

Supplemental Figure 11: Combined analysis of cell populations and cytokines/chemokines

(A) CombiROC analysis of cell populations in mild vs moderately SARS-CoV-2-infected CVD patients. Correlation analysis of plasma cytokines/chemokines levels and the depicted cell populations in CVD patients and SARS-CoV-2-infected CVD patients (B) mild, moderate, and severely SARS-CoV-2-infected CVD patients (C). The size of the circle reflects the correlation coefficient either negative (blue) or positive (red). Data were analyzed using Spearman correlation coefficient (B & C). Significant P values are depicted (* > 0.05; ** > 0.01; *** > 0.001; **** > 0.0001).
