

File S1

Assay of lactate production in MDA-MB-231 cells

Cells were maintained at a density of $5 \times 10^5 / 10 \text{ cm}^2$. Released lactate was assessed by using the method described by Rossi V., et al. In *Cancers* **2023**, 15, 3728. The graph shows the millimolar lactate concentrations released in medium at different time intervals.
