

Supplemental Fig S3: AdIL-6+Bleo induces T cell activation and CD64+MHChi/Clec7a macrophages but not CD206+/CD11b+ alternatively activated Macrophages at Day 7. BALB/c mice were intubated with saline control and AdDL70 or AdIL-6 alone or in combination with bleomycin (0.03U) for 7 days (n=3-6 mice /group). Flow cytometry strategy is summarized in Fig 4A.
