8 **Simple Summary:** The aim of this study was to analyse dog and cat advertisements on a popular
9 online trading website in Australia in February, 2016. A total of 2640 ads for dogs and 2093 ads for
10 cats were classified as being relinquished on gumtree.com.au. There were 23% of dog ads and 62%
11 of cat ads for free animals. The median age was 1.42 years in dogs and 0.9 years in cats. Compared
12 to the human population there were proportionately more ads in Queensland and fewer ads in
13 Victoria. In comparison to pets from animal shelters advertised on petrescue.com.au there were
14 more pure bred dogs on gumtree.com.au, although the common breeds were similar. Fifteen people
15 who had relinquished a dog or cat on gumtree.com.au were interviewed. They used
16 gumtree.com.au because they believed shelters were full, they wanted to see/interview the new
17 owner, or because they originally got the animal on gumtree and it works. These results shed light
18 on a hitherto under-studied population of relinquished dogs and cats.

19 **Abstract:** While traditionally people relinquish their pets to an animal shelter or pound, the internet
20 provides a newer method to re-home. We analysed advertisements (ads) on the largest website in
21 Australia for trading dogs and cats, gumtree.com.au. Data was collected in 2016. Dogs were
22 sampled on February 7, 16 and 24, 2016 and cats on February 9, 19 and 26, 2016 with 2640 ads for
23 relinquished dogs, and 2093 ads for relinquished cats. It was estimated >31,000 puppies/dogs and
24 >24,000 kittens/cats are relinquished on gumtree.com.au per year. The median age of dogs was 1.42
25 and cats 0.9 years of age. There were 23% of dog ads and 62% of cat ads for free animals. Compared
26 to the human population there were proportionately more ads in Queensland and fewer ads in
27 Victoria. A total of 15 people were surveyed who had relinquished a dog or cat using
28 gumtree.com.au. The dog owners used gumtree.com.au because they believed the shelters were full
29 (n = 4), and; they wanted to see/interview the new owner (n = 2). For cat owners it was because they
30 had originally got the cat on gumtree.com.au (n = 2); they use gumtree.com.au for other things, and
31 it works (n = 2), and; they wanted to see/interview the new owner (n = 2). The data collected will be
32 valuable for implementation of policy and interventions to protect the welfare of un-wanted dogs
33 and cats.

34 **Keywords:** relinquishment, dog, cat, online, Australia

35

36 1. Introduction

37 Australia has an owned dog and cat population of approximately 4.8 million and 3.9 million,
38 respectively [1]. However, it is likely that the total population of dogs and cats is higher, as un-
39 owned animals - strays, and those in registered or independent shelters or pounds would also
40 contribute to the total population. In addition, the ownership of an animal may be transferred
41 through sale or other trade, and animals in a shelter or pound can be rehomed. This results in a
42 complex network of animals transferred between the owned and un-owned populations, and
43 between different owners. Animals leave the care of their owners through being lost, surrenders to
44 a shelter or pound, being abandoned, being given away or being sold. Worldwide there have been
45 attempts to measure the un-owned population of dogs and cats in shelters [2,3], but there is a lack

46 of research into the dogs and cats that are transferred between owners and between owned and un-
47 owned populations in other ways.

48 Much of what we know about the flow of animals from the owned and un-owned populations
49 comes from rescue shelters and pounds. Larger rescue organisations collect data on numbers of
50 surrendered dogs and cats each year. There were 55,570 cats admitted to RSPCA shelters around
51 Australia in 2015/16, with numbers rising in the last few years. In contrast there were 45,256 dogs
52 admitted to RSPCA shelters in the same year and numbers are declining [4]. However, the RSPCA
53 represents only a portion of the surrendered population. The total number of both stray and
54 surrendered dogs in Australia in 2012/13 from shelter and local municipal facilities, has been
55 estimated at 211,655 dogs admitted, with 101,037 of these reclaimed [2]. There is no data available
56 estimating the total numbers of stray and surrendered cats in Australia, although it is likely to be
57 even higher. The incidence of unowned dogs and cats is a worldwide problem, with an estimated
58 129,743 dogs and 131,070 cats entering UK shelters in 2009 [3], and a study from South Korea
59 reporting over 10,000 abandoned dogs in Seoul [5]. In the US, it was estimated that 4.4% of dog-
60 and 3.8% of cat-owning households had relinquished a pet to a shelter in the previous year [6].

61 The relinquishment of pets represents a significant cost to society in a number of ways. In
62 Australia in 2004 there was an estimated \$AUS180 million spent annually by animal welfare
63 agencies (ACAC 2006), while in the United Kingdom expenditure by animal welfare organisations
64 was approximately £340 million in 2010 [7]. Local governments in Australia in 2004 spent \$AUS83
65 million on animal management (ACAC 2006); in the UK in 2011 the comparable figure was £57.5
66 million [8]. While local government costs include dog registrations and dealing with dog attacks, a
67 large portion of these figures would be expected to arise from stray and relinquished animals.

68 As well as the economic costs there are also emotional costs as people may be forced to
69 relinquish their pets due to external influences, such as a relationship breakdown or inability to find
70 rental accommodation that will allow a pet [9,10]. There are also emotional costs experienced by
71 staff involved in euthanizing large numbers of pets at shelters, with shelter workers struggling with
72 the moral dilemma of their job, often resulting in mental health problems and high staff turnover
73 [11-13]. Finally, un-owned dogs and cats are at an increased risk of impaired welfare using both
74 physical and psychological measures of welfare [14,15], as well as the emergence of diseases,
75 demonstrated by an outbreak of virulent systemic feline calicivirus in cats [16], and of *Streptococcus*
76 *equi* pneumonia in dogs [17].

77 If we are to design evidence-based strategies to reduce the numbers of dogs and cats
78 relinquished, as well as protect the welfare of pets in which relinquishment cannot be avoided, we
79 need to know more about the population of dogs and cats involved. Some shelters survey owners
80 who are relinquishing pets to determine their reasons for relinquishment [18,19], and also collect
81 demographic data on the age, sex and breed of the relinquished animal [4,18,19]. While this
82 information is not perfect (for example, owners may not be truthful about the behaviour of their pet
83 if they think it will negatively impact the likelihood of that pet finding a new home), it has been
84 helpful in designing interventions. For instance, knowing that sometimes pets are relinquished
85 because owners cannot find rental accommodation that allows pets has resulted in real changes,
86 with the Australian state of Victoria recently announcing modifications to rental agreements to
87 make it easier for people to rent with pets [20].

88 Pets are given away or sold through advertisements in newspapers, bulletin boards and using
89 the internet. In Australia, Gumtree (gumtree.com.au) has the highest volume of online ads for dogs
90 and cats, followed by Trading Post (tradingpost.com.au). Breeders of pure breed dogs also
91 advertise on DogzOnline (dogzonline.com.au), although this site represents a smaller number of
92 animals compared to Gumtree and Trading Post. Other forms of social media, such as Facebook®,

93 also advertise pets for sale or to find new homes. These online sites advertise both puppies and
94 kittens being sold by a breeder, and animals being relinquished.

95 There has been limited research into online trading of dogs and cats. In a US study, dog
96 breeders who advertised puppies on the internet were less knowledgeable about health issues
97 specific to their breed/s and less likely to screen their animals for heritable diseases compared to
98 dog breeders who did not advertise their puppies on a puppy internet site [21]. To our knowledge,
99 no published studies have focussed on pets being relinquished online. The aims of the present
100 study were to: 1) estimate the total numbers and prices of dogs and cats relinquished online on
101 gumtree.com.au; 2) analyse the breed and Australian State/Territory of origin of dogs and cats
102 relinquished on gumtree.com.au and compare with animals presented to petrescue.com.au (an
103 online charity advertising pets from a shelter or rescue organisation in Australia) and the RSPCA;
104 and 3) interview a sample of pet owners relinquishing their pets on gumtree.com.au to determine
105 their reasons for relinquishment and why they chose to advertise their pet online.

106 2. Materials and Methods

107 2.1 Extraction of data

108 Data from gumtree.com.au were collected over approximately three weeks for both dogs and
109 cats: February 8, 17 and 25, 2016 for dogs and February 9, 19 and 26, 2016 for cats. Data were
110 extracted using the BeautifulSoup module in python (version 3.2.1, released Feb 17 2012) to parse
111 the adverts, then cleaned and analysed using R (R Core Team 2017) and Pivot tables in Microsoft
112 Excel®. Cleaning was completed within Excel® by scrutinising individual ads to remove duplicates
113 or ads that were not for dogs or cats (e.g. equipment, pet sitting services). Data for the dog and cat
114 breed and cross/purebred status, owner status (owner/breeder), age, price and State/Territory were
115 collected. Where the town, but not the State or Postcode, were provided, an internet-based Postcode
116 finder (<http://auspost.com.au/postcode>) was used to determine the State/Territory. If there was
117 more than one place with the same name in more than one State/Territory then the ad was left as
118 State/Territory unknown. An estimate of the number of dogs and cats in each ad was made by
119 generating random numbers using R and then analysing the average number of dogs/cats per ad in
120 those random ads. There were 50 random ads used for both dogs (1.9% of total ads) and cats (2.4%
121 of total ads). Data on neuter, microchip and vaccination status were not collected as a minority of
122 ads reported on these factors.

123 2.2 Analysis of relinquishment ads

124 Dogs and cats advertised on the internet represent a mixture of puppies/kittens being sold
125 alongside pets being relinquished or traded. Many ads request a sum of money for the pet, even
126 when it appears the pet is being relinquished. The definition of relinquishment used for this study
127 was the Oxford definition: 'Voluntarily cease to keep or claim; give up'
128 (<https://en.oxforddictionaries.com/definition/relinquish>). Dogs were defined as being relinquished
129 if: 1) there was a statement within the ad confirming that a new home was being sought (e.g.
130 seeking new home, very sad to part with..., need to find a new forever home); 2) they were being
131 offered for free at any age; or 3) if the dog was older than 16 weeks of age and there was no
132 indication it had been advertised as a puppy and was still looking for a home ("X" is a 6 year old
133 pure bred Sheffield Blue Heeler. He is very friendly and good with other dogs and children.
134 Microchipped and wormed. To good home only.). On gumtree.com.au sellers are classified as
135 owner, breeder or shelter and the shelter animals were not included in the present study. It is
136 possible that some very small shelters were advertising as an owner rather than as a shelter, but
137 there was no way to differentiate these types of sellers. Both owner and breeder categories were
138 included as there were some breeders who were relinquishing pets using the above criteria (e.g.
139 'Owner breeder out of work and no permanent (sic) home, current home being sold by owner cannot find

140 another suitable home.' or 'Three female blue amstaffs mother and her two daughters ive raised my intentions
141 were to bread (sic) them but things have changed there pedigree papered registered ect (sic) spent alot \$ for
142 these lines call for more info ect (sic)'). The same criteria were used to determine a cat being
143 relinquished. In some ads there was more than one animal advertised. In those cases, data was
144 collected only from the first animal mentioned in the ad (e.g. breed, age, price), and the other
145 animal/s were not included.

146 The relinquished ads on Gumtree per State/Territory were compared with data provided by
147 John Bishop, Co-Founder and Joint CEO of PetRescue (<https://www.petrescue.com.au/>), for the
148 same time period as the Gumtree data were collected and the published figures from the RSPCA
149 between July 1 2014 and June 30 2015.

150 2.3 Surveys of owners who had relinquished dogs or cats

151 An email was sent through gumtree.com.au informing people about the study that we were
152 conducting and asking if they would be willing to participate. Ads were chosen from those
153 available online using the criteria for identifying a relinquished dog, outlined above. These were
154 selected starting from the first ads shown on each day. Due to the high numbers not all ads for
155 relinquished dogs or cats were included on each day. A total of 324 emails were sent to dog owners
156 between May 11 and June 14, 2016 and 299 emails to cat owners between May 17 and June 14, 2016.
157 The owners responded to the email either by return email or by phone. Surveys were performed
158 either on the phone or in written form via email, depending on the preference of the respondent.
159 Questions included: the demographics of the animal (age, breed, sex, neuter status, microchip); two
160 Likert type scale questions on satisfaction with the health and behaviour of the animal (1 is very
161 dissatisfied and 5 is very satisfied); Where did you get pet's name from originally?; What was the
162 main reason you advertised pet's name?; Why did you decide to advertise on Gumtree instead of
163 going to a shelter; Did you advertise pet's name anywhere else?; Have you successfully found a
164 new owner for pet's name yet?; If yes, do you know anything about the new owner? Participants
165 were also given an open ended question at the end of the survey to add any other details they
166 wished to share. Approval for this study was provided by the University of Adelaide Human Ethics
167 Committee (H-2016-036).

168 2.4 Statistical Tests

169 Comparisons between groups where the data was not normally distributed were made using
170 Mann-Whitney tests. Categorical data was compared used Chi-square tests. Data are presented as
171 Mean \pm SEM unless otherwise stated. A significance level of $p < 0.05$ was used for statistical testing.

172 3. Results

173 3.1. Dogs on Gumtree

174 A total of 2640 individual ads were identified for dogs being relinquished on gumtree.com.au
175 between February 7 and 24, 2016. There were 1328 ads on February 7, 1411 ads on February 16 and
176 1450 ads on February 24. Of these, 650 were new ads on Feb 16, and 663 were new ads on Feb 24,
177 giving an estimate of 82 new ads/day, or by extrapolation ($x 365$) 29,930 ads per year. The average
178 number of dogs per ad in 50 random ads was 1.06 (all ads were for single dogs excepting 3 ads for
179 two dogs), giving an estimate of 31,726 dogs advertised on gumtree.com.au per year.

180 Most of the dogs on Gumtree were classified as pure bred (n=1361, 51.4%) with 1188 (44.6%)
181 cross bred dogs, and 103 (3.9%) ads in which it was not clear if dogs were pure or cross bred. The
182 most common dog breeds advertised on Gumtree and on PetRescue in the same time period are
183 shown in Table 1. The top two breeds in order for both Gumtree and PetRescue were the

184 Staffordshire Terrier and Kelpie, representing just over 20% of the total ads for both sources. The
 185 third most common breed for Gumtree was the American Staffordshire Terrier (#4 for PetRescue),
 186 with the Greyhound the third most common breed for PetRescue (#24 for Gumtree). Unlike
 187 Gumtree, approximately three quarters (75.8%) of the ads on PetRescue were for cross breed dogs,
 188 with only 23.8% representing pure breed.

189 **Table 1.** Dog breeds in which 20 or more individuals were relinquished on gumtree.com.au or
 190 petrescue.com.au from February 8 to February 24, 2016 (In 103 dogs the pure breed status was
 191 unknown)

		(100)*	(51.4)	(44.7)			(23.8)	(75.8)

193 Most dogs on Gumtree were offered by the owner (n=2480, 93.5%) with 172 ads from breeders
 194 (6.5%). The median age for the dogs was 1.42 years, with a range of 0.2 to 14.2 years (n=2640; Table
 195 3). The most common age group was 1 to 2 years (32% of ads), with dogs that were 6 months to one
 196 year of age and two to five years of age both representing 26% of the ads. Dog ages were not
 197 normally distributed, with a right skew; with 10% of the ads for dogs over 5 years of age and 21 of
 198 the ads for dogs of 10 years of age or more. Dogs that were cross bred were advertised at a
 199 significantly lower age than pure bred dogs (2.0 ± 1.9 years, median 1.3 years) versus 2.3 ± 2.0 ,
 200 median 1.6 years, respectively; $p<0.0001$ Mann-Whitney).

201 The median price for each dog was \$AUS200, with a range from 0 to \$AUS7000. Almost
 202 one quarter (n=575, 23%) of dogs were advertised for free, with 43% of dogs advertised for
 203 \$AUS100-499 (Table 2). There were 147 ads in which no price was given. Pure bred dogs were
 204 advertised for a significantly higher price than cross bred dogs (\$AUS562 \pm 727 vs \$AUS198 \pm
 205 266, respectively; $p<0.0001$ Mann-Whitney).

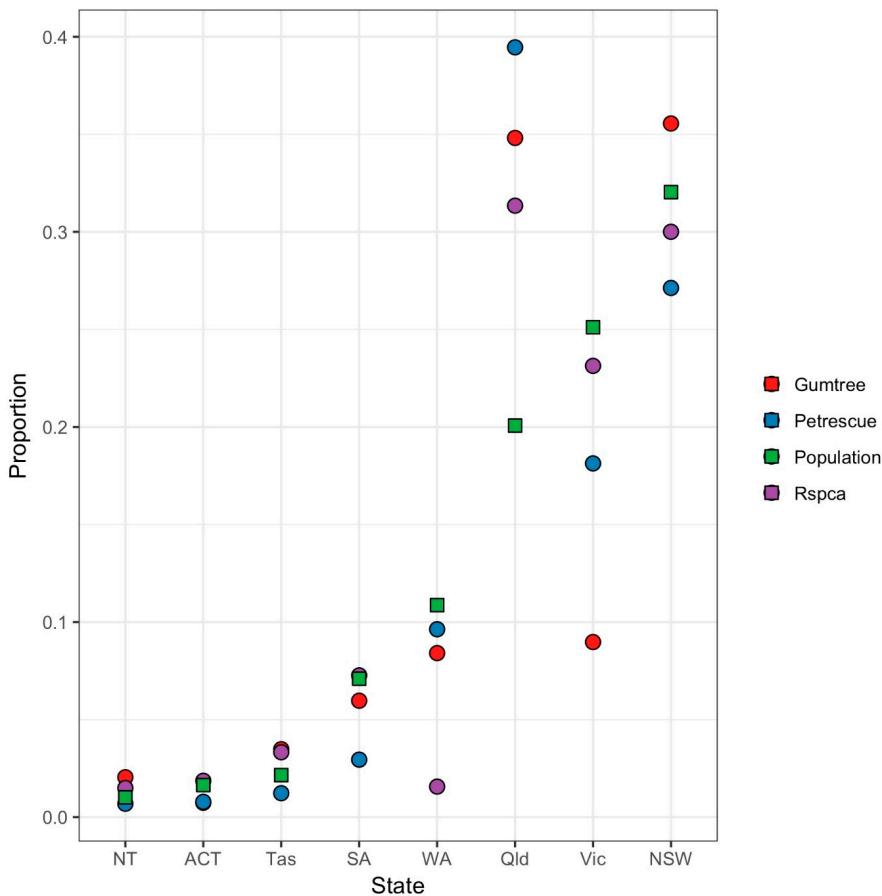

206 **Table 2.** Age and price categories of dogs relinquished on Gumtree from February 8 to 24, 2016

Age Range	N (%)	Price Range (AUS \$)	N (%)
Up to 16 weeks	20 (0.8)	0	575 (23.1)
16 weeks to 6 months	131 (5.0)	1-499	1181 (47.4)
6 months to 1 year	680 (26.1)	500-999	480 (19.3)
1 to 2 years	832 (32.0)	1000-1999	187 (7.5)
2 to 5 years	679 (26.1)	2000-2999	44 (1.8)
>5 years	260 (10.0)	3000-7000	26 (1.0)
TOTAL	2602 (100)	TOTAL	2493 (100)

207 ¹ Tables may have a footer.

208 The majority of Gumtree ads were from NSW (35.6%) and Queensland (34.8%), giving a total
 209 of approximately 70% of all Gumtree ads in Australia coming from those two States (Figure 1). The
 210 proportion of ads from Gumtree and PetRescue and the published figures on dogs surrendered to
 211 RSPCA shelters were compared with the State/Territory human population sizes, using data from
 212 the Australian Bureau of Statistics
 213 (<http://www.abs.gov.au/AUSSTATS/abs@.nsf/allprimarymainfeatures/3ADCB8E8492A9156CA25808900122529?opendocument>). There was a significant difference between the State/Territory human
 214 populations and the proportions of dogs advertised on Gumtree ($\chi^2(7) = 566.6$, $p < 0.0001$),
 215 PetRescue ($\chi^2(7) = 507.4$, $p < 0.0001$) and the RSPCA ($\chi^2(7) = 7001.2$, $p < 0.0001$). Compared to the
 216 proportion of the State/Territory human population, there were more ads for Gumtree in
 217 Queensland and NSW and fewer ads for Gumtree in Victoria. Queensland had a higher proportion
 218 of all three (Gumtree, PetRescue and RSPCA) versus the State human population (Figure 1). The
 219 proportions of dogs advertised were significantly different between Gumtree and Petrescue ($\chi^2(7) =$
 220 158.9, $p < 0.0001$).

222 **Figure 1.** Proportions of total ads for relinquished dogs on gumtree.com.au and petrescue.com.au
 223 from February 8 to February 24 2016, and RSPCA shelter admissions for each Australian
 224 State/Territory. States/Territories are ordered in increasing proportion of total population. (Note: The
 225 proportion of the Australian population in each State/Territory is: NSW 31.7%, Vic 24.9%, Qld 19.9%,
 226 WA 10.8%, SA 7.0%, Tas 2.1%, ACT 1.6% and NT 1.0%)

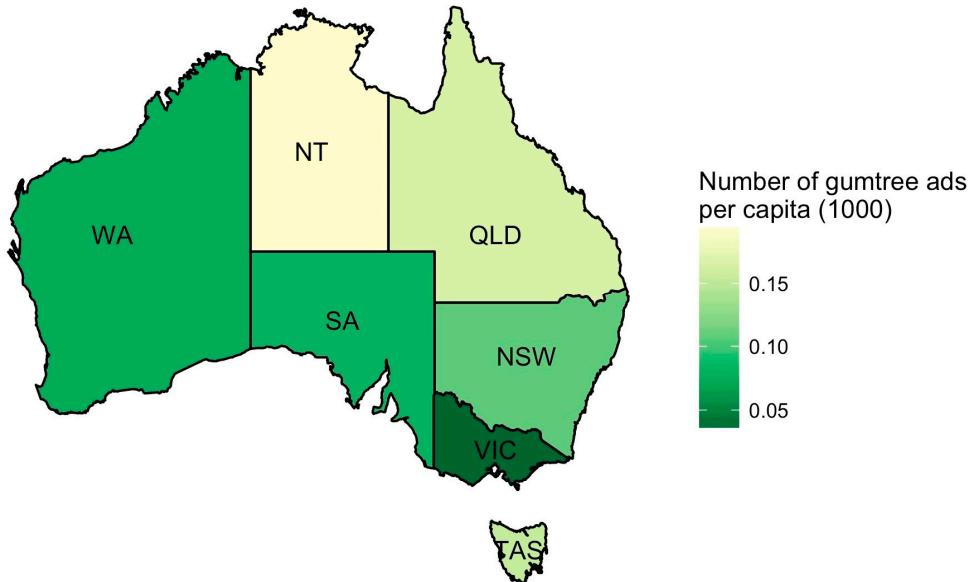

227

228 The per capita values for each marketplace and State/Territory are shown in Figure 2. The per
 229 capita number of Gumtree ads are highest for the Northern Territory and lowest in Victoria, while
 230 PetRescue and RSPCA figures per capita are highest in Queensland. Per capita rates for the RSPCA
 231 are higher than for Gumtree and PetRescue. The ACT is not shown on the map as it is too small in
 232 area; the ACT per capita figures for Gumtree, PetRescue and the RSPCA are 0.04, 0.04 and 2.1 per
 233 1000 residents, respectively.

234 **Figure 2.** Numbers per capita (1,000) of relinquished dogs on gumtree.com.au (A) and
 235 petrescue.com.au (B) from February 8 to February 24 2016, and RSPCA shelter admissions (C) for each
 236 Australian State/Territory. The ACT is not shown on the map as the area is too small for definition. Note:
 237 scales are different to enable differentiation of colour for each individual map.

262

263 The prices of advertised dogs in each State/Territory are shown in Table 3. There was a
 264 significant difference in price category between states $\chi^2(12) = 89.7$, $p < 0.0001$ (data for the ACT was
 265 not included as there were insufficient cases per category for analysis). The highest proportion of
 266 free dog ads was in Qld (34.5%) followed by the NT (31.9%) with the lowest proportion of free ads
 267 in WA (22.3%). The highest proportion of ads for dogs costing >\$AUS500 was in Victoria (47.6%)
 268 with the lowest proportion in Tasmania (16.3%).
 269

270 **Table 3.** Price range (AUS\$) of dogs advertised on Gumtree between February 7 and 26, 2016 and
 271 their Australian State or Territory. Percentages represent the proportion of dogs within that
 272 State/Territory in each price category.

273 *3.2. Cats on Gumtree*

274 A total of 2093 individual ads identified as cats being relinquished were posted between
 275 February 9 and 26, 2016. This included 1353 ads on February 9, 1397 ads on February 19 and 1465
 276 ads on February 26. There were 408 new ads on February 19 and 332 new ads on February 26,
 277 giving an estimate of 44 new ads per day or 16,060 ads per year (44 x 365). The average number of
 278 cats per ad in 50 random ads was 1.51 (37 ads for single cats/kittens, 8 ads for two cats/kittens, 3 ads
 279 for five cats/kittens and one ad for six kittens; no number provided in one ad), giving an estimate of
 280 24,250 cats advertised on gumtree.com.au per year.

281 A minority of 508 ads provided any information on whether a cat was a pure or cross breed,
 282 with 61% of these pure breed (n=310) and 39% cross breed (n=198). The breeds for which there were
 283 at least 15 ads on Gumtree are shown in Table 4 in comparison to cats advertised on PetRescue in
 284 the same time period. The Ragdoll and Domestic Shorthair were the most common breeds
 285 mentioned in the Gumtree ads, however, Domestic Shorthair and Domestic Medium Hair were by
 286 far the most common breeds on PetRescue.

287 **Table 4.** Cat breeds relinquished on gumtree.com.au from February 9 to February 26, 2016 in
 288 comparison to those advertised in the same period on petrescue.com.au

290

¹ Ranking of breeds from most common to least common

291

292

Most cats were offered by the owner (n=2003, 95.7%) with 90 ads from breeders (4.3%). The median age for the cats was 0.9 years, with a range of 0.0 to 18.2 years (n=2093). The most common age group was up to 16 weeks (23.6% of ads) with around half of the ads (53%) for cats that were one year of age or less (Table 5). Cat ages were not normally distributed, with a right skew; 10% of the ads were for cats over 5 years of age, and there were 9 ads for cats of over 15 years of age. Cats that were cross bred were advertised at a significantly lower age than pure bred cats (2.2 ± 2.7 years, median 1.3 years versus 2.5 ± 2.5 , median 1.6 years, respectively; $p<0.01$ Mann-Whitney).

299

300

Table 5. Price and age ranges of kittens and cats sold on Gumtree from February 9 to February 26, 2016. There were 11 ads in which no age was provided and 90 ads in which no price was provided.

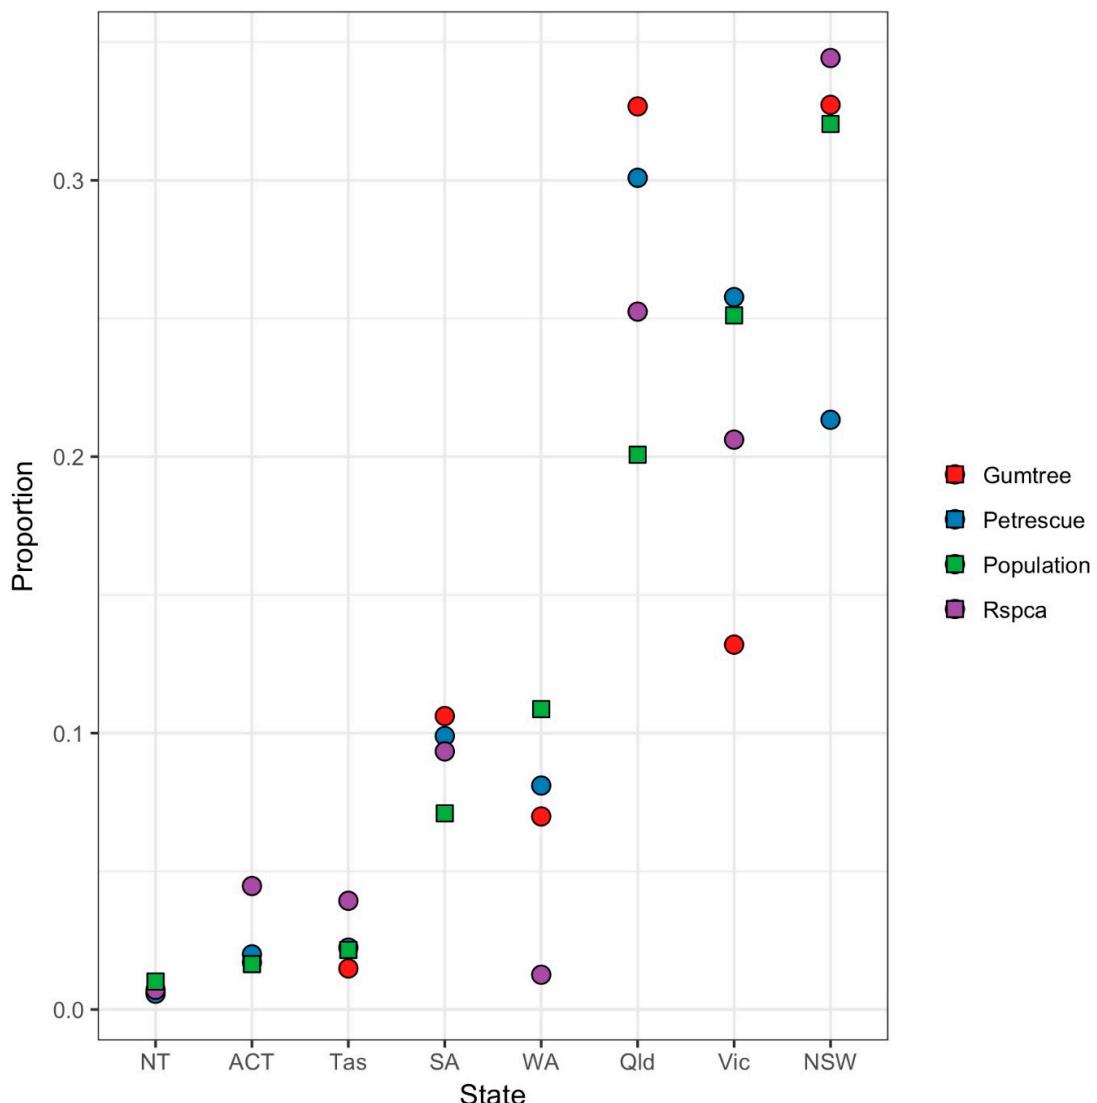

Age Range	N (%)	Price Range (AUS \$)	N (%)
Up to 16 weeks	492 (23.6)	0	1298 (62.0)
16 weeks to 6 months	414 (19.9)	1-499	617 (29.5)
6 months to 1 year	201 (9.7)	500-999	73 (3.5)
1 to 2 years	373 (17.9)	1000-1999	13 (0.6)
2 to 5 years	391 (18.8)	2000-2999	2 (0.1)
>5 years	211 (10.1)		
TOTAL	2082 (100)	TOTAL	2003 (100)

301

302 The median price for each cat was \$AUS0, with a range from 0 to \$AUS2500. Almost two thirds
303 (n=1298, 62%) of cats were advertised for free, with 30% of cats advertised for \$AUS1-499 (Table 6).
304 Pure bred cats were advertised for a significantly higher price than the cross bred cats (\$AUS351 ±
305 331 vs \$AUS66 ± 99, respectively, n=508; p<0.0001 Mann-Whitney).

306 The same proportion of cat ads on Gumtree were from NSW and Queensland (32.7% each;
307 Figure 3). The proportion of cat ads from Gumtree and PetRescue were compared with the
308 State/Territory human population sizes
309 (<http://www.abs.gov.au/AUSSTATS/abs@.nsf/allprimarymainfeatures/3ADCB8E8492A9156CA25808900122529?opendocument>). There was a significant difference between the State/Territory human
310 populations and the proportions of cats advertised on Gumtree ($\chi^2(7) = 566.6$, p < 0.0001), PetRescue
311 ($\chi^2(7) = 507.4$, p < 0.0001) and the RSPCA ($\chi^2(7) = 9969.9$, p < 0.0001). In Queensland the proportion
312 of cats from all three sources was higher than the Queensland human population, while in Victoria
313 PetRescue and Gumtree represented a lower proportion than the State human population. In WA
314 Gumtree, PetRescue and the RSPCA were a lower proportion than the human population, while in
315 NSW only the proportion of PetRescue ads was substantially lower than the State human
316 population. The proportions of cats advertised was significantly different between Gumtree and
317 Petrescue ($\chi^2(7) = 158.9$, p < 0.0001). Compared to PetRescue, there were more Gumtree ads in NSW,
318 SA, Tasmania and the Northern Territory than expected, and fewer ads in Victoria than expected.
319

320 **Figure 3.** Proportions of total ads for relinquished cats on gumtree.com.au and petrescue.com.au from
321 February 9 to February 26 2016, and RSPCA shelter admissions for each Australian State/Territory.
322 States/Territories are ordered in increasing proportion of total population. (Note: The proportion of
323 the Australian population in each State/Territory is: NSW 31.7%, Vic 24.9%, Qld 19.9%, WA 10.8%,
324 SA 7.0%, Tas 2.1%, ACT 1.6% and NT 1.0%)

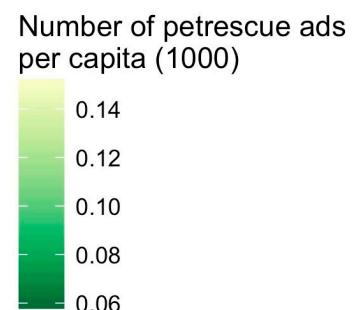

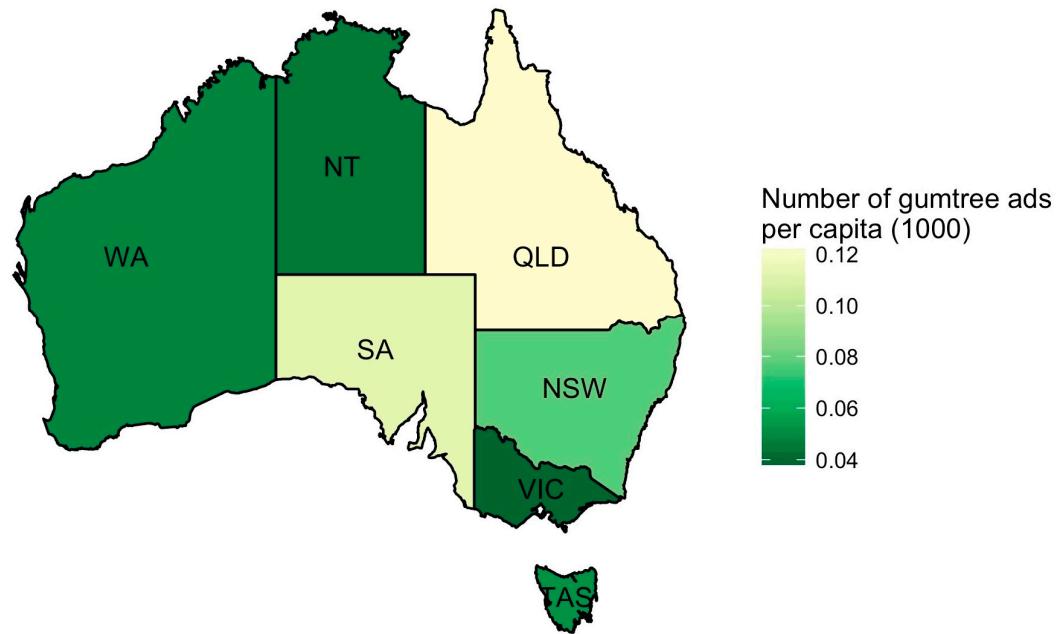

325

326 The per capita values for each marketplace and State/Territory are shown in Figure 4. The per
 327 capita number of Gumtree ads are highest for the Northern Territory and lowest in Victoria, while
 328 PetRescue and RSPCA figures per capita are highest in Queensland. Per capita rates for the RSPCA
 329 are higher than for Gumtree and PetRescue. The ACT is not shown on the map as it is too small in
 330 area; the ACT per capita figures for Gumtree, PetRescue and the RSPCA are 0.08, 0.12 and 6.3 per
 331 1000 residents, respectively. The per capita rate of cat admissions to RSPCA shelters is higher in the
 332 ACT than any other State/Territory.

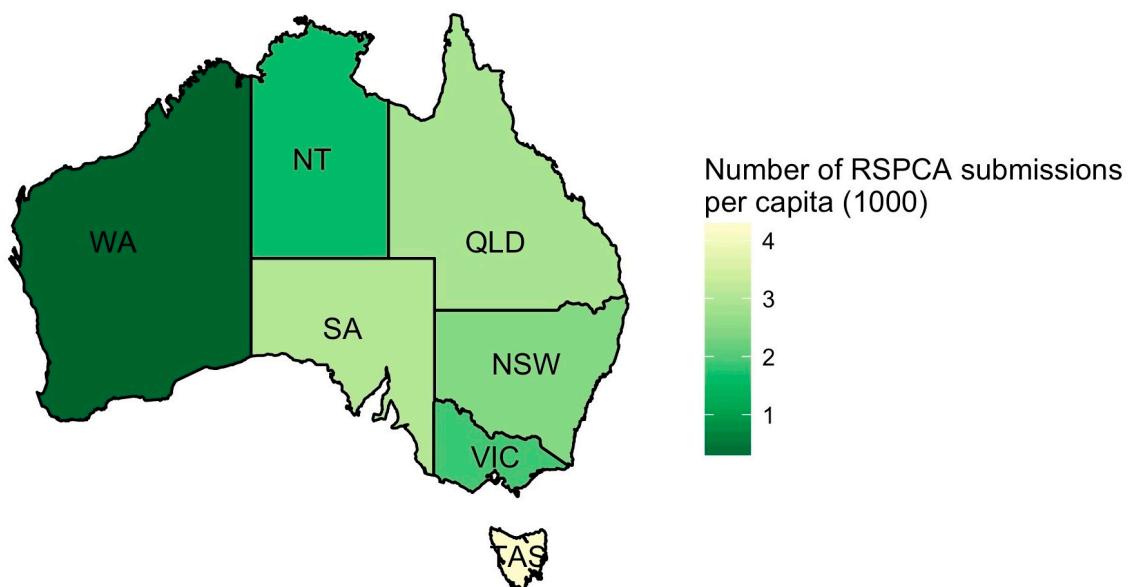

333

374 The prices of advertised cats on Gumtree in each State/Territory were compared using three
 375 categories: \$AUS0, \$AUS1-499 and >\$AUS500. The data for the ACT, NT and Tasmania were not
 376 included as there were insufficient cases per category. There was a significant difference in price
 377 category between states $\chi^2(8) = 38.6$, $p < 0.0001$. The highest proportion of free cat ads came from
 378 Victoria (77%) and SA (67%) with the lowest proportion of free ads in WA (54%; Table 6). Victoria
 379 had a lower proportion of Gumtree ads for cats \$AUS1-499 (16% vs >30% for other States), and the
 380 highest proportion of ads for cats costing >\$AUS500 (7%). The proportions of Gumtree ads for cats
 381 >\$AUS500 was low overall (3-7%).

382 **Table 6.** Price range of cats advertised on Gumtree between February 7 and 26, 2016 and their
 383 Australian State or Territory. Percentages represent the proportion of cats within that State/Territory
 384 in each price category.

	\$0	\$1-499	>\$500
	N(%)	N(%)	N(%)
New South Wales	356 (62.2)	190 (33.2)	26 (4.5)

Victoria	178 (77.1)	36 (15.6)	17 (7.4)
Western Australia	65 (53.7)	50 (41.3)	6 (5.0)
South Australia	125 (67.2)	56 (30.1)	5 (2.7)
TOTAL	1090 (64.9)	515 (30.7)	74 (4.4)

385 *3.3. Interviews*

386 Most interviews took place on the phone (n=11), with four people emailing back a survey.
 387 There were 15 responses in total, a response rate of 2.5% (8/324) for dogs and 2.3% (7/299) for cats.
 388 In addition, 16 people responded to the email to notify that they would not be involved, giving
 389 reasons such as not having time, or that the situation was too distressing.

390 There was a mix of dog and cat breeds being relinquished by the respondents (Table 7). Five of
 391 the dog owners had desexed dogs, with two dogs entire, and one in which the response was
 392 unclear. All dogs were microchipped, excepting one in which the response to this question was also
 393 unclear. Six dog owners scored a 4/5 (satisfied or highly satisfied) with their dog's health. Five dog
 394 owners also responded on their dog's behaviour, with three of the five highly satisfied and two
 395 giving a 3 or 3.5, i.e. neither satisfied nor dissatisfied. Four of the dogs were originally obtained
 396 online – three from Gumtree and one from tradingpost.com.au. Only one cat was entire, with the
 397 owner not clearly stating neuter status in one other cat. All cat owners were highly satisfied with
 398 their cat's health, but one owner scored their cat's behaviour a 2/5 and another owner 3/5 (Table 7).

399 **Table 7.** Demographic factors for the dogs and cats being relinquished by the 16 people
 400 participating in surveys of why they relinquished their pets on Gumtree (X represents a cross
 401 breed). Responses to the pet's Health and Behaviour were scored on a 1-5 Likert-type scale where 1
 402 was very dissatisfied and 5 was very satisfied. (NS = not stated)

403 ¹ Neutered; ² Microchipped; ³ Behaviour

404 There were a variety of reasons given for relinquishment of the dogs and cats (Table 8). For the
 405 eight dogs, the most common reasons were that they had rescued the dog and needed to find a new
 406 home for it (n=2), and the behaviour of the dog (escaping in one dog and too interested in nearby
 407 livestock in another). For two dog owners, two reasons were provided for the relinquishment, in

408 the other six cases, a single reason was provided. For the seven cats, the most common reasons for
 409 relinquishment were that the pets in the house were not getting on (cats in two cases and a dog in
 410 one case), and moving (n=2). For three of the cat owners, two reasons were provided for the
 411 relinquishment, in the other four cases, a single reason was provided.

412 **Table 8.** Reasons for relinquishment given by dog and cat owners advertising their pet on
 413 gumtree.com.au

Dogs	N	Cats	N
Rescue	2	Dog/cat not getting on	3
Behaviour	2	Moving	2
Dog injury (working dog)	1	Rescue	1
Own health	1	Allergy	1
Money	1	Expecting a baby	1
Relationship breakdown	1	Too many pets	1
Moving	1	Time	1
Time	1		

414 When asked the reason for using Gumtree rather than other places, the most common reason
 415 for the dog owners was that they believed the shelters were full (n=4) and that they wanted to
 416 see/interview the new owner of their dog (n=2; Table 9). The cat owners chose Gumtree as they
 417 originally got the cat on Gumtree (n=2), because they use Gumtree for other things and it works
 418 (n=2) and to see/interview the new owners of their cat (n=2). There were three dog owners and four
 419 cat owners who gave two different reasons to choose Gumtree.

420 **Table 9.** Reasons people gave for choosing to advertise their relinquished pet on gumtree.com.au

Dogs	N	Cats	N
Shelters full	4	Got the animal on gumtree	2
To see/ interview the new owner	2	Use gumtree for other things	2
Lack of knowledge of shelters	1	To see and interview the new owner	2
It worked before	1	It worked before	1
Shelter is last resort	1	Shelter is last resort	1
Immediate posting and quick response	1	Would be put down at a shelter	1
Would be put down at a shelter	1	Shelter too hard on pet	1
		Don't drive so can't get to shelter	1

421
 422 Relinquishing owners were also asked about the success of rehoming their pet on
 423 gumtree.com.au. Of the eight dog owners, three had successfully rehomed their dog at the time of
 424 completing the survey, and another owner had a prospective re-home organised. In one of the
 425 successful re-homings, the owner had carried out two failed trials with the dog, with a third trial
 426 being successful. For one dog owner there had been two responses with neither suitable, and in
 427 another there had been so many responses that they had had to take the ad down, although none
 428 had been successful at the time of the interview. In another two dog owners there had not yet been
 429 any responses. For the seven cat owners, one person had had 50 offers for the cat within ten
 430 minutes, and another had two potential homes within one day. Both of the cats in these examples

431 were pure breeds. In another two cat owners there had been a single response, the three remaining
432 owners had not yet received responses.

433

434 **4. Discussion**

435 The current study provides evidence about the numbers and types of dogs and cats
436 relinquished on one popular website (gumtree.com.au) in Australia, filling an important gap in
437 knowledge. It indicates that thousands of dogs and cats are being relinquished on gumtree.com.au
438 per year. Information collected on their breed and age profiles allows comparison with other
439 relinquished populations on petrescue.com.au and published RSPCA data. Although there are
440 similarities between the populations, such as the most common dog breeds on gumtree.com.au,
441 petrescue.com.au and in published RSPCA figures, there also appear to be differences suggesting
442 pets relinquished on gumtree.com.au represent a sub-population of relinquished animals.

443 By extrapolation, the total number of dogs and cats relinquished via Gumtree ads was
444 approximately 30,000 and 16,000, respectively. Recent estimates have indicated that 211,655 dogs
445 were admitted to shelters and municipal facilities in Australia in 2012-13 [2]. Some of the dogs
446 being offered on Gumtree may eventually be relinquished to a shelter or end up at a municipal
447 pound if a new owner is not found. The estimated Gumtree ads represent a significant proportion
448 (~14%) of the total number of dogs admitted to shelters and municipal facilities per year. This
449 proportion would be even higher if one considered other online websites (e.g. DogzOnline,
450 TradingPost), as well as Facebook®, and other private or closed websites advertising pets. The
451 diverse and diffuse nature of online ads, as well as the fact some are closed websites, makes it
452 impossible to estimate the total numbers of pets advertised online. If it is also considered that less
453 than half of shelter relinquishments are owner surrenders (19% in dogs to Queensland RSPCA
454 shelters in 2014 and 32% of cats between 2006 and 2009 in Queensland RSPCA shelters; [18,22]) then
455 the online ads would represent an even higher proportion of owner surrenders.

456 There is a complex flow of dogs and cats between the owned and un-owned populations. The
457 data presented from the gumtree.com.au ads, from petrescue.com.au (representing larger and
458 smaller shelters and pounds) and from published data from the RSPCA, illustrate the complexity of
459 movements of surrendered dogs and cats within and between Australian States/Territories. The
460 human population for each State/Territory was used for comparison; if one assumes that a similar
461 percentage of people in each State/Territory own a dog or cat, the human population is a proxy for
462 the dog and cat population. If one then assumes that a similar proportion of dog and cat owners in
463 each State/Territory relinquish their dogs or cats each year, the proportions should be similar. In
464 fact they were not, and this may be because these two assumptions are not true, and that people in
465 different States/Territories are more or less likely to own a dog/cat and to then relinquish it. In
466 general, Queensland had an overrepresentation of the surrendered population of dogs and cats on
467 Gumtree, PetRescue and the RSPCA compared to their human population, while Victoria tended to
468 have an underrepresentation of relinquished dogs and cats compared to their population. An
469 additional confounder is that RSPCA data is dependent on the numbers and sizes of shelters in each
470 State/Territory, and the petrescue.com.au data depends on the market penetration of
471 shelters/pounds using their website from each region. Internet access and hence access to Gumtree
472 may be more uniform between States. To fully understand the flow of owned and un-owned dogs
473 and cats within and between regions of Australia will require further research.

474 Although there were similar total numbers of ads for dogs and cats on Gumtree, there were
475 fewer new ads posted in the follow-up data sets for cats versus dogs. This suggests the turnover of
476 cat ads on gumtree.com.au is longer than for dogs. Of the dog and cat owners that were
477 interviewed, a higher proportion of dog owners had already successfully rehomed their pets versus
478 the cat owners, at the time of interview. Of the two cat owners who had multiple responses for

479 relinquishment, and had been able to successfully rehome their pets, both were pure bred cats.
480 However, the very small number of responses from owners relinquishing their pets on
481 gumtree.com.au means that this data is not likely to be representative of the entire population of
482 relinquishing owners.

483 There are many risks involved with online trade in pets for both prospective owners and
484 animals, but as yet online sales of dogs and cats remain unregulated around the world. In some
485 countries voluntary standards for online sales of pets have been developed, with the Pet
486 Advertising Advisory Group (<http://paag.org.uk/>) in the UK, the Irish Pet Advertising Advisory
487 Group (<http://ipaag.ie/>) and the BelgPAAG (Belgian Pet Advertising Advisory Group) was recently
488 launched in Belgium [23]. The EU Dog & Cat Alliance released a report into the cost of online sales
489 in the EU recently [24]. The main findings were that online ads are now the most common way for
490 people to purchase a pet, that there are no regulations around Europe that cover this trade, and the
491 many risks involved. These include sale of unweaned animals and animals in poor health. There are
492 up to 269,620 dogs and 67,847 cats estimated as being advertised online in the European Union on
493 any given day [24]. A report issued by BBB® International Investigations Initiative presents
494 evidence on how online pet sellers scam pet buyers in the US [25]. The BBB ScamTracker contained
495 907 reports on pet scams at the time the report was published, which was 12.5% of all online
496 purchase fraud complaints. Many of the scams do not involve a real animal, for example an ad for a
497 free dog or cat that urgently needs a new home may be posted. Once a person responds to the
498 advertisement, costs relating to transportation and care of the animal are requested. The report
499 includes information from other countries, with 337 pet complaints to the Australian Competition
500 and Consumer Commission in the first six months of 2017, and 377 complaints involving animals to
501 the Canadian Antifraud Centre in 2016, with estimated losses of \$222,000 [25].

502 In addition to the risks relating to online sales of dogs and cats outlined above, there are other
503 risks relating specifically to dog and cat relinquishment. If an aggressive dog is relinquished to a
504 reputable shelter, the dog's behaviour will be assessed and the risk to new owners evaluated.
505 Although behavioural assessments performed in shelters are unreliable [26], prospective owners
506 can be educated on the behaviour of the dog and triggers of aggression prior to adoption. In
507 addition, good shelters have access to trainers and behaviourists who can implement programs to
508 improve the behaviour of an animal. In some of the ads it was possible to read between the lines
509 and see that aggression was likely to have been a problem (e.g. *'Urgent rehoming needed for Jack*
510 *Russell cross, male, 10 years. Beautiful dog, very friendly but best suited to a kid free home.'*) but there is
511 nothing to prevent owners advertising and selling pets with a behavioural problem without
512 providing any warning or information to the new owner.

513 As well as the risk to new owners, there are also risks to the animals themselves. While not
514 perfect, shelters do question prospective new owners on their ability to look after a pet and may not
515 allow somebody to adopt a pet if they believe it will not be well cared for. Again, there is no
516 obligation when dogs and cats are traded online for this to occur. As people may have ready access
517 to the internet at any time of the day, and with the posting of cute photos, impulse buying may also
518 be a significant problem. The wording of some of the ads indicated an impulse purchase, for
519 example *'6 month old Shar Pei puppy we brought him off gumtree two weeks ago and he's the best puppy*
520 *ever but unfortunately I have no time for him as I have three babies. He has had all he's (sic) needle are up to*
521 *date. Looking for a good home with someone who has plenty of time for him.'* An additional risk associated
522 with the Gumtree ads was that a large proportion were free, or a minimal cost. It has been
523 suggested that animals obtained at no or a low cost are at an increased risk of future relinquishment
524 [27], perpetuating the problem. However, a later study suggested that the attachment of people to
525 cats did not differ between free- and fee-based cat adoptions [28]. Further research will be needed
526 to assess whether free animals adopted online are more or less at risk of being re-relinquished.

527 There is also an additional risk associated with offering dogs and cats free, or very low cost.
528 One of the interview respondents discussed how they had been taking home dogs advertised on
529 Gumtree free in order to find them a new home. This respondent felt that otherwise people
530 involved in dog fighting would take them (they had rehomed approximately 80 animals in the past
531 year). To our knowledge, there is no evidence of trade and use of dogs in dog fighting, although it
532 should be considered as a possibility. There were a number of ads describing dogs suitable for pig
533 hunting, which is illegal in some States of Australia [29]. In fact the Bull Arab, which is not a
534 recognised breed by the Australian National Kennel Council [30], is a breed often associated with
535 pig hunting, and a large number of Gumtree ads for Bull Arabs from Queensland (in which pig
536 hunting is legal) were observed. The final risk for dogs and cats advertised free or for low cost
537 online is from animal hoarders. Arluke et al (2017) describe three types of animal hoarders: the
538 overwhelmed caregiver, rescue and exploiter. The rescue hoarder has a missionary zeal to save all
539 animals and actively seeks to acquire animals [31]. Being exposed to advertisements of animals that
540 need rescuing on Gumtree is likely to trigger a rescue hoarder, who can acquire multiple animals
541 free or at minimal cost.

542 It is difficult to determine if the population of dogs and cats surrendered on Gumtree overlaps
543 with the animals that are surrendered to the RSPCA or other shelters. Four of the people
544 interviewed who had relinquished dogs on Gumtree stated that they used Gumtree as the local
545 shelters were full, and while this was not given as a reason by any cat owners there was one person
546 who said they used Gumtree because the cat would be 'put down' at a shelter. The animals
547 advertised on Gumtree would represent the 'owner surrender' dog admissions to a shelter. Only
548 19% of the 11,967 dogs entering the RSPCA in Queensland in 2014 were owner surrender, with 24%
549 classified as strays admitted by the public, and 34% from municipal councils [22]. However, some
550 of the strays admitted by the public may represent owned animals, with owners avoiding paying
551 shelter surrender fees, or not wanting people to know they are relinquishing their own pet. The top
552 four breeds processed by RSPCA shelters in Queensland in 2014 were the Staffordshire Bull Terrier
553 (20%), Australian Cattle Dog (8%), Kelpie (7%) and Bull Arab (7%). The top four breeds advertised
554 on Gumtree in the current study were the Staffordshire Bull Terrier (12%), Bull Arab (8%), Kelpie
555 (6%) and Australian Cattle Dog (5%). Thus the most popular breeds for the RSPCA and Gumtree
556 are similar, and also to the dogs offered on petrescue.com.au which represent both larger and
557 smaller shelters. Despite similarities in the breeds, the proportions of pure and cross breed dogs
558 differ widely, with 92% of the dogs admitted to the RSPCA in Queensland in 2014 being cross bred,
559 while only 46% of dogs from Queensland advertised on Gumtree cross bred. The median price of
560 pure bred dogs was significantly higher in the Gumtree ads than for cross bred dogs.

561 There is an important difference in relinquishing online versus giving up a dog or cat at a
562 shelter. At a shelter, owners may have to pay a fee to relinquish their pets, whereas on an online
563 site, they can request a sum of money. However, based upon the definition of relinquishment being
564 used in this study ('Voluntarily cease to keep or claim; give up') the owners are voluntarily giving
565 up their dog or cat. Indeed, if a dog or cat has been purchased originally for a large sum of money,
566 offering the pet online may allow the owners to make up for some of this loss. The general use of
567 the term relinquishment describes an animal taken to a shelter. When devising the criteria to
568 determine if a dog or cat was being relinquished, we originally planned to have a cap on price for
569 the animals we included in our study. However, when reading the descriptions of the ads, there
570 were ads in which the dog or cat was being traded for over \$AUS1000, and yet the wording
571 suggested that the decision of the owner to relinquish their pet had been difficult. Thus, it was not
572 possible to use a cut-off price and say that all pets below that price were relinquished and above
573 that price were not.

574 One reason provided by respondents for the use of Gumtree for relinquishing their pets was
575 that they could speak to the new owners and see where their pet would live before agreeing to give
576 their pet a new home. One of the owners had even run trials of their dog with the prospective new

577 owners, and had two failed trials before having success with the third. Follow-up and control on
578 the re-homing of their pet is something that cannot be provided in a traditional shelter, where the
579 animal is left and no further information on where, and even if it has been rehomed, is provided. A
580 novel dog adoption program has been suggested in the US which involves placing dogs into foster
581 homes, with the foster carer tasked with finding the dog a new home [32]. There are obvious issues
582 with protection of privacy and the possibility of the new owners being harassed by the previous
583 owner (or *vice versa*), but this feedback is important for shelters to consider. To accommodate
584 owners who want to know where their pet goes and that it is being well looked after, innovative
585 programs should be considered.

586 An important limitation of the current study was the limited number of relinquished owners
587 who responded. Of those who did respond, all would be classified as responsible pet owners who
588 were in positions in which they had no real choice but to relinquish their pet, and who were doing
589 their best to find a good home. One of the respondents had rescued the animal previously from an
590 ad on gumtree.com.au and believed that the owner was going to kill the animal if a new owner was
591 not found quickly (an unavoidable change in this persons living arrangements outside of their
592 control meant that they needed to relinquish the pet). It is likely the population of people
593 relinquishing their pets on gumtree.com.au are mixed, with some doing everything they can to find
594 a good home, and others not caring where their pet goes as long as they can dispose of it. Further
595 research with responses from a larger range of respondents would be difficult, as people who do
596 not care for their pet are also unlikely to respond to requests to participate in research. For the
597 owners who were relinquishing their pets, several were obviously upset about the difficult decision
598 they had been forced to make. It was also interesting that some owners felt it necessary to respond
599 to the email to notify us that they were not willing to participate as they found the situation too
600 distressing. This aligns with previous research that concluded that rather than giving their pet up at
601 a shelter thoughtlessly many people struggled with an unavoidable situation and really had no
602 choice [19].

603 Research based on the use of big data from web scraping (automated collection of data from
604 web pages) provides both important research data but also ethical questions. Guidelines for internet
605 research have been published [33], and we believe the current study presents no significant ethical
606 problem using these guidelines. The respondents in the present study who were interviewed
607 provided their informed consent to participate, and no personal details are included that could be
608 used to identify them. However, owners whose data were used to estimate numbers and
609 demographics of the relinquished pets did not consent to this use. Although the data were
610 publically available on gumtree.com.au, it can be argued that people did not consent to other uses
611 of their information. However, risks to these people are minimal in the present study as aggregate
612 data were used that do not permit identification of individuals, and the direct quotes used in the
613 paper are unlikely to be able to be used to identify individuals as the ads are now more than a year
614 old and are taken down from gumtree.com.au once new owners are found or owners decide not to
615 continue advertising. The benefits of the research in understanding a population of relinquished
616 pets that have hitherto not been studies are also likely to outweigh the minimal risks to the
617 individuals whose data was used.

618 Another important limitation of the study is that not all information posted by the dog and cat
619 owners is accurate, for example some owners may not know the true age of their pet or may
620 provide false information on factors such as dog breed. Owners may also provide false reasons for
621 the relinquishment due to social pressure to have others think well of us [34]. Finally, the
622 extrapolation from the ads posted in February to the total number per year is likely to be inaccurate
623 as numbers of ads will vary from month to month. This is particularly relevant for cats, as they are
624 seasonal breeders.

626

5. Conclusions

627 The present study provides evidence that many thousands of dogs and cats are relinquished
628 online in Australia each year. This population of pets has previously not been considered in policy
629 or strategies to reduce the risk of relinquishment and protect the welfare of un-owned dogs and
630 cats. Knowledge of online relinquishments adds detail to what we currently know about the
631 complex flow of dogs and cats between owned and un-owned populations, and between different
632 owners.

633

634 **Acknowledgments:** The authors would like to acknowledge The Australian Pet Welfare Foundation for a
635 research grant enabling this work to be performed, to John Bishop for allowing us access to the petrescue.com.au
636 dog and cat data from the same time period, and to Dr Veronika Czerwinski for helping with the initial stages
637 of data cleaning.

638 **Author Contributions:** S.H. and J.T. conceived and designed the experiments; S.H., J.T. and C.J. performed the
639 experiments; S.H., J.T. and C.J. analyzed the data; S.H. wrote the paper and S.H., J.T. and C.J. edited the final
640 version.

641 **Conflicts of Interest:** The authors declare no conflict of interest.
