n. *Uberrana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABDBV01*. The type species for the genus is *Candidatus* Uberrana actaritrix .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DSM-16500*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Monopellaceae.

Description of *Candidatus* Uberraria navifax sp. nov.

Candidatus Uberraria navifax (NL. fem. n. *navifax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYBR01 sp012730045*. The type genome for the species is the GenBank assembly GCA_012730045.1. The GC content of the type genome is 68.27 % and the genome length is 4.46 Mbp.

Description of *Candidatus* Uberraria gen. nov.

Candidatus Uberraria (NL. fem. n. *Uberraria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAYBR01*. The type species for the genus is *Candidatus* Uberraria navifax .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAITNO01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Fatilulaceae.

Description of *Candidatus* Uberrella ellipigena sp. nov.

Candidatus Uberrella ellipigena (NL. fem. n. *ellipigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AM-0621 sp900299185*. The type genome for the species is the GenBank assembly GCA_900299185.1. The GC content of the type genome is 56.53 % and the genome length is 7.87 Mbp.

Description of *Candidatus* Uberrella gen. nov.

Candidatus Uberrella (NL. fem. n. *Uberrella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *AM-0621*. The type species for the genus is *Candidatus* Uberrella ellipigena .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Uberrida exsatugo sp. nov.

Candidatus Uberrida exsatugo (NL. fem. n. *exsatugo* a species epithet created arbitrarily,

while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYSV01 sp012518215*. The type genome for the species is the GenBank assembly GCA_012518215.1. The GC content of the type genome is 50.41 % and the genome length is 2.14 Mbp.

Description of *Candidatus* Uberrida gen. nov.

Candidatus Uberrida (NL. fem. n. *Uberrida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAYSV01*. The type species for the genus is *Candidatus* Uberrida exsatugo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *PWGO01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Xenodiaceae.

Description of *Candidatus* Uberrula abascitica sp. nov.

Candidatus Uberrula abascitica (NL. fem. n. *abascitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTZC01 sp012961565*. The type genome for the species is the GenBank assembly GCA_012961565.1. The GC content of the type genome is 50.35 % and the genome length is 1.45 Mbp.

Description of *Candidatus* Uberrula gen. nov.

Candidatus Uberrula (NL. fem. n. *Uberrula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DTZC01*. The type species for the genus is *Candidatus* Uberrula abascitica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA5620*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Semaposaceae.

Description of *Candidatus* Udaeobacter abambimonia sp. nov.

Candidatus Udaeobacter abambimonia (NL. fem. n. *abambimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Udaeobacter sp013372845*. The type genome for the species is the GenBank assembly GCA_013372845.1. The GC content of the type genome is 55.16 % and the genome length is 3.22 Mbp.

Description of *Candidatus* Udaeobacter adpicitudo sp. nov.

Candidatus Udaeobacter adpicitudo (NL. fem. n. *adpicitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Udaeobacter sp003219435*. The type genome for the species is the GenBank assembly GCA_003219435.1. The GC content of the type genome is 55.19 % and the genome length is 2.73 Mbp.

Description of *Candidatus* Udaeobacter ceromimonia sp. nov.

Candidatus Udaeobacter ceromimonia (NL. fem. n. *ceromimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Udaeobacter sp003218885*. The type genome for the species is the GenBank assembly GCA_003221275.1. The GC content of the type genome is 55.29 % and the genome length is 1.99 Mbp.

Description of *Candidatus* Udaeobacter cicilugo sp. nov.

Candidatus Udaeobacter cicilugo (NL. fem. n. *cicilugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Udaeobacter sp003218535*. The type genome for the species is the GenBank assembly GCA_003218535.1. The GC content of the type genome is 54.5 % and the genome length is 2.69 Mbp.

Description of *Candidatus* Udaeobacter cimelitas sp. nov.

Candidatus Udaeobacter cimelitas (NL. fem. n. *cimelitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Udaeobacter sp003218815*. The type genome for the species is the GenBank assembly GCA_003218605.1. The GC content of the type genome is 54.53 % and the genome length is 1.88 Mbp.

Description of *Candidatus* Udaeobacter cnestentia sp. nov.

Candidatus Udaeobacter cnestentia (NL. fem. n. *cnestentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Udaeobacter sp003219465*. The type genome for the species is the GenBank assembly GCA_003219465.1. The GC content of the type genome is 55.2 % and the genome length is 4.19 Mbp.

Description of *Candidatus* Udaeobacter colepilenta sp. nov.

Candidatus Udaeobacter colepilenta (NL. fem. n. *colepilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Udaeobacter sp003221375*. The type genome for the species is the GenBank assembly GCA_003219035.1. The GC content of the type genome is 54.19 % and the genome length is 2.94 Mbp.

Description of *Candidatus* Udaeobacter coninibra sp. nov.

Candidatus Udaeobacter coninibra (NL. fem. n. *coninibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Udaeobacter sp003219005*. The type genome for the species is the GenBank assembly GCA_003218575.1. The GC content of the type genome is 55.1 % and the genome length is 2.11 Mbp.

Description of *Candidatus* Udaeobacter curabitio sp. nov.

Candidatus Udaeobacter curabitio (NL. fem. n. *curabitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Udaeobacter sp003221195*. The type genome for the species is the GenBank assembly GCA_003221195.1. The GC content of the type genome is 54.34 %

and the genome length is 3.1 Mbp.

Description of *Candidatus* Udaeobacter dehonago sp. nov.

Candidatus Udaeobacter dehonago (NL. fem. n. *dehonago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Udaeobacter sp003219945*. The type genome for the species is the GenBank assembly GCA_003219945.1. The GC content of the type genome is 54.92 % and the genome length is 2.24 Mbp.

Description of *Candidatus* Udaeobacter denicatica sp. nov.

Candidatus Udaeobacter denicatica (NL. fem. n. *denicatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Udaeobacter sp003217895*. The type genome for the species is the GenBank assembly GCA_003219725.1. The GC content of the type genome is 54.97 % and the genome length is 1.97 Mbp.

Description of *Candidatus* Udaeobacter divolibra sp. nov.

Candidatus Udaeobacter divolibra (NL. fem. n. *divolibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Udaeobacter sp003218735*. The type genome for the species is the GenBank assembly GCA_003218735.1. The GC content of the type genome is 54.5 % and the genome length is 1.49 Mbp.

Description of *Candidatus* Udaeobacter futativita sp. nov.

Candidatus Udaeobacter futativita (NL. fem. n. *futativita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Udaeobacter sp005887825*. The type genome for the species is the GenBank assembly GCA_005887825.1. The GC content of the type genome is 55.03 % and the genome length is 3.06 Mbp.

Description of *Candidatus* Udaeobacter hemiditio sp. nov.

Candidatus Udaeobacter hemiditio (NL. fem. n. *hemiditio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Udaeobacter sp003219695*. The type genome for the species is the GenBank assembly GCA_003219695.1. The GC content of the type genome is 55.64 % and the genome length is 3.14 Mbp.

Description of *Candidatus* Udaeobacter ignobitoga sp. nov.

Candidatus Udaeobacter ignobitoga (NL. fem. n. *ignobitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Udaeobacter sp003217835*. The type genome for the species is the GenBank assembly GCA_003217835.1. The GC content of the type genome is 54.57 % and the genome length is 1.75 Mbp.

Description of *Candidatus* Udaeobacter lanugitudo sp. nov.

Candidatus Udaeobacter lanugitudo (NL. fem. n. *lanugitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Udaeobacter sp003219355*. The type genome for the species is the GenBank assembly GCA_003219355.1. The GC content of the type genome is 54.5 % and the genome length is 2.23 Mbp.

Description of *Candidatus* Udaeobacter lapicousia sp. nov.

Candidatus Udaeobacter lapicousia (NL. fem. n. *lapicousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Udaeobacter sp003218345*. The type genome for the species is the GenBank assembly GCA_003218345.1. The GC content of the type genome is 54.51 % and the genome length is 2.39 Mbp.

Description of *Candidatus* Udaeobacter locupibra sp. nov.

Candidatus Udaeobacter locupibra (NL. fem. n. *locupibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Udaeobacter sp003218615*. The type genome for the species is the GenBank assembly GCA_003218615.1. The GC content of the type genome is 55.25 % and the genome length is 2.29 Mbp.

Description of *Candidatus* Udaeobacter manupitas sp. nov.

Candidatus Udaeobacter manupitas (NL. fem. n. *manupitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Udaeobacter sp003218755*. The type genome for the species is the GenBank assembly GCA_003218755.1. The GC content of the type genome is 54.87 % and the genome length is 2.63 Mbp.

Description of *Candidatus* Udaeobacter modifitas sp. nov.

Candidatus Udaeobacter modifitas (NL. fem. n. *modifitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Udaeobacter sp003218945*. The type genome for the species is the GenBank assembly GCA_003218945.1. The GC content of the type genome is 55.0 % and the genome length is 2.8 Mbp.

Description of *Candidatus* Udaeobacter nocumago sp. nov.

Candidatus Udaeobacter nocumago (NL. fem. n. *nocumago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Udaeobacter sp003218265*. The type genome for the species is the GenBank assembly GCA_003218265.1. The GC content of the type genome is 55.02 % and the genome length is 2.25 Mbp.

Description of *Candidatus* Udaeobacter perexousia sp. nov.

Candidatus Udaeobacter perexousia (NL. fem. n. *perexousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Udaeobacter sp003218915*. The type genome for the species is the GenBank assembly GCA_003218915.1. The GC content of the type genome is 54.62 %

and the genome length is 2.91 Mbp.

Description of *Candidatus* Udaeobacter purulitura sp. nov.

Candidatus Udaeobacter purulitura (NL. fem. n. *purulitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Udaeobacter sp003218135*. The type genome for the species is the GenBank assembly GCA_003218175.1. The GC content of the type genome is 54.86 % and the genome length is 2.82 Mbp.

Description of *Candidatus* Udaeobacter refocitio sp. nov.

Candidatus Udaeobacter refocitio (NL. fem. n. *refocitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Udaeobacter sp005887855*. The type genome for the species is the GenBank assembly GCA_005887855.1. The GC content of the type genome is 55.14 % and the genome length is 3.13 Mbp.

Description of *Candidatus* Udaeobacter reforibra sp. nov.

Candidatus Udaeobacter reforibra (NL. fem. n. *reforibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Udaeobacter sp003218415*. The type genome for the species is the GenBank assembly GCA_003218415.1. The GC content of the type genome is 55.25 % and the genome length is 2.05 Mbp.

Description of *Candidatus* Udaeobacter resulibula sp. nov.

Candidatus Udaeobacter resulibula (NL. fem. n. *resulibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Udaeobacter sp003220005*. The type genome for the species is the GenBank assembly GCA_003220005.1. The GC content of the type genome is 54.95 % and the genome length is 2.53 Mbp.

Description of *Candidatus* Udaeobacter resurastra sp. nov.

Candidatus Udaeobacter resurastra (NL. fem. n. *resurastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Udaeobacter sp003218975*. The type genome for the species is the GenBank assembly GCA_003218875.1. The GC content of the type genome is 55.1 % and the genome length is 3.08 Mbp.

Description of *Candidatus* Udaeobacter rorulifica sp. nov.

Candidatus Udaeobacter rorulifica (NL. fem. n. *rorulifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Udaeobacter sp003218475*. The type genome for the species is the GenBank assembly GCA_003218475.1. The GC content of the type genome is 54.77 % and the genome length is 3.16 Mbp.

Description of *Candidatus* Udaeobacter rurigifica sp. nov.

Candidatus Udaeobacter rurigifica (NL. fem. n. *rurigifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Udaeobacter sp003218395*. The type genome for the species is the GenBank assembly GCA_003218395.1. The GC content of the type genome is 54.86 % and the genome length is 2.95 Mbp.

Description of *Candidatus* Udaeobacter sacomatio sp. nov.

Candidatus Udaeobacter sacomatio (NL. fem. n. *sacomatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Udaeobacter sp003218785*. The type genome for the species is the GenBank assembly GCA_003218495.1. The GC content of the type genome is 54.8 % and the genome length is 2.55 Mbp.

Description of *Candidatus* Udaeobacter sarabigena sp. nov.

Candidatus Udaeobacter sarabigena (NL. fem. n. *sarabigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Udaeobacter sp003219335*. The type genome for the species is the GenBank assembly GCA_003219335.1. The GC content of the type genome is 55.02 % and the genome length is 3.71 Mbp.

Description of *Candidatus* Udaeobacter satacentia sp. nov.

Candidatus Udaeobacter satacentia (NL. fem. n. *satacentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Udaeobacter sp003219415*. The type genome for the species is the GenBank assembly GCA_001914875.1. The GC content of the type genome is 54.17 % and the genome length is 1.52 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Soil sample from Angelo meadow plot 2; 20cm depth; 2 days after second rain event (91mm)".

Description of *Candidatus* Udaeobacter sugilago sp. nov.

Candidatus Udaeobacter sugilago (NL. fem. n. *sugilago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Udaeobacter sp003217875*. The type genome for the species is the GenBank assembly GCA_003218255.1. The GC content of the type genome is 54.61 % and the genome length is 2.82 Mbp.

Description of *Candidatus* Udaeobacter vinacimonia sp. nov.

Candidatus Udaeobacter vinacimonia (NL. fem. n. *vinacimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Udaeobacter sp003219395*. The type genome for the species is the GenBank assembly GCA_003219395.1. The GC content of the type genome is 54.46 % and the genome length is 2.82 Mbp.

Description of *Candidatus* Ulcisana abnepessa sp. nov.

Candidatus Ulcisana abnepessa (NL. fem. n. *abnepessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *UBA4658 sp002405485*. The type genome for the species is the GenBank assembly GCA_002405485.1. The GC content of the type genome is 66.83 % and the genome length is 3.92 Mbp.

Description of *Candidatus* Ulcisana gen. nov.

Candidatus Ulcisana (NL. fem. n. *Ulcisana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA4658*. The type species for the genus is *Candidatus* Ulcisana abnepessa .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SM1A02*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cenaciaceae.

Description of *Candidatus* Ulcisaria bipatentia sp. nov.

Candidatus Ulcisaria bipatentia (NL. fem. n. *bipatentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RBG-13-39-12 sp001805125*. The type genome for the species is the GenBank assembly GCA_001805125.1. The GC content of the type genome is 39.49 % and the genome length is 2.93 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle background sediment; well D04 at 13ft depth".

Description of *Candidatus* Ulcisaria gen. nov.

Candidatus Ulcisaria (NL. fem. n. *Ulcisaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RBG-13-39-12*. The type species for the genus is *Candidatus* Ulcisaria bipatentia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SM23-35*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Peridulaceae.

Description of *Candidatus* Ulcisella aggesimonia sp. nov.

Candidatus Ulcisella aggesimonia (NL. fem. n. *aggesimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABSQH01 sp013213745*. The type genome for the species is the GenBank assembly GCA_013213745.1. The GC content of the type genome is 64.95 % and the genome length is 3.54 Mbp.

Description of *Candidatus* Ulcisella gen. nov.

Candidatus Ulcisella (NL. fem. n. *Ulcisella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABSQH01*. The type species for the genus is *Candidatus* Ulcisella aggesimonia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Ulcisia inmititrix sp. nov.

Candidatus Ulcisia inmititrix (NL. fem. n. *inmititrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA710 sp002298905*. The type genome for the species is the GenBank assembly GCA_002298905.1. The GC content of the type genome is 23.14 % and the genome length is 0.65 Mbp.

Description of *Candidatus* Ulcisia gen. nov.

Candidatus Ulcisia (NL. fem. n. *Ulcisia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA710*. The type species for the genus is *Candidatus* Ulcisia inmititrix .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Ulcisosa adsecibula sp. nov.

Candidatus Ulcisosa adsecibula (NL. fem. n. *adsecibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYBZ01 sp012744445*. The type genome for the species is the GenBank assembly GCA_012744445.1. The GC content of the type genome is 70.4 % and the genome length is 3.77 Mbp.

Description of *Candidatus* Ulcisosa gen. nov.

Candidatus Ulcisosa (NL. fem. n. *Ulcisosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAYBZ01*. The type species for the genus is *Candidatus* Ulcisosa adsecibula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SG8-38*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Benivosaceae.

Description of *Candidatus* Ulcisosa inlecitas sp. nov.

Candidatus Ulcisosa inlecitas (NL. fem. n. *inlecitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYBZ01 sp012514415*. The type genome for the species is the GenBank assembly GCA_012514415.1. The GC content of the type genome is 61.9 % and the genome length is 3.28 Mbp.

Description of *Candidatus* Ulcisula inmolilega sp. nov.

Candidatus Ulcisula inmolilega (NL. fem. n. *inmolilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JN-9 sp004103695*. The type genome for the species is the GenBank assembly RS_GCF_004103695.1. The GC content of the type genome is 32.26 % and the genome length is 3.22 Mbp.

Description of *Candidatus* Ulcisula gen. nov.

Candidatus Ulcisula (NL. fem. n. *Ulcisula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JN-9*. The type species for the genus is *Candidatus* Ulcisula inmolilega .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Uliginosibacterium pepenibra sp. nov.

Candidatus Uliginosibacterium pepenibra (NL. fem. n. *pepenibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Uliginosibacterium sp002307175*. The type genome for the species is the GenBank assembly GCA_002307175.1. The GC content of the type genome is 58.46 % and the genome length is 5.49 Mbp.

Description of *Candidatus* Uliginosibacterium sonabousia sp. nov.

Candidatus Uliginosibacterium sonabousia (NL. fem. n. *sonabousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Uliginosibacterium sp002855595*. The type genome for the species is the GenBank assembly RS_GCF_012972705.2. The GC content of the type genome is 62.38 % and the genome length is 4.09 Mbp.

Description of *Candidatus* Ulvibacter admigilega sp. nov.

Candidatus Ulvibacter admigilega (NL. fem. n. *admigilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ulvibacter_B sp009014635*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_009014635.1. The GC content of the type genome is 33.39 % and the genome length is 3.34 Mbp.

Description of *Candidatus* Ulvibacter carunessa sp. nov.

Candidatus Ulvibacter carunessa (NL. fem. n. *carunessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ulvibacter_B sp000170815*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The

type genome for the species is the GenBank assembly GCA_000170815.1. The GC content of the type genome is 34.04 % and the genome length is 3.21 Mbp.

Description of *Candidatus* Ulvibacter exculilenta sp. nov.

Candidatus Ulvibacter exculilenta (NL. fem. n. *exculilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ulvibacter_B sp003450155*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003450155.1. The GC content of the type genome is 36.66 % and the genome length is 1.86 Mbp.

Description of *Candidatus* Umbilana peropedo sp. nov.

Candidatus Umbilana peropedo (NL. fem. n. *peropedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WS-8 sp005893295*. The type genome for the species is the GenBank assembly GCA_005893295.1. The GC content of the type genome is 68.66 % and the genome length is 3.04 Mbp.

Description of *Candidatus* Umbilana gen. nov.

Candidatus Umbilana (NL. fem. n. *Umbilana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WS-8*. The type species for the genus is *Candidatus* Umbilana peropedo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *RBG-16-71-46*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Sonabidaceae.

Description of *Candidatus* Umbilaria exsanedo sp. nov.

Candidatus Umbilaria exsanedo (NL. fem. n. *exsanedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *SZUA-540 sp009731355*. The type genome for the species is the GenBank assembly RS_GCF_009731355.1. The GC content of the type genome is 56.43 % and the genome length is 3.27 Mbp.

Description of *Candidatus* Umbilaria gen. nov.

Candidatus Umbilaria (NL. fem. n. *Umbilaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SZUA-540*. The type species for the genus is *Candidatus* Umbilaria exsanedo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Umbilaria subofibula sp. nov.

Candidatus Umbilaria subofibula (NL. fem. n. *subofibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SZUA-540 sp003250235*. The type genome for the species is the GenBank assembly GCA_003250235.1. The GC content of the type genome is 57.64 % and the genome length is 2.99 Mbp.

Description of *Candidatus* Umbilida octupimonas sp. nov.

Candidatus Umbilida octupimonas (NL. fem. n. *octupimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5757 sp002418965*. The type genome for the species is the GenBank assembly GCA_002418965.1. The GC content of the type genome is 43.77 % and the genome length is 1.94 Mbp.

Description of *Candidatus* Umbilida gen. nov.

Candidatus Umbilida (NL. fem. n. *Umbilida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA5757*. The type species for the genus is *Candidatus* Umbilida octupimonas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA4068*. According to the renamed version of GTDB R06-RS202, this taxon belongs to

the family *Candidatus* Divulosaceae.

Description of *Candidatus* Umbilosa adnaritas sp. nov.

Candidatus Umbilosa adnaritas (NL. fem. n. *adnaritas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DSSC01 sp011331305*. The type genome for the species is the GenBank assembly GCA_011331305.1. The GC content of the type genome is 67.7 % and the genome length is 1.82 Mbp.

Description of *Candidatus* Umbilosa gen. nov.

Candidatus Umbilosa (NL. fem. n. *Umbilosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DSSC01*. The type species for the genus is *Candidatus* Umbilosa adnaritas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *PHET01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Pavimulaceae.

Description of *Candidatus* Umbilula refulessa sp. nov.

Candidatus Umbilula refulessa (NL. fem. n. *refulessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HyVt-448 sp011051615*. The type genome for the species is the GenBank assembly GCA_011051615.1. The GC content of the type genome is 61.38 % and the genome length is 2.68 Mbp.

Description of *Candidatus* Umbilula gen. nov.

Candidatus Umbilula (NL. fem. n. *Umbilula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *HyVt-448*. The type species for the genus is *Candidatus* Umbilula refulessa .

According to the original version of GTDB R06-RS202, this genus belongs to the family

UBA6429. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Volubosaceae.

Description of *Candidatus* Umboniibacter metapicella sp. nov.

Candidatus Umboniibacter metapicella (NL. fem. n. *metapicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Umboniibacter sp013372965*. The type genome for the species is the GenBank assembly GCA_013372965.1. The GC content of the type genome is 49.97 % and the genome length is 2.11 Mbp.

Description of *Candidatus* Undevana denunetta sp. nov.

Candidatus Undevana denunetta (NL. fem. n. *denunetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2746365 sp013138755*. The type genome for the species is the GenBank assembly GCA_013138755.1. The GC content of the type genome is 43.13 % and the genome length is 2.15 Mbp.

Description of *Candidatus* Undevana gen. nov.

Candidatus Undevana (NL. fem. n. *Undevana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2746365*. The type species for the genus is *Candidatus* Undevana denunetta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SZUA-229*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Carunanaceae.

Description of *Candidatus* Undevana encomago sp. nov.

Candidatus Undevana encomago (NL. fem. n. *encomago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2746365 sp011321985*. The type genome for the species is the

GenBank assembly GCA_011321985.1. The GC content of the type genome is 47.4 % and the genome length is 2.74 Mbp.

Description of *Candidatus* Undevana leviditrix sp. nov.

Candidatus Undevana leviditrix (NL. fem. n. *leviditrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2746365 sp013041745*. The type genome for the species is the GenBank assembly GCA_013041745.1. The GC content of the type genome is 48.42 % and the genome length is 2.97 Mbp.

Description of *Candidatus* Undevana loripatio sp. nov.

Candidatus Undevana loripatio (NL. fem. n. *loripatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2746365 sp002401185*. The type genome for the species is the GenBank assembly GCA_002401185.1. The GC content of the type genome is 42.44 % and the genome length is 1.54 Mbp.

Description of *Candidatus* Undevana mahelessa sp. nov.

Candidatus Undevana mahelessa (NL. fem. n. *mahelessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2746365 sp011051475*. The type genome for the species is the GenBank assembly GCA_011051475.1. The GC content of the type genome is 54.69 % and the genome length is 2.24 Mbp.

Description of *Candidatus* Undevana nosocitrix sp. nov.

Candidatus Undevana nosocitrix (NL. fem. n. *nosocitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2746365 sp002746365*. The type genome for the species is the GenBank assembly GCA_002746365.1. The GC content of the type genome is 42.28 % and the genome length is 3.41 Mbp.

Description of *Candidatus* Undevella rubefetta sp. nov.

Candidatus Undevella rubefetta (NL. fem. n. *rubefetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *KS4 sp007747445*. The type genome for the species is the GenBank assembly RS_GCF_007747445.1. The GC content of the type genome is 48.75 % and the genome length is 4.29 Mbp.

Description of *Candidatus* Undevella gen. nov.

Candidatus Undevella (NL. fem. n. *Undevella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *KS4*. The type species for the genus is *Candidatus* Undevella rubefetta .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Undevida exindatio sp. nov.

Candidatus Undevida exindatio (NL. fem. n. *exindatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HyVt-539 sp011321845*. The type genome for the species is the GenBank assembly GCA_011321845.1. The GC content of the type genome is 60.74 % and the genome length is 4.16 Mbp.

Description of *Candidatus* Undevida gen. nov.

Candidatus Undevida (NL. fem. n. *Undevida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *HyVt-539*. The type species for the genus is *Candidatus* Undevida exindatio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GCA-002748355*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Holisiaceae.

Description of *Candidatus* Undevosa inguricula sp. nov.

Candidatus Undevosa inguricula (NL. fem. n. *inguricula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DUPA01 sp012838515*. The type genome for the species is the GenBank assembly GCA_012838515.1. The GC content of the type genome is 41.1 % and the genome length is 2.16 Mbp.

Description of *Candidatus* Undevosa gen. nov.

Candidatus Undevosa (NL. fem. n. *Undevosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DUPA01*. The type species for the genus is *Candidatus* Undevosa inguricula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DTU010*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Ducilidaceae.

Description of *Candidatus* Undevula loripitudo sp. nov.

Candidatus Undevula loripitudo (NL. fem. n. *loripitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PXTQ01 sp003022505*. The type genome for the species is the GenBank assembly GCA_003022505.1. The GC content of the type genome is 63.64 % and the genome length is 1.55 Mbp.

Description of *Candidatus* Undevula gen. nov.

Candidatus Undevula (NL. fem. n. *Undevula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PXTQ01*. The type species for the genus is *Candidatus* Undevula loripitudo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Undibacterium arnacitas sp. nov.

Candidatus Undibacterium arnacitas (NL. fem. n. *arnacitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Undibacterium sp014284235*. The type genome for the species is the GenBank assembly RS_GCF_014284235.1. The GC content of the type genome is 51.85 % and the genome length is 4.25 Mbp.

Description of *Candidatus* Undibacterium bicinifica sp. nov.

Candidatus Undibacterium bicinifica (NL. fem. n. *bicinifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Undibacterium sp014284115*. The type genome for the species is the GenBank assembly RS_GCF_014284155.1. The GC content of the type genome is 46.92 % and the genome length is 4.38 Mbp.

Description of *Candidatus* Undibacterium cinefitio sp. nov.

Candidatus Undibacterium cinefitio (NL. fem. n. *cinefitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Undibacterium sp014284195*. The type genome for the species is the GenBank assembly RS_GCF_014284195.1. The GC content of the type genome is 53.33 % and the genome length is 3.61 Mbp.

Description of *Candidatus* Undibacterium conubilega sp. nov.

Candidatus Undibacterium conubilega (NL. fem. n. *conubilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Undibacterium sp014284265*. The type genome for the species is the GenBank assembly RS_GCF_014284265.1. The GC content of the type genome is 49.85 % and the genome length is 3.98 Mbp.

Description of *Candidatus* Undibacterium demagimonas sp. nov.

Candidatus Undibacterium demagimonas (NL. fem. n. *demagimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Undibacterium sp014284335*. The type genome for the species is the GenBank assembly RS_GCF_014284335.1. The GC content of the type genome is 51.55

% and the genome length is 6.28 Mbp.

Description of *Candidatus* Undibacterium domicimonas sp. nov.

Candidatus Undibacterium domicimonas (NL. fem. n. *domicimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Undibacterium sp014284365*. The type genome for the species is the GenBank assembly RS_GCF_014284365.1. The GC content of the type genome is 51.66 % and the genome length is 4.07 Mbp.

Description of *Candidatus* Undibacterium indidatio sp. nov.

Candidatus Undibacterium indidatio (NL. fem. n. *indidatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Undibacterium sp013287275*. The type genome for the species is the GenBank assembly GCA_013287275.1. The GC content of the type genome is 56.68 % and the genome length is 3.22 Mbp.

Description of *Candidatus* Undibacterium inhonitura sp. nov.

Candidatus Undibacterium inhonitura (NL. fem. n. *inhonitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Undibacterium sp009937975*. The type genome for the species is the GenBank assembly RS_GCF_009937975.1. The GC content of the type genome is 51.2 % and the genome length is 6.66 Mbp.

Description of *Candidatus* Undibacterium inmemicula sp. nov.

Candidatus Undibacterium inmemicula (NL. fem. n. *inmemicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Undibacterium sp014284175*. The type genome for the species is the GenBank assembly RS_GCF_014284175.1. The GC content of the type genome is 45.88 % and the genome length is 5.17 Mbp.

Description of *Candidatus* Undibacterium irrefedo sp. nov.

Candidatus Undibacterium irrefedo (NL. fem. n. *irrefedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Undibacterium sp010078235*. The type genome for the species is the GenBank assembly RS_GCF_010078235.1. The GC content of the type genome is 51.68 % and the genome length is 4.31 Mbp.

Description of *Candidatus* Undibacterium irrefigena sp. nov.

Candidatus Undibacterium irrefigena (NL. fem. n. *irrefigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Undibacterium sp009937955*. The type genome for the species is the GenBank assembly RS_GCF_009937955.1. The GC content of the type genome is 50.98 % and the genome length is 6.69 Mbp.

Description of *Candidatus* Undibacterium milipentia sp. nov.

Candidatus Undibacterium milipentia (NL. fem. n. *milipentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Undibacterium sp002482715*. The type genome for the species is the GenBank assembly GCA_002482715.1. The GC content of the type genome is 45.41 % and the genome length is 4.02 Mbp.

Description of *Candidatus* Undibacterium progrisca sp. nov.

Candidatus Undibacterium progrisca (NL. fem. n. *progrisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Undibacterium sp014284125*. The type genome for the species is the GenBank assembly RS_GCF_014284125.1. The GC content of the type genome is 50.43 % and the genome length is 6.46 Mbp.

Description of *Candidatus* Undibacterium semunedo sp. nov.

Candidatus Undibacterium semunedo (NL. fem. n. *semunedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Undibacterium sp014376575*. The type genome for the species is the GenBank assembly GCA_014376575.1. The GC content of the type genome is 46.37 % and the genome length is 1.98 Mbp.

Description of *Candidatus* Unetvaria arancilenta sp. nov.

Candidatus Unetvaria arancilenta (NL. fem. n. *arancilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *B1SED10-173 sp003551865*. The type genome for the species is the GenBank assembly GCA_003551865.1. The GC content of the type genome is 51.47 % and the genome length is 2.1 Mbp.

Description of *Candidatus* Unetvaria gen. nov.

Candidatus Unetvaria (NL. fem. n. *Unetvaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *B1SED10-173*. The type species for the genus is *Candidatus* Unetvaria arancilenta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DTU022*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Depelidaceae.

Description of *Candidatus* Unetvella derecibra sp. nov.

Candidatus Unetvella derecibra (NL. fem. n. *derecibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PWHG01 sp003554785*. The type genome for the species is the GenBank assembly GCA_003554785.1. The GC content of the type genome is 35.05 % and the genome length is 0.91 Mbp.

Description of *Candidatus* Unetvella gen. nov.

Candidatus Unetvella (NL. fem. n. *Unetvella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this genus is *PWHG01*. The type species for the genus is *Candidatus* Unetvella derecibra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA12465*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Manomosaceae.

Description of *Candidatus* Unetvia inexcitoga sp. nov.

Candidatus Unetvia inexcitoga (NL. fem. n. *inexcitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HGM12669 sp900761935*. The type genome for the species is the GenBank assembly RS_GCF_900761935.1. The GC content of the type genome is 46.36 % and the genome length is 1.96 Mbp.

Description of *Candidatus* Unetvia gen. nov.

Candidatus Unetvia (NL. fem. n. *Unetvia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *HGM12669*. The type species for the genus is *Candidatus* Unetvia inexcitoga .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-272*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Colipariaceae.

Description of *Candidatus* Unetvida camililega sp. nov.

Candidatus Unetvida camililega (NL. fem. n. *camililega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAADGP01 sp013152315*. The type genome for the species is the GenBank assembly GCA_013152315.1. The GC content of the type genome is 48.34 % and the genome length is 2.08 Mbp.

Description of *Candidatus* Unetvida gen. nov.

Candidatus Unetvida (NL. fem. n. *Unetvida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAADGP01*. The type species for the genus is *Candidatus* Unetvida camililega .

According to the original version of GTDB R06-RS202, this genus belongs to the family *J089*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Subabiaceae.

Description of *Candidatus* Unetvosa obnunifica sp. nov.

Candidatus Unetvosa obnunifica (NL. fem. n. *obnunifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WN38 sp003185655*. The type genome for the species is the GenBank assembly RS_GCF_003185655.1. The GC content of the type genome is 54.69 % and the genome length is 3.57 Mbp.

Description of *Candidatus* Unetvosa gen. nov.

Candidatus Unetvosa (NL. fem. n. *Unetvosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WN38*. The type species for the genus is *Candidatus* Unetvosa obnunifica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DSM-45221*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Celamiaceae.

Description of *Candidatus* Unetvosa omnivessa sp. nov.

Candidatus Unetvosa omnivessa (NL. fem. n. *omnivessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WN38 sp003566795*. The type genome for the species is the GenBank assembly GCA_003566795.1. The GC content of the type genome is 56.41 % and the genome length is 3.1 Mbp.

Description of *Candidatus* Unetvula binocitura sp. nov.

Candidatus Unetvula binocitura (NL. fem. n. *binocitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAFJH01 sp013298875*. The type genome for the species is the GenBank assembly GCA_013298875.1. The GC content of the type genome is 32.65 % and the genome length is 2.15 Mbp.

Description of *Candidatus* Unetvula gen. nov.

Candidatus Unetvula (NL. fem. n. *Unetvula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAFJH01*. The type species for the genus is *Candidatus* Unetvula binocitura .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Urbicana inmolifica sp. nov.

Candidatus Urbicana inmolifica (NL. fem. n. *inmolifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5203 sp002412765*. The type genome for the species is the GenBank assembly GCA_002412765.1. The GC content of the type genome is 46.47 % and the genome length is 4.45 Mbp.

Description of *Candidatus* Urbicana gen. nov.

Candidatus Urbicana (NL. fem. n. *Urbicana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA5203*. The type species for the genus is *Candidatus* Urbicana inmolifica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Urbicella ruricilenta sp. nov.

Candidatus Urbicella ruricilenta (NL. fem. n. *ruricilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DUPU01 sp012838175*. The type genome for the species is the GenBank assembly GCA_012838175.1. The GC content of the type genome is 42.09 % and the genome length is 2.41 Mbp.

Description of *Candidatus* Urbicella gen. nov.

Candidatus Urbicella (NL. fem. n. *Urbicella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DUPU01*. The type species for the genus is *Candidatus* Urbicella ruricilenta .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Urbicia diponibula sp. nov.

Candidatus Urbicia diponibula (NL. fem. n. *diponibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *TH-plancto1 sp003669575*. The type genome for the species is the GenBank assembly GCA_003669575.1. The GC content of the type genome is 58.47 % and the genome length is 3.94 Mbp.

Description of *Candidatus* Urbicia gen. nov.

Candidatus Urbicia (NL. fem. n. *Urbicia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *TH-plancto1*. The type species for the genus is *Candidatus* Urbicia diponibula .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Urbicia innulitrix sp. nov.

Candidatus Urbicia innulitrix (NL. fem. n. *innulitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *TH-plancto1 sp003671275*. The type genome for the species is the GenBank assembly GCA_003671275.1. The GC content of the type genome is 59.46 %

and the genome length is 5.03 Mbp.

Description of *Candidatus* Urbicida abveritudo sp. nov.

Candidatus Urbicida abveritudo (NL. fem. n. *abveritudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MHLB01 sp001818895*. The type genome for the species is the GenBank assembly GCA_001818895.1. The GC content of the type genome is 52.47 % and the genome length is 0.78 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under low O2 conditions; 0.1 micron filter; full assembly".

Description of *Candidatus* Urbicida gen. nov.

Candidatus Urbicida (NL. fem. n. *Urbicida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *MHLB01*. The type species for the genus is *Candidatus* Urbicida abveritudo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *2-01-FULL-56-20*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Socagosaceae.

Description of *Candidatus* Urbicula abrepicella sp. nov.

Candidatus Urbicula abrepicella (NL. fem. n. *abrepicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AWTP1-18 sp003963315*. The type genome for the species is the GenBank assembly GCA_003963315.1. The GC content of the type genome is 61.11 % and the genome length is 3.77 Mbp.

Description of *Candidatus* Urbicula gen. nov.

Candidatus Urbicula (NL. fem. n. *Urbicula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *AWTP1-18*. The type species for the genus is *Candidatus* Urbicula abrepicella .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Ureaplasma citocivita sp. nov.

Candidatus Ureaplasma citocivita (NL. fem. n. *citocivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ureaplasma sp900544585*. The type genome for the species is the GenBank assembly RS_GCF_900772055.1. The GC content of the type genome is 28.27 % and the genome length is 0.55 Mbp.

Description of *Candidatus* Urechidicola adsenax sp. nov.

Candidatus Urechidicola adsenax (NL. fem. n. *adsenax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Urechidicola sp001874265*. The type genome for the species is the GenBank assembly GCA_001874265.1. The GC content of the type genome is 33.46 % and the genome length is 2.7 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Mediterranean seawater enriched with a specific particulate matter".

Description of *Candidatus* Urechidicola obmutigena sp. nov.

Candidatus Urechidicola obmutigena (NL. fem. n. *obmutigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Urechidicola sp002401215*. The type genome for the species is the GenBank assembly GCA_002401215.1. The GC content of the type genome is 33.54 % and the genome length is 2.1 Mbp.

Description of *Candidatus* Urechidicola sicubedo sp. nov.

Candidatus Urechidicola sicubedo (NL. fem. n. *sicubedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Urechidicola sp002733665*. The type genome for the species is the GenBank assembly GCA_002733665.1. The GC content of the type genome is 31.5 % and the genome length is 2.71 Mbp.

Description of *Candidatus* Ureibacillus effosentia sp. nov.

Candidatus Ureibacillus effosentia (NL. fem. n. *effosentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ureibacillus sp012735355*. The type genome for the species is the GenBank assembly GCA_012735355.1. The GC content of the type genome is 36.2 % and the genome length is 2.79 Mbp.

Description of *Candidatus* Ureibacillus subabatica sp. nov.

Candidatus Ureibacillus subabatica (NL. fem. n. *subabatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Ureibacillus sp005491425*. The type genome for the species is the GenBank assembly RS_GCF_005491425.1. The GC content of the type genome is 36.68 % and the genome length is 4.14 Mbp.

Description of *Candidatus* Urinicoccus depicago sp. nov.

Candidatus Urinicoccus depicago (NL. fem. n. *depicago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Urinicoccus sp000221565*. The type genome for the species is the GenBank assembly RS_GCF_000221565.1. The GC content of the type genome is 41.39 % and the genome length is 1.95 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "biological product [ENVO:02000043]".

Description of *Candidatus* Urinicoccus perabedo sp. nov.

Candidatus Urinicoccus perabedo (NL. fem. n. *perabedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Urinicoccus sp001299455*. The type genome for the species is the GenBank assembly RS_GCF_001299455.1. The GC content of the type genome is 42.72 % and the genome length is 1.76 Mbp.

Description of *Candidatus* Utillana voragicella sp. nov.

Candidatus Utillana voragicella (NL. fem. n. *voragicella* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7707 sp002482435*. The type genome for the species is the GenBank assembly GCA_002482435.1. The GC content of the type genome is 53.73 % and the genome length is 2.07 Mbp.

Description of *Candidatus* Utillana gen. nov.

Candidatus Utillana (NL. fem. n. *Utillana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA7707*. The type species for the genus is *Candidatus* Utillana voragicella .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-138*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Selecellaceae.

Description of *Candidatus* Utillaria ficeditia sp. nov.

Candidatus Utillaria ficeditia (NL. fem. n. *ficeditia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DUNJ01 sp012518955*. The type genome for the species is the GenBank assembly GCA_012518955.1. The GC content of the type genome is 33.09 % and the genome length is 1.91 Mbp.

Description of *Candidatus* Utillaria gen. nov.

Candidatus Utillaria (NL. fem. n. *Utillaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DUNJ01*. The type species for the genus is *Candidatus* Utillaria ficeditia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Utillaria inlibilega sp. nov.

Candidatus Utillaria inlibilega (NL. fem. n. *inlibilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DUNJ01 sp012518745*. The type genome for the species is the GenBank assembly GCA_012518745.1. The GC content of the type genome is 40.93 % and the genome length is 1.56 Mbp.

Description of *Candidatus* Utillaria peropimonas sp. nov.

Candidatus Utillaria peropimonas (NL. fem. n. *peropimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DUNJ01 sp012839395*. The type genome for the species is the GenBank assembly GCA_012839395.1. The GC content of the type genome is 37.91 % and the genome length is 1.86 Mbp.

Description of *Candidatus* Utillella exsuficula sp. nov.

Candidatus Utillella exsuficula (NL. fem. n. *exsuficula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DSVM01 sp011368405*. The type genome for the species is the GenBank assembly GCA_011368405.1. The GC content of the type genome is 63.15 % and the genome length is 2.68 Mbp.

Description of *Candidatus* Utillella gen. nov.

Candidatus Utillella (NL. fem. n. *Utillella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DSVM01*. The type species for the genus is *Candidatus* Utillella exsuficula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *RBG-16-64-13*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Demululaceae.

Description of *Candidatus* Utillida reteciforma sp. nov.

Candidatus Utillida reteciforma (NL. fem. n. *reteciforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYAY01 sp012719125*. The type genome for the species is the GenBank assembly GCA_012719125.1. The GC content of the type genome is 61.57 % and the genome length is 10.65 Mbp.

Description of *Candidatus* Utillida gen. nov.

Candidatus Utillida (NL. fem. n. *Utillida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAYAY01*. The type species for the genus is *Candidatus* Utillida reteciforma .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Utillosa artocibula sp. nov.

Candidatus Utillosa artocibula (NL. fem. n. *artocibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIYVX01 sp903929765*. The type genome for the species is the GenBank assembly GCA_903929765.1. The GC content of the type genome is 62.58 % and the genome length is 3.83 Mbp.

Description of *Candidatus* Utillosa gen. nov.

Candidatus Utillosa (NL. fem. n. *Utillosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIYVX01*. The type species for the genus is *Candidatus* Utillosa artocibula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JAACEH01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cenotiaceae.

Description of *Candidatus* Utpotana bicorastra sp. nov.

Candidatus Utpotana bicorastra (NL. fem. n. *bicorastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAAOZ01 sp009908585*. The type genome for the species is the GenBank assembly GCA_009908585.1. The GC content of the type genome is 58.17 % and the genome length is 2.67 Mbp.

Description of *Candidatus* Utpotana gen. nov.

Candidatus Utpotana (NL. fem. n. *Utpotana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAAOZ01*. The type species for the genus is *Candidatus* Utpotana bicorastra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SLSP01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Decamosaceae.

Description of *Candidatus* Utpotaria perabatio sp. nov.

Candidatus Utpotaria perabatio (NL. fem. n. *perabatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *F1-80-MAGs062 sp005809115*. The type genome for the species is the GenBank assembly GCA_005809115.1. The GC content of the type genome is 60.88 % and the genome length is 5.09 Mbp.

Description of *Candidatus* Utpotaria gen. nov.

Candidatus Utpotaria (NL. fem. n. *Utpotaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *F1-80-MAGs062*. The type species for the genus is *Candidatus* Utpotaria perabatio .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Utpotella cucurilenta sp. nov.

Candidatus Utpotella cucurilenta (NL. fem. n. *cucurilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *SZUA-124 sp003230965*. The type genome for the species is the GenBank assembly GCA_003230965.1. The GC content of the type genome is 35.65 % and the genome length is 0.69 Mbp.

Description of *Candidatus* Utpotella gen. nov.

Candidatus Utpotella (NL. fem. n. *Utpotella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SZUA-124*. The type species for the genus is *Candidatus* Utpotella cucurilenta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA922*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cilibidaceae.

Description of *Candidatus* Utpotida occumago sp. nov.

Candidatus Utpotida occumago (NL. fem. n. *occumago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SIO2C1 sp010672925*. The type genome for the species is the GenBank assembly GCA_010672925.1. The GC content of the type genome is 42.77 % and the genome length is 8.67 Mbp.

Description of *Candidatus* Utpotida gen. nov.

Candidatus Utpotida (NL. fem. n. *Utpotida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SIO2C1*. The type species for the genus is *Candidatus* Utpotida occumago .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Utpotida sicunifica sp. nov.

Candidatus Utpotida sicunifica (NL. fem. n. *sicunifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SIO2C1 sp010692635*. The type genome for the species is the

GenBank assembly GCA_010692635.1. The GC content of the type genome is 42.7 % and the genome length is 8.17 Mbp.

Description of *Candidatus* Utpotula coninitoga sp. nov.

Candidatus Utpotula coninitoga (NL. fem. n. *coninitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002733465 sp002401655*. The type genome for the species is the GenBank assembly GCA_002401655.1. The GC content of the type genome is 36.87 % and the genome length is 2.95 Mbp.

Description of *Candidatus* Utpotula gen. nov.

Candidatus Utpotula (NL. fem. n. *Utpotula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-002733465*. The type species for the genus is *Candidatus* Utpotula coninitoga .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Utpotula inlecatica sp. nov.

Candidatus Utpotula inlecatica (NL. fem. n. *inlecatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002733465 sp002733465*. The type genome for the species is the GenBank assembly GCA_002733465.1. The GC content of the type genome is 36.77 % and the genome length is 4.25 Mbp.

Description of *Candidatus* Utputana adnilisca sp. nov.

Candidatus Utputana adnilisca (NL. fem. n. *adnilisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAADCO01 sp013154385*. The type genome for the species is the GenBank assembly GCA_013154385.1. The GC content of the type genome is 61.53 % and the genome length is 1.31 Mbp.

Description of *Candidatus* Utputana gen. nov.

Candidatus Utputana (NL. fem. n. *Utputana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAADCO01*. The type species for the genus is *Candidatus* Utputana adnilisca .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Utputaria recucago sp. nov.

Candidatus Utputaria recucago (NL. fem. n. *recucago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GWA1-44-24 sp001001115*. The type genome for the species is the GenBank assembly GCA_001001115.1. The GC content of the type genome is 41.81 % and the genome length is 0.46 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "aquifer sediment".

Description of *Candidatus* Utputaria gen. nov.

Candidatus Utputaria (NL. fem. n. *Utputaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GWA1-44-24*. The type species for the genus is *Candidatus* Utputaria recucago .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA9933*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Capilanaceae.

Description of *Candidatus* Utputella cicilastra sp. nov.

Candidatus Utputella cicilastra (NL. fem. n. *cicilastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACNLL01 sp014381545*. The type genome for the species is the GenBank assembly GCA_014381545.1. The GC content of the type genome is 42.11 % and the genome length is 2.07 Mbp.

Description of *Candidatus* Utputella gen. nov.

Candidatus Utputella (NL. fem. n. *Utputella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACNLL01*. The type species for the genus is *Candidatus* Utputella cicilastra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *ETH-SRB1*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Benevulaceae.

Description of *Candidatus* Utputella susicilega sp. nov.

Candidatus Utputella susicilega (NL. fem. n. *susicilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACNLL01 sp013202725*. The type genome for the species is the GenBank assembly GCA_013202725.1. The GC content of the type genome is 42.21 % and the genome length is 1.58 Mbp.

Description of *Candidatus* Utputida abligicella sp. nov.

Candidatus Utputida abligicella (NL. fem. n. *abligicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABEUN01 sp013044385*. The type genome for the species is the GenBank assembly GCA_013044385.1. The GC content of the type genome is 55.05 % and the genome length is 2.82 Mbp.

Description of *Candidatus* Utputida gen. nov.

Candidatus Utputida (NL. fem. n. *Utputida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABEUN01*. The type species for the genus is *Candidatus* Utputida abligicella .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Utputida indecetta sp. nov.

Candidatus Utputida indecetta (NL. fem. n. *indecetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABEUN01 sp013044415*. The type genome for the species is the GenBank assembly GCA_013044415.1. The GC content of the type genome is 53.28 % and the genome length is 2.14 Mbp.

Description of *Candidatus* Utputida pavicatica sp. nov.

Candidatus Utputida pavicatica (NL. fem. n. *pavicatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABEUN01 sp013044475*. The type genome for the species is the GenBank assembly GCA_013044475.1. The GC content of the type genome is 52.93 % and the genome length is 2.38 Mbp.

Description of *Candidatus* Utputula pabiledo sp. nov.

Candidatus Utputula pabiledo (NL. fem. n. *pabiledo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-12-FULL-37-14 sp001804735*. The type genome for the species is the GenBank assembly GCA_001804735.1. The GC content of the type genome is 37.27 % and the genome length is 1.9 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 1.2 micron filter; full assembly".

Description of *Candidatus* Utputula gen. nov.

Candidatus Utputula (NL. fem. n. *Utputula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *2-12-FULL-37-14*. The type species for the genus is *Candidatus* Utputula pabiledo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Utralia octopibra sp. nov.

Candidatus Utralia octopibra (NL. fem. n. *octopibra* a species epithet created arbitrarily,

while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *NIOZ-UU35 sp014382605*. The type genome for the species is the GenBank assembly GCA_014382605.1. The GC content of the type genome is 52.5 % and the genome length is 3.66 Mbp.

Description of *Candidatus* Utralia gen. nov.

Candidatus Utralia (NL. fem. n. *Utralia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *NIOZ-UU35*. The type species for the genus is *Candidatus* Utralia octopibra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA11858*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Malifellaceae.

Description of *Candidatus* Utralida inmacifica sp. nov.

Candidatus Utralida inmacifica (NL. fem. n. *inmacifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WOUP01 sp009772895*. The type genome for the species is the GenBank assembly GCA_009772895.1. The GC content of the type genome is 62.32 % and the genome length is 4.1 Mbp.

Description of *Candidatus* Utralida gen. nov.

Candidatus Utralida (NL. fem. n. *Utralida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WOUP01*. The type species for the genus is *Candidatus* Utralida inmacifica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *Verruco-01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vitigidaceae.

Description of *Candidatus* Utralosa antipastra sp. nov.

Candidatus Utralosa antipastra (NL. fem. n. *antipastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DSAD01 sp011372875*. The type genome for the species is the GenBank assembly GCA_011372875.1. The GC content of the type genome is 49.09 % and the genome length is 2.79 Mbp.

Description of *Candidatus* Utralosa gen. nov.

Candidatus Utralosa (NL. fem. n. *Utralosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DSAD01*. The type species for the genus is *Candidatus* Utralosa antipastra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1062*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Hexapariaceae.

Description of *Candidatus* Utralula ecligessa sp. nov.

Candidatus Utralula ecligessa (NL. fem. n. *ecligessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SCN-57-10 sp001725215*. The type genome for the species is the GenBank assembly GCA_001725215.1. The GC content of the type genome is 56.71 % and the genome length is 1.74 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Thiocyanate bioreactor".

Description of *Candidatus* Utralula gen. nov.

Candidatus Utralula (NL. fem. n. *Utralula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SCN-57-10*. The type species for the genus is *Candidatus* Utralula ecligessa .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Utrarana asbesitas sp. nov.

Candidatus Utrarana asbesitas (NL. fem. n. *asbesitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5553 sp002425825*. The type genome for the species is the GenBank assembly GCA_002425825.1. The GC content of the type genome is 45.04 % and the genome length is 2.41 Mbp.

Description of *Candidatus* Utrarana gen. nov.

Candidatus Utrarana (NL. fem. n. *Utrarana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA5553*. The type species for the genus is *Candidatus* Utrarana asbesitas .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Utrarana indifousia sp. nov.

Candidatus Utrarana indifousia (NL. fem. n. *indifousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5553 sp002428685*. The type genome for the species is the GenBank assembly GCA_002428685.1. The GC content of the type genome is 44.37 % and the genome length is 2.71 Mbp.

Description of *Candidatus* Utrarana turifimonas sp. nov.

Candidatus Utrarana turifimonas (NL. fem. n. *turifimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5553 sp002840645*. The type genome for the species is the GenBank assembly GCA_002840645.1. The GC content of the type genome is 45.34 % and the genome length is 2.68 Mbp.

Description of *Candidatus* Utrarella pabilifica sp. nov.

Candidatus Utrarella pabilifica (NL. fem. n. *pabilifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DRVG01 sp011374125*. The type genome for the species is the GenBank assembly GCA_011374125.1. The GC content of the type genome is 51.67 % and the genome length is 2.78 Mbp.

Description of *Candidatus* Utrarella gen. nov.

Candidatus Utrarella (NL. fem. n. *Utrarella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DRVG01*. The type species for the genus is *Candidatus* Utrarella pabilifica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Utrarida resupimonas sp. nov.

Candidatus Utrarida resupimonas (NL. fem. n. *resupimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6092 sp002428565*. The type genome for the species is the GenBank assembly GCA_002428565.1. The GC content of the type genome is 60.23 % and the genome length is 4.15 Mbp.

Description of *Candidatus* Utrarida gen. nov.

Candidatus Utrarida (NL. fem. n. *Utrarida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA6092*. The type species for the genus is *Candidatus* Utrarida resupimonas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA4823*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Habacidaceae.

Description of *Candidatus* Utrarosa caravitas sp. nov.

Candidatus Utrarosa caravitas (NL. fem. n. *caravitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *BM521 sp002869205*. The type genome for the species is the GenBank assembly GCA_002869205.1. The GC content of the type genome is 39.17 % and the genome length is 1.06 Mbp.

Description of *Candidatus* Utrarosa gen. nov.

Candidatus Utrarosa (NL. fem. n. *Utrarosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *BM521*. The type species for the genus is *Candidatus* Utrarosa caravitas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA922*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cilibidaceae.

Description of *Candidatus* Utrarula atrusitrix sp. nov.

Candidatus Utrarula atrusitrix (NL. fem. n. *atrusitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *NSJ-38 sp014337195*. The type genome for the species is the GenBank assembly GCA_014337195.1. The GC content of the type genome is 49.22 % and the genome length is 3.08 Mbp.

Description of *Candidatus* Utrarula gen. nov.

Candidatus Utrarula (NL. fem. n. *Utrarula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *NSJ-38*. The type species for the genus is *Candidatus* Utrarula atrusitrix .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Utrarula buxifax sp. nov.

Candidatus Utrarula buxifax (NL. fem. n. *buxifax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *NSJ-38 sp902363445*. The type genome for the species is the GenBank assembly RS_GCF_902363445.1. The GC content of the type genome is 49.05 % and the genome length is 3.13 Mbp.

Description of *Candidatus* Utricana lanigitudo sp. nov.

Candidatus Utricana lanigitudo (NL. fem. n. *lanigitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4656 sp002405525*. The type genome for the species is the GenBank assembly GCA_002405525.1. The GC content of the type genome is 70.85 % and the genome length is 4.06 Mbp.

Description of *Candidatus* Utricana gen. nov.

Candidatus Utricana (NL. fem. n. *Utricana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA4656*. The type species for the genus is *Candidatus* Utricana lanigitudo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Utricaria incenibra sp. nov.

Candidatus Utricaria incenibra (NL. fem. n. *incenibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RPPU01 sp003819975*. The type genome for the species is the GenBank assembly GCA_003819975.1. The GC content of the type genome is 48.48 % and the genome length is 5.14 Mbp.

Description of *Candidatus* Utricaria gen. nov.

Candidatus Utricaria (NL. fem. n. *Utricaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RPPU01*. The type species for the genus is *Candidatus* Utricaria incenibra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *HGW-15*. According to the renamed version of GTDB R06-RS202, this taxon belongs to

the family *Candidatus* Dapifulaceae.

Description of *Candidatus* Utricella adtenilenta sp. nov.

Candidatus Utricella adtenilenta (NL. fem. n. *adtenilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Marseille-P3106 sp900169975*. The type genome for the species is the GenBank assembly RS_GCF_900169975.1. The GC content of the type genome is 58.19 % and the genome length is 3.12 Mbp.

Description of *Candidatus* Utricella gen. nov.

Candidatus Utricella (NL. fem. n. *Utricella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Marseille-P3106*. The type species for the genus is *Candidatus* Utricella adtenilenta .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Utricella epiclicella sp. nov.

Candidatus Utricella epiclicella (NL. fem. n. *epiclicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Marseille-P3106 sp900543935*. The type genome for the species is the GenBank assembly GCA_900543935.1. The GC content of the type genome is 62.98 % and the genome length is 2.68 Mbp.

Description of *Candidatus* Utricia direcitica sp. nov.

Candidatus Utricia direcitica (NL. fem. n. *direcitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYOP01 sp012523085*. The type genome for the species is the GenBank assembly GCA_012523085.1. The GC content of the type genome is 48.17 % and the genome length is 3.22 Mbp.

Description of *Candidatus* Utricia gen. nov.

Candidatus Utricia (NL. fem. n. *Utricia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAYOP01*. The type species for the genus is *Candidatus* Utricia direcitica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Utricia halucessa sp. nov.

Candidatus Utricia halucessa (NL. fem. n. *halucessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYOP01 sp012520295*. The type genome for the species is the GenBank assembly GCA_012520295.1. The GC content of the type genome is 46.59 % and the genome length is 2.57 Mbp.

Description of *Candidatus* Utricosa inmemitia sp. nov.

Candidatus Utricosa inmemitia (NL. fem. n. *inmemitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SZUA-580 sp003249585*. The type genome for the species is the GenBank assembly GCA_003249585.1. The GC content of the type genome is 62.82 % and the genome length is 3.36 Mbp.

Description of *Candidatus* Utricosa gen. nov.

Candidatus Utricosa (NL. fem. n. *Utricosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SZUA-580*. The type species for the genus is *Candidatus* Utricosa inmemitia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *HGW-17*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Curacellaceae.

Description of *Candidatus* Utricula caduritudo sp. nov.

Candidatus Utricula caduritudo (NL. fem. n. *caduritudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *FEN-1160 sp003142835*. The type genome for the species is the GenBank assembly GCA_003142835.1. The GC content of the type genome is 44.35 % and the genome length is 2.49 Mbp.

Description of *Candidatus* Utricula gen. nov.

Candidatus Utricula (NL. fem. n. *Utricula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *FEN-1160*. The type species for the genus is *Candidatus* Utricula caduritudo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Utrinana cicatax sp. nov.

Candidatus Utrinana cicatax (NL. fem. n. *cicatax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-12-FULL-36-22 sp001771315*. The type genome for the species is the GenBank assembly GCA_001771315.1. The GC content of the type genome is 35.93 % and the genome length is 0.91 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 1.2 micron filter; full assembly".

Description of *Candidatus* Utrinana gen. nov.

Candidatus Utrinana (NL. fem. n. *Utrinana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *2-12-FULL-36-22*. The type species for the genus is *Candidatus* Utrinana cicatax .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA12409*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Demulanaceae.

Description of *Candidatus* Utrinaria oscilessa sp. nov.

Candidatus Utrinaria oscilessa (NL. fem. n. *oscilessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *E44-bin46 sp004376105*. The type genome for the species is the GenBank assembly GCA_004376105.1. The GC content of the type genome is 47.16 % and the genome length is 0.98 Mbp.

Description of *Candidatus* Utrinaria gen. nov.

Candidatus Utrinaria (NL. fem. n. *Utrinaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *E44-bin46*. The type species for the genus is *Candidatus* Utrinaria oscilessa .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA5760*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Holisellaceae.

Description of *Candidatus* Utrinella depacitia sp. nov.

Candidatus Utrinella depacitia (NL. fem. n. *depacitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA11986 sp003541875*. The type genome for the species is the GenBank assembly GCA_003541875.1. The GC content of the type genome is 52.08 % and the genome length is 2.65 Mbp.

Description of *Candidatus* Utrinella gen. nov.

Candidatus Utrinella (NL. fem. n. *Utrinella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA11986*. The type species for the genus is *Candidatus* Utrinella depacitia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA6906*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Culibellaceae.

Description of *Candidatus* Utrinia allibitoga sp. nov.

Candidatus Utrinia allibitoga (NL. fem. n. *allibitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DT-110 sp013214265*. The type genome for the species is the GenBank assembly GCA_013214265.1. The GC content of the type genome is 41.15 % and the genome length is 5.07 Mbp.

Description of *Candidatus* Utrinia gen. nov.

Candidatus Utrinia (NL. fem. n. *Utrinia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DT-110*. The type species for the genus is *Candidatus* Utrinia allibitoga .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Utrinosa scaccentia sp. nov.

Candidatus Utrinosa scaccentia (NL. fem. n. *scaccentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WQTY01 sp009786045*. The type genome for the species is the GenBank assembly GCA_009786045.1. The GC content of the type genome is 54.52 % and the genome length is 2.62 Mbp.

Description of *Candidatus* Utrinosa gen. nov.

Candidatus Utrinosa (NL. fem. n. *Utrinosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WQTY01*. The type species for the genus is *Candidatus* Utrinosa scaccentia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA4248*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Sicarulaceae.

Description of *Candidatus* Utrinula absegousia sp. nov.

Candidatus Utrinula absegousia (NL. fem. n. *absegousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DULF01 sp012840535*. The type genome for the species is the GenBank assembly GCA_012840535.1. The GC content of the type genome is 39.86 % and the genome length is 3.19 Mbp.

Description of *Candidatus* Utrinula gen. nov.

Candidatus Utrinula (NL. fem. n. *Utrinula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DULF01*. The type species for the genus is *Candidatus* Utrinula absegousia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DUMB01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Bacifiaceae.

Description of *Candidatus* Utrolana catalivita sp. nov.

Candidatus Utrolana catalivita (NL. fem. n. *catalivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SCRE01 sp004297935*. The type genome for the species is the GenBank assembly GCA_004297935.1. The GC content of the type genome is 65.18 % and the genome length is 3.95 Mbp.

Description of *Candidatus* Utrolana gen. nov.

Candidatus Utrolana (NL. fem. n. *Utrolana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SCRE01*. The type species for the genus is *Candidatus* Utrolana catalivita .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Utrolaria egrititoga sp. nov.

Candidatus Utrolaria egrititoga (NL. fem. n. *egrititoga* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYBG01 sp012718985*. The type genome for the species is the GenBank assembly GCA_012718985.1. The GC content of the type genome is 32.97 % and the genome length is 1.45 Mbp.

Description of *Candidatus* Utrolaria gen. nov.

Candidatus Utrolaria (NL. fem. n. *Utrolaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAYBG01*. The type species for the genus is *Candidatus* Utrolaria egrititoga .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-698*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Sataciaceae.

Description of *Candidatus* Utrolella adpacatio sp. nov.

Candidatus Utrolella adpacatio (NL. fem. n. *adpacatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CF-120 sp005881425*. The type genome for the species is the GenBank assembly GCA_005881425.1. The GC content of the type genome is 69.13 % and the genome length is 2.92 Mbp.

Description of *Candidatus* Utrolella gen. nov.

Candidatus Utrolella (NL. fem. n. *Utrolella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CF-120*. The type species for the genus is *Candidatus* Utrolella adpacatio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CF-121*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Haluculaceae.

Description of *Candidatus* Utrolia expasitio sp. nov.

Candidatus Utrolia expasitio (NL. fem. n. *expasitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *QYQL01 sp007280915*. The type genome for the species is the GenBank assembly GCA_007280915.1. The GC content of the type genome is 59.57 % and the genome length is 3.56 Mbp.

Description of *Candidatus* Utrolia gen. nov.

Candidatus Utrolia (NL. fem. n. *Utrolia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *QYQL01*. The type species for the genus is *Candidatus* Utrolia expasitio .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Utrolula dilecitia sp. nov.

Candidatus Utrolula dilecitia (NL. fem. n. *dilecitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DUAG01 sp012960925*. The type genome for the species is the GenBank assembly GCA_012960925.1. The GC content of the type genome is 49.85 % and the genome length is 2.37 Mbp.

Description of *Candidatus* Utrolula gen. nov.

Candidatus Utrolula (NL. fem. n. *Utrolula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DUAG01*. The type species for the genus is *Candidatus* Utrolula dilecitia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JAADHI01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Voragulaceae.

Description of *Candidatus* Uxorcaria ignositura sp. nov.

Candidatus Uxorcaria ignositura (NL. fem. n. *ignositura* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIWTU01 sp903915655*. The type genome for the species is the GenBank assembly GCA_903915655.1. The GC content of the type genome is 50.53 % and the genome length is 3.36 Mbp.

Description of *Candidatus* Uxorcaria gen. nov.

Candidatus Uxorcaria (NL. fem. n. *Uxorcaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIWTU01*. The type species for the genus is *Candidatus* Uxorcaria ignositura .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Uxorcella ammodilenta sp. nov.

Candidatus Uxorcella ammodilenta (NL. fem. n. *ammodilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1784 sp002315455*. The type genome for the species is the GenBank assembly GCA_002315455.1. The GC content of the type genome is 59.88 % and the genome length is 2.06 Mbp.

Description of *Candidatus* Uxorcella gen. nov.

Candidatus Uxorcella (NL. fem. n. *Uxorcella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1784*. The type species for the genus is *Candidatus* Uxorcella ammodilenta .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Uxorcella lenunilega sp. nov.

Candidatus Uxorcella lenunilega (NL. fem. n. *lenunilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1784 sp002314455*. The type genome for the species is the GenBank assembly GCA_002314455.1. The GC content of the type genome is 56.51 % and the genome length is 1.99 Mbp.

Description of *Candidatus* Uxorcella renavilega sp. nov.

Candidatus Uxorcella renavilega (NL. fem. n. *renavilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1784 sp902783135*. The type genome for the species is the GenBank assembly GCA_902783135.1. The GC content of the type genome is 61.92 % and the genome length is 2.64 Mbp.

Description of *Candidatus* Uxorcia repepago sp. nov.

Candidatus Uxorcia repepago (NL. fem. n. *repepago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-01-FULL-41-12 sp001805765*. The type genome for the species is the GenBank assembly GCA_001805765.1. The GC content of the type genome is 41.56 % and the genome length is 0.7 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under low O2 conditions; 0.1 micron filter; full assembly".

Description of *Candidatus* Uxorcia gen. nov.

Candidatus Uxorcia (NL. fem. n. *Uxorcia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *2-01-FULL-41-12*. The type species for the genus is *Candidatus* Uxorcia repepago .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA6249*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Refacosaceae.

Description of *Candidatus* Uxorcida colapastra sp. nov.

Candidatus Uxorcida colapastra (NL. fem. n. *colapastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *S120 sp011192075*. The type genome for the species is the GenBank assembly GCA_011192075.1. The GC content of the type genome is 46.62 % and the genome length is 1.7 Mbp.

Description of *Candidatus* Uxorcida gen. nov.

Candidatus Uxorcida (NL. fem. n. *Uxorcida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *S120*. The type species for the genus is *Candidatus* Uxorcida colapastra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA5760*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Holisellaceae.

Description of *Candidatus* Uxorcosa penicitio sp. nov.

Candidatus Uxorcosa penicitio (NL. fem. n. *penicitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RGMU01 sp010021705*. The type genome for the species is the GenBank assembly GCA_010021705.1. The GC content of the type genome is 41.7 % and the genome length is 2.14 Mbp.

Description of *Candidatus* Uxorcosa gen. nov.

Candidatus Uxorcosa (NL. fem. n. *Uxorcosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RGMU01*. The type species for the genus is *Candidatus* Uxorcosa penicitio .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Uxorcula sicubilenta sp. nov.

Candidatus Uxorcula sicubilenta (NL. fem. n. *sicubilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RBG-16-68-21 sp001767695*. The type genome for the species is the GenBank assembly GCA_001767695.1. The GC content of the type genome is 67.91 % and the genome length is 2.03 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle background sediment; well D04 at 16ft depth".

Description of *Candidatus* Uxorcula gen. nov.

Candidatus Uxorcula (NL. fem. n. *Uxorcula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RBG-16-68-21*. The type species for the genus is *Candidatus* Uxorcula sicubilenta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA11373*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Bigaranaceae.

Description of *Candidatus* Vacilana cacalax sp. nov.

Candidatus Vacilana cacalax (NL. fem. n. *cacalax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACMQJ01 sp014377055*. The type genome for the species is the GenBank assembly GCA_014377055.1. The GC content of the type genome is 29.05 % and the genome length is 3.89 Mbp.

Description of *Candidatus* Vacilana gen. nov.

Candidatus Vacilana (NL. fem. n. *Vacilana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACMQJ01*. The type species for the genus is *Candidatus* Vacilana cacalax .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JACMQJ01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vacilanaceae.

Description of *Candidatus* Vacilanaceae fam. nov.

Candidatus Vacilanaceae (NL. fem. n. *Vacilanaceae* a name created from the name of the

type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JACMQJ01*. The type genus for the taxon is *Candidatus* Vacilana .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA7694*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Bicoridales.

Description of *Candidatus* Vacilia incunifica sp. nov.

Candidatus Vacilia incunifica (NL. fem. n. *incunifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DUMP01 sp012839755*. The type genome for the species is the GenBank assembly GCA_012839755.1. The GC content of the type genome is 63.03 % and the genome length is 2.57 Mbp.

Description of *Candidatus* Vacilia gen. nov.

Candidatus Vacilia (NL. fem. n. *Vacilia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DUMP01*. The type species for the genus is *Candidatus* Vacilia incunifica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DUMP01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vaciliaceae.

Description of *Candidatus* Vaciliaceae fam. nov.

Candidatus Vaciliaceae (NL. fem. n. *Vaciliaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *DUMP01*. The type genus for the taxon is *Candidatus* Vacilia .

According to the original version of GTDB R06-RS202, this family belongs to the order *DUMP01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Vaciliales.

Description of *Candidatus* Vaciliales ord. nov.

Candidatus Vaciliales (NL. fem. n. *Vaciliales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *DUMP01*. The type genus for the taxon is *Candidatus* Vacilia .

According to the original version of GTDB R06-RS202, this family belongs to the class *DTU030*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Defarosae.

Description of *Candidatus* Vacilida affanitoga sp. nov.

Candidatus Vacilida affanitoga (NL. fem. n. *affanitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *F23-B02 sp004558025*. The type genome for the species is the GenBank assembly GCA_004558025.1. The GC content of the type genome is 54.53 % and the genome length is 2.0 Mbp.

Description of *Candidatus* Vacilida gen. nov.

Candidatus Vacilida (NL. fem. n. *Vacilida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *F23-B02*. The type species for the genus is *Candidatus* Vacilida affanitoga .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Vacilida alismitia sp. nov.

Candidatus Vacilida alismitia (NL. fem. n. *alismitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *F23-B02 sp900772725*. The type genome for the species is the GenBank assembly GCA_900772725.1. The GC content of the type genome is 54.83 % and the genome length is 1.47 Mbp.

Description of *Candidatus* Vacilida bacifitio sp. nov.

Candidatus Vacilida bacifitio (NL. fem. n. *bacifitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *F23-B02 sp900545805*. The type genome for the species is the GenBank assembly GCA_900545805.1. The GC content of the type genome is 54.06 % and the genome length is 1.7 Mbp.

Description of *Candidatus* Vacilida ceromatica sp. nov.

Candidatus Vacilida ceromatica (NL. fem. n. *ceromatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *F23-B02 sp000431075*. The type genome for the species is the GenBank assembly GCA_004552505.1. The GC content of the type genome is 53.5 % and the genome length is 1.49 Mbp.

Description of *Candidatus* Vacilida cicilatio sp. nov.

Candidatus Vacilida cicilatio (NL. fem. n. *cicilatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *F23-B02 sp004557075*. The type genome for the species is the GenBank assembly GCA_004557075.1. The GC content of the type genome is 52.62 % and the genome length is 2.26 Mbp.

Description of *Candidatus* Vacilida demigifica sp. nov.

Candidatus Vacilida demigifica (NL. fem. n. *demigifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *F23-B02 sp002472405*. The type genome for the species is the GenBank assembly GCA_002472405.1. The GC content of the type genome is 53.27 % and the genome length is 2.08 Mbp.

Description of *Candidatus* Vacilida depasibra sp. nov.

Candidatus Vacilida depasibra (NL. fem. n. *depasibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *F23-B02 sp002314685*. The type genome for the species is the GenBank assembly GCA_002314685.1. The GC content of the type genome is 49.68 % and the genome length is 1.6 Mbp.

Description of *Candidatus* Vacilida indomugo sp. nov.

Candidatus Vacilida indomugo (NL. fem. n. *indomugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *F23-B02 sp900760205*. The type genome for the species is the GenBank assembly GCA_900760205.1. The GC content of the type genome is 55.27 % and the genome length is 1.55 Mbp.

Description of *Candidatus* Vacilida laxititas sp. nov.

Candidatus Vacilida laxititas (NL. fem. n. *laxititas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *F23-B02 sp900556535*. The type genome for the species is the GenBank assembly GCA_900556535.1. The GC content of the type genome is 56.3 % and the genome length is 1.59 Mbp.

Description of *Candidatus* Vacilida letifatio sp. nov.

Candidatus Vacilida letifatio (NL. fem. n. *letifatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *F23-B02 sp004556755*. The type genome for the species is the GenBank assembly GCA_900772805.1. The GC content of the type genome is 54.92 % and the genome length is 1.75 Mbp.

Description of *Candidatus* Vacilida pinigatio sp. nov.

Candidatus Vacilida pinigatio (NL. fem. n. *pinigatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *F23-B02 sp003533405*. The type genome for the species is the GenBank assembly GCA_900762055.1. The GC content of the type genome is 52.81 % and the genome length is 1.99 Mbp.

Description of *Candidatus* Vacilida tegimibula sp. nov.

Candidatus Vacilida tegimibula (NL. fem. n. *tegimibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *F23-B02 sp004553495*. The type genome for the species is the GenBank assembly GCA_900765295.1. The GC content of the type genome is 53.76 % and the genome length is 1.59 Mbp.

Description of *Candidatus* Vacilida turilousia sp. nov.

Candidatus Vacilida turilousia (NL. fem. n. *turilousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *F23-B02 sp001916715*. The type genome for the species is the GenBank assembly GCA_000436275.1. The GC content of the type genome is 53.56 % and the genome length is 1.97 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "derived from human gut metagenome".

Description of *Candidatus* Vacilosa foricitrix sp. nov.

Candidatus Vacilosa foricitrix (NL. fem. n. *foricitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2746535 sp002746535*. The type genome for the species is the GenBank assembly GCA_002746535.1. The GC content of the type genome is 33.58 % and the genome length is 6.76 Mbp.

Description of *Candidatus* Vacilosa gen. nov.

Candidatus Vacilosa (NL. fem. n. *Vacilosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2746535*. The type species for the genus is *Candidatus* Vacilosa foricitrix .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GCA-2746535*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vacilosaceae.

Description of *Candidatus* Vacilosaceae fam. nov.

Candidatus Vacilosaceae (NL. fem. n. *Vacilosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *GCA-2746535.* The type genus for the taxon is *Candidatus* Vacilosa .

According to the original version of GTDB R06-RS202, this family belongs to the order *GCA-2746535*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Vacilosales.

Description of *Candidatus* Vacilosales ord. nov.

Candidatus Vacilosales (NL. fem. n. *Vacilosales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *GCA-2746535.* The type genus for the taxon is *Candidatus* Vacilosa .

According to the original version of GTDB R06-RS202, this family belongs to the class *UBA11346*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Cisorariae.

Description of *Candidatus* Vacilula agripitas sp. nov.

Candidatus Vacilula agripitas (NL. fem. n. *agripitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *TMED161 sp002591605*. The type genome for the species is the GenBank assembly GCA_002591605.1. The GC content of the type genome is 30.83 % and the genome length is 0.6 Mbp.

Description of *Candidatus* Vacilula gen. nov.

Candidatus Vacilula (NL. fem. n. *Vacilula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *TMED161*. The type species for the genus is *Candidatus* Vacilula agripitas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *TMED161*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vacilulaceae.

Description of *Candidatus* Vacilulaceae fam. nov.

Candidatus Vacilulaceae (NL. fem. n. *Vacilulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *TMED161*. The type genus for the taxon is *Candidatus* Vacilula .

According to the original version of GTDB R06-RS202, this family belongs to the order *SCGC-AAA003-L08*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Redaciales.

Description of *Candidatus* Vacilula bucolifica sp. nov.

Candidatus Vacilula bucolifica (NL. fem. n. *bucolifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *TMED161 sp002731795*. The type genome for the species is the GenBank assembly GCA_002731795.1. The GC content of the type genome is 31.46 % and the genome length is 1.55 Mbp.

Description of *Candidatus* Vacilula buxanedo sp. nov.

Candidatus Vacilula buxanedo (NL. fem. n. *buxanedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *TMED161 sp002703645*. The type genome for the species is the GenBank assembly GCA_002703645.1. The GC content of the type genome is 29.77 % and the genome length is 1.53 Mbp.

Description of *Candidatus* Vacilula ornitatica sp. nov.

Candidatus Vacilula ornitatica (NL. fem. n. *ornitatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *TMED161 sp002171125*. The type genome for the species is the GenBank assembly GCA_002171125.1. The GC content of the type genome is 30.97 % and the genome length is 1.22 Mbp.

Description of *Candidatus* Vagabana lenunifica sp. nov.

Candidatus Vagabana lenunifica (NL. fem. n. *lenunifica* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA10030 sp003453835*. The type genome for the species is the GenBank assembly GCA_003453835.1. The GC content of the type genome is 54.44 % and the genome length is 3.38 Mbp.

Description of *Candidatus* Vagabana gen. nov.

Candidatus Vagabana (NL. fem. n. *Vagabana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA10030*. The type species for the genus is *Candidatus* Vagabana lenunifica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA10030*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vagabanaceae.

Description of *Candidatus* Vagabanaceae fam. nov.

Candidatus Vagabanaceae (NL. fem. n. *Vagabanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA10030.* The type genus for the taxon is *Candidatus* Vagabana .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA10030*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Vagabanales.

Description of *Candidatus* Vagabanales ord. nov.

Candidatus Vagabanales (NL. fem. n. *Vagabanales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA10030.* The type genus for the taxon is *Candidatus* Vagabana .

According to the original version of GTDB R06-RS202, this family belongs to the class *UBA10030*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Vagabanae.

Description of *Candidatus* Vagabanae class. nov.

Candidatus Vagabanae (NL. fem. n. *c__Vagabanae* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA10030.* The type genus for the taxon is *Candidatus* Vagabana .

According to GTDB R06-RS202, this class belongs to the phylum *Bacteroidota*.

Description of *Candidatus* Vagabaria ephematica sp. nov.

Candidatus Vagabaria ephematica (NL. fem. n. *ephematica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WVXP01 sp011773445*. The type genome for the species is the GenBank assembly GCA_011773445.1. The GC content of the type genome is 51.12 % and the genome length is 3.73 Mbp.

Description of *Candidatus* Vagabaria gen. nov.

Candidatus Vagabaria (NL. fem. n. *Vagabaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WVXP01*. The type species for the genus is *Candidatus* Vagabaria ephematica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *WVXP01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vagabariaceae.

Description of *Candidatus* Vagabariaceae fam. nov.

Candidatus Vagabariaceae (NL. fem. n. *Vagabariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *WVXP01.* The type genus for the taxon is *Candidatus* Vagabaria .

According to the original version of GTDB R06-RS202, this family belongs to the order *BSN033*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Debucellales.

Description of *Candidatus* Vagabella fiducivita sp. nov.

Candidatus Vagabella fiducivita (NL. fem. n. *fiducivita* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2211 sp002327845*. The type genome for the species is the GenBank assembly GCA_002402885.1. The GC content of the type genome is 32.51 % and the genome length is 0.62 Mbp.

Description of *Candidatus* Vagabella gen. nov.

Candidatus Vagabella (NL. fem. n. *Vagabella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA2211*. The type species for the genus is *Candidatus* Vagabella fiducivita .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA5633*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Carecosaceae.

Description of *Candidatus* Vagabia abhinimonas sp. nov.

Candidatus Vagabia abhinimonas (NL. fem. n. *abhinimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA969 sp005786805*. The type genome for the species is the GenBank assembly GCA_005786805.1. The GC content of the type genome is 46.57 % and the genome length is 3.92 Mbp.

Description of *Candidatus* Vagabia gen. nov.

Candidatus Vagabia (NL. fem. n. *Vagabia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA969*. The type species for the genus is *Candidatus* Vagabia abhinimonas .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Vagabia dupunibula sp. nov.

Candidatus Vagabia dupunibula (NL. fem. n. *dupunibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA969 sp003671255*. The type genome for the species is the GenBank assembly GCA_003671255.1. The GC content of the type genome is 43.98 % and the genome length is 3.2 Mbp.

Description of *Candidatus* Vagabia mirabatio sp. nov.

Candidatus Vagabia mirabatio (NL. fem. n. *mirabatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA969 sp002303765*. The type genome for the species is the GenBank assembly GCA_003669795.1. The GC content of the type genome is 44.47 % and the genome length is 3.55 Mbp.

Description of *Candidatus* Vagabia refocitrix sp. nov.

Candidatus Vagabia refocitrix (NL. fem. n. *refocitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA969 sp009920765*. The type genome for the species is the GenBank assembly GCA_009920765.1. The GC content of the type genome is 44.24 % and the genome length is 4.81 Mbp.

Description of *Candidatus* Vagabia socagilega sp. nov.

Candidatus Vagabia socagilega (NL. fem. n. *socagilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA969 sp903960945*. The type genome for the species is the GenBank assembly GCA_903960945.1. The GC content of the type genome is 43.89 % and the genome length is 4.67 Mbp.

Description of *Candidatus* Vagabida taraxitudo sp. nov.

Candidatus Vagabida taraxitudo (NL. fem. n. *taraxitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *UBA6532 sp002434805*. The type genome for the species is the GenBank assembly GCA_002434805.1. The GC content of the type genome is 36.43 % and the genome length is 0.56 Mbp.

Description of *Candidatus* Vagabida gen. nov.

Candidatus Vagabida (NL. fem. n. *Vagabida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA6532*. The type species for the genus is *Candidatus* Vagabida taraxitudo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA6532*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vagabidaceae.

Description of *Candidatus* Vagabidaceae fam. nov.

Candidatus Vagabidaceae (NL. fem. n. *Vagabidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA6532.* The type genus for the taxon is *Candidatus* Vagabida .

According to GTDB R06-RS202, this family belongs to the order *Paceibacterales*.

Description of *Candidatus* Vagabosa conipimonia sp. nov.

Candidatus Vagabosa conipimonia (NL. fem. n. *conipimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *BM512 sp002869005*. The type genome for the species is the GenBank assembly GCA_002869005.1. The GC content of the type genome is 55.06 % and the genome length is 2.6 Mbp.

Description of *Candidatus* Vagabosa gen. nov.

Candidatus Vagabosa (NL. fem. n. *Vagabosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *BM512*. The type species for the genus is *Candidatus* Vagabosa conipimonia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *BM512*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vagabosaceae.

Description of *Candidatus* Vagabosaceae fam. nov.

Candidatus Vagabosaceae (NL. fem. n. *Vagabosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *BM512*. The type genus for the taxon is *Candidatus* Vagabosa .

According to GTDB R06-RS202, this family belongs to the order *Deferrisomatales*.

Description of *Candidatus* Vagabosa monopitio sp. nov.

Candidatus Vagabosa monopitio (NL. fem. n. *monopitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *BM512 sp002869015*. The type genome for the species is the GenBank assembly GCA_002869015.1. The GC content of the type genome is 54.08 % and the genome length is 2.53 Mbp.

Description of *Candidatus* Vagabula ficeditudo sp. nov.

Candidatus Vagabula ficeditudo (NL. fem. n. *ficeditudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *54-24 sp001508935*. The type genome for the species is the GenBank assembly GCA_001508935.1. The GC content of the type genome is 53.96 % and the genome length is 1.65 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "oil reservoir sample K3".

Description of *Candidatus* Vagabula gen. nov.

Candidatus Vagabula (NL. fem. n. *Vagabula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *54-24*. The type species for the genus is *Candidatus* Vagabula ficeditudo .

According to the original version of GTDB R06-RS202, this genus belongs to the family

54-24. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vagabulaceae.

Description of *Candidatus* Vagabulaceae fam. nov.

Candidatus Vagabulaceae (NL. fem. n. *Vagabulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *54-24.* The type genus for the taxon is *Candidatus* Vagabula .

According to GTDB R06-RS202, this family belongs to the order *Synergistales*.

Description of *Candidatus* Vagococcus absuritoga sp. nov.

Candidatus Vagococcus absuritoga (NL. fem. n. *absuritoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Vagococcus sp003950515*. The type genome for the species is the GenBank assembly RS_GCF_003950515.1. The GC content of the type genome is 34.65 % and the genome length is 2.35 Mbp.

Description of *Candidatus* Vagococcus delapugo sp. nov.

Candidatus Vagococcus delapugo (NL. fem. n. *delapugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Vagococcus sp003462485*. The type genome for the species is the GenBank assembly RS_GCF_003462485.1. The GC content of the type genome is 33.54 % and the genome length is 2.04 Mbp.

Description of *Candidatus* Vagococcus haricisca sp. nov.

Candidatus Vagococcus haricisca (NL. fem. n. *haricisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Vagococcus sp011304195*. The type genome for the species is the GenBank assembly RS_GCF_011304195.1. The GC content of the type genome is 34.35 % and the genome length is 3.05 Mbp.

Description of *Candidatus* Vagococcus nefaressa sp. nov.

Candidatus Vagococcus nefaressa (NL. fem. n. *nefaressa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Vagococcus sp003950315*. The type genome for the species is the GenBank assembly RS_GCF_003950315.1. The GC content of the type genome is 33.59 % and the genome length is 2.5 Mbp.

Description of *Candidatus* Vagococcus cululisca sp. nov.

Candidatus Vagococcus cululisca (NL. fem. n. *cululisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Vagococcus_A sp005145005*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_005863195.1. The GC content of the type genome is 36.61 % and the genome length is 2.04 Mbp.

Description of *Candidatus* Vagococcus diludimonia sp. nov.

Candidatus Vagococcus diludimonia (NL. fem. n. *diludimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Vagococcus_A sp004792515*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_004684045.1. The GC content of the type genome is 35.28 % and the genome length is 2.01 Mbp.

Description of *Candidatus* Vagococcus irrefitas sp. nov.

Candidatus Vagococcus irrefitas (NL. fem. n. *irrefitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Vagococcus_D sp011303955*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The

type genome for the species is the GenBank assembly RS_GCF_011303955.1. The GC content of the type genome is 36.59 % and the genome length is 1.53 Mbp.

Description of *Candidatus* Valefana cicatitas sp. nov.

Candidatus Valefana cicatitas (NL. fem. n. *cicatitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIKZZ01 sp903832085*. The type genome for the species is the GenBank assembly GCA_903832085.1. The GC content of the type genome is 55.23 % and the genome length is 2.65 Mbp.

Description of *Candidatus* Valefana gen. nov.

Candidatus Valefana (NL. fem. n. *Valefana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIKZZ01*. The type species for the genus is *Candidatus* Valefana cicatitas .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Valefella catiledo sp. nov.

Candidatus Valefella catiledo (NL. fem. n. *catiledo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1732 sp900320095*. The type genome for the species is the GenBank assembly GCA_900321125.1. The GC content of the type genome is 60.38 % and the genome length is 2.64 Mbp.

Description of *Candidatus* Valefella gen. nov.

Candidatus Valefella (NL. fem. n. *Valefella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1732*. The type species for the genus is *Candidatus* Valefella catiledo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1829*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cenodidaceae.

Description of *Candidatus* Valefella desacitoga sp. nov.

Candidatus Valefella desacitoga (NL. fem. n. *desacitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1732 sp902762495*. The type genome for the species is the GenBank assembly GCA_902779045.1. The GC content of the type genome is 58.93 % and the genome length is 2.84 Mbp.

Description of *Candidatus* Valefella inpinivita sp. nov.

Candidatus Valefella inpinivita (NL. fem. n. *inpinivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1732 sp902774245*. The type genome for the species is the GenBank assembly GCA_902774245.1. The GC content of the type genome is 59.37 % and the genome length is 2.84 Mbp.

Description of *Candidatus* Valefella melilitudo sp. nov.

Candidatus Valefella melilitudo (NL. fem. n. *melilitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1732 sp902802585*. The type genome for the species is the GenBank assembly GCA_902802585.1. The GC content of the type genome is 59.92 % and the genome length is 2.61 Mbp.

Description of *Candidatus* Valefella pimenimonia sp. nov.

Candidatus Valefella pimenimonia (NL. fem. n. *pimenimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1732 sp902778895*. The type genome for the species is the GenBank assembly GCA_902778895.1. The GC content of the type genome is 58.16 % and the genome length is 3.24 Mbp.

Description of *Candidatus* Valefella terebitas sp. nov.

Candidatus Valefella terebitas (NL. fem. n. *terebitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1732 sp902780135*. The type genome for the species is the GenBank assembly GCA_902780135.1. The GC content of the type genome is 61.24 % and the genome length is 2.84 Mbp.

Description of *Candidatus* Valefella vicatitas sp. nov.

Candidatus Valefella vicatitas (NL. fem. n. *vicatitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1732 sp002315855*. The type genome for the species is the GenBank assembly GCA_002315855.1. The GC content of the type genome is 49.83 % and the genome length is 2.44 Mbp.

Description of *Candidatus* Valefia licenibula sp. nov.

Candidatus Valefia licenibula (NL. fem. n. *licenibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HRBIN32 sp011053555*. The type genome for the species is the GenBank assembly GCA_011388395.1. The GC content of the type genome is 70.85 % and the genome length is 2.36 Mbp.

Description of *Candidatus* Valefia gen. nov.

Candidatus Valefia (NL. fem. n. *Valefia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *HRBIN32*. The type species for the genus is *Candidatus* Valefia licenibula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *HRBIN32*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Valefiaceae.

Description of *Candidatus* Valefiaceae fam. nov.

Candidatus Valefiaceae (NL. fem. n. *Valefiaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *HRBIN32.* The type genus for the taxon is *Candidatus* Valefia .

According to the original version of GTDB R06-RS202, this family belongs to the order *CSP1-3*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Minagiales.

Description of *Candidatus* Valefia milifago sp. nov.

Candidatus Valefia milifago (NL. fem. n. *milifago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HRBIN32 sp002898935*. The type genome for the species is the GenBank assembly GCA_002898935.1. The GC content of the type genome is 71.34 % and the genome length is 2.1 Mbp.

Description of *Candidatus* Valefida enharedo sp. nov.

Candidatus Valefida enharedo (NL. fem. n. *enharedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DSM-21351 sp012839035*. The type genome for the species is the GenBank assembly GCA_012839035.1. The GC content of the type genome is 67.26 % and the genome length is 3.25 Mbp.

Description of *Candidatus* Valefida gen. nov.

Candidatus Valefida (NL. fem. n. *Valefida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DSM-21351*. The type species for the genus is *Candidatus* Valefida enharedo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Valefida nosocibra sp. nov.

Candidatus Valefida nosocibra (NL. fem. n. *nosocibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *DSM-21351 sp004362375*. The type genome for the species is the GenBank assembly RS_GCF_002250605.1. The GC content of the type genome is 69.37 % and the genome length is 4.57 Mbp.

Description of *Candidatus* Valefida relapessa sp. nov.

Candidatus Valefida relapessa (NL. fem. n. *relapessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DSM-21351 sp002250625*. The type genome for the species is the GenBank assembly RS_GCF_002250625.1. The GC content of the type genome is 69.56 % and the genome length is 3.72 Mbp.

Description of *Candidatus* Valefosa vagabimonia sp. nov.

Candidatus Valefosa vagabimonia (NL. fem. n. *vagabimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WO2-FULL-39-9 sp001793155*. The type genome for the species is the GenBank assembly GCA_001792385.1. The GC content of the type genome is 38.88 % and the genome length is 1.14 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 0.1 micron filter; full assembly".

Description of *Candidatus* Valefosa gen. nov.

Candidatus Valefosa (NL. fem. n. *Valefosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WO2-FULL-39-9*. The type species for the genus is *Candidatus* Valefosa vagabimonia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA8517*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Xenoposaceae.

Description of *Candidatus* Vampirococcus dibuciforma sp. nov.

Candidatus Vampirococcus dibuciforma (NL. fem. n. *dibuciforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Vampirococcus sp002421805*. The type genome for the species is the GenBank assembly GCA_002421805.1. The GC content of the type genome is 53.4 % and the genome length is 1.88 Mbp.

Description of *Candidatus* Vampirovibrio detotax sp. nov.

Candidatus Vampirovibrio detotax (NL. fem. n. *detotax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Vampirovibrio sp902168245*. The type genome for the species is the GenBank assembly RS_GCF_902168245.1. The GC content of the type genome is 52.14 % and the genome length is 4.63 Mbp.

Description of *Candidatus* Vanidana lanugisca sp. nov.

Candidatus Vanidana lanugisca (NL. fem. n. *lanugisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3937 sp002385735*. The type genome for the species is the GenBank assembly GCA_012843035.1. The GC content of the type genome is 48.75 % and the genome length is 1.75 Mbp.

Description of *Candidatus* Vanidana gen. nov.

Candidatus Vanidana (NL. fem. n. *Vanidana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA3937*. The type species for the genus is *Candidatus* Vanidana lanugisca .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DTU073*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Taraxidaceae.

Description of *Candidatus* Vanidaria xenopousia sp. nov.

Candidatus Vanidaria xenopousia (NL. fem. n. *xenopousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *QNYZ01 sp003973265*. The type genome for the species is the GenBank assembly GCA_003973275.1. The GC content of the type genome is 52.75 % and the genome length is 2.24 Mbp.

Description of *Candidatus* Vanidaria gen. nov.

Candidatus Vanidaria (NL. fem. n. *Vanidaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *QNYZ01*. The type species for the genus is *Candidatus* Vanidaria xenopousia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *QNYZ01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vanidariaceae.

Description of *Candidatus* Vanidariaceae fam. nov.

Candidatus Vanidariaceae (NL. fem. n. *Vanidariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *QNYZ01.* The type genus for the taxon is *Candidatus* Vanidaria .

According to GTDB R06-RS202, this family belongs to the order *Desulfobacterales*.

Description of *Candidatus* Vanidella venunitrix sp. nov.

Candidatus Vanidella venunitrix (NL. fem. n. *venunitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAILDB01 sp903832855*. The type genome for the species is the GenBank assembly GCA_903866945.1. The GC content of the type genome is 36.96 % and the genome length is 0.74 Mbp.

Description of *Candidatus* Vanidella gen. nov.

Candidatus Vanidella (NL. fem. n. *Vanidella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAILDB01*. The type species for the genus is *Candidatus* Vanidella venunitrix .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GWA1-40-21*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Carunariaceae.

Description of *Candidatus* Vanidia peripentia sp. nov.

Candidatus Vanidia peripentia (NL. fem. n. *peripentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DSNY01 sp011056935*. The type genome for the species is the GenBank assembly GCA_011056935.1. The GC content of the type genome is 68.63 % and the genome length is 4.19 Mbp.

Description of *Candidatus* Vanidia gen. nov.

Candidatus Vanidia (NL. fem. n. *Vanidia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DSNY01*. The type species for the genus is *Candidatus* Vanidia peripentia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Vanidida adessitura sp. nov.

Candidatus Vanidida adessitura (NL. fem. n. *adessitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7428 sp011526275*. The type genome for the species is the GenBank assembly GCA_011526275.1. The GC content of the type genome is 43.7 % and the genome length is 1.68 Mbp.

Description of *Candidatus* Vanidida gen. nov.

Candidatus Vanidida (NL. fem. n. *Vanidida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA7428*. The type species for the genus is *Candidatus* Vanidida adessitura .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Vanidida casabugo sp. nov.

Candidatus Vanidida casabugo (NL. fem. n. *casabugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7428 sp011526285*. The type genome for the species is the GenBank assembly GCA_011526285.1. The GC content of the type genome is 39.85 % and the genome length is 1.98 Mbp.

Description of *Candidatus* Vanidida conaritio sp. nov.

Candidatus Vanidida conaritio (NL. fem. n. *conaritio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7428 sp003023645*. The type genome for the species is the GenBank assembly GCA_003023645.1. The GC content of the type genome is 37.62 % and the genome length is 2.09 Mbp.

Description of *Candidatus* Vanidida culibivita sp. nov.

Candidatus Vanidida culibivita (NL. fem. n. *culibivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7428 sp002708445*. The type genome for the species is the GenBank assembly GCA_002708445.1. The GC content of the type genome is 35.79 % and the genome length is 1.56 Mbp.

Description of *Candidatus* Vanidida excocax sp. nov.

Candidatus Vanidida excocax (NL. fem. n. *excocax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7428 sp002477625*. The type genome for the species is the GenBank assembly GCA_002477625.1. The GC content of the type genome is 38.79 % and the genome length is 1.42 Mbp.

Description of *Candidatus* Vanidida exsupitia sp. nov.

Candidatus Vanidida exsupitia (NL. fem. n. *exsupitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7428 sp011526265*. The type genome for the species is the GenBank assembly GCA_011526265.1. The GC content of the type genome is 45.04 % and the genome length is 2.07 Mbp.

Description of *Candidatus* Vanidida feditousia sp. nov.

Candidatus Vanidida feditousia (NL. fem. n. *feditousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7428 sp011526335*. The type genome for the species is the GenBank assembly GCA_011526335.1. The GC content of the type genome is 41.18 % and the genome length is 1.92 Mbp.

Description of *Candidatus* Vanidula decatentia sp. nov.

Candidatus Vanidula decatentia (NL. fem. n. *decatentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5429 sp009787485*. The type genome for the species is the GenBank assembly GCA_009787485.1. The GC content of the type genome is 39.73 % and the genome length is 2.26 Mbp.

Description of *Candidatus* Vanidula gen. nov.

Candidatus Vanidula (NL. fem. n. *Vanidula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA5429*. The type species for the genus is *Candidatus* Vanidula decatentia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *WCHB1-69*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Turibosaceae.

Description of *Candidatus* Vanidula invicitoga sp. nov.

Candidatus Vanidula invicitoga (NL. fem. n. *invicitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5429 sp009787675*. The type genome for the species is the GenBank assembly GCA_009787675.1. The GC content of the type genome is 38.5 % and the genome length is 2.39 Mbp.

Description of *Candidatus* Vanidula lugubentia sp. nov.

Candidatus Vanidula lugubentia (NL. fem. n. *lugubentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5429 sp009787115*. The type genome for the species is the GenBank assembly GCA_009787115.1. The GC content of the type genome is 38.39 % and the genome length is 1.89 Mbp.

Description of *Candidatus* Vanidula sacomigena sp. nov.

Candidatus Vanidula sacomigena (NL. fem. n. *sacomigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5429 sp009786185*. The type genome for the species is the GenBank assembly GCA_009786115.1. The GC content of the type genome is 38.14 % and the genome length is 2.6 Mbp.

Description of *Candidatus* Vanidula scintastra sp. nov.

Candidatus Vanidula scintastra (NL. fem. n. *scintastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5429 sp009776395*. The type genome for the species is the GenBank assembly GCA_009776395.1. The GC content of the type genome is 36.33 % and the genome length is 1.09 Mbp.

Description of *Candidatus* Vanidula vinoledo sp. nov.

Candidatus Vanidula vinoledo (NL. fem. n. *vinoledo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5429 sp002427605*. The type genome for the species is the GenBank assembly GCA_002427605.1. The GC content of the type genome is 37.7 %

and the genome length is 2.11 Mbp.

Description of *Candidatus* Vanitana dicabessa sp. nov.

Candidatus Vanitana dicabessa (NL. fem. n. *dicabessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS731 sp900544985*. The type genome for the species is the GenBank assembly GCA_900544985.1. The GC content of the type genome is 42.65 % and the genome length is 1.87 Mbp.

Description of *Candidatus* Vanitana gen. nov.

Candidatus Vanitana (NL. fem. n. *Vanitana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UMGS731*. The type species for the genus is *Candidatus* Vanitana dicabessa .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-272*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Colipariaceae.

Description of *Candidatus* Vanitaria dedigibra sp. nov.

Candidatus Vanitaria dedigibra (NL. fem. n. *dedigibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *QS-8-64-10 sp003023275*. The type genome for the species is the GenBank assembly GCA_003022585.1. The GC content of the type genome is 67.56 % and the genome length is 1.87 Mbp.

Description of *Candidatus* Vanitaria gen. nov.

Candidatus Vanitaria (NL. fem. n. *Vanitaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *QS-8-64-10*. The type species for the genus is *Candidatus* Vanitaria dedigibra .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Vanitaria dicibentia sp. nov.

Candidatus Vanitaria dicibentia (NL. fem. n. *dicibentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *QS-8-64-10 sp003023245*. The type genome for the species is the GenBank assembly GCA_003023245.1. The GC content of the type genome is 67.69 % and the genome length is 1.31 Mbp.

Description of *Candidatus* Vanitaria obvolimonia sp. nov.

Candidatus Vanitaria obvolimonia (NL. fem. n. *obvolimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *QS-8-64-10 sp003022485*. The type genome for the species is the GenBank assembly GCA_003022485.1. The GC content of the type genome is 67.81 % and the genome length is 1.81 Mbp.

Description of *Candidatus* Vanitaria siminousia sp. nov.

Candidatus Vanitaria siminousia (NL. fem. n. *siminousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *QS-8-64-10 sp003022535*. The type genome for the species is the GenBank assembly GCA_003022535.1. The GC content of the type genome is 68.3 % and the genome length is 1.76 Mbp.

Description of *Candidatus* Vanitia bicodilenta sp. nov.

Candidatus Vanitia bicodilenta (NL. fem. n. *bicodilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WO2-49-40 sp001780035*. The type genome for the species is the GenBank assembly GCA_001777855.1. The GC content of the type genome is 48.86 % and the genome length is 0.76 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under low O2 conditions; 1.2 micron filter; full assembly".

Description of *Candidatus* Vanitia gen. nov.

Candidatus Vanitia (NL. fem. n. *Vanitia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WO2-49-40*. The type species for the genus is *Candidatus* Vanitia bicodilenta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *O2-02-FULL-48-8*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Susicariaceae.

Description of *Candidatus* Vanitida colepibra sp. nov.

Candidatus Vanitida colepibra (NL. fem. n. *colepibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA923 sp002387735*. The type genome for the species is the GenBank assembly GCA_002387735.1. The GC content of the type genome is 48.08 % and the genome length is 2.8 Mbp.

Description of *Candidatus* Vanitida gen. nov.

Candidatus Vanitida (NL. fem. n. *Vanitida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA923*. The type species for the genus is *Candidatus* Vanitida colepibra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA923*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vanitidaceae.

Description of *Candidatus* Vanitidaceae fam. nov.

Candidatus Vanitidaceae (NL. fem. n. *Vanitidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA923.* The type genus for the taxon is *Candidatus* Vanitida .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA1018*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Desorariales.

Description of *Candidatus* Vanitula feculitia sp. nov.

Candidatus Vanitula feculitia (NL. fem. n. *feculitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SZUA-320 sp003246755*. The type genome for the species is the GenBank assembly GCA_003246755.1. The GC content of the type genome is 63.04 % and the genome length is 3.15 Mbp.

Description of *Candidatus* Vanitula gen. nov.

Candidatus Vanitula (NL. fem. n. *Vanitula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SZUA-320*. The type species for the genus is *Candidatus* Vanitula feculitia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GWC2-71-9*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Relenulaceae.

Description of *Candidatus* Vannielia offirifica sp. nov.

Candidatus Vannielia offirifica (NL. fem. n. *offirifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Vannielia sp006351965*. The type genome for the species is the GenBank assembly RS_GCF_006351965.1. The GC content of the type genome is 64.47 % and the genome length is 4.05 Mbp.

Description of *Candidatus* Variovorax abhinax sp. nov.

Candidatus Variovorax abhinax (NL. fem. n. *abhinax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Variovorax sp001984055*. The type genome for the species is the GenBank assembly RS_GCF_001984055.1. The GC content of the type genome is 67.47 % and the genome length is 7.19 Mbp.

Description of *Candidatus* Variovorax adlapifica sp. nov.

Candidatus Variovorax adlapifica (NL. fem. n. *adlapifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Variovorax sp900107745*. The type genome for the species is the GenBank assembly RS_GCF_900107745.1. The GC content of the type genome is 66.22 % and the genome length is 7.37 Mbp.

Description of *Candidatus* Variovorax antacimonia sp. nov.

Candidatus Variovorax antacimonia (NL. fem. n. *antacimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Variovorax sp009765735*. The type genome for the species is the GenBank assembly RS_GCF_009765735.1. The GC content of the type genome is 68.6 % and the genome length is 6.92 Mbp.

Description of *Candidatus* Variovorax argitivita sp. nov.

Candidatus Variovorax argitivita (NL. fem. n. *argitivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Variovorax sp001541225*. The type genome for the species is the GenBank assembly RS_GCF_001541225.1. The GC content of the type genome is 66.46 % and the genome length is 8.15 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "soil".

Description of *Candidatus* Variovorax arrugatio sp. nov.

Candidatus Variovorax arrugatio (NL. fem. n. *arrugatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Variovorax sp001425205*. The type genome for the species is the GenBank assembly RS_GCF_001425205.1. The GC content of the type genome is 66.64 % and the genome length is 6.06 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "root".

Description of *Candidatus* Variovorax artilifica sp. nov.

Candidatus Variovorax artilifica (NL. fem. n. *artilifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Variovorax sp003984645*. The type genome for the species is the GenBank assembly RS_GCF_003984645.1. The GC content of the type genome is 67.06 % and the genome length is 5.88 Mbp.

Description of *Candidatus* Variovorax astapifica sp. nov.

Candidatus Variovorax astapifica (NL. fem. n. *astapifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Variovorax sp900115685*. The type genome for the species is the GenBank assembly RS_GCF_900115685.1. The GC content of the type genome is 67.05 % and the genome length is 7.45 Mbp.

Description of *Candidatus* Variovorax benematio sp. nov.

Candidatus Variovorax benematio (NL. fem. n. *benematio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Variovorax sp003014875*. The type genome for the species is the GenBank assembly RS_GCF_003014875.1. The GC content of the type genome is 67.22 % and the genome length is 8.56 Mbp.

Description of *Candidatus* Variovorax benivetta sp. nov.

Candidatus Variovorax benivetta (NL. fem. n. *benivetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Variovorax sp003019815*. The type genome for the species is the GenBank assembly RS_GCF_003019815.1. The GC content of the type genome is 67.61 % and the genome length is 7.02 Mbp.

Description of *Candidatus* Variovorax capuditica sp. nov.

Candidatus Variovorax capuditica (NL. fem. n. *capuditica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Variovorax sp000282635*. The type genome for the species is the GenBank assembly RS_GCF_001426595.1. The GC content of the type genome is 66.92 % and the genome length is 6.32 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "root".

Description of *Candidatus* Variovorax colopentia sp. nov.

Candidatus Variovorax colopentia (NL. fem. n. *colopentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Variovorax sp901827185*. The type genome for the species is the GenBank assembly RS_GCF_901827165.1. The GC content of the type genome is 66.49 % and the genome length is 7.67 Mbp.

Description of *Candidatus* Variovorax decunibra sp. nov.

Candidatus Variovorax decunibra (NL. fem. n. *decunibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Variovorax sp900114785*. The type genome for the species is the GenBank assembly RS_GCF_900114785.1. The GC content of the type genome is 67.82 % and the genome length is 6.31 Mbp.

Description of *Candidatus* Variovorax defunatio sp. nov.

Candidatus Variovorax defunatio (NL. fem. n. *defunatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Variovorax sp900106655*. The type genome for the species is the GenBank assembly RS_GCF_900106655.1. The GC content of the type genome is 66.4 % and the genome length is 7.16 Mbp.

Description of *Candidatus* Variovorax delubicula sp. nov.

Candidatus Variovorax delubicula (NL. fem. n. *delubicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Variovorax sp004217005*. The type genome for the species is the GenBank assembly RS_GCF_004217005.1. The GC content of the type genome is 68.52 % and the genome length is 5.87 Mbp.

Description of *Candidatus* Variovorax dimacastra sp. nov.

Candidatus Variovorax dimacastra (NL. fem. n. *dimacastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Variovorax sp001899795*. The type genome for the species is the GenBank assembly GCA_001725035.1. The GC content of the type genome is 67.38 % and the genome length is 7.71 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Cyanide and thiocyanate bioreactor".

Description of *Candidatus* Variovorax effigetta sp. nov.

Candidatus Variovorax effigetta (NL. fem. n. *effigetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Variovorax sp014302995*. The type genome for the species is the GenBank assembly RS_GCF_014302995.1. The GC content of the type genome is 66.0 % and the genome length is 7.39 Mbp.

Description of *Candidatus* Variovorax exhilitudo sp. nov.

Candidatus Variovorax exhilitudo (NL. fem. n. *exhilitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Variovorax sp003852515*. The type genome for the species is the GenBank assembly RS_GCF_003852515.1. The GC content of the type genome is 66.83 % and the genome length is 7.18 Mbp.

Description of *Candidatus* Variovorax hirudago sp. nov.

Candidatus Variovorax hirudago (NL. fem. n. *hirudago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Variovorax sp002754375*. The type genome for the species is the GenBank assembly RS_GCF_002849325.1. The GC content of the type genome is 67.37 % and the genome length is 6.87 Mbp.

Description of *Candidatus* Variovorax immadessa sp. nov.

Candidatus Variovorax immadessa (NL. fem. n. *immadessa* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Variovorax sp004216615*. The type genome for the species is the GenBank assembly RS_GCF_004216615.1. The GC content of the type genome is 67.12 % and the genome length is 6.54 Mbp.

Description of *Candidatus* Variovorax inargibula sp. nov.

Candidatus Variovorax inargibula (NL. fem. n. *inargibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Variovorax sp014170375*. The type genome for the species is the GenBank assembly RS_GCF_014170375.1. The GC content of the type genome is 68.71 % and the genome length is 7.14 Mbp.

Description of *Candidatus* Variovorax incocitio sp. nov.

Candidatus Variovorax incocitio (NL. fem. n. *incocitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Variovorax sp004340105*. The type genome for the species is the GenBank assembly RS_GCF_004340105.1. The GC content of the type genome is 66.07 % and the genome length is 5.62 Mbp.

Description of *Candidatus* Variovorax incunitica sp. nov.

Candidatus Variovorax incunitica (NL. fem. n. *incunitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Variovorax sp003984625*. The type genome for the species is the GenBank assembly RS_GCF_003984625.1. The GC content of the type genome is 65.84 % and the genome length is 5.25 Mbp.

Description of *Candidatus* Variovorax indipibra sp. nov.

Candidatus Variovorax indipibra (NL. fem. n. *indipibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Variovorax sp902506565*. The type genome for the species is the GenBank assembly RS_GCF_902506565.1. The GC content of the type genome is 66.52 % and the genome length is 4.79 Mbp.

Description of *Candidatus* Variovorax infinilenta sp. nov.

Candidatus Variovorax infinilenta (NL. fem. n. *infinilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Variovorax sp004211245*. The type genome for the species is the GenBank assembly GCA_004211245.1. The GC content of the type genome is 67.25 % and the genome length is 4.19 Mbp.

Description of *Candidatus* Variovorax inlacitrix sp. nov.

Candidatus Variovorax inlacitrix (NL. fem. n. *inlacitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Variovorax sp901827205*. The type genome for the species is the GenBank assembly RS_GCF_901827205.1. The GC content of the type genome is 66.75 % and the genome length is 6.65 Mbp.

Description of *Candidatus* Variovorax insaliforma sp. nov.

Candidatus Variovorax insaliforma (NL. fem. n. *insaliforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Variovorax sp013376015*. The type genome for the species is the GenBank assembly RS_GCF_013376015.1. The GC content of the type genome is 66.67 % and the genome length is 6.92 Mbp.

Description of *Candidatus* Variovorax invinitas sp. nov.

Candidatus Variovorax invinitas (NL. fem. n. *invinitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Variovorax sp900090195*. The type genome for the species is the GenBank assembly RS_GCF_900090195.1. The GC content of the type genome is 66.53 % and the genome length is 7.73 Mbp.

Description of *Candidatus* Variovorax lanifitio sp. nov.

Candidatus Variovorax lanifitio (NL. fem. n. *lanifitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Variovorax sp001424835*. The type genome for the species is the GenBank assembly RS_GCF_001424835.1. The GC content of the type genome is 65.8 % and the genome length is 5.75 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "root".

Description of *Candidatus* Variovorax lapicisca sp. nov.

Candidatus Variovorax lapicisca (NL. fem. n. *lapicisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Variovorax sp900099805*. The type genome for the species is the GenBank assembly RS_GCF_900099805.1. The GC content of the type genome is 65.69 % and the genome length is 6.48 Mbp.

Description of *Candidatus* Variovorax loripigena sp. nov.

Candidatus Variovorax loripigena (NL. fem. n. *loripigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Variovorax sp002157355*. The type genome for the species is the GenBank assembly RS_GCF_002157355.1. The GC content of the type genome is 68.03 % and the genome length is 7.32 Mbp.

Description of *Candidatus* Variovorax meridilega sp. nov.

Candidatus Variovorax meridilega (NL. fem. n. *meridilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Variovorax sp014192585*. The type genome for the species is the GenBank assembly RS_GCF_014192585.1. The GC content of the type genome is 65.11 % and the genome length is 7.13 Mbp.

Description of *Candidatus* Variovorax milifitia sp. nov.

Candidatus Variovorax milifitia (NL. fem. n. *milifitia* a species epithet created arbitrarily,

while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Variovorax sp014303735*. The type genome for the species is the GenBank assembly GCA_014376455.1. The GC content of the type genome is 64.07 % and the genome length is 4.04 Mbp.

Description of *Candidatus* Variovorax pacifimonia sp. nov.

Candidatus Variovorax pacifimonia (NL. fem. n. *pacifimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Variovorax sp001577265*. The type genome for the species is the GenBank assembly RS_GCF_001577265.1. The GC content of the type genome is 65.97 % and the genome length is 4.32 Mbp.

Description of *Candidatus* Variovorax panopessa sp. nov.

Candidatus Variovorax panopessa (NL. fem. n. *panopessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Variovorax sp001426505*. The type genome for the species is the GenBank assembly RS_GCF_001426505.1. The GC content of the type genome is 67.84 % and the genome length is 5.75 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "root".

Description of *Candidatus* Variovorax panopibula sp. nov.

Candidatus Variovorax panopibula (NL. fem. n. *panopibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Variovorax sp901827155*. The type genome for the species is the GenBank assembly RS_GCF_901827155.1. The GC content of the type genome is 66.24 % and the genome length is 6.87 Mbp.

Description of *Candidatus* Variovorax progniforma sp. nov.

Candidatus Variovorax progniforma (NL. fem. n. *progniforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Variovorax sp901827175*. The type genome for the species is the GenBank assembly RS_GCF_901827175.1. The GC content of the type genome is 66.86 % and the genome length is 7.42 Mbp.

Description of *Candidatus* Variovorax resacibula sp. nov.

Candidatus Variovorax resacibula (NL. fem. n. *resacibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Variovorax sp003952185*. The type genome for the species is the GenBank assembly RS_GCF_003950725.1. The GC content of the type genome is 67.26 % and the genome length is 7.21 Mbp.

Description of *Candidatus* Variovorax risibibra sp. nov.

Candidatus Variovorax risibibra (NL. fem. n. *risibibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Variovorax sp900101545*. The type genome for the species is the GenBank assembly RS_GCF_900101545.1. The GC content of the type genome is 66.97 % and the genome length is 6.85 Mbp.

Description of *Candidatus* Variovorax rumifimonia sp. nov.

Candidatus Variovorax rumifimonia (NL. fem. n. *rumifimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Variovorax sp900112425*. The type genome for the species is the GenBank assembly RS_GCF_900115445.1. The GC content of the type genome is 68.13 % and the genome length is 8.72 Mbp.

Description of *Candidatus* Variovorax semunivita sp. nov.

Candidatus Variovorax semunivita (NL. fem. n. *semunivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Variovorax sp900115375*. The type genome for the species is the GenBank assembly RS_GCF_001399565.1. The GC content of the type genome is 69.18

% and the genome length is 9.59 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Drinking Water".

Description of *Candidatus* Variovorax solipicula sp. nov.

Candidatus Variovorax solipicula (NL. fem. n. *solipicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Variovorax sp013376045*. The type genome for the species is the GenBank assembly RS_GCF_013376045.1. The GC content of the type genome is 67.67 % and the genome length is 7.42 Mbp.

Description of *Candidatus* Variovorax suboditia sp. nov.

Candidatus Variovorax suboditia (NL. fem. n. *suboditia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Variovorax sp000620225*. The type genome for the species is the GenBank assembly RS_GCF_000620225.1. The GC content of the type genome is 64.58 % and the genome length is 6.63 Mbp.

Description of *Candidatus* Variovorax tabitifica sp. nov.

Candidatus Variovorax tabitifica (NL. fem. n. *tabitifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Variovorax sp003053685*. The type genome for the species is the GenBank assembly RS_GCF_004345975.1. The GC content of the type genome is 69.32 % and the genome length is 7.46 Mbp.

Description of *Candidatus* Variovorax utraricella sp. nov.

Candidatus Variovorax utraricella (NL. fem. n. *utraricella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Variovorax sp004210915*. The type genome for the species is the GenBank assembly GCA_004210915.1. The GC content of the type genome is 66.92 % and the genome length is 4.16 Mbp.

Description of *Candidatus* Variovorax vinacilega sp. nov.

Candidatus Variovorax vinacilega (NL. fem. n. *vinacilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Variovorax sp900100965*. The type genome for the species is the GenBank assembly RS_GCF_900100965.1. The GC content of the type genome is 66.7 % and the genome length is 7.0 Mbp.

Description of *Candidatus* Variovorax volunitia sp. nov.

Candidatus Variovorax volunitia (NL. fem. n. *volunitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Variovorax sp003096925*. The type genome for the species is the GenBank assembly RS_GCF_004341565.1. The GC content of the type genome is 68.11 % and the genome length is 8.61 Mbp.

Description of *Candidatus* Vatilana exoscicella sp. nov.

Candidatus Vatilana exoscicella (NL. fem. n. *exoscicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1433 sp002423395*. The type genome for the species is the GenBank assembly GCA_002423395.1. The GC content of the type genome is 36.13 % and the genome length is 1.87 Mbp.

Description of *Candidatus* Vatilana gen. nov.

Candidatus Vatilana (NL. fem. n. *Vatilana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1433*. The type species for the genus is *Candidatus* Vatilana exoscicella .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1433*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vatilanaceae.

Description of *Candidatus* Vatilanaceae fam. nov.

Candidatus Vatilanaceae (NL. fem. n. *Vatilanaceae* a name created from the name of the

type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA1433.* The type genus for the taxon is *Candidatus* Vatilana .

According to GTDB R06-RS202, this family belongs to the order *Eubacteriales*.

Description of *Candidatus* Vatilana facunitia sp. nov.

Candidatus Vatilana facunitia (NL. fem. n. *facunitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1433 sp012797825*. The type genome for the species is the GenBank assembly GCA_012797825.1. The GC content of the type genome is 36.02 % and the genome length is 1.85 Mbp.

Description of *Candidatus* Vatilana sacopitoga sp. nov.

Candidatus Vatilana sacopitoga (NL. fem. n. *sacopitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1433 sp002329295*. The type genome for the species is the GenBank assembly GCA_012520465.1. The GC content of the type genome is 42.19 % and the genome length is 1.52 Mbp.

Description of *Candidatus* Vatilaria opercitura sp. nov.

Candidatus Vatilaria opercitura (NL. fem. n. *opercitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9464 sp005801385*. The type genome for the species is the GenBank assembly GCA_005801385.1. The GC content of the type genome is 65.37 % and the genome length is 3.88 Mbp.

Description of *Candidatus* Vatilaria gen. nov.

Candidatus Vatilaria (NL. fem. n. *Vatilaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA9464*. The type species for the genus is *Candidatus* Vatilaria

opercitura .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA9464*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vatilariaceae.

Description of *Candidatus* Vatilariaceae fam. nov.

Candidatus Vatilariaceae (NL. fem. n. *Vatilariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA9464.* The type genus for the taxon is *Candidatus* Vatilaria .

According to GTDB R06-RS202, this family belongs to the order *Pedosphaerales*.

Description of *Candidatus* Vatilaria semilax sp. nov.

Candidatus Vatilaria semilax (NL. fem. n. *semilax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9464 sp003445095*. The type genome for the species is the GenBank assembly GCA_003445095.1. The GC content of the type genome is 59.49 % and the genome length is 6.02 Mbp.

Description of *Candidatus* Vatilella favilimonia sp. nov.

Candidatus Vatilella favilimonia (NL. fem. n. *favilimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2719675 sp002719675*. The type genome for the species is the GenBank assembly GCA_002719675.1. The GC content of the type genome is 32.62 % and the genome length is 1.4 Mbp.

Description of *Candidatus* Vatilella gen. nov.

Candidatus Vatilella (NL. fem. n. *Vatilella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2719675*. The type species for the genus is *Candidatus* Vatilella favilimonia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GCA-2719675*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vatilellaceae.

Description of *Candidatus* Vatilellaceae fam. nov.

Candidatus Vatilellaceae (NL. fem. n. *Vatilellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *GCA-2719675.* The type genus for the taxon is *Candidatus* Vatilella .

According to the original version of GTDB R06-RS202, this family belongs to the order *SAR202*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Defulidales.

Description of *Candidatus* Vatilella nubigatio sp. nov.

Candidatus Vatilella nubigatio (NL. fem. n. *nubigatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2719675 sp009392295*. The type genome for the species is the GenBank assembly GCA_009392295.1. The GC content of the type genome is 32.03 % and the genome length is 1.45 Mbp.

Description of *Candidatus* Vatilia docibetta sp. nov.

Candidatus Vatilia docibetta (NL. fem. n. *docibetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SMWF01 sp004357385*. The type genome for the species is the GenBank assembly GCA_004356365.1. The GC content of the type genome is 61.59 % and the genome length is 2.69 Mbp.

Description of *Candidatus* Vatilia gen. nov.

Candidatus Vatilia (NL. fem. n. *Vatilia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SMWF01*. The type species for the genus is *Candidatus* Vatilia docibetta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *HTCC2089*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Tegumosaceae.

Description of *Candidatus* Vatilida defosibra sp. nov.

Candidatus Vatilida defosibra (NL. fem. n. *defosibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1318 sp002307015*. The type genome for the species is the GenBank assembly GCA_002307015.1. The GC content of the type genome is 61.46 % and the genome length is 4.54 Mbp.

Description of *Candidatus* Vatilida gen. nov.

Candidatus Vatilida (NL. fem. n. *Vatilida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1318*. The type species for the genus is *Candidatus* Vatilida defosibra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1318*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vatilidaceae.

Description of *Candidatus* Vatilidaceae fam. nov.

Candidatus Vatilidaceae (NL. fem. n. *Vatilidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA1318.* The type genus for the taxon is *Candidatus* Vatilida .

According to GTDB R06-RS202, this family belongs to the order *Treponematales*.

Description of *Candidatus* Vatilosa catocousia sp. nov.

Candidatus Vatilosa catocousia (NL. fem. n. *catocousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UA16 sp002390615*. The type genome for the species is the GenBank

assembly GCA_003491685.1. The GC content of the type genome is 49.69 % and the genome length is 2.15 Mbp.

Description of *Candidatus* Vatilosa gen. nov.

Candidatus Vatilosa (NL. fem. n. *Vatilosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UA16*. The type species for the genus is *Candidatus* Vatilosa catocousia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UA16*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vatilosaceae.

Description of *Candidatus* Vatilosaceae fam. nov.

Candidatus Vatilosaceae (NL. fem. n. *Vatilosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UA16.* The type genus for the taxon is *Candidatus* Vatilosa .

According to GTDB R06-RS202, this family belongs to the order *Flavobacteriales*.

Description of *Candidatus* Vatilosa depubentia sp. nov.

Candidatus Vatilosa depubentia (NL. fem. n. *depubentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UA16 sp002292325*. The type genome for the species is the GenBank assembly GCA_002292325.1. The GC content of the type genome is 49.75 % and the genome length is 2.04 Mbp.

Description of *Candidatus* Vatilosa divulastra sp. nov.

Candidatus Vatilosa divulastra (NL. fem. n. *divulastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UA16 sp002420235*. The type genome for the species is the GenBank assembly GCA_002348525.1. The GC content of the type genome is 48.88 % and the genome length is 2.08 Mbp.

Description of *Candidatus* Vatilosa domigisca sp. nov.

Candidatus Vatilosa domigisca (NL. fem. n. *domigisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UA16 sp002323795*. The type genome for the species is the GenBank assembly GCA_002731615.1. The GC content of the type genome is 48.12 % and the genome length is 2.15 Mbp.

Description of *Candidatus* Vatilosa effosivita sp. nov.

Candidatus Vatilosa effosivita (NL. fem. n. *effosivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UA16 sp002336085*. The type genome for the species is the GenBank assembly GCA_002336085.1. The GC content of the type genome is 47.97 % and the genome length is 2.17 Mbp.

Description of *Candidatus* Vatilosa funamitas sp. nov.

Candidatus Vatilosa funamitas (NL. fem. n. *funamitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UA16 sp002448555*. The type genome for the species is the GenBank assembly GCA_002448555.1. The GC content of the type genome is 56.03 % and the genome length is 2.05 Mbp.

Description of *Candidatus* Vatilosa furibastra sp. nov.

Candidatus Vatilosa furibastra (NL. fem. n. *furibastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UA16 sp002477505*. The type genome for the species is the GenBank assembly GCA_002389585.1. The GC content of the type genome is 50.71 % and the genome length is 1.76 Mbp.

Description of *Candidatus* Vatilosa inlacibula sp. nov.

Candidatus Vatilosa inlacibula (NL. fem. n. *inlacibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UA16 sp002390405*. The type genome for the species is the GenBank assembly GCA_002390405.1. The GC content of the type genome is 50.78 % and the genome length is 2.27 Mbp.

Description of *Candidatus* Vatilosa pedifivita sp. nov.

Candidatus Vatilosa pedifivita (NL. fem. n. *pedifivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UA16 sp002690915*. The type genome for the species is the GenBank assembly GCA_002725055.1. The GC content of the type genome is 52.64 % and the genome length is 2.49 Mbp.

Description of *Candidatus* Vatilosa retecax sp. nov.

Candidatus Vatilosa retecax (NL. fem. n. *retecax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UA16 sp002863125*. The type genome for the species is the GenBank assembly GCA_002323545.1. The GC content of the type genome is 56.53 % and the genome length is 1.89 Mbp.

Description of *Candidatus* Vatilula pragmastra sp. nov.

Candidatus Vatilula pragmastra (NL. fem. n. *pragmastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *VENG01 sp009711705*. The type genome for the species is the GenBank assembly GCA_009711705.1. The GC content of the type genome is 43.93 % and the genome length is 4.3 Mbp.

Description of *Candidatus* Vatilula gen. nov.

Candidatus Vatilula (NL. fem. n. *Vatilula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *VENG01*. The type species for the genus is *Candidatus* Vatilula

pragmastra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *VENG01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vatilulaceae.

Description of *Candidatus* Vatilulaceae fam. nov.

Candidatus Vatilulaceae (NL. fem. n. *Vatilulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *VENG01.* The type genus for the taxon is *Candidatus* Vatilula .

According to GTDB R06-RS202, this family belongs to the order *Desulfotomaculales*.

Description of *Candidatus* Vavasana attesitura sp. nov.

Candidatus Vavasana attesitura (NL. fem. n. *attesitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4408 sp002389785*. The type genome for the species is the GenBank assembly GCA_002389785.1. The GC content of the type genome is 36.76 % and the genome length is 2.65 Mbp.

Description of *Candidatus* Vavasana gen. nov.

Candidatus Vavasana (NL. fem. n. *Vavasana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA4408*. The type species for the genus is *Candidatus* Vavasana attesitura .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA4408*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vavasanaceae.

Description of *Candidatus* Vavasanaceae fam. nov.

Candidatus Vavasanaceae (NL. fem. n. *Vavasanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA4408.* The type genus for the taxon is *Candidatus* Vavasana .

According to the original version of GTDB R06-RS202, this family belongs to the order *AKYH767*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Satacosales.

Description of *Candidatus* Vavasaria metabentia sp. nov.

Candidatus Vavasaria metabentia (NL. fem. n. *metabentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HO2-45-13 sp001821765*. The type genome for the species is the GenBank assembly GCA_001819835.1. The GC content of the type genome is 44.14 % and the genome length is 0.89 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 0.2 micron filter; full assembly".

Description of *Candidatus* Vavasaria gen. nov.

Candidatus Vavasaria (NL. fem. n. *Vavasaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *HO2-45-13*. The type species for the genus is *Candidatus* Vavasaria metabentia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GWA2-47-10b*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Bipatanaceae.

Description of *Candidatus* Vavasella bipinousia sp. nov.

Candidatus Vavasella bipinousia (NL. fem. n. *bipinousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIQBG01 sp903870055*. The type genome for the species is the GenBank assembly GCA_903870055.1. The GC content of the type genome is 53.28 % and the genome length is 2.05 Mbp.

Description of *Candidatus* Vavasella gen. nov.

Candidatus Vavasella (NL. fem. n. *Vavasella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIQBG01*. The type species for the genus is *Candidatus* Vavasella bipinousia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Vavasella cuticitio sp. nov.

Candidatus Vavasella cuticitio (NL. fem. n. *cuticitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIQBG01 sp009938325*. The type genome for the species is the GenBank assembly RS_GCF_009938325.1. The GC content of the type genome is 54.2 % and the genome length is 2.45 Mbp.

Description of *Candidatus* Vavasia halucitica sp. nov.

Candidatus Vavasia halucitica (NL. fem. n. *halucitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3946 sp002385755*. The type genome for the species is the GenBank assembly GCA_002385755.1. The GC content of the type genome is 47.63 % and the genome length is 1.45 Mbp.

Description of *Candidatus* Vavasia gen. nov.

Candidatus Vavasia (NL. fem. n. *Vavasia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA3946*. The type species for the genus is *Candidatus* Vavasia halucitica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-698*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Sataciaceae.

Description of *Candidatus* Vavasia relenimonas sp. nov.

Candidatus Vavasia relenimonas (NL. fem. n. *relenimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3946 sp002385575*. The type genome for the species is the GenBank assembly GCA_002385575.1. The GC content of the type genome is 52.28 % and the genome length is 1.37 Mbp.

Description of *Candidatus* Vavasida obnoxago sp. nov.

Candidatus Vavasida obnoxago (NL. fem. n. *obnoxago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PHAN01 sp002841695*. The type genome for the species is the GenBank assembly GCA_002841695.1. The GC content of the type genome is 52.72 % and the genome length is 2.06 Mbp.

Description of *Candidatus* Vavasida gen. nov.

Candidatus Vavasida (NL. fem. n. *Vavasida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PHAN01*. The type species for the genus is *Candidatus* Vavasida obnoxago .

According to the original version of GTDB R06-RS202, this genus belongs to the family *PHAN01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vavasidaceae.

Description of *Candidatus* Vavasidaceae fam. nov.

Candidatus Vavasidaceae (NL. fem. n. *Vavasidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *PHAN01*. The type genus for the taxon is *Candidatus* Vavasida .

According to the original version of GTDB R06-RS202, this family belongs to the order *PHAN01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Vavasidales.

Description of *Candidatus* Vavasidales ord. nov.

Candidatus Vavasidales (NL. fem. n. *Vavasidales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this taxon is *PHAN01*. The type genus for the taxon is *Candidatus* Vavasida .

According to the GTDB R06-RS202, this order belongs to the class *Endomicrobia*.

Description of *Candidatus* Vavasosa impavastra sp. nov.

Candidatus Vavasosa impavastra (NL. fem. n. *impavastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UM-FILTER-53-11 sp002788775*. The type genome for the species is the GenBank assembly GCA_002788775.1. The GC content of the type genome is 53.04 % and the genome length is 1.2 Mbp.

Description of *Candidatus* Vavasosa gen. nov.

Candidatus Vavasosa (NL. fem. n. *Vavasosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UM-FILTER-53-11*. The type species for the genus is *Candidatus* Vavasosa impavastra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UM-FILTER-53-11*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vavasosaceae.

Description of *Candidatus* Vavasosaceae fam. nov.

Candidatus Vavasosaceae (NL. fem. n. *Vavasosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UM-FILTER-53-11*. The type genus for the taxon is *Candidatus* Vavasosa .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA1369*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Malogiales.

Description of *Candidatus* Vavasula ensigitica sp. nov.

Candidatus Vavasula ensigitica (NL. fem. n. *ensigitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA11618 sp003539915*. The type genome for the species is the GenBank assembly GCA_003539915.1. The GC content of the type genome is 38.23 % and the genome length is 0.42 Mbp.

Description of *Candidatus* Vavasula gen. nov.

Candidatus Vavasula (NL. fem. n. *Vavasula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA11618*. The type species for the genus is *Candidatus* Vavasula ensigitica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA11618*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vavasulaceae.

Description of *Candidatus* Vavasulaceae fam. nov.

Candidatus Vavasulaceae (NL. fem. n. *Vavasulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA11618.* The type genus for the taxon is *Candidatus* Vavasula .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA6257*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Denomulales.

Description of *Candidatus* Vecoraria abantitio sp. nov.

Candidatus Vecoraria abantitio (NL. fem. n. *abantitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6053 sp003565815*. The type genome for the species is the GenBank assembly GCA_003565815.1. The GC content of the type genome is 57.31 % and the genome length is 3.66 Mbp.

Description of *Candidatus* Vecoraria gen. nov.

Candidatus Vecoraria (NL. fem. n. *Vecoraria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this genus is *UBA6053*. The type species for the genus is *Candidatus* Vecoraria abantitio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA6053*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vecorariaceae.

Description of *Candidatus* Vecorariaceae fam. nov.

Candidatus Vecorariaceae (NL. fem. n. *Vecorariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA6053.* The type genus for the taxon is *Candidatus* Vecoraria .

According to the original version of GTDB R06-RS202, this family belongs to the order *SS1-B-03-39*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Nutamidales.

Description of *Candidatus* Vecoraria holovago sp. nov.

Candidatus Vecoraria holovago (NL. fem. n. *holovago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6053 sp003565035*. The type genome for the species is the GenBank assembly GCA_003565035.1. The GC content of the type genome is 58.19 % and the genome length is 3.89 Mbp.

Description of *Candidatus* Vecoraria mahemilega sp. nov.

Candidatus Vecoraria mahemilega (NL. fem. n. *mahemilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6053 sp002429005*. The type genome for the species is the GenBank assembly GCA_002429005.1. The GC content of the type genome is 54.81 % and the genome length is 5.78 Mbp.

Description of *Candidatus* Vecoraria offuligena sp. nov.

Candidatus Vecoraria offuligena (NL. fem. n. *offuligena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6053 sp002429065*. The type genome for the species is the GenBank assembly GCA_002429065.1. The GC content of the type genome is 54.98 % and the genome length is 5.69 Mbp.

Description of *Candidatus* Vecorella adnumago sp. nov.

Candidatus Vecorella adnumago (NL. fem. n. *adnumago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *NAK19 sp003130835*. The type genome for the species is the GenBank assembly GCA_003130835.1. The GC content of the type genome is 51.18 % and the genome length is 3.45 Mbp.

Description of *Candidatus* Vecorella gen. nov.

Candidatus Vecorella (NL. fem. n. *Vecorella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *NAK19*. The type species for the genus is *Candidatus* Vecorella adnumago .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA4823*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Habacidaceae.

Description of *Candidatus* Vecorella nicotigena sp. nov.

Candidatus Vecorella nicotigena (NL. fem. n. *nicotigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *NAK19 sp003327455*. The type genome for the species is the GenBank assembly GCA_003327455.1. The GC content of the type genome is 51.4 % and the genome length is 3.9 Mbp.

Description of *Candidatus* Vecoria feficimonas sp. nov.

Candidatus Vecoria feficimonas (NL. fem. n. *feficimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *Spiro-02 sp001604275*. The type genome for the species is the GenBank assembly GCA_002306015.1. The GC content of the type genome is 55.1 % and the genome length is 2.45 Mbp.

Description of *Candidatus* Vecoria gen. nov.

Candidatus Vecoria (NL. fem. n. *Vecoria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Spiro-02*. The type species for the genus is *Candidatus* Vecoria feficimonas .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Vecorida nubifilenta sp. nov.

Candidatus Vecorida nubifilenta (NL. fem. n. *nubifilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *VMDI01 sp008080915*. The type genome for the species is the GenBank assembly GCA_009920215.1. The GC content of the type genome is 36.8 % and the genome length is 1.05 Mbp.

Description of *Candidatus* Vecorida gen. nov.

Candidatus Vecorida (NL. fem. n. *Vecorida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *VMDI01*. The type species for the genus is *Candidatus* Vecorida nubifilenta .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Vecorosa fidenitura sp. nov.

Candidatus Vecorosa fidenitura (NL. fem. n. *fidenitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002791395 sp002771355*. The type genome for the species is the GenBank assembly GCA_002771355.1. The GC content of the type genome is 39.26 % and the genome length is 0.99 Mbp.

Description of *Candidatus* Vecorosa gen. nov.

Candidatus Vecorosa (NL. fem. n. *Vecorosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-002791395*. The type species for the genus is *Candidatus* Vecorosa fidenitura .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GCA-002791395*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vecorosaceae.

Description of *Candidatus* Vecorosaceae fam. nov.

Candidatus Vecorosaceae (NL. fem. n. *Vecorosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *GCA-002791395.* The type genus for the taxon is *Candidatus* Vecorosa .

According to the original version of GTDB R06-RS202, this family belongs to the order *4484-211*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Delapellales.

Description of *Candidatus* Vecorula aclasimonia sp. nov.

Candidatus Vecorula aclasimonia (NL. fem. n. *aclasimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4733 sp002404055*. The type genome for the species is the GenBank assembly GCA_002404055.1. The GC content of the type genome is 64.95 % and the genome length is 7.56 Mbp.

Description of *Candidatus* Vecorula gen. nov.

Candidatus Vecorula (NL. fem. n. *Vecorula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA4733*. The type species for the genus is *Candidatus* Vecorula aclasimonia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA4733*. According to the renamed version of GTDB R06-RS202, this taxon belongs to

the family *Candidatus* Vecorulaceae.

Description of *Candidatus* Vecorulaceae fam. nov.

Candidatus Vecorulaceae (NL. fem. n. *Vecorulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA4733.* The type genus for the taxon is *Candidatus* Vecorula .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA4733*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Vecorulales.

Description of *Candidatus* Vecorulales ord. nov.

Candidatus Vecorulales (NL. fem. n. *Vecorulales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA4733.* The type genus for the taxon is *Candidatus* Vecorula .

According to the original version of GTDB R06-RS202, this family belongs to the class *UBA4733*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Vecorulae.

Description of *Candidatus* Vecorulae class. nov.

Candidatus Vecorulae (NL. fem. n. *c__Vecorulae* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA4733.* The type genus for the taxon is *Candidatus* Vecorula .

According to GTDB R06-RS202, this class belongs to the phylum *Chloroflexota*.

Description of *Candidatus* Vehemana divulilenta sp. nov.

Candidatus Vehemana divulilenta (NL. fem. n. *divulilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4675 sp002405165*. The type genome for the species is the GenBank assembly GCA_002436875.1. The GC content of the type genome is 35.42 % and the genome length is 1.51 Mbp.

Description of *Candidatus* Vehemana gen. nov.

Candidatus Vehemana (NL. fem. n. *Vehemana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA4675*. The type species for the genus is *Candidatus* Vehemana divulilenta .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Vehemaria catocivita sp. nov.

Candidatus Vehemaria catocivita (NL. fem. n. *catocivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SXXK01 sp003669615*. The type genome for the species is the GenBank assembly GCA_003669615.1. The GC content of the type genome is 54.81 % and the genome length is 3.77 Mbp.

Description of *Candidatus* Vehemaria gen. nov.

Candidatus Vehemaria (NL. fem. n. *Vehemaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SXXK01*. The type species for the genus is *Candidatus* Vehemaria catocivita .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Vehemaria conibetta sp. nov.

Candidatus Vehemaria conibetta (NL. fem. n. *conibetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SXXK01 sp903896675*. The type genome for the species is the GenBank assembly GCA_903872835.1. The GC content of the type genome is 59.38 % and the genome length is 5.38 Mbp.

Description of *Candidatus* Vehemaria decomitura sp. nov.

Candidatus Vehemaria decomitura (NL. fem. n. *decomitura* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SXXK01 sp005791255*. The type genome for the species is the GenBank assembly GCA_014192315.1. The GC content of the type genome is 59.44 % and the genome length is 6.34 Mbp.

Description of *Candidatus* Vehemaria denavitoga sp. nov.

Candidatus Vehemaria denavitoga (NL. fem. n. *denavitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SXXK01 sp003670925*. The type genome for the species is the GenBank assembly GCA_003670925.1. The GC content of the type genome is 53.77 % and the genome length is 5.78 Mbp.

Description of *Candidatus* Vehemaria dilecax sp. nov.

Candidatus Vehemaria dilecax (NL. fem. n. *dilecax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SXXK01 sp903924405*. The type genome for the species is the GenBank assembly GCA_903857035.1. The GC content of the type genome is 57.76 % and the genome length is 6.43 Mbp.

Description of *Candidatus* Vehemaria fuligatio sp. nov.

Candidatus Vehemaria fuligatio (NL. fem. n. *fuligatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SXXK01 sp903871805*. The type genome for the species is the GenBank assembly GCA_903924375.1. The GC content of the type genome is 55.26 % and the genome length is 6.74 Mbp.

Description of *Candidatus* Vehemaria subinitudo sp. nov.

Candidatus Vehemaria subinitudo (NL. fem. n. *subinitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SXXK01 sp903858815*. The type genome for the species is the GenBank assembly GCA_903847555.1. The GC content of the type genome is 57.98 % and the genome length is 6.86 Mbp.

Description of *Candidatus* Vehemia cinipifica sp. nov.

Candidatus Vehemia cinipifica (NL. fem. n. *cinipifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA11073 sp013289145*. The type genome for the species is the GenBank assembly GCA_013289145.1. The GC content of the type genome is 52.84 % and the genome length is 1.42 Mbp.

Description of *Candidatus* Vehemia gen. nov.

Candidatus Vehemia (NL. fem. n. *Vehemia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA11073*. The type species for the genus is *Candidatus* Vehemia cinipifica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA11073*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vehemiaceae.

Description of *Candidatus* Vehemiaceae fam. nov.

Candidatus Vehemiaceae (NL. fem. n. *Vehemiaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA11073.* The type genus for the taxon is *Candidatus* Vehemia .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA11073*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Vehemiales.

Description of *Candidatus* Vehemiales ord. nov.

Candidatus Vehemiales (NL. fem. n. *Vehemiales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this taxon is *UBA11073*. The type genus for the taxon is *Candidatus* Vehemia .

According to the GTDB R06-RS202, this order belongs to the class *Alphaproteobacteria*.

Description of *Candidatus* Vehemia loripitio sp. nov.

Candidatus Vehemia loripitio (NL. fem. n. *loripitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA11073 sp003536545*. The type genome for the species is the GenBank assembly GCA_003536545.1. The GC content of the type genome is 50.72 % and the genome length is 1.36 Mbp.

Description of *Candidatus* Vehemida algifivita sp. nov.

Candidatus Vehemida algifivita (NL. fem. n. *algifivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6098 sp002428525*. The type genome for the species is the GenBank assembly GCA_002428525.1. The GC content of the type genome is 53.52 % and the genome length is 2.5 Mbp.

Description of *Candidatus* Vehemida gen. nov.

Candidatus Vehemida (NL. fem. n. *Vehemida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA6098*. The type species for the genus is *Candidatus* Vehemida algifivita .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA6098*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vehemidaceae.

Description of *Candidatus* Vehemidaceae fam. nov.

Candidatus Vehemidaceae (NL. fem. n. *Vehemidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA6098*. The type genus for the taxon is *Candidatus* Vehemida .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA6098*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Vehemidales.

Description of *Candidatus* Vehemidales ord. nov.

Candidatus Vehemidales (NL. fem. n. *Vehemidales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA6098.* The type genus for the taxon is *Candidatus* Vehemida .

According to the original version of GTDB R06-RS202, this family belongs to the class *UBA6098*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Vehemidae.

Description of *Candidatus* Vehemidae class. nov.

Candidatus Vehemidae (NL. fem. n. *c__Vehemidae* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA6098.* The type genus for the taxon is *Candidatus* Vehemida .

According to the original version of GTDB R06-RS202, this family belongs to the phylum *UBP14*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the phylum *Candidatus* Nutamellota.

Description of *Candidatus* Vehemida perabisca sp. nov.

Candidatus Vehemida perabisca (NL. fem. n. *perabisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6098 sp011388305*. The type genome for the species is the GenBank assembly GCA_011388305.1. The GC content of the type genome is 54.45 % and the genome length is 2.15 Mbp.

Description of *Candidatus* Vehemosa actarifica sp. nov.

Candidatus Vehemosa actarifica (NL. fem. n. *actarifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *JACMKV01 sp014379915*. The type genome for the species is the GenBank assembly GCA_014379915.1. The GC content of the type genome is 59.27 % and the genome length is 2.56 Mbp.

Description of *Candidatus* Vehemosa gen. nov.

Candidatus Vehemosa (NL. fem. n. *Vehemosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACMKV01*. The type species for the genus is *Candidatus* Vehemosa actarifica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JACMKV01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vehemosaceae.

Description of *Candidatus* Vehemosaceae fam. nov.

Candidatus Vehemosaceae (NL. fem. n. *Vehemosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JACMKV01.* The type genus for the taxon is *Candidatus* Vehemosa .

According to GTDB R06-RS202, this family belongs to the order *Burkholderiales*.

Description of *Candidatus* Vehemosa lanugitia sp. nov.

Candidatus Vehemosa lanugitia (NL. fem. n. *lanugitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACMKV01 sp013695435*. The type genome for the species is the GenBank assembly GCA_013695435.1. The GC content of the type genome is 59.98 % and the genome length is 2.97 Mbp.

Description of *Candidatus* Vehemula pecunessa sp. nov.

Candidatus Vehemula pecunessa (NL. fem. n. *pecunessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA956 sp903878115*. The type genome for the species is the GenBank assembly GCA_903878115.1. The GC content of the type genome is 49.67 %

and the genome length is 4.41 Mbp.

Description of *Candidatus* Vehemula gen. nov.

Candidatus Vehemula (NL. fem. n. *Vehemula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA956*. The type species for the genus is *Candidatus* Vehemula pecunessa .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Vehemula plostibra sp. nov.

Candidatus Vehemula plostibra (NL. fem. n. *plostibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA956 sp004293285*. The type genome for the species is the GenBank assembly GCA_004293285.1. The GC content of the type genome is 53.82 % and the genome length is 3.02 Mbp.

Description of *Candidatus* Vehemula velivitrix sp. nov.

Candidatus Vehemula velivitrix (NL. fem. n. *velivitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA956 sp002293145*. The type genome for the species is the GenBank assembly GCA_002293145.1. The GC content of the type genome is 51.9 % and the genome length is 3.38 Mbp.

Description of *Candidatus* Vehicana risibitio sp. nov.

Candidatus Vehicana risibitio (NL. fem. n. *risibitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Pla86 sp007751255*. The type genome for the species is the GenBank assembly RS_GCF_007748095.1. The GC content of the type genome is 70.31 % and the genome length is 6.95 Mbp.

Description of *Candidatus* Vehicana gen. nov.

Candidatus Vehicana (NL. fem. n. *Vehicana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Pla86*. The type species for the genus is *Candidatus* Vehicana risibitio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GCA-002686595*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Domabosaceae.

Description of *Candidatus* Vehicaria catocastra sp. nov.

Candidatus Vehicaria catocastra (NL. fem. n. *catocastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS1484 sp900552285*. The type genome for the species is the GenBank assembly GCA_900552285.1. The GC content of the type genome is 50.1 % and the genome length is 1.58 Mbp.

Description of *Candidatus* Vehicaria gen. nov.

Candidatus Vehicaria (NL. fem. n. *Vehicaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UMGS1484*. The type species for the genus is *Candidatus* Vehicaria catocastra .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Vehicaria selibibula sp. nov.

Candidatus Vehicaria selibibula (NL. fem. n. *selibibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS1484 sp902388225*. The type genome for the species is the GenBank assembly GCA_902388225.1. The GC content of the type genome is 47.4 % and the genome length is 1.48 Mbp.

Description of *Candidatus* Vehicella biparousia sp. nov.

Candidatus Vehicella biparousia (NL. fem. n. *biparousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIUKV01 sp903899845*. The type genome for the species is the GenBank assembly GCA_903845245.1. The GC content of the type genome is 74.04 % and the genome length is 2.83 Mbp.

Description of *Candidatus* Vehicella gen. nov.

Candidatus Vehicella (NL. fem. n. *Vehicella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIUKV01*. The type species for the genus is *Candidatus* Vehicella biparousia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *PALSA-555*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Pocilulaceae.

Description of *Candidatus* Vehicia defaribra sp. nov.

Candidatus Vehicia defaribra (NL. fem. n. *defaribra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *OLB10 sp002455375*. The type genome for the species is the GenBank assembly GCA_003522815.1. The GC content of the type genome is 36.79 % and the genome length is 2.18 Mbp.

Description of *Candidatus* Vehicia gen. nov.

Candidatus Vehicia (NL. fem. n. *Vehicia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *OLB10*. The type species for the genus is *Candidatus* Vehicia defaribra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *OLB10*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vehiciaceae.

Description of *Candidatus* Vehiciaceae fam. nov.

Candidatus Vehiciaceae (NL. fem. n. *Vehiciaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *OLB10.* The type genus for the taxon is *Candidatus* Vehicia .

According to the original version of GTDB R06-RS202, this family belongs to the order *AKYH767-A*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Lenunanales.

Description of *Candidatus* Vehicia dilacax sp. nov.

Candidatus Vehicia dilacax (NL. fem. n. *dilacax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *OLB10 sp001567275*. The type genome for the species is the GenBank assembly GCA_001567275.1. The GC content of the type genome is 38.94 % and the genome length is 2.96 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "partial-nitritation anammox (PNA) reactor; full scale (600m3) reactor for the removal of ammonium from wastewater from the potato processing industry".

Description of *Candidatus* Vehicida semibetta sp. nov.

Candidatus Vehicida semibetta (NL. fem. n. *semibetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4664 sp002415345*. The type genome for the species is the GenBank assembly GCA_002415345.1. The GC content of the type genome is 54.63 % and the genome length is 0.97 Mbp.

Description of *Candidatus* Vehicida gen. nov.

Candidatus Vehicida (NL. fem. n. *Vehicida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA4664*. The type species for the genus is *Candidatus* Vehicida semibetta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA4664*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vehicidaceae.

Description of *Candidatus* Vehicidaceae fam. nov.

Candidatus Vehicidaceae (NL. fem. n. *Vehicidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA4664.* The type genus for the taxon is *Candidatus* Vehicida .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA4664*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Vehicidales.

Description of *Candidatus* Vehicidales ord. nov.

Candidatus Vehicidales (NL. fem. n. *Vehicidales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA4664.* The type genus for the taxon is *Candidatus* Vehicida .

According to the GTDB R06-RS202, this order belongs to the class *Saccharimonadia*.

Description of *Candidatus* Vehicosa bifaritica sp. nov.

Candidatus Vehicosa bifaritica (NL. fem. n. *bifaritica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *EC70 sp902591645*. The type genome for the species is the GenBank assembly GCA_902591645.1. The GC content of the type genome is 43.17 % and the genome length is 2.18 Mbp.

Description of *Candidatus* Vehicosa gen. nov.

Candidatus Vehicosa (NL. fem. n. *Vehicosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *EC70*. The type species for the genus is *Candidatus* Vehicosa bifaritica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DEV007*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Voragosaceae.

Description of *Candidatus* Vehicosa caselitia sp. nov.

Candidatus Vehicosa caselitia (NL. fem. n. *caselitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *EC70 sp002696885*. The type genome for the species is the GenBank assembly GCA_002696885.1. The GC content of the type genome is 38.29 % and the genome length is 1.55 Mbp.

Description of *Candidatus* Vehicosa ceromigena sp. nov.

Candidatus Vehicosa ceromigena (NL. fem. n. *ceromigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *EC70 sp002708885*. The type genome for the species is the GenBank assembly GCA_002448655.1. The GC content of the type genome is 43.41 % and the genome length is 2.23 Mbp.

Description of *Candidatus* Vehicosa coninessa sp. nov.

Candidatus Vehicosa coninessa (NL. fem. n. *coninessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *EC70 sp002712205*. The type genome for the species is the GenBank assembly GCA_002712205.1. The GC content of the type genome is 38.68 % and the genome length is 2.12 Mbp.

Description of *Candidatus* Vehicosa estovatio sp. nov.

Candidatus Vehicosa estovatio (NL. fem. n. *estovatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *EC70 sp013213965*. The type genome for the species is the GenBank assembly GCA_013213965.1. The GC content of the type genome is 43.07 % and the genome length is 3.28 Mbp.

Description of *Candidatus* Vehicosa filififorma sp. nov.

Candidatus Vehicosa filififorma (NL. fem. n. *filififorma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *EC70 sp002705125*. The type genome for the species is the GenBank assembly GCA_002705125.1. The GC content of the type genome is 38.82 % and the genome length is 2.98 Mbp.

Description of *Candidatus* Vehicosa fumifitica sp. nov.

Candidatus Vehicosa fumifitica (NL. fem. n. *fumifitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *EC70 sp014239335*. The type genome for the species is the GenBank assembly GCA_009937305.1. The GC content of the type genome is 42.75 % and the genome length is 3.49 Mbp.

Description of *Candidatus* Vehicosa indotatio sp. nov.

Candidatus Vehicosa indotatio (NL. fem. n. *indotatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *EC70 sp004211885*. The type genome for the species is the GenBank assembly GCA_004211885.1. The GC content of the type genome is 42.76 % and the genome length is 3.33 Mbp.

Description of *Candidatus* Vehicosa laxitatio sp. nov.

Candidatus Vehicosa laxitatio (NL. fem. n. *laxitatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *EC70 sp013911195*. The type genome for the species is the GenBank assembly GCA_013911195.1. The GC content of the type genome is 38.62 % and the genome length is 2.26 Mbp.

Description of *Candidatus* Vehicosa niteledo sp. nov.

Candidatus Vehicosa niteledo (NL. fem. n. *niteledo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *EC70 sp012960505*. The type genome for the species is the GenBank assembly GCA_012960505.1. The GC content of the type genome is 43.57 % and the genome length is 4.01 Mbp.

Description of *Candidatus* Vehicosa perabibra sp. nov.

Candidatus Vehicosa perabibra (NL. fem. n. *perabibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *EC70 sp902510815*. The type genome for the species is the GenBank assembly GCA_902510815.1. The GC content of the type genome is 39.07 % and the genome length is 2.2 Mbp.

Description of *Candidatus* Vehicosa seposousia sp. nov.

Candidatus Vehicosa seposousia (NL. fem. n. *seposousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *EC70 sp002731805*. The type genome for the species is the GenBank assembly GCA_002731805.1. The GC content of the type genome is 38.68 % and the genome length is 2.07 Mbp.

Description of *Candidatus* Vehicosa sicaritica sp. nov.

Candidatus Vehicosa sicaritica (NL. fem. n. *sicaritica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *EC70 sp002684575*. The type genome for the species is the GenBank assembly GCA_002709265.1. The GC content of the type genome is 38.43 % and the genome length is 1.37 Mbp.

Description of *Candidatus* Veillonella acontitica sp. nov.

Candidatus Veillonella acontitica (NL. fem. n. *acontitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Veillonella sp900550175*. The type genome for the species is the GenBank assembly GCA_900550175.1. The GC content of the type genome is 38.38 % and the genome length is 1.86 Mbp.

Description of *Candidatus* Veillonella alcalimonia sp. nov.

Candidatus Veillonella alcalimonia (NL. fem. n. *alcalimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Veillonella sp900556785*. The type genome for the species is the GenBank assembly GCA_900556785.1. The GC content of the type genome is 38.49 % and the genome length is 1.62 Mbp.

Description of *Candidatus* Veillonella alsidugo sp. nov.

Candidatus Veillonella alsidugo (NL. fem. n. *alsidugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Veillonella sp900549805*. The type genome for the species is the GenBank assembly GCA_900549805.1. The GC content of the type genome is 45.03 % and the genome length is 1.31 Mbp.

Description of *Candidatus* Veillonella bisulitudo sp. nov.

Candidatus Veillonella bisulitudo (NL. fem. n. *bisulitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Veillonella sp900766125*. The type genome for the species is the GenBank assembly GCA_900766125.1. The GC content of the type genome is 37.51 % and the genome length is 1.82 Mbp.

Description of *Candidatus* Veillonella cibaricella sp. nov.

Candidatus Veillonella cibaricella (NL. fem. n. *cibaricella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Veillonella sp003463825*. The type genome for the species is the GenBank assembly RS_GCF_902365095.1. The GC content of the type genome is 38.75 % and the genome length is 2.01 Mbp.

Description of *Candidatus* Veillonella colimitia sp. nov.

Candidatus Veillonella colimitia (NL. fem. n. *colimitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Veillonella sp900549845*. The type genome for the species is the GenBank assembly GCA_900549845.1. The GC content of the type genome is 38.73 % and the genome length is 1.66 Mbp.

Description of *Candidatus* Veillonella denupessa sp. nov.

Candidatus Veillonella denupessa (NL. fem. n. *denupessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Veillonella sp900757715*. The type genome for the species is the GenBank assembly GCA_900757715.1. The GC content of the type genome is 38.58 % and the genome length is 2.57 Mbp.

Description of *Candidatus* Veillonella depelilenta sp. nov.

Candidatus Veillonella depelilenta (NL. fem. n. *depelilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Veillonella sp900550455*. The type genome for the species is the GenBank assembly GCA_900764795.1. The GC content of the type genome is 44.19 % and the genome length is 1.62 Mbp.

Description of *Candidatus* Veillonella figiledo sp. nov.

Candidatus Veillonella figiledo (NL. fem. n. *figiledo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Veillonella sp900538355*. The type genome for the species is the GenBank assembly GCA_900538355.1. The GC content of the type genome is 38.83 % and the genome length is 2.09 Mbp.

Description of *Candidatus* Veillonella monogifica sp. nov.

Candidatus Veillonella monogifica (NL. fem. n. *monogifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Veillonella sp900765235*. The type genome for the species is the GenBank assembly GCA_900765235.1. The GC content of the type genome is 39.06 % and the genome length is 1.61 Mbp.

Description of *Candidatus* Veillonella optumilega sp. nov.

Candidatus Veillonella optumilega (NL. fem. n. *optumilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Veillonella sp002959755*. The type genome for the species is the GenBank assembly RS_GCF_002959755.1. The GC content of the type genome is 38.86 % and the genome length is 2.05 Mbp.

Description of *Candidatus* Veillonella releniforma sp. nov.

Candidatus Veillonella releniforma (NL. fem. n. *releniforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Veillonella sp900552445*. The type genome for the species is the GenBank assembly GCA_900552445.1. The GC content of the type genome is 40.55 % and the genome length is 1.36 Mbp.

Description of *Candidatus* Veillonella ridibibra sp. nov.

Candidatus Veillonella ridibibra (NL. fem. n. *ridibibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Veillonella sp900545205*. The type genome for the species is the GenBank assembly GCA_902406255.1. The GC content of the type genome is 38.77 % and the genome length is 1.86 Mbp.

Description of *Candidatus* Veillonella sanabimonas sp. nov.

Candidatus Veillonella sanabimonas (NL. fem. n. *sanabimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Veillonella sp900552715*. The type genome for the species is the GenBank assembly GCA_900552715.1. The GC content of the type genome is 38.66 % and the genome length is 1.87 Mbp.

Description of *Candidatus* Veillonella semivax sp. nov.

Candidatus Veillonella semivax (NL. fem. n. *semivax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Veillonella sp009929605*. The type genome for the species is the GenBank assembly GCA_009929605.1. The GC content of the type genome is 39.93 % and the genome length is 2.01 Mbp.

Description of *Candidatus* Veillonella curabibra sp. nov.

Candidatus Veillonella curabibra (NL. fem. n. *curabibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Veillonella_A sp900545795*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_900545795.1. The GC content of the type genome is 38.94 % and the genome length is 2.15 Mbp.

Description of *Candidatus* Veillonella necubisca sp. nov.

Candidatus Veillonella necubisca (NL. fem. n. *necubisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Veillonella_A sp010093125*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_010093125.1. The GC content of the type genome is 39.6 % and the genome length is 2.25 Mbp.

Description of *Candidatus* Veillonella nubigimonia sp. nov.

Candidatus Veillonella nubigimonia (NL. fem. n. *nubigimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Veillonella_A sp000431435*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_008658315.1. The GC content of the type genome is 42.77 % and the genome length is 2.45 Mbp.

Description of *Candidatus* Veillonella risibivita sp. nov.

Candidatus Veillonella risibivita (NL. fem. n. *risibivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Veillonella_A sp900765165*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_900765165.1. The GC content of the type genome is 47.73 % and the genome length is 2.48 Mbp.

Description of *Candidatus* Velifana bipenigena sp. nov.

Candidatus Velifana bipenigena (NL. fem. n. *bipenigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2716065 sp002716065*. The type genome for the species is the GenBank assembly GCA_002716065.1. The GC content of the type genome is 32.62 % and the genome length is 2.33 Mbp.

Description of *Candidatus* Velifana gen. nov.

Candidatus Velifana (NL. fem. n. *Velifana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2716065*. The type species for the genus is *Candidatus* Velifana bipenigena .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA10066*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Favonellaceae.

Description of *Candidatus* Velifaria invorax sp. nov.

Candidatus Velifaria invorax (NL. fem. n. *invorax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002701945 sp002701945*. The type genome for the species is the GenBank assembly GCA_002701945.1. The GC content of the type genome is 32.49 % and the genome length is 1.57 Mbp.

Description of *Candidatus* Velifaria gen. nov.

Candidatus Velifaria (NL. fem. n. *Velifaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-002701945*. The type species for the genus is *Candidatus* Velifaria invorax .

According to the original version of GTDB R06-RS202, this genus belongs to the family *TCS55*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Manufidaceae.

Description of *Candidatus* Velifaria monodilenta sp. nov.

Candidatus Velifaria monodilenta (NL. fem. n. *monodilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002701945 sp002701785*. The type genome for the species is the GenBank assembly GCA_002701785.1. The GC content of the type genome is 32.8 % and the genome length is 1.82 Mbp.

Description of *Candidatus* Velifaria obsoriforma sp. nov.

Candidatus Velifaria obsoriforma (NL. fem. n. *obsoriforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002701945 sp004321715*. The type genome for the species is the GenBank assembly GCA_004321715.1. The GC content of the type genome is 33.63 % and the genome length is 1.63 Mbp.

Description of *Candidatus* Velifaria redunisca sp. nov.

Candidatus Velifaria redunisca (NL. fem. n. *redunisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002701945 sp012964215*. The type genome for the species is the GenBank assembly GCA_012964215.1. The GC content of the type genome is 41.08 % and the genome length is 2.16 Mbp.

Description of *Candidatus* Velifella colimivita sp. nov.

Candidatus Velifella colimivita (NL. fem. n. *colimivita* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *LPB0142 sp001856665*. The type genome for the species is the GenBank assembly RS_GCF_001856665.1. The GC content of the type genome is 66.9 % and the genome length is 3.78 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "sea water".

Description of *Candidatus* Velifella gen. nov.

Candidatus Velifella (NL. fem. n. *Velifella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *LPB0142*. The type species for the genus is *Candidatus* Velifella colimivita .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Velifia inpudibra sp. nov.

Candidatus Velifia inpudibra (NL. fem. n. *inpudibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *0-14-0-80-59-12 sp002779395*. The type genome for the species is the GenBank assembly GCA_002779395.1. The GC content of the type genome is 59.07 % and the genome length is 2.2 Mbp.

Description of *Candidatus* Velifia gen. nov.

Candidatus Velifia (NL. fem. n. *Velifia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *0-14-0-80-59-12*. The type species for the genus is *Candidatus* Velifia inpudibra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *0-14-0-80-59-12*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Velifiaceae.

Description of *Candidatus* Velifiaceae fam. nov.

Candidatus Velifiaceae (NL. fem. n. *Velifiaceae* a name created from the name of the

type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *0-14-0-80-59-12.* The type genus for the taxon is *Candidatus* Velifia .

According to the original version of GTDB R06-RS202, this family belongs to the order *0-14-0-80-59-12*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Velifiales.

Description of *Candidatus* Velifiales ord. nov.

Candidatus Velifiales (NL. fem. n. *Velifiales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *0-14-0-80-59-12.* The type genus for the taxon is *Candidatus* Velifia .

According to the original version of GTDB R06-RS202, this family belongs to the class *UBA10030*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Vagabanae.

Description of *Candidatus* Velifida imbelastra sp. nov.

Candidatus Velifida imbelastra (NL. fem. n. *imbelastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABSQK01 sp013215875*. The type genome for the species is the GenBank assembly GCA_013215875.1. The GC content of the type genome is 42.29 % and the genome length is 5.49 Mbp.

Description of *Candidatus* Velifida gen. nov.

Candidatus Velifida (NL. fem. n. *Velifida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABSQK01*. The type species for the genus is *Candidatus* Velifida imbelastra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JABSQK01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Velifidaceae.

Description of *Candidatus* Velifidaceae fam. nov.

Candidatus Velifidaceae (NL. fem. n. *Velifidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JABSQK01.* The type genus for the taxon is *Candidatus* Velifida .

According to the original version of GTDB R06-RS202, this family belongs to the order *JABSQK01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Velifidales.

Description of *Candidatus* Velifidales ord. nov.

Candidatus Velifidales (NL. fem. n. *Velifidales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JABSQK01.* The type genus for the taxon is *Candidatus* Velifida .

According to the GTDB R06-RS202, this order belongs to the class *Lentisphaeria*.

Description of *Candidatus* Velifosa munififorma sp. nov.

Candidatus Velifosa munififorma (NL. fem. n. *munififorma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2708265 sp002708265*. The type genome for the species is the GenBank assembly GCA_002708265.1. The GC content of the type genome is 42.77 % and the genome length is 1.69 Mbp.

Description of *Candidatus* Velifosa gen. nov.

Candidatus Velifosa (NL. fem. n. *Velifosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2708265*. The type species for the genus is *Candidatus* Velifosa munififorma .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Velifula adfamimonas sp. nov.

Candidatus Velifula adfamimonas (NL. fem. n. *adfamimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2862 sp902778995*. The type genome for the species is the GenBank assembly GCA_902778995.1. The GC content of the type genome is 60.03 % and the genome length is 3.88 Mbp.

Description of *Candidatus* Velifula gen. nov.

Candidatus Velifula (NL. fem. n. *Velifula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA2862*. The type species for the genus is *Candidatus* Velifula adfamimonas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-74*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Subabosaceae.

Description of *Candidatus* Velifula admulitica sp. nov.

Candidatus Velifula admulitica (NL. fem. n. *admulitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2862 sp902777335*. The type genome for the species is the GenBank assembly GCA_902777335.1. The GC content of the type genome is 63.05 % and the genome length is 3.64 Mbp.

Description of *Candidatus* Velifula bicoricula sp. nov.

Candidatus Velifula bicoricula (NL. fem. n. *bicoricula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2862 sp902790525*. The type genome for the species is the GenBank assembly GCA_902790525.1. The GC content of the type genome is 62.03 % and the genome length is 3.75 Mbp.

Description of *Candidatus* Velifula bigariforma sp. nov.

Candidatus Velifula bigariforma (NL. fem. n. *bigariforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2862 sp902798105*. The type genome for the species is the GenBank assembly GCA_902798105.1. The GC content of the type genome is 60.74 % and the genome length is 3.24 Mbp.

Description of *Candidatus* Velifula buxifitoga sp. nov.

Candidatus Velifula buxifitoga (NL. fem. n. *buxifitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2862 sp900315585*. The type genome for the species is the GenBank assembly GCA_900315585.1. The GC content of the type genome is 62.8 % and the genome length is 2.77 Mbp.

Description of *Candidatus* Velifula carucitica sp. nov.

Candidatus Velifula carucitica (NL. fem. n. *carucitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2862 sp902799045*. The type genome for the species is the GenBank assembly GCA_902799045.1. The GC content of the type genome is 63.32 % and the genome length is 2.91 Mbp.

Description of *Candidatus* Velifula cenoditudo sp. nov.

Candidatus Velifula cenoditudo (NL. fem. n. *cenoditudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2862 sp902778045*. The type genome for the species is the GenBank assembly GCA_902778045.1. The GC content of the type genome is 63.65 % and the genome length is 2.91 Mbp.

Description of *Candidatus* Velifula decinitura sp. nov.

Candidatus Velifula decinitura (NL. fem. n. *decinitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2862 sp900318045*. The type genome for the species is the GenBank assembly GCA_902770545.1. The GC content of the type genome is 59.35 % and the genome length is 3.93 Mbp.

Description of *Candidatus* Velifula depopitio sp. nov.

Candidatus Velifula depopitio (NL. fem. n. *depopitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2862 sp902799465*. The type genome for the species is the GenBank assembly GCA_902799465.1. The GC content of the type genome is 62.77 % and the genome length is 2.89 Mbp.

Description of *Candidatus* Velifula fatifigena sp. nov.

Candidatus Velifula fatifigena (NL. fem. n. *fatifigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2862 sp902793325*. The type genome for the species is the GenBank assembly GCA_902793325.1. The GC content of the type genome is 65.01 % and the genome length is 3.23 Mbp.

Description of *Candidatus* Velifula herinibra sp. nov.

Candidatus Velifula herinibra (NL. fem. n. *herinibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2862 sp002350605*. The type genome for the species is the GenBank assembly GCA_902765735.1. The GC content of the type genome is 62.98 % and the genome length is 2.92 Mbp.

Description of *Candidatus* Velifula indevimonas sp. nov.

Candidatus Velifula indevimonas (NL. fem. n. *indevimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2862 sp902765395*. The type genome for the species is the GenBank assembly GCA_902765395.1. The GC content of the type genome is 62.5 % and the genome length is 3.38 Mbp.

Description of *Candidatus* Velifula infisivita sp. nov.

Candidatus Velifula infisivita (NL. fem. n. *infisivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2862 sp902764285*. The type genome for the species is the GenBank assembly GCA_902764285.1. The GC content of the type genome is 63.24 % and the genome length is 2.82 Mbp.

Description of *Candidatus* Velifula inpelitoga sp. nov.

Candidatus Velifula inpelitoga (NL. fem. n. *inpelitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2862 sp902785105*. The type genome for the species is the GenBank assembly GCA_902785105.1. The GC content of the type genome is 59.68 % and the genome length is 3.44 Mbp.

Description of *Candidatus* Velifula levififica sp. nov.

Candidatus Velifula levififica (NL. fem. n. *levififica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2862 sp902801165*. The type genome for the species is the GenBank assembly GCA_902801165.1. The GC content of the type genome is 63.31 % and the genome length is 3.55 Mbp.

Description of *Candidatus* Velifula lutulitia sp. nov.

Candidatus Velifula lutulitia (NL. fem. n. *lutulitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2862 sp902765305*. The type genome for the species is the GenBank assembly GCA_902765305.1. The GC content of the type genome is 60.53 % and the genome length is 3.88 Mbp.

Description of *Candidatus* Velifula retecimonas sp. nov.

Candidatus Velifula retecimonas (NL. fem. n. *retecimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *UBA2862 sp902790175*. The type genome for the species is the GenBank assembly GCA_902790175.1. The GC content of the type genome is 64.27 % and the genome length is 2.43 Mbp.

Description of *Candidatus* Velifula rubicitia sp. nov.

Candidatus Velifula rubicitia (NL. fem. n. *rubicitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2862 sp902800625*. The type genome for the species is the GenBank assembly GCA_902800625.1. The GC content of the type genome is 61.98 % and the genome length is 3.41 Mbp.

Description of *Candidatus* Velifula taraxitura sp. nov.

Candidatus Velifula taraxitura (NL. fem. n. *taraxitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2862 sp900317565*. The type genome for the species is the GenBank assembly GCA_902787545.1. The GC content of the type genome is 63.49 % and the genome length is 3.43 Mbp.

Description of *Candidatus* Velifula tumefitudo sp. nov.

Candidatus Velifula tumefitudo (NL. fem. n. *tumefitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2862 sp902773515*. The type genome for the species is the GenBank assembly GCA_902773515.1. The GC content of the type genome is 64.49 % and the genome length is 2.48 Mbp.

Description of *Candidatus* Velivana abhinitia sp. nov.

Candidatus Velivana abhinitia (NL. fem. n. *abhinitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5550 sp002418835*. The type genome for the species is the GenBank assembly GCA_002418835.1. The GC content of the type genome is 41.04 % and the genome length is 4.44 Mbp.

Description of *Candidatus* Velivana gen. nov.

Candidatus Velivana (NL. fem. n. *Velivana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA5550*. The type species for the genus is *Candidatus* Velivana abhinitia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA5550*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Velivanaceae.

Description of *Candidatus* Velivanaceae fam. nov.

Candidatus Velivanaceae (NL. fem. n. *Velivanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA5550.* The type genus for the taxon is *Candidatus* Velivana .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA4802*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Curabanales.

Description of *Candidatus* Velivana ampenimonia sp. nov.

Candidatus Velivana ampenimonia (NL. fem. n. *ampenimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5550 sp002069965*. The type genome for the species is the GenBank assembly GCA_002069965.1. The GC content of the type genome is 35.95 % and the genome length is 3.03 Mbp.

Description of *Candidatus* Velivana tigurigena sp. nov.

Candidatus Velivana tigurigena (NL. fem. n. *tigurigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5550 sp002425885*. The type genome for the species is the GenBank assembly GCA_002425885.1. The GC content of the type genome is 41.56 % and the genome length is 4.11 Mbp.

Description of *Candidatus* Velivaria camiligena sp. nov.

Candidatus Velivaria camiligena (NL. fem. n. *camiligena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SABY01 sp009928785*. The type genome for the species is the GenBank assembly GCA_009928785.1. The GC content of the type genome is 46.56 % and the genome length is 4.47 Mbp.

Description of *Candidatus* Velivaria gen. nov.

Candidatus Velivaria (NL. fem. n. *Velivaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SABY01*. The type species for the genus is *Candidatus* Velivaria camiligena .

According to the original version of GTDB R06-RS202, this genus belongs to the family *4484-276*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Bicubosaceae.

Description of *Candidatus* Velivaria mutabitura sp. nov.

Candidatus Velivaria mutabitura (NL. fem. n. *mutabitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SABY01 sp012523265*. The type genome for the species is the GenBank assembly GCA_010014445.1. The GC content of the type genome is 47.78 % and the genome length is 3.87 Mbp.

Description of *Candidatus* Velivella conibilega sp. nov.

Candidatus Velivella conibilega (NL. fem. n. *conibilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYTX01 sp012523635*. The type genome for the species is the GenBank assembly GCA_012523635.1. The GC content of the type genome is 59.2 % and the genome length is 2.35 Mbp.

Description of *Candidatus* Velivella gen. nov.

Candidatus Velivella (NL. fem. n. *Velivella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAYTX01*. The type species for the genus is *Candidatus* Velivella conibilega .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JAAYTX01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Velivellaceae.

Description of *Candidatus* Velivellaceae fam. nov.

Candidatus Velivellaceae (NL. fem. n. *Velivellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JAAYTX01*. The type genus for the taxon is *Candidatus* Velivella .

According to GTDB R06-RS202, this family belongs to the order *Elusimicrobiales*.

Description of *Candidatus* Velivia purulisca sp. nov.

Candidatus Velivia purulisca (NL. fem. n. *purulisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS693 sp900544555*. The type genome for the species is the GenBank assembly GCA_900544555.1. The GC content of the type genome is 50.54 % and the genome length is 2.29 Mbp.

Description of *Candidatus* Velivia gen. nov.

Candidatus Velivia (NL. fem. n. *Velivia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UMGS693*. The type species for the genus is *Candidatus* Velivia purulisca .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-138*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Selecellaceae.

Description of *Candidatus* Velivida betacicula sp. nov.

Candidatus Velivida betacicula (NL. fem. n. *betacicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WRAG01 sp009780345*. The type genome for the species is the GenBank assembly GCA_009780345.1. The GC content of the type genome is 45.84 % and the genome length is 2.05 Mbp.

Description of *Candidatus* Velivida gen. nov.

Candidatus Velivida (NL. fem. n. *Velivida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WRAG01*. The type species for the genus is *Candidatus* Velivida betacicula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *WRAG01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Velividaceae.

Description of *Candidatus* Velividaceae fam. nov.

Candidatus Velividaceae (NL. fem. n. *Velividaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *WRAG01.* The type genus for the taxon is *Candidatus* Velivida .

According to GTDB R06-RS202, this family belongs to the order *Monoglobales*.

Description of *Candidatus* Velivosa dicabimonia sp. nov.

Candidatus Velivosa dicabimonia (NL. fem. n. *dicabimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4419 sp002336245*. The type genome for the species is the GenBank assembly GCA_002390065.1. The GC content of the type genome is 44.59 % and the genome length is 2.65 Mbp.

Description of *Candidatus* Velivosa gen. nov.

Candidatus Velivosa (NL. fem. n. *Velivosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA4419*. The type species for the genus is *Candidatus* Velivosa dicabimonia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Velivula adgesedo sp. nov.

Candidatus Velivula adgesedo (NL. fem. n. *adgesedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *4484-219 sp003645965*. The type genome for the species is the GenBank assembly GCA_003645965.1. The GC content of the type genome is 43.02 % and the genome length is 2.42 Mbp.

Description of *Candidatus* Velivula gen. nov.

Candidatus Velivula (NL. fem. n. *Velivula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *4484-219*. The type species for the genus is *Candidatus* Velivula adgesedo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *4484-219*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Velivulaceae.

Description of *Candidatus* Velivulaceae fam. nov.

Candidatus Velivulaceae (NL. fem. n. *Velivulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *4484-219.* The type genus for the taxon is *Candidatus* Velivula .

According to the original version of GTDB R06-RS202, this family belongs to the order *JdFR-76*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Malogidales.

Description of *Candidatus* Velivula volunatica sp. nov.

Candidatus Velivula volunatica (NL. fem. n. *volunatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *4484-219 sp002085035*. The type genome for the species is the GenBank assembly GCA_003644765.1. The GC content of the type genome is 43.24 % and the genome length is 2.65 Mbp.

Description of *Candidatus* Venabana regigentia sp. nov.

Candidatus Venabana regigentia (NL. fem. n. *regigentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABCPG02 sp013333195*. The type genome for the species is the GenBank assembly GCA_013333165.2. The GC content of the type genome is 53.48 % and the genome length is 1.45 Mbp.

Description of *Candidatus* Venabana gen. nov.

Candidatus Venabana (NL. fem. n. *Venabana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABCPG02*. The type species for the genus is *Candidatus* Venabana regigentia .

According to GTDB R06-RS202, this genus belongs to the family _A.

Description of *Candidatus* Venabaria culibitudo sp. nov.

Candidatus Venabaria culibitudo (NL. fem. n. *culibitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1232 sp002309115*. The type genome for the species is the GenBank assembly GCA_902778555.1. The GC content of the type genome is 48.15 % and the genome length is 2.08 Mbp.

Description of *Candidatus* Venabaria gen. nov.

Candidatus Venabaria (NL. fem. n. *Venabaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1232*. The type species for the genus is *Candidatus* Venabaria

culibitudo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA932*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cenobanaceae.

Description of *Candidatus* Venabaria decupigena sp. nov.

Candidatus Venabaria decupigena (NL. fem. n. *decupigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1232 sp002315995*. The type genome for the species is the GenBank assembly GCA_002315995.1. The GC content of the type genome is 44.99 % and the genome length is 1.68 Mbp.

Description of *Candidatus* Venabaria dibapentia sp. nov.

Candidatus Venabaria dibapentia (NL. fem. n. *dibapentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1232 sp900769385*. The type genome for the species is the GenBank assembly RS_GCF_900769385.1. The GC content of the type genome is 43.82 % and the genome length is 1.94 Mbp.

Description of *Candidatus* Venabaria dilecitoga sp. nov.

Candidatus Venabaria dilecitoga (NL. fem. n. *dilecitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1232 sp900316795*. The type genome for the species is the GenBank assembly GCA_902766375.1. The GC content of the type genome is 47.8 % and the genome length is 1.74 Mbp.

Description of *Candidatus* Venabaria expanago sp. nov.

Candidatus Venabaria expanago (NL. fem. n. *expanago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1232 sp902797895*. The type genome for the species is the

GenBank assembly GCA_902797895.1. The GC content of the type genome is 43.44 % and the genome length is 1.68 Mbp.

Description of *Candidatus* Venabaria milipimonas sp. nov.

Candidatus Venabaria milipimonas (NL. fem. n. *milipimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1232 sp002372015*. The type genome for the species is the GenBank assembly GCA_002372015.1. The GC content of the type genome is 40.62 % and the genome length is 1.77 Mbp.

Description of *Candidatus* Venabaria nubigitoga sp. nov.

Candidatus Venabaria nubigitoga (NL. fem. n. *nubigitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1232 sp902780455*. The type genome for the species is the GenBank assembly GCA_902780455.1. The GC content of the type genome is 48.4 % and the genome length is 1.92 Mbp.

Description of *Candidatus* Venabaria obsuritia sp. nov.

Candidatus Venabaria obsuritia (NL. fem. n. *obsuritia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1232 sp902797115*. The type genome for the species is the GenBank assembly GCA_902797115.1. The GC content of the type genome is 38.9 % and the genome length is 1.6 Mbp.

Description of *Candidatus* Venabaria pavimilega sp. nov.

Candidatus Venabaria pavimilega (NL. fem. n. *pavimilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1232 sp900322025*. The type genome for the species is the GenBank assembly GCA_900322025.1. The GC content of the type genome is 40.66 % and the genome length is 1.61 Mbp.

Description of *Candidatus* Venabaria sicunugo sp. nov.

Candidatus Venabaria sicunugo (NL. fem. n. *sicunugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1232 sp900544815*. The type genome for the species is the GenBank assembly GCA_900544815.1. The GC content of the type genome is 40.46 % and the genome length is 2.03 Mbp.

Description of *Candidatus* Venabaria socagigena sp. nov.

Candidatus Venabaria socagigena (NL. fem. n. *socagigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1232 sp902769525*. The type genome for the species is the GenBank assembly GCA_902771025.1. The GC content of the type genome is 49.06 % and the genome length is 1.9 Mbp.

Description of *Candidatus* Venabaria tolutimonia sp. nov.

Candidatus Venabaria tolutimonia (NL. fem. n. *tolutimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1232 sp004561775*. The type genome for the species is the GenBank assembly GCA_004561775.1. The GC content of the type genome is 48.35 % and the genome length is 1.19 Mbp.

Description of *Candidatus* Venabaria viragitia sp. nov.

Candidatus Venabaria viragitia (NL. fem. n. *viragitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1232 sp900769735*. The type genome for the species is the GenBank assembly RS_GCF_900769735.1. The GC content of the type genome is 43.59 % and the genome length is 1.98 Mbp.

Description of *Candidatus* Venabella camilifica sp. nov.

Candidatus Venabella camilifica (NL. fem. n. *camilifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RCC307 sp002168155*. The type genome for the species is the GenBank assembly GCA_002168155.1. The GC content of the type genome is 60.28 % and the genome length is 2.07 Mbp.

Description of *Candidatus* Venabella gen. nov.

Candidatus Venabella (NL. fem. n. *Venabella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RCC307*. The type species for the genus is *Candidatus* Venabella camilifica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Venabella ciminastra sp. nov.

Candidatus Venabella ciminastra (NL. fem. n. *ciminastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RCC307 sp002470305*. The type genome for the species is the GenBank assembly GCA_002171075.2. The GC content of the type genome is 62.88 % and the genome length is 1.69 Mbp.

Description of *Candidatus* Venabella sonabivita sp. nov.

Candidatus Venabella sonabivita (NL. fem. n. *sonabivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RCC307 sp012270465*. The type genome for the species is the GenBank assembly GCA_012270465.1. The GC content of the type genome is 62.22 % and the genome length is 1.78 Mbp.

Description of *Candidatus* Venabella tumefivita sp. nov.

Candidatus Venabella tumefivita (NL. fem. n. *tumefivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RCC307 sp000063525*. The type genome for the species is the

GenBank assembly RS_GCF_000063525.1. The GC content of the type genome is 60.84 % and the genome length is 2.22 Mbp.

Description of *Candidatus* Venabia cadavitica sp. nov.

Candidatus Venabia cadavitica (NL. fem. n. *cadavitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GWF1-31-35 sp001029755*. The type genome for the species is the GenBank assembly GCA_000990335.1. The GC content of the type genome is 30.75 % and the genome length is 0.82 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "aquifer sediment".

Description of *Candidatus* Venabia gen. nov.

Candidatus Venabia (NL. fem. n. *Venabia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GWF1-31-35*. The type species for the genus is *Candidatus* Venabia cadavitica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA8517*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Xenoposaceae.

Description of *Candidatus* Venabida bicodugo sp. nov.

Candidatus Venabida bicodugo (NL. fem. n. *bicodugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *T3SED10-47 sp003562845*. The type genome for the species is the GenBank assembly GCA_003562845.1. The GC content of the type genome is 62.89 % and the genome length is 1.45 Mbp.

Description of *Candidatus* Venabida gen. nov.

Candidatus Venabida (NL. fem. n. *Venabida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *T3SED10-47*. The type species for the genus is *Candidatus* Venabida bicodugo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Venabida noninetta sp. nov.

Candidatus Venabida noninetta (NL. fem. n. *noninetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *T3SED10-47 sp003566155*. The type genome for the species is the GenBank assembly GCA_003566155.1. The GC content of the type genome is 61.21 % and the genome length is 1.93 Mbp.

Description of *Candidatus* Venabida rorulitica sp. nov.

Candidatus Venabida rorulitica (NL. fem. n. *rorulitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *T3SED10-47 sp003567155*. The type genome for the species is the GenBank assembly GCA_003567155.1. The GC content of the type genome is 60.09 % and the genome length is 1.69 Mbp.

Description of *Candidatus* Venabosa manupatica sp. nov.

Candidatus Venabosa manupatica (NL. fem. n. *manupatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3869 sp002392285*. The type genome for the species is the GenBank assembly GCA_002392285.1. The GC content of the type genome is 43.61 % and the genome length is 0.71 Mbp.

Description of *Candidatus* Venabosa gen. nov.

Candidatus Venabosa (NL. fem. n. *Venabosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA3869*. The type species for the genus is *Candidatus* Venabosa manupatica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA9783*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Holisanaceae.

Description of *Candidatus* Venefana biveritudo sp. nov.

Candidatus Venefana biveritudo (NL. fem. n. *biveritudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-01-FULL-51-21 sp001781435*. The type genome for the species is the GenBank assembly GCA_001781435.1. The GC content of the type genome is 50.5 % and the genome length is 0.63 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under low O2 conditions; 0.1 micron filter; full assembly".

Description of *Candidatus* Venefana gen. nov.

Candidatus Venefana (NL. fem. n. *Venefana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *2-01-FULL-51-21*. The type species for the genus is *Candidatus* Venefana biveritudo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2163*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Legifariaceae.

Description of *Candidatus* Venefaria proscitudo sp. nov.

Candidatus Venefaria proscitudo (NL. fem. n. *proscitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *QHBO01 sp003243965*. The type genome for the species is the GenBank assembly GCA_003243965.1. The GC content of the type genome is 69.62 % and the genome length is 2.22 Mbp.

Description of *Candidatus* Venefaria gen. nov.

Candidatus Venefaria (NL. fem. n. *Venefaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *QHBO01*. The type species for the genus is *Candidatus* Venefaria proscitudo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *QHBO01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to

the family *Candidatus* Venefariaceae.

Description of *Candidatus* Venefariaceae fam. nov.

Candidatus Venefariaceae (NL. fem. n. *Venefariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *QHBO01.* The type genus for the taxon is *Candidatus* Venefaria .

According to the original version of GTDB R06-RS202, this family belongs to the order *QHBO01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Venefariales.

Description of *Candidatus* Venefariales ord. nov.

Candidatus Venefariales (NL. fem. n. *Venefariales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *QHBO01.* The type genus for the taxon is *Candidatus* Venefaria .

According to the original version of GTDB R06-RS202, this family belongs to the class *Ellin6529*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Remedellae.

Description of *Candidatus* Venefella benemicula sp. nov.

Candidatus Venefella benemicula (NL. fem. n. *benemicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2588 sp003523055*. The type genome for the species is the GenBank assembly GCA_003523055.1. The GC content of the type genome is 37.42 % and the genome length is 1.79 Mbp.

Description of *Candidatus* Venefella gen. nov.

Candidatus Venefella (NL. fem. n. *Venefella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA2588*. The type species for the genus is *Candidatus* Venefella benemicula .

According to the original version of GTDB R06-RS202, this genus belongs to the family

UBA2588. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Venefellaceae.

Description of *Candidatus* Venefellaceae fam. nov.

Candidatus Venefellaceae (NL. fem. n. *Venefellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA2588.* The type genus for the taxon is *Candidatus* Venefella .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA3495*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Bicipellales.

Description of *Candidatus* Venefella decamimonas sp. nov.

Candidatus Venefella decamimonas (NL. fem. n. *decamimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2588 sp002723125*. The type genome for the species is the GenBank assembly GCA_002697635.1. The GC content of the type genome is 40.06 % and the genome length is 1.44 Mbp.

Description of *Candidatus* Venefella vinolastra sp. nov.

Candidatus Venefella vinolastra (NL. fem. n. *vinolastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2588 sp002339805*. The type genome for the species is the GenBank assembly GCA_002339805.1. The GC content of the type genome is 39.57 % and the genome length is 1.31 Mbp.

Description of *Candidatus* Venefia alcalitoga sp. nov.

Candidatus Venefia alcalitoga (NL. fem. n. *alcalitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-02-FULL-39-11 sp001779195*. The type genome for the species is the GenBank assembly GCA_001779195.1. The GC content of the type genome is 38.35

% and the genome length is 1.55 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 0.2 micron filter; full assembly".

Description of *Candidatus* Venefia gen. nov.

Candidatus Venefia (NL. fem. n. *Venefia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *2-02-FULL-39-11*. The type species for the genus is *Candidatus* Venefia alcalitoga .

According to the original version of GTDB R06-RS202, this genus belongs to the family *2-02-FULL-39-11*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Venefiaceae.

Description of *Candidatus* Venefiaceae fam. nov.

Candidatus Venefiaceae (NL. fem. n. *Venefiaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *2-02-FULL-39-11.* The type genus for the taxon is *Candidatus* Venefia .

According to the original version of GTDB R06-RS202, this family belongs to the order *2-02-FULL-39-11*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Venefiales.

Description of *Candidatus* Venefiales ord. nov.

Candidatus Venefiales (NL. fem. n. *Venefiales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *2-02-FULL-39-11.* The type genus for the taxon is *Candidatus* Venefia .

According to the GTDB R06-RS202, this order belongs to the class *Microgenomatia*.

Description of *Candidatus* Venefida affunitas sp. nov.

Candidatus Venefida affunitas (NL. fem. n. *affunitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *VBWP01 sp005771635*. The type genome for the species is the

GenBank assembly RS_GCF_005771635.1. The GC content of the type genome is 38.73 % and the genome length is 2.5 Mbp.

Description of *Candidatus* Venefida gen. nov.

Candidatus Venefida (NL. fem. n. *Venefida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *VBWP01*. The type species for the genus is *Candidatus* Venefida affunitas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *VBWP01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Venefidaceae.

Description of *Candidatus* Venefidaceae fam. nov.

Candidatus Venefidaceae (NL. fem. n. *Venefidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *VBWP01*. The type genus for the taxon is *Candidatus* Venefida .

According to the original version of GTDB R06-RS202, this family belongs to the order *ZOR0006*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Megalulales.

Description of *Candidatus* Venefosa tametitrix sp. nov.

Candidatus Venefosa tametitrix (NL. fem. n. *tametitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SLND01 sp007133205*. The type genome for the species is the GenBank assembly GCA_007133205.1. The GC content of the type genome is 63.07 % and the genome length is 2.07 Mbp.

Description of *Candidatus* Venefosa gen. nov.

Candidatus Venefosa (NL. fem. n. *Venefosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SLND01*. The type species for the genus is *Candidatus* Venefosa tametitrix .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SLND01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Venefosaceae.

Description of *Candidatus* Venefosaceae fam. nov.

Candidatus Venefosaceae (NL. fem. n. *Venefosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SLND01*. The type genus for the taxon is *Candidatus* Venefosa .

According to the original version of GTDB R06-RS202, this family belongs to the order *SLND01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Venefosales.

Description of *Candidatus* Venefosales ord. nov.

Candidatus Venefosales (NL. fem. n. *Venefosales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SLND01*. The type genus for the taxon is *Candidatus* Venefosa .

According to the GTDB R06-RS202, this order belongs to the class *Gammaproteobacteria*.

Description of *Candidatus* Venefula detesiforma sp. nov.

Candidatus Venefula detesiforma (NL. fem. n. *detesiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GWB1-50-10 sp001004105*. The type genome for the species is the GenBank assembly GCA_001003525.1. The GC content of the type genome is 48.71 % and the genome length is 0.57 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "aquifer sediment".

Description of *Candidatus* Venefula gen. nov.

Candidatus Venefula (NL. fem. n. *Venefula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GWB1-50-10*. The type species for the genus is *Candidatus* Venefula

detesiforma .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GWB1-50-10*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Venefulaceae.

Description of *Candidatus* Venefulaceae fam. nov.

Candidatus Venefulaceae (NL. fem. n. *Venefulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *GWB1-50-10.* The type genus for the taxon is *Candidatus* Venefula .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA6257*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Denomulales.

Description of *Candidatus* Venucana carecivita sp. nov.

Candidatus Venucana carecivita (NL. fem. n. *carecivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GWE2-29-8 sp001768555*. The type genome for the species is the GenBank assembly GCA_001768555.1. The GC content of the type genome is 29.06 % and the genome length is 2.82 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at time point 6 / F; 5m depth; 0.2 filter".

Description of *Candidatus* Venucana gen. nov.

Candidatus Venucana (NL. fem. n. *Venucana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GWE2-29-8*. The type species for the genus is *Candidatus* Venucana carecivita .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GWE2-29-8*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Venucanaceae.

Description of *Candidatus* Venucanaceae fam. nov.

Candidatus Venucanaceae (NL. fem. n. *Venucanaceae* a name created from the name of

the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *GWE2-29-8.* The type genus for the taxon is *Candidatus* Venucana .

According to GTDB R06-RS202, this family belongs to the order *Bacteroidales*.

Description of *Candidatus* Venucaria catilifica sp. nov.

Candidatus Venucaria catilifica (NL. fem. n. *catilifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SCTI01 sp004297735*. The type genome for the species is the GenBank assembly GCA_004297735.1. The GC content of the type genome is 51.79 % and the genome length is 0.77 Mbp.

Description of *Candidatus* Venucaria gen. nov.

Candidatus Venucaria (NL. fem. n. *Venucaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SCTI01*. The type species for the genus is *Candidatus* Venucaria catilifica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SCTI01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Venucariaceae.

Description of *Candidatus* Venucariaceae fam. nov.

Candidatus Venucariaceae (NL. fem. n. *Venucariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SCTI01.* The type genus for the taxon is *Candidatus* Venucaria .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA4664*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Vehicidales.

Description of *Candidatus* Venucella aspilitoga sp. nov.

Candidatus Venucella aspilitoga (NL. fem. n. *aspilitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *40CM-4-68-19 sp005879095*. The type genome for the species is the GenBank assembly GCA_005879095.1. The GC content of the type genome is 67.96 % and the genome length is 3.78 Mbp.

Description of *Candidatus* Venucella gen. nov.

Candidatus Venucella (NL. fem. n. *Venucella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *40CM-4-68-19*. The type species for the genus is *Candidatus* Venucella aspilitoga .

According to the original version of GTDB R06-RS202, this genus belongs to the family *40CM-4-68-19*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Venucellaceae.

Description of *Candidatus* Venucellaceae fam. nov.

Candidatus Venucellaceae (NL. fem. n. *Venucellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *40CM-4-68-19.* The type genus for the taxon is *Candidatus* Venucella .

According to GTDB R06-RS202, this family belongs to the order *Myxococcales*.

Description of *Candidatus* Venucella citocitia sp. nov.

Candidatus Venucella citocitia (NL. fem. n. *citocitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *40CM-4-68-19 sp005888115*. The type genome for the species is the GenBank assembly GCA_005888115.1. The GC content of the type genome is 69.97 % and the genome length is 4.73 Mbp.

Description of *Candidatus* Venucella dapifousia sp. nov.

Candidatus Venucella dapifousia (NL. fem. n. *dapifousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *40CM-4-68-19 sp001918155*. The type genome for the species is the GenBank assembly GCA_005879355.1. The GC content of the type genome is 68.2 % and the genome length is 5.24 Mbp.

Description of *Candidatus* Venucella lenunitica sp. nov.

Candidatus Venucella lenunitica (NL. fem. n. *lenunitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *40CM-4-68-19 sp005879315*. The type genome for the species is the GenBank assembly GCA_005879315.1. The GC content of the type genome is 68.21 % and the genome length is 4.43 Mbp.

Description of *Candidatus* Venucella menapibula sp. nov.

Candidatus Venucella menapibula (NL. fem. n. *menapibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *40CM-4-68-19 sp005879505*. The type genome for the species is the GenBank assembly GCA_005879115.1. The GC content of the type genome is 68.05 % and the genome length is 3.86 Mbp.

Description of *Candidatus* Venucella risibitura sp. nov.

Candidatus Venucella risibitura (NL. fem. n. *risibitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *40CM-4-68-19 sp005879535*. The type genome for the species is the GenBank assembly GCA_005879305.1. The GC content of the type genome is 68.26 % and the genome length is 3.8 Mbp.

Description of *Candidatus* Venucella vitigifica sp. nov.

Candidatus Venucella vitigifica (NL. fem. n. *vitigifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *40CM-4-68-19 sp005879805*. The type genome for the species is the GenBank assembly GCA_005879875.1. The GC content of the type genome is 68.33 %

and the genome length is 4.37 Mbp.

Description of *Candidatus* Venucida accumedo sp. nov.

Candidatus Venucida accumedo (NL. fem. n. *accumedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2653 sp003489505*. The type genome for the species is the GenBank assembly GCA_003489505.1. The GC content of the type genome is 37.03 % and the genome length is 1.55 Mbp.

Description of *Candidatus* Venucida gen. nov.

Candidatus Venucida (NL. fem. n. *Venucida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA2653*. The type species for the genus is *Candidatus* Venucida accumedo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Venucida bipatifica sp. nov.

Candidatus Venucida bipatifica (NL. fem. n. *bipatifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2653 sp002342175*. The type genome for the species is the GenBank assembly GCA_009926915.1. The GC content of the type genome is 37.31 % and the genome length is 1.76 Mbp.

Description of *Candidatus* Venucida giganifica sp. nov.

Candidatus Venucida giganifica (NL. fem. n. *giganifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2653 sp010030245*. The type genome for the species is the GenBank assembly GCA_010030245.1. The GC content of the type genome is 38.9 % and the genome length is 2.11 Mbp.

Description of *Candidatus* Venucida inlusigena sp. nov.

Candidatus Venucida inlusigena (NL. fem. n. *inlusigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2653 sp002403515*. The type genome for the species is the GenBank assembly GCA_002403515.1. The GC content of the type genome is 36.57 % and the genome length is 1.8 Mbp.

Description of *Candidatus* Venucosa adtacatica sp. nov.

Candidatus Venucosa adtacatica (NL. fem. n. *adtacatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MedAcidi-G2A sp002709645*. The type genome for the species is the GenBank assembly GCA_002709645.1. The GC content of the type genome is 44.25 % and the genome length is 1.83 Mbp.

Description of *Candidatus* Venucosa gen. nov.

Candidatus Venucosa (NL. fem. n. *Venucosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *MedAcidi-G2A*. The type species for the genus is *Candidatus* Venucosa adtacatica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA8592*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Pepenidaceae.

Description of *Candidatus* Venucosa buxifitica sp. nov.

Candidatus Venucosa buxifitica (NL. fem. n. *buxifitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MedAcidi-G2A sp002712325*. The type genome for the species is the GenBank assembly GCA_002712325.1. The GC content of the type genome is 44.27 % and the genome length is 1.27 Mbp.

Description of *Candidatus* Venucosa cocodessa sp. nov.

Candidatus Venucosa cocodessa (NL. fem. n. *cocodessa* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MedAcidi-G2A sp002341185*. The type genome for the species is the GenBank assembly GCA_002341185.1. The GC content of the type genome is 43.6 % and the genome length is 2.09 Mbp.

Description of *Candidatus* Venucosa colipago sp. nov.

Candidatus Venucosa colipago (NL. fem. n. *colipago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MedAcidi-G2A sp002713485*. The type genome for the species is the GenBank assembly GCA_002713485.1. The GC content of the type genome is 44.22 % and the genome length is 1.43 Mbp.

Description of *Candidatus* Venucosa conifisca sp. nov.

Candidatus Venucosa conifisca (NL. fem. n. *conifisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MedAcidi-G2A sp002295705*. The type genome for the species is the GenBank assembly GCA_002380725.1. The GC content of the type genome is 44.67 % and the genome length is 1.67 Mbp.

Description of *Candidatus* Venucosa depocitia sp. nov.

Candidatus Venucosa depocitia (NL. fem. n. *depocitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MedAcidi-G2A sp002712415*. The type genome for the species is the GenBank assembly GCA_002320315.1. The GC content of the type genome is 44.75 % and the genome length is 1.68 Mbp.

Description of *Candidatus* Venucosa dicibiforma sp. nov.

Candidatus Venucosa dicibiforma (NL. fem. n. *dicibiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MedAcidi-G2A sp002500385*. The type genome for the species is the GenBank assembly GCA_002500385.1. The GC content of the type genome is 44.07 % and the genome length is 1.57 Mbp.

Description of *Candidatus* Venucosa dilibatica sp. nov.

Candidatus Venucosa dilibatica (NL. fem. n. *dilibatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MedAcidi-G2A sp002380145*. The type genome for the species is the GenBank assembly GCA_011523005.1. The GC content of the type genome is 45.0 % and the genome length is 1.95 Mbp.

Description of *Candidatus* Venucosa manufitura sp. nov.

Candidatus Venucosa manufitura (NL. fem. n. *manufitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MedAcidi-G2A sp000817095*. The type genome for the species is the GenBank assembly GCA_000817095.1. The GC content of the type genome is 43.08 % and the genome length is 1.37 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "deep chlorophyll maximum in the Mediterranean off the coast of Alicante; Spain; 75m below sea surface".

Description of *Candidatus* Venucosa peraditio sp. nov.

Candidatus Venucosa peraditio (NL. fem. n. *peraditio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MedAcidi-G2A sp002713605*. The type genome for the species is the GenBank assembly GCA_002713605.1. The GC content of the type genome is 41.98 % and the genome length is 0.91 Mbp.

Description of *Candidatus* Venucosa refunitica sp. nov.

Candidatus Venucosa refunitica (NL. fem. n. *refunitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MedAcidi-G2A sp002719235*. The type genome for the species is the

GenBank assembly GCA_002295815.1. The GC content of the type genome is 44.83 % and the genome length is 1.85 Mbp.

Description of *Candidatus* Venucosa semipibra sp. nov.

Candidatus Venucosa semipibra (NL. fem. n. *semipibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MedAcidi-G2A sp002171605*. The type genome for the species is the GenBank assembly GCA_002713525.1. The GC content of the type genome is 43.36 % and the genome length is 2.36 Mbp.

Description of *Candidatus* Venucula denigago sp. nov.

Candidatus Venucula denigago (NL. fem. n. *denigago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CF-39 sp005882255*. The type genome for the species is the GenBank assembly GCA_005882255.1. The GC content of the type genome is 68.62 % and the genome length is 2.67 Mbp.

Description of *Candidatus* Venucula gen. nov.

Candidatus Venucula (NL. fem. n. *Venucula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CF-39*. The type species for the genus is *Candidatus* Venucula denigago .

According to the original version of GTDB R06-RS202, this genus belongs to the family *P2-11E*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Curotosaceae.

Description of *Candidatus* Venucula dicimitura sp. nov.

Candidatus Venucula dicimitura (NL. fem. n. *dicimitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CF-39 sp005887995*. The type genome for the species is the GenBank assembly GCA_005879625.1. The GC content of the type genome is 68.01 % and the

genome length is 3.1 Mbp.

Description of *Candidatus* Venucula hegumatica sp. nov.

Candidatus Venucula hegumatica (NL. fem. n. *hegumatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CF-39 sp005889405*. The type genome for the species is the GenBank assembly GCA_005889405.1. The GC content of the type genome is 67.88 % and the genome length is 3.05 Mbp.

Description of *Candidatus* Venunana arnogitio sp. nov.

Candidatus Venunana arnogitio (NL. fem. n. *arnogitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UM-FILTER-49-7 sp013152385*. The type genome for the species is the GenBank assembly GCA_013152385.1. The GC content of the type genome is 49.56 % and the genome length is 2.57 Mbp.

Description of *Candidatus* Venunana gen. nov.

Candidatus Venunana (NL. fem. n. *Venunana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UM-FILTER-49-7*. The type species for the genus is *Candidatus* Venunana arnogitio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UM-FILTER-49-7*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Venunanaceae.

Description of *Candidatus* Venunanaceae fam. nov.

Candidatus Venunanaceae (NL. fem. n. *Venunanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UM-FILTER-49-7.* The type genus for the taxon is *Candidatus* Venunana .

According to the original version of GTDB R06-RS202, this family belongs to the order *UM-FILTER-49-7*. According to the renamed version of GTDB R06-RS202, this taxon

belongs to the order *Candidatus* Venunanales.

Description of *Candidatus* Venunanales ord. nov.

Candidatus Venunanales (NL. fem. n. *Venunanales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UM-FILTER-49-7.* The type genus for the taxon is *Candidatus* Venunana .

According to the GTDB R06-RS202, this order belongs to the class *Holophagae*.

Description of *Candidatus* Venunana inregitia sp. nov.

Candidatus Venunana inregitia (NL. fem. n. *inregitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UM-FILTER-49-7 sp013151025*. The type genome for the species is the GenBank assembly GCA_013151025.1. The GC content of the type genome is 48.93 % and the genome length is 2.64 Mbp.

Description of *Candidatus* Venunana inturentia sp. nov.

Candidatus Venunana inturentia (NL. fem. n. *inturentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UM-FILTER-49-7 sp002789615*. The type genome for the species is the GenBank assembly GCA_002789615.1. The GC content of the type genome is 49.1 % and the genome length is 2.11 Mbp.

Description of *Candidatus* Venunana navicibra sp. nov.

Candidatus Venunana navicibra (NL. fem. n. *navicibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UM-FILTER-49-7 sp003650445*. The type genome for the species is the GenBank assembly GCA_003650445.1. The GC content of the type genome is 49.41 % and the genome length is 2.16 Mbp.

Description of *Candidatus* Venunaria abagmatio sp. nov.

Candidatus Venunaria abagmatio (NL. fem. n. *abagmatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2177 sp012511375*. The type genome for the species is the GenBank assembly GCA_012511375.1. The GC content of the type genome is 34.36 % and the genome length is 0.59 Mbp.

Description of *Candidatus* Venunaria gen. nov.

Candidatus Venunaria (NL. fem. n. *Venunaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA2177*. The type species for the genus is *Candidatus* Venunaria abagmatio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SC72*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Bipenellaceae.

Description of *Candidatus* Venunaria bisacentia sp. nov.

Candidatus Venunaria bisacentia (NL. fem. n. *bisacentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2177 sp002328805*. The type genome for the species is the GenBank assembly GCA_002403195.1. The GC content of the type genome is 36.04 % and the genome length is 0.56 Mbp.

Description of *Candidatus* Venunaria diluvivita sp. nov.

Candidatus Venunaria diluvivita (NL. fem. n. *diluvivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2177 sp002402455*. The type genome for the species is the GenBank assembly GCA_002402455.1. The GC content of the type genome is 35.98 % and the genome length is 0.65 Mbp.

Description of *Candidatus* Venunella absegedo sp. nov.

Candidatus Venunella absegedo (NL. fem. n. *absegedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3054 sp002308555*. The type genome for the species is the GenBank assembly GCA_002308555.1. The GC content of the type genome is 59.07 % and the genome length is 1.23 Mbp.

Description of *Candidatus* Venunella gen. nov.

Candidatus Venunella (NL. fem. n. *Venunella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA3054*. The type species for the genus is *Candidatus* Venunella absegedo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA3054*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Venunellaceae.

Description of *Candidatus* Venunellaceae fam. nov.

Candidatus Venunellaceae (NL. fem. n. *Venunellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA3054.* The type genus for the taxon is *Candidatus* Venunella .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA3054*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Venunellales.

Description of *Candidatus* Venunellales ord. nov.

Candidatus Venunellales (NL. fem. n. *Venunellales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA3054.* The type genus for the taxon is *Candidatus* Venunella .

According to the original version of GTDB R06-RS202, this family belongs to the class *UBA3054*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Venunellae.

Description of *Candidatus* Venunellae class. nov.

Candidatus Venunellae (NL. fem. n. *c__Venunellae* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA3054.* The type genus for the taxon is *Candidatus* Venunella .

According to the original version of GTDB R06-RS202, this family belongs to the phylum *UBA3054*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the phylum *Candidatus* Venunellota.

Description of *Candidatus* Venunellota phyl. nov.

Candidatus Venunellota (NL. fem. n. *Venunellota* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA3054.* The type genus for the taxon is *Candidatus* Venunella .

According to GTDB R06-RS202, this phylum belongs to the domain *Bacteria* .

Description of *Candidatus* Venunella arremilega sp. nov.

Candidatus Venunella arremilega (NL. fem. n. *arremilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3054 sp002366995*. The type genome for the species is the GenBank assembly GCA_002366995.1. The GC content of the type genome is 55.85 % and the genome length is 1.38 Mbp.

Description of *Candidatus* Venunia noninibra sp. nov.

Candidatus Venunia noninibra (NL. fem. n. *noninibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7916 sp002320385*. The type genome for the species is the GenBank assembly GCA_002320385.1. The GC content of the type genome is 42.04 % and the genome length is 1.42 Mbp.

Description of *Candidatus* Venunia gen. nov.

Candidatus Venunia (NL. fem. n. *Venunia* a name created arbitrarily, while preserving

the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA7916*. The type species for the genus is *Candidatus* Venunia noninibra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA7916*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Venuniaceae.

Description of *Candidatus* Venuniaceae fam. nov.

Candidatus Venuniaceae (NL. fem. n. *Venuniaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA7916.* The type genus for the taxon is *Candidatus* Venunia .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA7916*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Venuniales.

Description of *Candidatus* Venuniales ord. nov.

Candidatus Venuniales (NL. fem. n. *Venuniales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA7916.* The type genus for the taxon is *Candidatus* Venunia .

According to the GTDB R06-RS202, this order belongs to the class *Gammaproteobacteria*.

Description of *Candidatus* Venunia repagifica sp. nov.

Candidatus Venunia repagifica (NL. fem. n. *repagifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7916 sp002722435*. The type genome for the species is the GenBank assembly GCA_002722435.1. The GC content of the type genome is 43.09 % and the genome length is 1.93 Mbp.

Description of *Candidatus* Venunia senacitrix sp. nov.

Candidatus Venunia senacitrix (NL. fem. n. *senacitrix* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7916 sp002308435*. The type genome for the species is the GenBank assembly GCA_002308435.1. The GC content of the type genome is 44.18 % and the genome length is 1.27 Mbp.

Description of *Candidatus* Venunida dicanibra sp. nov.

Candidatus Venunida dicanibra (NL. fem. n. *dicanibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-01-FULL-44-22 sp001795975*. The type genome for the species is the GenBank assembly GCA_001794065.1. The GC content of the type genome is 41.51 % and the genome length is 0.58 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 0.1 micron filter; full assembly".

Description of *Candidatus* Venunida gen. nov.

Candidatus Venunida (NL. fem. n. *Venunida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *2-01-FULL-44-22*. The type species for the genus is *Candidatus* Venunida dicanibra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GWA2-44-9*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Beniviaceae.

Description of *Candidatus* Venunida semimitio sp. nov.

Candidatus Venunida semimitio (NL. fem. n. *semimitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-01-FULL-44-22 sp001794205*. The type genome for the species is the GenBank assembly GCA_001794205.1. The GC content of the type genome is 44.28 % and the genome length is 0.44 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 0.1 micron filter; full assembly".

Description of *Candidatus* Venunosa carucugo sp. nov.

Candidatus Venunosa carucugo (NL. fem. n. *carucugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UM-FILTER-45-8 sp002781785*. The type genome for the species is the GenBank assembly GCA_002790455.1. The GC content of the type genome is 45.33 % and the genome length is 1.28 Mbp.

Description of *Candidatus* Venunosa gen. nov.

Candidatus Venunosa (NL. fem. n. *Venunosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UM-FILTER-45-8*. The type species for the genus is *Candidatus* Venunosa carucugo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *XYC2-FULL-38-9*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Viripidaceae.

Description of *Candidatus* Venunula morigilenta sp. nov.

Candidatus Venunula morigilenta (NL. fem. n. *morigilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SFLA01 sp004553575*. The type genome for the species is the GenBank assembly GCA_004553575.1. The GC content of the type genome is 53.17 % and the genome length is 1.6 Mbp.

Description of *Candidatus* Venunula gen. nov.

Candidatus Venunula (NL. fem. n. *Venunula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SFLA01*. The type species for the genus is *Candidatus* Venunula morigilenta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-382*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Doxolulaceae.

Description of *Candidatus* Vepalana annubatica sp. nov.

Candidatus Vepalana annubatica (NL. fem. n. *annubatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JCM-19038 sp000698185*. The type genome for the species is the GenBank assembly RS_GCF_000698185.1. The GC content of the type genome is 41.53 % and the genome length is 4.1 Mbp.

Description of *Candidatus* Vepalana gen. nov.

Candidatus Vepalana (NL. fem. n. *Vepalana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JCM-19038*. The type species for the genus is *Candidatus* Vepalana annubatica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Vepalana denunentia sp. nov.

Candidatus Vepalana denunentia (NL. fem. n. *denunentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JCM-19038 sp000698145*. The type genome for the species is the GenBank assembly RS_GCF_000698145.1. The GC content of the type genome is 44.2 % and the genome length is 4.17 Mbp.

Description of *Candidatus* Vepalana luxuritia sp. nov.

Candidatus Vepalana luxuritia (NL. fem. n. *luxuritia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JCM-19038 sp000698125*. The type genome for the species is the GenBank assembly RS_GCF_000698125.1. The GC content of the type genome is 41.78 % and the genome length is 3.87 Mbp.

Description of *Candidatus* Vepalana recogugo sp. nov.

Candidatus Vepalana recogugo (NL. fem. n. *recogugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JCM-19038 sp012970285*. The type genome for the species is the GenBank assembly RS_GCF_012970285.1. The GC content of the type genome is 41.54 % and the genome length is 4.12 Mbp.

Description of *Candidatus* Vepalaria adpenitas sp. nov.

Candidatus Vepalaria adpenitas (NL. fem. n. *adpenitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Bin95 sp002238885*. The type genome for the species is the GenBank assembly GCA_002238885.1. The GC content of the type genome is 66.27 % and the genome length is 3.41 Mbp.

Description of *Candidatus* Vepalaria gen. nov.

Candidatus Vepalaria (NL. fem. n. *Vepalaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Bin95*. The type species for the genus is *Candidatus* Vepalaria adpenitas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *Bin95*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vepalariaceae.

Description of *Candidatus* Vepalariaceae fam. nov.

Candidatus Vepalariaceae (NL. fem. n. *Vepalariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *Bin95.* The type genus for the taxon is *Candidatus* Vepalaria .

According to the original version of GTDB R06-RS202, this family belongs to the order *Bin95*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Vepalariales.

Description of *Candidatus* Vepalariales ord. nov.

Candidatus Vepalariales (NL. fem. n. *Vepalariales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *Bin95*. The type genus for the taxon is *Candidatus* Vepalaria .

According to the GTDB R06-RS202, this order belongs to the class *Alphaproteobacteria*.

Description of *Candidatus* Vepalella adhorago sp. nov.

Candidatus Vepalella adhorago (NL. fem. n. *adhorago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7312 sp002471645*. The type genome for the species is the GenBank assembly GCA_002471645.1. The GC content of the type genome is 35.72 % and the genome length is 1.34 Mbp.

Description of *Candidatus* Vepalella gen. nov.

Candidatus Vepalella (NL. fem. n. *Vepalella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA7312*. The type species for the genus is *Candidatus* Vepalella adhorago .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA7312*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vepalellaceae.

Description of *Candidatus* Vepalellaceae fam. nov.

Candidatus Vepalellaceae (NL. fem. n. *Vepalellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA7312*. The type genus for the taxon is *Candidatus* Vepalella .

According to GTDB R06-RS202, this family belongs to the order *Flavobacteriales*.

Description of *Candidatus* Vepalella divoricella sp. nov.

Candidatus Vepalella divoricella (NL. fem. n. *divoricella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *UBA7312 sp902580855*. The type genome for the species is the GenBank assembly GCA_902580855.1. The GC content of the type genome is 34.93 % and the genome length is 1.34 Mbp.

Description of *Candidatus* Vepalella impaventia sp. nov.

Candidatus Vepalella impaventia (NL. fem. n. *impaventia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7312 sp002306655*. The type genome for the species is the GenBank assembly GCA_002306655.1. The GC content of the type genome is 36.26 % and the genome length is 0.9 Mbp.

Description of *Candidatus* Vepalella inlusisca sp. nov.

Candidatus Vepalella inlusisca (NL. fem. n. *inlusisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7312 sp002715345*. The type genome for the species is the GenBank assembly GCA_002715345.1. The GC content of the type genome is 36.13 % and the genome length is 1.21 Mbp.

Description of *Candidatus* Vepalia ascisibula sp. nov.

Candidatus Vepalia ascisibula (NL. fem. n. *ascisibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Palsa-1032 sp013813905*. The type genome for the species is the GenBank assembly GCA_013813905.1. The GC content of the type genome is 69.58 % and the genome length is 1.32 Mbp.

Description of *Candidatus* Vepalia gen. nov.

Candidatus Vepalia (NL. fem. n. *Vepalia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Palsa-1032*. The type species for the genus is *Candidatus* Vepalia ascisibula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CSP1-4*. According to the renamed version of GTDB R06-RS202, this taxon belongs to

the family *Candidatus* Hecatiaceae.

Description of *Candidatus* Vepalia pinifitica sp. nov.

Candidatus Vepalia pinifitica (NL. fem. n. *pinifitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Palsa-1032 sp013696275*. The type genome for the species is the GenBank assembly GCA_013696275.1. The GC content of the type genome is 67.87 % and the genome length is 2.36 Mbp.

Description of *Candidatus* Vepalia rarefentia sp. nov.

Candidatus Vepalia rarefentia (NL. fem. n. *rarefentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Palsa-1032 sp003169735*. The type genome for the species is the GenBank assembly GCA_003169735.1. The GC content of the type genome is 68.62 % and the genome length is 3.06 Mbp.

Description of *Candidatus* Vepalia tabitigena sp. nov.

Candidatus Vepalia tabitigena (NL. fem. n. *tabitigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Palsa-1032 sp013696945*. The type genome for the species is the GenBank assembly GCA_013696945.1. The GC content of the type genome is 69.77 % and the genome length is 1.76 Mbp.

Description of *Candidatus* Vepalosa bacifugo sp. nov.

Candidatus Vepalosa bacifugo (NL. fem. n. *bacifugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SKMY01 sp007120815*. The type genome for the species is the GenBank assembly GCA_007120815.1. The GC content of the type genome is 49.48 % and the genome length is 1.92 Mbp.

Description of *Candidatus* Vepalosa gen. nov.

Candidatus Vepalosa (NL. fem. n. *Vepalosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SKMY01*. The type species for the genus is *Candidatus* Vepalosa bacifugo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA8154*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Depubiaceae.

Description of *Candidatus* Vepalosa hirudax sp. nov.

Candidatus Vepalosa hirudax (NL. fem. n. *hirudax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SKMY01 sp003556225*. The type genome for the species is the GenBank assembly GCA_007129265.1. The GC content of the type genome is 53.32 % and the genome length is 1.16 Mbp.

Description of *Candidatus* Vepalosa sarabedo sp. nov.

Candidatus Vepalosa sarabedo (NL. fem. n. *sarabedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SKMY01 sp007126455*. The type genome for the species is the GenBank assembly GCA_007126455.1. The GC content of the type genome is 53.73 % and the genome length is 1.14 Mbp.

Description of *Candidatus* Vepalosa vavasitura sp. nov.

Candidatus Vepalosa vavasitura (NL. fem. n. *vavasitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SKMY01 sp003561325*. The type genome for the species is the GenBank assembly GCA_003561325.1. The GC content of the type genome is 54.66 % and the genome length is 1.22 Mbp.

Description of *Candidatus* Vepalula saxopibra sp. nov.

Candidatus Vepalula saxopibra (NL. fem. n. *saxopibra* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PJMF01 sp003173865*. The type genome for the species is the GenBank assembly GCA_003173865.1. The GC content of the type genome is 41.45 % and the genome length is 1.2 Mbp.

Description of *Candidatus* Vepalula gen. nov.

Candidatus Vepalula (NL. fem. n. *Vepalula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PJMF01*. The type species for the genus is *Candidatus* Vepalula saxopibra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *PJMF01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vepalulaceae.

Description of *Candidatus* Vepalulaceae fam. nov.

Candidatus Vepalulaceae (NL. fem. n. *Vepalulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *PJMF01.* The type genus for the taxon is *Candidatus* Vepalula .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA1400*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Bucolulales.

Description of *Candidatus* Verecana apoplitia sp. nov.

Candidatus Verecana apoplitia (NL. fem. n. *apoplitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Zag111 sp001899395*. The type genome for the species is the GenBank assembly GCA_001899395.1. The GC content of the type genome is 36.75 % and the genome length is 2.21 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Fecal samples from a 12-year-old male koala named Zagget".

Description of *Candidatus* Verecana gen. nov.

Candidatus Verecana (NL. fem. n. *Verecana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Zag111*. The type species for the genus is *Candidatus* Verecana apoplitia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Verecana butubetta sp. nov.

Candidatus Verecana butubetta (NL. fem. n. *butubetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Zag111 sp002438405*. The type genome for the species is the GenBank assembly GCA_002439905.1. The GC content of the type genome is 32.03 % and the genome length is 1.47 Mbp.

Description of *Candidatus* Verecana documastra sp. nov.

Candidatus Verecana documastra (NL. fem. n. *documastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Zag111 sp002405805*. The type genome for the species is the GenBank assembly GCA_002405805.1. The GC content of the type genome is 34.22 % and the genome length is 2.05 Mbp.

Description of *Candidatus* Verecana giganatica sp. nov.

Candidatus Verecana giganatica (NL. fem. n. *giganatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Zag111 sp002103105*. The type genome for the species is the GenBank assembly GCA_000438055.1. The GC content of the type genome is 32.13 % and the genome length is 1.92 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "derived from human gut metagenome".

Description of *Candidatus* Verecana hirudibra sp. nov.

Candidatus Verecana hirudibra (NL. fem. n. *hirudibra* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Zag111 sp902766105*. The type genome for the species is the GenBank assembly GCA_902766105.1. The GC content of the type genome is 32.95 % and the genome length is 1.89 Mbp.

Description of *Candidatus* Verecana licenitas sp. nov.

Candidatus Verecana licenitas (NL. fem. n. *licenitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Zag111 sp004558955*. The type genome for the species is the GenBank assembly GCA_004558955.1. The GC content of the type genome is 34.97 % and the genome length is 2.33 Mbp.

Description of *Candidatus* Verecana malifax sp. nov.

Candidatus Verecana malifax (NL. fem. n. *malifax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Zag111 sp002102825*. The type genome for the species is the GenBank assembly GCA_002102735.1. The GC content of the type genome is 32.19 % and the genome length is 1.93 Mbp.

Description of *Candidatus* Verecana obsatitrix sp. nov.

Candidatus Verecana obsatitrix (NL. fem. n. *obsatitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Zag111 sp900555325*. The type genome for the species is the GenBank assembly GCA_900555325.1. The GC content of the type genome is 31.89 % and the genome length is 2.13 Mbp.

Description of *Candidatus* Verecana ossicastra sp. nov.

Candidatus Verecana ossicastra (NL. fem. n. *ossicastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Zag111 sp900551965*. The type genome for the species is the GenBank assembly GCA_900551965.1. The GC content of the type genome is 34.41 % and the genome length is 1.61 Mbp.

Description of *Candidatus* Verecana velifivita sp. nov.

Candidatus Verecana velifivita (NL. fem. n. *velifivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Zag111 sp003258735*. The type genome for the species is the GenBank assembly GCA_900555145.1. The GC content of the type genome is 33.28 % and the genome length is 2.05 Mbp.

Description of *Candidatus* Verecaria nugivitia sp. nov.

Candidatus Verecaria nugivitia (NL. fem. n. *nugivitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SURF-24 sp003599415*. The type genome for the species is the GenBank assembly GCA_003599415.1. The GC content of the type genome is 35.45 % and the genome length is 5.03 Mbp.

Description of *Candidatus* Verecaria gen. nov.

Candidatus Verecaria (NL. fem. n. *Verecaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SURF-24*. The type species for the genus is *Candidatus* Verecaria nugivitia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SURF-24*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Verecariaceae.

Description of *Candidatus* Verecariaceae fam. nov.

Candidatus Verecariaceae (NL. fem. n. *Verecariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SURF-24.* The type genus for the taxon is *Candidatus* Verecaria .

According to GTDB R06-RS202, this family belongs to the order *Ignavibacteriales*.

Description of *Candidatus* Verecella remulibra sp. nov.

Candidatus Verecella remulibra (NL. fem. n. *remulibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CG2-30-59-28 sp001872605*. The type genome for the species is the GenBank assembly GCA_002784925.1. The GC content of the type genome is 58.78 % and the genome length is 5.32 Mbp.

Description of *Candidatus* Verecella gen. nov.

Candidatus Verecella (NL. fem. n. *Verecella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CG2-30-59-28*. The type species for the genus is *Candidatus* Verecella remulibra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CG2-30-59-28*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Verecellaceae.

Description of *Candidatus* Verecellaceae fam. nov.

Candidatus Verecellaceae (NL. fem. n. *Verecellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CG2-30-59-28.* The type genus for the taxon is *Candidatus* Verecella .

According to the original version of GTDB R06-RS202, this family belongs to the order *CG2-30-59-28*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Verecellales.

Description of *Candidatus* Verecellales ord. nov.

Candidatus Verecellales (NL. fem. n. *Verecellales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CG2-30-59-28.* The type genus for the taxon is *Candidatus* Verecella .

According to the GTDB R06-RS202, this order belongs to the class *Abditibacteria*.

Description of *Candidatus* Verecia bisacastra sp. nov.

Candidatus Verecia bisacastra (NL. fem. n. *bisacastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA10324 sp003455275*. The type genome for the species is the GenBank assembly GCA_003455275.1. The GC content of the type genome is 39.05 % and the genome length is 2.21 Mbp.

Description of *Candidatus* Verecia gen. nov.

Candidatus Verecia (NL. fem. n. *Verecia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA10324*. The type species for the genus is *Candidatus* Verecia bisacastra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA10324*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vereciaceae.

Description of *Candidatus* Vereciaceae fam. nov.

Candidatus Vereciaceae (NL. fem. n. *Vereciaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA10324.* The type genus for the taxon is *Candidatus* Verecia .

According to GTDB R06-RS202, this family belongs to the order *Chitinophagales*.

Description of *Candidatus* Verecia innoxibra sp. nov.

Candidatus Verecia innoxibra (NL. fem. n. *innoxibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA10324 sp014190575*. The type genome for the species is the GenBank assembly GCA_014190575.1. The GC content of the type genome is 36.72 % and the genome length is 3.19 Mbp.

Description of *Candidatus* Verecosa cotenitia sp. nov.

Candidatus Verecosa cotenitia (NL. fem. n. *cotenitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3943 sp002385625*. The type genome for the species is the GenBank assembly GCA_012843085.1. The GC content of the type genome is 52.21 % and the genome length is 2.24 Mbp.

Description of *Candidatus* Verecosa gen. nov.

Candidatus Verecosa (NL. fem. n. *Verecosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA3943*. The type species for the genus is *Candidatus* Verecosa cotenitia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA3943*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Verecosaceae.

Description of *Candidatus* Verecosaceae fam. nov.

Candidatus Verecosaceae (NL. fem. n. *Verecosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA3943.* The type genus for the taxon is *Candidatus* Verecosa .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA10575*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Valefulales.

Description of *Candidatus* Verecula fatilatica sp. nov.

Candidatus Verecula fatilatica (NL. fem. n. *fatilatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIJOT01 sp903822335*. The type genome for the species is the GenBank assembly GCA_903847165.1. The GC content of the type genome is 43.19 % and the genome length is 2.83 Mbp.

Description of *Candidatus* Verecula gen. nov.

Candidatus Verecula (NL. fem. n. *Verecula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIJOT01*. The type species for the genus is *Candidatus* Verecula fatilatica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Veridana detepisca sp. nov.

Candidatus Veridana detepisca (NL. fem. n. *detepisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-568 sp002399765*. The type genome for the species is the GenBank assembly GCA_002399765.1. The GC content of the type genome is 51.85 % and the genome length is 0.83 Mbp.

Description of *Candidatus* Veridana gen. nov.

Candidatus Veridana (NL. fem. n. *Veridana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAG-568*. The type species for the genus is *Candidatus* Veridana detepisca .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-288*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Xeropellaceae.

Description of *Candidatus* Veridana hirudugo sp. nov.

Candidatus Veridana hirudugo (NL. fem. n. *hirudugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-568 sp002437105*. The type genome for the species is the GenBank assembly GCA_002437105.1. The GC content of the type genome is 53.22 % and the genome length is 1.02 Mbp.

Description of *Candidatus* Veridana semunisca sp. nov.

Candidatus Veridana semunisca (NL. fem. n. *semunisca* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-568 sp000434395*. The type genome for the species is the GenBank assembly GCA_000434395.1. The GC content of the type genome is 34.9 % and the genome length is 1.48 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "derived from human gut metagenome".

Description of *Candidatus* Veridaria maxilicella sp. nov.

Candidatus Veridaria maxilicella (NL. fem. n. *maxilicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1715 sp002317135*. The type genome for the species is the GenBank assembly GCA_002317135.1. The GC content of the type genome is 36.42 % and the genome length is 2.53 Mbp.

Description of *Candidatus* Veridaria gen. nov.

Candidatus Veridaria (NL. fem. n. *Veridaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1715*. The type species for the genus is *Candidatus* Veridaria maxilicella .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1715*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Veridariaceae.

Description of *Candidatus* Veridariaceae fam. nov.

Candidatus Veridariaceae (NL. fem. n. *Veridariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA1715.* The type genus for the taxon is *Candidatus* Veridaria .

According to GTDB R06-RS202, this family belongs to the order *Bacteroidales*.

Description of *Candidatus* Veridaria sitelitica sp. nov.

Candidatus Veridaria sitelitica (NL. fem. n. *sitelitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1715 sp002371705*. The type genome for the species is the GenBank assembly GCA_002371705.1. The GC content of the type genome is 41.09 % and the genome length is 2.72 Mbp.

Description of *Candidatus* Veridella senipimonas sp. nov.

Candidatus Veridella senipimonas (NL. fem. n. *senipimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *QXCW01 sp003550275*. The type genome for the species is the GenBank assembly RS_GCF_003550275.1. The GC content of the type genome is 35.87 % and the genome length is 3.41 Mbp.

Description of *Candidatus* Veridella gen. nov.

Candidatus Veridella (NL. fem. n. *Veridella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *QXCW01*. The type species for the genus is *Candidatus* Veridella senipimonas .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Veridia aphoredo sp. nov.

Candidatus Veridia aphoredo (NL. fem. n. *aphoredo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *ETT8 sp003443995*. The type genome for the species is the GenBank assembly RS_GCF_003443995.1. The GC content of the type genome is 62.86 % and the genome length is 4.61 Mbp.

Description of *Candidatus* Veridia gen. nov.

Candidatus Veridia (NL. fem. n. *Veridia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *ETT8*. The type species for the genus is *Candidatus* Veridia aphoredo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Veridia citocatica sp. nov.

Candidatus Veridia citocatica (NL. fem. n. *citocatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *ETT8 sp004745575*. The type genome for the species is the GenBank assembly RS_GCF_004745575.1. The GC content of the type genome is 62.99 % and the genome length is 4.04 Mbp.

Description of *Candidatus* Veridia lanugitio sp. nov.

Candidatus Veridia lanugitio (NL. fem. n. *lanugitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *ETT8 sp002794355*. The type genome for the species is the GenBank assembly RS_GCF_002794355.1. The GC content of the type genome is 63.75 % and the genome length is 3.86 Mbp.

Description of *Candidatus* Veridia miracago sp. nov.

Candidatus Veridia miracago (NL. fem. n. *miracago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *ETT8 sp002900965*. The type genome for the species is the GenBank assembly RS_GCF_002900965.1. The GC content of the type genome is 63.42 % and the genome length is 3.7 Mbp.

Description of *Candidatus* Veridia obliviforma sp. nov.

Candidatus Veridia obliviforma (NL. fem. n. *obliviforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *ETT8 sp010915705*. The type genome for the species is the GenBank assembly RS_GCF_010915705.1. The GC content of the type genome is 64.39 % and the genome length is 4.49 Mbp.

Description of *Candidatus* Veridida adtematica sp. nov.

Candidatus Veridida adtematica (NL. fem. n. *adtematica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *40CM-4-65-16 sp005880755*. The type genome for the species is the GenBank assembly GCA_005880755.1. The GC content of the type genome is 66.06 % and the genome length is 2.41 Mbp.

Description of *Candidatus* Veridida gen. nov.

Candidatus Veridida (NL. fem. n. *Veridida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *40CM-4-65-16*. The type species for the genus is *Candidatus* Veridida adtematica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Veridida affulitia sp. nov.

Candidatus Veridida affulitia (NL. fem. n. *affulitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *40CM-4-65-16 sp005887735*. The type genome for the species is the GenBank assembly GCA_005887735.1. The GC content of the type genome is 65.82 % and the genome length is 2.71 Mbp.

Description of *Candidatus* Veridida culigetta sp. nov.

Candidatus Veridida culigetta (NL. fem. n. *culigetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *40CM-4-65-16 sp005881335*. The type genome for the species is the GenBank assembly GCA_005881335.1. The GC content of the type genome is 66.38 % and the genome length is 2.2 Mbp.

Description of *Candidatus* Veridida culigitrix sp. nov.

Candidatus Veridida culigitrix (NL. fem. n. *culigitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *40CM-4-65-16 sp005881275*. The type genome for the species is the GenBank assembly GCA_005881275.1. The GC content of the type genome is 65.62 % and the genome length is 2.94 Mbp.

Description of *Candidatus* Veridida deforilenta sp. nov.

Candidatus Veridida deforilenta (NL. fem. n. *deforilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *40CM-4-65-16 sp005887685*. The type genome for the species is the GenBank assembly GCA_005887675.1. The GC content of the type genome is 66.0 % and the genome length is 3.22 Mbp.

Description of *Candidatus* Veridida detorax sp. nov.

Candidatus Veridida detorax (NL. fem. n. *detorax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *40CM-4-65-16 sp005880345*. The type genome for the species is the GenBank assembly GCA_005880345.1. The GC content of the type genome is 66.88 % and the genome length is 1.95 Mbp.

Description of *Candidatus* Veridida ellipedo sp. nov.

Candidatus Veridida ellipedo (NL. fem. n. *ellipedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *40CM-4-65-16 sp005889085*. The type genome for the species is the GenBank assembly GCA_005889085.1. The GC content of the type genome is 65.91 % and the genome length is 2.8 Mbp.

Description of *Candidatus* Veridida esculousia sp. nov.

Candidatus Veridida esculousia (NL. fem. n. *esculousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *40CM-4-65-16 sp005879675*. The type genome for the species is the GenBank assembly GCA_005879675.1. The GC content of the type genome is 67.78 %

and the genome length is 2.74 Mbp.

Description of *Candidatus* Veridida hemidibra sp. nov.

Candidatus Veridida hemidibra (NL. fem. n. *hemidibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *40CM-4-65-16 sp005883575*. The type genome for the species is the GenBank assembly GCA_005880665.1. The GC content of the type genome is 65.76 % and the genome length is 3.22 Mbp.

Description of *Candidatus* Veridida meridivita sp. nov.

Candidatus Veridida meridivita (NL. fem. n. *meridivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *40CM-4-65-16 sp005889495*. The type genome for the species is the GenBank assembly GCA_005889495.1. The GC content of the type genome is 67.88 % and the genome length is 2.73 Mbp.

Description of *Candidatus* Veridida papilax sp. nov.

Candidatus Veridida papilax (NL. fem. n. *papilax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *40CM-4-65-16 sp005888075*. The type genome for the species is the GenBank assembly GCA_005888075.1. The GC content of the type genome is 65.15 % and the genome length is 2.0 Mbp.

Description of *Candidatus* Veridida proslax sp. nov.

Candidatus Veridida proslax (NL. fem. n. *proslax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *40CM-4-65-16 sp005880915*. The type genome for the species is the GenBank assembly GCA_005880915.1. The GC content of the type genome is 65.94 % and the genome length is 4.13 Mbp.

Description of *Candidatus* Veridida recumentia sp. nov.

Candidatus Veridida recumentia (NL. fem. n. *recumentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *40CM-4-65-16 sp005882545*. The type genome for the species is the GenBank assembly GCA_005882545.1. The GC content of the type genome is 65.66 % and the genome length is 2.53 Mbp.

Description of *Candidatus* Veridida resuritas sp. nov.

Candidatus Veridida resuritas (NL. fem. n. *resuritas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *40CM-4-65-16 sp005889135*. The type genome for the species is the GenBank assembly GCA_005887695.1. The GC content of the type genome is 68.32 % and the genome length is 2.25 Mbp.

Description of *Candidatus* Veridida tetenousia sp. nov.

Candidatus Veridida tetenousia (NL. fem. n. *tetenousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *40CM-4-65-16 sp005882135*. The type genome for the species is the GenBank assembly GCA_005882135.1. The GC content of the type genome is 66.15 % and the genome length is 2.71 Mbp.

Description of *Candidatus* Veridida vacilimonia sp. nov.

Candidatus Veridida vacilimonia (NL. fem. n. *vacilimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *40CM-4-65-16 sp001917775*. The type genome for the species is the GenBank assembly GCA_001917775.1. The GC content of the type genome is 66.01 % and the genome length is 1.58 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Soil sample from Angelo meadow plot 1; 40cm depth; pre rain".

Description of *Candidatus* Veridida visibitas sp. nov.

Candidatus Veridida visibitas (NL. fem. n. *visibitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *40CM-4-65-16 sp005880795*. The type genome for the species is the GenBank assembly GCA_005882655.1. The GC content of the type genome is 65.78 % and the genome length is 3.17 Mbp.

Description of *Candidatus* Veridosa dibucibula sp. nov.

Candidatus Veridosa dibucibula (NL. fem. n. *dibucibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *J007 sp003695985*. The type genome for the species is the GenBank assembly RS_GCF_012295525.1. The GC content of the type genome is 51.45 % and the genome length is 6.36 Mbp.

Description of *Candidatus* Veridosa gen. nov.

Candidatus Veridosa (NL. fem. n. *Veridosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *J007*. The type species for the genus is *Candidatus* Veridosa dibucibula .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Verifana aphoritrix sp. nov.

Candidatus Verifana aphoritrix (NL. fem. n. *aphoritrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2866 sp002309075*. The type genome for the species is the GenBank assembly GCA_002309075.1. The GC content of the type genome is 40.95 % and the genome length is 0.61 Mbp.

Description of *Candidatus* Verifana gen. nov.

Candidatus Verifana (NL. fem. n. *Verifana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA2866*. The type species for the genus is *Candidatus* Verifana

aphoritrix .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Verifana cenobetta sp. nov.

Candidatus Verifana cenobetta (NL. fem. n. *cenobetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2866 sp003979185*. The type genome for the species is the GenBank assembly GCA_013316035.1. The GC content of the type genome is 43.67 % and the genome length is 0.88 Mbp.

Description of *Candidatus* Verifana colutibula sp. nov.

Candidatus Verifana colutibula (NL. fem. n. *colutibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2866 sp013316435*. The type genome for the species is the GenBank assembly GCA_013316435.1. The GC content of the type genome is 45.12 % and the genome length is 0.69 Mbp.

Description of *Candidatus* Verifana depasitura sp. nov.

Candidatus Verifana depasitura (NL. fem. n. *depasitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2866 sp004138405*. The type genome for the species is the GenBank assembly RS_GCF_004138405.1. The GC content of the type genome is 40.3 % and the genome length is 0.56 Mbp.

Description of *Candidatus* Verifana detosessa sp. nov.

Candidatus Verifana detosessa (NL. fem. n. *detosessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2866 sp004138395*. The type genome for the species is the GenBank assembly RS_GCF_004138395.1. The GC content of the type genome is 43.27 % and the genome length is 0.73 Mbp.

Description of *Candidatus* Verifana encepatio sp. nov.

Candidatus Verifana encepatio (NL. fem. n. *encepatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2866 sp013333135*. The type genome for the species is the GenBank assembly GCA_013333135.2. The GC content of the type genome is 40.9 % and the genome length is 0.74 Mbp.

Description of *Candidatus* Verifana excamugo sp. nov.

Candidatus Verifana excamugo (NL. fem. n. *excamugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2866 sp007845165*. The type genome for the species is the GenBank assembly RS_GCF_007845165.1. The GC content of the type genome is 41.14 % and the genome length is 0.62 Mbp.

Description of *Candidatus* Verifana hexamitio sp. nov.

Candidatus Verifana hexamitio (NL. fem. n. *hexamitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2866 sp902761145*. The type genome for the species is the GenBank assembly GCA_902761145.1. The GC content of the type genome is 42.31 % and the genome length is 0.87 Mbp.

Description of *Candidatus* Verifana inperitica sp. nov.

Candidatus Verifana inperitica (NL. fem. n. *inperitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2866 sp002393165*. The type genome for the species is the GenBank assembly GCA_002393165.1. The GC content of the type genome is 48.52 % and the genome length is 0.66 Mbp.

Description of *Candidatus* Verifana irrefatio sp. nov.

Candidatus Verifana irrefatio (NL. fem. n. *irrefatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2866 sp002363125*. The type genome for the species is the GenBank assembly GCA_002363125.1. The GC content of the type genome is 39.69 % and the genome length is 0.65 Mbp.

Description of *Candidatus* Verifana ludimitoga sp. nov.

Candidatus Verifana ludimitoga (NL. fem. n. *ludimitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2866 sp013332965*. The type genome for the species is the GenBank assembly GCA_013333205.2. The GC content of the type genome is 41.35 % and the genome length is 0.74 Mbp.

Description of *Candidatus* Verifana nehalitio sp. nov.

Candidatus Verifana nehalitio (NL. fem. n. *nehalitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2866 sp013332955*. The type genome for the species is the GenBank assembly GCA_013332955.2. The GC content of the type genome is 41.09 % and the genome length is 0.73 Mbp.

Description of *Candidatus* Verifana nugigitudo sp. nov.

Candidatus Verifana nugigitudo (NL. fem. n. *nugigitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2866 sp002350545*. The type genome for the species is the GenBank assembly GCA_002350545.1. The GC content of the type genome is 41.86 % and the genome length is 0.72 Mbp.

Description of *Candidatus* Verifana paralitoga sp. nov.

Candidatus Verifana paralitoga (NL. fem. n. *paralitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *UBA2866 sp013333375*. The type genome for the species is the GenBank assembly GCA_013333375.2. The GC content of the type genome is 41.2 % and the genome length is 0.64 Mbp.

Description of *Candidatus* Verifana rubecentia sp. nov.

Candidatus Verifana rubecentia (NL. fem. n. *rubecentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2866 sp002315165*. The type genome for the species is the GenBank assembly GCA_002315165.1. The GC content of the type genome is 42.25 % and the genome length is 0.58 Mbp.

Description of *Candidatus* Verifana visocibra sp. nov.

Candidatus Verifana visocibra (NL. fem. n. *visocibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2866 sp002371235*. The type genome for the species is the GenBank assembly GCA_002371235.1. The GC content of the type genome is 42.19 % and the genome length is 0.72 Mbp.

Description of *Candidatus* Verifaria agrimibra sp. nov.

Candidatus Verifaria agrimibra (NL. fem. n. *agrimibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SLMJ01 sp007695115*. The type genome for the species is the GenBank assembly GCA_007695115.1. The GC content of the type genome is 58.74 % and the genome length is 3.68 Mbp.

Description of *Candidatus* Verifaria gen. nov.

Candidatus Verifaria (NL. fem. n. *Verifaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SLMJ01*. The type species for the genus is *Candidatus* Verifaria agrimibra .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Verifaria colepibula sp. nov.

Candidatus Verifaria colepibula (NL. fem. n. *colepibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SLMJ01 sp007123655*. The type genome for the species is the GenBank assembly GCA_007123655.1. The GC content of the type genome is 61.04 % and the genome length is 2.93 Mbp.

Description of *Candidatus* Verifaria domipatica sp. nov.

Candidatus Verifaria domipatica (NL. fem. n. *domipatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SLMJ01 sp007133615*. The type genome for the species is the GenBank assembly GCA_007124015.1. The GC content of the type genome is 58.96 % and the genome length is 3.57 Mbp.

Description of *Candidatus* Verifaria mirifitrix sp. nov.

Candidatus Verifaria mirifitrix (NL. fem. n. *mirifitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SLMJ01 sp007122555*. The type genome for the species is the GenBank assembly GCA_007122555.1. The GC content of the type genome is 59.57 % and the genome length is 2.61 Mbp.

Description of *Candidatus* Verifaria sonabitudo sp. nov.

Candidatus Verifaria sonabitudo (NL. fem. n. *sonabitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SLMJ01 sp007124395*. The type genome for the species is the GenBank assembly GCA_007124395.1. The GC content of the type genome is 58.8 % and the genome length is 2.99 Mbp.

Description of *Candidatus* Verifella viginitudo sp. nov.

Candidatus Verifella viginitudo (NL. fem. n. *viginitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WRAC01 sp009780415*. The type genome for the species is the GenBank assembly GCA_009780415.1. The GC content of the type genome is 50.6 % and the genome length is 2.53 Mbp.

Description of *Candidatus* Verifella gen. nov.

Candidatus Verifella (NL. fem. n. *Verifella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WRAC01*. The type species for the genus is *Candidatus* Verifella viginitudo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *WRAX01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Visibulaceae.

Description of *Candidatus* Verifia adnarivita sp. nov.

Candidatus Verifia adnarivita (NL. fem. n. *adnarivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Arctic96AD-7 sp002716165*. The type genome for the species is the GenBank assembly GCA_002716165.1. The GC content of the type genome is 35.99 % and the genome length is 1.35 Mbp.

Description of *Candidatus* Verifia gen. nov.

Candidatus Verifia (NL. fem. n. *Verifia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Arctic96AD-7*. The type species for the genus is *Candidatus* Verifia adnarivita .

According to the original version of GTDB R06-RS202, this genus belongs to the family *NAC60-12*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Peripidaceae.

Description of *Candidatus* Verifia advinessa sp. nov.

Candidatus Verifia advinessa (NL. fem. n. *advinessa* a species epithet created arbitrarily,

while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Arctic96AD-7 sp014382365*. The type genome for the species is the GenBank assembly GCA_014382365.1. The GC content of the type genome is 41.87 % and the genome length is 3.25 Mbp.

Description of *Candidatus* Verifia debucibra sp. nov.

Candidatus Verifia debucibra (NL. fem. n. *debucibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Arctic96AD-7 sp003212435*. The type genome for the species is the GenBank assembly GCA_003212435.1. The GC content of the type genome is 38.98 % and the genome length is 1.37 Mbp.

Description of *Candidatus* Verifia decacitudo sp. nov.

Candidatus Verifia decacitudo (NL. fem. n. *decacitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Arctic96AD-7 sp001627865*. The type genome for the species is the GenBank assembly GCA_001627755.1. The GC content of the type genome is 42.4 % and the genome length is 2.79 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Red Sea water column Station 34 - depth 258m".

Description of *Candidatus* Verifia demigedo sp. nov.

Candidatus Verifia demigedo (NL. fem. n. *demigedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Arctic96AD-7 sp002704555*. The type genome for the species is the GenBank assembly GCA_002704555.1. The GC content of the type genome is 39.07 % and the genome length is 1.97 Mbp.

Description of *Candidatus* Verifia denupibula sp. nov.

Candidatus Verifia denupibula (NL. fem. n. *denupibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Arctic96AD-7 sp002685535*. The type genome for the species is the GenBank assembly GCA_002687455.1. The GC content of the type genome is 42.79 % and the genome length is 2.08 Mbp.

Description of *Candidatus* Verifia inculitrix sp. nov.

Candidatus Verifia inculitrix (NL. fem. n. *inculitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Arctic96AD-7 sp902562015*. The type genome for the species is the GenBank assembly GCA_902562015.1. The GC content of the type genome is 37.55 % and the genome length is 1.65 Mbp.

Description of *Candidatus* Verifia innecatio sp. nov.

Candidatus Verifia innecatio (NL. fem. n. *innecatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Arctic96AD-7 sp902575715*. The type genome for the species is the GenBank assembly GCA_902575715.1. The GC content of the type genome is 32.37 % and the genome length is 1.26 Mbp.

Description of *Candidatus* Verifia macilax sp. nov.

Candidatus Verifia macilax (NL. fem. n. *macilax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Arctic96AD-7 sp002082305*. The type genome for the species is the GenBank assembly GCA_003973155.1. The GC content of the type genome is 42.36 % and the genome length is 2.35 Mbp.

Description of *Candidatus* Verifia mutabitoga sp. nov.

Candidatus Verifia mutabitoga (NL. fem. n. *mutabitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Arctic96AD-7 sp902513935*. The type genome for the species is the GenBank assembly GCA_902513935.1. The GC content of the type genome is 40.79 %

and the genome length is 1.85 Mbp.

Description of *Candidatus* Verifia refocitica sp. nov.

Candidatus Verifia refocitica (NL. fem. n. *refocitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Arctic96AD-7 sp012964265*. The type genome for the species is the GenBank assembly GCA_012963935.1. The GC content of the type genome is 42.41 % and the genome length is 2.48 Mbp.

Description of *Candidatus* Verifia utpotigena sp. nov.

Candidatus Verifia utpotigena (NL. fem. n. *utpotigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Arctic96AD-7 sp014381795*. The type genome for the species is the GenBank assembly GCA_014381795.1. The GC content of the type genome is 42.33 % and the genome length is 2.23 Mbp.

Description of *Candidatus* Verifia venuciforma sp. nov.

Candidatus Verifia venuciforma (NL. fem. n. *venuciforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Arctic96AD-7 sp000213335*. The type genome for the species is the GenBank assembly GCA_000213335.2. The GC content of the type genome is 41.11 % and the genome length is 2.16 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "South Atlantic sub-tropical gyre (station KN192-5-11)".

Description of *Candidatus* Verifia vitifivita sp. nov.

Candidatus Verifia vitifivita (NL. fem. n. *vitifivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Arctic96AD-7 sp902564345*. The type genome for the species is the GenBank assembly GCA_902561915.1. The GC content of the type genome is 35.97 % and the genome length is 2.52 Mbp.

Description of *Candidatus* Verifia vocamicella sp. nov.

Candidatus Verifia vocamicella (NL. fem. n. *vocamicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Arctic96AD-7 sp902590435*. The type genome for the species is the GenBank assembly GCA_902590435.1. The GC content of the type genome is 32.55 % and the genome length is 1.51 Mbp.

Description of *Candidatus* Verifida milipitura sp. nov.

Candidatus Verifida milipitura (NL. fem. n. *milipitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DUMF01 sp012840015*. The type genome for the species is the GenBank assembly GCA_012840015.1. The GC content of the type genome is 54.18 % and the genome length is 2.04 Mbp.

Description of *Candidatus* Verifida gen. nov.

Candidatus Verifida (NL. fem. n. *Verifida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DUMF01*. The type species for the genus is *Candidatus* Verifida milipitura .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DUMF01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Verifidaceae.

Description of *Candidatus* Verifidaceae fam. nov.

Candidatus Verifidaceae (NL. fem. n. *Verifidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *DUMF01*. The type genus for the taxon is *Candidatus* Verifida .

According to the original version of GTDB R06-RS202, this family belongs to the order *DUMF01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Verifidales.

Description of *Candidatus* Verifidales ord. nov.

Candidatus Verifidales (NL. fem. n. *Verifidales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *DUMF01*. The type genus for the taxon is *Candidatus* Verifida .

According to the original version of GTDB R06-RS202, this family belongs to the class *DTU015*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Cetariae.

Description of *Candidatus* Verifula cemenitio sp. nov.

Candidatus Verifula cemenitio (NL. fem. n. *cemenitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CFX15 sp013112575*. The type genome for the species is the GenBank assembly GCA_008501685.1. The GC content of the type genome is 51.34 % and the genome length is 5.5 Mbp.

Description of *Candidatus* Verifula gen. nov.

Candidatus Verifula (NL. fem. n. *Verifula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CFX15*. The type species for the genus is *Candidatus* Verifula cemenitio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA11579*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Mirabosaceae.

Description of *Candidatus* Verrucomicrobium fatilicella sp. nov.

Candidatus Verrucomicrobium fatilicella (NL. fem. n. *fatilicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Verrucomicrobium sp000739655*. The type genome for the species is the GenBank assembly RS_GCF_000739655.1. The GC content of the type genome is 60.78 % and the genome length is 8.69 Mbp.

Description of *Candidatus* Verrucomicrobium fetutatio sp. nov.

Candidatus Verrucomicrobium fetutatio (NL. fem. n. *fetutatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Verrucomicrobium sp000739635*. The type genome for the species is the GenBank assembly RS_GCF_000739635.1. The GC content of the type genome is 60.51 % and the genome length is 8.58 Mbp.

Description of *Candidatus* Verrucomicrobium hecatitas sp. nov.

Candidatus Verrucomicrobium hecatitas (NL. fem. n. *hecatitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Verrucomicrobium sp009885275*. The type genome for the species is the GenBank assembly GCA_009885275.1. The GC content of the type genome is 49.79 % and the genome length is 2.54 Mbp.

Description of *Candidatus* Vibrio abascigena sp. nov.

Candidatus Vibrio abascigena (NL. fem. n. *abascigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Vibrio sp011306175*. The type genome for the species is the GenBank assembly RS_GCF_011306175.1. The GC content of the type genome is 47.11 % and the genome length is 3.14 Mbp.

Description of *Candidatus* Vibrio adoscedo sp. nov.

Candidatus Vibrio adoscedo (NL. fem. n. *adoscedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Vibrio sp004804295*. The type genome for the species is the GenBank assembly RS_GCF_004804295.1. The GC content of the type genome is 50.31 % and the genome length is 4.56 Mbp.

Description of *Candidatus* Vibrio ambififica sp. nov.

Candidatus Vibrio ambififica (NL. fem. n. *ambififica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Vibrio sp011064285*. The type genome for the species is the GenBank assembly RS_GCF_011064285.1. The GC content of the type genome is 42.81 % and the genome length is 4.65 Mbp.

Description of *Candidatus* Vibrio apsuritio sp. nov.

Candidatus Vibrio apsuritio (NL. fem. n. *apsuritio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Vibrio sp009874545*. The type genome for the species is the GenBank assembly RS_GCF_009874545.1. The GC content of the type genome is 42.47 % and the genome length is 5.28 Mbp.

Description of *Candidatus* Vibrio arcelisca sp. nov.

Candidatus Vibrio arcelisca (NL. fem. n. *arcelisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Vibrio sp013114595*. The type genome for the species is the GenBank assembly RS_GCF_013114595.1. The GC content of the type genome is 41.94 % and the genome length is 4.85 Mbp.

Description of *Candidatus* Vibrio armiditica sp. nov.

Candidatus Vibrio armiditica (NL. fem. n. *armiditica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Vibrio sp002342685*. The type genome for the species is the GenBank assembly GCA_002342685.1. The GC content of the type genome is 41.69 % and the genome length is 4.91 Mbp.

Description of *Candidatus* Vibrio bacifatio sp. nov.

Candidatus Vibrio bacifatio (NL. fem. n. *bacifatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Vibrio sp000272145*. The type genome for the species is the GenBank assembly RS_GCF_000272145.2. The GC content of the type genome is 42.27 % and the genome length is 4.24 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "filtered seawater (<1um filter)".

Description of *Candidatus* Vibrio bipalilega sp. nov.

Candidatus Vibrio bipalilega (NL. fem. n. *bipalilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Vibrio sp000287055*. The type genome for the species is the GenBank assembly RS_GCF_000287055.2. The GC content of the type genome is 43.32 % and the genome length is 4.42 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "filtered seawater (64um filter)".

Description of *Candidatus* Vibrio bulapicula sp. nov.

Candidatus Vibrio bulapicula (NL. fem. n. *bulapicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Vibrio sp002812955*. The type genome for the species is the GenBank assembly RS_GCF_002812955.1. The GC content of the type genome is 45.36 % and the genome length is 3.76 Mbp.

Description of *Candidatus* Vibrio citipimonas sp. nov.

Candidatus Vibrio citipimonas (NL. fem. n. *citipimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Vibrio sp014596725*. The type genome for the species is the GenBank assembly RS_GCF_014596725.1. The GC content of the type genome is 43.12 % and the genome length is 4.69 Mbp.

Description of *Candidatus* Vibrio colubivita sp. nov.

Candidatus Vibrio colubivita (NL. fem. n. *colubivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Vibrio sp001676025*. The type genome for the species is the GenBank assembly RS_GCF_001675945.1. The GC content of the type genome is 41.95 % and the

genome length is 3.59 Mbp.

Description of *Candidatus* Vibrio crusmitas sp. nov.

Candidatus Vibrio crusmitas (NL. fem. n. *crusmitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Vibrio sp009601765*. The type genome for the species is the GenBank assembly RS_GCF_009601765.2. The GC content of the type genome is 42.33 % and the genome length is 3.51 Mbp.

Description of *Candidatus* Vibrio cunabicella sp. nov.

Candidatus Vibrio cunabicella (NL. fem. n. *cunabicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Vibrio sp012641465*. The type genome for the species is the GenBank assembly RS_GCF_012641465.1. The GC content of the type genome is 46.49 % and the genome length is 4.35 Mbp.

Description of *Candidatus* Vibrio dehonitudo sp. nov.

Candidatus Vibrio dehonitudo (NL. fem. n. *dehonitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Vibrio sp007858795*. The type genome for the species is the GenBank assembly RS_GCF_007858795.1. The GC content of the type genome is 44.07 % and the genome length is 5.41 Mbp.

Description of *Candidatus* Vibrio depicessa sp. nov.

Candidatus Vibrio depicessa (NL. fem. n. *depicessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Vibrio sp013369335*. The type genome for the species is the GenBank assembly RS_GCF_013369335.1. The GC content of the type genome is 47.07 % and the genome length is 4.14 Mbp.

Description of *Candidatus* Vibrio derecentia sp. nov.

Candidatus Vibrio derecentia (NL. fem. n. *derecentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Vibrio sp007124475*. The type genome for the species is the GenBank assembly GCA_007116955.1. The GC content of the type genome is 43.6 % and the genome length is 2.4 Mbp.

Description of *Candidatus* Vibrio desonibra sp. nov.

Candidatus Vibrio desonibra (NL. fem. n. *desonibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Vibrio sp002608565*. The type genome for the species is the GenBank assembly RS_GCF_003584965.1. The GC content of the type genome is 45.09 % and the genome length is 4.1 Mbp.

Description of *Candidatus* Vibrio effulisca sp. nov.

Candidatus Vibrio effulisca (NL. fem. n. *effulisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Vibrio sp000316985*. The type genome for the species is the GenBank assembly RS_GCF_000316985.1. The GC content of the type genome is 44.41 % and the genome length is 5.47 Mbp.

Description of *Candidatus* Vibrio egregentia sp. nov.

Candidatus Vibrio egregentia (NL. fem. n. *egregentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Vibrio sp013369385*. The type genome for the species is the GenBank assembly RS_GCF_013369385.1. The GC content of the type genome is 46.7 % and the genome length is 4.47 Mbp.

Description of *Candidatus* Vibrio ensifitica sp. nov.

Candidatus Vibrio ensifitica (NL. fem. n. *ensifitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Vibrio sp001506075*. The type genome for the species is the GenBank assembly RS_GCF_001506075.1. The GC content of the type genome is 45.7 % and the genome length is 4.76 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "marine sediment".

Description of *Candidatus* Vibrio epigratio sp. nov.

Candidatus Vibrio epigratio (NL. fem. n. *epigratio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Vibrio sp002342735*. The type genome for the species is the GenBank assembly GCA_002342735.1. The GC content of the type genome is 41.9 % and the genome length is 4.6 Mbp.

Description of *Candidatus* Vibrio feditastra sp. nov.

Candidatus Vibrio feditastra (NL. fem. n. *feditastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Vibrio sp013114545*. The type genome for the species is the GenBank assembly RS_GCF_013114545.1. The GC content of the type genome is 44.75 % and the genome length is 4.58 Mbp.

Description of *Candidatus* Vibrio herinitudo sp. nov.

Candidatus Vibrio herinitudo (NL. fem. n. *herinitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Vibrio sp001874155*. The type genome for the species is the GenBank assembly GCA_001874155.1. The GC content of the type genome is 44.52 % and the genome length is 2.57 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Mediterranean seawater enriched with a specific particulate matter".

Description of *Candidatus* Vibrio inambatio sp. nov.

Candidatus Vibrio inambatio (NL. fem. n. *inambatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Vibrio sp014050145*. The type genome for the species is the GenBank assembly RS_GCF_014050145.1. The GC content of the type genome is 44.12 % and the genome length is 4.59 Mbp.

Description of *Candidatus* Vibrio inbecetta sp. nov.

Candidatus Vibrio inbecetta (NL. fem. n. *inbecetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Vibrio sp000960595*. The type genome for the species is the GenBank assembly RS_GCF_000960595.1. The GC content of the type genome is 48.01 % and the genome length is 4.91 Mbp.

Description of *Candidatus* Vibrio indepentia sp. nov.

Candidatus Vibrio indepentia (NL. fem. n. *indepentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Vibrio sp002877365*. The type genome for the species is the GenBank assembly RS_GCF_002877365.1. The GC content of the type genome is 44.16 % and the genome length is 4.94 Mbp.

Description of *Candidatus* Vibrio inhabitudo sp. nov.

Candidatus Vibrio inhabitudo (NL. fem. n. *inhabitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Vibrio sp003144035*. The type genome for the species is the GenBank assembly RS_GCF_003144035.1. The GC content of the type genome is 46.08 % and the genome length is 4.27 Mbp.

Description of *Candidatus* Vibrio inmemimonia sp. nov.

Candidatus Vibrio inmemimonia (NL. fem. n. *inmemimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Vibrio sp013114625*. The type genome for the species is the GenBank assembly RS_GCF_013114625.1. The GC content of the type genome is 41.29 % and the genome length is 5.05 Mbp.

Description of *Candidatus* Vibrio inredentia sp. nov.

Candidatus Vibrio inredentia (NL. fem. n. *inredentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Vibrio sp006124995*. The type genome for the species is the GenBank assembly RS_GCF_006124995.1. The GC content of the type genome is 44.82 % and the genome length is 4.31 Mbp.

Description of *Candidatus* Vibrio insurigena sp. nov.

Candidatus Vibrio insurigena (NL. fem. n. *insurigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Vibrio sp000169995*. The type genome for the species is the GenBank assembly RS_GCF_000169995.1. The GC content of the type genome is 44.48 % and the genome length is 5.84 Mbp.

Description of *Candidatus* Vibrio manufimonia sp. nov.

Candidatus Vibrio manufimonia (NL. fem. n. *manufimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Vibrio sp002100145*. The type genome for the species is the GenBank assembly RS_GCF_002100145.1. The GC content of the type genome is 45.46 % and the genome length is 4.25 Mbp.

Description of *Candidatus* Vibrio momoricula sp. nov.

Candidatus Vibrio momoricula (NL. fem. n. *momoricula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Vibrio sp002875705*. The type genome for the species is the GenBank assembly RS_GCF_001974575.1. The GC content of the type genome is 43.96 % and the genome length is 5.78 Mbp.

Description of *Candidatus* Vibrio munimedo sp. nov.

Candidatus Vibrio munimedo (NL. fem. n. *munimedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Vibrio sp013113835*. The type genome for the species is the GenBank assembly RS_GCF_013113835.1. The GC content of the type genome is 45.85 % and the genome length is 5.28 Mbp.

Description of *Candidatus* Vibrio notabedo sp. nov.

Candidatus Vibrio notabedo (NL. fem. n. *notabedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Vibrio sp003716875*. The type genome for the species is the GenBank assembly RS_GCF_003716875.1. The GC content of the type genome is 45.44 % and the genome length is 4.01 Mbp.

Description of *Candidatus* Vibrio oblocivita sp. nov.

Candidatus Vibrio oblocivita (NL. fem. n. *oblocivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Vibrio sp000171815*. The type genome for the species is the GenBank assembly RS_GCF_000171815.1. The GC content of the type genome is 44.66 % and the genome length is 4.26 Mbp.

Description of *Candidatus* Vibrio petulilega sp. nov.

Candidatus Vibrio petulilega (NL. fem. n. *petulilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Vibrio sp903986855*. The type genome for the species is the GenBank assembly RS_GCF_903986855.1. The GC content of the type genome is 44.88 % and the genome length is 4.73 Mbp.

Description of *Candidatus* Vibrio sacomatica sp. nov.

Candidatus Vibrio sacomatica (NL. fem. n. *sacomatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Vibrio sp002873335*. The type genome for the species is the GenBank assembly RS_GCF_002874415.1. The GC content of the type genome is 44.37 % and the genome length is 5.16 Mbp.

Description of *Candidatus* Vibrio sarabatica sp. nov.

Candidatus Vibrio sarabatica (NL. fem. n. *sarabatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Vibrio sp013394185*. The type genome for the species is the GenBank assembly RS_GCF_013376745.1. The GC content of the type genome is 44.61 % and the genome length is 5.58 Mbp.

Description of *Candidatus* Vibrio scellastra sp. nov.

Candidatus Vibrio scellastra (NL. fem. n. *scellastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Vibrio sp002563795*. The type genome for the species is the GenBank assembly RS_GCF_002563795.1. The GC content of the type genome is 44.68 % and the genome length is 4.29 Mbp.

Description of *Candidatus* Vibrio siticessa sp. nov.

Candidatus Vibrio siticessa (NL. fem. n. *siticessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Vibrio sp001635455*. The type genome for the species is the GenBank assembly RS_GCF_001635455.1. The GC content of the type genome is 43.9 % and the genome length is 5.32 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "sea water".

Description of *Candidatus* Vibrio solipitica sp. nov.

Candidatus Vibrio solipitica (NL. fem. n. *solipitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Vibrio sp000176715*. The type genome for the species is the GenBank assembly RS_GCF_000176715.1. The GC content of the type genome is 46.46 % and the genome length is 4.08 Mbp.

Description of *Candidatus* Vibrio triclilenta sp. nov.

Candidatus Vibrio triclilenta (NL. fem. n. *triclilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Vibrio sp002873395*. The type genome for the species is the GenBank assembly RS_GCF_002873395.1. The GC content of the type genome is 41.09 % and the genome length is 3.78 Mbp.

Description of *Candidatus* Viburaria novilastra sp. nov.

Candidatus Viburaria novilastra (NL. fem. n. *novilastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2717485 sp002717485*. The type genome for the species is the GenBank assembly GCA_002717485.1. The GC content of the type genome is 29.49 % and the genome length is 1.4 Mbp.

Description of *Candidatus* Viburaria gen. nov.

Candidatus Viburaria (NL. fem. n. *Viburaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2717485*. The type species for the genus is *Candidatus* Viburaria novilastra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GCA-002718135*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Defululaceae.

Description of *Candidatus* Viburella denunicula sp. nov.

Candidatus Viburella denunicula (NL. fem. n. *denunicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTGP01 sp011334905*. The type genome for the species is the GenBank assembly GCA_011334905.1. The GC content of the type genome is 64.94 % and the genome length is 3.76 Mbp.

Description of *Candidatus* Viburella gen. nov.

Candidatus Viburella (NL. fem. n. *Viburella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DTGP01*. The type species for the genus is *Candidatus* Viburella denunicula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DTGP01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Viburellaceae.

Description of *Candidatus* Viburellaceae fam. nov.

Candidatus Viburellaceae (NL. fem. n. *Viburellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *DTGP01.* The type genus for the taxon is *Candidatus* Viburella .

According to the original version of GTDB R06-RS202, this family belongs to the order *DTGP01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Viburellales.

Description of *Candidatus* Viburellales ord. nov.

Candidatus Viburellales (NL. fem. n. *Viburellales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *DTGP01.* The type genus for the taxon is *Candidatus* Viburella .

According to the original version of GTDB R06-RS202, this family belongs to the class *DTGP01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Viburellae.

Description of *Candidatus* Viburellae class. nov.

Candidatus Viburellae (NL. fem. n. *c__Viburellae* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *DTGP01.* The type genus for the taxon is *Candidatus* Viburella .

According to GTDB R06-RS202, this class belongs to the phylum *Armatimonadota*.

Description of *Candidatus* Viburia laxitugo sp. nov.

Candidatus Viburia laxitugo (NL. fem. n. *laxitugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WLWT01 sp012103455*. The type genome for the species is the GenBank assembly GCA_011087615.1. The GC content of the type genome is 58.16 % and the genome length is 5.83 Mbp.

Description of *Candidatus* Viburia gen. nov.

Candidatus Viburia (NL. fem. n. *Viburia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WLWT01*. The type species for the genus is *Candidatus* Viburia laxitugo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *HK1*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Rumifiaceae.

Description of *Candidatus* Viburida arcifibula sp. nov.

Candidatus Viburida arcifibula (NL. fem. n. *arcifibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Palsa-739 sp005883365*. The type genome for the species is the GenBank assembly GCA_005883365.1. The GC content of the type genome is 70.14 % and the genome length is 2.15 Mbp.

Description of *Candidatus* Viburida gen. nov.

Candidatus Viburida (NL. fem. n. *Viburida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Palsa-739*. The type species for the genus is *Candidatus* Viburida arcifibula .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Viburida detepivita sp. nov.

Candidatus Viburida detepivita (NL. fem. n. *detepivita* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Palsa-739 sp003152275*. The type genome for the species is the GenBank assembly GCA_003152275.1. The GC content of the type genome is 67.64 % and the genome length is 3.25 Mbp.

Description of *Candidatus* Viburida irremago sp. nov.

Candidatus Viburida irremago (NL. fem. n. *irremago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Palsa-739 sp003161615*. The type genome for the species is the GenBank assembly GCA_003161615.1. The GC content of the type genome is 69.25 % and the genome length is 2.32 Mbp.

Description of *Candidatus* Viburida refulitia sp. nov.

Candidatus Viburida refulitia (NL. fem. n. *refulitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Palsa-739 sp003139545*. The type genome for the species is the GenBank assembly GCA_003139545.1. The GC content of the type genome is 68.82 % and the genome length is 2.96 Mbp.

Description of *Candidatus* Viburosa cinefifica sp. nov.

Candidatus Viburosa cinefifica (NL. fem. n. *cinefifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HIMB114 sp002692055*. The type genome for the species is the GenBank assembly GCA_002171215.1. The GC content of the type genome is 28.98 % and the genome length is 0.89 Mbp.

Description of *Candidatus* Viburosa gen. nov.

Candidatus Viburosa (NL. fem. n. *Viburosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this genus is *HIMB114*. The type species for the genus is *Candidatus* Viburosa cinefifica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Viburosa dibucessa sp. nov.

Candidatus Viburosa dibucessa (NL. fem. n. *dibucessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HIMB114 sp008638005*. The type genome for the species is the GenBank assembly GCA_008638005.1. The GC content of the type genome is 30.49 % and the genome length is 0.96 Mbp.

Description of *Candidatus* Viburosa diritousia sp. nov.

Candidatus Viburosa diritousia (NL. fem. n. *diritousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HIMB114 sp003209195*. The type genome for the species is the GenBank assembly GCA_003209195.1. The GC content of the type genome is 28.63 % and the genome length is 0.97 Mbp.

Description of *Candidatus* Viburosa fragmisca sp. nov.

Candidatus Viburosa fragmisca (NL. fem. n. *fragmisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HIMB114 sp000163555*. The type genome for the species is the GenBank assembly RS_GCF_000163555.2. The GC content of the type genome is 29.59 % and the genome length is 1.24 Mbp.

Description of *Candidatus* Viburosa licenimonas sp. nov.

Candidatus Viburosa licenimonas (NL. fem. n. *licenimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HIMB114 sp902524955*. The type genome for the species is the GenBank assembly GCA_902524955.1. The GC content of the type genome is 29.7 %

and the genome length is 0.97 Mbp.

Description of *Candidatus* Viburosa terebugo sp. nov.

Candidatus Viburosa terebugo (NL. fem. n. *terebugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HIMB114 sp002684895*. The type genome for the species is the GenBank assembly GCA_004321785.1. The GC content of the type genome is 29.85 % and the genome length is 0.85 Mbp.

Description of *Candidatus* Viburosa xeropitoga sp. nov.

Candidatus Viburosa xeropitoga (NL. fem. n. *xeropitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HIMB114 sp002171085*. The type genome for the species is the GenBank assembly GCA_002703205.1. The GC content of the type genome is 29.53 % and the genome length is 0.96 Mbp.

Description of *Candidatus* Viburula cibarivita sp. nov.

Candidatus Viburula cibarivita (NL. fem. n. *cibarivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-632 sp900539185*. The type genome for the species is the GenBank assembly GCA_900539185.1. The GC content of the type genome is 44.87 % and the genome length is 2.41 Mbp.

Description of *Candidatus* Viburula gen. nov.

Candidatus Viburula (NL. fem. n. *Viburula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAG-632*. The type species for the genus is *Candidatus* Viburula cibarivita .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Viburula desucicula sp. nov.

Candidatus Viburula desucicula (NL. fem. n. *desucicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-632 sp000431515*. The type genome for the species is the GenBank assembly GCA_000431515.1. The GC content of the type genome is 44.32 % and the genome length is 2.46 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "derived from human gut metagenome".

Description of *Candidatus* Viburula dicabitas sp. nov.

Candidatus Viburula dicabitas (NL. fem. n. *dicabitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-632 sp902783585*. The type genome for the species is the GenBank assembly GCA_902783585.1. The GC content of the type genome is 45.81 % and the genome length is 2.59 Mbp.

Description of *Candidatus* Viburula pavimimonia sp. nov.

Candidatus Viburula pavimimonia (NL. fem. n. *pavimimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-632 sp002406015*. The type genome for the species is the GenBank assembly GCA_002406015.1. The GC content of the type genome is 41.76 % and the genome length is 2.59 Mbp.

Description of *Candidatus* Vicatana anecliforma sp. nov.

Candidatus Vicatana anecliforma (NL. fem. n. *anecliforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *BJHT01 sp014193395*. The type genome for the species is the GenBank assembly GCA_014193395.1. The GC content of the type genome is 64.2 % and the genome length is 7.89 Mbp.

Description of *Candidatus* Vicatana gen. nov.

Candidatus Vicatana (NL. fem. n. *Vicatana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *BJHT01*. The type species for the genus is *Candidatus* Vicatana anecliforma .

According to the original version of GTDB R06-RS202, this genus belongs to the family *BJHT01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vicatanaceae.

Description of *Candidatus* Vicatanaceae fam. nov.

Candidatus Vicatanaceae (NL. fem. n. *Vicatanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *BJHT01.* The type genus for the taxon is *Candidatus* Vicatana .

According to GTDB R06-RS202, this family belongs to the order *Pedosphaerales*.

Description of *Candidatus* Vicataria metucigena sp. nov.

Candidatus Vicataria metucigena (NL. fem. n. *metucigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS268 sp900540705*. The type genome for the species is the GenBank assembly GCA_900540705.1. The GC content of the type genome is 35.53 % and the genome length is 1.76 Mbp.

Description of *Candidatus* Vicataria gen. nov.

Candidatus Vicataria (NL. fem. n. *Vicataria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UMGS268*. The type species for the genus is *Candidatus* Vicataria metucigena .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Vicataria ossarugo sp. nov.

Candidatus Vicataria ossarugo (NL. fem. n. *ossarugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS268 sp900540175*. The type genome for the species is the GenBank assembly GCA_900540175.1. The GC content of the type genome is 40.07 % and the genome length is 1.61 Mbp.

Description of *Candidatus* Vicatella inremago sp. nov.

Candidatus Vicatella inremago (NL. fem. n. *inremago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DRWM01 sp011373655*. The type genome for the species is the GenBank assembly GCA_011373655.1. The GC content of the type genome is 38.34 % and the genome length is 2.62 Mbp.

Description of *Candidatus* Vicatella gen. nov.

Candidatus Vicatella (NL. fem. n. *Vicatella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DRWM01*. The type species for the genus is *Candidatus* Vicatella inremago .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DRWM01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vicatellaceae.

Description of *Candidatus* Vicatellaceae fam. nov.

Candidatus Vicatellaceae (NL. fem. n. *Vicatellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *DRWM01.* The type genus for the taxon is *Candidatus* Vicatella .

According to the original version of GTDB R06-RS202, this family belongs to the order *DRWM01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Vicatellales.

Description of *Candidatus* Vicatellales ord. nov.

Candidatus Vicatellales (NL. fem. n. *Vicatellales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this taxon is *DRWM01*. The type genus for the taxon is *Candidatus* Vicatella .

According to the GTDB R06-RS202, this order belongs to the class *Polyangia*.

Description of *Candidatus* Vicatida benifugo sp. nov.

Candidatus Vicatida benifugo (NL. fem. n. *benifugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *VMFF01 sp007375915*. The type genome for the species is the GenBank assembly GCA_007375915.1. The GC content of the type genome is 37.56 % and the genome length is 0.6 Mbp.

Description of *Candidatus* Vicatida gen. nov.

Candidatus Vicatida (NL. fem. n. *Vicatida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *VMFF01*. The type species for the genus is *Candidatus* Vicatida benifugo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *VMFF01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vicatidaceae.

Description of *Candidatus* Vicatidaceae fam. nov.

Candidatus Vicatidaceae (NL. fem. n. *Vicatidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *VMFF01*. The type genus for the taxon is *Candidatus* Vicatida .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA920*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Denicosales.

Description of *Candidatus* Vicatula curacatio sp. nov.

Candidatus Vicatula curacatio (NL. fem. n. *curacatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *RUG841 sp902783835*. The type genome for the species is the GenBank assembly GCA_902783835.1. The GC content of the type genome is 35.55 % and the genome length is 1.88 Mbp.

Description of *Candidatus* Vicatula gen. nov.

Candidatus Vicatula (NL. fem. n. *Vicatula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RUG841*. The type species for the genus is *Candidatus* Vicatula curacatio .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Vicatula novilitrix sp. nov.

Candidatus Vicatula novilitrix (NL. fem. n. *novilitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG841 sp900772035*. The type genome for the species is the GenBank assembly RS_GCF_900772035.1. The GC content of the type genome is 38.31 % and the genome length is 1.75 Mbp.

Description of *Candidatus* Vicatula paralimonia sp. nov.

Candidatus Vicatula paralimonia (NL. fem. n. *paralimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG841 sp900313795*. The type genome for the species is the GenBank assembly GCA_900313795.1. The GC content of the type genome is 37.29 % and the genome length is 1.59 Mbp.

Description of *Candidatus* Vicecana cenotitia sp. nov.

Candidatus Vicecana cenotitia (NL. fem. n. *cenotitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIYTF01 sp903929035*. The type genome for the species is the GenBank assembly GCA_903929035.1. The GC content of the type genome is 38.61 % and the genome length is 3.36 Mbp.

Description of *Candidatus* Vicecana gen. nov.

Candidatus Vicecana (NL. fem. n. *Vicecana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIYTF01*. The type species for the genus is *Candidatus* Vicecana cenotitia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Vicecana vivifibula sp. nov.

Candidatus Vicecana vivifibula (NL. fem. n. *vivifibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIYTF01 sp903915485*. The type genome for the species is the GenBank assembly GCA_903915485.1. The GC content of the type genome is 37.78 % and the genome length is 3.7 Mbp.

Description of *Candidatus* Vicecaria megalousia sp. nov.

Candidatus Vicecaria megalousia (NL. fem. n. *megalousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTU072 sp001512685*. The type genome for the species is the GenBank assembly GCA_002385905.1. The GC content of the type genome is 42.75 % and the genome length is 1.4 Mbp.

Description of *Candidatus* Vicecaria gen. nov.

Candidatus Vicecaria (NL. fem. n. *Vicecaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DTU072*. The type species for the genus is *Candidatus* Vicecaria megalousia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DTU072*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vicecariaceae.

Description of *Candidatus* Vicecariaceae fam. nov.

Candidatus Vicecariaceae (NL. fem. n. *Vicecariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *DTU072*. The type genus for the taxon is *Candidatus* Vicecaria .

According to GTDB R06-RS202, this family belongs to the order *Christensenellales*.

Description of *Candidatus* Vicecaria oblucilega sp. nov.

Candidatus Vicecaria oblucilega (NL. fem. n. *oblucilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTU072 sp012838805*. The type genome for the species is the GenBank assembly GCA_012838805.1. The GC content of the type genome is 41.15 % and the genome length is 1.69 Mbp.

Description of *Candidatus* Vicecella adnubastra sp. nov.

Candidatus Vicecella adnubastra (NL. fem. n. *adnubastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Palsa-295 sp013287135*. The type genome for the species is the GenBank assembly GCA_013287135.1. The GC content of the type genome is 54.65 % and the genome length is 4.38 Mbp.

Description of *Candidatus* Vicecella gen. nov.

Candidatus Vicecella (NL. fem. n. *Vicecella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Palsa-295*. The type species for the genus is *Candidatus* Vicecella adnubastra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA7541*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Dilicellaceae.

Description of *Candidatus* Vicecella assibimonas sp. nov.

Candidatus Vicecella assibimonas (NL. fem. n. *assibimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Palsa-295 sp003131705*. The type genome for the species is the GenBank assembly GCA_003131705.1. The GC content of the type genome is 57.65 % and the genome length is 3.94 Mbp.

Description of *Candidatus* Vicecella deparessa sp. nov.

Candidatus Vicecella deparessa (NL. fem. n. *deparessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Palsa-295 sp003156635*. The type genome for the species is the GenBank assembly GCA_003156635.1. The GC content of the type genome is 58.8 % and the genome length is 4.18 Mbp.

Description of *Candidatus* Vicecella depopitas sp. nov.

Candidatus Vicecella depopitas (NL. fem. n. *depopitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Palsa-295 sp003131985*. The type genome for the species is the GenBank assembly GCA_003166995.1. The GC content of the type genome is 56.21 % and the genome length is 3.94 Mbp.

Description of *Candidatus* Vicecella ensifigena sp. nov.

Candidatus Vicecella ensifigena (NL. fem. n. *ensifigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Palsa-295 sp013289715*. The type genome for the species is the GenBank assembly GCA_013289715.1. The GC content of the type genome is 58.78 % and the genome length is 4.94 Mbp.

Description of *Candidatus* Vicecella irroticella sp. nov.

Candidatus Vicecella irroticella (NL. fem. n. *irroticella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *Palsa-295 sp013286165*. The type genome for the species is the GenBank assembly GCA_013286165.1. The GC content of the type genome is 59.9 % and the genome length is 2.19 Mbp.

Description of *Candidatus* Vicecella malagentia sp. nov.

Candidatus Vicecella malagentia (NL. fem. n. *malagentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Palsa-295 sp003167215*. The type genome for the species is the GenBank assembly GCA_003132885.1. The GC content of the type genome is 56.55 % and the genome length is 3.5 Mbp.

Description of *Candidatus* Vicecella manibilega sp. nov.

Candidatus Vicecella manibilega (NL. fem. n. *manibilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Palsa-295 sp003166795*. The type genome for the species is the GenBank assembly GCA_003132965.1. The GC content of the type genome is 59.86 % and the genome length is 3.91 Mbp.

Description of *Candidatus* Vicecella recocibula sp. nov.

Candidatus Vicecella recocibula (NL. fem. n. *recocibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Palsa-295 sp003153585*. The type genome for the species is the GenBank assembly GCA_003153585.1. The GC content of the type genome is 56.57 % and the genome length is 3.28 Mbp.

Description of *Candidatus* Vicecella tirunicula sp. nov.

Candidatus Vicecella tirunicula (NL. fem. n. *tirunicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Palsa-295 sp013289695*. The type genome for the species is the GenBank assembly GCA_013289695.1. The GC content of the type genome is 58.84 % and the genome length is 4.52 Mbp.

Description of *Candidatus* Vicecia denomitoga sp. nov.

Candidatus Vicecia denomitoga (NL. fem. n. *denomitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SZUA-232 sp003229305*. The type genome for the species is the GenBank assembly GCA_003229305.1. The GC content of the type genome is 61.14 % and the genome length is 1.95 Mbp.

Description of *Candidatus* Vicecia gen. nov.

Candidatus Vicecia (NL. fem. n. *Vicecia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SZUA-232*. The type species for the genus is *Candidatus* Vicecia denomitoga .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SZUA-232*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Viceciaceae.

Description of *Candidatus* Viceciaceae fam. nov.

Candidatus Viceciaceae (NL. fem. n. *Viceciaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SZUA-232.* The type genus for the taxon is *Candidatus* Vicecia .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA5794*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Rudicellales.

Description of *Candidatus* Vicecida dapifitas sp. nov.

Candidatus Vicecida dapifitas (NL. fem. n. *dapifitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WQUG01 sp009781115*. The type genome for the species is the GenBank assembly GCA_009781115.1. The GC content of the type genome is 56.89 % and the genome length is 1.98 Mbp.

Description of *Candidatus* Vicecida gen. nov.

Candidatus Vicecida (NL. fem. n. *Vicecida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WQUG01*. The type species for the genus is *Candidatus* Vicecida dapifitas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *WQUG01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vicecidaceae.

Description of *Candidatus* Vicecidaceae fam. nov.

Candidatus Vicecidaceae (NL. fem. n. *Vicecidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *WQUG01.* The type genus for the taxon is *Candidatus* Vicecida .

According to the original version of GTDB R06-RS202, this family belongs to the order *WRKU01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Volubellales.

Description of *Candidatus* Vicecida insoritas sp. nov.

Candidatus Vicecida insoritas (NL. fem. n. *insoritas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WQUG01 sp009785855*. The type genome for the species is the GenBank assembly GCA_009785855.1. The GC content of the type genome is 63.87 % and the genome length is 0.93 Mbp.

Description of *Candidatus* Vicecida voluniforma sp. nov.

Candidatus Vicecida voluniforma (NL. fem. n. *voluniforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WQUG01 sp009778715*. The type genome for the species is the GenBank assembly GCA_009778715.1. The GC content of the type genome is 56.18 % and the genome length is 1.73 Mbp.

Description of *Candidatus* Vicecosa sonivousia sp. nov.

Candidatus Vicecosa sonivousia (NL. fem. n. *sonivousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RBG-16-55-9 sp001778455*. The type genome for the species is the GenBank assembly GCA_001778455.1. The GC content of the type genome is 55.68 % and the genome length is 1.96 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle background sediment; well D04 at 16ft depth".

Description of *Candidatus* Vicecosa gen. nov.

Candidatus Vicecosa (NL. fem. n. *Vicecosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RBG-16-55-9*. The type species for the genus is *Candidatus* Vicecosa sonivousia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *RBG-16-55-9*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vicecosaceae.

Description of *Candidatus* Vicecosaceae fam. nov.

Candidatus Vicecosaceae (NL. fem. n. *Vicecosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *RBG-16-55-9.* The type genus for the taxon is *Candidatus* Vicecosa .

According to the original version of GTDB R06-RS202, this family belongs to the order *RBG-16-55-9*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Vicecosales.

Description of *Candidatus* Vicecosales ord. nov.

Candidatus Vicecosales (NL. fem. n. *Vicecosales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *RBG-16-55-9.* The type genus for the taxon is *Candidatus* Vicecosa .

According to the GTDB R06-RS202, this order belongs to the class *Bipolaricaulia*.

Description of *Candidatus* Vicecula anancitica sp. nov.

Candidatus Vicecula anancitica (NL. fem. n. *anancitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-45 sp002299665*. The type genome for the species is the GenBank assembly GCA_002299665.1. The GC content of the type genome is 38.23 % and the genome length is 2.66 Mbp.

Description of *Candidatus* Vicecula gen. nov.

Candidatus Vicecula (NL. fem. n. *Vicecula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAG-45*. The type species for the genus is *Candidatus* Vicecula anancitica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Vicecula malivifica sp. nov.

Candidatus Vicecula malivifica (NL. fem. n. *malivifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-45 sp900771955*. The type genome for the species is the GenBank assembly RS_GCF_900771955.1. The GC content of the type genome is 45.54 % and the genome length is 3.58 Mbp.

Description of *Candidatus* Vicecula nicomitio sp. nov.

Candidatus Vicecula nicomitio (NL. fem. n. *nicomitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-45 sp000438375*. The type genome for the species is the GenBank assembly GCA_004552925.1. The GC content of the type genome is 47.98 % and the genome length is 2.29 Mbp.

Description of *Candidatus* Victivallis adtesatica sp. nov.

Candidatus Victivallis adtesatica (NL. fem. n. *adtesatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Victivallis sp900551245*. The type genome for the species is the GenBank assembly GCA_900551245.1. The GC content of the type genome is 59.43 % and the genome length is 4.29 Mbp.

Description of *Candidatus* Victivallis aphorax sp. nov.

Candidatus Victivallis aphorax (NL. fem. n. *aphorax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Victivallis sp900550905*. The type genome for the species is the GenBank assembly GCA_900550905.1. The GC content of the type genome is 59.39 % and the genome length is 4.18 Mbp.

Description of *Candidatus* Victivallis effarilega sp. nov.

Candidatus Victivallis effarilega (NL. fem. n. *effarilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Victivallis sp900768515*. The type genome for the species is the GenBank assembly RS_GCF_900768515.1. The GC content of the type genome is 61.04 % and the genome length is 3.06 Mbp.

Description of *Candidatus* Victivallis emancisca sp. nov.

Candidatus Victivallis emancisca (NL. fem. n. *emancisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Victivallis sp900761715*. The type genome for the species is the GenBank assembly RS_GCF_900761715.1. The GC content of the type genome is 56.99 % and the genome length is 2.93 Mbp.

Description of *Candidatus* Victivallis retecifica sp. nov.

Candidatus Victivallis retecifica (NL. fem. n. *retecifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation

for this species is *Victivallis sp002998355*. The type genome for the species is the GenBank assembly RS_GCF_002998355.1. The GC content of the type genome is 59.96 % and the genome length is 5.24 Mbp.

Description of *Candidatus* Videlana homunitio sp. nov.

Candidatus Videlana homunitio (NL. fem. n. *homunitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WO2-48-25 sp001773695*. The type genome for the species is the GenBank assembly GCA_001773615.1. The GC content of the type genome is 47.48 % and the genome length is 0.95 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 0.1 micron filter; full assembly".

Description of *Candidatus* Videlana gen. nov.

Candidatus Videlana (NL. fem. n. *Videlana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WO2-48-25*. The type species for the genus is *Candidatus* Videlana homunitio .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Videlaria bimetatica sp. nov.

Candidatus Videlaria bimetatica (NL. fem. n. *bimetatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-02-FULL-38-15 sp001777055*. The type genome for the species is the GenBank assembly GCA_001777055.1. The GC content of the type genome is 38.75 % and the genome length is 0.83 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 0.2 micron filter; full assembly".

Description of *Candidatus* Videlaria gen. nov.

Candidatus Videlaria (NL. fem. n. *Videlaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this genus is *2-02-FULL-38-15*. The type species for the genus is *Candidatus* Videlaria bimetatica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA10151*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Sugiliaceae.

Description of *Candidatus* Videlella bipatimonas sp. nov.

Candidatus Videlella bipatimonas (NL. fem. n. *bipatimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2009 sp002706025*. The type genome for the species is the GenBank assembly GCA_002324005.1. The GC content of the type genome is 52.58 % and the genome length is 4.25 Mbp.

Description of *Candidatus* Videlella gen. nov.

Candidatus Videlella (NL. fem. n. *Videlella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA2009*. The type species for the genus is *Candidatus* Videlella bipatimonas .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Videlella habacicula sp. nov.

Candidatus Videlella habacicula (NL. fem. n. *habacicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2009 sp002314145*. The type genome for the species is the GenBank assembly GCA_002294235.1. The GC content of the type genome is 53.27 % and the genome length is 4.21 Mbp.

Description of *Candidatus* Videlella infucigena sp. nov.

Candidatus Videlella infucigena (NL. fem. n. *infucigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *UBA2009 sp002733205*. The type genome for the species is the GenBank assembly GCA_002733205.1. The GC content of the type genome is 52.22 % and the genome length is 4.15 Mbp.

Description of *Candidatus* Videlella sifunivita sp. nov.

Candidatus Videlella sifunivita (NL. fem. n. *sifunivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2009 sp002335285*. The type genome for the species is the GenBank assembly GCA_002340685.1. The GC content of the type genome is 53.18 % and the genome length is 3.72 Mbp.

Description of *Candidatus* Videlia ducilicella sp. nov.

Candidatus Videlia ducilicella (NL. fem. n. *ducilicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *QQVM01 sp004295015*. The type genome for the species is the GenBank assembly GCA_004295015.1. The GC content of the type genome is 39.44 % and the genome length is 3.87 Mbp.

Description of *Candidatus* Videlia gen. nov.

Candidatus Videlia (NL. fem. n. *Videlia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *QQVM01*. The type species for the genus is *Candidatus* Videlia ducilicella .

According to the original version of GTDB R06-RS202, this genus belongs to the family *2013-40CM-41-45*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vocifellaceae.

Description of *Candidatus* Videlia rubigifica sp. nov.

Candidatus Videlia rubigifica (NL. fem. n. *rubigifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *QQVM01 sp003389385*. The type genome for the species is the

GenBank assembly GCA_003389315.1. The GC content of the type genome is 41.81 % and the genome length is 3.43 Mbp.

Description of *Candidatus* Videlida aterrisca sp. nov.

Candidatus Videlida aterrisca (NL. fem. n. *aterrisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2856 sp900555005*. The type genome for the species is the GenBank assembly GCA_900555005.1. The GC content of the type genome is 52.73 % and the genome length is 2.19 Mbp.

Description of *Candidatus* Videlida gen. nov.

Candidatus Videlida (NL. fem. n. *Videlida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA2856*. The type species for the genus is *Candidatus* Videlida aterrisca .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Videlida avoncitura sp. nov.

Candidatus Videlida avoncitura (NL. fem. n. *avoncitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2856 sp002394165*. The type genome for the species is the GenBank assembly GCA_002394165.1. The GC content of the type genome is 54.47 % and the genome length is 2.51 Mbp.

Description of *Candidatus* Videlida ceracifica sp. nov.

Candidatus Videlida ceracifica (NL. fem. n. *ceracifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2856 sp009696445*. The type genome for the species is the GenBank assembly GCA_902786005.1. The GC content of the type genome is 53.64 % and the genome length is 2.38 Mbp.

Description of *Candidatus* Videlida cerucisca sp. nov.

Candidatus Videlida cerucisca (NL. fem. n. *cerucisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2856 sp002371345*. The type genome for the species is the GenBank assembly GCA_902797605.1. The GC content of the type genome is 52.4 % and the genome length is 2.6 Mbp.

Description of *Candidatus* Videlida defunilega sp. nov.

Candidatus Videlida defunilega (NL. fem. n. *defunilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2856 sp902800805*. The type genome for the species is the GenBank assembly GCA_002395635.1. The GC content of the type genome is 53.56 % and the genome length is 1.94 Mbp.

Description of *Candidatus* Videlida detoritia sp. nov.

Candidatus Videlida detoritia (NL. fem. n. *detoritia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2856 sp902767065*. The type genome for the species is the GenBank assembly GCA_902767065.1. The GC content of the type genome is 54.23 % and the genome length is 2.4 Mbp.

Description of *Candidatus* Videlida dibapicula sp. nov.

Candidatus Videlida dibapicula (NL. fem. n. *dibapicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2856 sp902803065*. The type genome for the species is the GenBank assembly GCA_902803065.1. The GC content of the type genome is 51.88 % and the genome length is 2.38 Mbp.

Description of *Candidatus* Videlida expecax sp. nov.

Candidatus Videlida expecax (NL. fem. n. *expecax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2856 sp002392705*. The type genome for the species is the GenBank assembly GCA_002392705.1. The GC content of the type genome is 54.56 % and the genome length is 2.62 Mbp.

Description of *Candidatus* Videlida futatitrix sp. nov.

Candidatus Videlida futatitrix (NL. fem. n. *futatitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2856 sp900313765*. The type genome for the species is the GenBank assembly GCA_902768775.1. The GC content of the type genome is 52.87 % and the genome length is 2.39 Mbp.

Description of *Candidatus* Videlida gemebatica sp. nov.

Candidatus Videlida gemebatica (NL. fem. n. *gemebatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2856 sp900318615*. The type genome for the species is the GenBank assembly GCA_002350005.1. The GC content of the type genome is 49.87 % and the genome length is 2.93 Mbp.

Description of *Candidatus* Videlida habacessa sp. nov.

Candidatus Videlida habacessa (NL. fem. n. *habacessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2856 sp900319065*. The type genome for the species is the GenBank assembly GCA_003523315.1. The GC content of the type genome is 53.92 % and the genome length is 2.48 Mbp.

Description of *Candidatus* Videlida hegumousia sp. nov.

Candidatus Videlida hegumousia (NL. fem. n. *hegumousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *UBA2856 sp002482005*. The type genome for the species is the GenBank assembly GCA_002482005.1. The GC content of the type genome is 52.64 % and the genome length is 3.27 Mbp.

Description of *Candidatus* Videlida linigatica sp. nov.

Candidatus Videlida linigatica (NL. fem. n. *linigatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2856 sp900321365*. The type genome for the species is the GenBank assembly GCA_900321365.1. The GC content of the type genome is 54.6 % and the genome length is 2.24 Mbp.

Description of *Candidatus* Videlida monacifica sp. nov.

Candidatus Videlida monacifica (NL. fem. n. *monacifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2856 sp902779575*. The type genome for the species is the GenBank assembly GCA_902777405.1. The GC content of the type genome is 54.08 % and the genome length is 2.69 Mbp.

Description of *Candidatus* Videlida obrigisca sp. nov.

Candidatus Videlida obrigisca (NL. fem. n. *obrigisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2856 sp902803155*. The type genome for the species is the GenBank assembly GCA_902803155.1. The GC content of the type genome is 53.05 % and the genome length is 2.37 Mbp.

Description of *Candidatus* Videlida parocibula sp. nov.

Candidatus Videlida parocibula (NL. fem. n. *parocibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2856 sp902799015*. The type genome for the species is the GenBank assembly GCA_902799015.1. The GC content of the type genome is 53.32 % and the genome length is 2.64 Mbp.

Description of *Candidatus* Videlida periditas sp. nov.

Candidatus Videlida periditas (NL. fem. n. *periditas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2856 sp902797665*. The type genome for the species is the GenBank assembly GCA_902797665.1. The GC content of the type genome is 53.83 % and the genome length is 3.8 Mbp.

Description of *Candidatus* Videlida resulatica sp. nov.

Candidatus Videlida resulatica (NL. fem. n. *resulatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2856 sp902781455*. The type genome for the species is the GenBank assembly GCA_902781455.1. The GC content of the type genome is 53.36 % and the genome length is 2.39 Mbp.

Description of *Candidatus* Videlida rudecentia sp. nov.

Candidatus Videlida rudecentia (NL. fem. n. *rudecentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2856 sp902785635*. The type genome for the species is the GenBank assembly GCA_902785635.1. The GC content of the type genome is 50.98 % and the genome length is 3.64 Mbp.

Description of *Candidatus* Videlida sarabitia sp. nov.

Candidatus Videlida sarabitia (NL. fem. n. *sarabitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2856 sp902767335*. The type genome for the species is the GenBank assembly GCA_902767335.1. The GC content of the type genome is 53.8 % and the genome length is 2.64 Mbp.

Description of *Candidatus* Videlida subodedo sp. nov.

Candidatus Videlida subodedo (NL. fem. n. *subodedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2856 sp002350685*. The type genome for the species is the GenBank assembly GCA_002350685.1. The GC content of the type genome is 54.23 % and the genome length is 2.83 Mbp.

Description of *Candidatus* Videlida viripigena sp. nov.

Candidatus Videlida viripigena (NL. fem. n. *viripigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2856 sp902801515*. The type genome for the species is the GenBank assembly GCA_902801515.1. The GC content of the type genome is 50.82 % and the genome length is 3.08 Mbp.

Description of *Candidatus* Videlosa immusatio sp. nov.

Candidatus Videlosa immusatio (NL. fem. n. *immusatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAADED01 sp013153605*. The type genome for the species is the GenBank assembly GCA_013153605.1. The GC content of the type genome is 51.77 % and the genome length is 1.62 Mbp.

Description of *Candidatus* Videlosa gen. nov.

Candidatus Videlosa (NL. fem. n. *Videlosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAADED01*. The type species for the genus is *Candidatus* Videlosa immusatio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JAADED01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Videlosaceae.

Description of *Candidatus* Videlosaceae fam. nov.

Candidatus Videlosaceae (NL. fem. n. *Videlosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JAADED01*. The type genus for the taxon is *Candidatus* Videlosa .

According to GTDB R06-RS202, this family belongs to the order *Flavobacteriales*.

Description of *Candidatus* Videlosa nucifentia sp. nov.

Candidatus Videlosa nucifentia (NL. fem. n. *nucifentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAADED01 sp013153655*. The type genome for the species is the GenBank assembly GCA_013153655.1. The GC content of the type genome is 48.04 % and the genome length is 1.67 Mbp.

Description of *Candidatus* Videlula nutamatio sp. nov.

Candidatus Videlula nutamatio (NL. fem. n. *nutamatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CG1-02-37-114 sp001871125*. The type genome for the species is the GenBank assembly GCA_002785445.1. The GC content of the type genome is 37.1 % and the genome length is 1.85 Mbp.

Description of *Candidatus* Videlula gen. nov.

Candidatus Videlula (NL. fem. n. *Videlula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CG1-02-37-114*. The type species for the genus is *Candidatus* Videlula nutamatio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CG1-02-37-114*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Videlulaceae.

Description of *Candidatus* Videlulaceae fam. nov.

Candidatus Videlulaceae (NL. fem. n. *Videlulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CG1-02-37-114*. The type genus for the taxon is *Candidatus* Videlula .

According to the original version of GTDB R06-RS202, this family belongs to the order *CG1-02-37-114*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Videlulales.

Description of *Candidatus* Videlulales ord. nov.

Candidatus Videlulales (NL. fem. n. *Videlulales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CG1-02-37-114.* The type genus for the taxon is *Candidatus* Videlula .

According to the GTDB R06-RS202, this order belongs to the class *Endomicrobia*.

Description of *Candidatus* Vigenana ludimifica sp. nov.

Candidatus Vigenana ludimifica (NL. fem. n. *ludimifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1146 sp002311345*. The type genome for the species is the GenBank assembly GCA_002402035.1. The GC content of the type genome is 56.88 % and the genome length is 3.09 Mbp.

Description of *Candidatus* Vigenana gen. nov.

Candidatus Vigenana (NL. fem. n. *Vigenana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1146*. The type species for the genus is *Candidatus* Vigenana ludimifica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1146*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vigenanaceae.

Description of *Candidatus* Vigenanaceae fam. nov.

Candidatus Vigenanaceae (NL. fem. n. *Vigenanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA1146.* The type genus for the taxon is *Candidatus* Vigenana .

According to the original version of GTDB R06-RS202, this family belongs to the order

UBA1146. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Vigenanales.

Description of *Candidatus* Vigenanales ord. nov.

Candidatus Vigenanales (NL. fem. n. *Vigenanales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA1146.* The type genus for the taxon is *Candidatus* Vigenana .

According to the original version of GTDB R06-RS202, this family belongs to the class *UBA8108*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Decomariae.

Description of *Candidatus* Vigenana sicinibula sp. nov.

Candidatus Vigenana sicinibula (NL. fem. n. *sicinibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1146 sp002711105*. The type genome for the species is the GenBank assembly GCA_002711105.1. The GC content of the type genome is 55.43 % and the genome length is 3.71 Mbp.

Description of *Candidatus* Vigenaria anagnatio sp. nov.

Candidatus Vigenaria anagnatio (NL. fem. n. *anagnatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYNR01 sp012520735*. The type genome for the species is the GenBank assembly GCA_012520735.1. The GC content of the type genome is 53.48 % and the genome length is 2.77 Mbp.

Description of *Candidatus* Vigenaria gen. nov.

Candidatus Vigenaria (NL. fem. n. *Vigenaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAYNR01*. The type species for the genus is *Candidatus* Vigenaria anagnatio .

According to the original version of GTDB R06-RS202, this genus belongs to the family

JAAYNR01. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vigenariaceae.

Description of *Candidatus* Vigenariaceae fam. nov.

Candidatus Vigenariaceae (NL. fem. n. *Vigenariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JAAYNR01.* The type genus for the taxon is *Candidatus* Vigenaria .

According to the original version of GTDB R06-RS202, this family belongs to the order *RFP12*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Capudanales.

Description of *Candidatus* Vigenella denunicella sp. nov.

Candidatus Vigenella denunicella (NL. fem. n. *denunicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2387 sp002343445*. The type genome for the species is the GenBank assembly GCA_002343025.1. The GC content of the type genome is 64.12 % and the genome length is 3.6 Mbp.

Description of *Candidatus* Vigenella gen. nov.

Candidatus Vigenella (NL. fem. n. *Vigenella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA2387*. The type species for the genus is *Candidatus* Vigenella denunicella .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Vigenia lucubago sp. nov.

Candidatus Vigenia lucubago (NL. fem. n. *lucubago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9988 sp001823095*. The type genome for the species is the GenBank assembly GCA_003489415.1. The GC content of the type genome is 52.07 %

and the genome length is 0.61 Mbp.

Description of *Candidatus* Vigenia gen. nov.

Candidatus Vigenia (NL. fem. n. *Vigenia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA9988*. The type species for the genus is *Candidatus* Vigenia lucubago .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA9988*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vigeniaceae.

Description of *Candidatus* Vigeniaceae fam. nov.

Candidatus Vigeniaceae (NL. fem. n. *Vigeniaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA9988.* The type genus for the taxon is *Candidatus* Vigenia .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA9983_A*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Ficedanales.

Description of *Candidatus* Vigenida citipilenta sp. nov.

Candidatus Vigenida citipilenta (NL. fem. n. *citipilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GWC2-37-13 sp000990565*. The type genome for the species is the GenBank assembly GCA_000990565.1. The GC content of the type genome is 34.91 % and the genome length is 1.12 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "aquifer sediment".

Description of *Candidatus* Vigenida gen. nov.

Candidatus Vigenida (NL. fem. n. *Vigenida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GWC2-37-13*. The type species for the genus is *Candidatus* Vigenida citipilenta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GWC2-37-13*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vigenidaceae.

Description of *Candidatus* Vigenidaceae fam. nov.

Candidatus Vigenidaceae (NL. fem. n. *Vigenidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *GWC2-37-13.* The type genus for the taxon is *Candidatus* Vigenida .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA1406*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Molecanales.

Description of *Candidatus* Vigenida decamessa sp. nov.

Candidatus Vigenida decamessa (NL. fem. n. *decamessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GWC2-37-13 sp002788805*. The type genome for the species is the GenBank assembly GCA_002786575.1. The GC content of the type genome is 35.19 % and the genome length is 0.91 Mbp.

Description of *Candidatus* Vigenida demadilenta sp. nov.

Candidatus Vigenida demadilenta (NL. fem. n. *demadilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GWC2-37-13 sp002050095*. The type genome for the species is the GenBank assembly GCA_002050095.1. The GC content of the type genome is 37.73 % and the genome length is 0.89 Mbp.

Description of *Candidatus* Vigenida detesilenta sp. nov.

Candidatus Vigenida detesilenta (NL. fem. n. *detesilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GWC2-37-13 sp002440905*. The type genome for the species is the

GenBank assembly GCA_002440905.1. The GC content of the type genome is 41.58 % and the genome length is 0.93 Mbp.

Description of *Candidatus* Vigenida diluditica sp. nov.

Candidatus Vigenida diluditica (NL. fem. n. *diluditica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GWC2-37-13 sp002786595*. The type genome for the species is the GenBank assembly GCA_002786595.1. The GC content of the type genome is 33.63 % and the genome length is 0.65 Mbp.

Description of *Candidatus* Vigenida extunitura sp. nov.

Candidatus Vigenida extunitura (NL. fem. n. *extunitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GWC2-37-13 sp000990305*. The type genome for the species is the GenBank assembly GCA_000990305.1. The GC content of the type genome is 33.7 % and the genome length is 0.71 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "aquifer sediment".

Description of *Candidatus* Vigenida fidenatica sp. nov.

Candidatus Vigenida fidenatica (NL. fem. n. *fidenatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GWC2-37-13 sp000991135*. The type genome for the species is the GenBank assembly GCA_000991135.1. The GC content of the type genome is 36.9 % and the genome length is 0.99 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "aquifer sediment".

Description of *Candidatus* Vigenida inrecitoga sp. nov.

Candidatus Vigenida inrecitoga (NL. fem. n. *inrecitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GWC2-37-13 sp001789855*. The type genome for the species is the GenBank assembly GCA_001789855.1. The GC content of the type genome is 43.85 % and the genome length is 0.47 Mbp. The isolation source for the NCBI BioSample

associated with the type genome is descibed as "Rifle well FP-101 under low O2 conditions; 0.1 micron filter; full assembly".

Description of *Candidatus* Vigenida penecifica sp. nov.

Candidatus Vigenida penecifica (NL. fem. n. *penecifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GWC2-37-13 sp002779665*. The type genome for the species is the GenBank assembly GCA_002779665.1. The GC content of the type genome is 33.75 % and the genome length is 0.78 Mbp.

Description of *Candidatus* Vigenida refacitura sp. nov.

Candidatus Vigenida refacitura (NL. fem. n. *refacitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GWC2-37-13 sp002792355*. The type genome for the species is the GenBank assembly GCA_002792355.1. The GC content of the type genome is 35.49 % and the genome length is 0.85 Mbp.

Description of *Candidatus* Vigenosa depocatio sp. nov.

Candidatus Vigenosa depocatio (NL. fem. n. *depocatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SBBA01 sp005239925*. The type genome for the species is the GenBank assembly GCA_005239925.1. The GC content of the type genome is 49.5 % and the genome length is 2.37 Mbp.

Description of *Candidatus* Vigenosa gen. nov.

Candidatus Vigenosa (NL. fem. n. *Vigenosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SBBA01*. The type species for the genus is *Candidatus* Vigenosa depocatio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SBBA01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vigenosaceae.

Description of *Candidatus* Vigenosaceae fam. nov.

Candidatus Vigenosaceae (NL. fem. n. *Vigenosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SBBA01*. The type genus for the taxon is *Candidatus* Vigenosa .

According to the original version of GTDB R06-RS202, this family belongs to the order *SBBL01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Ceraridales.

Description of *Candidatus* Vigenula manomitoga sp. nov.

Candidatus Vigenula manomitoga (NL. fem. n. *manomitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4592 sp002390705*. The type genome for the species is the GenBank assembly GCA_002390705.1. The GC content of the type genome is 53.46 % and the genome length is 2.07 Mbp.

Description of *Candidatus* Vigenula gen. nov.

Candidatus Vigenula (NL. fem. n. *Vigenula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA4592*. The type species for the genus is *Candidatus* Vigenula manomitoga .

According to the original version of GTDB R06-RS202, this genus belongs to the family *S36-B12*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Categidaceae.

Description of *Candidatus* Vigenula maxilibra sp. nov.

Candidatus Vigenula maxilibra (NL. fem. n. *maxilibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4592 sp002469525*. The type genome for the species is the GenBank assembly GCA_002469525.1. The GC content of the type genome is 53.57 % and the genome length is 2.02 Mbp.

Description of *Candidatus* Vigenula sicaritia sp. nov.

Candidatus Vigenula sicaritia (NL. fem. n. *sicaritia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4592 sp002365735*. The type genome for the species is the GenBank assembly GCA_002365735.1. The GC content of the type genome is 54.19 % and the genome length is 2.04 Mbp.

Description of *Candidatus* Viginana cobalicula sp. nov.

Candidatus Viginana cobalicula (NL. fem. n. *cobalicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6984 sp900550295*. The type genome for the species is the GenBank assembly GCA_900550295.1. The GC content of the type genome is 32.65 % and the genome length is 1.67 Mbp.

Description of *Candidatus* Viginana gen. nov.

Candidatus Viginana (NL. fem. n. *Viginana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA6984*. The type species for the genus is *Candidatus* Viginana cobalicula .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Viginana colopitio sp. nov.

Candidatus Viginana colopitio (NL. fem. n. *colopitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6984 sp900321735*. The type genome for the species is the GenBank assembly GCA_902774585.1. The GC content of the type genome is 29.73 % and the genome length is 2.17 Mbp.

Description of *Candidatus* Viginana detesedo sp. nov.

Candidatus Viginana detesedo (NL. fem. n. *detesedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6984 sp002450015*. The type genome for the species is the GenBank assembly GCA_002450015.1. The GC content of the type genome is 30.81 % and the genome length is 1.43 Mbp.

Description of *Candidatus* Viginana inlocatio sp. nov.

Candidatus Viginana inlocatio (NL. fem. n. *inlocatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6984 sp002369055*. The type genome for the species is the GenBank assembly GCA_002369055.1. The GC content of the type genome is 31.2 % and the genome length is 1.55 Mbp.

Description of *Candidatus* Viginana venucedo sp. nov.

Candidatus Viginana venucedo (NL. fem. n. *venucedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6984 sp003258725*. The type genome for the species is the GenBank assembly GCA_003258725.1. The GC content of the type genome is 32.51 % and the genome length is 1.86 Mbp.

Description of *Candidatus* Viginaria peridisca sp. nov.

Candidatus Viginaria peridisca (NL. fem. n. *peridisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *LLD-282 sp009927065*. The type genome for the species is the GenBank assembly GCA_009926025.1. The GC content of the type genome is 36.03 % and the genome length is 2.39 Mbp.

Description of *Candidatus* Viginaria gen. nov.

Candidatus Viginaria (NL. fem. n. *Viginaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *LLD-282*. The type species for the genus is *Candidatus* Viginaria

peridisca .

According to the original version of GTDB R06-RS202, this genus belongs to the family *LLD-282*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Viginariaceae.

Description of *Candidatus* Viginariaceae fam. nov.

Candidatus Viginariaceae (NL. fem. n. *Viginariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *LLD-282.* The type genus for the taxon is *Candidatus* Viginaria .

According to the original version of GTDB R06-RS202, this family belongs to the order *LLD-282*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Viginariales.

Description of *Candidatus* Viginariales ord. nov.

Candidatus Viginariales (NL. fem. n. *Viginariales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *LLD-282.* The type genus for the taxon is *Candidatus* Viginaria .

According to the GTDB R06-RS202, this order belongs to the class *Gammaproteobacteria*.

Description of *Candidatus* Viginella bigemago sp. nov.

Candidatus Viginella bigemago (NL. fem. n. *bigemago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5026 sp900557305*. The type genome for the species is the GenBank assembly RS_GCF_900752905.1. The GC content of the type genome is 24.94 % and the genome length is 1.17 Mbp.

Description of *Candidatus* Viginella gen. nov.

Candidatus Viginella (NL. fem. n. *Viginella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA5026*. The type species for the genus is *Candidatus* Viginella

bigemago .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA660*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vitigellaceae.

Description of *Candidatus* Viginella ciminedo sp. nov.

Candidatus Viginella ciminedo (NL. fem. n. *ciminedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5026 sp900550255*. The type genome for the species is the GenBank assembly GCA_900550255.1. The GC content of the type genome is 25.69 % and the genome length is 1.07 Mbp.

Description of *Candidatus* Viginella pavimibula sp. nov.

Candidatus Viginella pavimibula (NL. fem. n. *pavimibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5026 sp900546745*. The type genome for the species is the GenBank assembly GCA_900546745.1. The GC content of the type genome is 26.84 % and the genome length is 1.31 Mbp.

Description of *Candidatus* Viginella penecatica sp. nov.

Candidatus Viginella penecatica (NL. fem. n. *penecatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5026 sp900313725*. The type genome for the species is the GenBank assembly GCA_902793505.1. The GC content of the type genome is 24.35 % and the genome length is 1.13 Mbp.

Description of *Candidatus* Viginella repagicula sp. nov.

Candidatus Viginella repagicula (NL. fem. n. *repagicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5026 sp900552335*. The type genome for the species is the

GenBank assembly GCA_900552335.1. The GC content of the type genome is 27.27 % and the genome length is 0.83 Mbp.

Description of *Candidatus* Viginella xeramigena sp. nov.

Candidatus Viginella xeramigena (NL. fem. n. *xeramigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5026 sp002416285*. The type genome for the species is the GenBank assembly GCA_002416285.1. The GC content of the type genome is 30.38 % and the genome length is 1.5 Mbp.

Description of *Candidatus* Viginia hemitilega sp. nov.

Candidatus Viginia hemitilega (NL. fem. n. *hemitilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8106 sp003509065*. The type genome for the species is the GenBank assembly GCA_003509065.1. The GC content of the type genome is 49.15 % and the genome length is 2.57 Mbp.

Description of *Candidatus* Viginia gen. nov.

Candidatus Viginia (NL. fem. n. *Viginia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA8106*. The type species for the genus is *Candidatus* Viginia hemitilega .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA823*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Metapiaceae.

Description of *Candidatus* Viginia resalicula sp. nov.

Candidatus Viginia resalicula (NL. fem. n. *resalicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8106 sp002696705*. The type genome for the species is the GenBank assembly GCA_002696705.1. The GC content of the type genome is 49.94 %

and the genome length is 1.72 Mbp.

Description of *Candidatus* Viginida insibisca sp. nov.

Candidatus Viginida insibisca (NL. fem. n. *insibisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *OLB7 sp001567195*. The type genome for the species is the GenBank assembly GCA_001567195.1. The GC content of the type genome is 57.37 % and the genome length is 3.91 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "partial-nitritation anammox (PNA) reactor; full scale (600m3) reactor for the removal of ammonium from wastewater from the potato processing industry".

Description of *Candidatus* Viginida gen. nov.

Candidatus Viginida (NL. fem. n. *Viginida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *OLB7*. The type species for the genus is *Candidatus* Viginida insibisca .

According to the original version of GTDB R06-RS202, this genus belongs to the family *OLB7*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Viginidaceae.

Description of *Candidatus* Viginidaceae fam. nov.

Candidatus Viginidaceae (NL. fem. n. *Viginidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *OLB7*. The type genus for the taxon is *Candidatus* Viginida .

According to the original version of GTDB R06-RS202, this family belongs to the order *OLB7*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Viginidales.

Description of *Candidatus* Viginidales ord. nov.

Candidatus Viginidales (NL. fem. n. *Viginidales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *OLB7*. The type genus for the taxon is *Candidatus* Viginida .

According to the GTDB R06-RS202, this order belongs to the class *Kapabacteria*.

Description of *Candidatus* Viginosa apperousia sp. nov.

Candidatus Viginosa apperousia (NL. fem. n. *apperousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AV2 sp003218935*. The type genome for the species is the GenBank assembly GCA_003218935.1. The GC content of the type genome is 58.81 % and the genome length is 3.83 Mbp.

Description of *Candidatus* Viginosa gen. nov.

Candidatus Viginosa (NL. fem. n. *Viginosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *AV2*. The type species for the genus is *Candidatus* Viginosa apperousia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *AV2*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Viginosaceae.

Description of *Candidatus* Viginosaceae fam. nov.

Candidatus Viginosaceae (NL. fem. n. *Viginosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *AV2.* The type genus for the taxon is *Candidatus* Viginosa .

According to GTDB R06-RS202, this family belongs to the order *Pedosphaerales*.

Description of *Candidatus* Viginosa argimatio sp. nov.

Candidatus Viginosa argimatio (NL. fem. n. *argimatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AV2 sp003219345*. The type genome for the species is the GenBank assembly GCA_003219345.1. The GC content of the type genome is 58.61 % and the genome length is 5.74 Mbp.

Description of *Candidatus* Viginosa cilibessa sp. nov.

Candidatus Viginosa cilibessa (NL. fem. n. *cilibessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AV2 sp003218515*. The type genome for the species is the GenBank assembly GCA_003218515.1. The GC content of the type genome is 58.77 % and the genome length is 5.89 Mbp.

Description of *Candidatus* Viginosa intolax sp. nov.

Candidatus Viginosa intolax (NL. fem. n. *intolax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AV2 sp003219675*. The type genome for the species is the GenBank assembly GCA_003219675.1. The GC content of the type genome is 59.57 % and the genome length is 4.71 Mbp.

Description of *Candidatus* Viginula aggubessa sp. nov.

Candidatus Viginula aggubessa (NL. fem. n. *aggubessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA974 sp012963975*. The type genome for the species is the GenBank assembly GCA_012963975.1. The GC content of the type genome is 42.82 % and the genome length is 3.03 Mbp.

Description of *Candidatus* Viginula gen. nov.

Candidatus Viginula (NL. fem. n. *Viginula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA974*. The type species for the genus is *Candidatus* Viginula aggubessa .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UA16*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vatilosaceae.

Description of *Candidatus* Viginula amnigessa sp. nov.

Candidatus Viginula amnigessa (NL. fem. n. *amnigessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA974 sp002722795*. The type genome for the species is the GenBank assembly GCA_002722795.1. The GC content of the type genome is 38.5 % and the genome length is 1.74 Mbp.

Description of *Candidatus* Viginula aterritudo sp. nov.

Candidatus Viginula aterritudo (NL. fem. n. *aterritudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA974 sp002717605*. The type genome for the species is the GenBank assembly GCA_002717605.1. The GC content of the type genome is 39.7 % and the genome length is 1.23 Mbp.

Description of *Candidatus* Viginula attubitrix sp. nov.

Candidatus Viginula attubitrix (NL. fem. n. *attubitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA974 sp902578505*. The type genome for the species is the GenBank assembly GCA_902578505.1. The GC content of the type genome is 38.72 % and the genome length is 1.03 Mbp.

Description of *Candidatus* Viginula conamimonas sp. nov.

Candidatus Viginula conamimonas (NL. fem. n. *conamimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA974 sp002700285*. The type genome for the species is the GenBank assembly GCA_002359775.1. The GC content of the type genome is 43.46 % and the genome length is 1.87 Mbp.

Description of *Candidatus* Viginula denixax sp. nov.

Candidatus Viginula denixax (NL. fem. n. *denixax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA974 sp002746975*. The type genome for the species is the GenBank assembly GCA_002746975.1. The GC content of the type genome is 39.55 % and the genome length is 2.39 Mbp.

Description of *Candidatus* Viginula denomigena sp. nov.

Candidatus Viginula denomigena (NL. fem. n. *denomigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA974 sp002723115*. The type genome for the species is the GenBank assembly GCA_002723115.1. The GC content of the type genome is 41.2 % and the genome length is 1.7 Mbp.

Description of *Candidatus* Viginula halucimonia sp. nov.

Candidatus Viginula halucimonia (NL. fem. n. *halucimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA974 sp002292405*. The type genome for the species is the GenBank assembly GCA_002292405.1. The GC content of the type genome is 40.34 % and the genome length is 1.44 Mbp.

Description of *Candidatus* Viginula imbecifica sp. nov.

Candidatus Viginula imbecifica (NL. fem. n. *imbecifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA974 sp002336655*. The type genome for the species is the GenBank assembly GCA_002336655.1. The GC content of the type genome is 43.58 % and the genome length is 2.12 Mbp.

Description of *Candidatus* Viginula maciliforma sp. nov.

Candidatus Viginula maciliforma (NL. fem. n. *maciliforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA974 sp002693775*. The type genome for the species is the GenBank assembly GCA_002693775.1. The GC content of the type genome is 40.59 %

and the genome length is 1.87 Mbp.

Description of *Candidatus* Viginula omnimitia sp. nov.

Candidatus Viginula omnimitia (NL. fem. n. *omnimitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA974 sp002339135*. The type genome for the species is the GenBank assembly GCA_002339135.1. The GC content of the type genome is 42.52 % and the genome length is 1.95 Mbp.

Description of *Candidatus* Vilipana denomifica sp. nov.

Candidatus Vilipana denomifica (NL. fem. n. *denomifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *QYQG01 sp005790965*. The type genome for the species is the GenBank assembly GCA_005790965.1. The GC content of the type genome is 60.11 % and the genome length is 1.18 Mbp.

Description of *Candidatus* Vilipana gen. nov.

Candidatus Vilipana (NL. fem. n. *Vilipana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *QYQG01*. The type species for the genus is *Candidatus* Vilipana denomifica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Vilipana ecligivita sp. nov.

Candidatus Vilipana ecligivita (NL. fem. n. *ecligivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *QYQG01 sp007280375*. The type genome for the species is the GenBank assembly GCA_007280375.1. The GC content of the type genome is 60.27 % and the genome length is 1.38 Mbp.

Description of *Candidatus* Vilipana fibicibula sp. nov.

Candidatus Vilipana fibicibula (NL. fem. n. *fibicibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *QYQG01 sp005793645*. The type genome for the species is the GenBank assembly GCA_005793645.1. The GC content of the type genome is 58.56 % and the genome length is 1.3 Mbp.

Description of *Candidatus* Viliparia artufax sp. nov.

Candidatus Viliparia artufax (NL. fem. n. *artufax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACCXJ01 sp013697045*. The type genome for the species is the GenBank assembly GCA_013697045.1. The GC content of the type genome is 63.94 % and the genome length is 4.57 Mbp.

Description of *Candidatus* Viliparia gen. nov.

Candidatus Viliparia (NL. fem. n. *Viliparia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACCXJ01*. The type species for the genus is *Candidatus* Viliparia artufax .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JACCXJ01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vilipariaceae.

Description of *Candidatus* Vilipariaceae fam. nov.

Candidatus Vilipariaceae (NL. fem. n. *Vilipariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JACCXJ01*. The type genus for the taxon is *Candidatus* Viliparia .

According to the original version of GTDB R06-RS202, this family belongs to the order *JACCXJ01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Vilipariales.

Description of *Candidatus* Vilipariales ord. nov.

Candidatus Viliparіales (NL. fem. n. *Vilipariales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JACCXJ01*. The type genus for the taxon is *Candidatus* Viliparia .

According to the GTDB R06-RS202, this order belongs to the class *Gammaproteobacteria*.

Description of *Candidatus* Vilipella fatilifica sp. nov.

Candidatus Vilipella fatilifica (NL. fem. n. *fatilifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SAAU01 sp009929265*. The type genome for the species is the GenBank assembly GCA_009929265.1. The GC content of the type genome is 37.05 % and the genome length is 1.24 Mbp.

Description of *Candidatus* Vilipella gen. nov.

Candidatus Vilipella (NL. fem. n. *Vilipella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SAAU01*. The type species for the genus is *Candidatus* Vilipella fatilifica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SAAU01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vilipellaceae.

Description of *Candidatus* Vilipellaceae fam. nov.

Candidatus Vilipellaceae (NL. fem. n. *Vilipellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SAAU01*. The type genus for the taxon is *Candidatus* Vilipella .

According to the original version of GTDB R06-RS202, this family belongs to the order *RF32*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Resaculales.

Description of *Candidatus* Vilipia detesatica sp. nov.

Candidatus Vilipia detesatica (NL. fem. n. *detesatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SZUA-521 sp003248125*. The type genome for the species is the GenBank assembly GCA_003251285.1. The GC content of the type genome is 62.63 % and the genome length is 3.97 Mbp.

Description of *Candidatus* Vilipia gen. nov.

Candidatus Vilipia (NL. fem. n. *Vilipia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SZUA-521*. The type species for the genus is *Candidatus* Vilipia detesatica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *HTCC2089*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Tegumosaceae.

Description of *Candidatus* Vilipida adsudatica sp. nov.

Candidatus Vilipida adsudatica (NL. fem. n. *adsudatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *QS-5-54-17 sp003022365*. The type genome for the species is the GenBank assembly GCA_003022365.1. The GC content of the type genome is 53.63 % and the genome length is 0.82 Mbp.

Description of *Candidatus* Vilipida gen. nov.

Candidatus Vilipida (NL. fem. n. *Vilipida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *QS-5-54-17*. The type species for the genus is *Candidatus* Vilipida adsudatica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *QS-5-54-17*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vilipidaceae.

Description of *Candidatus* Vilipidaceae fam. nov.

Candidatus Vilipidaceae (NL. fem. n. *Vilipidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *QS-5-54-17.* The type genus for the taxon is *Candidatus* Vilipida .

According to GTDB R06-RS202, this family belongs to the order *Saccharimonadales*.

Description of *Candidatus* Viliposa catagax sp. nov.

Candidatus Viliposa catagax (NL. fem. n. *catagax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SLMF01 sp007124535*. The type genome for the species is the GenBank assembly GCA_007124535.1. The GC content of the type genome is 62.82 % and the genome length is 4.26 Mbp.

Description of *Candidatus* Viliposa gen. nov.

Candidatus Viliposa (NL. fem. n. *Viliposa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SLMF01*. The type species for the genus is *Candidatus* Viliposa catagax .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Viliposa ossicitrix sp. nov.

Candidatus Viliposa ossicitrix (NL. fem. n. *ossicitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SLMF01 sp007133715*. The type genome for the species is the GenBank assembly GCA_007133715.1. The GC content of the type genome is 62.48 % and the genome length is 4.33 Mbp.

Description of *Candidatus* Vilipula cobalitrix sp. nov.

Candidatus Vilipula cobalitrix (NL. fem. n. *cobalitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-988 sp003149915*. The type genome for the species is the GenBank assembly GCA_900542725.1. The GC content of the type genome is 34.05 % and the genome length is 1.48 Mbp.

Description of *Candidatus* Vilipula gen. nov.

Candidatus Vilipula (NL. fem. n. *Vilipula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAG-988*. The type species for the genus is *Candidatus* Vilipula cobalitrix .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA660*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vitigellaceae.

Description of *Candidatus* Vilitana pedepifica sp. nov.

Candidatus Vilitana pedepifica (NL. fem. n. *pedepifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIOSF01 sp903860855*. The type genome for the species is the GenBank assembly GCA_903878005.1. The GC content of the type genome is 40.01 % and the genome length is 1.52 Mbp.

Description of *Candidatus* Vilitana gen. nov.

Candidatus Vilitana (NL. fem. n. *Vilitana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIOSF01*. The type species for the genus is *Candidatus* Vilitana pedepifica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Vilitaria monogigena sp. nov.

Candidatus Vilitaria monogigena (NL. fem. n. *monogigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *OLB8 sp001567405*. The type genome for the species is the GenBank assembly GCA_002344555.1. The GC content of the type genome is 41.48 % and the genome length is 3.29 Mbp.

Description of *Candidatus* Vilitaria gen. nov.

Candidatus Vilitaria (NL. fem. n. *Vilitaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *OLB8*. The type species for the genus is *Candidatus* Vilitaria monogigena .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Vilitella pericimonia sp. nov.

Candidatus Vilitella pericimonia (NL. fem. n. *pericimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1351 sp002342805*. The type genome for the species is the GenBank assembly GCA_002342805.1. The GC content of the type genome is 36.05 % and the genome length is 4.16 Mbp.

Description of *Candidatus* Vilitella gen. nov.

Candidatus Vilitella (NL. fem. n. *Vilitella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1351*. The type species for the genus is *Candidatus* Vilitella pericimonia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Vilitella venunitia sp. nov.

Candidatus Vilitella venunitia (NL. fem. n. *venunitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1351 sp002382805*. The type genome for the species is the

GenBank assembly GCA_002306455.1. The GC content of the type genome is 36.95 % and the genome length is 3.37 Mbp.

Description of *Candidatus* Vilitia genufitura sp. nov.

Candidatus Vilitia genufitura (NL. fem. n. *genufitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2770975 sp002783405*. The type genome for the species is the GenBank assembly GCA_002770975.1. The GC content of the type genome is 48.57 % and the genome length is 5.99 Mbp.

Description of *Candidatus* Vilitia gen. nov.

Candidatus Vilitia (NL. fem. n. *Vilitia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2770975*. The type species for the genus is *Candidatus* Vilitia genufitura .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA7694*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Bicoridaceae.

Description of *Candidatus* Vilitida ciminitia sp. nov.

Candidatus Vilitida ciminitia (NL. fem. n. *ciminitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG11420 sp902769055*. The type genome for the species is the GenBank assembly GCA_902798325.1. The GC content of the type genome is 40.58 % and the genome length is 0.83 Mbp.

Description of *Candidatus* Vilitida gen. nov.

Candidatus Vilitida (NL. fem. n. *Vilitida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RUG11420*. The type species for the genus is *Candidatus* Vilitida ciminitia .

According to the original version of GTDB R06-RS202, this genus belongs to the family

RUG11792. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Desepulaceae.

Description of *Candidatus* Vilitida expisugo sp. nov.

Candidatus Vilitida expisugo (NL. fem. n. *expisugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG11420 sp902798535*. The type genome for the species is the GenBank assembly GCA_902798535.1. The GC content of the type genome is 37.45 % and the genome length is 0.95 Mbp.

Description of *Candidatus* Vilitida laxitifica sp. nov.

Candidatus Vilitida laxitifica (NL. fem. n. *laxitifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG11420 sp902773285*. The type genome for the species is the GenBank assembly GCA_902773285.1. The GC content of the type genome is 38.22 % and the genome length is 0.89 Mbp.

Description of *Candidatus* Vilitida letifimonia sp. nov.

Candidatus Vilitida letifimonia (NL. fem. n. *letifimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG11420 sp902796745*. The type genome for the species is the GenBank assembly GCA_902796745.1. The GC content of the type genome is 37.32 % and the genome length is 0.89 Mbp.

Description of *Candidatus* Vilitosa obnupatica sp. nov.

Candidatus Vilitosa obnupatica (NL. fem. n. *obnupatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAZZY01 sp014239035*. The type genome for the species is the GenBank assembly GCA_014239035.1. The GC content of the type genome is 38.26 % and the genome length is 1.54 Mbp.

Description of *Candidatus* Vilitosa gen. nov.

Candidatus Vilitosa (NL. fem. n. *Vilitosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAZZY01*. The type species for the genus is *Candidatus* Vilitosa obnupatica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JAAZZY01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vilitosaceae.

Description of *Candidatus* Vilitosaceae fam. nov.

Candidatus Vilitosaceae (NL. fem. n. *Vilitosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JAAZZY01.* The type genus for the taxon is *Candidatus* Vilitosa .

According to GTDB R06-RS202, this family belongs to the order *Chlamydiales*.

Description of *Candidatus* Vilitula antacastra sp. nov.

Candidatus Vilitula antacastra (NL. fem. n. *antacastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DRWO01 sp011375965*. The type genome for the species is the GenBank assembly GCA_011375965.1. The GC content of the type genome is 64.4 % and the genome length is 1.57 Mbp.

Description of *Candidatus* Vilitula gen. nov.

Candidatus Vilitula (NL. fem. n. *Vilitula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DRWO01*. The type species for the genus is *Candidatus* Vilitula antacastra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DRWO01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vilitulaceae.

Description of *Candidatus* Vilitulaceae fam. nov.

Candidatus Vilitulaceae (NL. fem. n. *Vilitulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *DRWO01*. The type genus for the taxon is *Candidatus* Vilitula .

According to the original version of GTDB R06-RS202, this family belongs to the order *DRWO01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Vilitulales.

Description of *Candidatus* Vilitulales ord. nov.

Candidatus Vilitulales (NL. fem. n. *Vilitulales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *DRWO01*. The type genus for the taxon is *Candidatus* Vilitula .

According to the GTDB R06-RS202, this order belongs to the class *Synergistia*.

Description of *Candidatus* Vinacana retunigena sp. nov.

Candidatus Vinacana retunigena (NL. fem. n. *retunigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5169 sp002429485*. The type genome for the species is the GenBank assembly GCA_002413465.1. The GC content of the type genome is 54.74 % and the genome length is 1.14 Mbp.

Description of *Candidatus* Vinacana gen. nov.

Candidatus Vinacana (NL. fem. n. *Vinacana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA5169*. The type species for the genus is *Candidatus* Vinacana retunigena .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA4664*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vehicidaceae.

Description of *Candidatus* Vinacaria celumedo sp. nov.

Candidatus Vinacaria celumedo (NL. fem. n. *celumedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7803 sp003476445*. The type genome for the species is the GenBank assembly GCA_003476445.1. The GC content of the type genome is 64.01 % and the genome length is 2.59 Mbp.

Description of *Candidatus* Vinacaria gen. nov.

Candidatus Vinacaria (NL. fem. n. *Vinacaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA7803*. The type species for the genus is *Candidatus* Vinacaria celumedo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *HTCC2089*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Tegumosaceae.

Description of *Candidatus* Vinacaria diluvibula sp. nov.

Candidatus Vinacaria diluvibula (NL. fem. n. *diluvibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA7803 sp002480525*. The type genome for the species is the GenBank assembly GCA_002720645.1. The GC content of the type genome is 68.76 % and the genome length is 3.15 Mbp.

Description of *Candidatus* Vinacella faticifica sp. nov.

Candidatus Vinacella faticifica (NL. fem. n. *faticifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WO2-44-18 sp001817915*. The type genome for the species is the GenBank assembly GCA_001817875.1. The GC content of the type genome is 43.51 % and the genome length is 0.67 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 0.1 micron filter; full assembly".

Description of *Candidatus* Vinacella gen. nov.

Candidatus Vinacella (NL. fem. n. *Vinacella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WO2-44-18*. The type species for the genus is *Candidatus* Vinacella faticifica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *WO2-44-18*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vinacellaceae.

Description of *Candidatus* Vinacellaceae fam. nov.

Candidatus Vinacellaceae (NL. fem. n. *Vinacellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *WO2-44-18.* The type genus for the taxon is *Candidatus* Vinacella .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA6257*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Denomulales.

Description of *Candidatus* Vinacia rinocibra sp. nov.

Candidatus Vinacia rinocibra (NL. fem. n. *rinocibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-02-FULL-40-10 sp001779115*. The type genome for the species is the GenBank assembly GCA_001779265.1. The GC content of the type genome is 39.5 % and the genome length is 1.29 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under low O2 conditions; 0.1 micron filter; full assembly".

Description of *Candidatus* Vinacia gen. nov.

Candidatus Vinacia (NL. fem. n. *Vinacia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *2-02-FULL-40-10*. The type species for the genus is *Candidatus* Vinacia rinocibra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *2-02-FULL-39-11*. According to the renamed version of GTDB R06-RS202, this taxon

belongs to the family *Candidatus* Venefiaceae.

Description of *Candidatus* Vinacida pabilentia sp. nov.

Candidatus Vinacida pabilentia (NL. fem. n. *pabilentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2863045 sp002863045*. The type genome for the species is the GenBank assembly GCA_002433445.1. The GC content of the type genome is 39.59 % and the genome length is 1.79 Mbp.

Description of *Candidatus* Vinacida gen. nov.

Candidatus Vinacida (NL. fem. n. *Vinacida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2863045*. The type species for the genus is *Candidatus* Vinacida pabilentia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Vinacosa ambadugo sp. nov.

Candidatus Vinacosa ambadugo (NL. fem. n. *ambadugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAKFX01 sp011064865*. The type genome for the species is the GenBank assembly GCA_011064865.1. The GC content of the type genome is 29.65 % and the genome length is 1.53 Mbp.

Description of *Candidatus* Vinacosa gen. nov.

Candidatus Vinacosa (NL. fem. n. *Vinacosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAKFX01*. The type species for the genus is *Candidatus* Vinacosa ambadugo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SM23-39*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Levifiaceae.

Description of *Candidatus* Vinacosa bicapessa sp. nov.

Candidatus Vinacosa bicapessa (NL. fem. n. *bicapessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAKFX01 sp011065175*. The type genome for the species is the GenBank assembly GCA_011065175.1. The GC content of the type genome is 29.32 % and the genome length is 1.59 Mbp.

Description of *Candidatus* Vinacosa duponivita sp. nov.

Candidatus Vinacosa duponivita (NL. fem. n. *duponivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAKFX01 sp011064875*. The type genome for the species is the GenBank assembly GCA_011064875.1. The GC content of the type genome is 29.43 % and the genome length is 1.58 Mbp.

Description of *Candidatus* Vinacosa perabicula sp. nov.

Candidatus Vinacosa perabicula (NL. fem. n. *perabicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAKFX01 sp011065045*. The type genome for the species is the GenBank assembly GCA_011065045.1. The GC content of the type genome is 30.16 % and the genome length is 1.76 Mbp.

Description of *Candidatus* Vinacosa volucitas sp. nov.

Candidatus Vinacosa volucitas (NL. fem. n. *volucitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAKFX01 sp011064905*. The type genome for the species is the GenBank assembly GCA_011064905.1. The GC content of the type genome is 30.25 % and the genome length is 1.57 Mbp.

Description of *Candidatus* Vinacula tomacilega sp. nov.

Candidatus Vinacula tomacilega (NL. fem. n. *tomacilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PWTM01 sp003563855*. The type genome for the species is the GenBank assembly GCA_003567235.1. The GC content of the type genome is 70.01 % and the genome length is 1.72 Mbp.

Description of *Candidatus* Vinacula gen. nov.

Candidatus Vinacula (NL. fem. n. *Vinacula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PWTM01*. The type species for the genus is *Candidatus* Vinacula tomacilega .

According to the original version of GTDB R06-RS202, this genus belongs to the family *PWTM01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vinaculaceae.

Description of *Candidatus* Vinaculaceae fam. nov.

Candidatus Vinaculaceae (NL. fem. n. *Vinaculaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *PWTM01.* The type genus for the taxon is *Candidatus* Vinacula .

According to the original version of GTDB R06-RS202, this family belongs to the order *B70-G9*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Retuniales.

Description of *Candidatus* Vinolana peribicella sp. nov.

Candidatus Vinolana peribicella (NL. fem. n. *peribicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *ATN2 sp003577145*. The type genome for the species is the GenBank assembly GCA_003577145.1. The GC content of the type genome is 67.24 % and the genome length is 4.05 Mbp.

Description of *Candidatus* Vinolana gen. nov.

Candidatus Vinolana (NL. fem. n. *Vinolana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *ATN2*. The type species for the genus is *Candidatus* Vinolana peribicella .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Vinolaria gerunugo sp. nov.

Candidatus Vinolaria gerunugo (NL. fem. n. *gerunugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3575 sp002375925*. The type genome for the species is the GenBank assembly GCA_004367365.1. The GC content of the type genome is 55.37 % and the genome length is 2.75 Mbp.

Description of *Candidatus* Vinolaria gen. nov.

Candidatus Vinolaria (NL. fem. n. *Vinolaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA3575*. The type species for the genus is *Candidatus* Vinolaria gerunugo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA3575*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vinolariaceae.

Description of *Candidatus* Vinolariaceae fam. nov.

Candidatus Vinolariaceae (NL. fem. n. *Vinolariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA3575.* The type genus for the taxon is *Candidatus* Vinolaria .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA3575*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Vinolariales.

Description of *Candidatus* Vinolariales ord. nov.

Candidatus Vinolariales (NL. fem. n. *Vinolariales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA3575.* The type genus for the taxon is *Candidatus* Vinolaria .

According to the original version of GTDB R06-RS202, this family belongs to the class *UBA3569*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Fuliganae.

Description of *Candidatus* Vinolella adgesitia sp. nov.

Candidatus Vinolella adgesitia (NL. fem. n. *adgesitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *LZORAL124-64-63 sp003646045*. The type genome for the species is the GenBank assembly GCA_003646045.1. The GC content of the type genome is 63.5 % and the genome length is 3.2 Mbp.

Description of *Candidatus* Vinolella gen. nov.

Candidatus Vinolella (NL. fem. n. *Vinolella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *LZORAL124-64-63*. The type species for the genus is *Candidatus* Vinolella adgesitia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *LZORAL124-64-63*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vinolellaceae.

Description of *Candidatus* Vinolellaceae fam. nov.

Candidatus Vinolellaceae (NL. fem. n. *Vinolellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *LZORAL124-64-63.* The type genus for the taxon is *Candidatus* Vinolella .

According to the original version of GTDB R06-RS202, this family belongs to the order *LZORAL124-64-63*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Vinolellales.

Description of *Candidatus* Vinolellales ord. nov.

Candidatus Vinolellales (NL. fem. n. *Vinolellales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *LZORAL124-64-63.* The type genus for the taxon is *Candidatus* Vinolella .

According to the GTDB R06-RS202, this order belongs to the class *Krumholzibacteria*.

Description of *Candidatus* Vinolella biverilega sp. nov.

Candidatus Vinolella biverilega (NL. fem. n. *biverilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *LZORAL124-64-63 sp002790835*. The type genome for the species is the GenBank assembly GCA_002790835.1. The GC content of the type genome is 64.67 % and the genome length is 3.39 Mbp.

Description of *Candidatus* Vinolella domipicula sp. nov.

Candidatus Vinolella domipicula (NL. fem. n. *domipicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *LZORAL124-64-63 sp002747875*. The type genome for the species is the GenBank assembly GCA_002747875.1. The GC content of the type genome is 63.93 % and the genome length is 3.36 Mbp.

Description of *Candidatus* Vinolida gerunitio sp. nov.

Candidatus Vinolida gerunitio (NL. fem. n. *gerunitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA10190 sp001817065*. The type genome for the species is the GenBank assembly GCA_003501005.1. The GC content of the type genome is 45.5 % and the genome length is 1.44 Mbp.

Description of *Candidatus* Vinolida gen. nov.

Candidatus Vinolida (NL. fem. n. *Vinolida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA10190*. The type species for the genus is *Candidatus* Vinolida gerunitio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA10190*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vinolidaceae.

Description of *Candidatus* Vinolidaceae fam. nov.

Candidatus Vinolidaceae (NL. fem. n. *Vinolidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA10190.* The type genus for the taxon is *Candidatus* Vinolida .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA10190*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Vinolidales.

Description of *Candidatus* Vinolidales ord. nov.

Candidatus Vinolidales (NL. fem. n. *Vinolidales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA10190.* The type genus for the taxon is *Candidatus* Vinolida .

According to the GTDB R06-RS202, this order belongs to the class *Andersenbacteria*.

Description of *Candidatus* Vinolosa arancastra sp. nov.

Candidatus Vinolosa arancastra (NL. fem. n. *arancastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MED-G10 sp902590895*. The type genome for the species is the GenBank assembly GCA_902590895.1. The GC content of the type genome is 29.8 % and the genome length is 1.07 Mbp.

Description of *Candidatus* Vinolosa gen. nov.

Candidatus Vinolosa (NL. fem. n. *Vinolosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this genus is *MED-G10*. The type species for the genus is *Candidatus* Vinolosa arancastra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *TMED127*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Tubicariaceae.

Description of *Candidatus* Vinolosa bulapousia sp. nov.

Candidatus Vinolosa bulapousia (NL. fem. n. *bulapousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MED-G10 sp002457065*. The type genome for the species is the GenBank assembly GCA_002702805.1. The GC content of the type genome is 29.81 % and the genome length is 1.09 Mbp.

Description of *Candidatus* Vinolosa rudicisca sp. nov.

Candidatus Vinolosa rudicisca (NL. fem. n. *rudicisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MED-G10 sp902547955*. The type genome for the species is the GenBank assembly GCA_902547955.1. The GC content of the type genome is 29.8 % and the genome length is 1.41 Mbp.

Description of *Candidatus* Vinolosa sitelibula sp. nov.

Candidatus Vinolosa sitelibula (NL. fem. n. *sitelibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MED-G10 sp002712255*. The type genome for the species is the GenBank assembly GCA_002712255.1. The GC content of the type genome is 28.55 % and the genome length is 1.23 Mbp.

Description of *Candidatus* Vinolula adalgitia sp. nov.

Candidatus Vinolula adalgitia (NL. fem. n. *adalgitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *UBA1321 sp002304345*. The type genome for the species is the GenBank assembly GCA_002304345.1. The GC content of the type genome is 57.29 % and the genome length is 4.28 Mbp.

Description of *Candidatus* Vinolula gen. nov.

Candidatus Vinolula (NL. fem. n. *Vinolula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1321*. The type species for the genus is *Candidatus* Vinolula adalgitia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1321*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vinolulaceae.

Description of *Candidatus* Vinolulaceae fam. nov.

Candidatus Vinolulaceae (NL. fem. n. *Vinolulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA1321.* The type genus for the taxon is *Candidatus* Vinolula .

According to GTDB R06-RS202, this family belongs to the order *Methylacidiphilales*.

Description of *Candidatus* Vinolula podagibula sp. nov.

Candidatus Vinolula podagibula (NL. fem. n. *podagibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1321 sp002306945*. The type genome for the species is the GenBank assembly GCA_002306945.1. The GC content of the type genome is 56.15 % and the genome length is 3.73 Mbp.

Description of *Candidatus* Vinulana agnomitica sp. nov.

Candidatus Vinulana agnomitica (NL. fem. n. *agnomitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PALSA-747 sp903916775*. The type genome for the species is the GenBank assembly GCA_903916775.1. The GC content of the type genome is 49.87 %

and the genome length is 1.23 Mbp.

Description of *Candidatus* Vinulana gen. nov.

Candidatus Vinulana (NL. fem. n. *Vinulana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PALSA-747*. The type species for the genus is *Candidatus* Vinulana agnomitica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Vinulana arrugedo sp. nov.

Candidatus Vinulana arrugedo (NL. fem. n. *arrugedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PALSA-747 sp903854185*. The type genome for the species is the GenBank assembly GCA_903854185.1. The GC content of the type genome is 50.77 % and the genome length is 1.45 Mbp.

Description of *Candidatus* Vinulana catilicella sp. nov.

Candidatus Vinulana catilicella (NL. fem. n. *catilicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PALSA-747 sp903838295*. The type genome for the species is the GenBank assembly GCA_903834265.1. The GC content of the type genome is 47.47 % and the genome length is 1.47 Mbp.

Description of *Candidatus* Vinulana celamatica sp. nov.

Candidatus Vinulana celamatica (NL. fem. n. *celamatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PALSA-747 sp903928395*. The type genome for the species is the GenBank assembly GCA_903875365.1. The GC content of the type genome is 48.34 % and the genome length is 1.57 Mbp.

Description of *Candidatus* Vinulana defenicula sp. nov.

Candidatus Vinulana defenicula (NL. fem. n. *defenicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PALSA-747 sp903907665*. The type genome for the species is the GenBank assembly GCA_903910395.1. The GC content of the type genome is 46.52 % and the genome length is 1.81 Mbp.

Description of *Candidatus* Vinulana deforitrix sp. nov.

Candidatus Vinulana deforitrix (NL. fem. n. *deforitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PALSA-747 sp903916385*. The type genome for the species is the GenBank assembly GCA_903906785.1. The GC content of the type genome is 52.15 % and the genome length is 1.37 Mbp.

Description of *Candidatus* Vinulana delebilenta sp. nov.

Candidatus Vinulana delebilenta (NL. fem. n. *delebilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PALSA-747 sp903844115*. The type genome for the species is the GenBank assembly GCA_903844115.1. The GC content of the type genome is 46.59 % and the genome length is 1.44 Mbp.

Description of *Candidatus* Vinulana democilega sp. nov.

Candidatus Vinulana democilega (NL. fem. n. *democilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PALSA-747 sp903867285*. The type genome for the species is the GenBank assembly GCA_903923855.1. The GC content of the type genome is 50.76 % and the genome length is 1.55 Mbp.

Description of *Candidatus* Vinulana denupastra sp. nov.

Candidatus Vinulana denupastra (NL. fem. n. *denupastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PALSA-747 sp903843225*. The type genome for the species is the GenBank assembly GCA_903906585.1. The GC content of the type genome is 50.74 % and the genome length is 1.22 Mbp.

Description of *Candidatus* Vinulana deparetta sp. nov.

Candidatus Vinulana deparetta (NL. fem. n. *deparetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PALSA-747 sp903834515*. The type genome for the species is the GenBank assembly GCA_903834515.1. The GC content of the type genome is 49.78 % and the genome length is 1.48 Mbp.

Description of *Candidatus* Vinulana dibapatio sp. nov.

Candidatus Vinulana dibapatio (NL. fem. n. *dibapatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PALSA-747 sp903898555*. The type genome for the species is the GenBank assembly GCA_903840965.1. The GC content of the type genome is 46.66 % and the genome length is 1.6 Mbp.

Description of *Candidatus* Vinulana enigmatio sp. nov.

Candidatus Vinulana enigmatio (NL. fem. n. *enigmatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PALSA-747 sp003151395*. The type genome for the species is the GenBank assembly GCA_003151395.1. The GC content of the type genome is 48.6 % and the genome length is 1.85 Mbp.

Description of *Candidatus* Vinulana ensicedo sp. nov.

Candidatus Vinulana ensicedo (NL. fem. n. *ensicedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PALSA-747 sp903932705*. The type genome for the species is the GenBank assembly GCA_903932705.1. The GC content of the type genome is 48.95 %

and the genome length is 1.36 Mbp.

Description of *Candidatus* Vinulana figiligena sp. nov.

Candidatus Vinulana figiligena (NL. fem. n. *figiligena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PALSA-747 sp903932695*. The type genome for the species is the GenBank assembly GCA_903909715.1. The GC content of the type genome is 52.3 % and the genome length is 1.18 Mbp.

Description of *Candidatus* Vinulana homilousia sp. nov.

Candidatus Vinulana homilousia (NL. fem. n. *homilousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PALSA-747 sp903899375*. The type genome for the species is the GenBank assembly GCA_903893985.1. The GC content of the type genome is 50.12 % and the genome length is 1.5 Mbp.

Description of *Candidatus* Vinulana maligitica sp. nov.

Candidatus Vinulana maligitica (NL. fem. n. *maligitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PALSA-747 sp903897155*. The type genome for the species is the GenBank assembly GCA_903830995.1. The GC content of the type genome is 45.5 % and the genome length is 0.94 Mbp.

Description of *Candidatus* Vinulana mimogedo sp. nov.

Candidatus Vinulana mimogedo (NL. fem. n. *mimogedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PALSA-747 sp903842855*. The type genome for the species is the GenBank assembly GCA_903842855.1. The GC content of the type genome is 49.68 % and the genome length is 1.44 Mbp.

Description of *Candidatus* Vinulana omnigitia sp. nov.

Candidatus Vinulana omnigitia (NL. fem. n. *omnigitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PALSA-747 sp903899145*. The type genome for the species is the GenBank assembly GCA_903899145.1. The GC content of the type genome is 44.83 % and the genome length is 0.85 Mbp.

Description of *Candidatus* Vinulana petuliforma sp. nov.

Candidatus Vinulana petuliforma (NL. fem. n. *petuliforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PALSA-747 sp903821145*. The type genome for the species is the GenBank assembly GCA_903825115.1. The GC content of the type genome is 51.08 % and the genome length is 1.14 Mbp.

Description of *Candidatus* Vinulana podagax sp. nov.

Candidatus Vinulana podagax (NL. fem. n. *podagax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PALSA-747 sp903839355*. The type genome for the species is the GenBank assembly GCA_903839355.1. The GC content of the type genome is 49.95 % and the genome length is 1.19 Mbp.

Description of *Candidatus* Vinulana siligilenta sp. nov.

Candidatus Vinulana siligilenta (NL. fem. n. *siligilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PALSA-747 sp903825945*. The type genome for the species is the GenBank assembly GCA_903858505.1. The GC content of the type genome is 49.97 % and the genome length is 0.99 Mbp.

Description of *Candidatus* Vinulana sonipentia sp. nov.

Candidatus Vinulana sonipentia (NL. fem. n. *sonipentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PALSA-747 sp903852585*. The type genome for the species is the GenBank assembly GCA_903836015.1. The GC content of the type genome is 47.19 % and the genome length is 1.39 Mbp.

Description of *Candidatus* Vinulana televigena sp. nov.

Candidatus Vinulana televigena (NL. fem. n. *televigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PALSA-747 sp903827345*. The type genome for the species is the GenBank assembly GCA_903827345.1. The GC content of the type genome is 50.6 % and the genome length is 1.61 Mbp.

Description of *Candidatus* Vinulana tomacifica sp. nov.

Candidatus Vinulana tomacifica (NL. fem. n. *tomacifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PALSA-747 sp903933585*. The type genome for the species is the GenBank assembly GCA_903933585.1. The GC content of the type genome is 51.33 % and the genome length is 1.53 Mbp.

Description of *Candidatus* Vinulana turibastra sp. nov.

Candidatus Vinulana turibastra (NL. fem. n. *turibastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PALSA-747 sp903895995*. The type genome for the species is the GenBank assembly GCA_903897395.1. The GC content of the type genome is 48.83 % and the genome length is 1.32 Mbp.

Description of *Candidatus* Vinulana turilibra sp. nov.

Candidatus Vinulana turilibra (NL. fem. n. *turilibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PALSA-747 sp903827945*. The type genome for the species is the GenBank assembly GCA_903842195.1. The GC content of the type genome is 46.65 %

and the genome length is 1.5 Mbp.

Description of *Candidatus* Vinulana verecimonas sp. nov.

Candidatus Vinulana verecimonas (NL. fem. n. *verecimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PALSA-747 sp903891755*. The type genome for the species is the GenBank assembly GCA_903891755.1. The GC content of the type genome is 49.26 % and the genome length is 1.27 Mbp.

Description of *Candidatus* Vinulana vinolitudo sp. nov.

Candidatus Vinulana vinolitudo (NL. fem. n. *vinolitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PALSA-747 sp903953805*. The type genome for the species is the GenBank assembly GCA_903839835.1. The GC content of the type genome is 50.32 % and the genome length is 1.24 Mbp.

Description of *Candidatus* Vinularia munifago sp. nov.

Candidatus Vinularia munifago (NL. fem. n. *munifago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5920 sp002452215*. The type genome for the species is the GenBank assembly GCA_002405955.1. The GC content of the type genome is 39.66 % and the genome length is 1.97 Mbp.

Description of *Candidatus* Vinularia gen. nov.

Candidatus Vinularia (NL. fem. n. *Vinularia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA5920*. The type species for the genus is *Candidatus* Vinularia munifago .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Vinularia purulago sp. nov.

Candidatus Vinularia purulago (NL. fem. n. *purulago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5920 sp002406055*. The type genome for the species is the GenBank assembly GCA_002406055.1. The GC content of the type genome is 35.56 % and the genome length is 1.96 Mbp.

Description of *Candidatus* Vinulella bisulastra sp. nov.

Candidatus Vinulella bisulastra (NL. fem. n. *bisulastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIZIN01 sp903933085*. The type genome for the species is the GenBank assembly GCA_903912475.1. The GC content of the type genome is 35.71 % and the genome length is 0.86 Mbp.

Description of *Candidatus* Vinulella gen. nov.

Candidatus Vinulella (NL. fem. n. *Vinulella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIZIN01*. The type species for the genus is *Candidatus* Vinulella bisulastra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAIZIN01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vinulellaceae.

Description of *Candidatus* Vinulellaceae fam. nov.

Candidatus Vinulellaceae (NL. fem. n. *Vinulellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CAIZIN01.* The type genus for the taxon is *Candidatus* Vinulella .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA9983_A*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Ficedanales.

Description of *Candidatus* Vinulia bacififorma sp. nov.

Candidatus Vinulia bacififorma (NL. fem. n. *bacififorma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-02-FULL-46-19 sp001795795*. The type genome for the species is the GenBank assembly GCA_001795665.1. The GC content of the type genome is 45.37 % and the genome length is 0.61 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under low O2 conditions; 0.1 micron filter; full assembly".

Description of *Candidatus* Vinulia gen. nov.

Candidatus Vinulia (NL. fem. n. *Vinulia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *2-02-FULL-46-19*. The type species for the genus is *Candidatus* Vinulia bacififorma .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GWA2-44-9*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Beniviaceae.

Description of *Candidatus* Vinulida tabifitio sp. nov.

Candidatus Vinulida tabifitio (NL. fem. n. *tabifitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *XYB2-FULL-50-12 sp001800355*. The type genome for the species is the GenBank assembly GCA_001800525.1. The GC content of the type genome is 49.95 % and the genome length is 2.16 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at 16ft depth; 0.2 micron filter at time point B".

Description of *Candidatus* Vinulida gen. nov.

Candidatus Vinulida (NL. fem. n. *Vinulida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *XYB2-FULL-50-12*. The type species for the genus is *Candidatus* Vinulida tabifitio .

According to the original version of GTDB R06-RS202, this genus belongs to the family

XYA2-FULL-47-53. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Defalidaceae.

Description of *Candidatus* Vinulosa decucatica sp. nov.

Candidatus Vinulosa decucatica (NL. fem. n. *decucatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SXRM01 sp009692465*. The type genome for the species is the GenBank assembly GCA_009692465.1. The GC content of the type genome is 61.16 % and the genome length is 5.82 Mbp.

Description of *Candidatus* Vinulosa gen. nov.

Candidatus Vinulosa (NL. fem. n. *Vinulosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SXRM01*. The type species for the genus is *Candidatus* Vinulosa decucatica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA9042*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Rubigariaceae.

Description of *Candidatus* Vinulosa fumififorma sp. nov.

Candidatus Vinulosa fumififorma (NL. fem. n. *fumififorma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SXRM01 sp903883645*. The type genome for the species is the GenBank assembly GCA_903860385.1. The GC content of the type genome is 64.25 % and the genome length is 6.28 Mbp.

Description of *Candidatus* Vinulosa ontolitudo sp. nov.

Candidatus Vinulosa ontolitudo (NL. fem. n. *ontolitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SXRM01 sp903919145*. The type genome for the species is the

GenBank assembly GCA_903919145.1. The GC content of the type genome is 66.16 % and the genome length is 6.97 Mbp.

Description of *Candidatus* Vinulosa redacicella sp. nov.

Candidatus Vinulosa redacicella (NL. fem. n. *redacicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SXRM01 sp005792545*. The type genome for the species is the GenBank assembly GCA_005792545.1. The GC content of the type genome is 66.51 % and the genome length is 7.03 Mbp.

Description of *Candidatus* Vinulula culibitoga sp. nov.

Candidatus Vinulula culibitoga (NL. fem. n. *culibitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *QALS01 sp900555925*. The type genome for the species is the GenBank assembly RS_GCF_900760435.1. The GC content of the type genome is 48.32 % and the genome length is 2.34 Mbp.

Description of *Candidatus* Vinulula gen. nov.

Candidatus Vinulula (NL. fem. n. *Vinulula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *QALS01*. The type species for the genus is *Candidatus* Vinulula culibitoga .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Vinulula ensicentia sp. nov.

Candidatus Vinulula ensicentia (NL. fem. n. *ensicentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *QALS01 sp900769545*. The type genome for the species is the GenBank assembly RS_GCF_900769545.1. The GC content of the type genome is 43.22 % and the genome length is 2.29 Mbp.

Description of *Candidatus* Vinulula rinocimonia sp. nov.

Candidatus Vinulula rinocimonia (NL. fem. n. *rinocimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *QALS01 sp003150575*. The type genome for the species is the GenBank assembly GCA_003150575.1. The GC content of the type genome is 50.52 % and the genome length is 2.99 Mbp.

Description of *Candidatus* Vinulula turifitio sp. nov.

Candidatus Vinulula turifitio (NL. fem. n. *turifitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *QALS01 sp900552625*. The type genome for the species is the GenBank assembly GCA_900552625.1. The GC content of the type genome is 52.92 % and the genome length is 2.06 Mbp.

Description of *Candidatus* Viragana documitio sp. nov.

Candidatus Viragana documitio (NL. fem. n. *documitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5201 sp002412775*. The type genome for the species is the GenBank assembly GCA_002412775.1. The GC content of the type genome is 41.34 % and the genome length is 3.17 Mbp.

Description of *Candidatus* Viragana gen. nov.

Candidatus Viragana (NL. fem. n. *Viragana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA5201*. The type species for the genus is *Candidatus* Viragana documitio .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Viragana labecitura sp. nov.

Candidatus Viragana labecitura (NL. fem. n. *labecitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5201 sp002441045*. The type genome for the species is the GenBank assembly GCA_002441045.1. The GC content of the type genome is 36.96 % and the genome length is 2.94 Mbp.

Description of *Candidatus* Viragana robigivita sp. nov.

Candidatus Viragana robigivita (NL. fem. n. *robigivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5201 sp001897605*. The type genome for the species is the GenBank assembly GCA_001897605.1. The GC content of the type genome is 37.59 % and the genome length is 3.42 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Thiocyanate stock biobioreactor".

Description of *Candidatus* Viragana volunastra sp. nov.

Candidatus Viragana volunastra (NL. fem. n. *volunastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5201 sp003482695*. The type genome for the species is the GenBank assembly GCA_003482695.1. The GC content of the type genome is 41.21 % and the genome length is 2.47 Mbp.

Description of *Candidatus* Viragaria resupatio sp. nov.

Candidatus Viragaria resupatio (NL. fem. n. *resupatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DG-74-3 sp001302985*. The type genome for the species is the GenBank assembly GCA_001302985.1. The GC content of the type genome is 36.86 % and the genome length is 0.54 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Methane-rich estuary sediments 52-54 cm".

Description of *Candidatus* Viragaria gen. nov.

Candidatus Viragaria (NL. fem. n. *Viragaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DG-74-3*. The type species for the genus is *Candidatus* Viragaria resupatio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DG-74-3*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Viragariaceae.

Description of *Candidatus* Viragariaceae fam. nov.

Candidatus Viragariaceae (NL. fem. n. *Viragariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *DG-74-3.* The type genus for the taxon is *Candidatus* Viragaria .

According to GTDB R06-RS202, this family belongs to the order *Paceibacterales*.

Description of *Candidatus* Viragella visocimonas sp. nov.

Candidatus Viragella visocimonas (NL. fem. n. *visocimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AA29 sp003222295*. The type genome for the species is the GenBank assembly GCA_003222295.1. The GC content of the type genome is 70.27 % and the genome length is 5.28 Mbp.

Description of *Candidatus* Viragella gen. nov.

Candidatus Viragella (NL. fem. n. *Viragella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *AA29*. The type species for the genus is *Candidatus* Viragella visocimonas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *Fen-336*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Exsanellaceae.

Description of *Candidatus* Viragia categitrix sp. nov.

Candidatus Viragia categitrix (NL. fem. n. *categitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *T1Sed10-49 sp003553795*. The type genome for the species is the GenBank assembly GCA_007134975.1. The GC content of the type genome is 74.35 % and the genome length is 2.12 Mbp.

Description of *Candidatus* Viragia gen. nov.

Candidatus Viragia (NL. fem. n. *Viragia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *T1Sed10-49*. The type species for the genus is *Candidatus* Viragia categitrix .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Viragia manomitas sp. nov.

Candidatus Viragia manomitas (NL. fem. n. *manomitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *T1Sed10-49 sp007133145*. The type genome for the species is the GenBank assembly GCA_007133145.1. The GC content of the type genome is 73.88 % and the genome length is 2.44 Mbp.

Description of *Candidatus* Viragida ablacentia sp. nov.

Candidatus Viragida ablacentia (NL. fem. n. *ablacentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *TMED54 sp902550555*. The type genome for the species is the GenBank assembly GCA_902550555.1. The GC content of the type genome is 29.23 % and the genome length is 1.6 Mbp.

Description of *Candidatus* Viragida gen. nov.

Candidatus Viragida (NL. fem. n. *Viragida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *TMED54*. The type species for the genus is *Candidatus* Viragida

ablacentia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *AAA536-G10*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Depicosaceae.

Description of *Candidatus* Viragida adrumivita sp. nov.

Candidatus Viragida adrumivita (NL. fem. n. *adrumivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *TMED54 sp902618195*. The type genome for the species is the GenBank assembly GCA_902618195.1. The GC content of the type genome is 29.19 % and the genome length is 1.24 Mbp.

Description of *Candidatus* Viragida adverousia sp. nov.

Candidatus Viragida adverousia (NL. fem. n. *adverousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *TMED54 sp902590245*. The type genome for the species is the GenBank assembly GCA_902590245.1. The GC content of the type genome is 29.36 % and the genome length is 1.56 Mbp.

Description of *Candidatus* Viragida antacetta sp. nov.

Candidatus Viragida antacetta (NL. fem. n. *antacetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *TMED54 sp004213885*. The type genome for the species is the GenBank assembly GCA_004213885.1. The GC content of the type genome is 28.69 % and the genome length is 1.41 Mbp.

Description of *Candidatus* Viragida cenotibra sp. nov.

Candidatus Viragida cenotibra (NL. fem. n. *cenotibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *TMED54 sp003210115*. The type genome for the species is the

GenBank assembly GCA_902575355.1. The GC content of the type genome is 29.71 % and the genome length is 1.33 Mbp.

Description of *Candidatus* Viragida cohorugo sp. nov.

Candidatus Viragida cohorugo (NL. fem. n. *cohorugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *TMED54 sp002691795*. The type genome for the species is the GenBank assembly GCA_002167275.2. The GC content of the type genome is 28.81 % and the genome length is 2.04 Mbp.

Description of *Candidatus* Viragida denavatio sp. nov.

Candidatus Viragida denavatio (NL. fem. n. *denavatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *TMED54 sp902615025*. The type genome for the species is the GenBank assembly GCA_902615025.1. The GC content of the type genome is 29.26 % and the genome length is 1.52 Mbp.

Description of *Candidatus* Viragida detunitas sp. nov.

Candidatus Viragida detunitas (NL. fem. n. *detunitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *TMED54 sp902630555*. The type genome for the species is the GenBank assembly GCA_902630555.1. The GC content of the type genome is 28.8 % and the genome length is 0.98 Mbp.

Description of *Candidatus* Viragida egregetta sp. nov.

Candidatus Viragida egregetta (NL. fem. n. *egregetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *TMED54 sp902524215*. The type genome for the species is the GenBank assembly GCA_902524215.1. The GC content of the type genome is 29.04 % and the genome length is 1.24 Mbp.

Description of *Candidatus* Viragida inrelicula sp. nov.

Candidatus Viragida inrelicula (NL. fem. n. *inrelicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *TMED54 sp902615325*. The type genome for the species is the GenBank assembly GCA_902615325.1. The GC content of the type genome is 29.07 % and the genome length is 1.78 Mbp.

Description of *Candidatus* Viragida lapilitudo sp. nov.

Candidatus Viragida lapilitudo (NL. fem. n. *lapilitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *TMED54 sp902616005*. The type genome for the species is the GenBank assembly GCA_902616005.1. The GC content of the type genome is 28.95 % and the genome length is 1.66 Mbp.

Description of *Candidatus* Viragida malogetta sp. nov.

Candidatus Viragida malogetta (NL. fem. n. *malogetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *TMED54 sp902615995*. The type genome for the species is the GenBank assembly GCA_902615995.1. The GC content of the type genome is 28.62 % and the genome length is 1.27 Mbp.

Description of *Candidatus* Viragida proprugo sp. nov.

Candidatus Viragida proprugo (NL. fem. n. *proprugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *TMED54 sp902622745*. The type genome for the species is the GenBank assembly GCA_902622745.1. The GC content of the type genome is 29.24 % and the genome length is 1.39 Mbp.

Description of *Candidatus* Viragosa adnepibra sp. nov.

Candidatus Viragosa adnepibra (NL. fem. n. *adnepibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DG-74-1 sp001303125*. The type genome for the species is the GenBank assembly GCA_001303125.1. The GC content of the type genome is 38.45 % and the genome length is 0.58 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Methane-rich estuary sediments 52-54 cm".

Description of *Candidatus* Viragosa gen. nov.

Candidatus Viragosa (NL. fem. n. *Viragosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DG-74-1*. The type species for the genus is *Candidatus* Viragosa adnepibra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DG-74-1*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Viragosaceae.

Description of *Candidatus* Viragosaceae fam. nov.

Candidatus Viragosaceae (NL. fem. n. *Viragosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *DG-74-1*. The type genus for the taxon is *Candidatus* Viragosa .

According to GTDB R06-RS202, this family belongs to the order *Paceibacterales*.

Description of *Candidatus* Viragula exceritia sp. nov.

Candidatus Viragula exceritia (NL. fem. n. *exceritia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SURF-47 sp003599235*. The type genome for the species is the GenBank assembly GCA_003599235.1. The GC content of the type genome is 40.27 % and the genome length is 1.52 Mbp.

Description of *Candidatus* Viragula gen. nov.

Candidatus Viragula (NL. fem. n. *Viragula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SURF-47*. The type species for the genus is *Candidatus* Viragula exceritia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SURF-47*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Viragulaceae.

Description of *Candidatus* Viragulaceae fam. nov.

Candidatus Viragulaceae (NL. fem. n. *Viragulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SURF-47.* The type genus for the taxon is *Candidatus* Viragula .

According to the original version of GTDB R06-RS202, this family belongs to the order *SURF-47*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Viragulales.

Description of *Candidatus* Viragulales ord. nov.

Candidatus Viragulales (NL. fem. n. *Viragulales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SURF-47.* The type genus for the taxon is *Candidatus* Viragula .

According to the original version of GTDB R06-RS202, this family belongs to the class *UBA9087*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Monocellae.

Description of *Candidatus* Virecana velifedo sp. nov.

Candidatus Virecana velifedo (NL. fem. n. *velifedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG114 sp900315615*. The type genome for the species is the GenBank assembly GCA_902797045.1. The GC content of the type genome is 48.28 % and the genome length is 1.8 Mbp.

Description of *Candidatus* Virecana gen. nov.

Candidatus Virecana (NL. fem. n. *Virecana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RUG114*. The type species for the genus is *Candidatus* Virecana velifedo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Virecaria arcelitudo sp. nov.

Candidatus Virecaria arcelitudo (NL. fem. n. *arcelitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *ATN3 sp003577105*. The type genome for the species is the GenBank assembly GCA_003577105.1. The GC content of the type genome is 59.93 % and the genome length is 2.87 Mbp.

Description of *Candidatus* Virecaria gen. nov.

Candidatus Virecaria (NL. fem. n. *Virecaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *ATN3*. The type species for the genus is *Candidatus* Virecaria arcelitudo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *ATN3*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Virecariaceae.

Description of *Candidatus* Virecariaceae fam. nov.

Candidatus Virecariaceae (NL. fem. n. *Virecariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *ATN3.* The type genus for the taxon is *Candidatus* Virecaria .

According to the original version of GTDB R06-RS202, this family belongs to the order *ATN3*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Virecariales.

Description of *Candidatus* Virecariales ord. nov.

Candidatus Virecariales (NL. fem. n. *Virecariales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *ATN3.* The type genus for the taxon is *Candidatus* Virecaria .

According to the GTDB R06-RS202, this order belongs to the class *Acidimicrobiia*.

Description of *Candidatus* Virecella redunicula sp. nov.

Candidatus Virecella redunicula (NL. fem. n. *redunicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RZYC01 sp009930475*. The type genome for the species is the GenBank assembly GCA_009930475.1. The GC content of the type genome is 49.94 % and the genome length is 4.77 Mbp.

Description of *Candidatus* Virecella gen. nov.

Candidatus Virecella (NL. fem. n. *Virecella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RZYC01*. The type species for the genus is *Candidatus* Virecella redunicula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *RZYC01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Virecellaceae.

Description of *Candidatus* Virecellaceae fam. nov.

Candidatus Virecellaceae (NL. fem. n. *Virecellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *RZYC01.* The type genus for the taxon is *Candidatus* Virecella .

According to the original version of GTDB R06-RS202, this family belongs to the order *RZYC01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Virecellales.

Description of *Candidatus* Virecellales ord. nov.

Candidatus Virecellales (NL. fem. n. *Virecellales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *RZYC01*. The type genus for the taxon is *Candidatus* Virecella .

According to the GTDB R06-RS202, this order belongs to the class *Kiritimatiellae*.

Description of *Candidatus* Virecia caselitio sp. nov.

Candidatus Virecia caselitio (NL. fem. n. *caselitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6022 sp002404195*. The type genome for the species is the GenBank assembly GCA_002404265.1. The GC content of the type genome is 49.4 % and the genome length is 0.8 Mbp.

Description of *Candidatus* Virecia gen. nov.

Candidatus Virecia (NL. fem. n. *Virecia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA6022*. The type species for the genus is *Candidatus* Virecia caselitio .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Virecida benepax sp. nov.

Candidatus Virecida benepax (NL. fem. n. *benepax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *OLB5 sp013140565*. The type genome for the species is the GenBank assembly GCA_013140565.1. The GC content of the type genome is 38.56 % and the genome length is 3.73 Mbp.

Description of *Candidatus* Virecida gen. nov.

Candidatus Virecida (NL. fem. n. *Virecida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *OLB5*. The type species for the genus is *Candidatus* Virecida benepax .

According to the original version of GTDB R06-RS202, this genus belongs to the family

OLB5. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Virecidaceae.

Description of *Candidatus* Virecidaceae fam. nov.

Candidatus Virecidaceae (NL. fem. n. *Virecidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *OLB5.* The type genus for the taxon is *Candidatus* Virecida .

According to the original version of GTDB R06-RS202, this family belongs to the order *SJA-28*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Panopidales.

Description of *Candidatus* Virecida dilemifica sp. nov.

Candidatus Virecida dilemifica (NL. fem. n. *dilemifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *OLB5 sp001567545*. The type genome for the species is the GenBank assembly GCA_001567545.1. The GC content of the type genome is 37.14 % and the genome length is 3.27 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "partial-nitritation anammox (PNA) reactor; full scale (600m3) reactor for the removal of ammonium from wastewater from the potato processing industry".

Description of *Candidatus* Virecida nugigibula sp. nov.

Candidatus Virecida nugigibula (NL. fem. n. *nugigibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *OLB5 sp002344125*. The type genome for the species is the GenBank assembly GCA_002425085.1. The GC content of the type genome is 39.9 % and the genome length is 3.51 Mbp.

Description of *Candidatus* Virecula conibisca sp. nov.

Candidatus Virecula conibisca (NL. fem. n. *conibisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2722315 sp012272825*. The type genome for the species is the GenBank assembly RS_GCF_012272825.1. The GC content of the type genome is 67.85 % and the genome length is 3.75 Mbp.

Description of *Candidatus* Virecula gen. nov.

Candidatus Virecula (NL. fem. n. *Virecula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2722315*. The type species for the genus is *Candidatus* Virecula conibisca .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Virecula hegumibula sp. nov.

Candidatus Virecula hegumibula (NL. fem. n. *hegumibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2722315 sp002722315*. The type genome for the species is the GenBank assembly GCA_002480365.1. The GC content of the type genome is 64.03 % and the genome length is 3.12 Mbp.

Description of *Candidatus* Virgibacillus attesivita sp. nov.

Candidatus Virgibacillus attesivita (NL. fem. n. *attesivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Virgibacillus sp000725285*. The type genome for the species is the GenBank assembly RS_GCF_000725285.1. The GC content of the type genome is 37.62 % and the genome length is 3.84 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "1 month-old fish sauce mash".

Description of *Candidatus* Virgibacillus betacitica sp. nov.

Candidatus Virgibacillus betacitica (NL. fem. n. *betacitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Virgibacillus sp003612345*. The type genome for the species is the

GenBank assembly RS_GCF_003612345.1. The GC content of the type genome is 37.32 % and the genome length is 4.54 Mbp.

Description of *Candidatus* Virgibacillus impigibra sp. nov.

Candidatus Virgibacillus impigibra (NL. fem. n. *impigibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Virgibacillus sp010994035*. The type genome for the species is the GenBank assembly RS_GCF_010994035.1. The GC content of the type genome is 40.41 % and the genome length is 4.08 Mbp.

Description of *Candidatus* Virgibacillus curacitoga sp. nov.

Candidatus Virgibacillus curacitoga (NL. fem. n. *curacitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Virgibacillus_E sp900258515*. Although GTDB has assigned a genus name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly RS_GCF_900258515.1. The GC content of the type genome is 38.52 % and the genome length is 3.93 Mbp.

Description of *Candidatus* Viridibacillus reforitoga sp. nov.

Candidatus Viridibacillus reforitoga (NL. fem. n. *reforitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Viridibacillus sp002813185*. The type genome for the species is the GenBank assembly RS_GCF_002813185.1. The GC content of the type genome is 36.7 % and the genome length is 4.76 Mbp.

Description of *Candidatus* Viridilinea redacatica sp. nov.

Candidatus Viridilinea redacatica (NL. fem. n. *redacatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Viridilinea sp903915775*. The type genome for the species is the GenBank assembly GCA_903861755.1. The GC content of the type genome is 60.58 % and the genome length is 4.45 Mbp.

Description of *Candidatus* Viripana buxififorma sp. nov.

Candidatus Viripana buxififorma (NL. fem. n. *buxififorma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SZUA-567 sp003249795*. The type genome for the species is the GenBank assembly GCA_003249795.1. The GC content of the type genome is 51.58 % and the genome length is 3.81 Mbp.

Description of *Candidatus* Viripana gen. nov.

Candidatus Viripana (NL. fem. n. *Viripana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SZUA-567*. The type species for the genus is *Candidatus* Viripana buxififorma .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SZUA-567*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Viripanaceae.

Description of *Candidatus* Viripanaceae fam. nov.

Candidatus Viripanaceae (NL. fem. n. *Viripanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SZUA-567.* The type genus for the taxon is *Candidatus* Viripana .

According to the original version of GTDB R06-RS202, this family belongs to the order *SZUA-567*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Viripanales.

Description of *Candidatus* Viripanales ord. nov.

Candidatus Viripanales (NL. fem. n. *Viripanales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SZUA-567.* The type genus for the taxon is *Candidatus* Viripana .

According to the original version of GTDB R06-RS202, this family belongs to the class *SZUA-567*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Viripanae.

Description of *Candidatus* Viripanae class. nov.

Candidatus Viripanae (NL. fem. n. *c__Viripanae* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SZUA-567.* The type genus for the taxon is *Candidatus* Viripana .

According to GTDB R06-RS202, this class belongs to the phylum *Planctomycetota*.

Description of *Candidatus* Viriparia demagitio sp. nov.

Candidatus Viriparia demagitio (NL. fem. n. *demagitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *20CM-2-55-15 sp003223875*. The type genome for the species is the GenBank assembly GCA_003222765.1. The GC content of the type genome is 55.19 % and the genome length is 6.01 Mbp.

Description of *Candidatus* Viriparia gen. nov.

Candidatus Viriparia (NL. fem. n. *Viriparia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *20CM-2-55-15*. The type species for the genus is *Candidatus* Viriparia demagitio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *20CM-2-55-15*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Viripariaceae.

Description of *Candidatus* Viripariaceae fam. nov.

Candidatus Viripariaceae (NL. fem. n. *Viripariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *20CM-2-55-15.* The type genus for the taxon is *Candidatus* Viriparia .

According to the original version of GTDB R06-RS202, this family belongs to the order *20CM-2-55-15*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Viripariales.

Description of *Candidatus* Viripariales ord. nov.

Candidatus Viripariales (NL. fem. n. *Viripariales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *20CM-2-55-15.* The type genus for the taxon is *Candidatus* Viriparia .

According to the GTDB R06-RS202, this order belongs to the class *Acidobacteriae*.

Description of *Candidatus* Viriparia dimadago sp. nov.

Candidatus Viriparia dimadago (NL. fem. n. *dimadago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *20CM-2-55-15 sp001920875*. The type genome for the species is the GenBank assembly GCA_001919455.1. The GC content of the type genome is 55.8 % and the genome length is 3.18 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Soil sample from Angelo meadow plot 1; 40cm depth; 4 days after first rain event (27mm)".

Description of *Candidatus* Viriparia risibitia sp. nov.

Candidatus Viriparia risibitia (NL. fem. n. *risibitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *20CM-2-55-15 sp003222815*. The type genome for the species is the GenBank assembly GCA_003222815.1. The GC content of the type genome is 56.13 % and the genome length is 5.67 Mbp.

Description of *Candidatus* Viripella bisacisca sp. nov.

Candidatus Viripella bisacisca (NL. fem. n. *bisacisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SKLX01 sp007121375*. The type genome for the species is the GenBank assembly GCA_003563435.1. The GC content of the type genome is 44.53 % and the genome length is 1.42 Mbp.

Description of *Candidatus* Viripella gen. nov.

Candidatus Viripella (NL. fem. n. *Viripella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SKLX01*. The type species for the genus is *Candidatus* Viripella bisacisca .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SKNC01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Rudiciaceae.

Description of *Candidatus* Viripia cerifitas sp. nov.

Candidatus Viripia cerifitas (NL. fem. n. *cerifitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIMNF01 sp903845155*. The type genome for the species is the GenBank assembly GCA_903845155.1. The GC content of the type genome is 43.85 % and the genome length is 4.29 Mbp.

Description of *Candidatus* Viripia gen. nov.

Candidatus Viripia (NL. fem. n. *Viripia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIMNF01*. The type species for the genus is *Candidatus* Viripia cerifitas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAIMNF01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Viripiaceae.

Description of *Candidatus* Viripiaceae fam. nov.

Candidatus Viripiaceae (NL. fem. n. *Viripiaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CAIMNF01*. The type genus for the taxon is *Candidatus* Viripia .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA1018*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Desorariales.

Description of *Candidatus* Viripia democibra sp. nov.

Candidatus Viripia democibra (NL. fem. n. *democibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIMNF01 sp903858975*. The type genome for the species is the GenBank assembly GCA_903858975.1. The GC content of the type genome is 46.39 % and the genome length is 2.63 Mbp.

Description of *Candidatus* Viripia dimacitura sp. nov.

Candidatus Viripia dimacitura (NL. fem. n. *dimacitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIMNF01 sp903842755*. The type genome for the species is the GenBank assembly GCA_903842755.1. The GC content of the type genome is 45.63 % and the genome length is 3.43 Mbp.

Description of *Candidatus* Viripia furibago sp. nov.

Candidatus Viripia furibago (NL. fem. n. *furibago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIMNF01 sp903831745*. The type genome for the species is the GenBank assembly GCA_903869685.1. The GC content of the type genome is 47.69 % and the genome length is 3.36 Mbp.

Description of *Candidatus* Viripida murelentia sp. nov.

Candidatus Viripida murelentia (NL. fem. n. *murelentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *XYC2-FULL-38-9 sp001818355*. The type genome for the species is the GenBank assembly GCA_001818815.1. The GC content of the type genome is 38.29 % and the genome length is 1.22 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at 16ft depth; 0.2 micron filter at time point B".

Description of *Candidatus* Viripida gen. nov.

Candidatus Viripida (NL. fem. n. *Viripida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *XYC2-FULL-38-9*. The type species for the genus is *Candidatus* Viripida murelentia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *XYC2-FULL-38-9*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Viripidaceae.

Description of *Candidatus* Viripidaceae fam. nov.

Candidatus Viripidaceae (NL. fem. n. *Viripidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *XYC2-FULL-38-9.* The type genus for the taxon is *Candidatus* Viripida .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA9570*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Pecunellales.

Description of *Candidatus* Viriposa domigitio sp. nov.

Candidatus Viriposa domigitio (NL. fem. n. *domigitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIVDV01 sp903904755*. The type genome for the species is the GenBank assembly GCA_903857425.1. The GC content of the type genome is 62.6 % and the genome length is 4.0 Mbp.

Description of *Candidatus* Viriposa gen. nov.

Candidatus Viriposa (NL. fem. n. *Viriposa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIVDV01*. The type species for the genus is *Candidatus* Viriposa domigitio .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Viriposa pavimicella sp. nov.

Candidatus Viriposa pavimicella (NL. fem. n. *pavimicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIVDV01 sp903832055*. The type genome for the species is the GenBank assembly GCA_903832055.1. The GC content of the type genome is 58.71 % and the genome length is 4.57 Mbp.

Description of *Candidatus* Viriposa refacigena sp. nov.

Candidatus Viriposa refacigena (NL. fem. n. *refacigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIVDV01 sp903832475*. The type genome for the species is the GenBank assembly GCA_903832475.1. The GC content of the type genome is 59.62 % and the genome length is 5.3 Mbp.

Description of *Candidatus* Viripula labecugo sp. nov.

Candidatus Viripula labecugo (NL. fem. n. *labecugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AC-67 sp005883175*. The type genome for the species is the GenBank assembly GCA_005883465.1. The GC content of the type genome is 66.51 % and the genome length is 2.16 Mbp.

Description of *Candidatus* Viripula gen. nov.

Candidatus Viripula (NL. fem. n. *Viripula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *AC-67*. The type species for the genus is *Candidatus* Viripula labecugo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *AC-67*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Viripulaceae.

Description of *Candidatus* Viripulaceae fam. nov.

Candidatus Viripulaceae (NL. fem. n. *Viripulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this taxon is *AC-67*. The type genus for the taxon is *Candidatus* Viripula .

According to the original version of GTDB R06-RS202, this family belongs to the order *AC-67*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Viripulales.

Description of *Candidatus* Viripulales ord. nov.

Candidatus Viripulales (NL. fem. n. *Viripulales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *AC-67*. The type genus for the taxon is *Candidatus* Viripula .

According to the original version of GTDB R06-RS202, this family belongs to the class *UBA4738*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Bisacosae.

Description of *Candidatus* Viripula ossifatica sp. nov.

Candidatus Viripula ossifatica (NL. fem. n. *ossifatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *AC-67 sp005884515*. The type genome for the species is the GenBank assembly GCA_005884515.1. The GC content of the type genome is 66.24 % and the genome length is 2.39 Mbp.

Description of *Candidatus* Visibana carunugo sp. nov.

Candidatus Visibana carunugo (NL. fem. n. *carunugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002694895 sp002715665*. The type genome for the species is the GenBank assembly GCA_002715665.1. The GC content of the type genome is 30.2 % and the genome length is 0.96 Mbp.

Description of *Candidatus* Visibana gen. nov.

Candidatus Visibana (NL. fem. n. *Visibana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-002694895*. The type species for the genus is *Candidatus* Visibana

carunugo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GCA-002694895*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Visibanaceae.

Description of *Candidatus* Visibanaceae fam. nov.

Candidatus Visibanaceae (NL. fem. n. *Visibanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *GCA-002694895.* The type genus for the taxon is *Candidatus* Visibana .

According to the original version of GTDB R06-RS202, this family belongs to the order *SAR202*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Defulidales.

Description of *Candidatus* Visibana ceracitio sp. nov.

Candidatus Visibana ceracitio (NL. fem. n. *ceracitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002694895 sp002711005*. The type genome for the species is the GenBank assembly GCA_002711005.1. The GC content of the type genome is 30.56 % and the genome length is 1.28 Mbp.

Description of *Candidatus* Visibana exsanibra sp. nov.

Candidatus Visibana exsanibra (NL. fem. n. *exsanibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002694895 sp002724435*. The type genome for the species is the GenBank assembly GCA_002724435.1. The GC content of the type genome is 30.42 % and the genome length is 0.93 Mbp.

Description of *Candidatus* Visibana homunitas sp. nov.

Candidatus Visibana homunitas (NL. fem. n. *homunitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *GCA-002694895 sp009391605*. The type genome for the species is the GenBank assembly GCA_009391605.1. The GC content of the type genome is 30.01 % and the genome length is 1.19 Mbp.

Description of *Candidatus* Visibana perexigena sp. nov.

Candidatus Visibana perexigena (NL. fem. n. *perexigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002694895 sp002694895*. The type genome for the species is the GenBank assembly GCA_002694895.1. The GC content of the type genome is 30.19 % and the genome length is 1.05 Mbp.

Description of *Candidatus* Visibaria delacitrix sp. nov.

Candidatus Visibaria delacitrix (NL. fem. n. *delacitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GAS188 sp900104855*. The type genome for the species is the GenBank assembly RS_GCF_900103895.1. The GC content of the type genome is 64.34 % and the genome length is 10.29 Mbp.

Description of *Candidatus* Visibaria gen. nov.

Candidatus Visibaria (NL. fem. n. *Visibaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GAS188*. The type species for the genus is *Candidatus* Visibaria delacitrix .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Visibella dapifastra sp. nov.

Candidatus Visibella dapifastra (NL. fem. n. *dapifastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *B11-G9 sp003641695*. The type genome for the species is the GenBank assembly GCA_003641695.1. The GC content of the type genome is 43.1 % and the genome length is 2.58 Mbp.

Description of *Candidatus* Visibella gen. nov.

Candidatus Visibella (NL. fem. n. *Visibella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *B11-G9*. The type species for the genus is *Candidatus* Visibella dapifastra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *B11-G9*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Visibellaceae.

Description of *Candidatus* Visibellaceae fam. nov.

Candidatus Visibellaceae (NL. fem. n. *Visibellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *B11-G9.* The type genus for the taxon is *Candidatus* Visibella .

According to the original version of GTDB R06-RS202, this family belongs to the order *B11-G9*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Visibellales.

Description of *Candidatus* Visibellales ord. nov.

Candidatus Visibellales (NL. fem. n. *Visibellales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *B11-G9.* The type genus for the taxon is *Candidatus* Visibella .

According to the GTDB R06-RS202, this order belongs to the class *Spirochaetia*.

Description of *Candidatus* Visibia cicarugo sp. nov.

Candidatus Visibia cicarugo (NL. fem. n. *cicarugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8260 sp003141695*. The type genome for the species is the GenBank assembly GCA_003141695.1. The GC content of the type genome is 70.1 % and the genome length is 3.09 Mbp.

Description of *Candidatus* Visibia gen. nov.

Candidatus Visibia (NL. fem. n. *Visibia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA8260*. The type species for the genus is *Candidatus* Visibia cicarugo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA8260*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Visibiaceae.

Description of *Candidatus* Visibiaceae fam. nov.

Candidatus Visibiaceae (NL. fem. n. *Visibiaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA8260.* The type genus for the taxon is *Candidatus* Visibia .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA8260*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Visibiales.

Description of *Candidatus* Visibiales ord. nov.

Candidatus Visibiales (NL. fem. n. *Visibiales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA8260.* The type genus for the taxon is *Candidatus* Visibia .

According to the GTDB R06-RS202, this order belongs to the class *Dormibacteria*.

Description of *Candidatus* Visibia conubitura sp. nov.

Candidatus Visibia conubitura (NL. fem. n. *conubitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8260 sp003135255*. The type genome for the species is the GenBank assembly GCA_003164555.1. The GC content of the type genome is 70.6 % and the genome length is 2.19 Mbp.

Description of *Candidatus* Visibia excarimonia sp. nov.

Candidatus Visibia excarimonia (NL. fem. n. *excarimonia* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8260 sp003153215*. The type genome for the species is the GenBank assembly GCA_003153215.1. The GC content of the type genome is 69.96 % and the genome length is 2.39 Mbp.

Description of *Candidatus* Visibia forinedo sp. nov.

Candidatus Visibia forinedo (NL. fem. n. *forinedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8260 sp003170875*. The type genome for the species is the GenBank assembly GCA_003170875.1. The GC content of the type genome is 70.13 % and the genome length is 3.03 Mbp.

Description of *Candidatus* Visibia gabinitrix sp. nov.

Candidatus Visibia gabinitrix (NL. fem. n. *gabinitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8260 sp003142035*. The type genome for the species is the GenBank assembly GCA_003142035.1. The GC content of the type genome is 70.23 % and the genome length is 2.55 Mbp.

Description of *Candidatus* Visibia galacago sp. nov.

Candidatus Visibia galacago (NL. fem. n. *galacago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8260 sp003134115*. The type genome for the species is the GenBank assembly GCA_003154955.1. The GC content of the type genome is 70.71 % and the genome length is 2.32 Mbp.

Description of *Candidatus* Visibia mimogetta sp. nov.

Candidatus Visibia mimogetta (NL. fem. n. *mimogetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8260 sp003491925*. The type genome for the species is the GenBank assembly GCA_003491925.1. The GC content of the type genome is 70.86 % and the genome length is 2.65 Mbp.

Description of *Candidatus* Visibida adnubitia sp. nov.

Candidatus Visibida adnubitia (NL. fem. n. *adnubitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *OLB17 sp003223975*. The type genome for the species is the GenBank assembly GCA_003223975.1. The GC content of the type genome is 52.36 % and the genome length is 3.66 Mbp.

Description of *Candidatus* Visibida gen. nov.

Candidatus Visibida (NL. fem. n. *Visibida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *OLB17*. The type species for the genus is *Candidatus* Visibida adnubitia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Visibida appugifica sp. nov.

Candidatus Visibida appugifica (NL. fem. n. *appugifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *OLB17 sp002360555*. The type genome for the species is the GenBank assembly GCA_002360555.1. The GC content of the type genome is 51.94 % and the genome length is 3.36 Mbp.

Description of *Candidatus* Visibida assubitia sp. nov.

Candidatus Visibida assubitia (NL. fem. n. *assubitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *OLB17 sp014379075*. The type genome for the species is the GenBank assembly GCA_014379075.1. The GC content of the type genome is 50.42 % and the

genome length is 3.38 Mbp.

Description of *Candidatus* Visibida bipalitoga sp. nov.

Candidatus Visibida bipalitoga (NL. fem. n. *bipalitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *OLB17 sp013695495*. The type genome for the species is the GenBank assembly GCA_013695495.1. The GC content of the type genome is 54.82 % and the genome length is 2.48 Mbp.

Description of *Candidatus* Visibida cilotiforma sp. nov.

Candidatus Visibida cilotiforma (NL. fem. n. *cilotiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *OLB17 sp013695195*. The type genome for the species is the GenBank assembly GCA_013695195.1. The GC content of the type genome is 48.96 % and the genome length is 2.83 Mbp.

Description of *Candidatus* Visibida depopilenta sp. nov.

Candidatus Visibida depopilenta (NL. fem. n. *depopilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *OLB17 sp902826795*. The type genome for the species is the GenBank assembly GCA_902826795.1. The GC content of the type genome is 53.71 % and the genome length is 4.15 Mbp.

Description of *Candidatus* Visibida ecfacitica sp. nov.

Candidatus Visibida ecfacitica (NL. fem. n. *ecfacitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *OLB17 sp013140875*. The type genome for the species is the GenBank assembly GCA_013140875.1. The GC content of the type genome is 52.68 % and the genome length is 3.49 Mbp.

Description of *Candidatus* Visibida excerilega sp. nov.

Candidatus Visibida excerilega (NL. fem. n. *excerilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *OLB17 sp001464455*. The type genome for the species is the GenBank assembly GCA_001464455.1. The GC content of the type genome is 53.13 % and the genome length is 4.2 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "dual media filters at the Ann Arbor; Michigan drinking water treatment plant".

Description of *Candidatus* Visibida exsusitura sp. nov.

Candidatus Visibida exsusitura (NL. fem. n. *exsusitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *OLB17 sp902826385*. The type genome for the species is the GenBank assembly GCA_902826385.1. The GC content of the type genome is 52.39 % and the genome length is 3.69 Mbp.

Description of *Candidatus* Visibida minagitica sp. nov.

Candidatus Visibida minagitica (NL. fem. n. *minagitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *OLB17 sp002333435*. The type genome for the species is the GenBank assembly GCA_003501905.1. The GC content of the type genome is 53.52 % and the genome length is 2.94 Mbp.

Description of *Candidatus* Visibida minagitrix sp. nov.

Candidatus Visibida minagitrix (NL. fem. n. *minagitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *OLB17 sp003223025*. The type genome for the species is the GenBank assembly GCA_003223025.1. The GC content of the type genome is 53.4 % and the genome length is 4.34 Mbp.

Description of *Candidatus* Visibida minuretta sp. nov.

Candidatus Visibida minuretta (NL. fem. n. *minuretta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *OLB17 sp003577445*. The type genome for the species is the GenBank assembly GCA_003577445.1. The GC content of the type genome is 54.67 % and the genome length is 2.8 Mbp.

Description of *Candidatus* Visibida opporimonia sp. nov.

Candidatus Visibida opporimonia (NL. fem. n. *opporimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *OLB17 sp011388875*. The type genome for the species is the GenBank assembly GCA_011388875.1. The GC content of the type genome is 48.04 % and the genome length is 2.83 Mbp.

Description of *Candidatus* Visibida ossucitia sp. nov.

Candidatus Visibida ossucitia (NL. fem. n. *ossucitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *OLB17 sp002483395*. The type genome for the species is the GenBank assembly GCA_002483395.1. The GC content of the type genome is 51.35 % and the genome length is 4.45 Mbp.

Description of *Candidatus* Visibida peripivita sp. nov.

Candidatus Visibida peripivita (NL. fem. n. *peripivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *OLB17 sp001567505*. The type genome for the species is the GenBank assembly GCA_001567505.1. The GC content of the type genome is 56.31 % and the genome length is 2.97 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "partial-nitritation anammox (PNA) reactor; full scale (600m3) reactor for the removal of ammonium from wastewater from the potato processing industry".

Description of *Candidatus* Visibida rinocetta sp. nov.

Candidatus Visibida rinocetta (NL. fem. n. *rinocetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *OLB17 sp001464665*. The type genome for the species is the GenBank assembly GCA_001464665.1. The GC content of the type genome is 55.14 % and the genome length is 3.96 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "dual media filters at the Ann Arbor; Michigan drinking water treatment plant".

Description of *Candidatus* Visibosa adnecivita sp. nov.

Candidatus Visibosa adnecivita (NL. fem. n. *adnecivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SKVJ01 sp003562555*. The type genome for the species is the GenBank assembly GCA_003562555.1. The GC content of the type genome is 58.73 % and the genome length is 1.86 Mbp.

Description of *Candidatus* Visibosa gen. nov.

Candidatus Visibosa (NL. fem. n. *Visibosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SKVJ01*. The type species for the genus is *Candidatus* Visibosa adnecivita .

According to the original version of GTDB R06-RS202, this genus belongs to the family *AB-539-J10*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Nubigidaceae.

Description of *Candidatus* Visibosa beneventia sp. nov.

Candidatus Visibosa beneventia (NL. fem. n. *beneventia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SKVJ01 sp003552125*. The type genome for the species is the GenBank assembly GCA_003552125.1. The GC content of the type genome is 57.63 % and the genome length is 2.09 Mbp.

Description of *Candidatus* Visibosa obtemitia sp. nov.

Candidatus Visibosa obtemitia (NL. fem. n. *obtemitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SKVJ01 sp003562475*. The type genome for the species is the GenBank assembly GCA_003562475.1. The GC content of the type genome is 58.02 % and the genome length is 2.46 Mbp.

Description of *Candidatus* Visibosa rorifitas sp. nov.

Candidatus Visibosa rorifitas (NL. fem. n. *rorifitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SKVJ01 sp007129495*. The type genome for the species is the GenBank assembly GCA_007120635.1. The GC content of the type genome is 56.37 % and the genome length is 2.08 Mbp.

Description of *Candidatus* Visibula accucitio sp. nov.

Candidatus Visibula accucitio (NL. fem. n. *accucitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WRAX01 sp009787945*. The type genome for the species is the GenBank assembly GCA_009787945.1. The GC content of the type genome is 45.41 % and the genome length is 1.78 Mbp.

Description of *Candidatus* Visibula gen. nov.

Candidatus Visibula (NL. fem. n. *Visibula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WRAX01*. The type species for the genus is *Candidatus* Visibula accucitio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *WRAX01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Visibulaceae.

Description of *Candidatus* Visibulaceae fam. nov.

Candidatus Visibulaceae (NL. fem. n. *Visibulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this taxon is *WRAX01*. The type genus for the taxon is *Candidatus* Visibula .

According to GTDB R06-RS202, this family belongs to the order *Lachnospirales*.

Description of *Candidatus* Visibula benivessa sp. nov.

Candidatus Visibula benivessa (NL. fem. n. *benivessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WRAX01 sp009780485*. The type genome for the species is the GenBank assembly GCA_009780485.1. The GC content of the type genome is 43.35 % and the genome length is 2.04 Mbp.

Description of *Candidatus* Visibula volunetta sp. nov.

Candidatus Visibula volunetta (NL. fem. n. *volunetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WRAX01 sp009779935*. The type genome for the species is the GenBank assembly GCA_009779935.1. The GC content of the type genome is 45.76 % and the genome length is 2.14 Mbp.

Description of *Candidatus* Visifana femelessa sp. nov.

Candidatus Visifana femelessa (NL. fem. n. *femelessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA954 sp002293155*. The type genome for the species is the GenBank assembly GCA_903905495.1. The GC content of the type genome is 53.85 % and the genome length is 1.7 Mbp.

Description of *Candidatus* Visifana gen. nov.

Candidatus Visifana (NL. fem. n. *Visifana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA954*. The type species for the genus is *Candidatus* Visifana femelessa .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Visifana nicoticula sp. nov.

Candidatus Visifana nicoticula (NL. fem. n. *nicoticula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA954 sp009924525*. The type genome for the species is the GenBank assembly GCA_009924525.1. The GC content of the type genome is 55.89 % and the genome length is 1.89 Mbp.

Description of *Candidatus* Visifaria emancibra sp. nov.

Candidatus Visifaria emancibra (NL. fem. n. *emancibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *D5 sp014385025*. The type genome for the species is the GenBank assembly GCA_014385025.1. The GC content of the type genome is 56.29 % and the genome length is 3.26 Mbp.

Description of *Candidatus* Visifaria gen. nov.

Candidatus Visifaria (NL. fem. n. *Visifaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *D5*. The type species for the genus is *Candidatus* Visifaria emancibra .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Visifaria papavifica sp. nov.

Candidatus Visifaria papavifica (NL. fem. n. *papavifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *D5 sp900113995*. The type genome for the species is the GenBank assembly GCA_004557345.1. The GC content of the type genome is 58.01 % and the genome length is 2.34 Mbp.

Description of *Candidatus* Visifella novililenta sp. nov.

Candidatus Visifella novililenta (NL. fem. n. *novililenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2-02-FULL-37-13 sp001782195*. The type genome for the species is the GenBank assembly GCA_001782195.1. The GC content of the type genome is 36.63 % and the genome length is 1.09 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 0.2 micron filter; full assembly".

Description of *Candidatus* Visifella gen. nov.

Candidatus Visifella (NL. fem. n. *Visifella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *2-02-FULL-37-13*. The type species for the genus is *Candidatus* Visifella novililenta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA12049*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Catecariaceae.

Description of *Candidatus* Visifia indilicella sp. nov.

Candidatus Visifia indilicella (NL. fem. n. *indilicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MHMH01 sp001819335*. The type genome for the species is the GenBank assembly GCA_001819335.1. The GC content of the type genome is 43.25 % and the genome length is 0.55 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under low O2 conditions; 0.1 micron filter; full assembly".

Description of *Candidatus* Visifia gen. nov.

Candidatus Visifia (NL. fem. n. *Visifia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *MHMH01*. The type species for the genus is *Candidatus* Visifia indilicella .

According to the original version of GTDB R06-RS202, this genus belongs to the family *MHMH01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Visifiaceae.

Description of *Candidatus* Visifiaceae fam. nov.

Candidatus Visifiaceae (NL. fem. n. *Visifiaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *MHMH01*. The type genus for the taxon is *Candidatus* Visifia .

According to GTDB R06-RS202, this family belongs to the order *Paceibacterales*.

Description of *Candidatus* Visifida cohurivita sp. nov.

Candidatus Visifida cohurivita (NL. fem. n. *cohurivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *63-22 sp900465915*. The type genome for the species is the GenBank assembly GCA_900465915.1. The GC content of the type genome is 66.07 % and the genome length is 4.25 Mbp.

Description of *Candidatus* Visifida gen. nov.

Candidatus Visifida (NL. fem. n. *Visifida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *63-22*. The type species for the genus is *Candidatus* Visifida cohurivita .

According to GTDB R06-RS202, this genus belongs to the family _A.

Description of *Candidatus* Visifida momorousia sp. nov.

Candidatus Visifida momorousia (NL. fem. n. *momorousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *63-22 sp001898995*. The type genome for the species is the GenBank assembly GCA_001898995.1. The GC content of the type genome is 62.66 % and the genome length is 4.14 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Ammonium sulfate bioreactor".

Description of *Candidatus* Visifosa feficitura sp. nov.

Candidatus Visifosa feficitura (NL. fem. n. *feficitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2023 sp002335145*. The type genome for the species is the GenBank assembly GCA_002335145.1. The GC content of the type genome is 53.45 % and the genome length is 1.1 Mbp.

Description of *Candidatus* Visifosa gen. nov.

Candidatus Visifosa (NL. fem. n. *Visifosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA2023*. The type species for the genus is *Candidatus* Visifosa feficitura .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2023*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Visifosaceae.

Description of *Candidatus* Visifosaceae fam. nov.

Candidatus Visifosaceae (NL. fem. n. *Visifosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA2023.* The type genus for the taxon is *Candidatus* Visifosa .

According to the original version of GTDB R06-RS202, this family belongs to the order *BD1-5*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Fusifellales.

Description of *Candidatus* Visifula cemenatio sp. nov.

Candidatus Visifula cemenatio (NL. fem. n. *cemenatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *66-474 sp004299705*. The type genome for the species is the GenBank assembly GCA_004299705.1. The GC content of the type genome is 64.62 % and the genome length is 3.62 Mbp.

Description of *Candidatus* Visifula gen. nov.

Candidatus Visifula (NL. fem. n. *Visifula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *66-474*. The type species for the genus is *Candidatus* Visifula cemenatio .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Visifula dehinimonia sp. nov.

Candidatus Visifula dehinimonia (NL. fem. n. *dehinimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *66-474 sp001899805*. The type genome for the species is the GenBank assembly GCA_001725765.1. The GC content of the type genome is 65.79 % and the genome length is 3.54 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Thiocyanate bioreactor".

Description of *Candidatus* Visifula pocilitoga sp. nov.

Candidatus Visifula pocilitoga (NL. fem. n. *pocilitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *66-474 sp004299555*. The type genome for the species is the GenBank assembly GCA_004299555.1. The GC content of the type genome is 66.04 % and the genome length is 2.98 Mbp.

Description of *Candidatus* Visocana lapilivita sp. nov.

Candidatus Visocana lapilivita (NL. fem. n. *lapilivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002793355 sp002793355*. The type genome for the species is the GenBank assembly GCA_002793355.1. The GC content of the type genome is 41.39 % and the genome length is 1.03 Mbp.

Description of *Candidatus* Visocana gen. nov.

Candidatus Visocana (NL. fem. n. *Visocana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this genus is *GCA-002793355*. The type species for the genus is *Candidatus* Visocana lapilivita .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GCA-002793355*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Visocanaceae.

Description of *Candidatus* Visocanaceae fam. nov.

Candidatus Visocanaceae (NL. fem. n. *Visocanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *GCA-002793355.* The type genus for the taxon is *Candidatus* Visocana .

According to the original version of GTDB R06-RS202, this family belongs to the order *SC72*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Bipenellales.

Description of *Candidatus* Visocaria adremax sp. nov.

Candidatus Visocaria adremax (NL. fem. n. *adremax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2241 sp002347645*. The type genome for the species is the GenBank assembly GCA_002347645.1. The GC content of the type genome is 70.13 % and the genome length is 2.79 Mbp.

Description of *Candidatus* Visocaria gen. nov.

Candidatus Visocaria (NL. fem. n. *Visocaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA2241*. The type species for the genus is *Candidatus* Visocaria adremax .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2241*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Visocariaceae.

Description of *Candidatus* Visocariaceae fam. nov.

Candidatus Visocariaceae (NL. fem. n. *Visocariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA2241*. The type genus for the taxon is *Candidatus* Visocaria .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA2241*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Visocariales.

Description of *Candidatus* Visocariales ord. nov.

Candidatus Visocariales (NL. fem. n. *Visocariales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA2241*. The type genus for the taxon is *Candidatus* Visocaria .

According to the GTDB R06-RS202, this order belongs to the class *Thermoleophilia*.

Description of *Candidatus* Visocella cunabifica sp. nov.

Candidatus Visocella cunabifica (NL. fem. n. *cunabifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *YD0425bin50 sp002753105*. The type genome for the species is the GenBank assembly GCA_002753105.1. The GC content of the type genome is 36.91 % and the genome length is 4.97 Mbp.

Description of *Candidatus* Visocella gen. nov.

Candidatus Visocella (NL. fem. n. *Visocella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *YD0425bin50*. The type species for the genus is *Candidatus* Visocella cunabifica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *YD0425bin50*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Visocellaceae.

Description of *Candidatus* Visocellaceae fam. nov.

Candidatus Visocellaceae (NL. fem. n. *Visocellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *YD0425bin50.* The type genus for the taxon is *Candidatus* Visocella .

According to GTDB R06-RS202, this family belongs to the order *Desulfobacterales*.

Description of *Candidatus* Visocia penuritia sp. nov.

Candidatus Visocia penuritia (NL. fem. n. *penuritia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WRMI01 sp009777175*. The type genome for the species is the GenBank assembly GCA_009777175.1. The GC content of the type genome is 34.08 % and the genome length is 3.09 Mbp.

Description of *Candidatus* Visocia gen. nov.

Candidatus Visocia (NL. fem. n. *Visocia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WRMI01*. The type species for the genus is *Candidatus* Visocia penuritia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Visocida alcibessa sp. nov.

Candidatus Visocida alcibessa (NL. fem. n. *alcibessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UASB340 sp001468925*. The type genome for the species is the GenBank assembly GCA_001468925.1. The GC content of the type genome is 28.7 % and the genome length is 1.08 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "wastewater sludge from a upflow anaerobic sludge blanket reactor".

Description of *Candidatus* Visocida gen. nov.

Candidatus Visocida (NL. fem. n. *Visocida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UASB340*. The type species for the genus is *Candidatus* Visocida

alcibessa .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UASB340*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Visocidaceae.

Description of *Candidatus* Visocidaceae fam. nov.

Candidatus Visocidaceae (NL. fem. n. *Visocidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UASB340.* The type genus for the taxon is *Candidatus* Visocida .

According to GTDB R06-RS202, this family belongs to the order *Babeliales*.

Description of *Candidatus* Visocida expuritio sp. nov.

Candidatus Visocida expuritio (NL. fem. n. *expuritio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UASB340 sp000989185*. The type genome for the species is the GenBank assembly GCA_000989185.1. The GC content of the type genome is 27.58 % and the genome length is 1.06 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "aquifer sediment".

Description of *Candidatus* Visocosa obtoritudo sp. nov.

Candidatus Visocosa obtoritudo (NL. fem. n. *obtoritudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DSUL01 sp011329005*. The type genome for the species is the GenBank assembly GCA_011329005.1. The GC content of the type genome is 63.92 % and the genome length is 3.52 Mbp.

Description of *Candidatus* Visocosa gen. nov.

Candidatus Visocosa (NL. fem. n. *Visocosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DSUL01*. The type species for the genus is *Candidatus* Visocosa obtoritudo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DSUL01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Visocosaceae.

Description of *Candidatus* Visocosaceae fam. nov.

Candidatus Visocosaceae (NL. fem. n. *Visocosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *DSUL01*. The type genus for the taxon is *Candidatus* Visocosa .

According to the original version of GTDB R06-RS202, this family belongs to the order *DSUL01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Visocosales.

Description of *Candidatus* Visocosales ord. nov.

Candidatus Visocosales (NL. fem. n. *Visocosales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *DSUL01*. The type genus for the taxon is *Candidatus* Visocosa .

According to the original version of GTDB R06-RS202, this family belongs to the class *UBA5829*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Susicellae.

Description of *Candidatus* Visocula capucilenta sp. nov.

Candidatus Visocula capucilenta (NL. fem. n. *capucilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTU098 sp001512635*. The type genome for the species is the GenBank assembly GCA_012728715.1. The GC content of the type genome is 50.16 % and the genome length is 2.62 Mbp.

Description of *Candidatus* Visocula gen. nov.

Candidatus Visocula (NL. fem. n. *Visocula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DTU098*. The type species for the genus is *Candidatus* Visocula

capucilenta .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Visocula furibibra sp. nov.

Candidatus Visocula furibibra (NL. fem. n. *furibibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTU098 sp002408725*. The type genome for the species is the GenBank assembly GCA_002408725.1. The GC content of the type genome is 50.13 % and the genome length is 2.24 Mbp.

Description of *Candidatus* Visocula medimousia sp. nov.

Candidatus Visocula medimousia (NL. fem. n. *medimousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DTU098 sp002305915*. The type genome for the species is the GenBank assembly GCA_012839155.1. The GC content of the type genome is 50.01 % and the genome length is 2.72 Mbp.

Description of *Candidatus* Vitabana acrocivita sp. nov.

Candidatus Vitabana acrocivita (NL. fem. n. *acrocivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1191 sp902797195*. The type genome for the species is the GenBank assembly GCA_902797195.1. The GC content of the type genome is 49.03 % and the genome length is 1.55 Mbp.

Description of *Candidatus* Vitabana gen. nov.

Candidatus Vitabana (NL. fem. n. *Vitabana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1191*. The type species for the genus is *Candidatus* Vitabana acrocivita .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Vitabana badititas sp. nov.

Candidatus Vitabana badititas (NL. fem. n. *badititas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1191 sp902772685*. The type genome for the species is the GenBank assembly GCA_902772685.1. The GC content of the type genome is 49.86 % and the genome length is 1.8 Mbp.

Description of *Candidatus* Vitabana brasmax sp. nov.

Candidatus Vitabana brasmax (NL. fem. n. *brasmax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1191 sp902796875*. The type genome for the species is the GenBank assembly GCA_902796875.1. The GC content of the type genome is 57.99 % and the genome length is 1.39 Mbp.

Description of *Candidatus* Vitabana debucedo sp. nov.

Candidatus Vitabana debucedo (NL. fem. n. *debucedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1191 sp002310095*. The type genome for the species is the GenBank assembly GCA_002310095.1. The GC content of the type genome is 52.32 % and the genome length is 1.45 Mbp.

Description of *Candidatus* Vitabana defarousia sp. nov.

Candidatus Vitabana defarousia (NL. fem. n. *defarousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1191 sp902797095*. The type genome for the species is the GenBank assembly GCA_902797095.1. The GC content of the type genome is 54.68 % and the genome length is 1.62 Mbp.

Description of *Candidatus* Vitabana divoritas sp. nov.

Candidatus Vitabana divoritas (NL. fem. n. *divoritas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1191 sp012513435*. The type genome for the species is the GenBank assembly GCA_012513435.1. The GC content of the type genome is 42.3 % and the genome length is 2.28 Mbp.

Description of *Candidatus* Vitabana exsatitura sp. nov.

Candidatus Vitabana exsatitura (NL. fem. n. *exsatitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1191 sp902766185*. The type genome for the species is the GenBank assembly GCA_902766185.1. The GC content of the type genome is 57.3 % and the genome length is 1.94 Mbp.

Description of *Candidatus* Vitabana illapastra sp. nov.

Candidatus Vitabana illapastra (NL. fem. n. *illapastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1191 sp902786815*. The type genome for the species is the GenBank assembly GCA_902786815.1. The GC content of the type genome is 52.18 % and the genome length is 2.21 Mbp.

Description of *Candidatus* Vitabana illibetta sp. nov.

Candidatus Vitabana illibetta (NL. fem. n. *illibetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1191 sp902783525*. The type genome for the species is the GenBank assembly GCA_902783525.1. The GC content of the type genome is 49.38 % and the genome length is 1.51 Mbp.

Description of *Candidatus* Vitabana impuditrix sp. nov.

Candidatus Vitabana impuditrix (NL. fem. n. *impuditrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *UBA1191 sp900542385*. The type genome for the species is the GenBank assembly GCA_900542385.1. The GC content of the type genome is 43.1 % and the genome length is 1.75 Mbp.

Description of *Candidatus* Vitabana malifilenta sp. nov.

Candidatus Vitabana malifilenta (NL. fem. n. *malifilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1191 sp902787725*. The type genome for the species is the GenBank assembly GCA_902787725.1. The GC content of the type genome is 51.03 % and the genome length is 1.57 Mbp.

Description of *Candidatus* Vitabana oblocimonia sp. nov.

Candidatus Vitabana oblocimonia (NL. fem. n. *oblocimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1191 sp902763505*. The type genome for the species is the GenBank assembly GCA_902763505.1. The GC content of the type genome is 48.5 % and the genome length is 2.29 Mbp.

Description of *Candidatus* Vitabana panifatica sp. nov.

Candidatus Vitabana panifatica (NL. fem. n. *panifatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1191 sp900066305*. The type genome for the species is the GenBank assembly GCA_900066305.1. The GC content of the type genome is 47.78 % and the genome length is 2.65 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "faeces".

Description of *Candidatus* Vitabana recomedo sp. nov.

Candidatus Vitabana recomedo (NL. fem. n. *recomedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1191 sp900543485*. The type genome for the species is the GenBank assembly GCA_900543485.1. The GC content of the type genome is 49.19 % and the genome length is 2.47 Mbp.

Description of *Candidatus* Vitabana refacax sp. nov.

Candidatus Vitabana refacax (NL. fem. n. *refacax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1191 sp902795135*. The type genome for the species is the GenBank assembly GCA_902795135.1. The GC content of the type genome is 48.34 % and the genome length is 2.08 Mbp.

Description of *Candidatus* Vitabana refocitia sp. nov.

Candidatus Vitabana refocitia (NL. fem. n. *refocitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1191 sp900549125*. The type genome for the species is the GenBank assembly RS_GCF_900758185.1. The GC content of the type genome is 47.8 % and the genome length is 1.71 Mbp.

Description of *Candidatus* Vitabana sugilousia sp. nov.

Candidatus Vitabana sugilousia (NL. fem. n. *sugilousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1191 sp900545775*. The type genome for the species is the GenBank assembly GCA_900545775.1. The GC content of the type genome is 39.77 % and the genome length is 2.04 Mbp.

Description of *Candidatus* Vitabaria inhonivita sp. nov.

Candidatus Vitabaria inhonivita (NL. fem. n. *inhonivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *XYD12-FULL-36-8 sp013388515*. The type genome for the species is the GenBank assembly GCA_013388515.1. The GC content of the type genome is 35.35 % and the genome length is 3.89 Mbp.

Description of *Candidatus* Vitabaria gen. nov.

Candidatus Vitabaria (NL. fem. n. *Vitabaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *XYD12-FULL-36-8*. The type species for the genus is *Candidatus* Vitabaria inhonivita .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Vitabaria maligitudo sp. nov.

Candidatus Vitabaria maligitudo (NL. fem. n. *maligitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *XYD12-FULL-36-8 sp001803045*. The type genome for the species is the GenBank assembly GCA_001803055.1. The GC content of the type genome is 35.33 % and the genome length is 4.1 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at 16ft depth; 0.2 micron filter at time point B".

Description of *Candidatus* Vitabella allacibra sp. nov.

Candidatus Vitabella allacibra (NL. fem. n. *allacibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Bin106 sp002238945*. The type genome for the species is the GenBank assembly GCA_002238945.1. The GC content of the type genome is 39.61 % and the genome length is 2.59 Mbp.

Description of *Candidatus* Vitabella gen. nov.

Candidatus Vitabella (NL. fem. n. *Vitabella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Bin106*. The type species for the genus is *Candidatus* Vitabella allacibra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *Bin106*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vitabellaceae.

Description of *Candidatus* Vitabellaceae fam. nov.

Candidatus Vitabellaceae (NL. fem. n. *Vitabellaceae* a name created from the name of

the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *Bin106.* The type genus for the taxon is *Candidatus* Vitabella .

According to GTDB R06-RS202, this family belongs to the order *Oligoflexales*.

Description of *Candidatus* Vitabia menapiforma sp. nov.

Candidatus Vitabia menapiforma (NL. fem. n. *menapiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAACET01 sp011682385*. The type genome for the species is the GenBank assembly GCA_011682385.1. The GC content of the type genome is 53.06 % and the genome length is 2.35 Mbp.

Description of *Candidatus* Vitabia gen. nov.

Candidatus Vitabia (NL. fem. n. *Vitabia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAACET01*. The type species for the genus is *Candidatus* Vitabia menapiforma .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JAACET01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vitabiaceae.

Description of *Candidatus* Vitabiaceae fam. nov.

Candidatus Vitabiaceae (NL. fem. n. *Vitabiaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JAACET01.* The type genus for the taxon is *Candidatus* Vitabia .

According to the original version of GTDB R06-RS202, this family belongs to the order *JAACET01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Vitabiales.

Description of *Candidatus* Vitabiales ord. nov.

Candidatus Vitabiales (NL. fem. n. *Vitabiales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JAACET01*. The type genus for the taxon is *Candidatus* Vitabia .

According to the GTDB R06-RS202, this order belongs to the class *Phycisphaerae*.

Description of *Candidatus* Vitabida adcubifica sp. nov.

Candidatus Vitabida adcubifica (NL. fem. n. *adcubifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *C7867-006 sp009694965*. The type genome for the species is the GenBank assembly GCA_009694965.1. The GC content of the type genome is 38.45 % and the genome length is 0.53 Mbp.

Description of *Candidatus* Vitabida gen. nov.

Candidatus Vitabida (NL. fem. n. *Vitabida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *C7867-006*. The type species for the genus is *Candidatus* Vitabida adcubifica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Vitabida direcisca sp. nov.

Candidatus Vitabida direcisca (NL. fem. n. *direcisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *C7867-006 sp001824295*. The type genome for the species is the GenBank assembly GCA_000994025.1. The GC content of the type genome is 39.64 % and the genome length is 0.64 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "aquifer sediment".

Description of *Candidatus* Vitabida direpigena sp. nov.

Candidatus Vitabida direpigena (NL. fem. n. *direpigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *C7867-006 sp000996025*. The type genome for the species is the GenBank assembly GCA_001825405.1. The GC content of the type genome is 38.69 % and the genome length is 0.63 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under low O2 conditions; 1.2 micron filter; full assembly".

Description of *Candidatus* Vitabida horomimonia sp. nov.

Candidatus Vitabida horomimonia (NL. fem. n. *horomimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *C7867-006 sp013816135*. The type genome for the species is the GenBank assembly GCA_013816135.1. The GC content of the type genome is 36.94 % and the genome length is 0.79 Mbp.

Description of *Candidatus* Vitabida inrefilenta sp. nov.

Candidatus Vitabida inrefilenta (NL. fem. n. *inrefilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *C7867-006 sp003173855*. The type genome for the species is the GenBank assembly GCA_003173855.1. The GC content of the type genome is 36.82 % and the genome length is 0.65 Mbp.

Description of *Candidatus* Vitabida procritoga sp. nov.

Candidatus Vitabida procritoga (NL. fem. n. *procritoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *C7867-006 sp001189155*. The type genome for the species is the GenBank assembly GCA_001189155.1. The GC content of the type genome is 36.44 % and the genome length is 0.67 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Hanford 300 Area IFRC 399-1-60 Groundwater".

Description of *Candidatus* Vitabida rumifitoga sp. nov.

Candidatus Vitabida rumifitoga (NL. fem. n. *rumifitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *C7867-006 sp001825395*. The type genome for the species is the GenBank assembly GCA_001823845.1. The GC content of the type genome is 39.09 % and the genome length is 0.47 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under high O2 conditions; 1.2 micron filter; full assembly".

Description of *Candidatus* Vitabosa genufilenta sp. nov.

Candidatus Vitabosa genufilenta (NL. fem. n. *genufilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Gp13-AA77 sp003224635*. The type genome for the species is the GenBank assembly GCA_003224585.1. The GC content of the type genome is 61.15 % and the genome length is 5.15 Mbp.

Description of *Candidatus* Vitabosa gen. nov.

Candidatus Vitabosa (NL. fem. n. *Vitabosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Gp13-AA77*. The type species for the genus is *Candidatus* Vitabosa genufilenta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA7540*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Maxumariaceae.

Description of *Candidatus* Vitabula locupetta sp. nov.

Candidatus Vitabula locupetta (NL. fem. n. *locupetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2040 sp002384725*. The type genome for the species is the GenBank assembly GCA_002384725.1. The GC content of the type genome is 38.27 % and the genome length is 2.25 Mbp.

Description of *Candidatus* Vitabula gen. nov.

Candidatus Vitabula (NL. fem. n. *Vitabula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this genus is *UBA2040*. The type species for the genus is *Candidatus* Vitabula locupetta .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Vitabula murilugo sp. nov.

Candidatus Vitabula murilugo (NL. fem. n. *murilugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2040 sp002332715*. The type genome for the species is the GenBank assembly GCA_002332715.1. The GC content of the type genome is 37.96 % and the genome length is 2.1 Mbp.

Description of *Candidatus* Vitifana cicilisca sp. nov.

Candidatus Vitifana cicilisca (NL. fem. n. *cicilisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIKAH01 sp903825355*. The type genome for the species is the GenBank assembly GCA_903887405.1. The GC content of the type genome is 42.04 % and the genome length is 1.32 Mbp.

Description of *Candidatus* Vitifana gen. nov.

Candidatus Vitifana (NL. fem. n. *Vitifana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIKAH01*. The type species for the genus is *Candidatus* Vitifana cicilisca .

According to the original version of GTDB R06-RS202, this genus belongs to the family *RVW-14*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Direpanaceae.

Description of *Candidatus* Vitifana medimitica sp. nov.

Candidatus Vitifana medimitica (NL. fem. n. *medimitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *CAIKAH01 sp010027825*. The type genome for the species is the GenBank assembly GCA_010027825.1. The GC content of the type genome is 50.14 % and the genome length is 3.03 Mbp.

Description of *Candidatus* Vitifaria antipousia sp. nov.

Candidatus Vitifaria antipousia (NL. fem. n. *antipousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *TC1 sp001584725*. The type genome for the species is the GenBank assembly RS_GCF_001584725.1. The GC content of the type genome is 32.75 % and the genome length is 1.62 Mbp.

Description of *Candidatus* Vitifaria gen. nov.

Candidatus Vitifaria (NL. fem. n. *Vitifaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *TC1*. The type species for the genus is *Candidatus* Vitifaria antipousia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *TC1*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vitifariaceae.

Description of *Candidatus* Vitifariaceae fam. nov.

Candidatus Vitifariaceae (NL. fem. n. *Vitifariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *TC1*. The type genus for the taxon is *Candidatus* Vitifaria .

According to the original version of GTDB R06-RS202, this family belongs to the order *TC1*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Vitifariales.

Description of *Candidatus* Vitifariales ord. nov.

Candidatus Vitifariales (NL. fem. n. *Vitifariales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *TC1*. The type genus for the taxon is *Candidatus* Vitifaria .

According to the original version of GTDB R06-RS202, this family belongs to the class *TC1*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Vitifariae.

Description of *Candidatus* Vitifariae class. nov.

Candidatus Vitifariae (NL. fem. n. *c__Vitifariae* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *TC1*. The type genus for the taxon is *Candidatus* Vitifaria .

According to GTDB R06-RS202, this class belongs to the phylum *Firmicutes_B*.

Description of *Candidatus* Vitifella benepago sp. nov.

Candidatus Vitifella benepago (NL. fem. n. *benepago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIXZV01 sp903925955*. The type genome for the species is the GenBank assembly GCA_903931025.1. The GC content of the type genome is 68.72 % and the genome length is 3.21 Mbp.

Description of *Candidatus* Vitifella gen. nov.

Candidatus Vitifella (NL. fem. n. *Vitifella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIXZV01*. The type species for the genus is *Candidatus* Vitifella benepago .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CSP1-4*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Hecatiaceae.

Description of *Candidatus* Vitifella pecunitrix sp. nov.

Candidatus Vitifella pecunitrix (NL. fem. n. *pecunitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIXZV01 sp903924005*. The type genome for the species is the

GenBank assembly GCA_903891385.1. The GC content of the type genome is 68.91 % and the genome length is 3.49 Mbp.

Description of *Candidatus* Vitifella supeletta sp. nov.

Candidatus Vitifella supeletta (NL. fem. n. *supeletta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIXZV01 sp903930745*. The type genome for the species is the GenBank assembly GCA_903930745.1. The GC content of the type genome is 71.79 % and the genome length is 3.72 Mbp.

Description of *Candidatus* Vitifia desucago sp. nov.

Candidatus Vitifia desucago (NL. fem. n. *desucago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WM-009 sp013822085*. The type genome for the species is the GenBank assembly GCA_013822085.1. The GC content of the type genome is 73.14 % and the genome length is 2.26 Mbp.

Description of *Candidatus* Vitifia gen. nov.

Candidatus Vitifia (NL. fem. n. *Vitifia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WM-009*. The type species for the genus is *Candidatus* Vitifia desucago .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SM1A02*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Cenaciaceae.

Description of *Candidatus* Vitifida coticilenta sp. nov.

Candidatus Vitifida coticilenta (NL. fem. n. *coticilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *F1-20-MAGs160 sp009705225*. The type genome for the species is the GenBank assembly GCA_009705225.1. The GC content of the type genome is 63.23 %

and the genome length is 2.59 Mbp.

Description of *Candidatus* Vitifida gen. nov.

Candidatus Vitifida (NL. fem. n. *Vitifida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *F1-20-MAGs160*. The type species for the genus is *Candidatus* Vitifida coticilenta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA8139*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Recocellaceae.

Description of *Candidatus* Vitifida decenedo sp. nov.

Candidatus Vitifida decenedo (NL. fem. n. *decenedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *F1-20-MAGs160 sp903827085*. The type genome for the species is the GenBank assembly GCA_903827085.1. The GC content of the type genome is 58.39 % and the genome length is 2.06 Mbp.

Description of *Candidatus* Vitifida dilacatica sp. nov.

Candidatus Vitifida dilacatica (NL. fem. n. *dilacatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *F1-20-MAGs160 sp009699125*. The type genome for the species is the GenBank assembly GCA_009699125.1. The GC content of the type genome is 58.59 % and the genome length is 1.93 Mbp.

Description of *Candidatus* Vitifida inculedo sp. nov.

Candidatus Vitifida inculedo (NL. fem. n. *inculedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *F1-20-MAGs160 sp903867185*. The type genome for the species is the GenBank assembly GCA_903867185.1. The GC content of the type genome is 57.56 % and the genome length is 2.57 Mbp.

Description of *Candidatus* Vitifida lenimilega sp. nov.

Candidatus Vitifida lenimilega (NL. fem. n. *lenimilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *F1-20-MAGs160 sp009703275*. The type genome for the species is the GenBank assembly GCA_009702555.1. The GC content of the type genome is 58.14 % and the genome length is 1.91 Mbp.

Description of *Candidatus* Vitifida pavicetta sp. nov.

Candidatus Vitifida pavicetta (NL. fem. n. *pavicetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *F1-20-MAGs160 sp009700115*. The type genome for the species is the GenBank assembly GCA_009706085.1. The GC content of the type genome is 57.57 % and the genome length is 2.22 Mbp.

Description of *Candidatus* Vitifida rubicastra sp. nov.

Candidatus Vitifida rubicastra (NL. fem. n. *rubicastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *F1-20-MAGs160 sp005787345*. The type genome for the species is the GenBank assembly GCA_005787345.1. The GC content of the type genome is 57.62 % and the genome length is 2.29 Mbp.

Description of *Candidatus* Vitifida semivitia sp. nov.

Candidatus Vitifida semivitia (NL. fem. n. *semivitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *F1-20-MAGs160 sp009703925*. The type genome for the species is the GenBank assembly GCA_009703925.1. The GC content of the type genome is 63.74 % and the genome length is 2.53 Mbp.

Description of *Candidatus* Vitifosa aggesax sp. nov.

Candidatus Vitifosa aggesax (NL. fem. n. *aggesax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CSSed10-48 sp007121175*. The type genome for the species is the GenBank assembly GCA_007121175.1. The GC content of the type genome is 70.68 % and the genome length is 2.55 Mbp.

Description of *Candidatus* Vitifosa gen. nov.

Candidatus Vitifosa (NL. fem. n. *Vitifosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CSSed10-48*. The type species for the genus is *Candidatus* Vitifosa aggesax .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Vitifosa defetilega sp. nov.

Candidatus Vitifosa defetilega (NL. fem. n. *defetilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CSSed10-48 sp003556805*. The type genome for the species is the GenBank assembly GCA_003561545.1. The GC content of the type genome is 70.61 % and the genome length is 2.93 Mbp.

Description of *Candidatus* Vitifosa detotitudo sp. nov.

Candidatus Vitifosa detotitudo (NL. fem. n. *detotitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CSSed10-48 sp007130445*. The type genome for the species is the GenBank assembly GCA_007126295.1. The GC content of the type genome is 71.4 % and the genome length is 2.84 Mbp.

Description of *Candidatus* Vitifosa immatitia sp. nov.

Candidatus Vitifosa immatitia (NL. fem. n. *immatitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *CSSed10-48 sp007695125*. The type genome for the species is the GenBank assembly GCA_007695125.1. The GC content of the type genome is 71.21 % and the genome length is 3.68 Mbp.

Description of *Candidatus* Vitifosa nefanitura sp. nov.

Candidatus Vitifosa nefanitura (NL. fem. n. *nefanitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CSSed10-48 sp003567075*. The type genome for the species is the GenBank assembly GCA_003562635.1. The GC content of the type genome is 70.62 % and the genome length is 2.08 Mbp.

Description of *Candidatus* Vitifosa relecugo sp. nov.

Candidatus Vitifosa relecugo (NL. fem. n. *relecugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CSSed10-48 sp007130855*. The type genome for the species is the GenBank assembly GCA_007118245.1. The GC content of the type genome is 70.91 % and the genome length is 3.1 Mbp.

Description of *Candidatus* Vitifosa vivificula sp. nov.

Candidatus Vitifosa vivificula (NL. fem. n. *vivificula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CSSed10-48 sp007122815*. The type genome for the species is the GenBank assembly GCA_007132035.1. The GC content of the type genome is 69.18 % and the genome length is 2.81 Mbp.

Description of *Candidatus* Vitifula linigicula sp. nov.

Candidatus Vitifula linigicula (NL. fem. n. *linigicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1188 sp900318975*. The type genome for the species is the GenBank assembly GCA_902759855.1. The GC content of the type genome is 31.64 % and the genome length is 1.3 Mbp.

Description of *Candidatus* Vitifula gen. nov.

Candidatus Vitifula (NL. fem. n. *Vitifula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1188*. The type species for the genus is *Candidatus* Vitifula linigicula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1188*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vitifulaceae.

Description of *Candidatus* Vitifulaceae fam. nov.

Candidatus Vitifulaceae (NL. fem. n. *Vitifulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA1188.* The type genus for the taxon is *Candidatus* Vitifula .

According to GTDB R06-RS202, this family belongs to the order *Izemoplasmatales*.

Description of *Candidatus* Vitifula monacousia sp. nov.

Candidatus Vitifula monacousia (NL. fem. n. *monacousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1188 sp002310135*. The type genome for the species is the GenBank assembly GCA_002310135.1. The GC content of the type genome is 29.22 % and the genome length is 1.13 Mbp.

Description of *Candidatus* Vitigana colipibra sp. nov.

Candidatus Vitigana colipibra (NL. fem. n. *colipibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABCPE02 sp013333875*. The type genome for the species is the GenBank assembly GCA_013333875.2. The GC content of the type genome is 36.48 % and the genome length is 1.8 Mbp.

Description of *Candidatus* Vitigana gen. nov.

Candidatus Vitigana (NL. fem. n. *Vitigana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JABCPE02*. The type species for the genus is *Candidatus* Vitigana colipibra .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Vitigana medimago sp. nov.

Candidatus Vitigana medimago (NL. fem. n. *medimago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JABCPE02 sp013333255*. The type genome for the species is the GenBank assembly GCA_013333255.2. The GC content of the type genome is 36.92 % and the genome length is 1.88 Mbp.

Description of *Candidatus* Vitigaria semunigena sp. nov.

Candidatus Vitigaria semunigena (NL. fem. n. *semunigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SZUA-545 sp003250175*. The type genome for the species is the GenBank assembly GCA_003250175.1. The GC content of the type genome is 54.49 % and the genome length is 2.06 Mbp.

Description of *Candidatus* Vitigaria gen. nov.

Candidatus Vitigaria (NL. fem. n. *Vitigaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SZUA-545*. The type species for the genus is *Candidatus* Vitigaria semunigena .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SZUA-545*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vitigariaceae.

Description of *Candidatus* Vitigariaceae fam. nov.

Candidatus Vitigariaceae (NL. fem. n. *Vitigariaceae* a name created from the name of the

type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SZUA-545.* The type genus for the taxon is *Candidatus* Vitigaria .

According to GTDB R06-RS202, this family belongs to the order *Campylobacterales*.

Description of *Candidatus* Vitigella cilicetta sp. nov.

Candidatus Vitigella cilicetta (NL. fem. n. *cilicetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA660 sp002299475*. The type genome for the species is the GenBank assembly GCA_002299475.1. The GC content of the type genome is 27.97 % and the genome length is 0.89 Mbp.

Description of *Candidatus* Vitigella gen. nov.

Candidatus Vitigella (NL. fem. n. *Vitigella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA660*. The type species for the genus is *Candidatus* Vitigella cilicetta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA660*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vitigellaceae.

Description of *Candidatus* Vitigellaceae fam. nov.

Candidatus Vitigellaceae (NL. fem. n. *Vitigellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA660.* The type genus for the taxon is *Candidatus* Vitigella .

According to the original version of GTDB R06-RS202, this family belongs to the order *RF39*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Defenosales.

Description of *Candidatus* Vitigella indidifica sp. nov.

Candidatus Vitigella indidifica (NL. fem. n. *indidifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA660 sp002304855*. The type genome for the species is the GenBank assembly GCA_002304855.1. The GC content of the type genome is 29.37 % and the genome length is 0.41 Mbp.

Description of *Candidatus* Vitigia caduressa sp. nov.

Candidatus Vitigia caduressa (NL. fem. n. *caduressa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1383 sp002305415*. The type genome for the species is the GenBank assembly GCA_002305415.1. The GC content of the type genome is 71.25 % and the genome length is 3.06 Mbp.

Description of *Candidatus* Vitigia gen. nov.

Candidatus Vitigia (NL. fem. n. *Vitigia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1383*. The type species for the genus is *Candidatus* Vitigia caduressa .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Vitigia delucimonas sp. nov.

Candidatus Vitigia delucimonas (NL. fem. n. *delucimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1383 sp002304945*. The type genome for the species is the GenBank assembly GCA_002304945.1. The GC content of the type genome is 70.86 % and the genome length is 2.98 Mbp.

Description of *Candidatus* Vitigia venabitoga sp. nov.

Candidatus Vitigia venabitoga (NL. fem. n. *venabitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *UBA1383 sp009930425*. The type genome for the species is the GenBank assembly GCA_009930425.1. The GC content of the type genome is 70.16 % and the genome length is 2.94 Mbp.

Description of *Candidatus* Vitigida duponimonia sp. nov.

Candidatus Vitigida duponimonia (NL. fem. n. *duponimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Verruco-01 sp001604585*. The type genome for the species is the GenBank assembly GCA_001604585.1. The GC content of the type genome is 58.82 % and the genome length is 2.7 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "3 replicate cellulose-degrading anaerobic digesters sampled at day 96 and day 362".

Description of *Candidatus* Vitigida gen. nov.

Candidatus Vitigida (NL. fem. n. *Vitigida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Verruco-01*. The type species for the genus is *Candidatus* Vitigida duponimonia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *Verruco-01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vitigidaceae.

Description of *Candidatus* Vitigidaceae fam. nov.

Candidatus Vitigidaceae (NL. fem. n. *Vitigidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *Verruco-01*. The type genus for the taxon is *Candidatus* Vitigida .

According to GTDB R06-RS202, this family belongs to the order *Opitutales*.

Description of *Candidatus* Vitigida salubigena sp. nov.

Candidatus Vitigida salubigena (NL. fem. n. *salubigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *Verruco-01 sp001604565*. The type genome for the species is the GenBank assembly GCA_001604565.1. The GC content of the type genome is 62.96 % and the genome length is 2.5 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "3 replicate cellulose-degrading anaerobic digesters sampled at day 96 and day 362".

Description of *Candidatus* Vitigosa detenago sp. nov.

Candidatus Vitigosa detenago (NL. fem. n. *detenago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RUG13160 sp902786275*. The type genome for the species is the GenBank assembly GCA_902781785.1. The GC content of the type genome is 26.83 % and the genome length is 0.93 Mbp.

Description of *Candidatus* Vitigosa gen. nov.

Candidatus Vitigosa (NL. fem. n. *Vitigosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RUG13160*. The type species for the genus is *Candidatus* Vitigosa detenago .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA660*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vitigellaceae.

Description of *Candidatus* Vitigula dedigitoga sp. nov.

Candidatus Vitigula dedigitoga (NL. fem. n. *dedigitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *QWOQ01 sp003669585*. The type genome for the species is the GenBank assembly GCA_003669585.1. The GC content of the type genome is 52.46 % and the genome length is 4.27 Mbp.

Description of *Candidatus* Vitigula gen. nov.

Candidatus Vitigula (NL. fem. n. *Vitigula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this genus is *QWOQ01*. The type species for the genus is *Candidatus* Vitigula dedigitoga .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1268*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Subinellaceae.

Description of *Candidatus* Vitiosangium energastra sp. nov.

Candidatus Vitiosangium energastra (NL. fem. n. *energastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Vitiosangium sp003044305*. The type genome for the species is the GenBank assembly RS_GCF_003044305.1. The GC content of the type genome is 68.31 % and the genome length is 14.08 Mbp.

Description of *Candidatus* Vitupana catilousia sp. nov.

Candidatus Vitupana catilousia (NL. fem. n. *catilousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA12053 sp001003855*. The type genome for the species is the GenBank assembly GCA_001003065.1. The GC content of the type genome is 47.12 % and the genome length is 0.92 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "aquifer sediment".

Description of *Candidatus* Vitupana gen. nov.

Candidatus Vitupana (NL. fem. n. *Vitupana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA12053*. The type species for the genus is *Candidatus* Vitupana catilousia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GWC2-37-73*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Camilariaceae.

Description of *Candidatus* Vitupana hegumivita sp. nov.

Candidatus Vitupana hegumivita (NL. fem. n. *hegumivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA12053 sp001001345*. The type genome for the species is the GenBank assembly GCA_003484185.1. The GC content of the type genome is 45.2 % and the genome length is 0.92 Mbp.

Description of *Candidatus* Vituparia acricicula sp. nov.

Candidatus Vituparia acricicula (NL. fem. n. *acricicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Palsa-870 sp003151935*. The type genome for the species is the GenBank assembly GCA_003151935.1. The GC content of the type genome is 65.5 % and the genome length is 2.94 Mbp.

Description of *Candidatus* Vituparia gen. nov.

Candidatus Vituparia (NL. fem. n. *Vituparia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Palsa-870*. The type species for the genus is *Candidatus* Vituparia acricicula .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Vituparia bigaredo sp. nov.

Candidatus Vituparia bigaredo (NL. fem. n. *bigaredo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Palsa-870 sp003169845*. The type genome for the species is the GenBank assembly GCA_003134635.1. The GC content of the type genome is 65.27 % and the genome length is 3.66 Mbp.

Description of *Candidatus* Vituparia offunatio sp. nov.

Candidatus Vituparia offunatio (NL. fem. n. *offunatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *Palsa-870 sp004299235*. The type genome for the species is the GenBank assembly GCA_004299235.1. The GC content of the type genome is 67.19 % and the genome length is 2.87 Mbp.

Description of *Candidatus* Vitupella decupentia sp. nov.

Candidatus Vitupella decupentia (NL. fem. n. *decupentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIWX01 sp903916755*. The type genome for the species is the GenBank assembly GCA_903916755.1. The GC content of the type genome is 67.98 % and the genome length is 3.35 Mbp.

Description of *Candidatus* Vitupella gen. nov.

Candidatus Vitupella (NL. fem. n. *Vitupella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIWX01*. The type species for the genus is *Candidatus* Vitupella decupentia .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Vitupia aneclimonas sp. nov.

Candidatus Vitupia aneclimonas (NL. fem. n. *aneclimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6136 sp002423305*. The type genome for the species is the GenBank assembly GCA_002423305.1. The GC content of the type genome is 57.14 % and the genome length is 2.45 Mbp.

Description of *Candidatus* Vitupia gen. nov.

Candidatus Vitupia (NL. fem. n. *Vitupia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA6136*. The type species for the genus is *Candidatus* Vitupia aneclimonas .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Vitupia nimiritio sp. nov.

Candidatus Vitupia nimiritio (NL. fem. n. *nimiritio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6136 sp009922685*. The type genome for the species is the GenBank assembly GCA_010031535.1. The GC content of the type genome is 53.1 % and the genome length is 2.3 Mbp.

Description of *Candidatus* Vitupia rosaratica sp. nov.

Candidatus Vitupia rosaratica (NL. fem. n. *rosaratica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6136 sp005792805*. The type genome for the species is the GenBank assembly GCA_005792805.1. The GC content of the type genome is 56.93 % and the genome length is 2.03 Mbp.

Description of *Candidatus* Vitupia serotetta sp. nov.

Candidatus Vitupia serotetta (NL. fem. n. *serotetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6136 sp903835265*. The type genome for the species is the GenBank assembly GCA_903835265.1. The GC content of the type genome is 53.69 % and the genome length is 2.45 Mbp.

Description of *Candidatus* Vitupia timefibula sp. nov.

Candidatus Vitupia timefibula (NL. fem. n. *timefibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6136 sp007280285*. The type genome for the species is the GenBank assembly GCA_007280285.1. The GC content of the type genome is 54.02 % and the genome length is 2.22 Mbp.

Description of *Candidatus* Vitupida ranunousia sp. nov.

Candidatus Vitupida ranunousia (NL. fem. n. *ranunousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Ch104c sp013426185*. The type genome for the species is the GenBank assembly GCA_013426185.1. The GC content of the type genome is 37.12 % and the genome length is 0.82 Mbp.

Description of *Candidatus* Vitupida gen. nov.

Candidatus Vitupida (NL. fem. n. *Vitupida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Ch104c*. The type species for the genus is *Candidatus* Vitupida ranunousia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA8517*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Xenoposaceae.

Description of *Candidatus* Vitupida refinibra sp. nov.

Candidatus Vitupida refinibra (NL. fem. n. *refinibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Ch104c sp013374855*. The type genome for the species is the GenBank assembly GCA_013374855.1. The GC content of the type genome is 36.23 % and the genome length is 0.8 Mbp.

Description of *Candidatus* Vituposa coturisca sp. nov.

Candidatus Vituposa coturisca (NL. fem. n. *coturisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Ch115 sp013178415*. The type genome for the species is the GenBank assembly GCA_012842525.1. The GC content of the type genome is 51.41 % and the genome length is 2.42 Mbp.

Description of *Candidatus* Vituposa gen. nov.

Candidatus Vituposa (NL. fem. n. *Vituposa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Ch115*. The type species for the genus is *Candidatus* Vituposa coturisca .

According to the original version of GTDB R06-RS202, this genus belongs to the family *Ch115*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vituposaceae.

Description of *Candidatus* Vituposaceae fam. nov.

Candidatus Vituposaceae (NL. fem. n. *Vituposaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *Ch115.* The type genus for the taxon is *Candidatus* Vituposa .

According to the original version of GTDB R06-RS202, this family belongs to the order *Ch115*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Vituposales.

Description of *Candidatus* Vituposales ord. nov.

Candidatus Vituposales (NL. fem. n. *Vituposales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *Ch115.* The type genus for the taxon is *Candidatus* Vituposa .

According to the original version of GTDB R06-RS202, this family belongs to the class *SHA-98*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Taxilidae.

Description of *Candidatus* Vitupula decinifica sp. nov.

Candidatus Vitupula decinifica (NL. fem. n. *decinifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2731375 sp002731375*. The type genome for the species is the GenBank assembly GCA_002500465.1. The GC content of the type genome is 58.92 % and the genome length is 4.35 Mbp.

Description of *Candidatus* Vitupula gen. nov.

Candidatus Vitupula (NL. fem. n. *Vitupula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2731375*. The type species for the genus is *Candidatus* Vitupula decinifica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *GCA-2731375*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vitupulaceae.

Description of *Candidatus* Vitupulaceae fam. nov.

Candidatus Vitupulaceae (NL. fem. n. *Vitupulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *GCA-2731375.* The type genus for the taxon is *Candidatus* Vitupula .

According to the original version of GTDB R06-RS202, this family belongs to the order *GCA-2731375*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Vitupulales.

Description of *Candidatus* Vitupulales ord. nov.

Candidatus Vitupulales (NL. fem. n. *Vitupulales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *GCA-2731375.* The type genus for the taxon is *Candidatus* Vitupula .

According to the GTDB R06-RS202, this order belongs to the class *Alphaproteobacteria*.

Description of *Candidatus* Vivifana defarisca sp. nov.

Candidatus Vivifana defarisca (NL. fem. n. *defarisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3571 sp002011425*. The type genome for the species is the GenBank assembly GCA_002011425.1. The GC content of the type genome is 61.22 % and the genome length is 1.89 Mbp.

Description of *Candidatus* Vivifana gen. nov.

Candidatus Vivifana (NL. fem. n. *Vivifana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA3571*. The type species for the genus is *Candidatus* Vivifana defarisca .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Vivifana inobsigena sp. nov.

Candidatus Vivifana inobsigena (NL. fem. n. *inobsigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3571 sp013151115*. The type genome for the species is the GenBank assembly GCA_013151115.1. The GC content of the type genome is 67.76 % and the genome length is 1.13 Mbp.

Description of *Candidatus* Vivifana irremitoga sp. nov.

Candidatus Vivifana irremitoga (NL. fem. n. *irremitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3571 sp002010365*. The type genome for the species is the GenBank assembly GCA_002010365.1. The GC content of the type genome is 61.9 % and the genome length is 1.29 Mbp.

Description of *Candidatus* Vivifana paralatio sp. nov.

Candidatus Vivifana paralatio (NL. fem. n. *paralatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3571 sp002375995*. The type genome for the species is the GenBank assembly GCA_002375995.1. The GC content of the type genome is 62.81 % and the genome length is 1.84 Mbp.

Description of *Candidatus* Vivifaria bisacimonas sp. nov.

Candidatus Vivifaria bisacimonas (NL. fem. n. *bisacimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DRUE01 sp011388515*. The type genome for the species is the

GenBank assembly GCA_011388515.1. The GC content of the type genome is 43.06 % and the genome length is 2.49 Mbp.

Description of *Candidatus* Vivifaria gen. nov.

Candidatus Vivifaria (NL. fem. n. *Vivifaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DRUE01*. The type species for the genus is *Candidatus* Vivifaria bisacimonas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DRUE01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vivifariaceae.

Description of *Candidatus* Vivifariaceae fam. nov.

Candidatus Vivifariaceae (NL. fem. n. *Vivifariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *DRUE01*. The type genus for the taxon is *Candidatus* Vivifaria .

According to the original version of GTDB R06-RS202, this family belongs to the order *RBG-13-61-14*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Volubiales.

Description of *Candidatus* Vivifella intacastra sp. nov.

Candidatus Vivifella intacastra (NL. fem. n. *intacastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5884 sp900551505*. The type genome for the species is the GenBank assembly GCA_900551505.1. The GC content of the type genome is 40.32 % and the genome length is 1.57 Mbp.

Description of *Candidatus* Vivifella gen. nov.

Candidatus Vivifella (NL. fem. n. *Vivifella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA5884*. The type species for the genus is *Candidatus* Vivifella intacastra .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Vivifella milipedo sp. nov.

Candidatus Vivifella milipedo (NL. fem. n. *milipedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5884 sp002431975*. The type genome for the species is the GenBank assembly GCA_003503815.1. The GC content of the type genome is 37.5 % and the genome length is 1.83 Mbp.

Description of *Candidatus* Vivifida homagilenta sp. nov.

Candidatus Vivifida homagilenta (NL. fem. n. *homagilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9942 sp003489165*. The type genome for the species is the GenBank assembly GCA_003489165.1. The GC content of the type genome is 38.89 % and the genome length is 2.03 Mbp.

Description of *Candidatus* Vivifida gen. nov.

Candidatus Vivifida (NL. fem. n. *Vivifida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA9942*. The type species for the genus is *Candidatus* Vivifida homagilenta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA9942*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vivifidaceae.

Description of *Candidatus* Vivifidaceae fam. nov.

Candidatus Vivifidaceae (NL. fem. n. *Vivifidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA9942.* The type genus for the taxon is *Candidatus* Vivifida .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA9942*. According to the renamed version of GTDB R06-RS202, this taxon belongs to

the order *Candidatus* Vivifidales.

Description of *Candidatus* Vivifidales ord. nov.

Candidatus Vivifidales (NL. fem. n. *Vivifidales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA9942.* The type genus for the taxon is *Candidatus* Vivifida .

According to the original version of GTDB R06-RS202, this family belongs to the class *UBA9942*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Vivifidae.

Description of *Candidatus* Vivifidae class. nov.

Candidatus Vivifidae (NL. fem. n. *c__Vivifidae* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA9942.* The type genus for the taxon is *Candidatus* Vivifida .

According to GTDB R06-RS202, this class belongs to the phylum *Nitrospinota*.

Description of *Candidatus* Vivifida nubifica sp. nov.

Candidatus Vivifida nubifica (NL. fem. n. *nubifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9942 sp001805005*. The type genome for the species is the GenBank assembly GCA_001805005.1. The GC content of the type genome is 38.8 % and the genome length is 1.88 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well FP-101 under low O2 conditions; 1.2 micron filter; 10% subassembly".

Description of *Candidatus* Vivifosa vicecisca sp. nov.

Candidatus Vivifosa vicecisca (NL. fem. n. *vicecisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PP17-6a sp900095615*. The type genome for the species is the GenBank assembly RS_GCF_900183705.1. The GC content of the type genome is 33.43

% and the genome length is 3.32 Mbp.

Description of *Candidatus* Vivifosa gen. nov.

Candidatus Vivifosa (NL. fem. n. *Vivifosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PP17-6a*. The type species for the genus is *Candidatus* Vivifosa vicecisca .

According to the original version of GTDB R06-RS202, this genus belongs to the family *PP17-6a*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vivifosaceae.

Description of *Candidatus* Vivifosaceae fam. nov.

Candidatus Vivifosaceae (NL. fem. n. *Vivifosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *PP17-6a.* The type genus for the taxon is *Candidatus* Vivifosa .

According to GTDB R06-RS202, this family belongs to the order *Tissierellales*.

Description of *Candidatus* Vivifula vigenibula sp. nov.

Candidatus Vivifula vigenibula (NL. fem. n. *vigenibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIVSY01 sp903908715*. The type genome for the species is the GenBank assembly GCA_903858955.1. The GC content of the type genome is 60.2 % and the genome length is 3.29 Mbp.

Description of *Candidatus* Vivifula gen. nov.

Candidatus Vivifula (NL. fem. n. *Vivifula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIVSY01*. The type species for the genus is *Candidatus* Vivifula vigenibula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAITUY01*. According to the renamed version of GTDB R06-RS202, this taxon belongs

to the family *Candidatus* Dupunosaceae.

Description of *Candidatus* Vocamana incomitio sp. nov.

Candidatus Vocamana incomitio (NL. fem. n. *incomitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *QHYA01 sp003223995*. The type genome for the species is the GenBank assembly GCA_003223995.1. The GC content of the type genome is 65.87 % and the genome length is 2.89 Mbp.

Description of *Candidatus* Vocamana gen. nov.

Candidatus Vocamana (NL. fem. n. *Vocamana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *QHYA01*. The type species for the genus is *Candidatus* Vocamana incomitio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *QHYA01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vocamanaceae.

Description of *Candidatus* Vocamanaceae fam. nov.

Candidatus Vocamanaceae (NL. fem. n. *Vocamanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *QHYA01.* The type genus for the taxon is *Candidatus* Vocamana .

According to the original version of GTDB R06-RS202, this family belongs to the order *QHYA01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Vocamanales.

Description of *Candidatus* Vocamanales ord. nov.

Candidatus Vocamanales (NL. fem. n. *Vocamanales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *QHYA01.* The type genus for the taxon is *Candidatus* Vocamana .

According to the original version of GTDB R06-RS202, this family belongs to the class

Mor1. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Ceracosae.

Description of *Candidatus* Vocamaria monodifica sp. nov.

Candidatus Vocamaria monodifica (NL. fem. n. *monodifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-002784865 sp002788395*. The type genome for the species is the GenBank assembly GCA_002784865.1. The GC content of the type genome is 34.98 % and the genome length is 0.93 Mbp.

Description of *Candidatus* Vocamaria gen. nov.

Candidatus Vocamaria (NL. fem. n. *Vocamaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-002784865*. The type species for the genus is *Candidatus* Vocamaria monodifica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA12049*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Catecariaceae.

Description of *Candidatus* Vocamella furibitoga sp. nov.

Candidatus Vocamella furibitoga (NL. fem. n. *furibitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CF-163 sp005880075*. The type genome for the species is the GenBank assembly GCA_005880075.1. The GC content of the type genome is 62.5 % and the genome length is 2.61 Mbp.

Description of *Candidatus* Vocamella gen. nov.

Candidatus Vocamella (NL. fem. n. *Vocamella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CF-163*. The type species for the genus is *Candidatus* Vocamella furibitoga .

According to the original version of GTDB R06-RS202, this genus belongs to the family *RBG-16-64-32*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Dedigellaceae.

Description of *Candidatus* Vocamella recumitica sp. nov.

Candidatus Vocamella recumitica (NL. fem. n. *recumitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CF-163 sp005882985*. The type genome for the species is the GenBank assembly GCA_005889375.1. The GC content of the type genome is 62.83 % and the genome length is 2.58 Mbp.

Description of *Candidatus* Vocamella vehicugo sp. nov.

Candidatus Vocamella vehicugo (NL. fem. n. *vehicugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CF-163 sp005882715*. The type genome for the species is the GenBank assembly GCA_005882195.1. The GC content of the type genome is 62.81 % and the genome length is 2.52 Mbp.

Description of *Candidatus* Vocamia patibilenta sp. nov.

Candidatus Vocamia patibilenta (NL. fem. n. *patibilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Bog-375 sp003164035*. The type genome for the species is the GenBank assembly GCA_003164035.1. The GC content of the type genome is 62.84 % and the genome length is 8.01 Mbp.

Description of *Candidatus* Vocamia gen. nov.

Candidatus Vocamia (NL. fem. n. *Vocamia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Bog-375*. The type species for the genus is *Candidatus* Vocamia patibilenta .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Vocamia recoratica sp. nov.

Candidatus Vocamia recoratica (NL. fem. n. *recoratica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Bog-375 sp003157745*. The type genome for the species is the GenBank assembly GCA_003157745.1. The GC content of the type genome is 63.26 % and the genome length is 5.82 Mbp.

Description of *Candidatus* Vocamia viburitio sp. nov.

Candidatus Vocamia viburitio (NL. fem. n. *viburitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Bog-375 sp003142185*. The type genome for the species is the GenBank assembly GCA_003167885.1. The GC content of the type genome is 62.4 % and the genome length is 5.65 Mbp.

Description of *Candidatus* Vocamida catocifica sp. nov.

Candidatus Vocamida catocifica (NL. fem. n. *catocifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *GCA-2719775 sp002719775*. The type genome for the species is the GenBank assembly GCA_002719775.1. The GC content of the type genome is 41.54 % and the genome length is 1.28 Mbp.

Description of *Candidatus* Vocamida gen. nov.

Candidatus Vocamida (NL. fem. n. *Vocamida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *GCA-2719775*. The type species for the genus is *Candidatus* Vocamida catocifica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2963*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Nimirellaceae.

Description of *Candidatus* Vocamosa adrementia sp. nov.

Candidatus Vocamosa adrementia (NL. fem. n. *adrementia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACMMQ01 sp014378955*. The type genome for the species is the GenBank assembly GCA_014378955.1. The GC content of the type genome is 41.93 % and the genome length is 1.53 Mbp.

Description of *Candidatus* Vocamosa gen. nov.

Candidatus Vocamosa (NL. fem. n. *Vocamosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACMMQ01*. The type species for the genus is *Candidatus* Vocamosa adrementia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JACMMQ01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vocamosaceae.

Description of *Candidatus* Vocamosaceae fam. nov.

Candidatus Vocamosaceae (NL. fem. n. *Vocamosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JACMMQ01*. The type genus for the taxon is *Candidatus* Vocamosa .

According to the original version of GTDB R06-RS202, this family belongs to the order *SK-Y3*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Legifanales.

Description of *Candidatus* Vocamula arillentia sp. nov.

Candidatus Vocamula arillentia (NL. fem. n. *arillentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYUY01 sp012517435*. The type genome for the species is the GenBank assembly GCA_012517435.1. The GC content of the type genome is 39.27 % and the genome length is 3.19 Mbp.

Description of *Candidatus* Vocamula gen. nov.

Candidatus Vocamula (NL. fem. n. *Vocamula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAYUY01*. The type species for the genus is *Candidatus* Vocamula arillentia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JAAYUY01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vocamulaceae.

Description of *Candidatus* Vocamulaceae fam. nov.

Candidatus Vocamulaceae (NL. fem. n. *Vocamulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JAAYUY01*. The type genus for the taxon is *Candidatus* Vocamula .

According to the original version of GTDB R06-RS202, this family belongs to the order *CAILMK01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Dicimosales.

Description of *Candidatus* Vocifana bicodibula sp. nov.

Candidatus Vocifana bicodibula (NL. fem. n. *bicodibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *XYA2-FULL-43-15 sp001784815*. The type genome for the species is the GenBank assembly GCA_001784815.1. The GC content of the type genome is 43.55 % and the genome length is 0.76 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at 16ft depth; 1.2 micron filter at time point A".

Description of *Candidatus* Vocifana gen. nov.

Candidatus Vocifana (NL. fem. n. *Vocifana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *XYA2-FULL-43-15*. The type species for the genus is *Candidatus* Vocifana bicodibula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2206*. According to the renamed version of GTDB R06-RS202, this taxon belongs to

the family *Candidatus* Colimulaceae.

Description of *Candidatus* Vocifaria diritivita sp. nov.

Candidatus Vocifaria diritivita (NL. fem. n. *diritivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3913 sp002391425*. The type genome for the species is the GenBank assembly GCA_002391425.1. The GC content of the type genome is 64.87 % and the genome length is 1.61 Mbp.

Description of *Candidatus* Vocifaria gen. nov.

Candidatus Vocifaria (NL. fem. n. *Vocifaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA3913*. The type species for the genus is *Candidatus* Vocifaria diritivita .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Vocifella triscitrix sp. nov.

Candidatus Vocifella triscitrix (NL. fem. n. *triscitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *2013-40CM-41-45 sp002215675*. The type genome for the species is the GenBank assembly GCA_002215675.1. The GC content of the type genome is 41.3 % and the genome length is 3.38 Mbp.

Description of *Candidatus* Vocifella gen. nov.

Candidatus Vocifella (NL. fem. n. *Vocifella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *2013-40CM-41-45*. The type species for the genus is *Candidatus* Vocifella triscitrix .

According to the original version of GTDB R06-RS202, this genus belongs to the family *2013-40CM-41-45*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vocifellaceae.

Description of *Candidatus* Vocifellaceae fam. nov.

Candidatus Vocifellaceae (NL. fem. n. *Vocifellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *2013-40CM-41-45.* The type genus for the taxon is *Candidatus* Vocifella .

According to the original version of GTDB R06-RS202, this family belongs to the order *AKYH767-A*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Lenunanales.

Description of *Candidatus* Vocifia baditessa sp. nov.

Candidatus Vocifia baditessa (NL. fem. n. *baditessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SLLW01 sp007133875*. The type genome for the species is the GenBank assembly GCA_003554765.1. The GC content of the type genome is 49.24 % and the genome length is 3.45 Mbp.

Description of *Candidatus* Vocifia gen. nov.

Candidatus Vocifia (NL. fem. n. *Vocifia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SLLW01*. The type species for the genus is *Candidatus* Vocifia baditessa .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SKNL01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Dehinulaceae.

Description of *Candidatus* Vocifia exindax sp. nov.

Candidatus Vocifia exindax (NL. fem. n. *exindax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SLLW01 sp007132495*. The type genome for the species is the GenBank assembly GCA_007132495.1. The GC content of the type genome is 50.58 % and the genome length is 3.37 Mbp.

Description of *Candidatus* Vocifida refulitoga sp. nov.

Candidatus Vocifida refulitoga (NL. fem. n. *refulitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *BJGZ01 sp014191195*. The type genome for the species is the GenBank assembly GCA_014191195.1. The GC content of the type genome is 33.04 % and the genome length is 2.41 Mbp.

Description of *Candidatus* Vocifida gen. nov.

Candidatus Vocifida (NL. fem. n. *Vocifida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *BJGZ01*. The type species for the genus is *Candidatus* Vocifida refulitoga .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA961*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Citipellaceae.

Description of *Candidatus* Vocifula agratimonia sp. nov.

Candidatus Vocifula agratimonia (NL. fem. n. *agratimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAABRE01 sp011391125*. The type genome for the species is the GenBank assembly GCA_011391125.1. The GC content of the type genome is 35.65 % and the genome length is 4.81 Mbp.

Description of *Candidatus* Vocifula gen. nov.

Candidatus Vocifula (NL. fem. n. *Vocifula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAABRE01*. The type species for the genus is *Candidatus* Vocifula agratimonia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JAABRE01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vocifulaceae.

Description of *Candidatus* Vocifulaceae fam. nov.

Candidatus Vocifulaceae (NL. fem. n. *Vocifulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JAABRE01.* The type genus for the taxon is *Candidatus* Vocifula .

According to GTDB R06-RS202, this family belongs to the order *Cyanobacteriales*.

Description of *Candidatus* Vogesella aneclicula sp. nov.

Candidatus Vogesella aneclicula (NL. fem. n. *aneclicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Vogesella sp900090205*. The type genome for the species is the GenBank assembly RS_GCF_900090205.1. The GC content of the type genome is 63.88 % and the genome length is 4.15 Mbp.

Description of *Candidatus* Vogesella ornitivita sp. nov.

Candidatus Vogesella ornitivita (NL. fem. n. *ornitivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Vogesella sp000335715*. The type genome for the species is the GenBank assembly RS_GCF_000335715.1. The GC content of the type genome is 61.34 % and the genome length is 3.77 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Little Long Lake".

Description of *Candidatus* Volubana decamitoga sp. nov.

Candidatus Volubana decamitoga (NL. fem. n. *decamitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5448 sp002427425*. The type genome for the species is the GenBank assembly GCA_002397605.1. The GC content of the type genome is 45.93 % and the genome length is 1.98 Mbp.

Description of *Candidatus* Volubana gen. nov.

Candidatus Volubana (NL. fem. n. *Volubana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA5448*. The type species for the genus is *Candidatus* Volubana decamitoga .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-382_A*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Regiganaceae.

Description of *Candidatus* Volubaria scammitudo sp. nov.

Candidatus Volubaria scammitudo (NL. fem. n. *scammitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *REEL01 sp007695095*. The type genome for the species is the GenBank assembly GCA_007695095.1. The GC content of the type genome is 35.42 % and the genome length is 3.49 Mbp.

Description of *Candidatus* Volubaria gen. nov.

Candidatus Volubaria (NL. fem. n. *Volubaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *REEL01*. The type species for the genus is *Candidatus* Volubaria scammitudo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *REEL01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Volubariaceae.

Description of *Candidatus* Volubariaceae fam. nov.

Candidatus Volubariaceae (NL. fem. n. *Volubariaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *REEL01*. The type genus for the taxon is *Candidatus* Volubaria .

According to GTDB R06-RS202, this family belongs to the order *Chitinophagales*.

Description of *Candidatus* Volubella telegentia sp. nov.

Candidatus Volubella telegentia (NL. fem. n. *telegentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *WRKU01 sp009777935*. The type genome for the species is the GenBank assembly GCA_009777935.1. The GC content of the type genome is 55.69 % and the genome length is 1.11 Mbp.

Description of *Candidatus* Volubella gen. nov.

Candidatus Volubella (NL. fem. n. *Volubella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *WRKU01*. The type species for the genus is *Candidatus* Volubella telegentia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *WRKU01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Volubellaceae.

Description of *Candidatus* Volubellaceae fam. nov.

Candidatus Volubellaceae (NL. fem. n. *Volubellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *WRKU01.* The type genus for the taxon is *Candidatus* Volubella .

According to the original version of GTDB R06-RS202, this family belongs to the order *WRKU01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Volubellales.

Description of *Candidatus* Volubellales ord. nov.

Candidatus Volubellales (NL. fem. n. *Volubellales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *WRKU01.* The type genus for the taxon is *Candidatus* Volubella .

According to the GTDB R06-RS202, this order belongs to the class *Coriobacteriia*.

Description of *Candidatus* Volubia colimentia sp. nov.

Candidatus Volubia colimentia (NL. fem. n. *colimentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RBG-13-61-14 sp001797815*. The type genome for the species is the GenBank assembly GCA_001797815.1. The GC content of the type genome is 61.15 % and the genome length is 4.74 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle background sediment; well D04 at 13ft depth".

Description of *Candidatus* Volubia gen. nov.

Candidatus Volubia (NL. fem. n. *Volubia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RBG-13-61-14*. The type species for the genus is *Candidatus* Volubia colimentia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *RBG-13-61-14*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Volubiaceae.

Description of *Candidatus* Volubiaceae fam. nov.

Candidatus Volubiaceae (NL. fem. n. *Volubiaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *RBG-13-61-14.* The type genus for the taxon is *Candidatus* Volubia .

According to the original version of GTDB R06-RS202, this family belongs to the order *RBG-13-61-14*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Volubiales.

Description of *Candidatus* Volubiales ord. nov.

Candidatus Volubiales (NL. fem. n. *Volubiales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *RBG-13-61-14.* The type genus for the taxon is *Candidatus* Volubia .

According to the original version of GTDB R06-RS202, this family belongs to the class *RBG-13-61-14*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Volubiae.

Description of *Candidatus* Volubiae class. nov.

Candidatus Volubiae (NL. fem. n. *c__Volubiae* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *RBG-13-61-14.* The type genus for the taxon is *Candidatus* Volubia .

According to the original version of GTDB R06-RS202, this family belongs to the phylum *RBG-13-61-14*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the phylum *Candidatus* Volubiota.

Description of *Candidatus* Volubiota phyl. nov.

Candidatus Volubiota (NL. fem. n. *Volubiota* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *RBG-13-61-14.* The type genus for the taxon is *Candidatus* Volubia .

According to GTDB R06-RS202, this phylum belongs to the domain *Bacteria* .

Description of *Candidatus* Volubida holisitrix sp. nov.

Candidatus Volubida holisitrix (NL. fem. n. *holisitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS966 sp900547185*. The type genome for the species is the GenBank assembly RS_GCF_900762305.1. The GC content of the type genome is 57.54 % and the genome length is 1.74 Mbp.

Description of *Candidatus* Volubida gen. nov.

Candidatus Volubida (NL. fem. n. *Volubida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UMGS966*. The type species for the genus is *Candidatus* Volubida holisitrix .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Volubida valefitudo sp. nov.

Candidatus Volubida valefitudo (NL. fem. n. *valefitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS966 sp900761965*. The type genome for the species is the GenBank assembly RS_GCF_900761965.1. The GC content of the type genome is 57.97 % and the genome length is 1.7 Mbp.

Description of *Candidatus* Volubula aprugivita sp. nov.

Candidatus Volubula aprugivita (NL. fem. n. *aprugivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *HT1-32 sp009649675*. The type genome for the species is the GenBank assembly RS_GCF_009649675.1. The GC content of the type genome is 57.6 % and the genome length is 4.42 Mbp.

Description of *Candidatus* Volubula gen. nov.

Candidatus Volubula (NL. fem. n. *Volubula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *HT1-32*. The type species for the genus is *Candidatus* Volubula aprugivita .

According to the original version of GTDB R06-RS202, this genus belongs to the family *HT1-32*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Volubulaceae.

Description of *Candidatus* Volubulaceae fam. nov.

Candidatus Volubulaceae (NL. fem. n. *Volubulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *HT1-32.* The type genus for the taxon is *Candidatus* Volubula .

According to GTDB R06-RS202, this family belongs to the order *Rhodospirillales*.

Description of *Candidatus* Volucana excorousia sp. nov.

Candidatus Volucana excorousia (NL. fem. n. *excorousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *SZUA-6 sp013151965*. The type genome for the species is the GenBank assembly GCA_013151965.1. The GC content of the type genome is 41.74 % and the genome length is 3.61 Mbp.

Description of *Candidatus* Volucana gen. nov.

Candidatus Volucana (NL. fem. n. *Volucana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SZUA-6*. The type species for the genus is *Candidatus* Volucana excorousia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SZUA-6*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Volucanaceae.

Description of *Candidatus* Volucanaceae fam. nov.

Candidatus Volucanaceae (NL. fem. n. *Volucanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SZUA-6.* The type genus for the taxon is *Candidatus* Volucana .

According to the original version of GTDB R06-RS202, this family belongs to the order *SZUA-6*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Volucanales.

Description of *Candidatus* Volucanales ord. nov.

Candidatus Volucanales (NL. fem. n. *Volucanales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SZUA-6.* The type genus for the taxon is *Candidatus* Volucana .

According to the GTDB R06-RS202, this order belongs to the class *Spirochaetia*.

Description of *Candidatus* Volucana infaticula sp. nov.

Candidatus Volucana infaticula (NL. fem. n. *infaticula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SZUA-6 sp003641675*. The type genome for the species is the

GenBank assembly GCA_003641675.1. The GC content of the type genome is 39.92 % and the genome length is 2.59 Mbp.

Description of *Candidatus* Volucana maxilitura sp. nov.

Candidatus Volucana maxilitura (NL. fem. n. *maxilitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SZUA-6 sp003233545*. The type genome for the species is the GenBank assembly GCA_003233545.1. The GC content of the type genome is 41.44 % and the genome length is 2.98 Mbp.

Description of *Candidatus* Volucaria domicago sp. nov.

Candidatus Volucaria domicago (NL. fem. n. *domicago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Marseille-P4683 sp900232885*. The type genome for the species is the GenBank assembly RS_GCF_900067065.1. The GC content of the type genome is 50.21 % and the genome length is 2.49 Mbp.

Description of *Candidatus* Volucaria gen. nov.

Candidatus Volucaria (NL. fem. n. *Volucaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Marseille-P4683*. The type species for the genus is *Candidatus* Volucaria domicago .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Volucia artolitio sp. nov.

Candidatus Volucia artolitio (NL. fem. n. *artolitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *4572-123 sp002084545*. The type genome for the species is the GenBank assembly GCA_002084545.1. The GC content of the type genome is 47.51 % and the genome length is 3.18 Mbp.

Description of *Candidatus* Volucia gen. nov.

Candidatus Volucia (NL. fem. n. *Volucia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *4572-123*. The type species for the genus is *Candidatus* Volucia artolitio .

According to the original version of GTDB R06-RS202, this genus belongs to the family *4572-123*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Voluciaceae.

Description of *Candidatus* Voluciaceae fam. nov.

Candidatus Voluciaceae (NL. fem. n. *Voluciaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *4572-123.* The type genus for the taxon is *Candidatus* Volucia .

According to GTDB R06-RS202, this family belongs to the order *Desulfobacterales*.

Description of *Candidatus* Volucida bonitifica sp. nov.

Candidatus Volucida bonitifica (NL. fem. n. *bonitifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Gp1-AA145 sp003224755*. The type genome for the species is the GenBank assembly GCA_003224755.1. The GC content of the type genome is 55.35 % and the genome length is 5.68 Mbp.

Description of *Candidatus* Volucida gen. nov.

Candidatus Volucida (NL. fem. n. *Volucida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Gp1-AA145*. The type species for the genus is *Candidatus* Volucida bonitifica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Volucida cimelivita sp. nov.

Candidatus Volucida cimelivita (NL. fem. n. *cimelivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Gp1-AA145 sp003224785*. The type genome for the species is the GenBank assembly GCA_003224785.1. The GC content of the type genome is 55.26 % and the genome length is 2.61 Mbp.

Description of *Candidatus* Volucida denuniforma sp. nov.

Candidatus Volucida denuniforma (NL. fem. n. *denuniforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Gp1-AA145 sp003224835*. The type genome for the species is the GenBank assembly GCA_003224835.1. The GC content of the type genome is 54.38 % and the genome length is 3.66 Mbp.

Description of *Candidatus* Volucida intemitica sp. nov.

Candidatus Volucida intemitica (NL. fem. n. *intemitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Gp1-AA145 sp003224815*. The type genome for the species is the GenBank assembly GCA_003224815.1. The GC content of the type genome is 55.22 % and the genome length is 4.55 Mbp.

Description of *Candidatus* Volucosa novilicella sp. nov.

Candidatus Volucosa novilicella (NL. fem. n. *novilicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA9217 sp003454665*. The type genome for the species is the GenBank assembly GCA_003454665.1. The GC content of the type genome is 54.65 % and the genome length is 3.01 Mbp.

Description of *Candidatus* Volucosa gen. nov.

Candidatus Volucosa (NL. fem. n. *Volucosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA9217*. The type species for the genus is *Candidatus* Volucosa novilicella .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA9217*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Volucosaceae.

Description of *Candidatus* Volucosaceae fam. nov.

Candidatus Volucosaceae (NL. fem. n. *Volucosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA9217*. The type genus for the taxon is *Candidatus* Volucosa .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA9217*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Volucosales.

Description of *Candidatus* Volucosales ord. nov.

Candidatus Volucosales (NL. fem. n. *Volucosales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA9217*. The type genus for the taxon is *Candidatus* Volucosa .

According to the original version of GTDB R06-RS202, this family belongs to the class *UBA9217*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Volucosae.

Description of *Candidatus* Volucosae class. nov.

Candidatus Volucosae (NL. fem. n. *c__Volucosae* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA9217*. The type genus for the taxon is *Candidatus* Volucosa .

According to GTDB R06-RS202, this class belongs to the phylum *Nitrospirota*.

Description of *Candidatus* Volucula vicatiforma sp. nov.

Candidatus Volucula vicatiforma (NL. fem. n. *vicatiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PWNZ01 sp003564135*. The type genome for the species is the GenBank assembly GCA_003564135.1. The GC content of the type genome is 40.36 % and the genome length is 2.87 Mbp.

Description of *Candidatus* Volucula gen. nov.

Candidatus Volucula (NL. fem. n. *Volucula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PWNZ01*. The type species for the genus is *Candidatus* Volucula vicatiforma .

According to the original version of GTDB R06-RS202, this genus belongs to the family *PWNZ01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Voluculaceae.

Description of *Candidatus* Voluculaceae fam. nov.

Candidatus Voluculaceae (NL. fem. n. *Voluculaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *PWNZ01.* The type genus for the taxon is *Candidatus* Volucula .

According to GTDB R06-RS202, this family belongs to the order *Cloacimonadales*.

Description of *Candidatus* Volunana curotitudo sp. nov.

Candidatus Volunana curotitudo (NL. fem. n. *curotitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-245 sp900552135*. The type genome for the species is the GenBank assembly GCA_900552135.1. The GC content of the type genome is 29.83 % and the genome length is 1.47 Mbp.

Description of *Candidatus* Volunana gen. nov.

Candidatus Volunana (NL. fem. n. *Volunana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAG-245*. The type species for the genus is *Candidatus* Volunana

curotitudo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-508*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Fidenidaceae.

Description of *Candidatus* Volunana istinatio sp. nov.

Candidatus Volunana istinatio (NL. fem. n. *istinatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-245 sp900761475*. The type genome for the species is the GenBank assembly RS_GCF_900761475.1. The GC content of the type genome is 30.03 % and the genome length is 1.49 Mbp.

Description of *Candidatus* Volunana recumilega sp. nov.

Candidatus Volunana recumilega (NL. fem. n. *recumilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-245 sp000435175*. The type genome for the species is the GenBank assembly GCA_003150745.1. The GC content of the type genome is 32.4 % and the genome length is 2.63 Mbp.

Description of *Candidatus* Volunana sugilitura sp. nov.

Candidatus Volunana sugilitura (NL. fem. n. *sugilitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-245 sp000434195*. The type genome for the species is the GenBank assembly GCA_900553275.1. The GC content of the type genome is 29.92 % and the genome length is 1.26 Mbp.

Description of *Candidatus* Volunana vinolax sp. nov.

Candidatus Volunana vinolax (NL. fem. n. *vinolax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-245 sp900758165*. The type genome for the species is the

GenBank assembly RS_GCF_900758165.1. The GC content of the type genome is 27.15 % and the genome length is 1.6 Mbp.

Description of *Candidatus* Volunaria desacisca sp. nov.

Candidatus Volunaria desacisca (NL. fem. n. *desacisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Bin5 sp009840225*. The type genome for the species is the GenBank assembly GCA_009840225.1. The GC content of the type genome is 59.86 % and the genome length is 5.6 Mbp.

Description of *Candidatus* Volunaria gen. nov.

Candidatus Volunaria (NL. fem. n. *Volunaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *Bin5*. The type species for the genus is *Candidatus* Volunaria desacisca .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Volunaria monumitas sp. nov.

Candidatus Volunaria monumitas (NL. fem. n. *monumitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Bin5 sp011523365*. The type genome for the species is the GenBank assembly GCA_011523365.1. The GC content of the type genome is 59.73 % and the genome length is 5.67 Mbp.

Description of *Candidatus* Volunaria sonivitura sp. nov.

Candidatus Volunaria sonivitura (NL. fem. n. *sonivitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Bin5 sp009838625*. The type genome for the species is the GenBank assembly GCA_009845725.1. The GC content of the type genome is 59.62 % and the genome length is 4.3 Mbp.

Description of *Candidatus* Volunaria stercilenta sp. nov.

Candidatus Volunaria stercilenta (NL. fem. n. *stercilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Bin5 sp002238445*. The type genome for the species is the GenBank assembly GCA_002238445.1. The GC content of the type genome is 58.5 % and the genome length is 5.55 Mbp.

Description of *Candidatus* Volunaria vinacax sp. nov.

Candidatus Volunaria vinacax (NL. fem. n. *vinacax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *Bin5 sp009841235*. The type genome for the species is the GenBank assembly GCA_009837805.1. The GC content of the type genome is 60.33 % and the genome length is 5.03 Mbp.

Description of *Candidatus* Volunella exaspatica sp. nov.

Candidatus Volunella exaspatica (NL. fem. n. *exaspatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA6109 sp002428445*. The type genome for the species is the GenBank assembly GCA_002428445.1. The GC content of the type genome is 58.99 % and the genome length is 4.19 Mbp.

Description of *Candidatus* Volunella gen. nov.

Candidatus Volunella (NL. fem. n. *Volunella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA6109*. The type species for the genus is *Candidatus* Volunella exaspatica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA6109*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Volunellaceae.

Description of *Candidatus* Volunellaceae fam. nov.

Candidatus Volunellaceae (NL. fem. n. *Volunellaceae* a name created from the name of

the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA6109*. The type genus for the taxon is *Candidatus* Volunella .

According to GTDB R06-RS202, this family belongs to the order *Syntrophales*.

Description of *Candidatus* Volunia binocessa sp. nov.

Candidatus Volunia binocessa (NL. fem. n. *binocessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CF-118 sp005880525*. The type genome for the species is the GenBank assembly GCA_005880525.1. The GC content of the type genome is 66.82 % and the genome length is 2.28 Mbp.

Description of *Candidatus* Volunia gen. nov.

Candidatus Volunia (NL. fem. n. *Volunia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CF-118*. The type species for the genus is *Candidatus* Volunia binocessa .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Volunia siligedo sp. nov.

Candidatus Volunia siligedo (NL. fem. n. *siligedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CF-118 sp005879985*. The type genome for the species is the GenBank assembly GCA_005880815.1. The GC content of the type genome is 66.94 % and the genome length is 2.67 Mbp.

Description of *Candidatus* Volunida delucastra sp. nov.

Candidatus Volunida delucastra (NL. fem. n. *delucastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RBG-16-60-22 sp001796935*. The type genome for the species is the GenBank assembly GCA_001796935.1. The GC content of the type genome is 61.23 % and the genome length is 1.87 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle background sediment; well D04 at 16ft depth".

Description of *Candidatus* Volunida gen. nov.

Candidatus Volunida (NL. fem. n. *Volunida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RBG-16-60-22*. The type species for the genus is *Candidatus* Volunida delucastra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *RBG-16-60-22*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Volunidaceae.

Description of *Candidatus* Volunidaceae fam. nov.

Candidatus Volunidaceae (NL. fem. n. *Volunidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *RBG-16-60-22.* The type genus for the taxon is *Candidatus* Volunida .

According to GTDB R06-RS202, this family belongs to the order *Dehalococcoidales*.

Description of *Candidatus* Volunosa haricentia sp. nov.

Candidatus Volunosa haricentia (NL. fem. n. *haricentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SpSt-899 sp011358905*. The type genome for the species is the GenBank assembly GCA_011358905.1. The GC content of the type genome is 59.11 % and the genome length is 2.36 Mbp.

Description of *Candidatus* Volunosa gen. nov.

Candidatus Volunosa (NL. fem. n. *Volunosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this genus is *SpSt-899*. The type species for the genus is *Candidatus* Volunosa haricentia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SpSt-899*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Volunosaceae.

Description of *Candidatus* Volunosaceae fam. nov.

Candidatus Volunosaceae (NL. fem. n. *Volunosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *SpSt-899.* The type genus for the taxon is *Candidatus* Volunosa .

According to the original version of GTDB R06-RS202, this family belongs to the order *SZUA-161*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Corocosales.

Description of *Candidatus* Volunula dinupitrix sp. nov.

Candidatus Volunula dinupitrix (NL. fem. n. *dinupitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SIBS01 sp009695045*. The type genome for the species is the GenBank assembly GCA_014190945.1. The GC content of the type genome is 31.54 % and the genome length is 0.81 Mbp.

Description of *Candidatus* Volunula gen. nov.

Candidatus Volunula (NL. fem. n. *Volunula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SIBS01*. The type species for the genus is *Candidatus* Volunula dinupitrix .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA12049*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Catecariaceae.

Description of *Candidatus* Voragana pinifedo sp. nov.

Candidatus Voragana pinifedo (NL. fem. n. *pinifedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *QNES01 sp003645255*. The type genome for the species is the GenBank assembly GCA_003645175.1. The GC content of the type genome is 39.24 % and the genome length is 3.54 Mbp.

Description of *Candidatus* Voragana gen. nov.

Candidatus Voragana (NL. fem. n. *Voragana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *QNES01*. The type species for the genus is *Candidatus* Voragana pinifedo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Voragaria asceligena sp. nov.

Candidatus Voragaria asceligena (NL. fem. n. *asceligena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PALSA-1004 sp003153455*. The type genome for the species is the GenBank assembly GCA_003153455.1. The GC content of the type genome is 60.83 % and the genome length is 6.69 Mbp.

Description of *Candidatus* Voragaria gen. nov.

Candidatus Voragaria (NL. fem. n. *Voragaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PALSA-1004*. The type species for the genus is *Candidatus* Voragaria asceligena .

According to the original version of GTDB R06-RS202, this genus belongs to the family *SG8-41*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Diludanaceae.

Description of *Candidatus* Voragaria recucimonas sp. nov.

Candidatus Voragaria recucimonas (NL. fem. n. *recucimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PALSA-1004 sp903913965*. The type genome for the species is the GenBank assembly GCA_903866315.1. The GC content of the type genome is 58.08 % and the genome length is 3.25 Mbp.

Description of *Candidatus* Voragaria regigibula sp. nov.

Candidatus Voragaria regigibula (NL. fem. n. *regigibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PALSA-1004 sp903889565*. The type genome for the species is the GenBank assembly GCA_903861245.1. The GC content of the type genome is 62.47 % and the genome length is 4.25 Mbp.

Description of *Candidatus* Voragaria vilitago sp. nov.

Candidatus Voragaria vilitago (NL. fem. n. *vilitago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PALSA-1004 sp903905655*. The type genome for the species is the GenBank assembly GCA_903905655.1. The GC content of the type genome is 62.69 % and the genome length is 2.55 Mbp.

Description of *Candidatus* Voragella apoplago sp. nov.

Candidatus Voragella apoplago (NL. fem. n. *apoplago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACCZJ01 sp013696065*. The type genome for the species is the GenBank assembly GCA_013696065.1. The GC content of the type genome is 65.09 % and the genome length is 2.58 Mbp.

Description of *Candidatus* Voragella gen. nov.

Candidatus Voragella (NL. fem. n. *Voragella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JACCZJ01*. The type species for the genus is *Candidatus* Voragella apoplago .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Voragella luceratio sp. nov.

Candidatus Voragella luceratio (NL. fem. n. *luceratio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACCZJ01 sp013813125*. The type genome for the species is the GenBank assembly GCA_013813125.1. The GC content of the type genome is 65.24 % and the genome length is 1.8 Mbp.

Description of *Candidatus* Voragella plascentia sp. nov.

Candidatus Voragella plascentia (NL. fem. n. *plascentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JACCZJ01 sp013696975*. The type genome for the species is the GenBank assembly GCA_013696975.1. The GC content of the type genome is 65.34 % and the genome length is 1.88 Mbp.

Description of *Candidatus* Voragia subacigena sp. nov.

Candidatus Voragia subacigena (NL. fem. n. *subacigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PNKZ01 sp013822735*. The type genome for the species is the GenBank assembly GCA_013822735.1. The GC content of the type genome is 61.45 % and the genome length is 6.88 Mbp.

Description of *Candidatus* Voragia gen. nov.

Candidatus Voragia (NL. fem. n. *Voragia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PNKZ01*. The type species for the genus is *Candidatus* Voragia subacigena .

According to the original version of GTDB R06-RS202, this genus belongs to the family *PNKZ01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Voragiaceae.

Description of *Candidatus* Voragiaceae fam. nov.

Candidatus Voragiaceae (NL. fem. n. *Voragiaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *PNKZ01*. The type genus for the taxon is *Candidatus* Voragia .

According to GTDB R06-RS202, this family belongs to the order *Pirellulales*.

Description of *Candidatus* Voragida careciforma sp. nov.

Candidatus Voragida careciforma (NL. fem. n. *careciforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2201 sp002327305*. The type genome for the species is the GenBank assembly GCA_002327305.1. The GC content of the type genome is 65.51 % and the genome length is 3.65 Mbp.

Description of *Candidatus* Voragida gen. nov.

Candidatus Voragida (NL. fem. n. *Voragida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA2201*. The type species for the genus is *Candidatus* Voragida careciforma .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2201*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Voragidaceae.

Description of *Candidatus* Voragidaceae fam. nov.

Candidatus Voragidaceae (NL. fem. n. *Voragidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA2201*. The type genus for the taxon is *Candidatus* Voragida .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA2201*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Voragidales.

Description of *Candidatus* Voragidales ord. nov.

Candidatus Voragidales (NL. fem. n. *Voragidales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA2201*. The type genus for the taxon is *Candidatus* Voragida .

According to the GTDB R06-RS202, this order belongs to the class *Thermoanaerobaculia*.

Description of *Candidatus* Voragula ontolibula sp. nov.

Candidatus Voragula ontolibula (NL. fem. n. *ontolibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAADHI01 sp013151935*. The type genome for the species is the GenBank assembly GCA_013151935.1. The GC content of the type genome is 45.75 % and the genome length is 2.53 Mbp.

Description of *Candidatus* Voragula gen. nov.

Candidatus Voragula (NL. fem. n. *Voragula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAADHI01*. The type species for the genus is *Candidatus* Voragula ontolibula .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JAADHI01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Voragulaceae.

Description of *Candidatus* Voragulaceae fam. nov.

Candidatus Voragulaceae (NL. fem. n. *Voragulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JAADHI01*. The type genus for the taxon is *Candidatus* Voragula .

According to the original version of GTDB R06-RS202, this family belongs to the order *SBBL01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Ceraridales.

Description of *Candidatus* Vulcanococcus alticivita sp. nov.

Candidatus Vulcanococcus alticivita (NL. fem. n. *alticivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Vulcanococcus sp014654725*. The type genome for the species is the GenBank assembly GCA_014654725.1. The GC content of the type genome is 63.93 % and the genome length is 2.96 Mbp.

Description of *Candidatus* Vulcanococcus decatimonia sp. nov.

Candidatus Vulcanococcus decatimonia (NL. fem. n. *decatimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Vulcanococcus sp000179255*. The type genome for the species is the GenBank assembly RS_GCF_000179255.1. The GC content of the type genome is 62.97 % and the genome length is 2.43 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Chesapeake Bay".

Description of *Candidatus* Vulcanococcus decinisca sp. nov.

Candidatus Vulcanococcus decinisca (NL. fem. n. *decinisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Vulcanococcus sp903934375*. The type genome for the species is the GenBank assembly GCA_903940705.1. The GC content of the type genome is 67.92 % and the genome length is 2.46 Mbp.

Description of *Candidatus* Vulcanococcus defacivita sp. nov.

Candidatus Vulcanococcus defacivita (NL. fem. n. *defacivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Vulcanococcus sp014191535*. The type genome for the species is the GenBank assembly GCA_014191535.1. The GC content of the type genome is 68.85 % and the genome length is 1.94 Mbp.

Description of *Candidatus* Vulcanococcus encolisca sp. nov.

Candidatus Vulcanococcus encolisca (NL. fem. n. *encolisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Vulcanococcus sp014217875*. The type genome for the species is the GenBank assembly RS_GCF_014217875.1. The GC content of the type genome is 62.56 % and the genome length is 2.42 Mbp.

Description of *Candidatus* Vulcanococcus ignipibra sp. nov.

Candidatus Vulcanococcus ignipibra (NL. fem. n. *ignipibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Vulcanococcus sp009926195*. The type genome for the species is the GenBank assembly GCA_009926195.1. The GC content of the type genome is 67.71 % and the genome length is 2.31 Mbp.

Description of *Candidatus* Vulcanococcus morigilega sp. nov.

Candidatus Vulcanococcus morigilega (NL. fem. n. *morigilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Vulcanococcus sp000179235*. The type genome for the species is the GenBank assembly RS_GCF_000179235.2. The GC content of the type genome is 64.06 % and the genome length is 2.79 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Chesapeake Bay".

Description of *Candidatus* Vulcanococcus risibigena sp. nov.

Candidatus Vulcanococcus risibigena (NL. fem. n. *risibigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Vulcanococcus sp010029175*. The type genome for the species is the GenBank assembly GCA_010029175.1. The GC content of the type genome is 67.84 % and the genome length is 2.24 Mbp.

Description of *Candidatus* Vulcanococcus vitigitoga sp. nov.

Candidatus Vulcanococcus vitigitoga (NL. fem. n. *vitigitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Vulcanococcus sp010030955*. The type genome for the species is the

GenBank assembly GCA_010030765.1. The GC content of the type genome is 69.79 % and the genome length is 1.89 Mbp.

Description of *Candidatus* Wagnerdoeblera siticiforma sp. nov.

Candidatus Wagnerdoeblera siticiforma (NL. fem. n. *siticiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Wagnerdoeblera sp003863335*. The type genome for the species is the GenBank assembly RS_GCF_003863335.1. The GC content of the type genome is 63.05 % and the genome length is 4.24 Mbp.

Description of *Candidatus* Weimerbacter aprugetta sp. nov.

Candidatus Weimerbacter aprugetta (NL. fem. n. *aprugetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Weimerbacter sp902803645*. The type genome for the species is the GenBank assembly GCA_902803645.1. The GC content of the type genome is 47.42 % and the genome length is 2.21 Mbp.

Description of *Candidatus* Weimerbacter denomicella sp. nov.

Candidatus Weimerbacter denomicella (NL. fem. n. *denomicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Weimerbacter sp900316165*. The type genome for the species is the GenBank assembly GCA_003455175.1. The GC content of the type genome is 44.69 % and the genome length is 1.74 Mbp.

Description of *Candidatus* Weimerbacter funamitia sp. nov.

Candidatus Weimerbacter funamitia (NL. fem. n. *funamitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Weimerbacter sp002480925*. The type genome for the species is the GenBank assembly GCA_002481745.1. The GC content of the type genome is 46.28 % and the genome length is 1.93 Mbp.

Description of *Candidatus* Weimerbacter hemitiforma sp. nov.

Candidatus Weimerbacter hemitiforma (NL. fem. n. *hemitiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Weimerbacter sp900317825*. The type genome for the species is the GenBank assembly GCA_002481975.1. The GC content of the type genome is 47.14 % and the genome length is 2.05 Mbp.

Description of *Candidatus* Weimerbacter pavicitudo sp. nov.

Candidatus Weimerbacter pavicitudo (NL. fem. n. *pavicitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Weimerbacter sp900315505*. The type genome for the species is the GenBank assembly GCA_002474355.1. The GC content of the type genome is 47.13 % and the genome length is 1.81 Mbp.

Description of *Candidatus* Weimerbacter subucitia sp. nov.

Candidatus Weimerbacter subucitia (NL. fem. n. *subucitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Weimerbacter sp900100095*. The type genome for the species is the GenBank assembly RS_GCF_900106615.1. The GC content of the type genome is 43.88 % and the genome length is 3.21 Mbp.

Description of *Candidatus* Weissella manibitudo sp. nov.

Candidatus Weissella manibitudo (NL. fem. n. *manibitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Weissella sp011304355*. The type genome for the species is the GenBank assembly RS_GCF_011304355.1. The GC content of the type genome is 37.22 % and the genome length is 1.62 Mbp.

Description of *Candidatus* Weizmannia secunax sp. nov.

Candidatus Weizmannia secunax (NL. fem. n. *secunax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Weizmannia sp008974185*. The type genome for the species is the GenBank assembly RS_GCF_008974185.1. The GC content of the type genome is 45.86 % and the genome length is 3.19 Mbp.

Description of *Candidatus* Wenxinia cicaratio sp. nov.

Candidatus Wenxinia cicaratio (NL. fem. n. *cicaratio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Wenxinia sp012070395*. The type genome for the species is the GenBank assembly RS_GCF_012070395.1. The GC content of the type genome is 69.56 % and the genome length is 3.85 Mbp.

Description of *Candidatus* Wenzhouxiangella antevitica sp. nov.

Candidatus Wenzhouxiangella antevitica (NL. fem. n. *antevitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Wenzhouxiangella sp003560975*. The type genome for the species is the GenBank assembly GCA_003560975.1. The GC content of the type genome is 65.21 % and the genome length is 3.08 Mbp.

Description of *Candidatus* Wenzhouxiangella assefimonia sp. nov.

Candidatus Wenzhouxiangella assefimonia (NL. fem. n. *assefimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Wenzhouxiangella sp007694885*. The type genome for the species is the GenBank assembly GCA_007694885.1. The GC content of the type genome is 65.03 % and the genome length is 2.6 Mbp.

Description of *Candidatus* Wenzhouxiangella bulapatio sp. nov.

Candidatus Wenzhouxiangella bulapatio (NL. fem. n. *bulapatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Wenzhouxiangella sp007123575*. The type genome for the species is the GenBank assembly GCA_007123575.1. The GC content of the type genome is 61.68

% and the genome length is 2.84 Mbp.

Description of *Candidatus* Wenzhouxiangella bulapetta sp. nov.

Candidatus Wenzhouxiangella bulapetta (NL. fem. n. *bulapetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Wenzhouxiangella sp007695005*. The type genome for the species is the GenBank assembly GCA_007695005.1. The GC content of the type genome is 62.59 % and the genome length is 3.31 Mbp.

Description of *Candidatus* Wenzhouxiangella dapifax sp. nov.

Candidatus Wenzhouxiangella dapifax (NL. fem. n. *dapifax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Wenzhouxiangella sp003567685*. The type genome for the species is the GenBank assembly GCA_003567685.1. The GC content of the type genome is 61.74 % and the genome length is 2.74 Mbp.

Description of *Candidatus* Wenzhouxiangella decomentia sp. nov.

Candidatus Wenzhouxiangella decomentia (NL. fem. n. *decomentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Wenzhouxiangella sp007131235*. The type genome for the species is the GenBank assembly GCA_007131235.1. The GC content of the type genome is 62.26 % and the genome length is 3.3 Mbp.

Description of *Candidatus* Wenzhouxiangella demigivita sp. nov.

Candidatus Wenzhouxiangella demigivita (NL. fem. n. *demigivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Wenzhouxiangella sp013285445*. The type genome for the species is the GenBank assembly GCA_013285445.1. The GC content of the type genome is 63.85 % and the genome length is 3.49 Mbp.

Description of *Candidatus* Wenzhouxiangella desomitia sp. nov.

Candidatus Wenzhouxiangella desomitia (NL. fem. n. *desomitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Wenzhouxiangella sp007123055*. The type genome for the species is the GenBank assembly GCA_007123055.1. The GC content of the type genome is 63.17 % and the genome length is 2.47 Mbp.

Description of *Candidatus* Wenzhouxiangella diponugo sp. nov.

Candidatus Wenzhouxiangella diponugo (NL. fem. n. *diponugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Wenzhouxiangella sp003417465*. The type genome for the species is the GenBank assembly RS_GCF_003417465.1. The GC content of the type genome is 62.88 % and the genome length is 3.13 Mbp.

Description of *Candidatus* Wenzhouxiangella disiditas sp. nov.

Candidatus Wenzhouxiangella disiditas (NL. fem. n. *disiditas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Wenzhouxiangella sp003561495*. The type genome for the species is the GenBank assembly GCA_003561495.1. The GC content of the type genome is 60.22 % and the genome length is 2.55 Mbp.

Description of *Candidatus* Wenzhouxiangella gerunax sp. nov.

Candidatus Wenzhouxiangella gerunax (NL. fem. n. *gerunax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Wenzhouxiangella sp009908385*. The type genome for the species is the GenBank assembly GCA_009908385.1. The GC content of the type genome is 66.63 % and the genome length is 2.94 Mbp.

Description of *Candidatus* Wenzhouxiangella immatifica sp. nov.

Candidatus Wenzhouxiangella immatifica (NL. fem. n. *immatifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Wenzhouxiangella sp003565625*. The type genome for the species is the GenBank assembly GCA_003565625.1. The GC content of the type genome is 63.63 % and the genome length is 2.81 Mbp.

Description of *Candidatus* Wenzhouxiangella ineffilenta sp. nov.

Candidatus Wenzhouxiangella ineffilenta (NL. fem. n. *ineffilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Wenzhouxiangella sp007135935*. The type genome for the species is the GenBank assembly GCA_007135935.1. The GC content of the type genome is 61.06 % and the genome length is 3.21 Mbp.

Description of *Candidatus* Wenzhouxiangella lapicilenta sp. nov.

Candidatus Wenzhouxiangella lapicilenta (NL. fem. n. *lapicilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Wenzhouxiangella sp010499265*. The type genome for the species is the GenBank assembly RS_GCF_010499265.1. The GC content of the type genome is 63.71 % and the genome length is 3.35 Mbp.

Description of *Candidatus* Wenzhouxiangella letifitas sp. nov.

Candidatus Wenzhouxiangella letifitas (NL. fem. n. *letifitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Wenzhouxiangella sp007135355*. The type genome for the species is the GenBank assembly GCA_003562715.1. The GC content of the type genome is 62.62 % and the genome length is 1.82 Mbp.

Description of *Candidatus* Wenzhouxiangella manomugo sp. nov.

Candidatus Wenzhouxiangella manomugo (NL. fem. n. *manomugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Wenzhouxiangella sp007128175*. The type genome for the species is the GenBank assembly GCA_003556165.1. The GC content of the type genome is 62.62

% and the genome length is 1.95 Mbp.

Description of *Candidatus* Wenzhouxiangella modifugo sp. nov.

Candidatus Wenzhouxiangella modifugo (NL. fem. n. *modifugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Wenzhouxiangella sp007116585*. The type genome for the species is the GenBank assembly GCA_007116585.1. The GC content of the type genome is 63.23 % and the genome length is 1.9 Mbp.

Description of *Candidatus* Wenzhouxiangella obnoxastra sp. nov.

Candidatus Wenzhouxiangella obnoxastra (NL. fem. n. *obnoxastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Wenzhouxiangella sp007127425*. The type genome for the species is the GenBank assembly GCA_007127425.1. The GC content of the type genome is 62.05 % and the genome length is 2.08 Mbp.

Description of *Candidatus* Wenzhouxiangella perexicula sp. nov.

Candidatus Wenzhouxiangella perexicula (NL. fem. n. *perexicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Wenzhouxiangella sp007119095*. The type genome for the species is the GenBank assembly GCA_007119095.1. The GC content of the type genome is 60.79 % and the genome length is 2.43 Mbp.

Description of *Candidatus* Wenzhouxiangella refulibula sp. nov.

Candidatus Wenzhouxiangella refulibula (NL. fem. n. *refulibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Wenzhouxiangella sp007121485*. The type genome for the species is the GenBank assembly GCA_007134315.1. The GC content of the type genome is 65.76 % and the genome length is 2.31 Mbp.

Description of *Candidatus* Wenzhouxiangella relapimonia sp. nov.

Candidatus Wenzhouxiangella relapimonia (NL. fem. n. *relapimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Wenzhouxiangella sp007134485*. The type genome for the species is the GenBank assembly GCA_007134485.1. The GC content of the type genome is 60.46 % and the genome length is 3.35 Mbp.

Description of *Candidatus* Wenzhouxiangella saburastra sp. nov.

Candidatus Wenzhouxiangella saburastra (NL. fem. n. *saburastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Wenzhouxiangella sp011008905*. The type genome for the species is the GenBank assembly RS_GCF_011008905.1. The GC content of the type genome is 63.07 % and the genome length is 3.13 Mbp.

Description of *Candidatus* Wenzhouxiangella semifitura sp. nov.

Candidatus Wenzhouxiangella semifitura (NL. fem. n. *semifitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Wenzhouxiangella sp007694055*. The type genome for the species is the GenBank assembly GCA_007694055.1. The GC content of the type genome is 62.4 % and the genome length is 4.15 Mbp.

Description of *Candidatus* Williamsia figilicella sp. nov.

Candidatus Williamsia figilicella (NL. fem. n. *figilicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Williamsia sp002095395*. The type genome for the species is the GenBank assembly RS_GCF_002095395.1. The GC content of the type genome is 64.72 % and the genome length is 5.98 Mbp.

Description of *Candidatus* Williamsia melopivita sp. nov.

Candidatus Williamsia melopivita (NL. fem. n. *melopivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Williamsia sp002095435*. The type genome for the species is the GenBank assembly GCA_013822805.1. The GC content of the type genome is 64.75 % and the genome length is 6.42 Mbp.

Description of *Candidatus* Winkia demadimonas sp. nov.

Candidatus Winkia demadimonas (NL. fem. n. *demadimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Winkia sp002849225*. The type genome for the species is the GenBank assembly RS_GCF_002872055.1. The GC content of the type genome is 56.63 % and the genome length is 2.18 Mbp.

Description of *Candidatus* Winogradskyella abmatax sp. nov.

Candidatus Winogradskyella abmatax (NL. fem. n. *abmatax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Winogradskyella sp013213975*. The type genome for the species is the GenBank assembly GCA_013213975.1. The GC content of the type genome is 34.3 % and the genome length is 3.13 Mbp.

Description of *Candidatus* Winogradskyella adpicilenta sp. nov.

Candidatus Winogradskyella adpicilenta (NL. fem. n. *adpicilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Winogradskyella sp013002225*. The type genome for the species is the GenBank assembly GCA_013002225.1. The GC content of the type genome is 34.37 % and the genome length is 2.99 Mbp.

Description of *Candidatus* Winogradskyella anaplifica sp. nov.

Candidatus Winogradskyella anaplifica (NL. fem. n. *anaplifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Winogradskyella sp002682935*. The type genome for the species is the GenBank assembly GCA_002682935.1. The GC content of the type genome is 33.53 %

and the genome length is 3.48 Mbp.

Description of *Candidatus* Winogradskyella assicicula sp. nov.

Candidatus Winogradskyella assicicula (NL. fem. n. *assicicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Winogradskyella sp001971725*. The type genome for the species is the GenBank assembly RS_GCF_001971725.1. The GC content of the type genome is 34.43 % and the genome length is 3.35 Mbp.

Description of *Candidatus* Winogradskyella attelax sp. nov.

Candidatus Winogradskyella attelax (NL. fem. n. *attelax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Winogradskyella sp002706045*. The type genome for the species is the GenBank assembly GCA_002706045.1. The GC content of the type genome is 33.38 % and the genome length is 2.82 Mbp.

Description of *Candidatus* Winogradskyella bucolitia sp. nov.

Candidatus Winogradskyella bucolitia (NL. fem. n. *bucolitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Winogradskyella sp013394675*. The type genome for the species is the GenBank assembly RS_GCF_013394675.1. The GC content of the type genome is 33.2 % and the genome length is 4.53 Mbp.

Description of *Candidatus* Winogradskyella cacopago sp. nov.

Candidatus Winogradskyella cacopago (NL. fem. n. *cacopago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Winogradskyella sp013042245*. The type genome for the species is the GenBank assembly GCA_013042245.1. The GC content of the type genome is 33.41 % and the genome length is 2.58 Mbp.

Description of *Candidatus* Winogradskyella cocolicula sp. nov.

Candidatus Winogradskyella cocolicula (NL. fem. n. *cocolicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Winogradskyella sp013003655*. The type genome for the species is the GenBank assembly GCA_013043525.1. The GC content of the type genome is 34.88 % and the genome length is 2.15 Mbp.

Description of *Candidatus* Winogradskyella colepatica sp. nov.

Candidatus Winogradskyella colepatica (NL. fem. n. *colepatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Winogradskyella sp002163855*. The type genome for the species is the GenBank assembly GCA_004211875.1. The GC content of the type genome is 33.05 % and the genome length is 1.75 Mbp.

Description of *Candidatus* Winogradskyella cosiditia sp. nov.

Candidatus Winogradskyella cosiditia (NL. fem. n. *cosiditia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Winogradskyella sp004211785*. The type genome for the species is the GenBank assembly GCA_004211785.1. The GC content of the type genome is 33.24 % and the genome length is 2.9 Mbp.

Description of *Candidatus* Winogradskyella culilatio sp. nov.

Candidatus Winogradskyella culilatio (NL. fem. n. *culilatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Winogradskyella sp013213835*. The type genome for the species is the GenBank assembly GCA_013213835.1. The GC content of the type genome is 33.23 % and the genome length is 3.55 Mbp.

Description of *Candidatus* Winogradskyella defulibula sp. nov.

Candidatus Winogradskyella defulibula (NL. fem. n. *defulibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Winogradskyella sp013394635*. The type genome for the species is the GenBank assembly RS_GCF_013394595.1. The GC content of the type genome is 34.73 % and the genome length is 4.51 Mbp.

Description of *Candidatus* Winogradskyella doxolitoga sp. nov.

Candidatus Winogradskyella doxolitoga (NL. fem. n. *doxolitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Winogradskyella sp000828715*. The type genome for the species is the GenBank assembly RS_GCF_000828715.1. The GC content of the type genome is 32.18 % and the genome length is 3.81 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Marine Agar 2216".

Description of *Candidatus* Winogradskyella eccisisca sp. nov.

Candidatus Winogradskyella eccisisca (NL. fem. n. *eccisisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Winogradskyella sp013403925*. The type genome for the species is the GenBank assembly RS_GCF_013403925.1. The GC content of the type genome is 32.28 % and the genome length is 3.9 Mbp.

Description of *Candidatus* Winogradskyella fibicitica sp. nov.

Candidatus Winogradskyella fibicitica (NL. fem. n. *fibicitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Winogradskyella sp002722255*. The type genome for the species is the GenBank assembly GCA_002722255.1. The GC content of the type genome is 33.77 % and the genome length is 3.21 Mbp.

Description of *Candidatus* Winogradskyella ficedatica sp. nov.

Candidatus Winogradskyella ficedatica (NL. fem. n. *ficedatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Winogradskyella sp013403865*. The type genome for the species is the

GenBank assembly RS_GCF_013403865.1. The GC content of the type genome is 33.4 % and the genome length is 4.13 Mbp.

Description of *Candidatus* Winogradskyella homulicula sp. nov.

Candidatus Winogradskyella homulicula (NL. fem. n. *homulicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Winogradskyella sp002364335*. The type genome for the species is the GenBank assembly GCA_002364335.1. The GC content of the type genome is 32.36 % and the genome length is 3.42 Mbp.

Description of *Candidatus* Winogradskyella inhorigena sp. nov.

Candidatus Winogradskyella inhorigena (NL. fem. n. *inhorigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Winogradskyella sp009709615*. The type genome for the species is the GenBank assembly RS_GCF_009709615.1. The GC content of the type genome is 35.48 % and the genome length is 3.57 Mbp.

Description of *Candidatus* Winogradskyella inlibousia sp. nov.

Candidatus Winogradskyella inlibousia (NL. fem. n. *inlibousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Winogradskyella sp009741275*. The type genome for the species is the GenBank assembly RS_GCF_009741275.1. The GC content of the type genome is 31.9 % and the genome length is 3.61 Mbp.

Description of *Candidatus* Winogradskyella innumifica sp. nov.

Candidatus Winogradskyella innumifica (NL. fem. n. *innumifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Winogradskyella sp013403985*. The type genome for the species is the GenBank assembly RS_GCF_013403985.1. The GC content of the type genome is 32.45 % and the genome length is 4.01 Mbp.

Description of *Candidatus* Winogradskyella inrecigena sp. nov.

Candidatus Winogradskyella inrecigena (NL. fem. n. *inrecigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Winogradskyella sp013403975*. The type genome for the species is the GenBank assembly RS_GCF_013403975.1. The GC content of the type genome is 35.01 % and the genome length is 3.48 Mbp.

Description of *Candidatus* Winogradskyella irraditas sp. nov.

Candidatus Winogradskyella irraditas (NL. fem. n. *irraditas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Winogradskyella sp013394655*. The type genome for the species is the GenBank assembly RS_GCF_013394655.1. The GC content of the type genome is 34.63 % and the genome length is 4.56 Mbp.

Description of *Candidatus* Winogradskyella maxumago sp. nov.

Candidatus Winogradskyella maxumago (NL. fem. n. *maxumago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Winogradskyella sp003712105*. The type genome for the species is the GenBank assembly GCA_003712105.1. The GC content of the type genome is 33.78 % and the genome length is 3.15 Mbp.

Description of *Candidatus* Winogradskyella murilax sp. nov.

Candidatus Winogradskyella murilax (NL. fem. n. *murilax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Winogradskyella sp000171875*. The type genome for the species is the GenBank assembly RS_GCF_000171875.1. The GC content of the type genome is 32.4 % and the genome length is 3.83 Mbp.

Description of *Candidatus* Winogradskyella peradousia sp. nov.

Candidatus Winogradskyella peradousia (NL. fem. n. *peradousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Winogradskyella sp003335675*. The type genome for the species is the GenBank assembly RS_GCF_003335675.1. The GC content of the type genome is 33.32 % and the genome length is 2.81 Mbp.

Description of *Candidatus* Winogradskyella vicatifica sp. nov.

Candidatus Winogradskyella vicatifica (NL. fem. n. *vicatifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Winogradskyella sp013403955*. The type genome for the species is the GenBank assembly RS_GCF_013403955.1. The GC content of the type genome is 33.4 % and the genome length is 4.33 Mbp.

Description of *Candidatus* Woeseia miracessa sp. nov.

Candidatus Woeseia miracessa (NL. fem. n. *miracessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Woeseia sp013003155*. The type genome for the species is the GenBank assembly GCA_013043285.1. The GC content of the type genome is 57.26 % and the genome length is 2.7 Mbp.

Description of *Candidatus* Wohlfahrtiimonas foricitio sp. nov.

Candidatus Wohlfahrtiimonas foricitio (NL. fem. n. *foricitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Wohlfahrtiimonas sp002252155*. The type genome for the species is the GenBank assembly RS_GCF_002252155.1. The GC content of the type genome is 43.82 % and the genome length is 2.1 Mbp.

Description of *Candidatus* Wolbachia adnepitoga sp. nov.

Candidatus Wolbachia adnepitoga (NL. fem. n. *adnepitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Wolbachia sp013365435*. The type genome for the species is the GenBank assembly RS_GCF_013365435.1. The GC content of the type genome is 32.12

% and the genome length is 1.05 Mbp.

Description of *Candidatus* Wolbachia arcipibula sp. nov.

Candidatus Wolbachia arcipibula (NL. fem. n. *arcipibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Wolbachia sp013365455*. The type genome for the species is the GenBank assembly RS_GCF_013365455.1. The GC content of the type genome is 32.7 % and the genome length is 0.92 Mbp.

Description of *Candidatus* Wolbachia baditibula sp. nov.

Candidatus Wolbachia baditibula (NL. fem. n. *baditibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Wolbachia sp013366805*. The type genome for the species is the GenBank assembly RS_GCF_013366805.1. The GC content of the type genome is 34.51 % and the genome length is 1.05 Mbp.

Description of *Candidatus* Wolbachia citocibula sp. nov.

Candidatus Wolbachia citocibula (NL. fem. n. *citocibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Wolbachia sp000306885*. The type genome for the species is the GenBank assembly GCA_902646795.1. The GC content of the type genome is 32.07 % and the genome length is 1.09 Mbp.

Description of *Candidatus* Wolbachia deculicula sp. nov.

Candidatus Wolbachia deculicula (NL. fem. n. *deculicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Wolbachia sp902636535*. The type genome for the species is the GenBank assembly GCA_902636385.1. The GC content of the type genome is 35.09 % and the genome length is 1.27 Mbp.

Description of *Candidatus* Wolbachia exhonedo sp. nov.

Candidatus Wolbachia exhonedo (NL. fem. n. *exhonedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Wolbachia sp013365475*. The type genome for the species is the GenBank assembly RS_GCF_013365475.1. The GC content of the type genome is 32.28 % and the genome length is 0.86 Mbp.

Description of *Candidatus* Wolbachia funamilega sp. nov.

Candidatus Wolbachia funamilega (NL. fem. n. *funamilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Wolbachia sp000008385*. The type genome for the species is the GenBank assembly GCA_902646465.1. The GC content of the type genome is 33.83 % and the genome length is 1.35 Mbp.

Description of *Candidatus* Wolbachia herinentia sp. nov.

Candidatus Wolbachia herinentia (NL. fem. n. *herinentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Wolbachia sp001931755*. The type genome for the species is the GenBank assembly RS_GCF_001931755.2. The GC content of the type genome is 34.35 % and the genome length is 1.8 Mbp.

Description of *Candidatus* Wolbachia illapilega sp. nov.

Candidatus Wolbachia illapilega (NL. fem. n. *illapilega* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Wolbachia sp012277315*. The type genome for the species is the GenBank assembly RS_GCF_012277315.1. The GC content of the type genome is 35.57 % and the genome length is 1.2 Mbp.

Description of *Candidatus* Wolbachia immacitrix sp. nov.

Candidatus Wolbachia immacitrix (NL. fem. n. *immacitrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Wolbachia sp012277295*. The type genome for the species is the GenBank assembly RS_GCF_012277295.1. The GC content of the type genome is 35.18 % and the genome length is 1.5 Mbp.

Description of *Candidatus* Wolbachia legifivita sp. nov.

Candidatus Wolbachia legifivita (NL. fem. n. *legifivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Wolbachia sp001439985*. The type genome for the species is the GenBank assembly RS_GCF_001439985.1. The GC content of the type genome is 33.68 % and the genome length is 1.13 Mbp.

Description of *Candidatus* Wolbachia meriditrix sp. nov.

Candidatus Wolbachia meriditrix (NL. fem. n. *meriditrix* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Wolbachia sp000829315*. The type genome for the species is the GenBank assembly RS_GCF_013366855.1. The GC content of the type genome is 36.09 % and the genome length is 1.03 Mbp.

Description of *Candidatus* Wolbachia milifitica sp. nov.

Candidatus Wolbachia milifitica (NL. fem. n. *milifitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Wolbachia sp013365495*. The type genome for the species is the GenBank assembly RS_GCF_013365495.1. The GC content of the type genome is 28.22 % and the genome length is 0.86 Mbp.

Description of *Candidatus* Wolbachia obfusilenta sp. nov.

Candidatus Wolbachia obfusilenta (NL. fem. n. *obfusilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Wolbachia sp902636395*. The type genome for the species is the GenBank assembly GCA_902636395.1. The GC content of the type genome is 35.95 %

and the genome length is 1.23 Mbp.

Description of *Candidatus* Wolbachia rorulimonas sp. nov.

Candidatus Wolbachia rorulimonas (NL. fem. n. *rorulimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Wolbachia sp003344345*. The type genome for the species is the GenBank assembly RS_GCF_001027565.1. The GC content of the type genome is 34.49 % and the genome length is 1.66 Mbp.

Description of *Candidatus* Wolbachia semifica sp. nov.

Candidatus Wolbachia semifica (NL. fem. n. *semifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Wolbachia sp000376585*. The type genome for the species is the GenBank assembly GCA_902646185.1. The GC content of the type genome is 34.04 % and the genome length is 1.23 Mbp.

Description of *Candidatus* Wolbachia sonabicella sp. nov.

Candidatus Wolbachia sonabicella (NL. fem. n. *sonabicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Wolbachia sp003516275*. The type genome for the species is the GenBank assembly RS_GCF_014534705.1. The GC content of the type genome is 34.09 % and the genome length is 1.46 Mbp.

Description of *Candidatus* Wolbachia venabimonas sp. nov.

Candidatus Wolbachia venabimonas (NL. fem. n. *venabimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Wolbachia sp001648025*. The type genome for the species is the GenBank assembly GCA_001648025.1. The GC content of the type genome is 35.14 % and the genome length is 1.17 Mbp.

Description of *Candidatus* Xanthobacter cerimugo sp. nov.

Candidatus Xanthobacter cerimugo (NL. fem. n. *cerimugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Xanthobacter sp000702385*. The type genome for the species is the GenBank assembly RS_GCF_000526175.1. The GC content of the type genome is 67.8 % and the genome length is 5.47 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "not provided; submitted under MIGS 2.1".

Description of *Candidatus* Xanthobacter delecessa sp. nov.

Candidatus Xanthobacter delecessa (NL. fem. n. *delecessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Xanthobacter sp012275355*. The type genome for the species is the GenBank assembly RS_GCF_012275355.1. The GC content of the type genome is 67.96 % and the genome length is 5.58 Mbp.

Description of *Candidatus* Xanthobacter immigousia sp. nov.

Candidatus Xanthobacter immigousia (NL. fem. n. *immigousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Xanthobacter sp012932745*. The type genome for the species is the GenBank assembly RS_GCF_012932745.1. The GC content of the type genome is 68.16 % and the genome length is 5.21 Mbp.

Description of *Candidatus* Xanthobacter obambifica sp. nov.

Candidatus Xanthobacter obambifica (NL. fem. n. *obambifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Xanthobacter sp008364685*. The type genome for the species is the GenBank assembly RS_GCF_008364685.1. The GC content of the type genome is 67.92 % and the genome length is 5.31 Mbp.

Description of *Candidatus* Xanthomarina butubicula sp. nov.

Candidatus Xanthomarina butubicula (NL. fem. n. *butubicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in

apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Xanthomarina sp002366675*. The type genome for the species is the GenBank assembly GCA_002366675.1. The GC content of the type genome is 31.33 % and the genome length is 2.55 Mbp.

Description of *Candidatus* Xanthomarina diludago sp. nov.

Candidatus Xanthomarina diludago (NL. fem. n. *diludago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Xanthomarina sp003144015*. The type genome for the species is the GenBank assembly RS_GCF_003144015.1. The GC content of the type genome is 32.24 % and the genome length is 3.19 Mbp.

Description of *Candidatus* Xanthomonas cibaricula sp. nov.

Candidatus Xanthomonas cibaricula (NL. fem. n. *cibaricula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Xanthomonas sp014199795*. The type genome for the species is the GenBank assembly RS_GCF_014199735.1. The GC content of the type genome is 68.94 % and the genome length is 4.86 Mbp.

Description of *Candidatus* Xanthomonas lugubitio sp. nov.

Candidatus Xanthomonas lugubitio (NL. fem. n. *lugubitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Xanthomonas sp001043115*. The type genome for the species is the GenBank assembly RS_GCF_001043115.1. The GC content of the type genome is 68.89 % and the genome length is 4.95 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Phaseolus vulgaris".

Description of *Candidatus* Xanthomonas lutulimonas sp. nov.

Candidatus Xanthomonas lutulimonas (NL. fem. n. *lutulimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Xanthomonas sp000963005*. The type genome for the species is the GenBank assembly RS_GCF_000963005.1. The GC content of the type genome is 62.84 % and the genome length is 3.53 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "water droplets on sugarcane leaves".

Description of *Candidatus* Xanthomonas penuribra sp. nov.

Candidatus Xanthomonas penuribra (NL. fem. n. *penuribra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Xanthomonas sp001423495*. The type genome for the species is the GenBank assembly RS_GCF_001423495.1. The GC content of the type genome is 64.03 % and the genome length is 5.17 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "leaf".

Description of *Candidatus* Xanthomonas vanititas sp. nov.

Candidatus Xanthomonas vanititas (NL. fem. n. *vanititas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Xanthomonas sp001423585*. The type genome for the species is the GenBank assembly RS_GCF_003364095.1. The GC content of the type genome is 64.29 % and the genome length is 5.26 Mbp.

Description of *Candidatus* Xanthomonas vitabentia sp. nov.

Candidatus Xanthomonas vitabentia (NL. fem. n. *vitabentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Xanthomonas sp014236855*. The type genome for the species is the GenBank assembly RS_GCF_014236835.1. The GC content of the type genome is 68.55 % and the genome length is 5.19 Mbp.

Description of *Candidatus* Xanthomonas decomitoga sp. nov.

Candidatus Xanthomonas decomitoga (NL. fem. n. *decomitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Xanthomonas_B sp003449195*. Although GTDB has assigned a genus

name with an alphabetic suffix, this genus designation cannot be incorporated into a well-formed binomial, so in naming this species, we have used the basonym for the genus. The type genome for the species is the GenBank assembly GCA_003449195.1. The GC content of the type genome is 66.75 % and the genome length is 1.84 Mbp.

Description of *Candidatus* Xenobium moleciforma sp. nov.

Candidatus Xenobium moleciforma (NL. fem. n. *moleciforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Xenobium sp012799975*. The type genome for the species is the GenBank assembly GCA_012799975.1. The GC content of the type genome is 64.92 % and the genome length is 3.65 Mbp.

Description of *Candidatus* Xenococcus progrivita sp. nov.

Candidatus Xenococcus progrivita (NL. fem. n. *progrivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Xenococcus sp000332055*. The type genome for the species is the GenBank assembly RS_GCF_000332055.1. The GC content of the type genome is 39.68 % and the genome length is 5.93 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "marine aquarium".

Description of *Candidatus* Xenodana divoritudo sp. nov.

Candidatus Xenodana divoritudo (NL. fem. n. *divoritudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIWGV01 sp903912365*. The type genome for the species is the GenBank assembly GCA_903821485.1. The GC content of the type genome is 44.89 % and the genome length is 1.17 Mbp.

Description of *Candidatus* Xenodana gen. nov.

Candidatus Xenodana (NL. fem. n. *Xenodana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIWGV01*. The type species for the genus is *Candidatus* Xenodana divoritudo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA5542*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Favilidaceae.

Description of *Candidatus* Xenodaria dilematio sp. nov.

Candidatus Xenodaria dilematio (NL. fem. n. *dilematio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3263 sp001689615*. The type genome for the species is the GenBank assembly GCA_002491865.1. The GC content of the type genome is 52.15 % and the genome length is 1.87 Mbp.

Description of *Candidatus* Xenodaria gen. nov.

Candidatus Xenodaria (NL. fem. n. *Xenodaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA3263*. The type species for the genus is *Candidatus* Xenodaria dilematio .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Xenodaria nefaricula sp. nov.

Candidatus Xenodaria nefaricula (NL. fem. n. *nefaricula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3263 sp002490725*. The type genome for the species is the GenBank assembly GCA_002490725.1. The GC content of the type genome is 56.62 % and the genome length is 1.7 Mbp.

Description of *Candidatus* Xenodaria obmutitas sp. nov.

Candidatus Xenodaria obmutitas (NL. fem. n. *obmutitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA3263 sp900759865*. The type genome for the species is the GenBank assembly GCA_900759865.1. The GC content of the type genome is 57.3 %

and the genome length is 2.22 Mbp.

Description of *Candidatus* Xenodia mirifitica sp. nov.

Candidatus Xenodia mirifitica (NL. fem. n. *mirifitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *PWGO01 sp003554525*. The type genome for the species is the GenBank assembly GCA_003554525.1. The GC content of the type genome is 46.24 % and the genome length is 2.31 Mbp.

Description of *Candidatus* Xenodia gen. nov.

Candidatus Xenodia (NL. fem. n. *Xenodia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *PWGO01*. The type species for the genus is *Candidatus* Xenodia mirifitica .

According to the original version of GTDB R06-RS202, this genus belongs to the family *PWGO01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Xenodiaceae.

Description of *Candidatus* Xenodiaceae fam. nov.

Candidatus Xenodiaceae (NL. fem. n. *Xenodiaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *PWGO01*. The type genus for the taxon is *Candidatus* Xenodia .

According to the original version of GTDB R06-RS202, this family belongs to the order *DTU022*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Depelidales.

Description of *Candidatus* Xenodida codifugo sp. nov.

Candidatus Xenodida codifugo (NL. fem. n. *codifugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5861 sp002432635*. The type genome for the species is the GenBank assembly GCA_002432635.1. The GC content of the type genome is 49.18 %

and the genome length is 3.25 Mbp.

Description of *Candidatus* Xenodida gen. nov.

Candidatus Xenodida (NL. fem. n. *Xenodida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA5861*. The type species for the genus is *Candidatus* Xenodida codifugo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Xenodosa colutibra sp. nov.

Candidatus Xenodosa colutibra (NL. fem. n. *colutibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RZZM01 sp009929845*. The type genome for the species is the GenBank assembly GCA_009929845.1. The GC content of the type genome is 56.7 % and the genome length is 5.64 Mbp.

Description of *Candidatus* Xenodosa gen. nov.

Candidatus Xenodosa (NL. fem. n. *Xenodosa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RZZM01*. The type species for the genus is *Candidatus* Xenodosa colutibra .

According to the original version of GTDB R06-RS202, this genus belongs to the family *RZZM01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Xenodosaceae.

Description of *Candidatus* Xenodosaceae fam. nov.

Candidatus Xenodosaceae (NL. fem. n. *Xenodosaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *RZZM01.* The type genus for the taxon is *Candidatus* Xenodosa .

According to the original version of GTDB R06-RS202, this family belongs to the order *RZYC01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to

the order *Candidatus* Virecellales.

Description of *Candidatus* Xenodula algebatica sp. nov.

Candidatus Xenodula algebatica (NL. fem. n. *algebatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SYFN01 sp010024875*. The type genome for the species is the GenBank assembly GCA_010024875.1. The GC content of the type genome is 56.88 % and the genome length is 3.02 Mbp.

Description of *Candidatus* Xenodula gen. nov.

Candidatus Xenodula (NL. fem. n. *Xenodula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SYFN01*. The type species for the genus is *Candidatus* Xenodula algebatica .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Xenodula culilifica sp. nov.

Candidatus Xenodula culilifica (NL. fem. n. *culilifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SYFN01 sp900299005*. The type genome for the species is the GenBank assembly GCA_900299005.1. The GC content of the type genome is 56.89 % and the genome length is 2.92 Mbp.

Description of *Candidatus* Xenodula dehinitura sp. nov.

Candidatus Xenodula dehinitura (NL. fem. n. *dehinitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SYFN01 sp903872555*. The type genome for the species is the GenBank assembly GCA_903894555.1. The GC content of the type genome is 53.6 % and the genome length is 2.25 Mbp.

Description of *Candidatus* Xenodula derecisca sp. nov.

Candidatus Xenodula derecisca (NL. fem. n. *derecisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SYFN01 sp005800405*. The type genome for the species is the GenBank assembly GCA_005803965.1. The GC content of the type genome is 54.54 % and the genome length is 2.08 Mbp.

Description of *Candidatus* Xenodula parocitica sp. nov.

Candidatus Xenodula parocitica (NL. fem. n. *parocitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SYFN01 sp903904635*. The type genome for the species is the GenBank assembly GCA_903904635.1. The GC content of the type genome is 49.32 % and the genome length is 2.47 Mbp.

Description of *Candidatus* Xenodula sicunilenta sp. nov.

Candidatus Xenodula sicunilenta (NL. fem. n. *sicunilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SYFN01 sp903846425*. The type genome for the species is the GenBank assembly GCA_903924935.1. The GC content of the type genome is 48.75 % and the genome length is 2.38 Mbp.

Description of *Candidatus* Xenopana cituvedo sp. nov.

Candidatus Xenopana cituvedo (NL. fem. n. *cituvedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *RYZV01 sp004011965*. The type genome for the species is the GenBank assembly RS_GCF_004011945.1. The GC content of the type genome is 42.72 % and the genome length is 0.68 Mbp.

Description of *Candidatus* Xenopana gen. nov.

Candidatus Xenopana (NL. fem. n. *Xenopana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *RYZV01*. The type species for the genus is *Candidatus* Xenopana cituvedo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Xenoparia cacopicula sp. nov.

Candidatus Xenoparia cacopicula (NL. fem. n. *cacopicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2137 sp002695035*. The type genome for the species is the GenBank assembly GCA_002695035.1. The GC content of the type genome is 44.38 % and the genome length is 2.14 Mbp.

Description of *Candidatus* Xenoparia gen. nov.

Candidatus Xenoparia (NL. fem. n. *Xenoparia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA2137*. The type species for the genus is *Candidatus* Xenoparia cacopicula .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Xenoparia cerebivita sp. nov.

Candidatus Xenoparia cerebivita (NL. fem. n. *cerebivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2137 sp002701555*. The type genome for the species is the GenBank assembly GCA_002701555.1. The GC content of the type genome is 42.56 % and the genome length is 1.39 Mbp.

Description of *Candidatus* Xenoparia supelatica sp. nov.

Candidatus Xenoparia supelatica (NL. fem. n. *supelatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this species is *UBA2137 sp002328415*. The type genome for the species is the GenBank assembly GCA_002471725.1. The GC content of the type genome is 44.93 % and the genome length is 1.61 Mbp.

Description of *Candidatus* Xenopella diritimonas sp. nov.

Candidatus Xenopella diritimonas (NL. fem. n. *diritimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS1600 sp900553315*. The type genome for the species is the GenBank assembly RS_GCF_900756615.1. The GC content of the type genome is 57.64 % and the genome length is 2.57 Mbp.

Description of *Candidatus* Xenopella gen. nov.

Candidatus Xenopella (NL. fem. n. *Xenopella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UMGS1600*. The type species for the genus is *Candidatus* Xenopella diritimonas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-74*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Subabosaceae.

Description of *Candidatus* Xenopella monimatica sp. nov.

Candidatus Xenopella monimatica (NL. fem. n. *monimatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UMGS1600 sp900553295*. The type genome for the species is the GenBank assembly RS_GCF_900758145.1. The GC content of the type genome is 59.58 % and the genome length is 2.4 Mbp.

Description of *Candidatus* Xenopia tirocedo sp. nov.

Candidatus Xenopia tirocedo (NL. fem. n. *tirocedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *DSKJ01 sp011051445*. The type genome for the species is the

GenBank assembly GCA_011051445.1. The GC content of the type genome is 69.89 % and the genome length is 3.35 Mbp.

Description of *Candidatus* Xenopia gen. nov.

Candidatus Xenopia (NL. fem. n. *Xenopia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *DSKJ01*. The type species for the genus is *Candidatus* Xenopia tirocedo .

According to the original version of GTDB R06-RS202, this genus belongs to the family *DSKJ01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Xenopiaceae.

Description of *Candidatus* Xenopiaceae fam. nov.

Candidatus Xenopiaceae (NL. fem. n. *Xenopiaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *DSKJ01*. The type genus for the taxon is *Candidatus* Xenopia .

According to the original version of GTDB R06-RS202, this family belongs to the order *FW602-bin22*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Colipulales.

Description of *Candidatus* Xenopida absuribula sp. nov.

Candidatus Xenopida absuribula (NL. fem. n. *absuribula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MED-G11 sp902560025*. The type genome for the species is the GenBank assembly GCA_902560025.1. The GC content of the type genome is 30.44 % and the genome length is 0.82 Mbp.

Description of *Candidatus* Xenopida gen. nov.

Candidatus Xenopida (NL. fem. n. *Xenopida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *MED-G11*. The type species for the genus is *Candidatus* Xenopida absuribula .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Xenopida adcometta sp. nov.

Candidatus Xenopida adcometta (NL. fem. n. *adcometta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MED-G11 sp014239665*. The type genome for the species is the GenBank assembly GCA_014239665.1. The GC content of the type genome is 29.83 % and the genome length is 1.27 Mbp.

Description of *Candidatus* Xenopida ancepigena sp. nov.

Candidatus Xenopida ancepigena (NL. fem. n. *ancepigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MED-G11 sp014239615*. The type genome for the species is the GenBank assembly GCA_014239615.1. The GC content of the type genome is 29.68 % and the genome length is 1.22 Mbp.

Description of *Candidatus* Xenopida cacomicella sp. nov.

Candidatus Xenopida cacomicella (NL. fem. n. *cacomicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MED-G11 sp902593165*. The type genome for the species is the GenBank assembly GCA_902593165.1. The GC content of the type genome is 30.57 % and the genome length is 1.23 Mbp.

Description of *Candidatus* Xenopida cicarilenta sp. nov.

Candidatus Xenopida cicarilenta (NL. fem. n. *cicarilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MED-G11 sp902594745*. The type genome for the species is the GenBank assembly GCA_902635655.1. The GC content of the type genome is 30.49 % and the genome length is 1.25 Mbp.

Description of *Candidatus* Xenopida cocibax sp. nov.

Candidatus Xenopida cocibax (NL. fem. n. *cocibax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MED-G11 sp002729755*. The type genome for the species is the GenBank assembly GCA_004214195.1. The GC content of the type genome is 28.62 % and the genome length is 0.57 Mbp.

Description of *Candidatus* Xenopida cucuricula sp. nov.

Candidatus Xenopida cucuricula (NL. fem. n. *cucuricula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MED-G11 sp004214015*. The type genome for the species is the GenBank assembly GCA_004214015.1. The GC content of the type genome is 29.64 % and the genome length is 0.81 Mbp.

Description of *Candidatus* Xenopida decomibra sp. nov.

Candidatus Xenopida decomibra (NL. fem. n. *decomibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MED-G11 sp902516925*. The type genome for the species is the GenBank assembly GCA_902516925.1. The GC content of the type genome is 30.62 % and the genome length is 0.99 Mbp.

Description of *Candidatus* Xenopida defesilenta sp. nov.

Candidatus Xenopida defesilenta (NL. fem. n. *defesilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MED-G11 sp902519955*. The type genome for the species is the GenBank assembly GCA_902519955.1. The GC content of the type genome is 30.23 % and the genome length is 1.04 Mbp.

Description of *Candidatus* Xenopida exentibula sp. nov.

Candidatus Xenopida exentibula (NL. fem. n. *exentibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MED-G11 sp902509805*. The type genome for the species is the GenBank assembly GCA_902509805.1. The GC content of the type genome is 30.25 % and the genome length is 0.78 Mbp.

Description of *Candidatus* Xenopida exforastra sp. nov.

Candidatus Xenopida exforastra (NL. fem. n. *exforastra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MED-G11 sp902517365*. The type genome for the species is the GenBank assembly GCA_902517365.1. The GC content of the type genome is 30.05 % and the genome length is 0.68 Mbp.

Description of *Candidatus* Xenopida filifitica sp. nov.

Candidatus Xenopida filifitica (NL. fem. n. *filifitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MED-G11 sp002457075*. The type genome for the species is the GenBank assembly GCA_002705625.1. The GC content of the type genome is 29.91 % and the genome length is 1.12 Mbp.

Description of *Candidatus* Xenopida hibisibra sp. nov.

Candidatus Xenopida hibisibra (NL. fem. n. *hibisibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MED-G11 sp902594485*. The type genome for the species is the GenBank assembly GCA_902592695.1. The GC content of the type genome is 30.5 % and the genome length is 1.13 Mbp.

Description of *Candidatus* Xenopida innasigena sp. nov.

Candidatus Xenopida innasigena (NL. fem. n. *innasigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MED-G11 sp902597925*. The type genome for the species is the GenBank assembly GCA_902597925.1. The GC content of the type genome is 30.66 %

and the genome length is 0.99 Mbp.

Description of *Candidatus* Xenopida intolilenta sp. nov.

Candidatus Xenopida intolilenta (NL. fem. n. *intolilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MED-G11 sp902523665*. The type genome for the species is the GenBank assembly GCA_902523665.1. The GC content of the type genome is 30.27 % and the genome length is 1.13 Mbp.

Description of *Candidatus* Xenopida lanigiforma sp. nov.

Candidatus Xenopida lanigiforma (NL. fem. n. *lanigiforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MED-G11 sp902577515*. The type genome for the species is the GenBank assembly GCA_902577515.1. The GC content of the type genome is 30.12 % and the genome length is 1.16 Mbp.

Description of *Candidatus* Xenopida linigisca sp. nov.

Candidatus Xenopida linigisca (NL. fem. n. *linigisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MED-G11 sp902583445*. The type genome for the species is the GenBank assembly GCA_902615235.1. The GC content of the type genome is 30.19 % and the genome length is 1.02 Mbp.

Description of *Candidatus* Xenopida maligessa sp. nov.

Candidatus Xenopida maligessa (NL. fem. n. *maligessa* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MED-G11 sp902586435*. The type genome for the species is the GenBank assembly GCA_902591115.1. The GC content of the type genome is 30.27 % and the genome length is 1.04 Mbp.

Description of *Candidatus* Xenopida maxumilenta sp. nov.

Candidatus Xenopida maxumilenta (NL. fem. n. *maxumilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MED-G11 sp902514615*. The type genome for the species is the GenBank assembly GCA_902514615.1. The GC content of the type genome is 30.12 % and the genome length is 1.03 Mbp.

Description of *Candidatus* Xenopida navifugo sp. nov.

Candidatus Xenopida navifugo (NL. fem. n. *navifugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MED-G11 sp902620455*. The type genome for the species is the GenBank assembly GCA_902540755.1. The GC content of the type genome is 30.36 % and the genome length is 1.13 Mbp.

Description of *Candidatus* Xenopida pedifax sp. nov.

Candidatus Xenopida pedifax (NL. fem. n. *pedifax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MED-G11 sp902629505*. The type genome for the species is the GenBank assembly GCA_902629505.1. The GC content of the type genome is 31.06 % and the genome length is 0.86 Mbp.

Description of *Candidatus* Xenopida pragmitura sp. nov.

Candidatus Xenopida pragmitura (NL. fem. n. *pragmitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MED-G11 sp902510395*. The type genome for the species is the GenBank assembly GCA_902510395.1. The GC content of the type genome is 29.83 % and the genome length is 0.98 Mbp.

Description of *Candidatus* Xenopida secunugo sp. nov.

Candidatus Xenopida secunugo (NL. fem. n. *secunugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MED-G11 sp004213645*. The type genome for the species is the GenBank assembly GCA_902518175.1. The GC content of the type genome is 29.97 % and the genome length is 1.04 Mbp.

Description of *Candidatus* Xenopida tumefibra sp. nov.

Candidatus Xenopida tumefibra (NL. fem. n. *tumefibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MED-G11 sp902617285*. The type genome for the species is the GenBank assembly GCA_902617285.1. The GC content of the type genome is 30.22 % and the genome length is 1.19 Mbp.

Description of *Candidatus* Xenopida vacilicella sp. nov.

Candidatus Xenopida vacilicella (NL. fem. n. *vacilicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MED-G11 sp902622595*. The type genome for the species is the GenBank assembly GCA_902540315.1. The GC content of the type genome is 30.52 % and the genome length is 0.8 Mbp.

Description of *Candidatus* Xenopida vilipitio sp. nov.

Candidatus Xenopida vilipitio (NL. fem. n. *vilipitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *MED-G11 sp902598525*. The type genome for the species is the GenBank assembly GCA_902598525.1. The GC content of the type genome is 30.28 % and the genome length is 1.17 Mbp.

Description of *Candidatus* Xenoposa delapicella sp. nov.

Candidatus Xenoposa delapicella (NL. fem. n. *delapicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8517 sp003484955*. The type genome for the species is the GenBank assembly GCA_003484955.1. The GC content of the type genome is 40.07 %

and the genome length is 0.75 Mbp.

Description of *Candidatus* Xenoposa gen. nov.

Candidatus Xenoposa (NL. fem. n. *Xenoposa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA8517*. The type species for the genus is *Candidatus* Xenoposa delapicella .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA8517*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Xenoposaceae.

Description of *Candidatus* Xenoposaceae fam. nov.

Candidatus Xenoposaceae (NL. fem. n. *Xenoposaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA8517.* The type genus for the taxon is *Candidatus* Xenoposa .

According to the original version of GTDB R06-RS202, this family belongs to the order *GWA2-44-7*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Notacellales.

Description of *Candidatus* Xenoposa desacitica sp. nov.

Candidatus Xenoposa desacitica (NL. fem. n. *desacitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8517 sp001001045*. The type genome for the species is the GenBank assembly GCA_001001045.1. The GC content of the type genome is 43.73 % and the genome length is 0.6 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "aquifer sediment".

Description of *Candidatus* Xenoposa musulitura sp. nov.

Candidatus Xenoposa musulitura (NL. fem. n. *musulitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA8517 sp000997405*. The type genome for the species is the

GenBank assembly GCA_001793455.1. The GC content of the type genome is 40.5 % and the genome length is 0.68 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Rifle well CD01 at 16ft depth; 0.1 micron filter at time point B".

Description of *Candidatus* Xenopula mahelicula sp. nov.

Candidatus Xenopula mahelicula (NL. fem. n. *mahelicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIWHR01 sp010365205*. The type genome for the species is the GenBank assembly GCA_010365205.1. The GC content of the type genome is 66.3 % and the genome length is 3.04 Mbp.

Description of *Candidatus* Xenopula gen. nov.

Candidatus Xenopula (NL. fem. n. *Xenopula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIWHR01*. The type species for the genus is *Candidatus* Xenopula mahelicula .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Xenopula roraribula sp. nov.

Candidatus Xenopula roraribula (NL. fem. n. *roraribula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIWHR01 sp903912485*. The type genome for the species is the GenBank assembly GCA_903912485.1. The GC content of the type genome is 69.09 % and the genome length is 5.27 Mbp.

Description of *Candidatus* Xeramana cocodax sp. nov.

Candidatus Xeramana cocodax (NL. fem. n. *cocodax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *NS-102 sp003075435*. The type genome for the species is the GenBank assembly GCA_001899605.1. The GC content of the type genome is 40.06 % and the

genome length is 6.14 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Thiocyanate ramp bioreactor".

Description of *Candidatus* Xeramana gen. nov.

Candidatus Xeramana (NL. fem. n. *Xeramana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *NS-102*. The type species for the genus is *Candidatus* Xeramana cocodax .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Xeramana laxitivita sp. nov.

Candidatus Xeramana laxitivita (NL. fem. n. *laxitivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *NS-102 sp001899685*. The type genome for the species is the GenBank assembly GCA_001899685.1. The GC content of the type genome is 44.03 % and the genome length is 6.01 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Thiocyanate ramp bioreactor".

Description of *Candidatus* Xeramana vicecitudo sp. nov.

Candidatus Xeramana vicecitudo (NL. fem. n. *vicecitudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *NS-102 sp009192765*. The type genome for the species is the GenBank assembly RS_GCF_009192765.1. The GC content of the type genome is 41.8 % and the genome length is 5.69 Mbp.

Description of *Candidatus* Xeramaria refunimonia sp. nov.

Candidatus Xeramaria refunimonia (NL. fem. n. *refunimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4082 sp002383355*. The type genome for the species is the GenBank assembly GCA_002383355.1. The GC content of the type genome is 37.44 % and the genome length is 1.68 Mbp.

Description of *Candidatus* Xeramaria gen. nov.

Candidatus Xeramaria (NL. fem. n. *Xeramaria* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA4082*. The type species for the genus is *Candidatus* Xeramaria refunimonia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *34-128*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Tumefosaceae.

Description of *Candidatus* Xeramella coluticella sp. nov.

Candidatus Xeramella coluticella (NL. fem. n. *coluticella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA1539 sp002788135*. The type genome for the species is the GenBank assembly GCA_002771095.1. The GC content of the type genome is 46.51 % and the genome length is 0.84 Mbp.

Description of *Candidatus* Xeramella gen. nov.

Candidatus Xeramella (NL. fem. n. *Xeramella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA1539*. The type species for the genus is *Candidatus* Xeramella coluticella .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA1539*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Xeramellaceae.

Description of *Candidatus* Xeramellaceae fam. nov.

Candidatus Xeramellaceae (NL. fem. n. *Xeramellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA1539.* The type genus for the taxon is *Candidatus* Xeramella .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA9983_A*. According to the renamed version of GTDB R06-RS202, this taxon belongs

to the order *Candidatus* Ficedanales.

Description of *Candidatus* Xeramia tibicentia sp. nov.

Candidatus Xeramia tibicentia (NL. fem. n. *tibicentia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAIJLX01 sp903821695*. The type genome for the species is the GenBank assembly GCA_903821695.1. The GC content of the type genome is 47.97 % and the genome length is 2.11 Mbp.

Description of *Candidatus* Xeramia gen. nov.

Candidatus Xeramia (NL. fem. n. *Xeramia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAIJLX01*. The type species for the genus is *Candidatus* Xeramia tibicentia .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAIJLX01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Xeramiaceae.

Description of *Candidatus* Xeramiaceae fam. nov.

Candidatus Xeramiaceae (NL. fem. n. *Xeramiaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CAIJLX01*. The type genus for the taxon is *Candidatus* Xeramia .

According to GTDB R06-RS202, this family belongs to the order *Rickettsiales*.

Description of *Candidatus* Xeramida bicoritudo sp. nov.

Candidatus Xeramida bicoritudo (NL. fem. n. *bicoritudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4036 sp002382325*. The type genome for the species is the GenBank assembly GCA_002306465.1. The GC content of the type genome is 33.23 % and the genome length is 2.64 Mbp.

Description of *Candidatus* Xeramida gen. nov.

Candidatus Xeramida (NL. fem. n. *Xeramida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA4036*. The type species for the genus is *Candidatus* Xeramida bicoritudo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Xeramida pericitura sp. nov.

Candidatus Xeramida pericitura (NL. fem. n. *pericitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA4036 sp004116335*. The type genome for the species is the GenBank assembly RS_GCF_004116335.1. The GC content of the type genome is 34.94 % and the genome length is 2.53 Mbp.

Description of *Candidatus* Xeramula adgenugo sp. nov.

Candidatus Xeramula adgenugo (NL. fem. n. *adgenugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-882 sp900545455*. The type genome for the species is the GenBank assembly GCA_900545455.1. The GC content of the type genome is 45.29 % and the genome length is 2.7 Mbp.

Description of *Candidatus* Xeramula gen. nov.

Candidatus Xeramula (NL. fem. n. *Xeramula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAG-882*. The type species for the genus is *Candidatus* Xeramula adgenugo .

According to GTDB R06-RS202, this genus belongs to the family .

Description of *Candidatus* Xeramula decamicula sp. nov.

Candidatus Xeramula decamicula (NL. fem. n. *decamicula* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-882 sp900545175*. The type genome for the species is the GenBank assembly RS_GCF_900755825.1. The GC content of the type genome is 41.4 % and the genome length is 2.87 Mbp.

Description of *Candidatus* Xeramula socagugo sp. nov.

Candidatus Xeramula socagugo (NL. fem. n. *socagugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-882 sp003486385*. The type genome for the species is the GenBank assembly RS_GCF_900753995.1. The GC content of the type genome is 43.61 % and the genome length is 2.71 Mbp.

Description of *Candidatus* Xeramula tametatio sp. nov.

Candidatus Xeramula tametatio (NL. fem. n. *tametatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-882 sp000435595*. The type genome for the species is the GenBank assembly GCA_900538415.1. The GC content of the type genome is 43.75 % and the genome length is 2.98 Mbp.

Description of *Candidatus* Xeropana cisaletta sp. nov.

Candidatus Xeropana cisaletta (NL. fem. n. *cisaletta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *W3P20-009 sp004552385*. The type genome for the species is the GenBank assembly GCA_004552385.1. The GC content of the type genome is 56.61 % and the genome length is 2.04 Mbp.

Description of *Candidatus* Xeropana gen. nov.

Candidatus Xeropana (NL. fem. n. *Xeropana* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation

for this genus is *W3P20-009*. The type species for the genus is *Candidatus* Xeropana cisaletta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *W3P20-009*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Xeropanaceae.

Description of *Candidatus* Xeropanaceae fam. nov.

Candidatus Xeropanaceae (NL. fem. n. *Xeropanaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *W3P20-009.* The type genus for the taxon is *Candidatus* Xeropana .

According to GTDB R06-RS202, this family belongs to the order *Bacteroidales*.

Description of *Candidatus* Xeropana infiribula sp. nov.

Candidatus Xeropana infiribula (NL. fem. n. *infiribula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *W3P20-009 sp900766825*. The type genome for the species is the GenBank assembly RS_GCF_900766825.1. The GC content of the type genome is 49.72 % and the genome length is 2.82 Mbp.

Description of *Candidatus* Xeroparia subabimonas sp. nov.

Candidatus Xeroparia subabimonas (NL. fem. n. *subabimonas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *SKZC01 sp007127575*. The type genome for the species is the GenBank assembly GCA_007127575.1. The GC content of the type genome is 66.63 % and the genome length is 3.19 Mbp.

Description of *Candidatus* Xeroparia gen. nov.

Candidatus Xeroparia (NL. fem. n. *Xeroparia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *SKZC01*. The type species for the genus is *Candidatus* Xeroparia subabimonas .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA6960*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Caravidaceae.

Description of *Candidatus* Xeropella hegumago sp. nov.

Candidatus Xeropella hegumago (NL. fem. n. *hegumago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-288 sp000437395*. The type genome for the species is the GenBank assembly GCA_900539125.1. The GC content of the type genome is 30.4 % and the genome length is 1.7 Mbp.

Description of *Candidatus* Xeropella gen. nov.

Candidatus Xeropella (NL. fem. n. *Xeropella* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAG-288*. The type species for the genus is *Candidatus* Xeropella hegumago .

According to the original version of GTDB R06-RS202, this genus belongs to the family *CAG-288*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Xeropellaceae.

Description of *Candidatus* Xeropellaceae fam. nov.

Candidatus Xeropellaceae (NL. fem. n. *Xeropellaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *CAG-288.* The type genus for the taxon is *Candidatus* Xeropella .

According to the original version of GTDB R06-RS202, this family belongs to the order *RFN20*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Cerofellales.

Description of *Candidatus* Xeropia macililenta sp. nov.

Candidatus Xeropia macililenta (NL. fem. n. *macililenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-628 sp900553835*. The type genome for the species is the GenBank assembly GCA_900553835.1. The GC content of the type genome is 26.32 % and the genome length is 0.94 Mbp.

Description of *Candidatus* Xeropia gen. nov.

Candidatus Xeropia (NL. fem. n. *Xeropia* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *CAG-628*. The type species for the genus is *Candidatus* Xeropia macililenta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA660*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Vitigellaceae.

Description of *Candidatus* Xeropia semimitica sp. nov.

Candidatus Xeropia semimitica (NL. fem. n. *semimitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-628 sp000438415*. The type genome for the species is the GenBank assembly GCA_000438415.1. The GC content of the type genome is 26.22 % and the genome length is 1.08 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "derived from human gut metagenome".

Description of *Candidatus* Xeropia tenilicella sp. nov.

Candidatus Xeropia tenilicella (NL. fem. n. *tenilicella* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *CAG-628 sp003524085*. The type genome for the species is the GenBank assembly RS_GCF_900758665.1. The GC content of the type genome is 28.0 % and the genome length is 1.15 Mbp.

Description of *Candidatus* Xeropida innabilenta sp. nov.

Candidatus Xeropida innabilenta (NL. fem. n. *innabilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *JAAYJT01 sp012522795*. The type genome for the species is the GenBank assembly GCA_012522795.1. The GC content of the type genome is 37.15 % and the genome length is 2.88 Mbp.

Description of *Candidatus* Xeropida gen. nov.

Candidatus Xeropida (NL. fem. n. *Xeropida* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *JAAYJT01*. The type species for the genus is *Candidatus* Xeropida innabilenta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *JAAYJT01*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Xeropidaceae.

Description of *Candidatus* Xeropidaceae fam. nov.

Candidatus Xeropidaceae (NL. fem. n. *Xeropidaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *JAAYJT01.* The type genus for the taxon is *Candidatus* Xeropida .

According to GTDB R06-RS202, this family belongs to the order *Bacteroidales*.

Description of *Candidatus* Xeroposa exsisetta sp. nov.

Candidatus Xeroposa exsisetta (NL. fem. n. *exsisetta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA2394 sp002343335*. The type genome for the species is the GenBank assembly GCA_002343335.1. The GC content of the type genome is 48.43 % and the genome length is 2.65 Mbp.

Description of *Candidatus* Xeroposa gen. nov.

Candidatus Xeroposa (NL. fem. n. *Xeroposa* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA2394*. The type species for the genus is *Candidatus* Xeroposa exsisetta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA2394*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Xeroposaceae.

Description of *Candidatus* Xeroposaceae fam. nov.

Candidatus Xeroposaceae (NL. fem. n. *Xeroposaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA2394.* The type genus for the taxon is *Candidatus* Xeroposa .

According to the original version of GTDB R06-RS202, this family belongs to the order *UBA2394*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the order *Candidatus* Xeroposales.

Description of *Candidatus* Xeroposales ord. nov.

Candidatus Xeroposales (NL. fem. n. *Xeroposales* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA2394.* The type genus for the taxon is *Candidatus* Xeroposa .

According to the original version of GTDB R06-RS202, this family belongs to the class *UBA2394*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the class *Candidatus* Xeroposae.

Description of *Candidatus* Xeroposae class. nov.

Candidatus Xeroposae (NL. fem. n. *c__Xeroposae* a name created from the name of the type genus by addition of the appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA2394.* The type genus for the taxon is *Candidatus* Xeroposa .

According to GTDB R06-RS202, this class belongs to the phylum *Bdellovibrionota*.

Description of *Candidatus* Xeropula offulilenta sp. nov.

Candidatus Xeropula offulilenta (NL. fem. n. *offulilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5734 sp009928985*. The type genome for the species is the

GenBank assembly GCA_009928985.1. The GC content of the type genome is 55.27 % and the genome length is 3.01 Mbp.

Description of *Candidatus* Xeropula gen. nov.

Candidatus Xeropula (NL. fem. n. *Xeropula* a name created arbitrarily, while preserving the phonotactics and morphology of Latin).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this genus is *UBA5734*. The type species for the genus is *Candidatus* Xeropula offulilenta .

According to the original version of GTDB R06-RS202, this genus belongs to the family *UBA5734*. According to the renamed version of GTDB R06-RS202, this taxon belongs to the family *Candidatus* Xeropulaceae.

Description of *Candidatus* Xeropulaceae fam. nov.

Candidatus Xeropulaceae (NL. fem. n. *Xeropulaceae* a name created from the name of the type genus by addition of an appropriate suffix).

A taxon identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this taxon is *UBA5734.* The type genus for the taxon is *Candidatus* Xeropula .

According to GTDB R06-RS202, this family belongs to the order *Saccharofermentanales*.

Description of *Candidatus* Xeropula rudecago sp. nov.

Candidatus Xeropula rudecago (NL. fem. n. *rudecago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5734 sp002419145*. The type genome for the species is the GenBank assembly GCA_002419145.1. The GC content of the type genome is 54.7 % and the genome length is 2.31 Mbp.

Description of *Candidatus* Xeropula televisca sp. nov.

Candidatus Xeropula televisca (NL. fem. n. *televisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202. The GTDB R06-RS202 placeholder designation for this species is *UBA5734 sp002419365*. The type genome for the species is the GenBank assembly GCA_002419365.1. The GC content of the type genome is 55.51 %

and the genome length is 2.7 Mbp.

Description of *Candidatus* Xiphinematobacter nimiritas sp. nov.

Candidatus Xiphinematobacter nimiritas (NL. fem. n. *nimiritas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Xiphinematobacter sp001318295*. The type genome for the species is the GenBank assembly RS_GCF_001318295.1. The GC content of the type genome is 47.73 % and the genome length is 0.92 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "roots of grapevine in Idaho".

Description of *Candidatus* Xylanimonas antecimonia sp. nov.

Candidatus Xylanimonas antecimonia (NL. fem. n. *antecimonia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Xylanimonas sp009780755*. The type genome for the species is the GenBank assembly GCA_009780755.1. The GC content of the type genome is 63.05 % and the genome length is 2.39 Mbp.

Description of *Candidatus* Xylanimonas bisacifica sp. nov.

Candidatus Xylanimonas bisacifica (NL. fem. n. *bisacifica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Xylanimonas sp009782865*. The type genome for the species is the GenBank assembly GCA_009782865.1. The GC content of the type genome is 68.69 % and the genome length is 2.01 Mbp.

Description of *Candidatus* Xylanimonas lanugitica sp. nov.

Candidatus Xylanimonas lanugitica (NL. fem. n. *lanugitica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Xylanimonas sp009783295*. The type genome for the species is the GenBank assembly GCA_009783295.1. The GC content of the type genome is 73.12 % and the genome length is 3.98 Mbp.

Description of *Candidatus* Xylanimonas luticousia sp. nov.

Candidatus Xylanimonas luticousia (NL. fem. n. *luticousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Xylanimonas sp009846865*. The type genome for the species is the GenBank assembly RS_GCF_009846865.1. The GC content of the type genome is 75.03 % and the genome length is 3.91 Mbp.

Description of *Candidatus* Xylanimonas remulitia sp. nov.

Candidatus Xylanimonas remulitia (NL. fem. n. *remulitia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Xylanimonas sp004135385*. The type genome for the species is the GenBank assembly RS_GCF_004135385.1. The GC content of the type genome is 73.41 % and the genome length is 3.86 Mbp.

Description of *Candidatus* Xylophilus acceritudo sp. nov.

Candidatus Xylophilus acceritudo (NL. fem. n. *acceritudo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Xylophilus sp001421705*. The type genome for the species is the GenBank assembly RS_GCF_001421705.1. The GC content of the type genome is 69.43 % and the genome length is 4.48 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "leaf".

Description of *Candidatus* Xylophilus obtemedo sp. nov.

Candidatus Xylophilus obtemedo (NL. fem. n. *obtemedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Xylophilus sp009906855*. The type genome for the species is the GenBank assembly RS_GCF_009906855.1. The GC content of the type genome is 68.37 % and the genome length is 5.87 Mbp.

Description of *Candidatus* Yaniella excinatica sp. nov.

Candidatus Yaniella excinatica (NL. fem. n. *excinatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Yaniella sp002358975*. The type genome for the species is the GenBank assembly GCA_002358975.1. The GC content of the type genome is 53.37 % and the genome length is 2.58 Mbp.

Description of *Candidatus* Yaniella indiditio sp. nov.

Candidatus Yaniella indiditio (NL. fem. n. *indiditio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Yaniella sp013393415*. The type genome for the species is the GenBank assembly GCA_013393415.1. The GC content of the type genome is 56.51 % and the genome length is 3.14 Mbp.

Description of *Candidatus* Yeosuana manubitas sp. nov.

Candidatus Yeosuana manubitas (NL. fem. n. *manubitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Yeosuana sp002441545*. The type genome for the species is the GenBank assembly GCA_002441545.1. The GC content of the type genome is 31.56 % and the genome length is 3.62 Mbp.

Description of *Candidatus* Yeosuana obfenivita sp. nov.

Candidatus Yeosuana obfenivita (NL. fem. n. *obfenivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Yeosuana sp011762485*. The type genome for the species is the GenBank assembly RS_GCF_011762485.1. The GC content of the type genome is 32.6 % and the genome length is 4.16 Mbp.

Description of *Candidatus* Yeosuana terebibula sp. nov.

Candidatus Yeosuana terebibula (NL. fem. n. *terebibula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Yeosuana sp002784145*. The type genome for the species is the GenBank assembly GCA_009994285.1. The GC content of the type genome is 33.19 %

and the genome length is 3.13 Mbp.

Description of *Candidatus* Yimella abinvilenta sp. nov.

Candidatus Yimella abinvilenta (NL. fem. n. *abinvilenta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Yimella sp014530045*. The type genome for the species is the GenBank assembly RS_GCF_014530045.1. The GC content of the type genome is 66.65 % and the genome length is 3.22 Mbp.

Description of *Candidatus* Yimella desonitura sp. nov.

Candidatus Yimella desonitura (NL. fem. n. *desonitura* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Yimella sp013135345*. The type genome for the species is the GenBank assembly RS_GCF_013135345.1. The GC content of the type genome is 69.35 % and the genome length is 3.49 Mbp.

Description of *Candidatus* Yonghaparkia bipinitoga sp. nov.

Candidatus Yonghaparkia bipinitoga (NL. fem. n. *bipinitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Yonghaparkia sp001425665*. The type genome for the species is the GenBank assembly RS_GCF_001429705.1. The GC content of the type genome is 71.9 % and the genome length is 2.59 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "soil".

Description of *Candidatus* Yonghaparkia recoricula sp. nov.

Candidatus Yonghaparkia recoricula (NL. fem. n. *recoricula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Yonghaparkia sp005502445*. The type genome for the species is the GenBank assembly RS_GCF_005502445.1. The GC content of the type genome is 70.57 % and the genome length is 2.57 Mbp.

Description of *Candidatus* Yonghaparkia thessax sp. nov.

Candidatus Yonghaparkia thessax (NL. fem. n. *thessax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Yonghaparkia sp012530535*. The type genome for the species is the GenBank assembly RS_GCF_012530535.1. The GC content of the type genome is 72.36 % and the genome length is 2.62 Mbp.

Description of *Candidatus* Yoonia aminnivita sp. nov.

Candidatus Yoonia aminnivita (NL. fem. n. *aminnivita* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Yoonia sp900143545*. The type genome for the species is the GenBank assembly RS_GCF_900143545.1. The GC content of the type genome is 56.78 % and the genome length is 3.91 Mbp.

Description of *Candidatus* Yoonia appicigena sp. nov.

Candidatus Yoonia appicigena (NL. fem. n. *appicigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Yoonia sp001419985*. The type genome for the species is the GenBank assembly RS_GCF_001419985.1. The GC content of the type genome is 57.83 % and the genome length is 3.7 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "Surface seawater".

Description of *Candidatus* Yoonia benivax sp. nov.

Candidatus Yoonia benivax (NL. fem. n. *benivax* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Yoonia sp002378665*. The type genome for the species is the GenBank assembly GCA_002333375.1. The GC content of the type genome is 55.61 % and the genome length is 2.81 Mbp.

Description of *Candidatus* Yoonia inconedo sp. nov.

Candidatus Yoonia inconedo (NL. fem. n. *inconedo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Yoonia sp003201935*. The type genome for the species is the GenBank assembly RS_GCF_003201935.1. The GC content of the type genome is 57.81 % and the genome length is 3.92 Mbp.

Description of *Candidatus* Yoonia inoblitio sp. nov.

Candidatus Yoonia inoblitio (NL. fem. n. *inoblitio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Yoonia sp003318235*. The type genome for the species is the GenBank assembly RS_GCF_003318235.1. The GC content of the type genome is 54.37 % and the genome length is 3.66 Mbp.

Description of *Candidatus* Yoonia irrotitas sp. nov.

Candidatus Yoonia irrotitas (NL. fem. n. *irrotitas* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Yoonia sp000169435*. The type genome for the species is the GenBank assembly RS_GCF_000169435.1. The GC content of the type genome is 55.47 % and the genome length is 3.5 Mbp.

Description of *Candidatus* Yoonia nimiretta sp. nov.

Candidatus Yoonia nimiretta (NL. fem. n. *nimiretta* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Yoonia sp000967725*. The type genome for the species is the GenBank assembly RS_GCF_000967725.1. The GC content of the type genome is 54.34 % and the genome length is 3.56 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "wood".

Description of *Candidatus* Yoonia vitifatio sp. nov.

Candidatus Yoonia vitifatio (NL. fem. n. *vitifatio* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Yoonia sp003551805*. The type genome for the species is the GenBank

assembly GCA_003551805.1. The GC content of the type genome is 59.05 % and the genome length is 3.12 Mbp.

Description of *Candidatus* Youhaiella puruligena sp. nov.

Candidatus Youhaiella puruligena (NL. fem. n. *puruligena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Youhaiella sp000689495*. The type genome for the species is the GenBank assembly RS_GCF_000689495.1. The GC content of the type genome is 64.01 % and the genome length is 4.67 Mbp.

Description of *Candidatus* Youngiibacter paropatica sp. nov.

Candidatus Youngiibacter paropatica (NL. fem. n. *paropatica* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Youngiibacter sp002428415*. The type genome for the species is the GenBank assembly GCA_002428415.1. The GC content of the type genome is 46.14 % and the genome length is 2.87 Mbp.

Description of *Candidatus* Youngiibacter sifunago sp. nov.

Candidatus Youngiibacter sifunago (NL. fem. n. *sifunago* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Youngiibacter sp002428605*. The type genome for the species is the GenBank assembly GCA_002402305.1. The GC content of the type genome is 46.89 % and the genome length is 2.79 Mbp.

Description of *Candidatus* Zavarzinia feculugo sp. nov.

Candidatus Zavarzinia feculugo (NL. fem. n. *feculugo* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Zavarzinia sp003590945*. The type genome for the species is the GenBank assembly RS_GCF_003590945.1. The GC content of the type genome is 66.67 % and the genome length is 5.64 Mbp.

Description of *Candidatus* Zeaxanthinibacter cenotitoga sp. nov.

Candidatus Zeaxanthinibacter cenotitoga (NL. fem. n. *cenotitoga* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Zeaxanthinibacter sp013003145*. The type genome for the species is the GenBank assembly GCA_013003145.1. The GC content of the type genome is 45.78 % and the genome length is 2.17 Mbp.

Description of *Candidatus* Zeaxanthinibacter indivousia sp. nov.

Candidatus Zeaxanthinibacter indivousia (NL. fem. n. *indivousia* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Zeaxanthinibacter sp001683825*. The type genome for the species is the GenBank assembly RS_GCF_001683825.1. The GC content of the type genome is 49.98 % and the genome length is 4.12 Mbp. The isolation source for the NCBI BioSample associated with the type genome is descibed as "single strain isolated from microbial consortium enriched at the cathode of a solar microbial fuel cell originally enriched from seawater collected near Rutgers; NJ".

Description of *Candidatus* Zemynaea adlocicula sp. nov.

Candidatus Zemynaea adlocicula (NL. fem. n. *adlocicula* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Zemynaea sp002413145*. The type genome for the species is the GenBank assembly GCA_002413145.1. The GC content of the type genome is 65.07 % and the genome length is 2.22 Mbp.

Description of *Candidatus* Zhengella nosocigena sp. nov.

Candidatus Zhengella nosocigena (NL. fem. n. *nosocigena* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Zhengella sp002708825*. The type genome for the species is the GenBank assembly GCA_002710865.1. The GC content of the type genome is 63.81 % and the genome length is 4.88 Mbp.

Description of *Candidatus* Zoogloea abpatibula sp. nov.

Candidatus Zoogloea abpatibula (NL. fem. n. *abpatibula* a species epithet created

arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Zoogloea sp009469605*. The type genome for the species is the GenBank assembly RS_GCF_009469605.1. The GC content of the type genome is 65.77 % and the genome length is 5.02 Mbp.

Description of *Candidatus* Zoogloea horomibra sp. nov.

Candidatus Zoogloea horomibra (NL. fem. n. *horomibra* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Zoogloea sp012927165*. The type genome for the species is the GenBank assembly RS_GCF_012927165.1. The GC content of the type genome is 65.94 % and the genome length is 5.83 Mbp.

Description of *Candidatus* Zoogloea illibisca sp. nov.

Candidatus Zoogloea illibisca (NL. fem. n. *illibisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Zoogloea sp008011925*. The type genome for the species is the GenBank assembly GCA_008011925.1. The GC content of the type genome is 64.65 % and the genome length is 2.93 Mbp.

Description of *Candidatus* Zoogloea indeviforma sp. nov.

Candidatus Zoogloea indeviforma (NL. fem. n. *indeviforma* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Zoogloea sp009026175*. The type genome for the species is the GenBank assembly GCA_009026175.1. The GC content of the type genome is 65.57 % and the genome length is 5.44 Mbp.

Description of *Candidatus* Zoogloea vigenisca sp. nov.

Candidatus Zoogloea vigenisca (NL. fem. n. *vigenisca* a species epithet created arbitrarily, while preserving the phonotactics and morphology of Latin; used as a noun in apposition).

A species identified and delineated according to the algorithms of the Genome Taxonomy

Database (GTDB) release R06-RS202.The GTDB R06-RS202 placeholder designation for this species is *Zoogloea sp002028455*. The type genome for the species is the GenBank assembly RS_GCF_002028455.1. The GC content of the type genome is 64.2 % and the genome length is 5.81 Mbp.
