

Supplementary Fig. S1A. Day 21 histological staining with H&E and CD206 immunostaining. Female BALB/c mice received 2×10^7 PFU/ mouse as in Fig 1 (AdDL70+Bleo, AdOSM+Bleo, AdIL-6+Bleo) and examined at day 21 (3 mice per group). Representative images of histological serial sections of lung parenchyma stained with H&E (Left panels, low power) and immunostaining for CD206 (middle low power and right panels high power). Brown signals are CD206+.
