Figure S1 Conformation of the recognition of CHO/CD44s and CHO/CD44v3-10 by C$_{44}$Mab-46 by flow cytometry. CHO-K1, CHO/CD44s, CHO/CD44v3-10, were treated with 10 μg/mL of C$_{44}$Mab-46, followed by treatment with Alexa Fluor 488-conjugated anti-mouse IgG (Red line). The black line represents the negative control (blocking buffer).
